# REPORT OF THE SUPERVISORY BOARD

# DEAR SAHREHOLDERS,

In the fiscal year 2024, EnviTec Biogas AG was again able to build on the positive performance of recent years. After the exceptional years 2022 and 2023, which were characterised by unusually high electricity and gas prices, the business situation returned to normal but remained gratifying in a multi-year comparison. The positive business trend was supported by the global demand for climate-friendly energy generation and the growing sales of advanced biofuels. Overall, earnings generated are clearly higher than in earlier years, which underpins the positive performance of the EnviTec Group.

In the Own Plant Operation segment, the investment programme started in the previous year was consistently carried on. The investments focused on the conversion of further plants into gas upgrading facilities with CO2 liquefaction. Two of these projects in Forst (Brandenburg) and Friedland (Mecklenburg-Western Pomerania) were successfully completed in the first quarter of 2025. Moreover, the DIN EN ISO 22000 certification of bio-LCO2 production in Güstrow marked an important step in expanding the Group's bioenergy expertise.

The international project business in the Plant Construction segment also showed a positive trend, with new plants successfully realised in several European countries, including Sweden, Estonia and Denmark. In the USA, a large number of plants were completed, ensuring high capacity utilisation. A project realised in Denmark marked the commissioning of the 100th EnviThan gas upgrading facility.

As part of the ongoing diversification of its business activity, the EnviTec Group established EnviTec Wind|Solar GmbH & Co. KG in 2024 with the aim of adding further renewable energy generation types to the existing portfolio.

Another milestone was marked by the takeover of the former Uniper subsidiary, LIQVIS GmbH, in early February 2025. The operation of 18 LNG filling stations in Germany and France will allow EnviTec to open up its own bio-LNG sales channel, thus strengthening its own value chain in the transport sector.

Although the Own Plant Operation, which is EnviTec Group's most important segment, performed below the level of the previous year as expected, it again generated a strong result in the fiscal year 2024. Total output amounted to EUR 200.5 million. The segment's operating result (EBT) stood at EUR 41.9 million. The decline from the previous year is mainly due to the fact that electricity and gas prices were lower than in the prior year period, along with reduced GHG quota prices for biomethane.

EnviTec's Plant Construction segment (including the holding company) generated sales revenues of EUR 95.6 million in the fiscal year 2024. The segment's operating result (EBT) stood at EUR 9.5 million. This trend is mainly attributable to the lower number of completed and recognisable construction projects, especially compared to the exceptionally dynamic prior year period.

Overall, the performance of the Service segment remained at the same level as in the previous year. The segment's revenues rose to EUR 50.5 million, with the operating result (EBT) at EUR -7.4 million. As in the previous years, this result is primarily attributable to the fact that intra-Group transactions are deducted from revenues during consolidation at Group level.

Collectively, the three segments caused Group revenues to fall by 19.0% to EUR 337.7 million. Total output also declined by 20.9% to EUR 352.5 million. The cost of materials decreased by 15.7% to EUR 210.8 million, especially due to lower electricity and gas prices as

well as reduced material costs in the Plant Construction segment. Personnel expenses rose to EUR 43.7 million as a result of continued hiring and inflation. Other operating expenses declined to EUR 34.4 million. EBITDA amounted to EUR 67.3 million. Earnings before taxes (EBT) stood at EUR 44.0 million (previous year: EUR 88.2 million). Consolidated net income amounted to EUR 29.8 million, which corresponds to earnings per share of EUR 2.01 (previous year: EUR 4.31).

With equity at EUR 184.4 million, the balance sheet ratios remained very solid. The equity ratio stood at 44.6% at the end of 2024. Considering the ambivalent economic conditions alongside the current investment programme and the normalised business performance, the Executive Board and the Supervisory Board of EnviTec Biogas AG propose paying out a reduced dividend of EUR 0.50 per share for the fiscal year 2024.

Amid the accelerating climate change and the quest for a secure energy supply, the overall conditions in the international biogas markets have generally shown a positive trend in recent years. The 'biomass package'

adopted in January 2025 and the coalition agreement between CDU/CSU and SPD mean that Germany is now also about to change course, supported by an explicit commitment to the importance of bioenergy in the electricity, heating and transport sectors. This also includes the announcement that the RED III Directive, which raises the EU-wide target for renewable energy in the transport sector to 29% and increases the minimum share of advanced biofuels from just 2.7% to as much as 5.5%, will be quickly incorporated into national legislation. A major inhibiting factor is the ongoing burden on the GHG quota market due to incorrectly declared or mislabelled biofuels from Asia. The new federal government has at least announced that priority will be given to addressing these issues. It is also positive that the coalition agreement provides for a toll exemption for emission-free vehicles – although this must be implemented in a way that is open to all technologies to allow the existing potential of all climate-friendly solutions to be utilised equally.

At the European level, the REPowerEU Plan continues

from left to right  
**Silvia Breher** Member of the Supervisory Board, Lindern (until May 2025)  
**Ulf Hüttmeyer** Chairman of the Supervisory Board, Vechta  
**Michael Böging** Vice Chairman of the Supervisory Board, Vechta

to provide the central framework for the accelerated expansion of biomethane production. The ambitious target of 35 billion Nm³ by 2030 underlines the strategic importance for the European energy supply. At the same time, it shows that this important political initiative is only gradually beginning to have an effect in practice. Developments in important foreign markets such as the USA are currently also subject to considerable uncertainty, making customers noticeably reluctant to invest.

For the further development of EnviTec Biogas, it will be crucial that the positive signals that are coming from the market and from policymakers are translated into reliable conditions that are open to different technologies – and that decarbonisation does not lose momentum due to geopolitical tensions or declining political commitment of individual players.

EnviTec has started the fiscal year 2025 with solid momentum. For the full year, EnviTec projects consolidated total output (or revenues) in a range from EUR 330 million to EUR 370 million. The company expects earnings before taxes (EBT) to come in between EUR 25 million and EUR 35 million. The decline compared to the fiscal year 2024 is due, on the one hand, to one-time effects in the Energy unit, which will not recur in the current fiscal year, and, on the other hand, to a negative result in the Plant Construction segment, partly also as a result of consolidation effects.

At the same time, the EnviTec Group used the positive extraordinary effects of the previous years to enter new business segments and geographic markets, thus laying a strong basis for a continued successful business performance. As a result, the Group’s profitability is now clearly above the level of earlier years.

## Activity report of the Supervisory Board

In the context of our Supervisory Board activity, we again executed all controlling and advisory tasks imposed on us by law, the statutes and the rules of procedure in 2024. We continuously monitored the Executive Board and provided it with assistance and advice in steering the company. We were directly involved in all decisions that were of fundamental importance for

the Group at an early stage. To allow us to execute our advisory and supervisory tasks, the Executive Board provided us with written and verbal information on all relevant issues in a regular, timely and comprehensive manner.

These include, in particular, planning and budgeting as well as strategic development, the development of new business fields, the business trend and the situation of the Group as well as the risk position, risk management and compliance. After thorough examination, the Supervisory Board approved all business events requiring its approval. The Executive Board and the Supervisory Board also liaised regularly between the meetings. Due to the detailed reports provided by the Executive Board and the auditor, we are convinced that the company and the Group are managed lawfully, correctly and efficiently. We saw no need to exercise our audit rights pursuant to section 111 para. 2 of the German Stock Corporation Act. No conflicts of interest involving members of the Executive Board or the Supervisory Board that required immediate reporting to the Supervisory Board and disclosure to the Annual General Meeting occurred in the past fiscal year.

## Formation of committees

As the Supervisory Board consists of only three members, no committees were formed in 2024. All issues that would have been addressed by committees were discussed by the full Supervisory Board.

## Meetings and main aspects of the consultations

In the fiscal year 2024, the Supervisory Board held four ordinary meetings on 13 May, 25 June, 20 September and 13 December. All meetings were attended by all Supervisory Board members, some of whom attended remotely.

The business trend, the net worth, financial and earnings position, investment projects as well as the risk situation and risk management of EnviTec Biogas were discussed in detail at all meetings.

In addition, the following topics were on the agenda and were addressed and discussed in detail with the

Executive Board:

- Audit for 2023
- Internationalisation strategy in the Own Plant Operation segment
- Strategic diversification of the business portfolio, e.g. by entering the photovoltaic and wind power business
- Strategic positioning in the bio-LNG business, including the analysis, assessment and final decision on the acquisition of LIQVIS GmbH
- Other market-relevant decisions such as incorrectly declared biofuels from Asia
- Planning and budgeting for 2025

## Change on the Supervisory Board

On 9 May 2025, Franz-Josef Wiese was appointed a member of the Supervisory Board of EnviTec Biogas AG (ISIN: DE000A0MVL58) by the Oldenburg Local Court with immediate effect at the request of the company’s Executive Board. The court appointment is valid until the end of the next ordinary General Meeting. The appointment of a new member became necessary when the previous member of the Supervisory Board and Deputy Chairwoman of the CDU party, Silvia Breher, was appointed Parliamentary State Secretary to the Federal Minister of Food, Agriculture and Home Affairs as part of the formation of the new federal government.

Franz-Josef Wiese is Head of Corporate Clients at Landessparkasse zu Oldenburg. He looks back on 40 years of experience in the corporate client business, including more than two decades in senior positions, and has in-depth knowledge of the agricultural and food industry.

The Supervisory Board would like to thank Silvia Breher for her dedicated and trustworthy contribution to supervising and strategically supporting the company.

## Audit of separate and consolidated financial statements

At the Annual General Meeting on 25 June 2024, the shareholders elected Kohl & Zerhusen GmbH Wirtschaftsprüfungsgesellschaft, Steinfeld, auditors of the separate and the consolidated financial statements for the fiscal year 2024. After having obtained a declaration of independence from the auditor, the Chairman of the Supervisory Board commissioned the auditor to perform the audit, agreed the audit fee and determined the focal points of the audit. On this basis and including the company’s accounts, Kohl & Zerhusen GmbH audited the consolidated financial statements of EnviTec Biogas AG prepared by the Executive Board in accordance with the German Commercial Code (HGB) for the period ended 31 December 2024 as well as the Group management report. Given that EnviTec Biogas AG, as a single entity, did not exceed the size criteria defined in section 267 para. 1 of the German Commercial Code (HGB), the company was able to again take advantage of the disclosure relief for small corporations and to forego an audit of the financial statements of EnviTec Biogas AG for the fiscal year 2024. However, the company had the financial statements, consisting of balance sheet, income statement and notes, subjected to a voluntary audit.

All Supervisory Board members received the management report, the financial statements and the audit reports in good time. These were intensively reviewed by us at the Supervisory Board meeting on 14 May 2025. The meeting on 14 May 2025 was attended by the Executive Board and the Supervisory Board as well as by the auditors of Kohl & Zerhusen GmbH. The auditor explained the main results of the audit and answered additional questions of the Supervisory Board. No objections were raised after our own audit and the talks with the Executive Board and the auditor. The Supervisory Board therefore concurred with the audit result of Kohl & Zerhusen GmbH and approved the separate and the consolidated financial statements prepared by the Executive Board for the period ended 31 December 2024 as well as the Group management report. The financial statements of EnviTec Biogas AG have thus been endorsed. Having scrutinised the Executive Board’s proposal for the allocation of the accumulated

profits, we endorsed this proposal as well.

EnviTec’s workforce continued to grow in the past year and comprised some 693 people at the end of 2024. We would like to welcome all new employees, express our thanks for the successful work and wish the Executive Board and the entire EnviTec team every success for the current fiscal year.

We would also like to thank you, dear shareholders, for your continued trust and hope that we can continue to count on your support also in the future.

Lohne, 14 May 2025

Ulf Hüttmeyer  
Chairman of the Supervisory Board

# GROUP MANAGEMENT REPORT

of EnviTec Biogas AG

EnviTec Biogas AG takes advantage of the relief for small corporations granted under section 326 of the German Commercial Code (HGB) and refrains from preparing and publishing a management report for the fiscal year 2024. The consolidated financial statements, which include the financial statements of EnviTec Biogas AG, do not contain a combined management report for EnviTec Biogas AG and the Group, but only a Group management report.

Fundamentals of the Group

Business model of the EnviTec Group

The EnviTec Biogas Group, headquartered in Lohne, Germany, is one of the leading manufacturers and operators of biogas plants. EnviTec is a full-service biogas supplier and covers the entire value chain for the production of biogas. This includes planning and construction of biogas plants and biogas upgrading plants as well as their commissioning. The company takes charge of biological and technical services on demand and also offers full plant and operational management. EnviTec also operates its own plants, making it one of the largest biogas and biomethane producers in Germany. EnviTec’s business activities also include the production and marketing of climate-neutral fuels (bio-LNG) for the transport sector as well as food-grade liquid carbon dioxide (LCO2).

EnviTec’s customer-oriented design has set standards in terms of reliability and profitability. EnviTec plants can produce clean energy from all types of feedstock materials – from organic waste to renewable resources. Established in 2002, the company is today active in 18 countries worldwide (including Germany).

Corporate structure and business segments

The Group is structured into three segments, Own Plant Operation, Service, and Plant Construction. All segments are closely integrated in strategic, technical and financial terms. The parent company of the Group

operates as a holding company, which provides services such as controlling, HR management, legal consulting, treasury and marketing for the three business segments. The business purpose of the parent company also includes the holding of equity investments in the Own Plant Operation segment as well as start-up financing of the respective project companies.

Own Plant Operation

The Own Plant Operation segment handles the generation of electricity, heat and gas in the company’s own biogas plants in Germany and abroad. 80 plants in Germany with an annual biogas production of approximately 1,500 GWh and another seven plants in other European countries with a capacity of 180 GWh make EnviTec one of the largest biogas producers in Germany. About one third of the annual biogas output is accounted for by biogas upgrading plants. With regular operations in BioEnergie Park Güstrow starting in the fiscal year 2023, the business activities also comprise the production and marketing of climate-neutral fuel (bio-LNG (liquefied natural gas)) for the transport sector and of food-grade liquid carbon dioxide (LCO2) in addition to the production of biogas and biomethane. The plants are usually operated in cooperation with local partners from the agricultural or energy sectors. These partnerships are characterised by a clear division of tasks, with every partner concentrating on their respective strengths. The local partner makes available the site, procures the feedstock materials and assumes responsibility for the daily operation of the plant. Once the plant is in operation, we perform all necessary maintenance work, provide biological and technical services and take care of the commercial management. At the end of the fiscal year, EnviTec Wind|Solar GmbH & Co. KG was established as a joint venture for the development and realisation of wind and solar projects. The aim is to add further renewable generation types to the existing plant portfolio successively.

Service

EnviTec’s Service segment provides all services related to the operation of biogas plants. As a full-service biogas supplier, we know all biogas generation processes in detail and our experts take care of starting up the plants and constantly control the biological processes. In our lab, feedstock materials and fermentation residues are checked for optimum quality so as to make recommen-

dations on boosting the plant’s efficiency. The range of services also includes regular plant inspections and training of the operators and their employees. EnviTec Biogas also offers partial maintenance services, which are charged by actual expense, or a full maintenance scheme including assumption of the repair cost risk.

Plant Construction

The Plant Construction segment builds biogas and biomethane plants for customers such as farmers, industrial enterprises and energy providers. We plan the plant, build it and start up the production of biogas. Our product portfolio covers the complete value chain of biogas plant engineering for plants from 75 kW. Besides large-scale plants, EnviTec also offers a compact plant design, which is marketed under the name of “EnviFarm Compact”. EnviThan is the company’s highly efficient and innovative technology for the upgrading of biogas. The processed biomethane may be fed directly into the natural gas grid, be used for heating or industrial purposes or as an environmentally friendly fuel alternative (bio-LNG or CNG – compressed natural gas).

Objectives, strategy and competition

Over the past years, we have attained a leading position in the biogas market and have already built more than 700 biogas and gas upgrading plants in 18 countries. Besides Germany, which is the main market, the Group’s most important geographical markets at present are the rest of Europe and the USA. Our strategic objective is to achieve sustainable growth and to expand our market position as an integrated supplier and operator of biogas plants. In this context, we attach top priority to the satisfaction of our customers and their involvement in the ongoing development of our plants in accordance with their wishes and requirements. The short to medium-term strategic positioning is strongly influenced by the ongoing discussion about the legal framework in the individual markets. The individual markets are very heterogeneous, which is primarily due to the different subsidisation models. We are closely monitoring developments in the individual countries so as to be able to respond quickly to changes in the operating environment.

| Corporate structure of EnviTec Biogas                                                 |                                          |                                                                                       |                                |                                                                                       |                                 |

\* various project companies of biogas plants; for details of the equity holdings and their amounts, refer to the notes

We want to explore new applications, processes and markets to achieve our goal of reducing our exposure to the prevailing subsidy conditions and generating a growing share of the Group’s earnings outside the subsidised biogas sector. We have defined the following cornerstones for sustainable growth:

Effective expansion of own plant operation

The expansion of the Own Plant Operation segment and of energy production are at the core of EnviTec Biogas’ corporate strategy. This segment of the Group already makes the highest contribution to EnviTec’s total revenues.

In Germany, EnviTec primarily relies on the optimisation of the existing plants and on selective capacity expansion. The purpose of this segment is to stabilise the Group’s revenue streams. The guaranteed feed-in tariffs of the biogas plants operated by EnviTec will expire between 2025 and 2035. In the 9th amendment to the German Renewable Energy Sources Act (EEG), which came into force in 2021, the German government has created a follow-up subsidy, which provides an option to continue operating plants within the EEG.

In addition, there are new possible uses for biogas, a flexible source of energy, in the industrial, heating and transport sectors, which enable continued operation outside the EEG. To this end, an investment programme was launched in 2021, which meanwhile amounts to over EUR 200 million, making it the largest programme of its kind in the company’s history. In addition to the successful completion of the comprehensive conversion of BioEnergie Park Güstrow, two further existing plants have since been converted and expanded into gas upgrading plants with integrated LCO2 production. These were completed in the first quarter of 2025. The conversion of another two plants is scheduled for completion by the end of 2025. Moreover, EnviTec intends to add further renewable energy generation types (wind and solar) to the existing plant portfolio.

Flexible market development to drive growth

EnviTec closely monitors worldwide developments in the biogas sector. As soon as sustainable structures arise in a market, we review them thoroughly and then make a timely decision as to whether or not we should enter this market. When making inroads into new mar-

kets, we rely on regional partners; this way, we combine our long-standing experience in plant construction and operation with their knowledge of the regional specifics. The downstream Service segment is also gaining importance as the international expansion continues. The aim is for the Plant Construction segment and the downstream Service segment to operate profitably also in difficult market phases, while maintaining sufficient capacity to seize new market opportunities as they arise. Besides erecting plants for the upgrading of biomethane, the conversion of existing plants and new possible uses in the industrial and heating sectors are becoming increasingly relevant. EnviTec is also continuously monitoring possibilities for expansion into other renewable energy sources.

Continuous adaptation and expansion of services offered

The Service segment is an important strategic pillar of EnviTec’s integrated business model and makes an important contribution to the successful performance of the company’s other segments. For the Plant Construction segment, the services we offer provide strategic advantages in project origination, as our comprehensive range of high-quality services allows us to ensure that the plants we build and complete can be operated efficiently and safely, generating high income for our customers. Our service teams also ensure the performance and cost-efficiency of our own plants, thereby supporting strong returns. The strategic integration of the segments is continuously expanded and refined. The focus is on expanding the biological and technical services in other European countries and the extension of the range of services for third-party plants. Moreover, the service operations will be progressively expanded to include new technologies, also aided by strategic partnerships.

Strengthening our innovation leadership

By consistently expanding our technological expertise, we consolidate EnviTec’s leading position within our industry and increase the environmental and economic attractiveness of our core product, biogas. Our objective is to continuously improve the operation of our plants and to reduce the amount of substrates they require without affecting their performance. In addition, EnviTec cooperates with established manufacturers to expand

the range of applications for biogas. By operating Germany’s largest integrated bio-LNG plant including CO2 liquefaction (LCO2), EnviTec is doing truly pioneering work as an independent supplier of climate-neutral fuel for commercial and heavy goods transport and as a producer of green carbon dioxide for the food industry.

Control system

Our corporate aim is to grow profitably. From this basis, we derive our key performance indicators: sales revenues/total output and return on equity. Earnings before tax (EBT) are the most important performance indicator. ERP (Enterprise Resource Planning) software is used throughout the Group for the fast and comprehensive presentation of all processes such as materials handling, finance and accounting, project controlling as well as sales and marketing.

The forecast for each fiscal year is prepared at the Group level for EBT, along with a consistent range for total output and revenue. The background for the latter is the project business in the Plant Construction segment: depending on the progress and invoicing status of construction projects at the balance sheet date, these projects are recognised as sales once the final invoice has been issued, or they are included in total output as part of inventory build-up. As this accounting effect is challenging to predict, the Group forecast is based on a common range for both performance indicators.

The EnviTec Biogas Group is moreover characterised by high quality standards. Since 2016, EnviTec Service GmbH has organised a quality management system according to ISO 9001:2015. The regular recertification took place in 2021 for the German and, for the first time, also for the Italian service subsidiary. In 2022, EnviTec Biogas S.r.l. in Italy also obtained successful certification to ISO 14001 and ISO 45001, which cover aspects such as environmental management, safety and occupational health and safety. EnviTec’s French subsidiary has held the Qualimetha seal since 2021, which also certifies compliance with high quality standards. In addition, EnviTec Bioenergie Güstrow GmbH was successfully certified to DIN EN ISO 22000 in the reporting period. The certification confirms compliance with international food safety standards in the production of food-grade liquid CO2 (LCO2).

Research and development

Ongoing development is key to sustainable success. We take this very seriously and continue to improve our technologies for a more flexible use of feedstock materials, for increasing the gas yield and for optimising the efficiency of our plants and improving our quality management.

By developing new plant concepts, e.g. the production of liquid biomethane as fuel for the transport sector and the liquefaction of carbon dioxide, we are opening up new business segments and make EnviTec fit for the future.

EnviTec’s in-house developments in recent years also include remote dialling systems with increased security against cyberattacks for biogas and gas upgrading plants and a specially developed EnviTec remote app, which is already being used in the majority of EnviTec’s domestic biogas and biogas upgrading plants.

The latest example of our development expertise is a continuous stirred tank reactor featuring a patented roof design. Its robust concrete construction allows for a fermenter volume exceeding 10,000 cubic metres while maintaining a compact footprint, making it ideal for locations with structural limitations. With this innovation, we are setting new benchmarks in large-scale plant engineering.

Economic report

Macroeconomic and industry-specific environment

Macroeconomic conditions

Amid ongoing geopolitical uncertainty, the global economy demonstrated a strong performance in the 2024 fiscal year, largely bolstered by the easing of monetary policy in many regions and a decline in inflation. According to the International Monetary Fund (IMF), global growth for the full year 2024 amounted to 3.3%, with variations across different regions. The gross domestic product grew by 1.8% in the industrialised countries and by 4.3% in the emerging and developing countries. In the eurozone countries, a drop in industrial output – especially in Germany – restricted GDP growth to 0.9%.

There were also notable differences between the markets that are particularly important for EnviTec. While economic output slightly decreased in Germany (-0.2%) and saw modest growth in France (+1.1%), the USA experienced a positive economic trend with a growth rate of +2.8%.

Development of the biogas market and effects on the EnviTec Group

Commodities market

After a sharp rise due to the war in Ukraine, prices in the German agricultural market fell in 2023 but have steadily increased again during the reporting period. The German Agricultural Commodities Index, compiled by Agrarmarkt-Informationen-GmbH (AMI), surpassed last year’s figure of 130 points, reaching over 140 points at the end of 2024 (base year 2020).

This increase was largely driven by higher price premiums for rapeseed, while producer prices for grains, for example, showed a downward trend. The upward trend has continued into the current fiscal year, with the price index reaching 147 points in April (April 2023: 133).

Harvest yields in Germany were below the previous year’s level in 2024, mainly due to unfavourable

weather conditions such as extreme rainfall in some regions. At the same time, the overall result is very heterogeneous as in the previous year, according to the German Farmers’ Association (DBV). Important energy crops such as silo maize benefited from the increased rainfall. Preliminary data indicates that the total harvest volume in 2024 was approximately 89.6 million tonnes, about 5.3 tonnes more than the previous year. In contrast, the rapeseed harvest fell by 0.6 million tonnes to 3.6 million tonnes, due to reduced cultivation areas and lower yields per hectare.

However, thanks to long-term supply contracts, high inventory levels and close cooperation with regional farmers, EnviTec benefited from moderate prices for the agricultural commodities used as feedstock in the reporting period. Furthermore, the supply of feedstock materials is expected to remain comfortable in the current fiscal year 2025 in spite of heterogeneous harvest yields. Overall, EnviTec anticipates that the higher costs of agricultural production (e.g. for diesel, fertilisers, wages) and the increasingly evident effects of climate change (e.g. drought) may lead to higher expenditure on raw materials in the coming years. In the short term, however, purchase prices are likely to stay moderate in the current fiscal year, partly due to falling inflation rates.

Biogas upgrading as well as bio-LNG and bio-CNG

Biogas upgrading is currently the most dynamic market for biogas plants. The biomethane generated is fed into the natural gas grid. It can thus replace natural gas in all end-user applications such as heat utilisation or in the industrial sector. Biomethane may also be used as a low-carbon fuel, especially in the transport sector. A new study published by the Fraunhofer Institute for Systems and Innovation Research (ISI), the Technical University of Hamburg (TUHH) and the Institute of Resource Efficiency and Energy Strategies IREES GmbH clearly shows that biomethane has the best greenhouse gas footprint. As a sustainable gaseous (bio-CNG) or liquid (bio-LNG) fuel, biomethane can save more than 90% of climate-damaging greenhouse gas emissions already today, while at the same time avoiding almost 100% of hazardous fine dust and nitrogen oxide emissions. Moreover, the use of biomethane in the mobility sector has negative greenhouse gas emissions if credits according to European legis-

lation (RED II) are taken into account. These credits result from the avoidance of emissions in agriculture by using residues in biogas plants.

Geographic markets

According to calculations by the International Energy Agency, global energy-related carbon emissions in 2024 were up 0.8% on the previous year to 37.8 billion tonnes, which marked yet another record (Germany / AG Energiebilanzen e.V. forecast of 18 October 2024: -3.3%). This trend clearly reflects the importance of using renewable energy sources to combat climate change. Both in Germany and internationally, this requires ambitious regulatory conditions. For manufacturers and operators of biogas plants, the legal frameworks are of great importance.

In **Germany**, the Renewable Energy Sources Act (EEG) is one of the laws that constitute the main legal basis for the biogas sector. In addition, the feeding of refined biogas into the natural gas grid is governed by the German Gas Grid Access Directive. The use of biomethane is governed by the regulations of the Federal Immission Control Act (BImSchG).

While the share of renewables in Germany’s gross electricity generation continued to increase sharply in 2024 (2023: 56.0%; 2024: 59.4%), the share of biogas rose slightly to 6.5% (2023: 6.2%), according to the Federal Statistical Office. The overall goal of the EEG amendment, which came into force on 1 January 2023, is to increase the share of wind, solar and hydropower in gross electricity to 80% by 2030. However, biogas and biomethane played a minor role in the last legislative period. The new coalition agreement between the CDU/CSU and SPD, signed in spring 2025, along with the ‘biomass package’ adopted in January 2025, marks the first genuine positive signals for the German biogas industry in years. The coalition agreement’s clear commitment to bioenergy, the increase in tender volumes and improvements in flexibility remuneration indicate a shift in direction. Nonetheless, significant challenges remain, particularly concerning the speed of implementation, system complexity and the ongoing lack of long-term investment certainty.

There are currently also new political incentives for the use of bioenergy in the transport and heat sector.

Germany had already set itself ambitious targets in the ordinance implementing the regulations on the greenhouse gas reduction quota (GHG quota) for the implementation of the EU RED II Directive: by 2030, the share of renewable energy in final energy consumption in the transport sector should be 25% (EU target: 14%). As a result, Germany’s LNG filling station network has grown strongly in recent years. A total of 196 LNG filling stations are now in operation throughout Germany (as at 2 May 2025).

The RED III Directive, which came into effect across Europe in November 2023, raises the previous target to at least 29% and mandates a 5.5% share for advanced biofuels and renewable fuels of non-biogenic origin. This Directive, which actually would have had to be implemented by May 2025, will now be implemented swiftly under the leadership of the new federal government. In their coalition agreement, CDU/CSU and SPD have also announced plans to further increase the GHG reduction quota and establish technology-neutral, straightforward, and investment-friendly conditions for alternative fuels. In addition to tax incentives, there will be a particular focus on enhancing the integrity and transparency of quota trading.

This is because a major inhibiting factor for the expansion of advanced fuels is the ongoing burden on the GHG quota market due to incorrectly declared or mislabelled biofuels. The resulting price distortions affect competition to the detriment of credible market players and undermine the climate policy effect of the instrument. Imports of falsely declared biofuels are also part of the problem. The federal government has announced that priority will be given to addressing these issues. EnviTec expressly welcomes this and, in its capacity as a member of an industry-wide association initiative, supports the call for an effective set of rules to ensure a fair and functioning GHG quota market.

In the heating sector, the amended version of the German Building Energy Act came into force on 1 January 2024. Since that date, the installation of heating systems covering at least 65% of the heat requirements from renewable energy sources has been mandatory. Biomethane-fuelled gas heating systems can meet this requirement provided that corresponding supply

contracts are in place. The German Building Energy Act, however, classifies biomethane as a limited resource and primarily recommends it for existing buildings.

The use of biomethane is generally also eligible for subsidisation under the Federal Funding for Efficient Buildings (BEG) programme, which was reformed in January 2024 – at subsidy rates of up to 70% in combination with bonus schemes. Despite this progress, the future prospects for the use of biomethane in the heating market remain unclear.

In summary, the economic and political conditions in Germany have recently improved in some areas but still remain challenging overall. Important progress was achieved with the ‘biomass package’ adopted in January 2025. The coalition agreement signed by the CDU/SPD government also contains the first explicit commitment to the importance of bioenergy in the electricity, heating and transport sectors. However, there is still no reliable long-term investment and planning certainty. Despite a generally positive subsidy backdrop, the future of biomethane remains unclear, especially in the heating sector. There is a lack of clearly defined expansion targets and stable signals. This also applies to the integration of bioenergy in the future power plant strategy. Although it is planned to also take climate-neutral solutions into account in future tenders, the exact structure has yet to be finalised. And while the coalition government has committed itself to being open to all technologies, it remains to be seen how the systematic discrimination against bioenergy – especially in the mobility sector – can be overcome during implementation. Establishing reliable, technology-neutral and investment-friendly conditions therefore remains a key concern for EnviTec Biogas.

Thanks to the early internationalisation of its business activity, EnviTec has, for many years, generated substantial revenues in all business segments not only in Germany but also in various **international markets**, each of which has its own national characteristics and legal requirements.

At the pan-European level, the European Commission’s REPowerEU Plan is of particular importance. The geopolitical situation and, most importantly, the situation on the energy markets, call for determined

action to speed up the energy transition. The aim of the plan therefore is to become independent of fossil energy sources from Russia as quickly as possible. To reach this goal, 20% of Europe’s gas imports from Russia are to be substituted with biomethane by 2030 among other things. A specific target of 35 billion Nm3 of biomethane by 2030 has been set, which would correspond to a tenfold increase in current production volumes.

A study on the implementation of the REPowerEU plan commissioned by Gas for Climate (GfC), a European association of leading gas transmission and production companies, estimates the Europe-wide (EU-27) biomethane production potential at 38 billion Nm3 in 2030 and 91 billion Nm3 in 2050. The five countries with the highest potential across both periods are Germany, France, Spain, Sweden and Italy. The study also shows considerable potential in Eastern European countries such as Poland.

Within Europe, **France** has been one of the most dynamic countries in the industry for years. A new certificate system for the promotion of biomethane production was introduced in 2024. Gas suppliers will be obliged to gradually provide biogas certificates starting 2026 – with targets of 0.8 TWh in 2026, 3.1 TWh in 2027 and 6.5 TWh by 2028. In addition, the European Commission has approved a state subsidy programme worth EUR 1.5 billion for new biomethane plants with an annual production of 25 GWh or more.

The **US biogas market** again grew at record rates in 2024. According to the American Biogas Council (ABC), 125 new biogas plants were taken into operation, 17% more than in the previous year. Investments in new projects increased by 40% to a total of USD 3 billion. A large number of the new plants are designed for the production of renewable natural gas (RNG), supported by government incentive schemes such as the Renewable Fuel Standard and the Californian Low Carbon Fuel Standards. A total of close to 2,500 biogas plants are now in operation in the USA, which has potential for over 20,000 additional sites. Despite dynamic market growth, the policies of the new US administration under Donald Trump are causing considerable investment uncertainty. The combination of regulatory rollback, trade policy actions such as

new tariffs and the questioning of existing subsidy programmes is a massive obstacle to project development. In addition, increased funding costs are adversely affecting investment conditions.

**Denmark** remains one of the most advanced countries in the world when it comes to the use of biogas. In April 2025, the share of gas from biomethane distributed via the gas grid exceeded 40% for the first time. A EUR 1.7 billion state subsidy programme and new tendering schemes are intended to enable gas requirements to be fully covered by renewable gases by 2030. In addition, stricter requirements have been introduced to limit methane emissions from biogas plants.

As the world’s largest carbon emitter, **China** offers huge market potential for renewable energy. The share of non-fossil energy sources in primary energy consumption is to increase to 25% by 2030 and to 90% by 2060. In the first quarter of 2025, electricity generation from renewable sources reached a record share of 39% of the national electricity mix for the first time – driven by strong increases in wind and solar energy. The country also has huge potential in the biogas and biomethane sector, in terms of both available biomass and political goals. So far, however, implementation has fallen short of expectations.

**Italy** remains the world’s third largest biogas producer. The Biomethane Regulation, which came into force in January 2023, has noticeably improved the conditions for new projects. Additional incentives followed in 2024 in the form of the FER2 Decree, which introduced effective tenders for biogas plants, and the RES2 Regulation, which provides funding schemes for smaller plants. Notwithstanding this progress, expansion has fallen short of political targets so far – especially because of administrative hurdles and delays in the operational implementation of the funding instruments.

### Business trend and segment performance

All of EnviTec Group’s business segments delivered a good business performance in the fiscal year 2024. After the exceptional years 2022 and 2023, which were characterised by unusually high electricity and gas prices, the market situation returned to normal in the reporting year but remains dynamic in a multi-year comparison. Growth is mainly driven by the strong demand for climate-friendly energy generation, the company’s ongoing internationalisation and the steady expansion of the advanced biofuel segment.

EnviTec’s Own Plant Operation segment continued the largest investment programme in the company’s history during the reporting year. Following last year’s start-up of the large-scale bio-LNG and LCO2 plant in Güstrow, the focus in 2024 was placed on converting another four of the company’s own plants into gas upgrading plants with integrated CO2 liquefaction. Two of these projects with a total investment volume of roughly EUR 50 million were successfully completed in the first quarter of 2025. The processing capacity of the plant in Forst was doubled and an additional CO2 liquefaction plant with an annual capacity of roughly 16,000 tonnes of food-grade bio-LCO2 was built. The Friedland site also uses the additionally generated biomethane for climate-neutral fuel production. The successful DIN EN ISO 22000 certification of the food-safe production in Güstrow in June 2024 represents another important development step in the expansion of the company’s bioenergy production expertise.

Several international markets provided important stimulation for a positive business trend in the Plant Construction segment. In the USA, a large number of current projects ensured high capacity utilisation. The US team is supported by cooperation with Collins Precast LLC, including on-site production of concrete containers. A large number of projects were successfully completed in the reporting period, especially for the US customer SJI Renewable Energy Ventures.

EnviTec also continued its successful internationalisation in Europe. The company successfully entered the Swedish market with the start-up of a 400 Nm³/h EnviThan gas upgrading plant. The fourth project for an Estonian

key account shows that EnviTec continued its successful market presence also in this region. The combined biogas and gas upgrading plant makes an important contribution to the regional circular economy and to the decarbonisation of the Estonian transport sector. The completion of the 100th EnviThan gas upgrading plant realised in the context of a project in Denmark was another important milestone. This coincided with the 12th anniversary of the technology, which was developed in collaboration with Evonik. Through continuous development, the system’s performance, energy efficiency and design have been noticeably optimised.

In Italy, the contract for another fully integrated biogas plant including EnviThan gas upgrading was signed in the fourth quarter of 2024. The project exemplifies the strong market position of EnviTec Biogas S.r.l, which today looks back on more than 40 MW of installed capacity and 15 years of experience in the Italian market.

In April 2024, the management of the Plant Construction segment underwent a reorganisation. Responsibility for the segment’s operational and strategic positioning is now shared by Maurice Markerink, Jakob Falkenstein, and CTO Jürgen Tenbrink.

To further diversify its business activities, EnviTec and partners jointly established EnviTec Wind|Solar GmbH & Co. KG in 2024. The aim is to add further renewable generation types to the existing plant portfolio successively.

After the end of the reporting period, in early February 2025, EnviTec Biogas acquired former Uniper subsidiary LIQVIS GmbH, along with its 18 LNG filling stations in Germany and France. Integrating this filling station infrastructure into EnviTec’s own value chain expands the company’s reach in the transport sector and provides a direct sales channel for bio-LNG produced at its own facilities.

Segment performance

The EnviTec Group operates in three segments: Own Plant Operation, Service, and Plant Construction. The Own Plant Operation segment accounted for 56.7% of total revenues in the fiscal year 2024 (previous year: 56.6%). At 28.3%, the Plant Construction segment’s contribution to sales revenues (including the holding company) was slightly lower than the previous year’s 31.7%. The Service segment’s relative share climbed to 15.0% (previous year: 11.7%).

Own Plant Operation

As anticipated, the fiscal year 2024 saw a decline in the performance of Own Plant Operation, the EnviTec Group’s most important segment, compared to the previous year which had been boosted by one-time effects due to unusually high energy prices from fixed supply contracts. The segment’s revenues declined by 18.8% to EUR 191.6 million (previous year: EUR 236.1 million). At EUR 6.6 million, other operating income exceeded the previous year’s level, while the EUR 2.3 million increase in inventories of biomethane produced in the company’s own plants but not yet sold was clearly below the previous year’s EUR 12.9 million. This results in total output of EUR 200.5 million for the fiscal year 2024 (previous year: EUR 255.0 million). It was primarily the year-on-year decline in electricity and gas prices that led to a reduced electricity trading volume. Additionally, GHG quota prices for biomethane continued to decline.

The cost of materials in the Own Plant Operation segment declined by 7.2% to EUR 115.7 million (previous year: EUR 124.6 million). The segment’s operating result thus amounted to EUR 84.9 million in the fiscal year 2024 (previous year: EUR 130.4 million). Personnel expenses increased to EUR 10.3 million (previous year: EUR 9.5 million), driven by the Own Plant Operation

segment’s ongoing business expansion and inflation. Depreciation and amortisation totalled EUR 18.3 million, up from EUR 15.3 million in the previous year, while other operating expenses amounted to EUR 16.1 million (previous year: EUR 29.2 million).

EnviTec operated a total of 87 plants in the fiscal year 2024 (previous year: 87). As in the previous year, the output of the company’s own plants amounted to 78.0 MW. Plants with a capacity of 58.7 MW were fully consolidated (previous year: 58.2 MW) and 19.3 MW accounted for using the equity method (previous year: 19.8 MW). Seven plants with a total output of 7.0 MW are operated abroad (previous year: 7.0 MW); the remaining 80 plants with a total output of 71.0 MW are operated in Germany.

The segment’s operating result (EBT) amounted to EUR 41.9 million in the fiscal year 2024 (previous year: EUR 80.7 million). The EBT margin in the Own Plant Operation segment (in percent of total output) stood at 20.9%.

Service

The performance of the Service segment remained at the same level as the previous year. The segment’s revenues rose by 4.0% to EUR 50.5 million (previous year: EUR 48.6 million). Finished goods and work in progress, which mainly comprise repowering and conversion projects (gas upgrading), declined only marginally, while other operating income stayed at the previous year’s level of EUR 1.8 million. Total output amounted to EUR 52.2 million (previous year: EUR 50.2 million).

Italy, the Czech Republic and Great Britain as well as Denmark, France and the USA remain the Service segment’s most important markets besides Germany. Outside Germany, plants with a total electrical output

of 241 MW (previous year: 230 MW) were serviced as of the end of 2024, which break down into technical services for 187 MW (previous year: 174 MW) and biological services for 54 MW (previous year: 56 MW).

In Germany, biological services were provided for plants with a total electrical output of 74 MW and 10 MW equivalent (EnviThan) (previous year: 74 MW / 12 MW) and technical services for plants with an electrical output totalling 274 MW and 16 MW equivalent (EnviThan) (previous year: 272 MW / 14 MW) as of the end of 2024.

At EUR 41.9 million, the cost of materials slightly exceeded the previous year’s level (EUR 41.4 million) in the fiscal year 2024. Personnel expenses in the Service segment increased by 13.7% to EUR 12.5 million (previous year: EUR 11.0 million), primarily as a result of the ongoing expansion of business activities in Germany and abroad as well as due to inflation. Other operating expenses stayed at the previous year’s level of EUR 4.3 million. The segment’s operating result (EBT) thus stood at EUR -7.4 million (previous year: EUR -7.3 million). As in the previous years, the negative segment result is primarily attributable to the fact that transactions with own plant operation companies are deducted from revenues in consolidation at Group level. This means that costs, especially the cost of materials, remain in the Service segment, whereas revenues generated with entities from the Own Plant Operation and Plant Construction segments are no longer included due to consolidation. On a stand-alone basis, the Service segment again generated a positive operating result.

Plant Construction (including the holding company)

EnviTec’s Plant Construction segment generated revenues of EUR 95.6 million in the fiscal year 2024 (previous year: EUR 132.1 million). This is mainly attributable to a lower number of completed construction projects that were finally invoiced in accordance with the German Commercial Code (HGB). At EUR 99.7 million, total output, which takes plants under construction into account through changes in inventories, was also below the previous year’s very dynamic EUR 140.5 million. France and the USA are currently the most important markets for EnviTec’s Plant Construction segment. Demand also remains high in Scandinavia and the Baltic states. The company currently sees high development potential in Southern Europe, which it plans to further expand in the future.

The cost of materials in the Plant Construction segment declined to EUR 53.2 million (previous year: EUR 84.1 million), primarily due to the lower total output. Furthermore, the previous year’s cost of materials included high-priced technological components for the conversion of the plant in Güstrow. At EUR 20.8 million, personnel expenses slightly exceeded the previous year’s EUR 19.9 million. Other operating expenses amounted to EUR 14.0 million (previous year: EUR 19.5 million). The segment’s operating result (EBT) thus stood at EUR 9.5 million (previous year: EUR 14.8 million).

Order situation in the Plant Construction segment

At the end of December 2024, the Plant Construction segment’s order book totalled EUR 129.0 million, down 38.0% on the previous year (EUR 208.0 million). Of this amount, EUR 93.5 million is already under construction and partially included in changes in inventories. EUR 49.5 million relates to the international biogas markets. Most of these are orders in France, the USA and Denmark. The fact that the order backlog in the Plant Construction segment is lower than in previous periods reflects the unusually high order volume in the US market as well as the associated high utilisation of plant construction capacity throughout the year to complete the projects.

About 65.5% of the orders at the balance sheet date were placed by customers from the agricultural sector (previous year: 53.5%), with about 7.5% placed by industrial customers (previous year: 6.5%). The remaining orders were placed by the Own Plant Operation segment.

Employees

Respect, support and individual development form the foundation of EnviTec’s corporate culture. Well-trained, motivated employees are the most important asset and the basis for long-term corporate success. Sustainable human resources development therefore is the company’s top priority.

In the reporting period, the number of employees climbed from 686 to 693 on 31 December 2024. The headcount in the Plant Construction segment rose slightly to 229 (previous year: 222). The Own Plant Operation segment had 219 employees (previous year: 217). The Service segment’s headcount declined from 200 to 197. The holding company, EnviTec Biogas AG, had 48 employees (previous year: 47). Most employees (557) again worked in Germany (previous year: 546). As at the balance sheet date, 136 people were employed at the foreign locations of EnviTec Biogas (previous year: 140).

The growing internationalisation of the business means that intercultural openness and mobility are important prerequisites. The aim is to attract and retain employees who respond flexibly to new requirements and confidently represent EnviTec, also in an international context.

The company’s employment policy is geared to meeting both corporate requirements and individual interests. Performance-oriented remuneration schemes and internal further training programmes open up attractive opportunities for development. They are complemented by social benefits and activities that promote a sense of community and a corporate culture characterised by reliability and fairness.

EnviTec effectively attracts young talent through training, dual study programmes and the cooperation with the Private University of Applied Sciences for Business and Technology (PHWT) in Vechta. Our locations in Lohne and Saerbeck offer an attractive living and working environment – with regional roots and an international focus.

Earnings position

Comparison of the actual performance with the originally projected performance

During the reporting period, the EnviTec Group essentially performed in line with expectations. In its May 2024 forecast, EnviTec’s Executive Board had projected total output (or revenue) of between EUR 360 million and EUR 400 million as well as earnings before taxes (EBT) of between EUR 40 million and EUR 50 million. Total output of EUR 352.5 million and EBT of EUR 44.0 million mean that the business volume is slightly below the originally projected range, while earnings are within the expected range. The anticipated year-on-year decline is primarily due to the scheduled non-recurrence of positive one-time effects in the Energy segment. Another reason is the excessive drop in GHG quota prices for biomethane produced by the Own Plant Operation segment. At the same time, the results confirm the fact that the Group’s profitability has been strengthened considerably as part of the growth strategy of the past years and is now clearly higher than in earlier years.

Sales revenues

Own Plant Operation remains the Group’s largest segment. Revenues in this segment declined by 18.8% to EUR 191.6 million (previous year: EUR 236.1 million), primarily due to lower electricity and gas prices as well as declining GHG quota prices for biomethane. Total output thus dropped by 21.4% to EUR 200.5 million (previous year: EUR 255.0 million). Sales revenues in the Service segment rose by 4.0% to EUR 50.5 million (previous year: EUR 48.6 million). Total output improved by EUR 2.0 million to EUR 52.2 million (previous year: EUR 50.2 million). Following an exceptionally dynamic performance in the previous year, sales

revenues in the Plant Construction segment (including the holding company) fell to EUR 95.6 million (previous year: EUR 132.1 million). Total output, which also includes plants under construction via changes in inventories, declined by 29.0% to EUR 99.7 million (previous year: EUR 140.5 million).

The performance of all three segments of EnviTec sent consolidated revenues falling by 19.0% to EUR 337.7 million (previous year: EUR 416.8 million). The Group’s total output also declined by 20.9% to EUR 352.5 million, down from the previous year’s record of EUR 445.8 million. The decline was essentially in line with expectations, given that the previous year had clearly been influenced by one-time effects.

Domestic revenues amounted to EUR 214.9 million in the fiscal year 2024 (previous year: EUR 254.7 million). Sales revenues generated outside Germany declined from EUR 162.1 million in the previous year to EUR 122.8 million. Italy and the USA accounted for the largest share of international revenues. Revenues generated in these markets amounted to EUR 18.4 million and EUR 70.2 million, respectively, in the reporting period.

Expenses

The cost of materials is the main expense item for the EnviTec Biogas Group. In the fiscal year 2024, this item declined by 15.7% to EUR 210.8 million at Group level (previous year: EUR 250.1 million). At 54.9%, the Own Plant Operation segment accounted for the biggest share. In the previous year, this share was 49.8%. While the cost of materials in the Own Plant Operation segment declined moderately, the decline in the Plant Construction segment was much more pronounced as a large number of projects were completed. At EUR 141.7 million, gross profit was also lower than the previous year’s EUR 195.7 million. Personnel expenses rose to EUR 43.7 million (previous year: EUR 40.5 million) as a result of the Group expanding its workforce as well as due to inflation. Personnel expenses as a percentage of sales revenues thus stood at 12.8% (previous year: 9.7%). In relation to total output, they amounted to 12.4%, compared to 9.1% in the previous year.

Depreciation/amortisation increased significantly by 16.1% to EUR 22.2 million in the reporting period (previous year: EUR 19.1 million). The increase is primarily

due to the systematic depreciation of BioEnergie Park Güstrow. Other operating expenses, which include operating, administrative and selling expenses, declined by 35.1% to EUR 34.4 million (previous year: EUR 53.0 million).

Earnings

As had been anticipated, the EnviTec Group’s earnings performance in the fiscal year 2024 was below the level of the previous year, which had been influenced by one-time effects. Earnings before interest, taxes, depreciation and amortisation (EBITDA) totalled EUR 67.3 million (previous year: EUR 116.1 million). The operating result (EBIT) amounted to EUR 41.5 million (previous year: EUR 83.1 million). Interest expenses increased to EUR 3.3 million in the fiscal year 2024 (previous year: EUR 2.5 million). Interest income amounted to EUR 2.2 million, compared to EUR 2.0 million in the previous year. This resulted in a net financial result of EUR -1.1 million (previous year: EUR -0.5 million). The result from equity accounted investments amounted to EUR 2.9 million (previous year: EUR 13.6 million). There were no write-downs on financial assets in the fiscal year 2024 (previous year: EUR 8.4 million). Earnings before taxes (EBT) thus stood at EUR 44.0 million, compared

to EUR 88.2 million in the fiscal year 2023. Income tax expenses declined to EUR 14.0 million (previous year: EUR 23.9 million). Consolidated net income for the year thus amounted to EUR 29.8 million (previous year: EUR 64.1 million).

Earnings per share declined from EUR 4.31 in the previous year to EUR 2.01 in the reporting year.

As anticipated, the record results of the fiscal years 2022 and 2023, which were considerably influenced by one-time effects, could not be achieved again in the fiscal year 2024. At the same time, the EnviTec Group used the developments in the previous years to enter new business segments and geographic markets, thus laying a strong basis for a continued successful business performance. The current results confirm the fact that the Group’s profitability has been strengthened considerably as part of the growth strategy of the past years and is now clearly higher than in earlier years.

In the single financial statements of EnviTec Biogas AG, accumulated profits amounted to EUR 118.9 million. The Executive Board and the Supervisory Board of EnviTec Biogas AG propose to distribute a dividend of EUR 0.50 per share for the fiscal year 2024.

For computational reasons, rounding differences may occur in the tables and charts in this Annual Report.  
\*Including earnings contribution from equity accounted investments and other investments

Net worth position

As of the balance sheet date 31 December 2024, the EnviTec Group’s total assets amounted to EUR 413.8 million, down EUR 3.5 million on the prior year reporting date.

On the assets side, fixed assets rose by 13.3% to EUR 205.7 million. The value of intangible assets increased slightly from EUR 8.0 million to EUR 8.3 million. The value of tangible assets rose significantly by 22.9% to EUR 174.2 million as of 31 December 2024. This was mainly attributable to the increase in payments on account and plants under construction, which reflects the conversion and expansion of the company’s existing plants under the investment programme.

Financial assets declined from EUR 31.8 million on 31 December 2023 to EUR 23.2 million at the end of 2024, with the value of equity accounted investments, which had increased in the previous year, now declining by EUR 7.2 million to EUR 16.6 million. The decline is due to reduced earnings contributions resulting from declining electricity and gas prices. Other loans decreased from EUR 6.4 million to EUR 4.4 million, while loans to companies in which an interest is held rose slightly from EUR 1.0 million to EUR 1.3 million.

Current assets fell by 11.5% to EUR 202.7 million, with inventories growing by EUR 7.5 million to EUR 95.4 million. This includes raw materials and supplies, which rose by EUR 8.7 million to EUR 72.3 million, essentially due to an increased purchasing volume resulting from higher capacity utilisation of the Güstrow plant and to increased stocks resulting from better harvest yields. The value of work in progress declined by EUR 27.4 million to EUR 24.5 million, which is attributable to the final invoicing of a large number of plant construction projects. Receivables and other assets rose by 44.6% to EUR 80.6 million as of the reporting date due to the quarterly billing of GHG quota contracts. Cash and cash equivalents declined from EUR 85.3 million on the prior year reporting date to EUR 26.6 million on 31 December 2024.

Financial position

As of 31 December 2024, the liabilities side of the EnviTec Group’s balance sheet again showed a comfortable equity capitalisation of EUR 184.4 million. Compared to the prior year reporting date, equity declined by 8.1% (31 December 2023: EUR 200.6 million) as a result of the high dividend payment for the fiscal year 2023. The equity ratio stood at 44.6% (31 December 2023: 48.1%). The company thus still has a very solid foundation on which to continue its successful expansion in the international biogas markets.

Total liabilities amounted to EUR 175.6 million (31 December 2023: EUR 151.4 million). Liabilities to banks increased particularly strongly to EUR 120.7 million (31 December 2023: EUR 76.1 million) in the context of the implementation of the investment programme in the Own Plant Operation segment. Trade liabilities rose from EUR 22.9 million on 31 December 2023 to EUR 26.4 million on the reporting date. Other liabilities increased from EUR 9.5 million to EUR 12.8 million. In contrast, advance payments received on orders dropped from EUR 25.3 million to EUR 6.7 million as a large number of plant construction projects were finally invoiced. Liabilities towards companies in which an interest is held decreased from EUR 17.5 million to EUR 9.0 million.

Provisions decreased from EUR 62.2 million at the end of 2023 to EUR 51.6 million on 31 December 2024 as a result of reduced tax provisions (EUR -10.8 million). At EUR 27.6 million, other provisions were on a par with the previous year.

Investments

In 2024, the Group’s investments in intangible and tangible assets amounted to EUR 55.3 million, compared to EUR 55.4 million the previous year. As in the previous years, the biggest portion of the company’s investments related to the Own Plant Operation segment. EnviTec projects lower investments for 2025.

Cash position

Cash and cash equivalents declined to EUR 26.6 million as of the balance sheet date (previous year: EUR 85.3 million). It should be noted that the Group achieved exceptionally high profitability in the two previous years due to high electricity and gas prices, which moreover enabled a dividend payment of EUR 44.6 million in the reporting period. In connection with the ongoing investment programme, the company’s liquidity is expected to normalise at the current level. EnviTec Biogas had unused overdraft facilities of roughly EUR 15.8 million as of 31 December 2024.

Cashflow

At EUR -10.4 million, the EnviTec Group’s net cash flow was clearly below the previous year’s EUR 83.3 million, while gross cash flow also declined significantly. This was due to the weaker result and higher income taxes paid. In addition, the increase in inventories and the decline in other liabilities and trade liabilities led to an increased working capital tie-up. Net cash used in investing activities decreased slightly to EUR 43.3 million (previous year: EUR 49.9 million). At EUR 15.7 million, net cash used in financing activities in the reporting period was at the previous year’s level (EUR 17.5 million). This was due to the repayment of financial liabilities

of EUR 15.3 million, a dividend payment of EUR 44.6 million and new borrowings of EUR 49.1 million.

Disclosures regarding the purchase and holdings of treasury shares

The parent company of the Group, EnviTec Biogas AG, Lohne, holds 150,000 shares in the company. Please refer to the corresponding disclosures in the notes to the consolidated financial statements pursuant to section 315 para. 2 sentence 2 of the German Commercial Code (HGB) and section 160 para. 1 No. 2 of the German Stock Corporation Act.

Opportunity and risk report

The conscious and controlled management of risks and opportunities is the basis for successful long-term corporate development. The changing global energy market opens up opportunities for EnviTec Biogas which the company wants to exploit. Opportunities naturally entail risks, which must be adequately managed and minimised to ensure successful corporate development. EnviTec Biogas has therefore introduced a management system which systematically identifies potential risks and shows measures to minimise these risks. All executive staff are trained in identifying risks and taking appropriate responses. They encourage their employees to think in an entrepreneurial manner and to avoid risks. Risk management forms the basis for corporate control and helps to achieve the company’s objectives. It is an integral element of all business processes and business units.

Opportunities

Sector-specific opportunities

Across the globe, continuously growing demand for energy contrasts with the fight against climate change, which makes the importance of using renewable energy sources such as biogas more than obvious. In addition, there are geopolitical conflicts, which have brought the issue of supply security more strongly into focus, especially in Europe. Russia’s invasion of Ukraine, for instance, prompted the European Commission to present its REPowerEU plan in March 2022. It includes proposals on how Europe can become independent of fossil energy sources from Russia well before 2030. As part of the diversification of the gas supply, the REPowerEU plan aims to reduce net greenhouse gas emissions by a least 55% by 2030 and to achieve climate neutrality by 2050. In this context, the European Commission also envisages an important role for biomethane, which will open up great growth potential for the biogas industry in the future.

As a renewable energy source that can cover base load and peak load requirements, biogas can be produced locally and is a flexible and reliable supplier of electricity

and heat. Moreover, the production of biogas facilitates the intelligent use of biological waste. Biomethane is a highly versatile fuel that can make a sustainable contribution to decarbonisation in all consumption sectors, especially in the transport and heating sectors, where no satisfactory contributions to carbon reduction have yet been achieved. The gradual implementation of the RED II Directive in the EU member states has led to a noticeable increase in demand for advanced biofuels such as bio-CNG and bio-LNG across Europe – including Germany. However, the implementation of the RED III Directive, which provides for further increased quotas for advanced biofuels, is still pending in several European countries. In Germany, its implementation has at least been announced in the coalition agreement of the new federal government. Its implementation would create additional market incentives and promote the current position and further expansion of this business segment.

With the expansion of BioEnergie Park Güstrow, EnviTec has already secured an advantageous position in the upgrading of bio-LNG for the transport sector. Another two of the company’s own plants have already been converted for bio-LNG production, and additional plants will follow. As EnviTec continues to internationalise into the most promising biogas and biomethane markets, the company will expand and strengthen its position in international markets. Opportunities for the construction of new plants arise in established markets such as France, Denmark, Italy or the Baltic states. Outside Europe, the USA is currently the most attractive market. Other potentially interesting markets are Sweden, Poland, Spain and Indonesia. The switch to biomethane projects continues to gain importance also internationally, and EnviTec is well positioned for further expansion thanks to its proprietary EnviThan technology.

In established markets, opportunities arise where competitors are unable to respond appropriately to short-term changes in the general framework or successfully face the competition. This will open up opportunities primarily for EnviTec’s Service segment, in the area of conversion and upgrading of existing plants and for the company’s Own Plant Operation segment to win new customers as well as market share.

Strategic corporate opportunities

Strategic opportunities for EnviTec Biogas will arise from the ongoing internationalisation of business activity. The company will continue to seize opportunities in the international biogas markets. On the one hand, the focus is on markets in which the expansion of biogas production and upgrading plants is progressing and where EnviTec, as a leading plant manufacturer, can benefit from this general development.

The biggest growth opportunities currently exist in various member states of the European Union. In connection with the implementation of the REPowerEU plan, EnviTec has the opportunity to expand its existing business activities and sustainably tap into new markets. There are also considerable opportunities for EnviTec in the USA, which are, however, diminished by the current political and economic environment, at least in the short term.

From a technical point of view, growth opportunities for EnviTec will arise primarily in the bio-LNG market. Bio-LNG is mainly used for medium and heavy trucks covering long distances. The start of operation of BioEnergie Park Güstrow has put EnviTec in a promising position here. Other existing plants operated by the company have been and are currently being converted to produce bio-LNG. In general, the market for bio-CNG and bio-LNG offers plant operators the opportunity to continue operating their plants economically as biomethane producers after the EEG subsidy expires.

EnviTec is also continuously monitoring possibilities for expansion into other areas of renewable energy. In recent months, further steps have been taken to strategically expand the business model with the establishment of a joint venture for wind and solar power and the acquisition of LIQVIS GmbH’s LNG filling station infrastructure. Both activities serve the goal of systematically tapping complementary value creation potential along the climate-neutral energy and fuel supply chain.

Risiks

Risk management

EnviTec Biogas has laid down the tasks, reporting and organisational structures in a Risk Management Manual. This Manual defines risks and describes the complete risk management process. The task of the Risk Officers is to assess and monitor risks in accordance with defined categories so as to be able to take countermeasures if required. Based on a regularly updated risk inventory, these are reviewed at quarterly intervals. Any risks that arise suddenly and have a notable impact on the company’s business performance, earnings position, or enterprise value are immediately reported to the Executive Board, which will then take the necessary decisions. In the context of its reports to the Supervisory Board, the Executive Board continuously informs the latter about the main risks and outlines the measures taken to manage these risks.

EnviTec is a company operating in a dynamically changing international market environment. This gives rise to risks which are inextricably linked with the business activities. As a matter of principle, risks arising from changes in general conditions or technological developments cannot be completely avoided. EnviTec’s risk management system is therefore constantly being adapted to the latest developments. The Group does not take risks that are unrelated to the key objectives of corporate development.

These key objectives include:

- development and implementation of the business model
- and sustainable corporate value creation,
- securing liquidity.

The Executive Board has no knowledge of any risks jeopardising the continued existence of the company. Individual risks capable of jeopardising the corporate value and the business performance are described below.

Procurement risks

Several developments have repeatedly caused problems in the procurement markets in recent years. Starting with the disruption of supply chains during the COVID-19 pandemic, the war in Ukraine and the lockdowns

in China put additional pressure on procurement markets from the beginning of 2022. Although the situation has normalised recently, procurement risks may arise in the future and have an impact on EnviTec, especially with regard to the construction of biogas plants. EnviTec sources most of the components required for this purpose from suppliers. This could lead to supply shortages for the components. Short-term price increases and/or difficult pricing pose another risk. In 2024, the inflation rate in Germany stood at 2.2% on average. Experts at the ZEW – Leibniz Centre for European Economic Research in Mannheim expect a rate of 2.3% for 2025. Prices in the commodity markets also picked up sharply, especially due to the war in Ukraine. EnviTec aims to counteract these developments by maintaining close business relationships and signing fixed-price agreements.

Supply bottlenecks may also result from environmental disasters or adverse weather conditions affecting large areas. This- may lead to lost harvests of the substrates used in the operation of biogas plants, i.e., renewable or organic resources and waste. Prices for the required feedstock materials may rise as a result of high demand. This could jeopardise the cost-efficiency of the biogas plants operated by EnviTec’s Own Plant Operation segment. This risk is being mitigated, among other things, by long-term delivery contracts with regional agricultural operations and high inventories.

In summary, EnviTec currently classifies procurement risks as operational risks that are likely to occur in the Own Plant Operation segment due to rising commodity prices. The potential impact on the Group is considered to be significant for the Own Plant Operation segment and moderate for the Plant Construction segment.

Environmental and industry risks

The financial success of the products and services offered by EnviTec Biogas depends on the promotion of renewable energy sources under appropriate policies and regulations. In Germany, these include the Renewable Energy Sources Act (EEG). Most of the other member states of the European Union and a number of non-EU countries have also put in place regulations comparable to the German Renewable Energy Sources Act (EEG). At the same time, the biomethane sector will become one of the most important fields of application

for biogas in the coming years. The regulations of the Federal Immission Control Act (BImSchG) are very important in this context. In addition, the feeding of refined biogas into the natural gas grid is governed by the German Gas Grid Access Directive.

Any changes in the statutory conditions governing the erection, enlargement and operation of biogas plants, both in Germany and in other countries, may have a negative effect on the net worth, financial and earnings position of EnviTec Biogas.

Apart from the legal framework, some parts of the general public as well as certain special interest groups have reservations about biogas plants and their construction. This is why, in June 2009, EnviTec Biogas and other companies established the German Biogas Council, which acts as a source of advice and port of call for policy-makers, the corporate sector and special interest groups and aims to eliminate prejudices. The aim is to promote the agricultural and industrial orientation of biogas technology and to represent the industry’s shared interests with regard to legislation and products. EnviTec is also involved in a number of other national and international industry associations in order to actively shape the dialogue with politicians, the general public and market players.

EnviTec Biogas intends to expand its international activities and thus exploit growth opportunities, which gives rise to a number of risks. These include potential changes in the political, economic, social, legal, cultural and fiscal conditions prevailing in individual countries. In addition, there is the risk of unexpected changes in local laws and regulations, which may have an adverse impact on the business activity of EnviTec Biogas.

Some countries in which the company is already active or plans to become active are considerably less stable in economic, political and legal terms than the member states of the European Union. Inadequate legal and administrative systems may make it more difficult or even impossible to obtain official permits, hamper the completion of customers’ orders or jeopardise the enforcement of financial and other claims. The company has built up substantial know-how in its foreign representative offices and the Group management team to anticipate changes and prepare itself and its customers accordingly. Management will not contem-

plate investments in countries in which EnviTec Biogas sees no opportunities following close and continuous monitoring; existing investments in such countries will be terminated.

In summary, EnviTec classifies the above environmental and industry risks as strategic risks, whose occurrence is likely overall, but whose impact on the business activity as well as the financial and earnings position of the Group would be moderate if such a risk occurred.

Personnel risks

The growth of EnviTec Biogas depends on highly qualified employees. Growth will be slowed if it is not possible to hire well trained employees in a timely manner or to retain key qualifications in the company. The Group consistently and intensively uses recruitment tools and constantly coordinates the company’s hiring needs with individual departments.

At the same time, the company continues to train and educate its employees and expands its knowledge by cooperating with the scientific departments of technical colleges.

In summary, EnviTec currently considers personnel risks to be likely to occur and their impact on the Group to be moderate if they occurred.

Competitive risks

Existing or future competitors may try to win market share by pursuing an aggressive pricing or acquisition policy. This competition is made even fiercer by the continuous reduction in the minimum remuneration paid for electricity which is fed into the public grid from biogas plants in accordance with the German Renewable Energy Sources Act (EEG) and the associated imperative to permanently cut costs, as well as by similar trends in other countries.

In summary, EnviTec currently classifies competitive risks as strategic risks, whose occurrence is likely, but whose impact on the Group would be low if they occurred.

Technological risks

Biogas plants are subject to rapid technological change. The market for biogas plants is being driven by constantly improved new products and services. It is

characterised by short product lifecycles and frequently changing customer requirements. We assume that this will continue to be the case going forward. By introducing new products or services earlier or under more favourable conditions than our company, our competitors could gain a lead or secure exclusive rights to new technologies. The future success of EnviTec Biogas therefore depends on its ability to continuously develop new products and services and to enter into technology partnerships.

In summary, EnviTec currently classifies technological risks as strategic risks, whose occurrence is likely, but whose impact on the Group would be low if they occurred.

Order, sales and default risk

The effects of macroeconomic developments on the company’s customers and its order and sales situation are difficult to assess. A decline in the order backlog due to cancellations or a lack of new orders would have an impact on the future sales and earnings position. EnviTec Biogas has intensified its communication with its customers to anticipate any potential postponement of orders and supports its customers in the approval processes.

When marketing and selling electricity and gas generated from biogas, the company takes out long-term sales and purchase positions. These positions might incur significant losses in an oversupplied (long) or under-supplied (short) market environment combined with a negative market trend. At this time, all relevant positions are covered by counterparties from within the Group with excellent credit standing or provisions have been established for potential risks. To prevent the loss of receivables, the company has optimised its receivables management process as well as the creditworthiness review.

In summary, EnviTec currently classifies the order, sales and default risk as a strategic risk, whose occurrence is unlikely. Moreover, the potential impact on the business activity as well as the financial and earnings position of the Group is considered to be low.

Overall, EnviTec sees no material risks arising from order and sales management.

Corporate growth and internal risks

The EnviTec Group has an internal controlling and risk management system regarding the accounting process which defines suitable structures that are implemented in the organisation. This system is designed to ensure timely, consistent and correct accounting of all business processes and transactions. It also guarantees compliance with legal standards, accounting regulations and internal instructions.

The consolidated accounts are produced centrally based on the data of the consolidated subsidiaries. Specially trained employees are responsible for consolidation. The management teams of the Group’s member companies are responsible for implementing and monitoring the local internal controlling systems. Generally, it should be noted that an internal controlling system, irrespective of the size and structure, does not provide 100% security that material misstatements in the accounts are avoided or identified. However, it serves to prevent with sufficient certainty that corporate risks have a material effect. Future processes will make high demands on our organisation and will tie up substantial management resources. There is a risk that the company’s organisation and structure will be unable to keep pace with the company’s requirements. The company therefore attaches top priority to developing and refining the necessary organisational, information and management structures.

Currency risks

All sales and purchases are made in the Group currency, the euro. This does not entail major currency risks. Currency risks may arise in conjunction with transactions of the subsidiaries in Great Britain, the Czech Republic, Sweden, Indonesia and the USA. Exchange rates are therefore monitored on an ongoing basis to ensure that currency hedging measures can be taken at an early stage.

In summary, EnviTec currently classifies currency risks as operational risks, whose occurrence is likely and whose impact on the Group would be moderate if they occurred.

Risks from financing instruments

All non-current liabilities of the EnviTec Group carry predominantly fixed interest rates and are therefore exposed to fair-value risk, meaning that potential interest rate increases do not represent a risk to the company.

Forecast

Macroeconomic and industry-specific environment

Macroeconomic trend: Economic climate expected to cloud over

The world economy proved to be robust in the past fiscal year and was able to grow despite ongoing challenges. However, trade policy uncertainties in particular are clouding the economic outlook for 2025 as a whole. According to its latest forecast (April 2025), the IMF expects growth of 2.8%, which is a significant downward revision from the 3.3% forecast at the beginning of the year. The rate of expansion is hence still below average by historical standards. This is primarily due to existing geopolitical tensions and protectionist measures. In particular, the introduction of comprehensive tariffs under the new US administration is having a significant impact on trade and therefore also on global supply chains. For the industrialised countries, the IMF forecasts economic growth of 1.4%. The gross domestic product of the emerging and developing countries is expected to grow by 3.7%. An increase by 0.8% is projected for the eurozone countries. A clearly subdued economic trend is again expected in the markets that are particularly important to EnviTec such as Germany (0.0%) and France (+0.6%). The US economy is also expected to slow down significantly. The IMF now only expects it to grow by 1.8% in 2025, after forecasting GDP growth of 2.7% at the beginning of the current year.

Biogas market: Transformation of energy markets opens up new growth opportunities – companies need stable and fair conditions

The international conditions for the biogas industry have recently developed in a very ambivalent manner. In Germany, the political and regulatory conditions have recently improved in some areas. The ‘biomass package’ adopted in January 2025 and specific commitments to bioenergy in the new federal government’s coalition agreement mark the first substantial progress in years. Nevertheless, the situation remains complex:

There is still a lack of long-term investment and planning security, particularly in the transport and heating sector and in the context of the national power plant strategy. The future implementation of the good approaches in the coalition agreement will show whether new fair and feasible conditions for bioenergy that are open to all technologies will actually be created.

Significant impetus is currently being provided by the mobility sector: the implementation of the European RED III Directive, rising GHG quotas and a growing LNG filling station network could further improve the conditions for the use of bio-LNG and bio-CNG. With the acquisition of LIQVIS, EnviTec is positioning itself consistently as a provider of climate-neutral fuel solutions along the entire value chain.

Growing market opportunities are provided not only by the continuation and expansion of existing biomethane applications, i.e., in the EEG feed-in and heating sectors, as an additive product for household customers or in the transport sector, but also by the further substitution of natural gas, i.e., in the industrial sector and for the generation of electricity.

At the European level, the REPowerEU Plan continues to provide the central framework for the accelerated expansion of biomethane production. The target of 35 billion Nm³ by 2030 and new studies estimating a technical potential of up to 91 billion Nm³ (Gas for Climate) or 111 billion Nm³ (European Biogas Association) emphasise the strategic importance of biogas for the European energy supply.

## Performance of EnviTec Biogas

In view of the continued positive industry trend, the management of EnviTec Biogas is confident about the coming years. Thanks to its international presence, technological expertise and integrated, profitable business model, the Group is strategically well positioned to continue to exploit the opportunities that arise in the biogas sector and to expand its business activities in a targeted manner. Significant growth impetus comes from the increasing demand for climate-neutral energy sources, political support for biomethane at the European level and the ongoing expansion of the company’s own portfolio.

The production and marketing of advanced biofuels remain a key growth area. With the successful conversion of the Forst and Friedland sites, which was completed in the first quarter of 2025, EnviTec has further expanded its bio-LNG and LCO2 production. Another two of the company’s own plants are currently being converted and are to be completed by the end of 2025. The acquisition of LIQVIS GmbH at the beginning of 2025 marks another potentially strategically significant step towards deepening the value chain in the transport sector. The ongoing burden on the GHG quota market due to incorrectly declared or mislabelled biofuels from Asia remains a major inhibiting factor. The resulting price distortions affect competition to the detriment of credible market players and undermine the climate policy effect of the instrument. The new federal government has at least announced that priority will be given to addressing these issues.

By establishing EnviTec Wind|Solar GmbH & Co. KG, the Group has moreover expanded its business model to include wind and solar power projects. The integration of additional types of renewable energy generation complements existing business activities and strengthens the company’s strategic positioning in the increasingly cross-sectoral energy industry.

In the international Plant Construction segment, EnviTec is also continuously opening up new markets. The successful expansion into Sweden and the Baltic States, along with interesting new business opportu-

nities in Southern Europe, underlines the demand for EnviTec technologies.

In view of these developments and a good start to the current fiscal year, EnviTec expects a satisfactory development in the fiscal year 2025. The dynamic international biogas markets, political incentives for decarbonisation, and the consistent implementation of the investment programme provide a solid foundation for future development. It will, however, be crucial that the positive signals that are coming from the market and from policymakers continue to be translated into reliable conditions that are open to different technologies – and that decarbonisation does not lose momentum due to geopolitical tensions or declining political commitment of individual players.

Besides the changing regulatory framework, the main short-term risk is the volatile price trend for commodities and building materials. Poor crop yields resulting from droughts and other climate impacts in Southern and Central Europe also pose a material risk. At the same time, EnviTec expects to be able to offset this in the context of a continued good business performance.

### Segment performance

The flexibilisation of plants and the conversion of old plants to gas upgrading continue to open up selective opportunities for **Plant Construction** in Germany. EnviTec continues to expect a fundamentally positive environment in the international biogas markets in the fiscal year 2025. At the same time, it shows that important political initiatives such as REPowerEU are only gradually beginning to have an effect. The further development of important foreign markets such as the USA is currently also subject to considerable uncertainty, making customers noticeably reluctant to invest. The order book totalled EUR 129.0 million at the end of December 2024. The decline is mainly due to the number of finally invoiced projects – particularly in the USA –, the internal tying up of resources in connection with the investment programme, and a higher reluctance to invest as a result of international uncertainties.

With revenues (or total output) declining, the Plant Construction segment will generate negative earnings (EBT). The completion of the investment programme will also have a negative impact on the result of the

Plant Construction segment, as consolidation at Group level will result in the deduction of the corresponding internal project margins with the Own Plant Operation segment from the Plant Construction segment’s earnings (so-called elimination of intra-Group results).

The **Own Plant Operation** segment will face several opposing trends in the fiscal year 2025; on the one hand, the volume of biomethane produced will continue to increase due to the latest expansions. At the same time, extraordinary income from favourable energy trading contracts generated in the first quarter of 2024 will not recur in the current fiscal year. In view of the electricity and gas prices and the prices for RED II-certified biomethane (including the GHG quota), the company expects a lower level. At the bottom line, both revenues and earnings will remain slightly below the level of the previous year, which was still partly influenced by extraordinary income. At the same time, however, the Own Plant Operation segment will maintain its strong earnings position and continue to expand it in the coming years.

For the **Service** segment, EnviTec projects business to remain unchanged in the current fiscal year. The expansion of business activities in international markets will continue to have a slightly adverse impact on the bottom line. Overall, the Service segment’s total output (or revenue) and earnings (EBT) are expected to remain at the prior year level in the fiscal year 2025.

### Group forecast

Based on the above-described developments in the individual segments, consolidated total output (or revenue) is expected to come in between EUR 330 million and EUR 370 million in the fiscal year 2025. The EnviTec Executive Board expects earnings before taxes (EBT) to come in between EUR 25 million and EUR 35 million. The decline compared to the fiscal year 2024 is mainly due to one-time effects in the Energy unit, which will not recur in this form in the current fiscal year, as well as lower earnings in the Plant Construction segment.

At the same time, the EnviTec Group used the positive extraordinary effects of the previous years to enter new business segments and geographic markets, thus laying a strong basis for a continued successful busi-

ness performance. As a result, the Group’s profitability is now clearly above the level of earlier years.

The volatility in the energy markets remains a material factor of uncertainty. Moreover, the forecast depends on the number of projects finally invoiced in accordance with the German Commercial Code (HGB) at the end of 2025.

The Executive Board and the Supervisory Board expressly thank all employees of the EnviTec Group, as it is the personal commitment of each one of them that makes the company so successful.

Lohne, 14 May 2025

The Executive Board of EnviTec Biogas AG

# NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. General information

EnviTec Biogas AG, headquartered in Lohne, Germany, registered with the Commercial Register of the Oldenburg local court under HRB 201466, is a Germany-based company operating on an international scale whose business purpose is the construction and sale of biogas plants through its subsidiaries as well as the operation of own biogas plants, the provision of technical and biological services, the marketing of electricity, biomethane and bio-LNG and the acquisition and sale of equity investments.

As of the reporting date 31 December 2024, EnviTec Biogas AG is a small corporation within the meaning of section 267 para. 1 of the German Commercial Code (HGB). The company’s shares are traded in the Basic Board of the Frankfurt Stock Exchange, Deutsche Börse AG.

EnviTec Biogas AG prepares its consolidated financial statements in accordance with the provisions of sections 290 et seqq. of the German Commercial

Code (HGB). The consolidated financial statements give a true and fair view of the net worth, financial and earnings position of the company in accordance with German principles of proper accounting. The presentation, recognition and measurement consistency in the balance sheet and the income statement has been maintained.

The consolidated balance sheet follows the structure stipulated in section 266 HGB. “Thereof” sub-items are provided in the notes.

The type of expenditure format pursuant to section 275 para 2 HGB was used for the income statement.

2. Basic principles of the consolidated financial statements

2.1. Basis of consolidation

The following changes in the basis of consolidation occurred between 1 January 2024 and 31 December 2024:

|                                                    | Germany | Abroad | Total |
|----------------------------------------------------|---------|--------|-------|
| EnviTec Biogas AG and fully consolidated companies |         |        |       |
| 31/12/2023                                         | 92      | 24     | 116   |
| Additions of subsidiaries                          | 1       | 4      | 5     |
| Disposals of subsidiaries                          | 0       | 1      | 1     |
| 31/12/2024                                         | 93      | 27     | 120   |

|                                         | Germany | Abroad | Total |
|-----------------------------------------|---------|--------|-------|
| Equity accounted companies              |         |        |       |
| 31/12/2023                              | 50      | 6      | 56    |
| Additions of equity accounted companies | 0       | 0      | 0     |
| Disposals of equity accounted companies | 1       | 1      | 2     |
| 31/12/2024                              | 49      | 5      | 54    |

As at the balance sheet date, the EnviTec Group comprised 174 entities including EnviTec Biogas AG (31 December 2023: 172), of which 120 (31 December 2023: 116) were fully consolidated.

Under an agreement dated 18 December 2023, Fünfte Biogas Bützow Betriebs GmbH & Co. KG, Lohne, acquired 7.9% of the limited partnership capital of Zweite Biogas Bützow Betriebs GmbH & Co. KG, Lohne. The company is now fully consolidated and is no longer shown under equity accounted companies.

Under an agreement dated 18 March 2024, EnviTec BioLNG GmbH & Co. KG, Lohne, acquired a share in Green LNG GmbH, Lohne, in the nominal amount of EUR 100,000.00.

On 3 May 2024, Fünfte Biogas Bützow Betriebs GmbH & Co. KG, Lohne, acquired further limited partnership shares in Vierte Biogas Bützow Betriebs GmbH & Co. KG, Bützow, in the amount of EUR 75,000.00.

EnviTec Biogas Sweden AB, based in Nässjö, Sweden, was established under statutes dated 21 May 2024. The company’s share capital amounts to SEK 100,000.00, of which 100% is held by EnviTec Anlagenbau GmbH & Co. KG, Lohne.

On 26 March 2024, PT EnviTec Biogas Asia was established in Indonesia as a wholly owned subsidiary of EnviTec Anlagenbau GmbH & Co. KG, Lohne. The company’s share capital amounts to IDR 10,100,000,000, of which 99% is held by EnviTec Anlagenbau GmbH & Co. KG, Lohne, and 1% by EnviTec Anlagenbau Verwaltungs GmbH, Lohne.

The disposals of fully consolidated entities result from the merger of Biogas Operating Holding S.R.L., Italy, into EnviTec Biogas Operating Holding S.R.L., Italy (formerly Second Operating Holding S.R.L., Italy).

By shareholder resolution dated 29 April 2024, LZ Biogas GmbH & Co. KG, Lohne, merged into EnviTec Biogas Betriebs GmbH & Co. KG, Lohne.

By shareholder resolution dated 18 March 2024, the following companies merged into Zweite EnviTec Beteiligung GmbH & Co. KG, Lohne:

- ET Friesoyther Agrar GmbH & Co. KG, Lohne
- Friesoyther Agrar 2 GmbH & Co. KG, Lohne
- ET Wesermarsch GmbH & Co. KG, Lohne

EnviTec Biogas Iberia, Sociedad Limitada, Spain, was established on 15 October 2024. The share capital amounts to EUR 100,000.00, of which 100% is held by EnviTec Anlagenbau GmbH & Co. KG.

In the USA, EnviTec Biogas Concrete LLC, based in Wilmington, was established as a wholly owned subsidiary of EnviTec Biogas USA, Inc., Rochester.

Under an agreement dated 10 May 2024, Zweite EnviTec Beteiligungs GmbH & Co. KG, Lohne, acquired a further share in Biogas Schönthäl Verwaltungs GmbH, Willebadessen, in the amount of EUR 2,500.00 and a further limited partnership share in Biogas Schönthäl GmbH & Co. KG, Willebadessen, in the amount of EUR 10,000.00.

Under agreements dated 23 October 2024, EnviTec Wind | Solar GmbH & Co. KG, based in Lohne, and EnviTec Wind | Solar Verwaltungs GmbH, also based in Lohne, were established. EnviTec Biogas AG, Lohne, holds a 100% share in the share capital of EnviTec Biogas AG, Lohne, totalling EUR 25,000. EnviTec Biogas AG holds a limited partnership share of EUR 437,500.00 in the fixed capital of EnviTec Wind | Solar GmbH & Co. KG.

On 10 December 2024, EnviTec Biogas AG, Lohne, established a limited liability company under the name PV LAKO Angern Verwaltungs GmbH, which is based in Angern. The share capital amounts to EUR 25,000.00, of which 100% is held by EnviTec Biogas AG.

In accordance with section 296 para. 2 of the German Commercial Code (HGB), the following entities were not included in the consolidated financial statements for reasons of materiality:

- Bioenergie Rietschen GmbH, Lohne
- Bioenergie Friedland GmbH & Co. KG, Lohne
- Biogas Bützow Verwaltungs GmbH, Lohne
- Green LNG GmbH, Lohne
- EnviTec Wind I Solar GmbH & Co. KG, Lohne
- EnviTec Wind I Solar Verwaltungs GmbH, Lohne
- PV LAKO Angern Verwaltungs GmbH, Angern

2.2. Fully consolidated and associated companies as well as equity investments

The following entities are fully consolidated in the consolidated financial statements of EnviTec Biogas AG:

| Name and head office of the company                      | Group share in % |       | Equity capital in EUR |            | Result in EUR |            |
|----------------------------------------------------------|------------------|-------|-----------------------|------------|---------------|------------|

2.3. Consolidation methods

The consolidated financial statements cover those entities in which EnviTec Biogas AG directly or indirectly holds the majority of the voting rights (subsidiaries) unless their influence on the net worth, financial and earnings position of the Group is of subordinate importance. Consolidation starts at the time when the possibility to control exists and ends when the possibility of control no longer exists.

Where required, the financial statements of the subsidiaries are adjusted to reflect the accounting and valuation methods used by the Group.

All subsidiaries prepare their separate financial statements as of 31 December of each year.

Capital consolidation

Business combinations are accounted for in accordance with section 301 of the German Commercial Code (HGB) using the purchase method by netting the carrying amounts of the investments with the remeasured equity capital of the subsidiaries at the time of their acquisition. Assets and liabilities are recognised at their respective fair values. A positive difference remaining after the purchase price allocation is capitalised as goodwill.

Debt consolidation

Receivables and liabilities between the consolidated companies are omitted in accordance with section 303 HGB.

Expense and income consolidation

Expenses and income between consolidated entities are omitted in accordance with section 305 HGB.

Elimination of intercompany profits and losses

Intercompany profits and losses from intra-Group transactions are eliminated in accordance with section 304 HGB.

Equity accounting method

The equity method is used to measure joint ventures and associated companies which are under the joint management (joint ventures) or controlling influence (associated companies) of EnviTec Biogas AG. For investments accounted for using the equity method in the consolidated financial statements, the acquisition costs are increased or decreased annually by the changes in equity corresponding to EnviTec’s share in the equity capital. The changes in pro-rated equity that are recognised in profit or loss are shown separately in the income statement.

3. Accounting and valuation principles

The consolidated financial statements were prepared in accordance with the general provisions of section 264 et seqq. of the German Commercial Code (HGB) for large corporations as defined in section 267 para. 3 sentence 2 HGB, the provisions for consolidated financial statements stipulated in section 290 et seqq. HGB as well as the complementary provisions of the German Stock Corporation Act.

The financial statements of the entities covered by the consolidated financial statements, as well as the companies accounted for using the equity method, are based on uniform accounting and valuation principles.

Receivables and liabilities generally arise on a euro basis, which means that no currency translation is required. The financial statements of the consolidated companies are prepared in euros save for twelve exceptions. Equity is translated at historical rates, assets and liabilities in the foreign-currency financial statements are translated at the mean rates on the balance sheet date. Expense and income items are translated at average annual exchange rates. Exchange differences are recognised in equity.

The accounting, valuation and reporting methods remained unchanged from the previous year.

3.1. Intangible assets

Purchased intangible assets are capitalised at cost. If they have a determinable useful life, they are written off accordingly over a period of up to ten years.

Goodwill is written off using the straight-line method over 5 to 20 years. Goodwill was capitalised in the consolidated financial statements of EnviTec Biogas AG only for acquisitions. The useful lives reflect the lifecycles of the acquired companies.

3.2. Tangible assets

Tangible assets are carried at acquisition or production cost less depreciation – with the exception of land and leasehold rights – and less write-downs for impairment.

Acquisition costs comprise the purchase price, ancillary costs and subsequent acquisition expenditure as well as cost reductions.

Production cost includes all direct costs attributable to the production process and a reasonable portion of the production-related overheads. Financing costs are not recognised.

Systematic depreciation of property, plant and equipment is performed according to the straight-line method or, where permissible, according to the declining balance method.

The useful lives on which depreciation is based reflect the estimated or anticipated useful lives for the Group and are shown in the table below:

|                                | Useful life    |
|--------------------------------|----------------|
| Buildings                      | 20 to 40 years |
| Other structures               | 10 to 20 years |
| Technical equipment            | 6 to 20 years  |
| Machinery and appliances       | 6 to 12 years  |
| Operating and office equipment | 3 to 11 years  |
| Vehicles                       | 5 to 8 years   |
| IT equipment                   | 3 to 7 years   |

3.3. Financial assets

Financial assets – with the exception of shares in equity accounted investments – are recognised at cost or at the lower value as of the reporting date.

3.4. Inventories

Raw materials and supplies are recognised at cost or at the lower value as of the reporting date.

Finished goods and work in progress are recognised at production cost. Production cost includes material and manufacturing costs as well as appropriate overheads. Interest on borrowings is not included in the valuation. The lower of cost or market principle was considered in the valuation.

Payments on account made are recognised at their nominal amount.

Payments on account received for work in progress are set off from work in progress to the extent that they do not exceed the latter.

3.5. Receivables and other assets

Receivables and other assets are recognised at their nominal value or at the lower value as of the balance sheet date. Itemised allowances are established where required. Adequate general allowances are established for the general default risk of trade receivables.

3.6. Cash in hand and cash at banks

Cash in hand and cash at banks are recognised at their nominal values.

3.7. Prepaid expenses

In accordance with section 250 para. 1 of the German Commercial Code (HGB), prepaid expenses for payments made prior to the reporting date were recognised at the nominal value if they represented expenses for a certain period after this date.

3.8. Deferred taxes

Deferred taxes were recognised for temporary differences between the commercial balance sheet and the tax balance sheet as well as for tax losses carried forward that can be offset within five years. A tax rate of 28.08% is applied throughout the Group.

3.9. Provisions

The provisions cover all discernible risks and contingent liabilities and impending losses. They were recognised at their settlement values required according to prudent commercial judgement. Provisions with a remaining term of more than one year are discounted at the average market rate of the past seven fiscal years for the respective maturities.

3.10. Liabilities

Liabilities were recognised at their respective settlement amount.

3.11. Deferred income

Taking into account section 250 para. 2 HGB, deferred income received prior to the reporting date was recognised at the nominal value if it represented income for a certain period after this date.

4. Disclosures on balance sheet items

The required disclosures regarding the items of the consolidated balance sheet are provided below.

4.1. Fixed assets

The fixed asset items changed as follows:

|        |                                                                                                                                | As at<br>01/01/2024              | Additions<br>2024 | Additions<br>due to<br>transitional<br>consolidation | Disposals<br>2024 | Currency<br>differences<br>2024 | Reclassi-<br>fications<br>2024 | As at<br>31/12/2024 | As at<br>01/01/2024       | Additions<br>2024 | Disposals<br>2024 | Reclassifications<br>2024 | As at<br>31/12/2024 |  | As at<br>31/12/2024 | As at<br>31/12/2023 |

4.2. Goodwill

Systematic amortisation amounted to kEUR 1,185 in the reporting period.

4.3. Receivables and other assets

Other assets include receivables from refunds of input tax and advance tax payments in the amount of kEUR 15,133 (previous year: kEUR 8,761), which legally arise only after the reporting date.

4.4. Prepaid expenses

The prepaid expenses item essentially includes the payment of loan processing fees, leases and ground rent, insurance premiums, and a payment for the sale of GHG quotas for periods after the reporting date.

4.5. Deferred taxes

Deferred taxes are determined on the basis of temporary differences between the recognised values of assets and liabilities and their tax values as well as for tax losses carried forward.

The company’s tax rate of 28.08% was used for the valuation (15.825% corporate income tax including solidarity surcharge and 12.25% trade tax). The trade tax rate is derived from the average trade tax factor of 350%.

Deferred tax assets and liabilities are shown in the table below:

4.6. Equity capital

The company’s share capital totals EUR 15,000,000.00. Own shares with a nominal value of EUR 150,000.00 are openly deducted from the equity capital in the balance sheet. The portion of the purchase price of the own shares that exceeds the nominal amount of EUR 1,752,000.00 has been offset against the revenue reserves. The share capital is divided into 15,000,000 bearer shares with a par value of EUR 1.00 per share.

Changes in accumulated profits

|                                                        | kEUR    |
|--------------------------------------------------------|---------|
| Consolidated net profit                                | 29,784  |
| Profit carried forward as of 1 January 2024            | 161,791 |
| Payout to shareholders                                 | -44,550 |
| Profit attributable to minority shareholders           | -1,151  |
| Increase recognised in equity                          | 391     |
| Consolidated accumulated profit as of 31 December 2024 | 146,265 |

4.7.Liabilities

Liabilities are composed as follows:

|                                                            | Remaining term up to 1 year | Remaining term 1 to 5 years | Remaining term more than 5 years | Total       |
|------------------------------------------------------------|-----------------------------|-----------------------------|----------------------------------|-------------|
| EUR                                                        | 31/12/2024                  |                             |                                  |             |

\* incl. sales revenues of the holding company

6. Explanations regarding the cash flow statement

Cash and cash equivalents at the beginning and the end of the cash flow statement comprise cash in hand, cash deposits at the Bundesbank, cash at banks and cheques (kEUR 26,601) as well as liabilities to banks payable on demand (kEUR 10,732).

As of the reporting date 31 December 2024, access to cash and cash equivalents in the amount of kEUR 6,663 (previous year: kEUR 2,209) was restricted. These are reserve holdings set aside as per obligations under various debt capital agreements in connection with the construction of biogas plants.

7. Other disclosures

Contingent liabilities and other financial obligations

Contingent liabilities

| in kEUR              | 31/12/2024 | 31/12/2023 |
|----------------------|------------|------------|
| Guaranty obligations | 1,025      | 1,025      |

Disclosures on contingent liabilities pursuant to section 314 No. 19 HGB

Due to the orderly net assets, financial and earnings position of the beneficiaries of the contingent liabilities, the risk of a claim being raised under the contingent liabilities is currently considered to be low.

Other financial obligations

Other financial obligations are shown below:

| in kEUR                   | Total | Remaining term |              |                   |
|---------------------------|-------|----------------|--------------|-------------------|
|                           |       | up to 1 year   | 1 to 5 years | more than 5 years |
| From rental agreements    | 908   | 164            | 415          | 329               |
| From purchase commitments | 3,723 | 3,723          | 0            | 0                 |
| From license agreements   | 137   | 58             | 79           | 0                 |
| Total                     | 4,768 | 3,945          | 494          | 329               |

In addition, some of the own plants have rental agreements of minor importance.

Significant post balance sheet events

On 1 February 2025, EnviTec BioLNG GmbH & Co. KG, Lohne, acquired 100% of the shares in LIQVIS GmbH, Essen, acquiring fixed assets in the amount of about EUR 25 million.

Fees of the auditors of the consolidated financial statements

The following fees were recognised as expenses for the services provided by the auditors of the consolidated financial statements, Kohl & Zerhusen GmbH:

|                     | 2024 in<br>kEUR |
|---------------------|-----------------|
| Audit fees          | 100             |
| Tax consulting fees | 135             |
| Total               | 235             |

Related party disclosures

All transactions with related parties are made on terms equivalent to those that prevail in arm’s length transactions.

Staff

The table below shows the average staff numbers of the worldwide member companies of the EnviTec Group in 2024:

|                    | 2024 | 2023 |
|--------------------|------|------|
| Blue-collar staff  | 48   | 49   |
| White-collar staff | 641  | 611  |
| Total              | 689  | 660  |

Governing bodies of the company

Executive Board

The Executive Board was composed of the following members in the past fiscal year:

Olaf von Lehmden, Lohne, businessman,  
Chief Executive Officer (CEO)  
since 1 July 2007

Jörg Fischer, Weyhe, businessman,  
Chief Financial Officer (CFO)  
since 1 July 2007

Jürgen Tenbrink, Steinfurt, engineer,  
Chief Technology Officer (CTO)  
since 1 July 2010

No other mandates are held by the members of the Executive Board.

The compensation of the Executive Board consists of the following components:

- Fixed compensation in the form of a monthly salary
- Variable compensation based on the operating result of the EnviTec Group and the achievement of personal targets

As compensation for a competition prohibition imposed on them following the regular end of their activity as a member of the Executive Board, the members of the Executive Board will receive an ex gratia payment equal to 50% of the fixed compensation last received for a period of up to one year. In the event of premature termination of their activity as a member of the Executive Board, the ex gratia payment depends on the circumstances of the termination pursuant to section 75 of the German Commercial Code (HGB).

The following compensation was paid to the members of the Executive Board in the fiscal year 2024:

| in kEUR               | 2024  | 2023  |
|-----------------------|-------|-------|
| Fixed compensation    | 550   | 550   |
| Variable compensation | 505   | 414   |
| Other compensation*   | 41    | 37    |
| Total                 | 1,096 | 1,001 |

\*Other compensation includes benefits in money’s worth resulting from the use of company cars as well as the portions of the D&O insurance attributable to the Executive Board members

Supervisory Board

Appointees to the Supervisory Board in the reporting period:

Mr Ulf Hüttmeyer (Chairman)  
Executive Vice President of EMP Structured Assets GmbH, Munich

Mr Michael Böging (Vice Chairman)  
Managing Director of Unternehmensgruppe Weiße Köpfe GmbH, Emstek

Ms Silvia Breher (until 2 May 2025)  
Member of the German Bundestag

Mr Franz-Josef Wiese (since 9 May 2025)  
Head of Corporate Clients, Landessparkasse zu Oldenburg, Oldenburg (Oldb.)

The expenses for the compensation of the Supervisory Board in the fiscal year 2024 include fixed compensation for the Supervisory Board activity in an amount of EUR 40,000 (previous year: EUR 40,000).

Other compensation (meeting attendance fees and re-funds of expenses) amounted to EUR 18,000 (previous year: EUR 18,000).

8. Profit appropriation

The Executive Board and the Supervisory Board of EnviTec Biogas AG will propose a dividend of EUR 0.50 per share to the shareholders at the ordinary Annual General Meeting on 4 July 2025. Including own shares held by the company, this is equivalent to a total dividend payout of kEUR 7,425.

Given that the profit distribution requires the approval of the Annual General Meeting, no liability has been recognised in the balance sheet.

Lohne, 14 May 2025

Olaf von Lehmden

Jürgen Tenbrink

Independent Auditor’s Report

To EnviTec Biogas AG, Lohne

We have audited the consolidated financial statements of EnviTec Biogas AG, Lohne, and its subsidiaries (the Group), comprising the consolidated balance sheet as of 31 December 2024, the consolidated income statement, the consolidated statement of changes in equity and the consolidated cashflow statement for the fiscal year from 1 January to 31 December 2024, and the notes to the consolidated financial statements, including a description of the accounting and valuation principles used. In addition, we have audited the Group management report of EnviTec Biogas AG, Lohne, for the fiscal year from 1 January to 31 December 2024.

According to our assessment based on the findings of our audit

- the accompanying consolidated financial statements comply in all material respects with German commercial law and give a true and fair view of the asset and financial position of the Group as of 31 December 2024 and of its earnings position for the fiscal year from 1 January to 31 December 2024 in accordance with German principles of proper accounting and
- the Group management report gives a true and fair view of the position of the Group. In all material aspects, this Group management report is consistent with the consolidated financial statements, complies with German legal requirements and suitably presents the opportunities and risks of future developments.

In accordance with section 322 para. 3 sentence 1 of the German Commercial Code (HGB), we declare that our audit has not led to any objections regarding the correctness of the consolidated financial statements and the Group management report.

Basis for the audit opinions

We conducted our audit of the consolidated financial statements and the Group management report in accordance with section 317 of the German Commercial Code (HGB) in compliance with German generally accepted standards for the audit of financial statements promulgated by the Institut der Wirtschaftsprüfer (Ins-

titute of Public Auditors in Germany; IDW). Our responsibility under those provisions and standards is further described in the “Auditor’s responsibility for the audit of the consolidated financial statements and the Group management report” section of our report. We are independent of the Group companies in accordance with the requirements of German commercial and professional law, and we have fulfilled our ethical responsibilities applicable in Germany in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion on the consolidated financial statements and the Group management report.

Responsibilities of the legal representatives and the Supervisory Board for the consolidated financial statements and the Group management report

The legal representatives are responsible for the preparation of the consolidated financial statements that comply, in all material respects, with German commercial law and for ensuring that the consolidated financial statements, in accordance with German principles of proper accounting, give a true and fair view of the net assets, financial and earnings position of the Group. In addition the legal representatives are responsible for such internal control as they have determined necessary in accordance with German principles of proper accounting to enable the preparation of consolidated financial statements that are free from misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, the legal representatives are responsible for assessing the company’s ability to continue as a going concern. Furthermore, they are responsible for disclosing matters related to the going concern, where relevant. In addition, they are responsible for accounting for the continuing operations of the company in accordance with the principles of proper accounting, unless otherwise required by law or fact.

Moreover, the legal representatives are responsible for the preparation of the Group management report, which as a whole provides a suitable view of the Group’s position and is consistent with the consolidated financial statements in all material respects, complies with German legal requirements and suitably presents the

opportunities and risks of future developments. In addition, the legal representatives are responsible for such arrangements and measures (systems) as they consider necessary to enable the preparation of a Group management report that complies with the requirements of German commercial law and to enable the provision of sufficient and appropriate evidence for assertions in the Group management report.

The Supervisory Board is responsible for overseeing the Group’s financial reporting process for the preparation of the consolidated financial statements and the Group management report.

Auditor’s responsibility for the audit of the consolidated financial statements and the Group management report

Our objective is to obtain reasonable assurance whether the consolidated financial statements as a whole are free from misstatement, whether due to fraud or error, and whether the Group management report as a whole provides a suitable view of the Group’s position and is consistent in all material respects with the consolidated financial statements and the findings of our audit, complies with German legal requirements and suitably presents the opportunities and risks of future developments, and to issue an auditor’s report which includes our audit opinion on the consolidated financial statements and the Group management report.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with section 317 of the German Commercial Code (HGB) and in compliance with German generally accepted standards for the audit of consolidated financial statements promulgated by the Institut der Wirtschaftsprüfer (IDW) will always detect a material misstatement. Misstatements can arise from fraud or error and are considered material if, individually or in total, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements and this Group management report.

The website of the Institut der Wirtschaftsprüfer (IDW) contains a more detailed description of the auditor’s responsibility for the audit of the consolidated financial statements and the Group management report at <https://www.idw.de/idw/verlautbarungen/>

bestaetigungsvermerk/3-v2-hgb-konzern-non-pie. This description forms part of our auditor’s report.
