REPORT OF THE EXECUTIVE BOARD

DEAR SAHREHOLDERS,

Reflecting on the fiscal year 2025, we can see that, ultimately, the EnviTec Group delivered a solid business performance and achieved a good result, despite the various challenges faced. As has been indicated on several occasions, the record results from the exceptional years 2022 and 2023 could not be repeated to the same extent. Nevertheless, it is apparent that the strategic decisions and investments undertaken in recent years have strengthened the profitability of our business model in a sustainable way.

With the commissioning of the converted Forst, Friedland and Neuburg/Steinhausen sites, the largest investment programme in the company's history was largely completed during the reporting year. This has enabled us to significantly increase our production capacity and lay the groundwork for long-term earnings growth in the Own Plant Operation segment. Furthermore, the acquisition of LIQVIS GmbH in February 2025 extends our value chain in the transport sector and creates a direct sales channel for bio-LNG from our own plants. In November 2025, we signed a bio-LNG supply agreement with the shipping company TT-Line for its ferry fleet, thereby entering the maritime sector as an additional sales channel.

Our international activities also gained considerable momentum after a subdued first half of the year. In Slovakia, we entered the market by commissioning our first EnviThan gas upgrading plant in June 2025. Later in the year, we secured a second project order. In Belgium, we signed our first project for a gas upgrading plant with integrated CO₂ liquefaction, and we also entered the Lithuanian market via the order of an EnviThan plant. In addition, we secured our first major order in Spain. In Sweden, construction has begun on a large-scale gas upgrading plant, which will supply biomethane for the production of bio-LNG. In our established markets of

France, Denmark and Italy, we reached further important milestones. We also concluded several contracts with new customers in Germany. Overall, the Plant Construction segment's order backlog rose to EUR 148.1 million as at 31 December 2025, compared to EUR 129.0 million on the same date in the previous year.

At the same time, contradictory legislation in the German home market is creating short-term burdens. The law on the further development of the GHG quota, which was finally passed on 8 May 2026, abolished double counting for advanced biofuels with retroactive effect from 1 January 2026. This decision directly affects us. Relying on the carbon crediting mechanisms set out in European law, we have invested significant sums in recent years to expand our bio-LNG value chain. The retroactive abolition of double counting undermines this investment base and led to the recognition of a provision for anticipated losses in the Own Plant Operation segment in the fiscal year 2025.

The draft amendment to the German Energy Industry Act (EnWG), adopted by the German federal cabinet in March 2026, which shortens the capping period for grid connection of new plants to ten years, also currently falls short of European requirements and the German federal government's own ambitions. The investments required for upgrading and grid feed-in cannot be amortised within this shortened period.

Nonetheless, there are also encouraging developments: the more concrete plans for the Building Modernisation Act presented in early May provide, for the first time, a genuine outlook for biomethane demand in the heating market. The green gas quota, as well as the increasing share of green fuels in new gas heating systems, could inject fresh impetus into the German biogas market. Raising the GHG quota from its current 12.1% to 17.5%

from 2027 will also drive up demand for climate-friendly fuels. The introduction of new anti-fraud measures is likewise welcome, though unfortunately these will not come into effect until 2027. The coalition committee's pledge in April 2026 to classify vehicles powered by bio-CNG and bio-LNG as zero-emission vehicles under the CO₂ fleet regulation is another important development.

The macroeconomic environment remains marked by considerable uncertainty. Geopolitical tensions, disruptions to trade policy and renewed volatility in the energy and commodities markets are having a negative impact on global growth prospects. These factors underscore the strategic importance of a local, domestic and independent energy supply, such as that provided by biomethane. At the same time, they are contributing to pressures in international procurement markets, which we are addressing by maintaining close relationships with our suppliers.

For the fiscal year 2026, we project consolidated total output (or revenues) in a range between EUR 330 million and EUR 370 million. Earnings before taxes (EBT) are forecast to come in at between EUR 5 million and EUR 15 million. The decrease compared to the fiscal year 2025 mainly results from the abolition of double counting and the increased difficulty of marketing biofuels. We also assume that a major proportion of current projects in Plant Construction cannot be finally invoiced by the end of 2026, which means that profits will only be realised in the fiscal year 2027.

Overall, however, we see positive structural drivers for the biomethane business in Germany and in other European countries. The Plant Construction segment enjoys a high level of capacity utilisation and has well-filled order books. We therefore expect revenue (total output/sales) and earnings (EBT) to rise again in 2027.

Jörg Fischer

REPORT OF THE SUPERVISORY BOARD

DEAR SAHREHOLDERS,

For the EnviTec Group, the fiscal year 2025 was characterised by several contrasting developments, which overall resulted in a solid business performance by the Group. As anticipated, performance fell short of the levels achieved in 2022 and 2023, which were influenced by one-time effects. The retroactive abolition of double counting for advanced biofuels towards the GHG quota in Germany had a negative impact on earnings during the reporting period.

In the Own Plant Operation segment, the most important segment of the EnviTec Group, the multi-year investment programme was largely completed during the reporting year. Following the commissioning of the Forst (Brandenburg) and Friedland (Mecklenburg-Western Pomerania) sites in the first quarter of 2025, the conversion of the Neuburg/Steinhausen site into a gas upgrading facility with integrated CO₂ liquefaction was also completed as the year progressed. EnviTec has therefore significantly expanded its production capacities for bio-LNG and bio-LCO₂ once again. Additionally, EnviTec has opened up its own sales channel for bio-LNG in the transport sector and systematically extended its value chain by acquiring LIQVIS GmbH in February 2025. During the reporting year, the marketing of bio-LNG produced at the company's own facilities was also extended to the maritime sector.

Revenues in the Own Plant Operation segment increased by 15.4% to EUR 221.2 million (previous year: EUR 191.6 million). Non-cash expenses relating to the recognition of a provision of around EUR 8 million for anticipated losses from long-term sales contracts in the bio-LNG business had a negative effect. This provision was recognised in view of the abolition of double counting of advanced biofuels, which was decided in May 2026 as part of the national implementation of RED III, and which will result in a one-time reduction in expected

revenues from these contracts. Taking this provision into consideration, the segment's operating result (EBT) for the fiscal year 2025 was EUR 41.7 million, broadly in line with the previous year's figure (EUR 41.9 million).

In the Plant Construction segment, several European markets provided positive momentum following a weak first half of the year. EnviTec entered new markets in Slovakia, Lithuania, Belgium and Spain. In Sweden, construction began on a large-scale bio-LNG project for heavy goods transport. Membrane technology reached another milestone with the completion of the 100th EnviThan gas upgrading plant in Denmark. By contrast, as planned, EnviTec significantly scaled back its activities in the US market due to the altered energy and trade policy environment. Sales revenues in the fiscal year 2025 amounted to EUR 45.5 million (previous year: EUR 95.6 million). This decline is primarily attributable to the weak performance in the first half of 2025. By contrast, business activity picked up significantly in the second half of the year. The segment's operating result (EBT) was EUR -11.5 million (previous year: EUR 9.5 million).

The Service segment also experienced a decline during the reporting period. However, the drop in revenues by 9.0% to EUR 46.0 million (previous year: EUR 50.5 million) is largely due to the fact that in previous periods some international service companies were involved in Plant Construction projects and the resulting revenues have now been assigned to the Plant Construction segment for the full year 2025.

The segment's operating result (EBT) stood at EUR -4.2 million (previous year: EUR -7.4 million). As in previous years, this result is largely due to the elimination of intra-Group transactions from revenues during consolidation at Group level.

Taken together, the performance of the three segments led to a decrease in consolidated revenues of 7.4% to EUR 312.6 million (previous year: EUR 337.7 million). Conversely, total output increased by 6.8% to EUR 376.4 million. Taking account of the provision for anticipated losses of around EUR 8 million, earnings before taxes (EBT) amounted to EUR 26.0 million (previous year: EUR 44.0 million). Consolidated net income was therefore EUR 16.7 million (previous year: EUR 29.8 million), equating to earnings per share of EUR 1.12 (previous year: EUR 2.01). With equity amounting to EUR 190.9 million, the balance sheet remained very solid. The equity ratio stood at 40.9% at the end of 2025.

Given the overall positive trend in international biogas markets, the Supervisory Board remains confident regarding the outlook for the coming years. In Europe particularly, structural growth drivers are providing momentum for biomethane. This includes the rising demand for climate-neutral energy sources in response

to ever-increasing greenhouse gas reduction obligations. Moreover, ongoing geopolitical tensions are leading to an increased need for diversified, independent energy supplies. In many European markets, this has resulted in technology-neutral energy policies.

In the Plant Construction segment, order momentum has recently improved noticeably, with market entries and follow-up projects in Slovakia, Lithuania, Belgium and Spain, as well as milestones in France, Denmark and Italy. By comparison, the US market is shaped by significant uncertainty in energy and trade policy. As planned, EnviTec has substantially reduced its activities in this region. In the German home market, contradictory legislation by the federal government is causing short-term challenges. While the current draft of the German Buildings Energy Act, including a binding green gas quota, would create specific demand prospects for biomethane in the German heating market, the retroactive abolition of double counting and the insufficient draft

from left to right
Michael Böging Vice Chairman of the Supervisory Board, Vechta
Ulf Hüttmeyer Chairman of the Supervisory Board, Vechta
Franz-Josef Wiese Member of the Supervisory Board, Garrel (from May 2025)

of the German Energy Industry Act (EnWG) undermine investment security for precisely those market participants that have invested in the green gas value chain. On the other hand, other measures introduced as part of the GHG quota package offer positive support.

Despite the evident regulatory burdens in Germany, the opportunities for the EnviTec Group outweigh the risks over the medium term. With the largely completed multi-year investment programme, the acquisition of LIQVIS GmbH, and new supply contracts, a solid foundation has been laid for strengthening the Own Plant Operation segment's earnings position in a sustainable manner. Internationally as well, EnviTec is well positioned in key growth markets to benefit from the expansion and transformation of the energy markets.

For the current fiscal year 2026, EnviTec is forecasting total output (or revenues) within a range of EUR 330 million to EUR 370 million. Earnings before taxes (EBT) are expected to come in at between EUR 5 million and EUR 15 million. The decrease compared to the fiscal year 2025 mainly results from the abolition of double counting and the increased difficulty of marketing biofuels. Management also expects that a significant portion of current Plant Construction projects will not be subject to final invoicing by 31 December 2026. Therefore, profit will only be recognised on final invoicing in the fiscal year 2027, in accordance with the requirements of the German Commercial Code (HGB). From a management perspective, the result will already turn positive again in 2026.

At the same time, a positive impetus for the biomethane business in Germany and other European countries is expected to lead to increases in revenue (total output/revenues) and earnings (EBT) in the next fiscal year, 2027.

In view of the currently mixed overall conditions and the short-term challenges resulting from the abolition of double counting, the Executive Board and the Supervisory Board of EnviTec Biogas AG propose that no dividend be distributed for the fiscal year 2025.

Activity report of the Supervisory Board

As the Supervisory Board, we carried out all the controlling and advisory duties required of us under law, the statutes and the rules of procedure in the fiscal year 2025. We continuously monitored the Executive Board and provided it with assistance and advice in leading the company. We were directly involved in all decisions that were of fundamental importance for the Group at an early stage. To allow us to execute our advisory and supervisory tasks, the Executive Board provided us with written and verbal information on all relevant issues in a regular, timely and comprehensive manner.

These included, in particular, planning and budgeting as well as strategic development, the development of new business fields and geographical markets, the business trend and the situation of the Group as well as the risk position, risk management and compliance. The Supervisory Board also dealt in detail with the effects of the changing macroeconomic and regulatory environment on the Group's business performance, in particular the development of the energy markets, the situation on the GHG quota market, regulatory matters in Germany (biomass package, draft bill for the Energy Industry Act, GHG Implementation Act) and within the European Union (RED III, REPowerEU), as well as with the implications of subdued investment momentum in the US market.

The Supervisory Board also satisfied itself of the effectiveness of the risk management and internal control systems as well as the compliance management system and had the Executive Board explain the target/actual comparison of the planning and budgeting and the underlying assumptions.

After thorough examination, the Supervisory Board approved all business events requiring its approval. The Executive Board and the Supervisory Board also liaised regularly between the meetings. Due to the detailed reports provided by the Executive Board and the auditor, we are convinced that the company and the Group are managed lawfully, correctly and efficiently. We saw no need to exercise our audit rights pursuant to section 111 para. 2 of the German Stock Corporation Act. No conflicts of interest involving members of the Executive

Board or the Supervisory Board that required immediate reporting to the Supervisory Board and disclosure to the Annual General Meeting occurred in the past fiscal year.

Change on the Supervisory Board

On 9 May 2025, Franz-Josef Wiese was appointed a member of the Supervisory Board of EnviTec Biogas AG by the Oldenburg Local Court with immediate effect at the request of the company's Executive Board. The court appointment was valid until the end of the next ordinary General Meeting. The appointment of a new member became necessary when the previous member of the Supervisory Board and Deputy Federal Chairwoman of the CDU party, Silvia Breher, was appointed Parliamentary State Secretary to the Federal Ministry of Food, Agriculture and Home Affairs as part of the formation of the new federal government.

At the Annual General Meeting on 4 July 2025, the shareholders elected Franz-Josef Wiese as an ordinary member of the Supervisory Board for a term until the end of the ordinary General Meeting in 2027. Franz-Josef Wiese is Head of Corporate Clients at Landessparkasse zu Oldenburg. He looks back on 40 years of experience in the corporate client business, including more than two decades in senior positions, and has in-depth knowledge of the agricultural and food industry.

Formation of committees

As the Supervisory Board consists of only three members, no committees were formed in 2025.

All issues that would have been addressed by committees were discussed by the full Supervisory Board.

Meetings and main aspects of the consultations

In the fiscal year 2025, the Supervisory Board held four ordinary meetings on 12 May, 4 July, 9 October and 10 December 2025. All meetings were attended by all members of the Supervisory Board.

The business trend, the net worth, financial and earnings position, investment projects as well as the risk

situation and risk management of EnviTec Biogas were discussed in detail at all meetings.

In addition, the following topics were on the agenda and were addressed and discussed in detail with the Executive Board:

- auditor's report and adoption of the annual financial statements 2024 and approval of the consolidated financial statements 2024
- resolution on the dividend proposal and preparation of the ordinary General Meeting 2025
- discussion of the quarterly and half-year results 2025 including the forecast for the full year
- draft bill for the implementation of the RED III Directive and ongoing monitoring of the implementation status
- implementation of the European Gas Directive
- opening up of new sales channels, in particular bio-LNG for the maritime sector
- planning and budgeting for 2026
- strategic further development of the Group.

Audit of separate and consolidated financial statements

At the Annual General Meeting on 4 July 2025, the shareholders elected Kohl & Zerhusen GmbH Wirtschaftsprüfungsgesellschaft, Steinfeld, auditors of the separate and the consolidated financial statements for the fiscal year 2025. After having obtained a declaration of independence from the auditor, the Chairman of the Supervisory Board commissioned the auditor to perform the audit, agreed the audit fee and determined the focal points of the audit. On this basis and including the company's accounts, Kohl & Zerhusen GmbH audited the consolidated financial statements of EnviTec Biogas AG prepared by the Executive Board in accordance with the German Commercial Code (HGB) for the period ended 31

December 2025 as well as the Group management report. Given that EnviTec Biogas AG, as a single entity, did not exceed the size criteria defined in section 267

para. 1 of the German Commercial Code (HGB), the company was able to again take advantage of the disclosure relief for small corporations and to forego an audit of the financial statements of EnviTec Biogas AG for the fiscal year 2025. However, the company had the financial statements, consisting of balance sheet, income statement and notes, subjected to a voluntary audit.

The auditor issued an unqualified audit opinion on the consolidated financial statements and the Group management report as of 31 December 2025, as well as on the voluntarily audited annual financial statements of EnviTec Biogas AG.

All Supervisory Board members received the management report, the financial statements and the audit reports in good time. These were intensively reviewed by us at the Supervisory Board meeting on 12 May 2026. The meeting on 12 May 2026 was attended by the Executive Board and the Supervisory Board as well as by the auditors of Kohl & Zerhusen GmbH. The auditor explained the main results of the audit and answered additional questions of the Supervisory Board. No objections were raised after our own audit and the talks with the Executive Board and the auditor. The Supervisory Board therefore concurred with the audit result of Kohl & Zerhusen GmbH and approved the separate and the consolidated financial statements prepared by the Executive Board for the period ended 31 December 2025 as well as the Group management report. The financial statements of EnviTec Biogas AG have thus been endorsed. Having scrutinised the Executive Board's proposal for the allocation of the accumulated profits, we endorsed this proposal as well.

The Supervisory Board wishes to thank the Executive Board and all employees of the EnviTec Group for their commitment and dedication. Our thanks also go to our customers and business partners for their trust and cooperation.

We would like to thank you, our esteemed shareholders, for your ongoing trust in EnviTec Biogas AG. We would be delighted if you would continue to support our company over the course of the fiscal year 2026.

Lohne, 12 May 2026

Ulf Hüttmeyer
Chairman of the Supervisory Board

GROUP MANAGEMENT REPORT

of EnviTec Biogas AG

EnviTec Biogas AG takes advantage of the relief for small corporations granted under section 326 of the German Commercial Code (HGB) and refrains from preparing and publishing a management report for the fiscal year 2025. The consolidated financial statements, which include the financial statements of EnviTec Biogas AG, do not contain a combined management report for EnviTec Biogas AG and the Group, but only a Group management report.

Fundamentals of the Group

Business model of the EnviTec Group

The EnviTec Biogas Group, headquartered in Lohne, Germany, is one of the leading manufacturers and operators of biogas plants. EnviTec is a full-service biogas supplier and covers the entire value chain for the production of biogas. This includes planning and construction of biogas plants and biogas upgrading plants as well as their commissioning. The company takes charge of biological and technical services on demand and also offers full plant and operational management. EnviTec also operates its own plants, making it one of the largest biogas and biomethane producers in Germany. EnviTec’s business activities also include the production and marketing of climate-neutral fuels (bio-LNG) for the transport sector as well as food-grade liquid carbon dioxide (LCO₂).

EnviTec’s customer-oriented design has set standards in terms of reliability and profitability. EnviTec plants can produce clean energy from all types of feedstock materials – from organic waste to renewable resources. Established in 2002, the company is today active in 18 countries worldwide (including Germany).

Corporate structure and business segments

The Group is structured into three segments, Own Plant Operation, Service, and Plant Construction. All segments are closely integrated in strategic, technical and financial terms. The parent company of the Group operates as a holding company, which provides services such as controlling, HR management, legal consulting, treasury and marketing for the three business segments. The business purpose of the parent company also includes the holding of equity investments in the Own Plant Operation segment as well as start-up financing of the respective project companies.

Own Plant Operation

The Own Plant Operation segment handles the generation of electricity, heat and gas in the company’s own biogas plants in Germany and abroad. 84 plants in Germany with an annual biogas production of approximately 1,650 GWh and another seven plants in other European countries with a capacity of 180 GWh make EnviTec one of the largest biogas producers in Germany. About one third of the annual biogas output is accounted for by biogas upgrading plants. In addition to the production of biogas and biomethane, business activities have also comprised the production and marketing of climate-neutral fuel (bio-LNG (liquefied natural gas)) for the transport sector and of food-grade liquid carbon dioxide (LCO₂) since the fiscal year 2023. The plants are usually operated in cooperation with local partners from the agricultural sector. These partnerships are characterised by a clear division of tasks, with every partner concentrating on their respective strengths. The local partner makes available the site, procures the feedstock materials and assumes responsibility for the daily operation of the plant. Once the plant is in operation, we perform all necessary maintenance work, provide biological and technical services and take care of the commercial management. At the end of the fiscal year 2024, EnviTec Wind | Solar GmbH & Co. KG was established as a joint venture for the development and realisation of wind and solar projects. The aim is to gradually add further renewable generation types to the existing plant portfolio.

Service

EnviTec’s Service segment provides all services related to the operation of biogas plants. As a full-service biogas supplier, we know all biogas generation processes in detail and our experts take care of starting up the plants and constantly control the biological processes. In our lab, feedstock materials and fermentation residues are checked for optimum quality so as to make recommendations on boosting the plant’s efficiency. The range of services also includes regular plant inspections and training of the operators and their employees. EnviTec Biogas also offers partial maintenance services, which are charged by actual expense, or a full maintenance scheme including assumption of the repair cost risk.

Plant Construction

The Plant Construction segment builds biogas and biomethane plants for customers such as farmers, industrial enterprises and energy providers. We plan the plant, build it and start up the production of biogas. Our product portfolio covers the complete value chain of biogas plant engineering for plants from 500 kW. EnviThan is the company’s highly efficient and innovative technology for the upgrading of biogas. The processed biomethane may be fed directly into the natural gas grid, be used for heating or industrial purposes or as an environmentally friendly fuel alternative (bio-LNG or CNG – compressed natural gas).

* various project companies of biogas plants; for details of the equity holdings and their amounts, refer to the notes

Objectives, strategy and competition

Over the past years, we have attained a leading position in the biogas market and have already built more than 700 biogas and gas upgrading plants in 18 countries. The Group's most important geographical markets at present are its main market, Germany, and other European countries. Our strategic objective is to achieve sustainable growth and to expand our market position as an integrated supplier and operator of biogas plants. In this context, we attach top priority to the satisfaction of our customers and their involvement in the ongoing development of our plants in accordance with their wishes and requirements. The short to medium-term strategic positioning is strongly influenced by the ongoing discussion about the legal framework in the individual markets. The individual markets are very heterogeneous, which is primarily due to the different subsidisation models. We are closely monitoring developments in the individual countries so as to be able to respond quickly to changes in the operating environment.

We are exploring new applications, processes and markets to pursue our goal of reducing our exposure to the prevailing subsidy conditions and generating a growing share of the Group's earnings outside the subsidised biogas sector. We have defined the following cornerstones for sustainable growth:

Effective expansion of own plant operation

The expansion of the Own Plant Operation segment and of energy production are at the core of EnviTec Biogas' corporate strategy. This segment of the Group has been making the highest contribution to EnviTec's total revenues for years.

In Germany, EnviTec primarily relies on the optimisation of the existing plants and on selective capacity expansion. The purpose of this segment is to further stabilise the Group's revenue streams. The guaranteed feed-in tariffs of the biogas plants operated by EnviTec will gradually expire between 2025 and 2035. In the 9th amendment to the German Renewable Energy Sources Act (EEG), which came into force in 2021, the German government has created a follow-up subsidy, which provides an option to continue operating plants within the EEG.

In addition, there are new potential uses for biogas, a flexible source of energy, in the industrial, heating and transport sectors, enabling continued operation outside the EEG scheme. To this end, the largest investment programme in the company's history has been under-way since 2021 and was largely completed in the fiscal year 2025. In addition to the comprehensive conversion of BioEnergiepark Güstrow, four further existing plants were converted and expanded into gas upgrading plants with integrated LCO₂ production under this programme.

After the completion of the investment programme, EnviTec is in principle prepared to further expand its plant portfolio in the German home market. However, this requires reliable, technology-neutral and investment-friendly conditions, the establishment of which remains a key concern for EnviTec. EnviTec also continuously reviews opportunities to expand its international business portfolio.

Flexible market development to drive growth

EnviTec continuously monitors regulatory and market developments for biogas and biomethane in the international markets. Based on this, the company identifies new markets with robust framework conditions, examines these in detail, and decides whether to enter a new market depending on the results. When entering new markets, the company relies on partners from the region in question, thereby combining its long-standing experience in plant construction and operation with in-depth knowledge of local specifics. The downstream Service segment is also of great importance as the international expansion continues. The aim is for the Plant Construction segment and the downstream Service segment to remain profitable even during challenging market phases, while also maintaining the necessary capacity to take advantage of new market opportunities as soon as they arise. Besides constructing plants for the upgrading of biomethane, the conversion of existing plants and new potential uses in the industrial and heating sectors are becoming increasingly relevant. EnviTec also continuously monitors opportunities for expansion into other renewable energy sources.

Continuous adaptation and expansion of services offered

The Service segment represents an important strategic pillar of EnviTec's integrated business model and makes a significant contribution to the successful development of the company's other segments. In the Plant Construction segment, the range of services creates strategic advantages at the project initiation stage, as EnviTec can ensure, through its comprehensive and high-quality service offering, that the plants it constructs can be operated efficiently and safely once completed, generating strong returns for its customers. The service teams also ensure the performance and cost-efficiency of the company's own plants, thus contributing to strong returns. The strategic integration of the segments is continuously expanded and refined. The focus is on expanding the biological and technical services in other European countries and the extension of the range of services for third-party plants. Moreover, the service operations will be progressively expanded to include new technologies, also aided by strategic partnerships.

Strengthening our innovation leadership

By continually expanding the company's technological expertise, EnviTec Biogas strengthens its leading position within the industry and further enhances the ecological and economic appeal of its core product, biogas. The aim is to achieve ongoing improvements in the operation of the plants and to reduce the amount of substrate required for the same performance. In addition, EnviTec cooperates with established manufacturers to expand the range of applications for biogas. By operating Germany's largest integrated bio-LNG plant including CO₂ liquefaction (LCO₂), EnviTec has done truly pioneering work as an independent supplier of climate-neutral fuel for commercial and heavy-duty transport and as a producer of green carbon dioxide for the food industry.

Control system

EnviTec's corporate aim is to grow profitably. Accordingly, the company's key performance indicators are revenues/total output and return on equity. Earnings before tax (EBT) are the most important performance indicator. ERP (Enterprise Resource Planning) software is used throughout the Group for the fast and comprehensive presentation of all processes such as materials handling, finance and accounting, project controlling as well as sales and marketing.

The forecast for each fiscal year is prepared at Group level for EBT, along with a consistent range for total output and revenues. The background for the latter is the project business in the Plant Construction segment: depending on the progress and invoicing status of construction projects at the balance sheet date, these projects are either recognised as revenues once the final invoice has been issued or they are included in total output as part of inventory build-up. As this accounting effect is challenging to predict, the Group forecast is based on a common range for both performance indicators.

The EnviTec Biogas Group is moreover characterised by high quality standards. Since 2016, EnviTec Service GmbH has organised a quality management system according to ISO 9001:2015. The regular recertification took place in 2021 for the German and, for the first time, also for the Italian service subsidiary. In 2022, EnviTec Biogas S.r.l. also obtained successful certification to ISO 14001 and ISO 45001, which cover aspects such as environmental management, safety and occupational health and safety. EnviTec Biogas France SARL has held the Qualimetha seal since 2021, which also certifies compliance with high quality standards. In addition, EnviTec Bioenergie Güstrow GmbH was successfully certified to DIN EN ISO 22000 in the previous reporting period 2024. The certification confirms compliance with international food safety standards in the production of food-grade liquid CO₂ (LCO₂).

Research and development

Ongoing development is key to sustainable success. EnviTec takes this very seriously and is constantly working on enhancing its technologies for more flexible use of feedstock materials, increasing gas yields and optimising the efficiency of its plants, as well as improving quality management.

By developing new plant concepts, such as the production of liquid biomethane as fuel for the transport sector and the liquefaction of carbon dioxide, EnviTec is opening up new business segments in order to remain future-proof.

EnviTec’s in-house developments in recent years also include remote dialling systems with greater protection against cyberattacks for biogas and gas upgrading plants and a dedicated EnviTec remote app, which is already in use at the majority of EnviTec’s biogas and biogas upgrading plants in Germany.

A key focus is on the ongoing advancement of EnviThan membrane technology. A milestone was reached in the reporting period with the completion of the 100th EnviThan gas upgrading plant. Over its twelve-year history, the technology has been subject to continuous optimisation with regard to performance, energy efficiency and design. The total capacity of EnviThan plants installed worldwide now amounts to over 40,000 Nm³/h of biomethane.

Economic Report

Macroeconomic and industry-specific environment

Commodities market

Prices in the German agricultural market developed in two phases during the reporting year. The upward trend observed since the beginning of 2024 continued into late summer 2025. The German Agricultural Commodities Index compiled by Agrarmarkt Informations-GmbH (AMI) reached its peak for the fiscal year at 147 points in August 2025, significantly above the previous year’s level (August 2024: 135 points). However, this trend reversed markedly as the year progressed. At the end of 2025, the index stood at 131 points, well below the previous year’s figure (December 2024: 141 points). In the first quarter of 2026, the decline initially continued. In March 2026, however, the index firmed for the first time after eight consecutive declines, closing at 125.7 points.

According to the German Farmers’ Association (DBV), **crop yields** in Germany were significantly higher in 2025 compared to the previous year. The grain harvest reached approximately 45.1 million tonnes, which was 6.1 million tonnes more than the previous year (2024: 39.0 million tonnes), with wheat and winter barley in particular achieving higher yields per hectare. At almost 4.0 million tonnes, the rapeseed harvest was also around 10% higher than in the previous year (2024: 3.6 million tonnes). This was due to a slightly larger cultivated area and about 9% higher yields per hectare. Conversely, the harvest volume for silage and green maize, at about 87.5 million tonnes, was slightly below the previous year’s level of around 90.9 million tonnes. Despite regional differences in weather – in particular a dry spring – the DBV considers the overall supply situation on the German commodities market to be comfortable.

Thanks to long-term supply contracts, high inventory levels and close cooperation with regional farmers, EnviTec benefited from moderate prices for the agricultural commodities used as feedstock in the reporting year. Overall, EnviTec anticipates that the

higher costs of agricultural production (e.g. for diesel, fertilisers, wages) and the increasingly apparent effects of climate change (e.g. drought) may result in higher raw material expenses in the coming years. In the short term, however, purchase prices are expected to remain moderate owing to the favourable supply situation.

Biogas upgrading as well as bio-LNG and bio-CNG

Biogas upgrading is currently the most dynamic market for biogas plants. The biomethane generated is fed into the natural gas grid. It can thus replace natural gas in all end-user applications such as heat utilisation or in the industrial sector. Biomethane may also be used as a low-carbon fuel, especially in the transport sector. A new study published by the Fraunhofer Institute for Systems and Innovation Research (ISI), the Technical University of Hamburg (TUHH) and the Institute of Resource Efficiency and Energy Strategies IREES GmbH clearly shows that biomethane has the best greenhouse gas footprint. As a sustainable gaseous (bio-CNG) or liquid (bio-LNG) fuel, biomethane can save more than 90% of climate-damaging greenhouse gas emissions already today, while at the same time avoiding almost 100% of hazardous fine dust and nitrogen oxide emissions. Moreover, the use of biomethane in the mobility sector has negative greenhouse gas (GHG) emissions if credits according to European legislation (RED II) are taken into account. These credits result from the avoidance of emissions in agriculture by using residues in biogas plants. As a result, Germany’s LNG filling station network has grown in recent years. According to Deutsche Energie-Agentur GmbH (dena), there are currently around 180 LNG filling stations suitable for trucks in Germany, the majority of which offer bio-LNG.

The prices for **GHG quotas** from advanced fuels recovered considerably in the reporting year. After a modest upward trend in the first few months of the year, prices rose sharply on the publication of the draft bill for implementing the RED III Directive and reached their annual high at around EUR 500 in December.

The high price level was mainly due to expectations that 2025 may be the last commitment year with double counting of advanced fuels. Stabilisation of the market was also supported by the suspension of GHG

quota transferability for 2025 and 2026, which prevented further accumulation of market-disruptive surpluses. However, GHG quota transferability is once again planned for 2027, meaning backlogged quotas from previous years could return to the market, potentially exerting significant price pressure in the short term.

Geographic markets

According to the International Energy Agency (IEA), global energy-related carbon emissions amounted to 38.4 billion tonnes in 2025. This corresponds to an increase of 0.4% compared to the previous year and therefore marks another record level.

According to preliminary figures from the German Federal Environment Agency, greenhouse gas emissions in **Germany** were only slightly below the previous year’s level (-0.1%) at 648.9 million tonnes of carbon equivalents. These developments highlight the crucial role of renewable energy sources in addressing climate change. Exploiting this potential requires far-reaching and ambitious regulatory decisions both in Germany and internationally.

In Germany, the Renewable Energy Sources Act (EEG) is one of the laws that constitute the main legal basis for the biogas sector. In addition, the feeding of refined biogas into the natural gas grid is governed by the German Gas Grid Access Directive. The use of biomethane is governed by the regulations of the Federal Immission Control Act (BImSchG).

According to the Federal Statistical Office, gross electricity generation in Germany increased slightly to 507.5 billion kWh in 2025 (previous year: 503.2 billion kWh). The share of renewable energy sources was 57.2%, remaining almost unchanged at the high level reached in the previous year (57.3%), with the contribution from biomass amounting to 8.4% (previous year: 8.8%). The overall objective of the EEG amendment, which entered into force on 1 January 2023, is to raise the share of wind, solar and hydropower in gross electricity to 80% by 2030. However, biogas and biomethane played a secondary role in the last legislative period.

With the new coalition agreement between the CDU/CSU and SPD in spring 2025 and the adoption of the biomass package in January 2025, the German biogas

sector received its first strong positive signals in years. The coalition agreement’s commitment to bioenergy, the increase in tender volumes and improvements in the flexibility remuneration scheme all indicated a shift in direction. As time progressed, however, it became apparent that key new legislative proposals do not sufficiently fulfil these ambitions. Instead, clear inconsistencies between the German government’s objectives and the actual underlying conditions have emerged, which are having a significant negative impact on the sector’s willingness to invest in Germany.

The current plans for the **Building Modernisation Act (GMG)** from the end of February 2026 can generally be regarded as positive. For the first time, the German government has set out concrete demand prospects for biomethane in the heating market. Proposals include an overarching green gas quota for distributors of fossil fuels alongside an increasing share of green fuels in new gas heating systems (bio-stairs). From EnviTec’s perspective, the green gas quota is a key lever for decarbonising new and existing heating systems, addressing a gap in the heating transition consistently highlighted in recent years.

Besides some improvements for bio-LNG producers such as EnviTec, the **law on the further development of the GHG quota**, adopted on 8 May 2026, also introduces significant disadvantages. Raising the GHG quota from its current 12.1% to 17.5% from 2027 will generally boost demand for climate-friendly fuels.

The measures to prevent fraud are also welcome, although they will unfortunately not come into force until 2027. Conversely, the abolition of double counting for advanced biofuels such as bio-LNG and bio-CNG will be effective retrospectively from 1 January 2026. This decision discriminates against domestic producers of advanced biofuels in favour of other fuel options and affects the protection of legitimate expectations and existing investment security. It stands in clear contradiction to the coalition agreement’s pledge to ensure technology-neutral and investment-friendly framework conditions. While the triple counting for electromobility remains unchanged, it is specifically those biofuels that achieve the highest greenhouse gas savings among all available fuel options that are being downgraded in terms of crediting. For EnviTec, this move directly burdens its bio-LNG business, into

which the Group has invested substantially in recent years – not least in reliance on the carbon crediting mechanisms laid down in European law.

From the industry’s perspective, the draft adopted by the German federal cabinet in March 2026 to implement the European **gas and hydrogen internal market** package, which provides for changes to the **German Energy Industry Act (EnWG)**, falls massively short of the European requirements and the German federal government’s own ambitions. While extending the capping period for grid connection to 20 years for existing plants supports the retention of capacities, for new plants the period is set at just ten years. However, the investments required for upgrading and grid feeding cannot be amortised within this period of time. Moreover, biomethane is not taken into account in a binding manner within gas distribution network planning or market queries carried out by grid operators. This results in a clear contradiction: While the GMG aims to make the demand for green gas politically binding, the EnWG does not guarantee the necessary grid access on the supply side, thereby blocking investment in Germany.

While the first draft of the **EEG 2027** introduces ways to shape the future role of biogas in the electricity system, the sector considers it to fall short of the ambitions defined in the coalition agreement.

A clear positive signal is provided by the results of the coalition committee in April 2026. The federal government has pledged to work at European level to ensure that vehicles powered exclusively by renewable fuels, including bio-CNG and bio-LNG, can be counted as zero-emission vehicles under the EU’s fleet-wide CO₂ emissions regulation. The actual implementation date will, however, depend on the future course of the European legislative process.

In summary, significant aspects of the technology-neutral and investment-friendly energy policy announced in the coalition agreement are not being implemented by central legislative proposals. Due, in particular, to the retroactive abolition of double counting in the transport sector in combination with the shorter capping period in the EnWG and the insufficient working draft of the EEG, there is currently no consistently reliable basis for planning investments in

Germany. Establishing consistent, technology-neutral and investment-friendly framework conditions therefore remains a key concern for EnviTec.

Given developments within Germany, EnviTec’s internationally diversified business activities remain strategically vital. In many foreign markets, especially in other European countries, the regulatory framework conditions for biogas, biomethane and advanced fuels are more reliable and investment-friendly than in Germany. In addition to the domestic market, EnviTec has for many years also generated substantial revenues in all business segments in various **international markets**, each of which has its own national characteristics and legal requirements.

At the pan-European level, the European Commission’s REPowerEU Plan remains the central framework for reducing dependency on Russian energy imports in light of the current geopolitical situation, and for speeding up a genuine energy transition.

According to the European Biogas Association (EBA), the biomethane production capacity installed in Europe at the end of the first quarter of 2025 amounted to about 7 billion Nm³ per year, up around 9% on the previous year. Investments of about EUR 28 billion have currently been announced Europe-wide up to 2030, which are expected to provide an additional production capacity of about 7.3 billion Nm³ per year. Despite this progress, there is still a considerable gap to the Commission’s 35 billion Nm³ target. Studies on the long-term potential have identified a sustainable European production potential of well above 100 billion Nm³ by 2050, given the right framework conditions.

Within Europe, **France** has been one of the most dynamic countries in the industry for years.

The new register for biogas production certificates (Certificats de Production de Biogaz, CPB) came into force on 1 January 2026. Gas suppliers are thus obliged to gradually provide biogas certificates, with minimum quotas of 0.8 TWh in 2026, 3.1 TWh in 2027 and 6.5 TWh by 2028. In addition, a state subsidy programme worth EUR 1.5 billion for new biomethane plants with an annual production of 25 GWh or more has been introduced.

Denmark continues to rank among the most advanced countries worldwide in biogas utilisation. Some 45% of Danish gas consumption is already met by biogas. After several years marked by record investments, the volume of upgraded biomethane being fed into the gas grid has recently stagnated. According to Biogas Danmark, the Danish industry association, it should nonetheless be possible for Denmark’s gas consumption to be met entirely from biogas in future, and market opportunities continue to exist for the sector.

Italy is the world’s third largest biogas producer. However, further expansion in recent years has lagged behind political ambitions, mainly as a result of administrative barriers and delays in rolling out support schemes. Following approval of the fifth revision of the National Plan for Reconstruction and Resilience (PNRR) in November 2025, a more realistic path to achieving the targets now seems possible.

Spain has increasingly become the focus of the European biogas industry in recent years. According to data provided by the European Biogas Association (EBA), Spain tops the list of planned biomethane investments, with committed investments of about EUR 4.8 billion up to 2030 and an expected production of 17.3 TWh per year. The industry association Sedigas puts Spain’s long-term production potential at up to 163 TWh per year, equivalent to roughly half the country’s natural gas consumption. With major energy firms and project developers becoming more involved, further acceleration in growth is expected over the coming years.

After several record years, the growth momentum in the **US** biogas market declined significantly in 2025. According to the American Biogas Council, the addition of new plants remains at a strong level, but investment decisions are being held back by trade policy issues, uncertainty over programmes under the Inflation Reduction Act and the debate surrounding Renewable Volume Obligations. For plant manufacturers such as EnviTec, a revival in activity is not expected until there is greater stability in the regulatory environment.

Business trend and segment performance

All in all, the EnviTec Group recorded a solid business trend in the fiscal year 2025. As expected, the Group’s key performance indicators were lower than in the previous years, which had been characterised by one-time effects, but over a multi-year comparison still remained in part well above the levels of earlier fiscal years.

In the Own Plant Operation segment, the focus was on the completion of the largest investment programme in the company’s history. The expansion and conversion of the Forst (Brandenburg) and Friedland (Mecklenburg-Western Pomerania) sites was completed in the first quarter of 2025, followed by their transition to regular operations. The conversion of the company’s own plant in Neuburg/Steinhausen into a gas upgrading site with integrated CO₂ liquefaction was completed in the further course of the year. EnviTec has once again significantly expanded its production capacities for bio-LNG and bio-LCO₂ by largely completing its multi-year investment programme in 2025.

In February 2025, EnviTec Biogas acquired the former Uniper subsidiary LIQVIS GmbH, which operates a total of 18 LNG filling stations in Germany and France. Integrating this filling station infrastructure into EnviTec’s own value chain expands the company’s reach in the transport sector and provides a direct sales channel for bio-LNG produced at its own facilities. During the reporting year, the marketing of bio-LNG produced at the company’s own facilities was also extended to the maritime sector. In November 2025, EnviTec Biogas and the shipping company TT-Line signed bio-LNG supply agreement for TT-Line’s ferry fleet. Under the FuelEU maritime regulation, shipping companies are required to comply with binding maximum limits for greenhouse gas intensity of the energy used on board. This has resulted in an additional bio-LNG sales channel for EnviTec.

In addition, several European markets delivered significant positive impulses in the past fiscal year. Membrane technology reached another milestone in the reporting year with the completion of the 100th EnviThan gas upgrading as part of a project in Denmark. In France, EnviTec set another milestone with the commissioning

of its 40th EnviThan gas upgrading plant in the department of Aube. EnviTec also secured its first project order in the Spanish market, with construction already underway. In Slovakia, the company successfully entered the market in June 2025 with the start-up of a 449 Nm³/h EnviThan gas upgrading plant in Bierovce. With the construction of a second 417 Nm³/h EnviThan gas upgrading plant, EnviTec further expanded its local market presence over the course of the year. The plant started feeding into the grid in April 2026. In Italy, EnviTec completed a biogas and gas upgrading plant with an upgrading capacity of 237 Nm³/h of biomethane in the reporting year. This plant started feeding into the public gas grid in January 2026. In Belgium, EnviTec signed its first project for a gas upgrading plant with integrated CO₂ liquefaction. In Sweden, the construction phase began on a large-scale biogas and gas upgrading project aimed at producing bio-LNG for heavy-duty transport, designed for up to 70 GWh of biomethane per year. EnviTec continued to expand its market presence in the Baltic states with a fourth project for an Estonian key account. The company also successfully entered the Lithuanian market with the order of a 675 Nm³/h EnviThan plant.

By contrast, in the US market EnviTec, as planned, significantly reduced its business activities in the reporting period. The realignment of US energy policy, trade policy measures, and uncertainty regarding existing subsidy programmes are making new business considerably more difficult. The presentation of the US Energy Vision Leadership Award to EnviTec Biogas by the eponymous US non-governmental organisation in October 2025 acknowledges the company’s successful technological position in the US market. Given the current political environment, however, no operational impetus is expected at present.

In the German market, in addition to existing customers commissioning further EnviThan gas upgrading plants, EnviTec concluded contracts with three new customers in Bavaria, Bremen and Saxony-Anhalt in December 2025. These projects involve gas upgrading plants with modular expansion options, which are primarily intended for the injection of biomethane into regional gas grids.

Segment performance

The EnviTec Group operates in three segments: Own Plant Operation, Service, and Plant Construction. In the fiscal year 2025, the share of total revenues attributable to the Own Plant Operation segment increased to 70.7% (previous year: 56.7%) due to an expansive segment development and declining revenues in the other two segments. At 14.6%, the share of the Plant Construction segment (including the holding company) was significantly lower than in the previous year (28.3%). The share of the Service segment was 14.7% (previous year: 15.0%).

Own Plant Operation

Own Plant Operation, the most important segment of the EnviTec Group, delivered a very positive performance overall in the fiscal year 2025. Several partly opposing trends influenced its revenue and earnings performance. A positive contribution was made, on the one hand, by higher production volumes at the Güstrow site and the ramp-up of three successfully converted and expanded plants. On the other hand, stabilisation of GHG quota prices also had a positive effect, although the market remained burdened by incorrectly declared import volumes from Asia. Moreover, LIQVIS GmbH, which was acquired at the beginning of 2025, made a positive contribution to revenues in the low double-digit million range.

Conversely, electricity and gas prices were, as expected, well below the levels seen in the record years of 2022 and 2023. Extraordinary income from favourable energy trading contracts, which had still influenced the previous year’s result, no longer had an impact in the reporting period. Additionally, a non-cash expense of around EUR 8 million for the recognition of a provision for anticipated losses from long-term sales contracts in the bio-LNG business also had a negative effect.

This provision was recognised in relation to the abolition

of double counting for advanced biofuels, which was decided on 8 May 2026 by the German Federal Council in the context of national implementation of RED III, resulting in a one-time reduction in the expected revenue from these contracts.

The segment’s revenues rose by 15.4% to EUR 221.2 million (previous year: EUR 191.6 million). Finished goods and work in progress, which mainly comprise unsold GHG quotas, biomethane certificates and biomethane, increased by EUR 23.4 million compared to the previous year (EUR 2.3 million). Other operating income, mainly attributable to the acquisition of LIQVIS GmbH as well as the reversal of provisions, rose by EUR 4.4 million to EUR 11.0 million. Total output increased by 27.5% to EUR 255.6 million.

The cost of materials in the Own Plant Operation segment rose by 22.0% to EUR 141.1 million (previous year: EUR 115.7 million) as a result of increased bio-LNG production capacities. Gross profit amounted to EUR 114.5 million (previous year: EUR 84.9 million).

Personnel expenses increased by 19.9% to EUR 12.4 million (previous year: EUR 10.3 million) due to plant expansions, the acquisition of LIQVIS GmbH and inflation. Depreciation and amortisation amounted to EUR 24.7 million, compared to EUR 18.3 million in the previous year. Other operating expenses likewise rose, mainly as a result of the acquisition of LIQVIS GmbH and the aforementioned provision for anticipated losses, to EUR 34.5 million (previous year: EUR 16.1 million).

EnviTec operated a total of 91 plants in the fiscal year 2025 (previous year: 88). The total output of the company’s own plants increased to 87.4 MW (previous year: 81.0 MW). Of this, 68.2 MW was fully consolidated (previous year: 61.8 MW) and 19.2 MW was accounted for using the equity method (previous year: 19.2 MW). Seven plants with a total output of 7.0 MW were operated abroad (previous year: 7.0 MW); the remaining 84 plants with a total output of 80.4 MW were operated in Germany.

Taking into account the provision for anticipated losses, the segment’s operating result (EBT) of EUR 41.7 million in the fiscal year 2025 was in line with the previous year (EUR 41.9 million). The EBT margin in the Own Plant Operation segment (relative to total output) was 16.3% (previous year: 20.9%).

Service

The Service segment saw a downward trend during the reporting period. The segment’s revenues declined by 9.0% to EUR 46.0 million (previous year: EUR 50.5 million). The decline in revenues is largely due to the fact that in previous periods some international service companies were involved in Plant Construction projects and the resulting revenues have now been assigned to the Plant Construction segment for the full year 2025. Total revenues of the Service segment’s core business were only slightly down on the previous year.

Finished goods and work in progress increased by EUR 0.3 million. At EUR 2.6 million, other operating income was above the previous year’s level (EUR 1.8 million). Total output amounted to EUR 48.9 million (previous year: EUR 52.2 million).

The Czech Republic, Italy and Great Britain as well as Denmark and France are currently the Service segment’s most important markets besides Germany.

Outside Germany, plants with a total electrical output of 250 MW (previous year: 241 MW) were serviced as of the end of 2025, which break down into technical services for 197 MW (previous year: 187 MW) and biological services for 53 MW (previous year: 54 MW).

In Germany, biological services were provided for plants with a total electrical output of 72 MW and 10 MW equivalent (EnviThan) (previous year: 74 MW / 10 MW) and technical services for plants with an electrical output totalling 270 MW and 19 MW equivalent (EnviThan) (previous year: 274 MW / 16 MW) as of the end of 2025.

At EUR 35.4 million in the fiscal year 2025, the cost of materials was significantly lower than in the previous year (EUR 41.9 million) as a result of the separation

of the Service and Plant Construction segments. Due to the shifts described above, the Service segment’s personnel expenses of EUR 12.0 million were also below the previous year’s level (EUR 12.5 million). Other operating expenses amounted to EUR 4.7 million, after EUR 4.3 million in the previous year. The segment’s operating result (EBT) thus stood at EUR -4.2 million (previous year: EUR -7.4 million). As in the previous years, the negative segment result is primarily attributable to the fact that transactions with own plant operation companies are deducted from revenues in consolidation at Group level. This means that costs, especially the cost of materials, remain in the Service segment, whereas revenues generated with entities from the Own Plant Operation and Plant Construction segments are no longer included due to consolidation. On a stand-alone basis, the Service segment again generated a positive operating result.

Plant Construction (including the holding company)

The Plant Construction segment declined significantly in the fiscal year 2025. This was mainly due to the fact that the market situation in the first half of 2025 was characterised by regulatory uncertainty and investment restraint – particularly in the US market. By contrast, business activity picked up significantly in the second half of the year. This is reflected in the total output, which takes into account work in progress through changes in inventories. It increased from EUR 18.4 million after the first six months of 2025 to EUR 71.9 million for the full year 2025, although thus still remaining below the previous year’s level of EUR 99.7 million. The improvement in the second half of the year was mainly driven by the positive trend in demand in the European markets. Sales revenues in the fiscal year 2025 amounted to EUR 45.5 million (previous year: EUR 95.6 million). The decline is

essentially attributable to the weak performance in the first half of the year (EUR 14.8 million), consolidation effects with the Own Plant Operation segment as well as the high number of projects still under construction that could not yet be recognised as revenues under the German Commercial Code (HGB).

The cost of materials in the Plant Construction segment fell by 17.0% to EUR 44.2 million (previous year: EUR 53.2 million) as a result of the decline in capacity utilisation. Personnel expenses amounted to EUR 20.2 million (previous year: EUR 20.8 million). Other operating expenses totalled EUR 14.2 million (previous year: EUR 14.0 million).

The segment’s operating result (EBT) thus stood at EUR -11.5 million (previous year: EUR 9.5 million). However, the significantly improved order situation and capacity utilisation in the second half of the year will lead to a corresponding improvement in earnings in the current fiscal year 2026.

Order situation in the Plant Construction segment

At the end of December 2025, the Plant Construction segment’s order book totalled EUR 148.1 million, up 14.9% on the previous year (EUR 129.0 million). Of this amount, EUR 78.4 million is already under construction and partially included in changes in inventories. EUR 117.1 million relates to the international biogas markets. Most of these are orders in Sweden and Spain. Demand also remains high in the Baltic states. By contrast, momentum in the US market has slowed down considerably as a result of regulatory uncertainty, which is why EnviTec has significantly scaled back its activities in this market.

Employees

Respect, support and individual development form the foundation of EnviTec’s corporate culture. Well-trained, motivated employees are the most important asset and the basis for long-term corporate success. Sustainable human resources development therefore is the company’s top priority.

In the reporting period, the number of employees increased from 693 to 699 as at 31 December 2025. The headcount in the Plant Construction segment fell to 206 (previous year: 229). The Own Plant Operation segment had 253 employees (previous year: 219). The Service segment’s headcount increased slightly from 197 to 198. The holding company, EnviTec Biogas AG, had 42 employees (previous year: 48). Most employees (562) continued to be based in Germany (previous year: 557). As at the balance sheet date, 137 people were working at the foreign locations of EnviTec Biogas (previous year: 136).

Given the growing internationalisation of the business means, intercultural openness and mobility are important prerequisites. The aim is to attract and retain employees who are flexible in responding to new requirements and can confidently represent EnviTec, in an international context as well.

The company’s employment policy is geared to meeting both corporate requirements and individual interests. Performance-oriented remuneration schemes and internal further training programmes open up attractive opportunities for development. These are complemented by social benefits and activities that promote a sense of community and a corporate culture characterised by reliability and fairness.

EnviTec effectively attracts young talent through training, dual study programmes and the cooperation with the Private University of Applied Sciences for Business and Technology (PHWT) in Vechta. Our locations in Lohne and Saerbeck offer an attractive living and working environment – with regional roots and an international focus.

Bodies

On 9 May 2025, Franz-Josef Wiese was appointed a member of the Supervisory Board of EnviTec Biogas AG (ISIN: DE000A0MVLS8) by the Oldenburg Local Court with immediate effect at the request of the company’s Executive Board. The court appointment was valid until the end of the next ordinary General Meeting. The appointment of a new member became necessary when the previous member of the Supervisory Board and Deputy Chairwoman of the CDU party, Silvia Breher, was appointed Parliamentary State Secretary to the Federal Ministry of Food, Agriculture and Home Affairs as part of the formation of the new federal government.

At the Annual General Meeting on 4 July 2025, the shareholders elected Franz-Josef Wiese as an ordinary member of the Supervisory Board for a term until the end of the ordinary General Meeting in 2027. Franz-Josef Wiese is Head of Corporate Clients at Landessparkasse zu Oldenburg. He looks back on 40

years of experience in the corporate client business, including more than two decades in senior positions, and has in-depth knowledge of the agricultural and food industry.

Earnings position

Comparison of the actual performance with the originally projected performance

The forecast for each fiscal year is prepared at Group level for EBT, along with a consistent range for total output and revenues. The background for the latter is the project business in the Plant Construction segment: depending on the progress and invoicing status of construction projects at the balance sheet date, these projects are either included in total output as part of inventory build-up or recognised as revenues once the final invoice has been issued in accordance with accounting under the German Commercial Code (HGB).

Overall, the EnviTec Group’s business performance in the reporting period was in line with its expectations. In its May 2025 forecast, EnviTec’s Executive Board had projected total output (or revenues) of between EUR 330 million and EUR 370 million as well as earnings before taxes (EBT) of between EUR 25 million and EUR 35 million. Upon publication of the figures for the first half of the year in September 2025, EnviTec specified its forecast and expected to reach the lower end of each range. With revenues of EUR 312.6 million, the business volume is slightly below the forecast range. At the same time, total output at EUR 376.4 million is slightly higher than projected as a result of higher capacity utilisation in the Plant Construction segment. At EUR 26.0 million, EBT was within the expected range. Overall, the expected decline compared to the previous year is mainly due to one-time effects in the Energy unit, which did not occur again in the fiscal year 2025, as well as significantly weaker earnings in the Plant Construction segment. At the same time, the Group’s business volume and profitability remain above the level of previous years.

Sales revenues

Own Plant Operation remains the Group’s largest segment. Revenues in this segment rose by 15.4% to EUR 221.2 million (previous year: EUR 191.6 million), mainly as a result of increased production capacities, the integration of LIQVIS and stabilised GHG quota prices. Total output also increased significantly to EUR 255.6 million (previous year: EUR 200.5 million). Revenues in the Service segment fell by 9.0% to EUR 46.0 million (previous year: EUR 50.5 million), due to the separation of the Plant Construction and Service segments. Total output dropped to 48.9 million (previous year: EUR 52.2 million). Revenues in the Plant Construction segment (including

the holding company) declined by 52.4% to EUR 45.5 million (previous year: EUR 95.6 million). This was primarily due to low capacity utilisation in the first half of 2025, which was caused by regulatory uncertainty and changes to the political framework in key markets. Total output, which also includes plants under construction through changes in inventories, fell to EUR 71.9 million (previous year: EUR 99.7 million). However, this decline was significantly cushioned by improved capacity utilisation in the second half of the year.

The performance of all three segments of EnviTec resulted in a decrease in consolidated revenues of 7.4% to EUR 312.6 million (previous year: EUR 337.7 million). By contrast, total output rose by 6.8% to EUR 376.4 million, due to a significant increase in finished goods and work in progress (EUR 39.2 million) and higher other operating income (EUR 21.0 million).

Domestic revenues amounted to EUR 247.2 million in the fiscal year 2025 (previous year: EUR 214.9 million). Sales revenues generated outside Germany declined from EUR 122.8 million in the previous year to EUR 65.4 million. Italy and France accounted for the largest

share of international revenues. Revenues generated in these markets amounted to EUR 24.8 million and EUR 13.1 million, respectively, in the reporting period.

Expenses

The cost of materials is the main expense item for the EnviTec Biogas Group. In the fiscal year 2025, this item increased by 4.7% to EUR 220.7 million, after EUR 210.8 million in the previous year. At 63.9%, the Own Plant Operation segment accounted for the biggest share. In the previous year, this share was 54.9%. While the cost of materials in the Own Plant Operation segment rose considerably due to the increased production capacities for bio-LNG, this item fell by 15.6% and 17.0%, respectively, in the Service and Plant Construction segments. At EUR 155.7 million, gross profit was up on the previous year’s level of EUR 141.7 million. Personnel expenses picked up slightly by 2.1% to EUR 44.6 million (previous year: EUR 43.7 million). Personnel expenses as a percentage of sales revenues thus stood at 14.3% (previous year: 12.9%). In relation to total output, they amounted to 11.9%, compared to 12.4% in the previous year.

Depreciation and amortisation increased significantly by 30.9% to EUR 29.0 million in the reporting period (previous year: EUR 22.2 million). The increase is primarily attributable to depreciation of completed conversion projects and the acquisition of LIQVIS GmbH. At EUR 53.4 million, other operating expenses, which include operating, administrative and selling expenses, were higher than in the previous year (EUR 34.4 million). The increase is partly attributable to the recognition of a provision of about EUR 8 million for anticipated losses from sales contracts in the bio-LNG business. This provision was recognised in view of the abolition of double counting of advanced biofuels, which was decided in May 2026 as part of the national implementation of RED III, and which will result in a one-time reduction in expected revenues from these contracts.

Earnings

As anticipated, the EnviTec Group’s earnings performance in the fiscal year 2025 was below the level of the previous year, which had still partly been influenced by one-time effects. Earnings before interest, taxes, depreciation and amortisation (EBITDA) totalled

EUR 59.6 million (previous year: EUR 67.3 million). The result from equity accounted investments recognised under this item amounted to EUR 1.9 million (previous year: EUR 2.9 million). Taking into account the provision of about EUR 8 million for anticipated losses, earnings before interest and taxes (EBIT) totalled EUR 28.7 million (previous year: EUR 41.5 million). Interest expenses increased to EUR 5.5 million in the fiscal year 2025 (previous year: EUR 3.3 million) as a result of higher borrowings for construction projects. Interest income amounted to EUR 0.9 million, compared to EUR 2.2 million in the previous year.

This resulted in a net financial result of EUR -4.6 million (previous year: EUR -1.1 million). Earnings before taxes (EBT) thus stood at EUR 26.0 million, after EUR 44.0 million in the fiscal year 2024. Income tax expenses declined to EUR 9.1 million (previous year: EUR 14.0 million). Consolidated net income for the year thus amounted to EUR 16.7 million (previous year: EUR 29.8 million). Earnings per share in the fiscal year 2025 stood at EUR 1.12 (previous year: EUR 2.01).

In summary, as expected, the fiscal year 2025 was characterised by a continued normalisation of business performance, following previous years that were affected by extraordinary income. Despite lower capacity utilisation in the Plant Construction segment in the first half of the year and regulatory burdens, the Group proved resilient. At the same time, EnviTec took advantage of developments in previous years to create a solid foundation for sustained success, through the successful completion of the largest investment programme in the company’s history, the integration of LIQVIS GmbH, and the strengthening of its position in international plant construction markets. The legal framework, particularly in its German home market, remains the greatest risk to the Group’s continued positive development.

In the single financial statements of EnviTec Biogas AG, accumulated profits amounted to EUR 116.1 million. The Executive Board and the Supervisory Board of EnviTec Biogas AG propose not to distribute a dividend for the fiscal year 2025.

Net worth position

As at the balance sheet date of 31 December 2025, the EnviTec Group’s total assets stood at EUR 466.5 million, which represents an increase of 12.7% compared to the previous year’s reporting date.

On the assets side, fixed assets rose by 14.9% to EUR 236.4 million. The value of tangible assets again increased significantly by 16.5% to EUR 202.9 million as of 31 December 2025. This development was primarily due to the EnviTec Group’s investment programme, which led to a 47.1% increase in the value of land and buildings to EUR 52.8 million. In this context, the value of technical equipment and machinery rose by 84.8% to EUR 117.9 million. The completion of this programme also resulted in a sharp decline in payments on account and plants under construction of 70.3% to EUR 17.7 million.

The value of intangible assets declined from EUR 8.3 million to EUR 7.2 million. Financial assets rose from EUR 23.2 million as at 31 December 2024 to EUR 26.2 million at the end of 2025. The value of investments accounted for using the equity method increased by 5.8% to EUR 17.6 million. Other loans decreased from EUR 4.4 million to EUR 3.8 million, while loans to companies in which an interest is held increased from EUR 1.3 million to EUR 3.9 million.

Current assets also increased by 8.2% to EUR 219.3 million.

Inventories rose by EUR 22.8 million to EUR 118.2 million. This is primarily attributable to an increase in finished goods – mainly GHG quotas – by EUR 23.6 million to EUR 34.5 million. The value of work in progress increased significantly by EUR 26.3 million to EUR 50.8 million as a result of the inventory build-up in the Plant Construction segment. The value of raw materials and supplies fell by 4.6% to EUR 68.9 million.

The value of receivables and other assets declined by 6.5% to EUR 75.4 million.

Cash and cash equivalents decreased slightly from EUR 26.6 million at the previous year’s reporting date to EUR 25.7 million at 31 December 2025.

Changes in the Group's earnings figures	2025	2024	2023	2022	2021
in kEUR					
Total output	376,429	352,514	445,781	421,064	275,792
Sales revenues	312,640	337,699	416,816	382,834	262,367
Earnings before interest, taxes, depreciation and amortisation (EBITDA)	59,604*	67,283*	116,121*	82,771*	37,757
Earnings before taxes (EBT)	25,964	43,994	88,215	66,595	23,294
Consolidated net profit	16,656	29,784	64,075	48,257	16,869

For computational reasons, rounding differences may occur in the tables and charts in this Annual Report.
*Including earnings contribution from equity accounted investments and other investments

Financial position

As at 31 December 2025, the liabilities side of the EnviTec Group’s balance sheet once again showed a comfortable equity capitalisation of EUR 190.9 million. In comparison to the previous year’s reporting date, equity increased by 3.6% (31 December 2024: EUR 184.4 million), mainly due to a lower dividend payment and the resulting higher accumulated profit of EUR 155.3 million (31 December 2024: EUR 146.3 million). The equity ratio stood at 40.9% (31 December 2024: 44.6%).

The company therefore continues to have a very solid capital base to pursue its expansion in the global biogas markets.

Total liabilities amounted to EUR 227.2 million (31 December 2024: EUR 175.6 million). Liabilities to banks increased particularly strongly to EUR 165.3 million (31 December 2024: EUR 120.7 million) in the context of the implementation of the investment programme in the Own Plant Operation segment. Trade liabilities fell from EUR 26.4 million on 31 December 2024 to EUR 22.7 million on the reporting date. Advance payments received on orders rose from EUR 6.7 million to EUR 14.7 million, reflecting the inventory build-up in the Plant Construction segment. Liabilities towards companies in which an interest is held decreased further from EUR 9.0 million to EUR 7.2 million. Other liabilities increased from EUR 12.8 million to EUR 17.3 million, mainly due to higher VAT liabilities as at the reporting date.

Provisions decreased from EUR 51.6 million at the end of 2024 to EUR 40.0 million on 31 December 2025 as a result of reduced tax provisions (EUR -14.2 million). At

EUR 30.2 million, other provisions were 9.3% higher than in the previous year.

Investments

In 2025, the Group’s investments in intangible assets and property, plant and equipment amounted to EUR 58.2 million, compared to EUR 55.3 million in the previous year. The largest single item was the acquisition of LIQVIS GmbH at EUR 27.1 million. The remaining investments mainly related to the Own Plant Operation segment. EnviTec projects lower investments in 2026.

Cash position

Cash and cash equivalents declined slightly to EUR 25.7 million as at the balance sheet date (previous year: EUR 26.6 million). This reflects the anticipated normalisation of the cash position following the exceptionally high profitability levels in 2022 and 2023, which were attributable to the electricity and gas price situation during those years. In addition, the past fiscal year was characterised by high ongoing investments as part of the now completed investment programme.

EnviTec continues to have a comfortable financial basis,

which secures its ongoing business operations and provides financial flexibility for emerging business opportunities. As at 31 December 2025, unused overdraft facilities amounting to approximately EUR 11.1 million were available.

Cashflow

At EUR 17.8 million, the EnviTec Group’s net cash flow was clearly above the previous year’s figure of EUR -10.4 million, with gross cash flow also rising significantly. This was attributable to higher depreciation and amortisation, an increase in other liabilities, and a reduction in trade receivables. The outflow of cash from investing activities rose to EUR 48.7 million (previous year: EUR 43.3 million). The inflow of cash (previous year: outflow of EUR -15.7 million) from financing activities in the reporting period resulted from the repayment of financial liabilities of EUR 21.1 million, a dividend payment of EUR 7.4 million and new borrowings of EUR 59.1 million.

Disclosures regarding the purchase and holdings of treasury shares

The parent company of the Group, EnviTec Biogas AG, Lohne, holds 150,000 shares in the company. Please refer to the corresponding disclosures in the notes to the consolidated financial statements pursuant to section 315 para. 2 sentence 2 of the German Commercial Code (HGB) and section 160 para. 1 No. 2 of the German Stock Corporation Act.

Opportunity and risk report

The conscious and controlled management of risks and opportunities is the basis for successful long-term corporate development. The changing global energy market opens up opportunities for EnviTec Biogas which the company wants to exploit. Opportunities naturally entail risks, which must be adequately managed and minimised to ensure successful corporate development. EnviTec Biogas has therefore introduced a management system which systematically identifies potential risks and shows measures to minimise these risks. All executive staff are trained in identifying risks and taking appropriate responses. They encourage their employees to think in an entrepreneurial manner and to avoid risks. Risk management forms the basis for corporate control and helps to achieve the company’s objectives. It is an integral element of all business processes and business units.

Opportunities

Sector-specific opportunities

Across the globe, continuously growing demand for energy contrasts with the fight against climate change, which highlights the importance of using renewable energy sources such as biogas. In addition, there are geopolitical conflicts, which have brought the issue of supply security more strongly into focus, especially in Europe. Russia’s invasion of Ukraine, for instance, prompted the European Commission to present its REPowerEU plan in March 2022, which includes the political goal of increasing EU-wide production of biomethane to 35 billion Nm³ by 2030. Most recently, the EU adopted a regulation in January 2026 that will gradually ban Russian gas and LNG imports completely by autumn 2027 at the latest. This will result in further substitution demand, which biomethane, as a technically directly usable, grid-compatible energy carrier, is particularly well positioned to meet. The geopolitical tensions in the Middle East, particularly the escalation of the conflict with Iran, have further reinforced Europe’s strategic interest in a more independent energy supply. In this context, REPowerEU envisages an important role for biomethane, which will open up great growth potential for the biogas industry in the future.

As a renewable energy source that can cover base load and peak load requirements, biogas can be produced locally and is a flexible and reliable supplier of electricity and heat. Biomethane is a highly versatile fuel that can make a sustainable contribution to defossilisation across all consumption sectors, especially in the transport and heating sectors. At the European level, the RED III Directive has established an important framework for the ongoing increase in quotas for advanced biofuels. Its national implementation has brought significant short-term burdens in Germany. In EnviTec’s view, however, the opportunities will outweigh the risks in the medium term, even in the domestic market: rising GHG reduction quotas, a growing network of LNG filling stations and structurally increasing demand for advanced biofuels will provide the basis for further expanding this business segment.

There are opportunities for the construction of new plants, above all, in rapidly growing European markets such as France, Spain, Denmark, Italy and the Baltic states. In France, the register for biogas production certificates (CPB) with binding minimum quotas, which came into force on 1 January 2026, establishes a reliable framework for demand from which EnviTec, as an established market participant, can benefit. According to data from the European Biogas Association (EBA), Spain leads the list of planned biomethane investments, with committed investments of around EUR 4.8 billion up to 2030. With its EnviThan technology, EnviTec is well positioned for further expansion in these markets.

In established markets, opportunities arise where competitors are unable to respond appropriately to short-term changes in the general framework or successfully face the competition. This will open up opportunities primarily for EnviTec’s Service segment, in the area of conversion and upgrading of existing plants and for the company’s Own Plant Operation segment to win new customers as well as market share.

Strategic corporate opportunities

Strategic opportunities for EnviTec Biogas will arise from the ongoing internationalisation of business activity. The company will continue to seize opportunities in the international biogas markets. The focus is on markets where the expansion of plants for biogas production and upgrading is progressing, and where EnviTec, as a

leading plant manufacturer, can benefit from this development. The greatest growth opportunities currently exist in various member states of the European Union, where EnviTec aims to expand its existing business activities and sustainably tap into new markets as part of the implementation of the REPowerEU plan.

From a technical perspective, growth opportunities for EnviTec are expected to arise mainly in the bio-LNG market. By successfully completing the largest investment programme in the company’s history in the fiscal year 2025, EnviTec has significantly increased its production capacities for advanced biofuels. In addition, the bio-CNG and bio-LNG markets generally offer plant operators the opportunity to continue running their plants economically as producers of biomethane after the expiry of the EEG subsidy. With the acquisition of LIQVIS GmbH in the fiscal year 2025, EnviTec has systematically extended its value chain in the transport sector and now has a direct sales channel for bio-LNG from its own plants.

EnviTec also continuously monitors opportunities for expansion into other segments of renewable energy. The establishment of EnviTec Wind | Solar GmbH & Co. KG in the fiscal year 2024 marked another strategic step towards widening the business model, with the intention of gradually complementing the existing plant portfolio with additional renewable generation types.

Risks

Risk management

EnviTec Biogas has laid down the tasks, reporting and organisational structures in a Risk Management Manual. This Manual defines risks and describes the complete risk management process. The task of the Risk Officers is to assess and monitor risks in accordance with defined categories so as to be able to take counter-measures if required. Based on a regularly updated risk inventory, these are reviewed at quarterly intervals. Any risks that arise suddenly and have a notable impact on the company’s business performance, earnings position or enterprise value are immediately reported to the Executive Board, which will then take the necessary decisions. In the context of its reports to the Supervisory Board, the Executive Board continuously informs the latter about the main risks and outlines the measures

taken to manage these risks.

EnviTec is a company operating in a dynamically changing international market environment. This gives rise to risks which are inextricably linked with the business activities. As a matter of principle, risks arising from changes in general conditions or technological developments cannot be completely avoided. EnviTec's risk management system is therefore constantly being adapted to the latest developments. The Group does not take risks that are unrelated to the key objectives of corporate development.

These key objectives include:

- development and implementation of the business model,
- sustainable value creation and
- securing liquidity.

The Executive Board has no knowledge of any risks jeopardising the continued existence of the company. Individual risks capable of jeopardising the corporate value and the business performance are described below.

Procurement risks

Several developments have repeatedly caused problems in the procurement markets in recent years. Starting with the disruption of supply chains during the COVID-19 pandemic, the war in Ukraine put procurement markets under considerable pressure. Although the situation has normalised recently, the trade policy upheavals in 2025, especially the comprehensive import tariffs introduced by the US government and the geopolitical tensions in the Middle East as a result of the escalation of the conflict with Iran, have led to renewed disruptions of international supply chains and increased price pressure on the energy and commodities markets. This could also lead to procurement risks in the future, which could have an impact on EnviTec, especially with regard to the construction of biogas plants. EnviTec sources most of the components required for this purpose from suppliers. This could lead to supply shortages for the components. Short-term price increases and/or difficult pricing pose another risk. In the reporting year, the inflation rate in Germany stood at 2.2% on average (previous year: 2.2%). Experts at the ZEW – Leibniz Centre for European Economic Research in Mannheim expect an

increase to 2.7% for 2026. EnviTec aims to counteract these developments by maintaining close business relationships and signing fixed-price agreements.

Supply bottlenecks may also result from environmental disasters, animal epidemics or adverse weather conditions affecting large areas. This may lead to lost harvests of the substrates used in the operation of biogas plants, i.e., renewable or organic resources and waste. Prices for the required feedstock materials may rise as a result of high demand. This could jeopardise the cost-efficiency of the biogas plants operated by EnviTec's Own Plant Operation segment. In the reporting year, EnviTec benefited from an overall good harvest situation and moderate substrate prices. In the longer term, however, rising production costs in agriculture, as well as climate-related yield risks, could result in higher expenditure on raw materials. This risk is being limited by several measures: long-term supply contracts with regional agricultural enterprises, high inventory levels and increasingly performance-based substrate contracts structurally reduce price volatility. Furthermore, EnviTec has systematically reduced its dependence on energy crops in recent years, so that volatile maize prices now have a lesser impact on the profitability of the Own Plant Operation segment than in earlier periods.

In summary, EnviTec currently classifies procurement risks as operational risks that may occur in the Own Plant Operation segment due to potentially rising commodity and substrate prices. The potential impact on the Group is expected to be moderate for both the Own Plant Operation segment and the Plant Construction segment.

Environmental and industry risks

The financial success of the products and services offered by EnviTec Biogas depends on the promotion of renewable energy sources under appropriate policies and regulations. In Germany, these include the Renewable Energy Sources Act (EEG). Most of the other member states of the European Union and a number of non-EU countries have also put in place regulations comparable to the German Renewable Energy Sources Act (EEG). At the same time, biomethane will remain the most important field of application. The regulations of the Federal Immission Control Act (BImSchG) are very important in this context. In addition, the feeding

of refined biogas into the natural gas grid is governed by the German Gas Grid Access Directive.

Any changes in the statutory conditions governing the erection, enlargement and operation of biogas plants, both in Germany and in other countries, may have a negative effect on the net worth, financial and earnings position of EnviTec Biogas. In the German home market, specific regulatory burdens materialised during the reporting year and immediately afterwards. The retroactive abolition of double counting for advanced biofuels, effective from 1 January 2026, constitutes a direct intervention in the earnings model of the Own Plant Operation segment. In addition, the draft of the German Energy Industry Act (EnWG) provides for a shortened capping period for the grid connection of new plants, which prevents investments in the expansion of biomethane in Germany. Both measures are at odds with the technology-neutral and investment-friendly energy policy commitments set out in the coalition agreement and place a short-term strain on business development in the German market.

Another risk arises from the structure of the GHG quota market. The planned reintroduction of the option to transfer GHG quotas in 2027 could return quantities accumulated in previous years to the market and put considerable short-term pressure on the price level for advanced fuels. This risk is exacerbated by the ongoing impact of incorrectly declared or mislabelled biofuel volumes, which may lead to price distortions to the detriment of credible market participants. The German legislator has increased the GHG quota to 17.5% for 2027. Whether this measure will be sufficient to prevent significant price erosion remains uncertain at the time of reporting.

Apart from the legal framework, parts of the general public and certain interest groups have reservations regarding biogas plants and their construction.

EnviTec is therefore actively involved in a range of national and international industry associations in order to help shape a stable, technology-neutral and investment-friendly environment, as well as to foster dialogue with policymakers, the public and market participants.

EnviTec Biogas aims to further expand its international activities and thereby make use of growth opportunities, which results in a number of risk factors. These include possible changes to the political, economic, social, legal,

cultural and fiscal conditions in individual countries, as well as unexpected amendments to foreign laws and regulations to which the company may need to react at short notice. Experience from recent years has shown that, even in markets generally regarded as attractive for biogas, the regulatory environment can change rapidly, often to the detriment of investors.

Some countries in which the company is already active or plans to become active are considerably less stable in economic, political and legal terms than the member states of the European Union. Inadequate legal and administrative systems may make it more difficult or even impossible to obtain official permits, hamper the completion of customers' orders or jeopardise the enforcement of financial and other claims. The company has built up substantial know-how in its foreign representative offices and the Group management team to anticipate changes and prepare itself and its customers accordingly. Management will not contemplate investments in countries in which EnviTec Biogas sees no opportunities following close and continuous monitoring; existing investments in such countries will be terminated.

In summary, EnviTec classifies the above environmental and industry risks as strategic risks, whose occurrence is likely overall and whose impact on the business activity as well as the financial and earnings position of the Group would be moderate to significant if such a risk occurred.

Personnel risks

The growth of EnviTec Biogas depends on highly qualified employees. Growth will be slowed if it is not possible to hire well trained employees in a timely manner or to retain key qualifications in the company. The Group consistently and intensively uses recruitment tools and constantly coordinates the company's hiring needs with individual departments.

At the same time, the company continues to train and educate its employees and expands its knowledge by cooperating with the scientific departments of technical colleges.

In summary, EnviTec currently considers personnel risks to be likely to occur and their impact on the Group to be moderate if they occurred.

Competitive risks

Existing or future competitors may try to win market share by pursuing an aggressive pricing or acquisition policy. With the gradual expiry of subsidisation under the German Renewable Energy Sources Act (EEG), competition is increasingly shifting to the non-subsidised markets – in particular biomethane, bio-LNG and the service sector – where cost pressure and competitive intensity continue to increase. Moreover, new providers are increasingly entering international plant construction markets.

In addition, mislabelled biofuels from third countries are putting domestic producers such as EnviTec under price pressure and distorting competition.

In summary, EnviTec currently classifies competitive risks as strategic risks, whose occurrence is likely, but whose impact on the Group would be low if they occurred.

Technological risks

Biogas plants are subject to technological change. The market for biogas plants is being driven by constantly improved new products and services. It is characterised by short product lifecycles and frequently changing customer requirements. We assume that this will continue to be the case going forward. By introducing new products or services earlier or under more favourable conditions than our company, our competitors could gain a lead or secure exclusive rights to new technologies. The future success of EnviTec Biogas therefore depends on its ability to continuously develop new products and services and to enter into technology partnerships. With its EnviThan technology and the completion of its 100th gas upgrading plant in the reporting year, EnviTec has established a technological basis that counteracts this risk.

In summary, EnviTec currently classifies technological risks as strategic risks, whose occurrence is likely, but whose impact on the Group would be low if they occurred.

Order, sales and default risk

The effects of macroeconomic and business developments on the company’s customers and its order and sales situation are difficult to assess. A decline in the

order backlog due to cancellations or a lack of new orders would have an impact on the future revenue and earnings position. In addition, regulatory uncertainty in the German home market – in particular the retroactive abolition of double counting and the inadequacy of the EnWG draft with regard to grid access – has put a significant damper on customers’ willingness to invest and is having a negative impact on incoming orders in the Plant Construction segment in the short term. EnviTec Biogas has intensified its communication with its customers to anticipate any potential postponement of orders and supports its customers in the approval processes.

When marketing and selling electricity and gas generated from biogas, the company takes out long-term sales and purchase positions. These positions might incur significant losses in an oversupplied (long) or under-supplied (short) market environment combined with a negative market trend. In the area of advanced biofuels, there is also a risk that the planned reintroduction of the transferability of GHG quotas in 2027 could lead to accumulated quantities returning to the market and place considerable short-term pressure on the price level for bio-LNG and bio-CNG. Currently, all relevant positions within the Group are either secured by counterparties with excellent credit ratings, or provisions have been made for any potential risks. To prevent the loss of receivables, the company has optimised its receivables management process as well as the creditworthiness review.

In summary, EnviTec currently classifies the order, sales and default risk as a strategic risk that may occur. Moreover, the potential impact on the business activity as well as the financial and earnings position of the Group is considered to be moderate.

Corporate growth and internal risks

The EnviTec Group has an internal controlling and risk management system regarding the accounting process which defines suitable structures that are implemented in the organisation. This system is designed to ensure timely, consistent and correct accounting of all business processes and transactions. It also guarantees compliance with legal standards, accounting regulations and internal instructions.

The consolidated accounts are produced centrally based

on the data of the consolidated subsidiaries. Specially trained employees are responsible for consolidation. The management teams of the Group’s member companies are responsible for implementing and monitoring the local internal controlling systems.

Generally, it should be noted that an internal controlling system, irrespective of the size and structure, does not provide 100% security that material misstatements in the accounts are avoided or identified. However, it serves to prevent with sufficient certainty that corporate risks have a material effect.

Generally, strategic growth initiatives, the integration of new Group companies and the adaptation of internal processes to changing regulatory frameworks tie up considerable management resources. There is a risk that the company’s organisation and structure will be unable to keep pace with the company’s requirements. Accordingly, the company places a high priority on the ongoing development of its organisational, information and management structures. With the successful completion of the largest investment programme in the company’s history in the fiscal year 2025, the relevant capacities will also be more readily available in the future. At the same time, the acquisition of LIQVIS GmbH as a new Group company with its own network of filling stations and business model leads to additional integration requirements.

In summary, EnviTec currently classifies risks from corporate growth and internal processes as operational risks that may occur. The potential impact on the business activity as well as the financial and earnings position of the Group is considered to be moderate.

Currency risks

All sales and purchases are made in the Group currency, the euro. This does not entail major currency risks. Currency risks may arise in conjunction with transactions of the subsidiaries in the USA, Great Britain, the Czech Republic, Sweden and Denmark. In this context, EnviTec is closely monitoring the increased volatility on the international foreign exchange markets, which was fuelled by geopolitical tensions and trade policy uncertainties in the reporting year. Exchange rates are therefore monitored on an ongoing basis to ensure that currency hedging measures can be taken at an early stage.

In summary, EnviTec currently classifies currency risks as operational risks, whose occurrence is likely and whose impact on the Group would be moderate if they occurred.

Risks from financing instruments

All non-current liabilities of the EnviTec Group carry predominantly fixed interest rates and are therefore exposed to fair-value risk, meaning that potential interest rate increases do not represent a risk to the company.

Overall risk situation

At the end of the fiscal year 2025, the risk situation of the EnviTec Group is considered to be manageable overall. The main risks currently stem from the regulatory environment in the German home market, particularly due to the retroactive abolition of double counting for advanced biofuels and the inadequate provisions on grid access in the German Energy Industry Act (EnWG). There is also uncertainty regarding the future price development of the GHG quota market in 2027. EnviTec’s assessment of the market over the medium term is, however, positive. The GHG quota obligations, which will be gradually increased until 2040 as part of the national implementation of the RED III Directive, create reliable, structural demand prospects. In addition, procurement risks resulting from geopolitical tensions and trade policy disruptions could heighten price pressure in the Plant Construction segment.

The Executive Board has no knowledge of any risks jeopardising the continued existence of the company. The international diversification of its business activities, its solid equity capitalisation, long-term supply contracts, and its established risk management and control system provide a reliable basis for addressing the identified risks effectively.

Forecast

Macroeconomic and industry-specific environment

Macroeconomic trend: Economic climate expected to cloud over

In the fiscal year 2026, the global economy has, so far, been affected by another geopolitical shock, and the outbreak of the war in Iran at the end of February 2026 has abruptly dampened global growth prospects. Rising energy prices, disrupted trade and transport routes, as well as a renewed rise in inflation expectations, are weighing on economic momentum worldwide. According to the International Monetary Fund’s spring forecast (IMF, April 2026), global economic growth is projected at 3.1% for 2026 as a whole (previous year: 3.4%). The pace of expansion therefore remains subdued. The IMF expects growth of 1.8% for the industrialised countries and 3.9% for the emerging and developing countries. The eurozone economy is projected to grow by 1.1%.

Once again, the markets that are of particular significance to EnviTec present a mixed picture. Germany’s gross domestic product is expected to increase by 0.8% in 2026 – supported by fiscal policy stimuli, in particular higher infrastructure and defence spending. France (+0.9%) and Italy (+0.5%) are also experiencing only modest growth momentum. Spain (+2.1%), which has recently gained in importance for the EnviTec Group, remains the fastest-growing economy among the major eurozone countries, although the growth pace is somewhat slower than in the previous year (+2.8%).

Biogas market: unbroken momentum in Europe – German regulation falls short of own aspirations

The international framework conditions for the biogas industry continued to develop in a mixed manner during the reporting year. In Germany, the Building Modernisation Act (GMG) available as a draft bill could provide new stimuli. The proposed green gas quota and the bio-stairs for new gas heating systems now offer, for the first time, a concrete outlook for demand for biomethane in the heat supply sector. Additionally, maritime applications

are gaining in significance as a new area for the use of bio-LNG. However, the specific implementation of other key legislative projects in Germany has recently led to considerable disappointment. The retroactive abolition of double counting for advanced biofuels such as bio-LNG and bio-CNG from 1 January 2026, the shortened capping periods for new plants provided for in the Energy Industry Act (EnWG), as well as a working draft of the Renewable Energy Sources Act (EEG) which falls short of the coalition’s promises, mean that there is currently no consistent and reliable planning basis for investment in Germany. The technology-neutral and investment-friendly energy policy set out in the coalition agreement has, in key areas, been more than undermined by actual legislation.

Regarding the market environment for advanced GHG quotas, a reduction obligation and the exclusion of questionable biofuel imports are supporting the price level on the demand side in the current fiscal year. Simultaneously, the increase in the crude oil price triggered by the war in Iran is making biomethane a more attractive option for compliance purposes. By contrast, the retroactive abolition of double counting from 1 January 2026 is diminishing the economic attractiveness of advanced biomethane. We nevertheless anticipate that the market environment will improve in the medium term.

For biogas and biomethane to fulfil their roles as independent, secure sources of energy and heat in the face of geopolitical change, politicians need to establish consistent and predictable framework conditions – also with respect to existing investments in the sector. Over the medium term, bio-LNG, as the fuel delivering the greatest greenhouse gas reductions among all available alternatives, will remain one of the mainstays of decarbonisation in heavy-duty and shipping transport. With LIQVIS, EnviTec is positioning itself as a provider of climate-neutral fuel solutions along the entire value chain. Growing market opportunities are provided not only by the continuation of existing biomethane applications, but increasingly also by the further substitution of natural gas in the industrial sector and for the generation of electricity – and above all in international markets, where the regulatory environment for biomethane is more reliable than in Germany.

At the European level, the REPowerEU Plan continues to provide the central framework for the accelerated

expansion of biomethane production. While the production capacity installed in Europe at the end of the first quarter of 2025 of about 7 billion Nm³ per year represents an increase of around 9% on the previous year, it also illustrates the considerable gap to the target value of 35 billion Nm³ by 2030. This underlines the strategic importance of international diversification for the EnviTec Group.

Performance of EnviTec Biogas

In view of the continued positive industry trend, the management of EnviTec Biogas is confident about the coming years. Thanks to its international presence, technological expertise and integrated, profitable business model, the Group is strategically well positioned to continue to exploit the opportunities that arise in the biogas sector and to expand its business activities in a targeted manner. Significant growth impetus comes from the increasing demand for climate-neutral energy sources, political support for biomethane at the European level and the ongoing expansion of the company’s own portfolio. Continuing geopolitical tensions – particularly in the Middle East and Ukraine – as well as the associated risks for international oil and gas markets, highlight the importance of a diversified and independent energy supply. EnviTec regards itself as well positioned to contribute to security of supply from regional renewable energy sources.

The production and marketing of advanced biofuels remain a key growth area. Building on the significant investments made in past fiscal years, EnviTec has established the foundation for a sustained strengthening of earnings in the Own Plant Operation segment. The acquisition of LIQVIS GmbH at the beginning of 2025 expands the company’s value chain in the transport sector and creates a direct sales channel for bio-LNG produced at its own plants. Supply agreements with new customer segments, including the agreement with TT-Line concluded in October 2025, underpin the strong market positioning.

Nevertheless, the regulatory setting for advanced biofuels in Germany remains ambivalent. The May 2026 decision to abolish double counting in the transport sector with retroactive effect from 1 January 2026 will

place a significant burden on the bio-LNG business in the current fiscal year. On the other hand, other measures introduced as part of the GHG quota package offer positive support. If, however, oil and fuel prices remain at a high level in the medium term as a result of geopolitical tensions, a significant further structural increase in demand for bio-LNG and bio-CNG is likely. EnviTec’s medium-term outlook therefore remains positive.

After weaker performance in the past reporting period, EnviTec expects business in the Plant Construction segment to pick up again. The international order situation improved noticeably over the course of the fiscal year 2025, with market entries and follow-up projects in Slovakia, Belgium, Lithuania and Spain, as well as milestones in the established markets of France, Denmark and Italy. Against the backdrop of the geopolitical situation, further increasing GHG reduction obligations and a trend towards more technology-neutral energy policies in many European markets, EnviTec sees considerable potential in the plant construction sector in the coming years. In the German home market, however, contradictory legislation is creating short-term burdens. While the planned Building Modernisation Act, with its binding green gas quota, would – for the first time in years – open up a specific demand perspective for biomethane in the heating market, the retroactive abolition of double counting for advanced biofuels, together with the inadequate draft of the Energy Industry Act (EnWG), undermines investment security for exactly those market participants such as EnviTec that have invested considerable resources into expanding the value chain for green gas in recent years. A broader recovery in domestic business will only occur if the federal government fulfils the commitment laid out in the coalition agreement to a technology-neutral and investment-friendly energy policy in concrete legislation.

Segment performance

In the **Plant Construction** segment, EnviTec is recording a significant increase in demand, especially in other European countries, which is also reflected in growing capacity utilisation. At the end of December 2025, the Plant Construction segment’s order book totalled EUR 148.1 million, up 14.9% on the previous year (EUR 129.0 million). Both the current order backlog and new business primarily comprise projects that, under the German Commercial Code (HGB), are likely

to be finally invoiced only to a limited extent by the end of the year. While total output (or revenues) is expected to rise, the Plant Construction segment will improve its contribution to earnings, but will nonetheless report a negative result (EBT) overall in the fiscal year 2026. From a management perspective, the segment result will already return to positive territory in 2026. From 2027, EnviTec also expects to achieve a positive result under HGB again.

The **Own Plant Operation** segment will continue to face several opposing trends in the fiscal year 2026. On one hand, the volume of biomethane produced will continue to increase as a result of expansions under the investment programme. With regard to price developments, there is increased planning uncertainty. Although the rise in crude oil prices triggered by the war in Iran basically supports the attractiveness of bio-LNG and bio-CNG, further developments cannot currently be predicted. At the same time, the current high prices for biomethane that is eligible for counting towards the GHG-quota are dampened in their economic effect by the abolition of double counting that came into effect on 1 January 2026. Additionally, long-term contracts for the sale of GHG quotas concluded by EnviTec have led to a provision for anticipated losses in the fiscal year 2025 due to the abolition of double counting. In the fiscal year 2026, the corresponding revenues will be recognised in equity in segment reporting. Consequently, both revenues and earnings in the Own Plant Operation segment will be significantly below the previous year's level. Nevertheless, the Own Plant Operation segment will maintain its fundamentally strong earnings position and can be expected to expand it once the aforementioned effects subside in subsequent years.

In the **Service** segment, EnviTec expects positive business performance in the current fiscal year and forecasts total output (or revenues) and earnings (EBT) to be slightly above the previous year's level.

Group forecast

Based on the above-described developments in the individual segments, consolidated total output (or revenues) is expected to come in between EUR 330 million and EUR 370 million in the fiscal year 2026. The EnviTec Executive Board expects earnings before taxes (EBT) to come in between EUR 5 million and EUR 15

million. The decline compared to the fiscal year 2025 is mainly due to one-off effects in the Energy unit resulting from the abolition of double counting and the increased difficulty in placing biofuels on the market. Management also assumes that a major proportion of current projects in Plant Construction cannot be finally invoiced by the end of 2026, which means that profits will only be realised in the fiscal year 2027 in accordance with accounting under the German Commercial Code (HGB).

At the same time, we see positive impetus for the biomethane business in Germany and other European countries. The Plant Construction segment has a high capacity utilisation and well-filled order books. EnviTec therefore expects revenue (total output/sales) and earnings (EBT) to rise in 2027.

The implementation of the German government's political plans and volatility in the energy markets remain a material factor of uncertainty. Moreover, the forecast depends on the number of projects that can be finally invoiced in accordance with the German Commercial Code (HGB) at the end of the year.

The Executive Board and the Supervisory Board would like to extend their heartfelt thanks to all employees of the EnviTec Group for their commitment and their contribution to the Group's business development. With their know-how, reliability and loyalty to the company, we will continue to shape the future of EnviTec as a leading all-round biogas provider together in the years to come.

Lohne, 12 May 2026

The Executive Board of EnviTec Biogas AG
Olaf von Lehmden, Jörg Fischer, Jürgen Tenbrink

CONSOLIDATED FINANCIAL STATEMENTS

Consolidated balance sheet

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. General information

EnviTec Biogas AG, headquartered in Lohne, Germany, registered with the Commercial Register of the Oldenburg local court under HRB 201466, is a Germany-based company operating on an international scale whose business purpose is the construction and sale of biogas plants through its subsidiaries as well as the operation of own biogas plants, the provision of technical and biological services, the marketing of electricity, biomethane and bio-LNG and the acquisition and sale of equity investments.

As of the reporting date 31 December 2025, EnviTec Biogas AG is a small corporation within the meaning of section 267 para. 1 of the German Commercial Code (HGB). The company’s shares are traded in the Basic Board of the Frankfurt Stock Exchange, Deutsche Börse AG.

EnviTec Biogas AG prepares its consolidated financial statements in accordance with the provisions of sections 290 et seqq. of the German Commercial Code (HGB). The consolidated financial statements

give a true and fair view of the net worth, financial and earnings position of the company in accordance with German principles of proper accounting. The presentation, recognition and measurement consistency in the balance sheet and the income statement has been maintained.

The consolidated balance sheet follows the structure stipulated in section 266 HGB. “Thereof” sub-items are provided in the notes. The type of expenditure format pursuant to section 275 para 2 HGB was used for the income statement.

2. Basic principles of the consolidated financial statements

2.1. Basis of consolidation

The following changes in the basis of consolidation occurred between 1 January 2025 and 31 December 2025:

	Germany	Abroad	Total
EnviTec Biogas AG and fully consolidated companies			
31/12/2024	90	24	114
Additions of subsidiaries	2	1	3
Disposals of subsidiaries	2	0	2
31/12/2025	90	25	115

	Germany	Abroad	Total
Equity accounted companies			
31/12/2024	51	0	51
Additions of equity accounted companies	1	0	1
Disposals of equity accounted companies	1	0	1
31/12/2025	51	0	51

As at the balance sheet date, the EnviTec Group comprised 166 entities including EnviTec Biogas AG (31 December 2024: 165), of which 115 (31 December 2024: 114) were fully consolidated.

On 22 January 2025, Fünfte Biogas Bützow Betriebs GmbH & Co. KG, Lohne, acquired further limited partnership shares in Vierte Biogas Bützow Betriebs GmbH & Co. KG, Bützow, in the amount of EUR 100,000.00.

EnviTec Wind | Solar GmbH & Co. KG, Lohne, has been included in the consolidated financial statements as a company accounted for using the equity method since 1 January 2025. EnviTec Biogas AG holds 43.75% of the shares. In accordance with section 296 para. 2 HGB, the company was previously not included in the consolidated financial statements.

By notarised purchase agreement dated 20 December 2024 and assumption of control as of 1 February 2025, 100% of the shares in LIQVIS GmbH, Düsseldorf, were fully consolidated and 100% of the shares in SASU Liqvis France, Paris, were acquired.

On 25 August 2025, Zweite EnviTec Beteiligungs GmbH & Co. KG, Lohne, acquired limited partnership shares in Erste Anklam Betriebs GmbH & Co. KG, Anklam, in the amount of EUR 6,150.00 and thus holds 100% of the shares.

Under a contract dated 8 October 2025, EnviTec BioLNG GmbH & Co. KG, Lohne, acquired the remaining 50% of the limited partnership shares in BALANCE EnviTec Bio-LNG GmbH & Co. KG, Lohne, and is now the sole limited partner of the company. BALANCE EnviTec Bio-LNG GmbH & Co. KG, Lohne, which was previously included in the consolidated financial statements as a company accounted for using the equity method, will be fully consolidated from now on.

Under a contract dated 17 November 2025, MMF Max-Flow Membran Filtration GmbH, Lohne, acquired 100% of the shares in Bioenergie Rietschen GmbH, Lohne, and resolved to merge Bioenergie Rietschen GmbH, Lohne, with MMF MaxFlow Membran Filtration GmbH, Lohne, with effect from 31 October 2025.

Under contracts dated 27 November 2025, MMF Max-Flow Membran Filtration GmbH, Lohne, also acquired 100% of the shares in each of the following companies:

- Biogas Anklam Verwaltungs GmbH, Anklam
- GreenLNG GmbH, Lohne

Under the same contracts, it was resolved to merge the two companies with MMF MaxFlow Membran Filtration GmbH, Lohne, with effect from 30 September 2025.

In addition, it was resolved to merge EnviTec Italia GmbH, Lohne, with MMF MaxFlow Membran Filtration GmbH, Lohne, under a contract dated 27 November 2025.

MMF Max Flow Filtration GmbH, Lohne, was renamed Biogas Anklam Verwaltungs GmbH, Lohne, with effect from 30 September 2025.

On 13 October 2025, Fünfte Biogas Bützow Betriebs GmbH & Co. KG, Lohne, acquired further limited partnership shares in Zweite Biogas Bützow Betriebs GmbH & Co. KG, Bützow, in the amount of EUR 200,000.00.

On 5 November 2025, Fünfte Biogas Bützow Betriebs GmbH & Co. KG, Lohne, acquired further limited partnership shares in Dritte Biogas Bützow Betriebs GmbH & Co. KG, Bützow, in the amount of EUR 200,000.00.

Under contracts dated 6 October 2025, Bioenergie Lunow GmbH & Co. KG and Bioenergie Lunow Verwaltungs GmbH, both based in Lohne, were established. EnviTec Biogas Betriebs GmbH & Co. KG, Lohne, holds a 100% share in the share capital of Bioenergie Lunow Verwaltungs GmbH, Lohne, totalling EUR 25,000.00. EnviTec Biogas Betriebs GmbH & Co. KG, Lohne, holds a limited partnership share of EUR 64,000.00 in the fixed capital of Bioenergie Lunow GmbH & Co. KG in the amount of EUR 100,000.00.

In the fiscal year 2025, the remaining minority shares in Baura Biogas Soc. Agricola A.r.l., Verona, Italy were also acquired.

In accordance with section 296 para. 2 of the German Commercial Code (HGB), the following entities were not included in the consolidated financial statements for reasons of materiality:

- Bioenergie Friedland GmbH & Co. KG, Lohne
- Biogas Bützow Verwaltungs GmbH, Lohne
- EnviTec Wind I Solar Verwaltungs GmbH, Lohne
- PV LAKO Angern Verwaltungs GmbH, Angern
- PV LAKO Angern GmbH & Co. KG, Angern
- Bioenergie Lunow GmbH & Co. KG, Lohne
- Bioenergie Lunow Verwaltungs GmbH, Lohne
- BALANCE EnviTec Verwaltungs GmbH, Ahrensfelde

2.3. Consolidation methods

The consolidated financial statements cover those entities in which EnviTec Biogas AG directly or indirectly holds the majority of the voting rights (subsidiaries) unless their influence on the net worth, financial and earnings position of the Group is of subordinate importance. Consolidation starts at the time when the possibility to control exists and ends when the possibility of control no longer exists.

Where required, the financial statements of the subsidiaries are adjusted to reflect the accounting and valuation methods used by the Group.

All subsidiaries prepare their separate financial statements as of 31 December of each year.

Capital consolidation

Business combinations are accounted for in accordance with section 301 of the German Commercial Code (HGB) using the purchase method by netting the carrying amounts of the investments with the remeasured equity capital of the subsidiaries at the time of their acquisition. Assets, liabilities and contingent liabilities of acquired subsidiaries are recognised at their respective fair values. A positive difference remaining after the purchase price allocation is capitalised as goodwill.

The transactions in the fiscal year 2025 described in section “2.1 Basis of consolidation” led to an increase in recognised goodwill by a total of EUR 499,491.00. The acquisition of 100% of the shares in LIQVIS GmbH and 100% of the shares in SASU Liqvis France SARL resulted in a negative difference from initial consolidation totalling EUR 7,324,631.92. EUR 5,118,589.90 of this amount has characteristics of equity, as depreciable tangible assets, in particular, were acquired at favourable terms. EUR 2,206,042.02 has characteristics of debt, as loss expectations existed to this extent. In the fiscal year 2025, EUR 538,686.29 of the amount with characteristics of equity was reversed to the income statement and EUR 2,206,042.02 of the amount with characteristics of debt was reversed to the income statement.

Debt consolidation

Receivables and liabilities between the consolidated companies are omitted in accordance with section 303 HGB.

Expense and income consolidation

Expenses and income between consolidated entities are omitted in accordance with section 305 HGB.

Elimination of intercompany profits and losses

Intercompany profits and losses from intra-Group transactions are eliminated in accordance with section 304 HGB.

Equity accounting method

The equity method is used to measure joint ventures and associated companies which are under the joint management (joint ventures) or controlling influence

(associated companies) of EnviTec Biogas AG. For investments accounted for using the equity method in the consolidated financial statements, the acquisition costs are increased or decreased annually by the changes in equity corresponding to EnviTec’s share in the equity capital. The changes in pro-rated equity that are recognised in profit or loss are shown separately in the income statement.

3. Accounting and valuation principles

The consolidated financial statements were prepared in accordance with the general provisions of section 264 et seqq. of the German Commercial Code (HGB) for large corporations as defined in section 267 para. 3 sentence 2 HGB, the provisions for consolidated financial statements stipulated in section 290 et seqq. HGB as well as the complementary provisions of the German Stock Corporation Act.

The financial statements of the entities covered by the consolidated financial statements, as well as the companies accounted for using the equity method, are based on uniform accounting and valuation principles.

Receivables and liabilities generally arise on a euro basis, which means that no currency translation is required. The financial statements of the consolidated companies are prepared in euros save for twelve exceptions. Equity is translated at historical rates, assets and liabilities in the foreign-currency financial statements are translated at the mean rates on the balance sheet date. Expense and income items are translated at average annual exchange rates. Exchange differences are recognised in equity.

The accounting, valuation and reporting methods remained unchanged from the previous year.

3.1. Intangible assets

Purchased intangible assets are capitalised at cost.

If they have a determinable useful life, they are written off accordingly over a period of up to ten years.

Goodwill is written off using the straight-line method over 5 to 20 years. Goodwill was capitalised in the consolidated financial statements of EnviTec Biogas AG only for acquisitions. The useful lives reflect the lifecycles of the acquired companies.

3.2. Tangible assets

Tangible assets are carried at acquisition or production cost less depreciation – with the exception of land and leasehold rights – and less write-downs for impairment.

Acquisition costs comprise the purchase price, ancillary costs and subsequent acquisition expenditure as well as cost reductions.

Production cost includes all direct costs attributable to the production process and a reasonable portion of the production-related overheads. Financing costs are not recognised.

Systematic depreciation of property, plant and equipment is performed according to the straight-line method or, where permissible, according to the declining balance method.

The useful lives on which depreciation is based reflect the estimated or anticipated useful lives for the Group and are shown in the table below:

	Useful life
Buildings	20 to 40 years
Other structures	10 to 20 years
Technical equipment	6 to 20 years
Machinery and appliances	6 to 12 years
Operating and office equipment	3 to 11 years
Vehicles	5 to 8 years
IT equipment	3 to 7 years

3.3. Financial assets

Financial assets – with the exception of shares investments accounted for using the equity method – are recognised at cost or at the lower value as of the reporting date.

3.4. Inventories

Raw materials and supplies are recognised at cost or at the lower value as of the reporting date.

Finished goods and work in progress are recognised at production cost. Production cost includes material and manufacturing costs as well as appropriate overheads. Interest on borrowings is not included in the valuation. The lower of cost or market principle was considered in the valuation.

In addition to biomethane and biomethane certificates, the finished goods item also includes greenhouse gas reduction quotas (GHG quotas). The GHG quotas are generated in a Group-internal, separately implemented and monitored production process and are accordingly recognised at Group production cost, taking into account the lower of cost or market principle. Production cost includes material and manufacturing costs as well as appropriate overheads.

Payments on account made are recognised at their nominal amount.

Payments on account received for work in progress are set off from work in progress to the extent that they do not exceed the latter.

3.5. Receivables and other assets

Receivables and other assets are recognised at their nominal value or at the lower value as at the balance sheet date. Itemised allowances are established where required. Adequate general allowances are established for the general default risk of trade receivables.

3.6. Cash in hand and cash at banks

Cash in hand and cash at banks are recognised at their nominal values.

3.7. Prepaid expenses

In accordance with section 250 para. 1 of the German Commercial Code (HGB), prepaid expenses for pay-

ments made prior to the reporting date were recognised at the nominal value if they represented expenses for a certain period after this date.

3.8. Deferred taxes

Deferred taxes were recognised for temporary differences between the commercial balance sheet and the tax balance sheet as well as for tax losses carried forward that can be offset within five years. A tax rate of 28.08% or 25.44% is applied throughout the Group.

3.9. Provisions

The provisions cover all discernible risks and contingent liabilities and impending losses. They were recognised at their settlement values required according to prudent commercial judgement. Provisions with a remaining term of more than one year are discounted at the average market rate of the past seven fiscal years for the respective maturities.

3.10. Liabilities

Liabilities were recognised at their respective settlement amount.

3.11. Deferred income

Taking into account section 250 para. 2 HGB, deferred income received prior to the reporting date was recognised at the nominal value if it represented income for a certain period after this date.

4. Disclosures on balance sheet items

4.1. Fixed assets

The fixed asset items changed as follows:

The required disclosures regarding the items of the consolidated balance sheet are provided below.

		As at 01/01/2025	Additions 2025	Additions due to transitional consolidation	Disposals 2025	Currency differences 2025	Reclassi- fications 2025	As at 31/12/2025	As at 01/01/2025	Additions 2025	Disposals 2025	Reclassifications 2025	As at 31/12/2025	As at 31/12/2025	As at 31/12/2024

4.2. Goodwill

Systematic amortisation amounted to kEUR 1,304 in the reporting period.

4.3. Receivables and other assets

Other assets include receivables from refunds of input tax and advance tax payments in the amount of kEUR 11,457 (previous year: kEUR 15,133), which legally arise only after the reporting date.

4.4. Prepaid expenses

The prepaid expense item essentially includes the payment of loan processing fees, leases and ground rent as well as insurance premiums for periods after the reporting date.

4.5. Deferred taxes

Deferred taxes are determined on the basis of temporary differences between the recognised values of assets and liabilities and their tax values as well as for tax losses carried forward.

The company’s tax rate of 28.08% was generally used for the valuation (15.825% corporate income tax including solidarity surcharge and 12.25% trade tax). The trade tax rate is derived from the average trade tax factor of 350%. The valuation of deferred taxes on technical equipment and machinery was based on an average tax rate of 25.44% in 2025, taking into account the German “Act for an Immediate Tax-based Investment Programme”.

Deferred tax assets and liabilities are shown in the table below:

	31/12/2025	31/12/2024	VÄ
Deferred tax assets			
Tax losses carried forward	975	494	481
Technical equipment and machinery	2,964	2,264	700
Other provisions	2,583	1,011	1,572
Work in progress	734	0	734
	7,256	3,769	3,487
Deferred tax liabilities			
Work in progress	0	2,611	-2,611
Technical equipment and machinery	680	780	-100
	680	3,391	-2,711

The change in deferred tax assets and deferred tax liabilities relating to work in progress also includes the correction of amounts from previous years of foreign subsidiaries.

4.6. Equity capital

The company’s share capital totals EUR 15,000,000.00. Own shares with a nominal value of EUR 150,000.00 are openly deducted from the equity capital in the balance sheet. The portion of the purchase price of the own shares that exceeds the nominal amount of EUR 1,752,000.00 has been offset against the revenue reserves. The share capital is divided into 15,000,000 bearer shares with a par value of EUR 1.00 per share.

Changes in accumulated profits

	kEUR
Consolidated net profit	16,656
Profit carried forward as of 1 January 2025	146,265
Payout to shareholders	-7,425
Profit attributable to minority shareholders	-731
Increase recognised in equity	518
Consolidated accumulated profit as of 31 December 2025	155,283

Collateral furnished

Liabilities to banks in the amount of kEUR 118,874 are secured by the assignment of property, plant and equipment, the assignment of claims under existing contracts as well as a pledge on business assets. The items of property, plant and equipment furnished as collateral have a carrying amount of kEUR 125,648.

4.7. Liabilities

Liabilities are composed as follows:

	Remaining term up to 1 year	Remaining term 1 to 5 years	Remaining term more than 5 years	Total
EUR	31/12/2025			
Liabilities to banks	73,214,990.69	66,814,438.31	25,272,198.79	165,301,627.79
Advance payments received on account of orders	14,729,380.58	0.00	0.00	14,729,380.58
Trade liabilities	22,703,434.68	0.00	0.00	22,703,434.68
Liabilities towards companies in which an interest is held	7,160,429.44	0.00	0.00	7,160,429.44
Other payables	17,349,554.31	0.00	0.00	17,349,554.31
	135,157,789.70	66,814,438.31	25,272,198.79	227,244,426.79
thereof tax liabilities	10,004,513.80			
thereof social security liabilities	328,693.70			

5. Disclosures on the consolidated income statement

The required disclosures regarding the items of the consolidated income statement are provided below.

Sales revenues

A breakdown of sales revenues by activities and geographic markets is provided below, reflecting the income and expense consolidation:

in kEUR	Areas of activity							
	Plant Construction*		Service		Own Plant Operation		Total

* incl. sales revenues of the holding company

6. Explanations regarding the cash flow statement

Cash and cash equivalents at the beginning and the end of the cash flow statement comprise cash in hand, cash deposits at the Bundesbank, cash at banks and cheques (kEUR 25,686) as well as liabilities to banks payable on demand (kEUR 17,433).

As of the reporting date 31 December 2025, access to cash and cash equivalents in the amount of kEUR 5,547 (previous year: kEUR 6,663) was restricted. These are reserve holdings set aside as per obligations under various debt capital agreements in connection with the construction of biogas plants.

7. Other disclosures

Contingent liabilities and other financial obligations

Contingent liabilities

in kEUR	31/12/2025	31/12/2024
Guaranty obligations	1,025	1,025

Disclosures on contingent liabilities pursuant to section 314 No. 19 HGB

Due to the orderly net assets, financial and earnings position of the beneficiaries of the contingent liabilities, the risk of a claim being raised under the contingent liabilities is currently considered to be low.

Other financial obligations

Other financial obligations are shown below:

in TEUR	Total	Remaining term		
		up to 1 year	1 to 5 years	more than 5 years
From rental agreements	4,970	1,117	2,782	1,071
From purchase commitments	7,666	7,666	0	0
From license agreements	117	77	40	0
Total	12,753	8,860	2,822	1,071

In addition, some of the own plants have rental agreements of minor importance.

Significant post balance sheet events

The law passed by the Bundestag in spring 2026 on the further development of the GHG quota resulted in the abolition of advanced biofuels such as bio-LNG and bio-CNG with retroactive effect from 1 January 2026. For EnviTec, this intervention represents a direct burden for the bio-LNG business.

Fees of the auditors of the consolidated financial statements

The following fees were recognised as expenses for the services provided by the auditors of the consolidated financial statements, Kohl & Zerhusen GmbH:

	2025 in kEUR
Audit fees	100
Tax consulting fees	135
Total	235

Related party disclosures

All transactions with related parties are made on terms equivalent to those that prevail in arm’s length transactions.

Staff

The table below shows the average staff numbers of the worldwide member companies of the EnviTec Group in 2025:

	2025	2024
Blue-collar staff	48	48
White-collar staff	651	641
Total	699	689

Governing bodies of the company

Executive Board

The Executive Board was composed of the following members in the past fiscal year:

Olaf von Lehmden, Lohne, businessman,
Chief Executive Officer (CEO)
since 1 July 2007

Jörg Fischer, Weyhe, businessman,
Chief Financial Officer (CFO)
since 1 July 2007

Jürgen Tenbrink, Steinfurt, engineer,
Chief Technology Officer (CTO)
since 1 July 2010

No other mandates are held by the members of the Executive Board.

The compensation of the Executive Board consists of the following components:

- > Fixed compensation in the form of a monthly salary
- > Variable compensation based on the operating result of the EnviTec Group and the achievement of personal targets

As compensation for a competition prohibition imposed on them following the regular end of their activity as a member of the Executive Board, the members of the Executive Board will receive an ex gratia payment equal to 50% of the fixed compensation last received for a period of up to one year. In the event of premature termination of their activity as a member of the Executive Board, the ex gratia payment depends on the circumstances of the termination pursuant to section 75 of the German Commercial Code (HGB).

The following compensation was paid to the members of the Executive Board in the fiscal year 2025:

in kEUR	2025	2024
Fixed compensation	550	550
Variable compensation	552	505
Other compensation*	38	41
Total	1.140	1.096

*Other compensation includes benefits in money's worth resulting from the use of company cars as well as the portions of the D&O insurance attributable to the Executive Board members

Supervisory Board

Appointees to the Supervisory Board in the reporting period:

Mr Ulf Hüttmeyer (Chairman)
Executive Vice President of EMP Structured Assets GmbH, Munich

Mr Michael Böging (Vice Chairman)
Managing Director of Weiße Köpfe GmbH, Emstek

Ms Silvia Breher (until 2 May 2025)
Member of the German Bundestag

Mr Franz-Josef Wiese (since 9 May 2025)
Head of Corporate Clients, Landessparkasse zu Oldenburg, Oldenburg (Oldb.)

The expenses for the compensation of the Supervisory Board in the fiscal year 2025 include fixed compensation for the Supervisory Board activity in an amount of EUR 40,000 (previous year: EUR 40,000).

Other compensation (meeting attendance fees and re-funds of expenses) amounted to EUR 18,000 (previous year: EUR 18,000).

8. Profit appropriation

The Executive Board and the Supervisory Board of EnviTec Biogas AG will propose to the shareholders at the ordinary General Meeting on 3 July 2026 that the result be carried forward in full to new account.

Lohne, 12 May 2026

Olaf von Lehmden

Independent Auditor’s Report

To EnviTec Biogas AG, Lohne

We have audited the consolidated financial statements of EnviTec Biogas AG, Lohne, and its subsidiaries (the Group), comprising the consolidated balance sheet as of 31 December 2025, the consolidated income statement, the consolidated statement of changes in equity and the consolidated cashflow statement for the fiscal year from 1 January to 31 December 2025, and the notes to the consolidated financial statements, including a description of the accounting and valuation principles used. In addition, we have audited the Group management report of EnviTec Biogas AG, Lohne, for the fiscal year from 1 January to 31 December 2025.

According to our assessment based on the findings of our audit

- the accompanying consolidated financial statements comply in all material respects with German commercial law and give a true and fair view of the asset and financial position of the Group as of 31 December 2025 and of its earnings position for the fiscal year from 1 January to 31 December 2025 in accordance with German principles of proper accounting and
- the Group management report gives a true and fair view of the position of the Group. In all material aspects, this Group management report is consistent with the consolidated financial statements, complies with German legal requirements and suitably presents the opportunities and risks of future developments.

In accordance with section 322 para. 3 sentence 1 of the German Commercial Code (HGB), we declare that our audit has not led to any objections regarding the correctness of the consolidated financial statements and the Group management report.

Basis for the audit opinions

We conducted our audit of the consolidated financial statements and the Group management report in accordance with section 317 of the German Commercial Code (HGB) in compliance with German generally accepted standards for the audit of financial statements promulgated by the Institut der Wirtschaftsprüfer

(Institute of Public Auditors in Germany; IDW). Our responsibility under those provisions and standards is further described in the “Auditor’s responsibility for the audit of the consolidated financial statements and the Group management report” section of our report. We are independent of the Group companies in accordance with the requirements of German commercial and professional law, and we have fulfilled our ethical responsibilities applicable in Germany in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion on the consolidated financial statements and the Group management report.

Responsibilities of the legal representatives and the Supervisory Board for the consolidated financial statements and the Group management report

The legal representatives are responsible for the preparation of the consolidated financial statements that comply, in all material respects, with German commercial law and for ensuring that the consolidated financial statements, in accordance with German principles of proper accounting, give a true and fair view of the net assets, financial and earnings position of the Group. In addition the legal representatives are responsible for such internal control as they have determined necessary in accordance with German principles of proper accounting to enable the preparation of consolidated financial statements that are free from misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, the legal representatives are responsible for assessing the company’s ability to continue as a going concern. Furthermore, they are responsible for disclosing matters related to the going concern, where relevant. In addition, they are responsible for accounting for the continuing operations of the company in accordance with the principles of proper accounting, unless otherwise required by law or fact.

Moreover, the legal representatives are responsible for the preparation of the Group management report, which as a whole provides a suitable view of the Group’s position and is consistent with the consolidated financial statements in all material respects, complies with German legal requirements and suitably presents the

opportunities and risks of future developments. In addition, the legal representatives are responsible for such arrangements and measures (systems) as they consider necessary to enable the preparation of a Group management report that complies with the requirements of German commercial law and to enable the provision of sufficient and appropriate evidence for assertions in the Group management report.

The Supervisory Board is responsible for overseeing the Group’s financial reporting process for the preparation of the consolidated financial statements and the Group management report.

Auditor’s responsibility for the audit of the consolidated financial statements and the Group management report

Our objective is to obtain reasonable assurance whether the consolidated financial statements as a whole are free from misstatement, whether due to fraud or error, and whether the Group management report as a whole provides a suitable view of the Group’s position and is consistent in all material respects with the consolidated financial statements and the findings of our audit, complies with German legal requirements and suitably presents the opportunities and risks of future developments, and to issue an auditor’s report which includes our audit opinion on the consolidated financial statements and the Group management report.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with section 317 of the German Commercial Code (HGB) and in compliance with German generally accepted standards for the audit of consolidated financial statements promulgated by the Institut der Wirtschaftsprüfer (IDW) will always detect a material misstatement. Misstatements can arise from fraud or error and are considered material if, individually or in total, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements and this Group management report.

The website of the Institut der Wirtschaftsprüfer (IDW) contains a more detailed description of the auditor’s responsibility for the audit of the consolidated financial statements and the Group management report at <https://www.idw.de/idw/verlautbarungen/bestaeti->

gungsvermerk/3-v2-hgb-konzern-non-pie. This description forms part of our auditor’s report.
