VEOLIA ENVIRONNEMENT

UNIVERSAL REGISTRATION DOCUMENT

Annual financial report

2025

The Universal Registration Document was filed with the *Autorité des Marchés Financiers* (AMF, the French Financial Markets Authority) on March 19, 2026, in accordance with Regulation (EU) 2017/1129, without prior approval in accordance with Article 9 of this Regulation.

The Universal Registration Document may be used when securities are offered to the public or admitted to trading on a regulated market, if supplemented by a securities note and, where applicable, a summary and all amendments made to the Universal Registration Document. The resulting documents are approved as a whole by the AMF in accordance with Regulation (EU) 2017/1129.

This document is a reproduction of the official version of the Universal Registration Document including the 2025 Annual Financial Report prepared in accordance with the European Single Electronic Format (ESEF) and filed with the AMF, available on the website of the Company and the AMF. This is a translation into English of the Universal Registration Document of the Company issued in French and it is available on the website of the Company.

MESSAGE FROM ANTOINE FRÉROT

Chairman of the Board of Directors

The world we live in is increasingly uncertain and less predictable, and economic and geopolitical disruptions are a near-daily occurrence. Ours is a chaotic world, whose guiding lights are flickering, even those that previously seemed the strongest. In spite of this challenging context, Veolia has stayed the course; it is thriving and strengthening its position as a leader, by implementing its strategy for profitable and selective growth, seeing projects through to fruition and chalking up multiple business wins.

One thing is clear: our group is resilient. Resilient, because it is agile and innovative. Resilient, because it excels at adapting. Resilient, thanks to its strategic decisions and well-balanced business portfolio, in both geographical and sectoral terms. Resilient, because it is based on underlying trends that persist through crises. Resilient, thanks to the skill of its Executive Management, the inventiveness of its teams and the commitment of its 220,000 employees. Our Group has proven its resilience by rising to every challenge that came its way over the past few years: the Covid pandemic, sky-rocketing energy prices in Europe, the war in Ukraine, shifting trade relations, the list goes on.

At Veolia, we have a compass to guide us and help us stay on course in troubled waters: our purpose. This purpose outlines what drives our company, what its existence and ability to endure are rooted in, and where it's headed. This purpose is what unites and mobilizes its employees, it's what gives them the strength to outdo themselves, to "move mountains", and to hold firm in stormy weather. When we established our purpose in 2019, we were one of the first groups in France to do so. Later, in 2023, we published a shorter version to make it easier for all our employees to embrace it and for our stakeholders to understand it. Finally, in 2025, we added it to our Articles of Association, to further strengthen Veolia's ability to create value.

Our Group's governance system is stable and balanced. It enables the Group to fully harness all the talent at its disposal. As proof of Veolia's attractiveness, two major shareholders bought a stake in its share capital in 2025.

Firstly, CriteriaCaixa, Spain's leading holding company, acquired a 5% stake, followed by Bpifrance, the public investment bank, and its Lac1 fund, which provides long-term support to listed multinationals. Meanwhile, our employees strengthened their position as the Group's largest shareholder and now hold 9.5% of its share capital. For Veolia, this is a way to simultaneously share the value it creates and guarantee its independence and control of its own destiny.

Both the arrival of two large and important shareholders and the increased stake of employee shareholders are signs of confidence in the strength of our Group and its growth outlook. This also gives the Group additional resources to ramp up the implementation of its strategic program, harness even more of its businesses' immense potential and continue preparing for the future with passion!

**VEOLIA STAYS THE
COURSE, CONTINUES
TO THRIVE AND
STRENGTHENS ITS
POSITION AS A
LEADER.**

INTERVIEW WITH ESTELLE BRACHLIANOFF

Chief Executive Officer of Veolia

Now that the Group is halfway through its GreenUp strategic program, what is your assessment so far?

As of the end of 2025, our performance is perfectly in step with the goals and objectives of GreenUp. This is thanks in particular to the rapid growth of our boosters, including both our business boosters – Water Technologies, Hazardous Waste and Bioenergy – and our activity outside of Europe, which is growing twice as fast as the Group average. This was coupled with the great resilience of our “traditional” activities and countries, which remain a solid foundation. The Suez merger was finalized and the corresponding synergies have exceeded the target we initially set.

So I am delighted with our results and all the more proud that we achieved them in a context of fragility and uncertainty on the economic, political and geopolitical fronts. They are a testament to the robustness of our business model, which is both very global and very local, with deep roots in the regions. A robust model that allows us to invest! If I had to choose two words to sum up Veolia’s track record in 2025, I would say “growth” and “resilience”.

Veolia made many investments and acquisitions in 2025. Can you tell us about them?

Indeed, we have significantly transformed the Group’s business portfolio, making it more technological and international. In the four years from 2023 to 2027, €8 billion in assets will have been “rotated” via acquisitions or disposals. With these targeted investments and acquisitions, amounting to €4 billion net, we are strengthening the Group’s growth profile and leadership position.

In 2025, we made several major acquisitions in our growth-booster businesses. First of all, we bought back CDPQ’s 30% stake in part of our Water Technologies business for €1.5 billion, which allowed us to combine all our businesses together in a single entity. And, of course, there was our acquisition of Clean Earth for €2.6 billion. This will make us the second-largest hazardous waste treatment company in the United States, it accelerates our international growth and represents a major milestone in our Group’s transformation. All of this obviously creates value, thanks in particular to the resulting synergies.

In tandem with these acquisitions, we were particularly active in investing in decarbonizing our urban heating networks, combating drought and water pollutants, particularly PFAS, and Hazardous Waste Treatment. One of our most symbolic projects is the multi-energy cogeneration plant in Poznań. Thanks to this project, the heating network of this city, which is the fifth largest in Poland, will be completely coal-free by 2030. Another noteworthy example is that last year we inaugurated one of the largest PFAS treatment plants in the United States; it provides high quality drinking water to more than 100,000 Delaware residents.

IF I HAD TO CHOOSE TWO WORDS TO SUM UP VEOLIA'S TRACK RECORD IN 2025, I WOULD SAY "GROWTH" AND "RESILIENCE".

What opportunities are emerging for Veolia?

Our offerings provide unique, efficient and affordable solutions to the major challenges of the 21st century, and this is one of the main reasons why our customers choose us. For cities and industries alike, Veolia is first and foremost synonymous with ecological security: security in the face of pollution; security in terms of their supply of water, energy and secondary raw materials; health security; legal security; price security; supply chain security, the list goes on. Whether for water, energy or waste, our services are clearly aligned with the current challenges of maintaining strategic autonomy and ensuring the security of countries and industries. With our unique, competitive and integrated technologies and solutions, we can provide what cities and industries need most critically.

These are all assets that make us confident about achieving our objectives. Our compass is clear: it is our purpose, it is the ecological transformation, it is also our strategy and our priorities, it is the powerful combination of boosters and stronghold businesses set out in the GreenUp program. At the same time, as we saw in 2025, we have demonstrated our agility and great capacity to adapt, allowing us to achieve our objectives in a deeply uncertain world. There's no question that our world is undergoing a profound transformation, but this presents opportunities, which we are seizing and which mean we can make an even greater difference.

I must stress this point: the defense of purchasing power is an essential issue, on which our company has a very positive impact. With Veolia, nothing is lost, everything is transformed. We produce useful things from something useless: raw materials from waste, heat from wastewater, land by decontaminating industrial wastelands, etc. This approach saves financial resources, protects against price volatility, preserves purchasing power and supports local industry! Reconciling ecology and economy, ecology and the middle classes is also one of Veolia’s major contributions!

2025 HIGHLIGHTS

DECARBONIZE

» JULY

PORTUGAL

Veolia set to produce local energy from waste for Greater Porto in Portugal. The €270-million contract marks a new chapter for the waste-to-energy plant, with digitalization, energy efficiency and decarbonization placed at the heart of its future strategy.

Veolia is partnering with LIPOR, the association representing eight municipalities in the Porto region, covering 1 million inhabitants.

» OCTOBER

FRANCE

The waste-to-energy unit in Le Mans, operated by Veolia for 50 years and a pioneer in innovation, continues to write its history

Veolia has launched the first stage of a global carbon capture and recovery program in partnership with the city. Operational from 2026, the industrial demonstrator will capture 10 metric tons of CO₂ per day, with a 90% success rate. The gas will be liquefied for use in local agriculture and industry. This groundbreaking project will also be rolled out in Port Arthur, United States.

» NOVEMBER

POLAND

Veolia's ambition is to eradicate coal from the district heating network in Poznań by 2030.

The first milestone was reached with the inauguration of a new state-of-the-art multi-energy cogeneration unit. The plant already supplies 60% of the heat to 560,000 inhabitants, while generating electricity at the same time, with an energy performance of 92%. Next, the Group plans to add geothermal energy and heat recovered from data centers.

DEPOLLUTE

» FEBRUARY AUSTRALIA

Canberra will soon have an ultramodern recycling plant. Veolia was selected to build and operate this site, which will have cutting-edge laser and optical sorting technologies.

In the first 20 years of operation, the facility is expected to process more than 1.3 million metric tons of waste, representing a reduction in greenhouse gas emissions of 520,000 metric tons.

» OCTOBER SINGAPORE

PFAS are contaminating tap water and the wider environment. Veolia became the first company to obtain a license from the Singapore National Environment Agency to process fire-fighting foam containing PFAS.

Thanks to its high-temperature thermal technology, the Group guarantees a destruction efficiency of up to 99.9999% of targeted PFAS. This solution allows local industries to pre-empt the 2026 regulations.

» NOVEMBER UNITED STATES

Veolia accelerates its GreenUp strategy by signing a US\$3-billion agreement to acquire Clean Earth in the United States.

Once completed, this major deal will allow the Group to double its hazardous waste treatment capacity on the other side of the Atlantic*. By integrating 2,100 employees, 82 sites and 700 operating permits, Veolia will expand its presence in rapidly growing industries such as distribution and healthcare.

**subject to closing.*

2025 HIGHLIGHTS

SAVE/REGENERATE

» JULY BRAZIL

This is a first in Brazil, where treated wastewater reuse accounts for less than 1% of total water consumption.

A municipal wastewater treatment plant will be repurposed for industrial use. Equipped with membrane bioreactors and reverse osmosis technology, Vitória's water reuse production station will treat 38,880 m³ per day, which will then be supplied to industrial users. The project will secure the supply for the local economy, while conserving enough freshwater resources to meet the needs of 200,000 people.

» SEPTEMBER SAUDI ARABIA

The consortium composed of Veolia, Marafiq and Lamar has signed an agreement with SATORP (Saudi Aramco and TotalEnergies) to recycle petrochemical effluents from Jubail.

The US\$500-million project involves the construction and 30-year operation of the largest industrial water reuse plant in the Middle East. Thanks to state-of-the-art technology, 8.8 million m³ of wastewater will be treated annually from 2028.

» DECEMBER UNITED KINGDOM

Veolia awarded over £1 billion in waste management contracts in the United Kingdom in 2025.

Veolia consolidates its leadership in the United Kingdom with over £1 billion in waste management contracts won or renewed in 2025. Preferred partner to more than 50 local authorities, the Group has grown its municipal services by 35% in five years, with a variety of innovative solutions such as closed-loop PET recycling in Shropshire and vehicle-to-grid (V2G) trucks. This is accompanied by high-impact local initiatives which, in 2025, ranged from local employment and procurement, to donations and educational initiatives, generating more than £25 million in local social value.

BUSINESSES

WATER

Veolia's expertise spans **treatment of water to monitoring its quality** at each stage in the cycle from extraction to discharge back into the natural environment.

The Group innovates to protect resources and encourages recycling and reuse of water by cities and industry.

3,825 drinking water production plants managed

110 millions people supplied with drinking water

3,202 wastewater treatment plants managed

97 millions people connected to wastewater systems

WASTE

Veolia is the specialist in **waste management**, whether for liquid or solid, non-hazardous or hazardous waste. The Group's areas of expertise cover the waste life cycle from collection to recycling, and on to its final recovery as materials or energy.

42 millions people provided with collection services on behalf of local authorities

64 millions metric tons of treated waste

561,051 business customers

845 waste processing operated

ENERGY

As an expert in **energy services**, Veolia supports the economic growth of its municipal and industrial customers while helping reduce their ecological footprint. Whether in energy efficiency, efficient management of heating and cooling networks, green energy production or local low-carbon energy, the Group has a unique expertise for a more sustainable world.

45 millions MWh produced

48,538 thermal installations managed

494 heating and cooling networks managed

2,614 industrial sites managed

Solutions for municipal and industrial clients

Water

- Drinking water production
- Drinking water distribution
- Wastewater collection
- Wastewater treatment and reuse
- Sludge management
- Customer relationship services
- Water and environmental technologies
- Desalination
- Auditing, consulting, engineering, design and build

Waste

- Waste collection
- Waste sorting, recycling and recovery
- Landfill and biogas recovery
- Waste-to-energy recovery
- Industrial utilities and integrated facilities management
- Integrated waste management
- Hazardous waste treatment and recycling
- Soil remediation
- Industrial effluent treatment

Energy

- Energy services for buildings
- Energy production
- Energy distribution and district networks
- Energy micro-networks
- Smart industries
- Cooling system management
- Air quality management

VEOLIA'S STRATEGIC PROGRAM FOR THE PERIOD 2024-2027:

2025 is the second year of the GreenUp strategic program for the period 2024-2027 (see Section 1.2.1).

GreenUp presents a value creation model that combines our three strongholds and three boosters to accelerate our profitable growth:

- essential services strongholds in the infrastructure model: Municipal water, Solid waste and District heating. These businesses provide essential services under long-term contracts with strong visibility of cash flow generation and will have solid growth in the coming years;
- growth boosters, rooted in our bastions, will drive our growth:
 - water technologies and new solutions,
 - in energy, bioenergy, renewable energy, energy flexibility and efficiency, and
 - hazardous waste treatment.

GreenUp in a nutshell:

Firm financial commitments (for more details, see definitions of financial indicators in Section 5.5.2 below) and non-financial commitments (decarbonize by erasing +30% of emissions* in 2027 vs. 2023; reach 1.5 billion m³ of freshwater saved in 2027; treat 9 million metric tons of hazardous waste in 2027), thanks to a unique positioning in a growing market, that make it possible to commit to a growth in net result of around 10% per year between 2023 and 2027 (for more details see Section 1.2.1).

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

VEOLIA'S PURPOSE...

AN IMPROVEMENT APPROACH SHARED WITH AND FOR OUR STAKEHOLDERS

For simplicity and to facilitate appropriation, and to align with the GreenUp strategic program, the multifaceted performance framework has been reduced to 15 objectives, along with the number of associated Group performance indicators.

Sustainable Development Goals (SDGs)

Veolia participates to a varied extent in the implementation of all 17 SDGs, with a direct impact on 13 SDGs.

THE MULTIFACETED PERFORMANCE IN THE STRATEGIC PROGRAM AFR

In its Purpose, Veolia expresses its aim to take stakeholder expectations into account when creating and sharing wealth. Accordingly, Veolia has committed to a multifaceted performance which takes into account the economic and financial, commercial, human resources, social and environmental performance. Under the 2024-2027 GreenUp strategic program, 15 progress objectives were defined for 2027 during the GreenUp launch at the end of 2023.

This commitment is broken down in all Group processes, so that the multifaceted performance objectives drive the management of activities. The related progress indicators are regularly audited and measured by independent third-party bodies and are included in the calculation of Veolia senior executive variable compensation.

At the end of 2025, all KPI results are on track to achieve respective GreenUp targets.

Dimension	Commitment	Objective pursued	SDG	Indicator definition	2023 Baseline	Results 2024	Results 2025	2027 Target
Commercial performance	Guarantee results over the long-term through innovative services	1. Customer and consumer satisfaction		Customer satisfaction rate calculated using the Extended Net Promoter Score methodology (score and revenue coverage) ⁽¹⁾	Not applicable	NPS score = 55 with 81% of revenue covered	NPS score = 57 with 84% of revenue covered	NPS Score ≥ 30 with 80% of revenue covered
		2. Decarbonization of our customers – Scope 4		Erased GHG emissions (new methodology) ⁽²⁾	13.45 Mt	+13% vs 2023	+23.6% vs 2023	+30% vs 2023
		3. Growth boosters and innovation		Revenue growth in priority business segments (Energy, Water Technology, Hazardous Waste) ⁽³⁾	12.032 billion €	6.6%	+8.6%	CAGR ≥5% at constant energy prices and exchange rates, excluding divestitures planned at 01/01/24
Environmental performance	Combat pollution and accelerate ecological transformation	4. Decarbonization – scopes 1 and 2 reduction		Scopes 1 and 2 ⁽⁴⁾ GHG emissions reduction	24.3 Mt of CO ₂ eq (Baseline 2021)	-14.5% vs 2021	-18.6% vs 2021	-18% vs 2021
		5. Decarbonization – transformation of our assets		Decarbonation Capex; Phase Out of coal and methane capture (cumulative 2024-2027) ⁽⁵⁾	Not applicable	133.5 M€	141 M€	600 M€ (cumulative 2024-2027)
		6. Fresh water saved and resource regeneration	 	Freshwater saved (reuse, desalination, leakage reduction)	1.4 billion m ³	1.45 billion m ³	1.574 billion m ³	≥ 1.5 billion m ³
		7. Depollution – biodiversity	 	Biodiversity preservation on sensitive sites	59% progress on action plans (new scope)	73% progress on action plans	80% progress on action plans	≥ 85% progress on action plans

Dimension	Commitment	Objective pursued	SDG	Indicator definition	2023 Baseline	Results 2024	Results 2025	2027 Target
Human resources performance	Give meaning to our employees work and help them with career development and commitment	8. Health, safety and well-being	 	Lost time injury frequency rate (Veolia employees)	4.95	4.33	4.11	≤ 4.1
		9. Employee commitment		Employee commitment rate (Voice of Resources Survey)	89%	88%	88%	≥ 85%
		10. Diversity and inclusion		Proportion of women in the Group Management Committee	25.6%	32.4%	37.1%	≥ 30%
Social performance	Support regional development through responsible means	11. Ethics and integrity		Positive answers to the ethics and compliance question in the "Voice of Resources" survey	88%	86%	88%	≥ 83%
		12. Support to local communities	 	Residents benefiting from inclusive solutions to access essential services (all activities) ⁽⁶⁾	7.8 million people	8.4 million people	9.2 million people	8.4 million people (at constant scope)
Economic and financial performance	Increase prosperity and results over time	13. Profitability		Current net income, Group share ⁽⁷⁾	1,335 M€	1,530 M€	1,643 M€	CAGR ~10% (constant FX 2023)
		14. Investment capacity		Free Cash Flow (before discretionary growth Capex) ⁽⁷⁾	1,683 M€	1,819 M€	1,782 M€	Annual target
		15. Return on capital employed		Post-tax ROCE ⁽⁷⁾	8.3%	8.8%	9.4%	Annual target

- (1) In 2025, the methodology was applied and validated on 359 operational units, covering a revenue of €37 billion (84% of the total revenue amounting to €44.2 billion). The remaining 16% corresponds to entities that did not send surveys (calls for tenders in progress, contractual difficulties, etc.) or that sent surveys that did not meet the validation criteria.
- (2) Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.
- (3) The definition of Growth Booster has been aligned with the GreenUp Booster definition.
- (4) % reduction compared to the 2021 baseline restated according to the new allocation method, GHG emissions in scopes 1, 2 and 3.
- (5) The indicator is calculated based on the initial investment budget for new forms of energy aimed at eliminating coal in Europe by 2030, that was estimated in 2023 at €1.65 billion.
- (6) The methodology includes activities related to Water, Waste and Energy; the scope of the BUs / contracts includes the former Suez contracts.
- (7) See the definition of financial indicators in Section 5.5 below.

Commercial performance

- **Customer and consumer satisfaction:** the 2025 campaign results confirm the excellent momentum in the program of listening to customers according to the Net Promoter Score (NPS). Group revenue covered is 84%. The NPS was 57, a good level compared to undertakings operating in comparable sectors.
- **Decarbonization of our customers – Scope 4^{*}:** Veolia continues to put effort in decarbonizing its customers' activities through waste recycling, material and energy recovery, low carbon and renewable energy production and energy efficiency solutions. In 2025, +23.6% vs 2023 of GHGs were erased. The Group's strategic direction on decarbonizing local energy supports this upward trajectory.
- **Growth Boosters and innovation:** this metric measures revenue growth in priority, or "Booster" business segments (Energy, Water Technologies and Hazardous Waste). The target of the GreenUp program is defined as an average growth rate over the duration of the program, compared to 2023, excluding the impact of energy prices and exchange rates, and excluding planned divestment. The 2025 target of the GreenUp plan was reached, with 8.6% growth vs 2024, benefiting from strong growth in our boosters particularly in the 'local and decarbonized energy' segment.

Environmental performance

- **Decarbonization - scopes 1 and 2:** the Group is committed to achieving Net Zero by 2050 (-90% vs. 2021). To ensure the credibility of the approach of companies committing to a carbon neutrality target by 2050, the SBTi sets an intermediate milestone. The Group has therefore built the emission reduction strategy within this framework with a milestone of -50% reduction in scope 1 and 2 emissions by 2032 compared to 2021. This 10-year timeframe is a standard timeframe used by the SBTi to assess validity of the commitments made by enterprises with a carbon neutrality target by 2050. As part of its GreenUp program, and in line with the commitments validated by the SBTi, the Group has set the target of an 18% reduction in Scope 1 and 2 GHG emissions by the end of 2027 compared to 2021, excluding significant acquisitions. The result is in line with the GreenUp 2027 target: reduction of 18.6% compared to the 2021 baseline, calculated based on the new method of allocation of the GHG emissions to scopes 1, 2 and 3 (the reduction target at the end of 2027 remains unchanged at -18%) (see Section 4.1.2.1.2).
- **Decarbonization – transformation of our assets:** the metric used for the GreenUp strategic program is the total amount of decarbonization investments for the 2024-2027 period. It consolidates the planned investment for coal phase-out in Europe and methane capture in our landfills. The 2025 target of the GreenUp program (€136 million) was exceeded, with €141 million invested.
- **Saved freshwater and resource regeneration:** the indicator used is the annual volume of saved freshwater. This indicator gives concrete evidence of the Group's significant contribution to preserving water resources. The indicator combines three elements: the volumes of water reused (after treatment), the volumes of desalinated water, and the volumes of drinking water preserved due to network efficiency. In 2025, with an annual estimate of 1.574 billion m³ of freshwater saved, these results bode well for the achievement of the 2027 target. This performance demonstrates the effectiveness of the action plans undertaken by the Group, particularly in terms of water reuse, desalination and network optimization (see Section 4.1.2.3.1).

- **Depollution – biodiversity:** GreenUp was an opportunity to implement measures in order to reaffirm the importance of biodiversity in the Group's commitments. In 2024, Veolia reviewed the list of the sites the Group operates that are considered to have significant stakes with regard to the protection of environments and biodiversity taking into account its new scope of activities. This review focused on the target for biodiversity action plan deployment in 158 sites, instead of 107 in the previous scope (2020-2023), and the addition of 51 new sites, including 14 from the former Suez. The 2024-2027 GreenUp plan target of 75% progress in 2025 was exceeded, with the mobilization of all the Business Units, enabling this metric to reach 80% (see Section 4.1.2.4).

Human resources performance

- **Health, safety and well-being:** Veolia strives to ensure the physical and psychological integrity of its employees. Regarding the lost time injury frequency rate metric, "zero accidents" is both an objective and a performance driver for the Group. In 2025, the lost time injury frequency rate continued to fall, dropping below the target rate of 4.3 set in the 2024-2027 GreenUp plan with a rate of 4.11 (see Section 4.1.3.1.3). Despite these significant advances, progress must continue in the BUs whose rate remains significantly above the average, and each new acquisition must be supported in order to quickly reach Veolia standards.
- **Employee commitment:** according to the Voice of Resources survey, which had 135,000 respondents in 2025 (4% more than in 2024), the employee commitment rate remains at a level of 88%. These excellent results, which exceed the target rate of 85%, testify to strong support and a high level of confidence among employees in the implementation of the Group's strategy (see Section 4.1.3.1.7.1).
- **Diversity and inclusion:** the actions implemented to promote diversity and increase the number of female executives in the Group (recruitment process, young talents policy, Group Executive Committee succession plan, specific development programs, etc.) were continued. At the end of 2025, the proportion of women on the Group's Executive Committee was 37.1%, which is higher than the initial 2027 target of the GreenUp program (30%).

Social performance

- **Ethics and integrity:** in 2025, 88% of respondents to the Voice of Resources survey positively answered the question "Does Veolia act ethically in my country and satisfy compliance rules in its activities?" This is 5 percentage points above the target of 83%, against a backdrop of greater participation in the survey.
- **Support to local communities:** this metric measures the number of people benefiting from inclusive solutions to access or retain access to essential services (water, energy, waste) under Veolia contracts (cf. Section 4.1.3.3.2 below). With a result of 9.2 million people, the Group recorded encouraging results for the achievement of the 2027 objectives. This performance can be explained notably by the rapid development of policies in certain particularly relevant BUs, such as India, Colombia, Morocco, and Central and Eastern Europe.

Economic and financial performance

- The three financial indicators reflect strong activity growth and a solid operational and financial performance. Detailed comments on the financial indicators can be found in chapter 5.

^{*} Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

1.1 History and general introduction

1.1.1 HISTORY AND DEVELOPMENT

- 1853** Compagnie Générale des Eaux was created by Imperial Decree. It won its first public service concession for the distribution of water in the city of Lyon, France. It went on to expand its activities in France in the cities of Nantes (1854), Nice (1864), Paris (1860) and later in the Greater Paris region (1869).
- 1880** A treaty granted Compagnie Générale des Eaux a contract for the production and distribution of water in Venice. Contracts followed for Constantinople in 1882 and Porto in 1883.
- 1975** Compagnie Générale des Eaux created SARP Industries for hazardous waste recovery. SARP Industries rapidly became the first European center for processing liquid toxic waste.
- 1980** Compagnie Générale des Eaux took control of:
- Compagnie Générale d'Entreprises Automobiles (CGEA) (which would become CONNEX and ONYX, and later Veolia Transport and Veolia Propreté, respectively);
 - Compagnie Générale de Chauffage and Esys-Montenay (which would later merge to form Dalkia);
 - all of its subsidiaries involved in design, engineering and operating activities relating to drinking water and wastewater treatment, grouping them together in Omnium de Traitement et de Valorisation (OTV).
- It also began to expand significantly into other countries.
- 1998** Compagnie Générale des Eaux became "Vivendi" and renamed its main water subsidiary "Compagnie Générale des Eaux".
- 1999** Vivendi established "Vivendi Environnement" to consolidate all of its environmental services activities: Water (Vivendi Water), Waste (ONYX), Energy services (Dalkia) and Transport (CONNEX).
- 2000** Vivendi became Vivendi Universal. Vivendi Environnement shares were admitted for trading on the Paris stock exchange on July 20, 2000.
- 2001** Vivendi Environnement shares were included in the CAC 40 in August and were listed on the New York Stock Exchange in the form of American Depositary Receipts (ADR) in October.
- 2002** Vivendi Universal gradually reduced its stake. At the same time, Vivendi Environnement carried out a major restructuring to refocus on its core environmental services activities.
- 2003** Vivendi Environnement became Veolia Environnement.⁽¹⁾
- 2005** Veolia Environnement rolled out the Veolia brand, applying it across its divisions (Veolia Eau, Veolia Propreté, Veolia Énergie and Veolia Transport).
- 2006** Vivendi Universal withdrew completely from Veolia Environnement's share capital.
- 2011** Veolia Environnement and Caisse des dépôts et consignations announced the creation of Veolia Transdev, after merging their respective subsidiaries, Veolia Transport and Transdev.
- The Group presented its strategic plan and its mid-term outlook, aimed primarily at refocusing its activities and business portfolio.
- 2013** The Group embarked upon a significant organizational change. The Group's activities were organized by geographic zone rather than by business line and division. Veolia Transdev became Transdev Group.
- 2014** Veolia Environnement and EDF finalized the agreement relating to their joint subsidiary, Dalkia. EDF took over all of Dalkia's activities in France and retained the Dalkia brand, while the Group assumed control of the international business activities. At the same time, the Group took over all the Latin-American activities of Proactiva, the joint subsidiary held with FCC.
- The Veolia Environnement ADR have not been listed on the New York Stock Exchange since December 23, 2014. The ADR securities are now traded on the US over-the-counter market.
- 2015** The Group unveiled its 2016-2018 strategic plan focusing on two key areas: (i) increasing revenue by achieving a better balance of municipal and industrial contracts and strengthening the Group's position outside of Europe, and; (ii) pursuing its strategy of reducing costs and improving operating efficiency.
- At the COP 21, Veolia reaffirmed its commitment to the fight against climate change. This commitment is founded on three key initiatives to curb greenhouse gas emissions: the circular economy, implementation of the polluter-payer principle and a reduction in methane emissions.
- 2016** Veolia Environnement signed an agreement with Caisse des dépôts et consignations covering its withdrawal from Transdev Group. Caisse des dépôts et consignations acquired 20% of the share capital of Transdev Group.
- It also acquired the American start-up, Kurion, and now has a comprehensive offering in the nuclear clean-up sector, thereby creating Veolia's Nuclear Solutions business.
- 2019** Veolia Environnement sold its remaining stake in Transdev Group to the Rethmann group.
- At the Combined General Meeting, Veolia officially gave itself a Purpose.
- Veolia completed the divestiture of its energy assets in the United States to Antin Infrastructures Partners for €1.1 billion
- 2020** On February 28, the Group unveiled its 2020-2023 strategic program: Impact 2023.
- On October 5, Veolia Environnement acquired Engie's 29.9% stake in Suez and confirmed its intention to file a takeover bid on the remaining Suez shares.
- 2021** Veolia continued its Suez combination project. The successful completion of Veolia's public tender offer for Suez was published on January 10, 2022 by the French Financial Markets Authority (AMF), with settlement-delivery on January 18, 2022. The squeeze-out procedure for Suez shares on Euronext Paris was performed on February 18, 2022 and the shares were delisted at that date.
- 2022** Following the merger with Suez in 2022, Veolia strengthened its ambition to create a global champion of ecological transformation.
- 2024** On February 29, the Group unveiled its 2024-2027 strategic program: GreenUp.
- 2025** 99,97% of Veolia's shareholders voted to include the purpose in the company's articles of association.

⁽¹⁾ In this Universal Registration Document, unless otherwise indicated, the term Company refers to the public limited company Veolia Environnement, and the terms Group and Veolia refer to Veolia Environnement and its direct and indirect consolidated subsidiaries.

1.1.2 PURPOSE OF THE COMPANY

Veolia was one of the first French groups to define its purpose, adopted by its Board of Directors in April 2019. The Group's purpose was drawn up in consultation with its various stakeholders and approved by the Board of Directors, and articulates why Veolia exists and what it does and how, for the benefit of all its stakeholders. This purpose, which is the fruit of more than 170 years of history, is in line with Veolia's "Resourcing the World" mission statement.

The purpose states the fundamental way in which Veolia will act. It is both the direction in which the Group is heading and a means to show the extent of its ambition and to give its actions a firmer long-term foundation. All Veolia's stakeholders are informed of its purpose - whether employees, customers, suppliers, shareholders, partners or the territories where it operates - so that they know what it means and can contribute to its practical application.

In 2023, Veolia adopted a short version of its purpose to facilitate its appropriation by all employees and more strongly highlight its key elements for all stakeholders, thus supporting, strengthening and accelerating its deployment.

Ecological transformation means acting to reconcile human progress and environmental protection.

We develop and implement locally solutions to depollute vital resources and preserve them from depletion, solutions to decarbonise our ways of living and producing and adapt them to the consequences of climate change.

All over the world, attuned to local cultures, we strive to improve the health and quality of life of communities.

At Veolia, we tackle economic, social and environmental issues as an inseparable whole to the benefit of the largest number of people.

The long version of the purpose can be found on [veolia.com](https://www.veolia.com).

Veolia's purpose was adopted by its Board of Directors on April 18, 2019, and included in the company's articles of association on April 24, 2025.

1.1.3 GENERAL INTRODUCTION

Veolia is a world leader in environmental services and offers a complete range of solutions for managing Water, Waste and Energy on five continents.

In 2025, the Group operated in 54⁽¹⁾ countries, generated revenue of €44,396 million and employed 215,965 people.

Veolia's organization is divided into seven geographic zones (France and Hazardous Waste Europe, Central and Eastern Europe, North America, Asia Pacific, Iberia and Latin America, North America, Italy-Africa-Middle East) and an additional worldwide zone (Water technologies).

In the geographic zones, the organization is structured by delegated zone or country (Business Unit), with the directors for each country responsible for the Water, Waste and Energy business lines within their scope.

Veolia Environnement is included in the Euronext Paris CAC 40 index.

⁽¹⁾ Countries where Veolia has a permanent establishment, employees and capital employed in excess of €5 million.

1.2 Strategy AFR

Faced with the tangible impacts of climate change, the demand for ecological transformation has never been stronger. In a world committed to achieving carbon neutrality and gradually reducing fossil fuels, industries and regions need to be steered toward proven, affordable and replicable solutions: solutions that enable them to reduce their carbon footprint, but also adapt to the already visible consequences of climate change, notably on water resources, preserve the health of populations, and exploit new local resources to gain greater sovereignty and autonomy.

Veolia is focusing on being the missing link of this ecological transformation to meet growing market demand.

Today, Veolia operates in a market where demand outweighs supply: decarbonization, climate change adaptation and mitigation, management of the scarcity of resources, preservation of the quality of life and health

of individuals, search for competitiveness and strategic independence for players and regions.

The Group has never been as strong with unique solutions across the entire value chain of business lines that are vital to ecological transformation or as well-positioned to assist its customers in addressing these various challenges.

In recent years, the Group has demonstrated solid growth and strong resilience by meeting its financial and non-financial commitments despite uncertain and at times difficult market conditions, thanks in particular to its business portfolio, its investment choices, and its extensive geographic presence (40% outside Europe).

1.2.1 VEOLIA'S STRATEGIC PROGRAM FOR THE PERIOD 2024-2027 : GREENUP

For Veolia, ecological transformation requires solutions which decarbonize, decontaminate and regenerate and therefore preserve health, well-being and purchasing power, the strategic autonomy and attractiveness of regions and the performance of industrial customers.

This impact demonstrates the importance of dedicating efforts to greening, transformation, and not just to what is already "green": this is precisely the objective of GreenUp. Veolia is also accelerating its own decarbonization trajectory, with a reduction in emissions (scope 1 and 2) of -50% by 2032, compatible with the 1.5°C warming trajectory of the Paris Agreement.

One ambition: to be the champion for ecological transformation

With GreenUp, Veolia proposes to take real action toward ecological transformation, accelerate, transform and deliver genuine affordable and replicable solutions.

With GreenUp, Veolia is also accelerating the profitable growth of its activities worldwide. The Group will strengthen its position as global and European leader in its strongholds, municipal water, solid waste recycling and recovery and heating networks, and step up the growth of its booster activities with the highest impact: water technologies and new solutions, hazardous waste treatment and bioenergy, electric flexibility and energy efficiency. Their rapid, large-scale deployment will help erase 30% of additional CO₂ emissions (scope 4*), preserve 1.5 billion m³ of water and treat 9 million metric tons of hazardous waste by 2027.

The Group operates in buoyant markets that are not correlated with economic cycles. It is guided by a governance and management that have demonstrated their ability to deliver results, whatever the context.

The Group's strength also lies in the fact that its employees are its leading shareholder. It is an employer of choice with an employee commitment rate of 89% and has top rankings in ESG classifications.

One priority: boost the growth of a century old foundation

To achieve its growth, Veolia acts as a solutions integrator, combining its different businesses - Water, Waste and Energy - to help its customers decarbonize, decontaminate and regenerate resources. To achieve this, the Group relies on the combination of its core businesses ("strongholds") with growth boosters, strengthened by its worldwide presence in order to duplicate and deliver proven solutions in the 54 ⁽¹⁾ countries where it operates.

The acceleration of GreenUp will therefore rely on the strongholds on which these boosters can develop. They account for 70% of Veolia's activity today and will continue to fuel its growth, contributing by 30% by 2027 with €2 billion earmarked for investment as part of the plan.

These are the robust foundations of essential services to the territories or to industry, often comparable to infrastructures. For these activities, such as heating networks, municipal water and solid waste, Veolia maintains its global and European leadership thanks to its operational excellence and innovation efforts.

Spearheading of Veolia's growth, the boosters are strategic activities to which the Group will devote a major share of its resources, as part of its GreenUp plan and aims to achieve revenue growth of +50% by 2030. They already account for 30% of its revenue and will generate 70% of its 2024-2027 growth. Veolia will allocate half of its growth investments to these activities, i.e. €2 billion, as much as for all the activities in the previous strategic plan.

These investments will primarily be made in 3 geographic areas: North America, Middle East and Australia.

The objective in each country where the Group operates is to rank among the top 3 companies in the market in at least one of its core businesses so that it is large enough to strengthen our positions and develop other activities.

To improve the Group's resilience, investment choices will also be made with the aim of diversifying and balancing the allocation of capital employed: <5% of the Group share in most countries in which it operates.

Water technologies

A central pillar of Veolia's activities, the Water business has guided the Group for 170 years, positioning Veolia as a leader in this sector. The Group intends to maintain its operational excellence while offering technological innovations to its customers, moving from water distribution activities to water science activities.

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

⁽¹⁾ Countries where Veolia has a permanent establishment, employees and capital employed in excess of €5 million.

Water technologies and new solutions are the program's second booster. They will preserve water resources and treat new pollutants. Veolia aims to become the water services provider of the future by focusing on the efficiency of its solutions, such as the reuse of treated wastewater, the treatment of water and pollutants, including micro-pollutants using cutting-edge technologies, or the production of drinking water.

With a unique portfolio of proprietary solutions and technologies, Veolia is aiming for 1.5 billion m³ of water saved by 2027.

Hazardous waste treatment

As the world leader in hazardous waste treatment and present on every continent, Veolia is accelerating its activities with its customers with the deployment of unique offers.

Hazardous waste treatment is the third booster in this program. This will process the most toxic and harmful components to preserve the health of individuals and ecosystems.

The Group intends to accelerate circular economy solutions and innovation in lithium battery recycling, with the construction of several facilities, including one in Europe for copper, cobalt, nickel and lithium refining.

Veolia will continue to develop its activities and put all its expertise in hazardous waste treatment to work for its customers with the aim of processing 9 million tons ⁽¹⁾ of polluting waste by 2027.

Decarbonizing local energy

The first booster of the GreenUp program involves bioenergy, energy efficiency in buildings and industries, and flexibility. Producing local, low-carbon energy for all its municipal and industrial customers worldwide: this is Veolia's commitment. Its ambition is to produce 8 GW of bioenergy and have a flexible installed capacity of 3 GW by 2030.

From the production of bioenergy from non-recyclable waste and wastewater to heat and cold recovery, or even through energy efficiency solutions, the Group is focusing on the production of local, affordable, low-carbon energy, with a target of a 30% increase in metric tons of CO₂ equivalent removed by 2027.

Veolia is accelerating the development of these innovative solutions to enable its customers to optimize and balance their energy mix, while accelerating the production and consumption of renewable energies.

Innovate and combine our strengths to accelerate

Even though the priority of the Veolia boosters is to deploy and replicate our existing solutions to our customers and in other regions, Veolia is also speeding up the development of future solutions that will drive the Group's growth in the years to come.

Already a leading player in the research and development of environmental solutions, the Group will significantly boost its investments in innovation, doubling them with an additional €200 million.

Veolia is preparing to design tomorrow's technologies to address the future challenges of its customers, for example, decarbonizing by creating value from biogenic carbon or regenerating resources by working to recycle and recover strategic metals from used batteries or incorporating artificial intelligence in our operations to detect leaks or optimize energy production.

With GreenUp, Veolia is also seeking to capitalize on its unique international positioning to replicate its solutions from one country to another. The goal of expanding the Group's international coverage is governed by key principles: maintaining our presence if the Group has a top 3 ranking in a given country and the diversification of capital employed (<5% in most countries where Veolia operates). During GreenUp, Veolia's growth will be stepped up in three zones: United States, Middle East and Australia.

Veolia also plans to boost the efficiency gains generated by digital technology and artificial intelligence as part of its annual savings plan, particularly to optimize the water and energy consumption of its customers, improve waste sorting and recycling and strengthen predictive maintenance.

Accelerate for greater ecological transformation impact

With GreenUp, Veolia confirms its ambition to combine activity growth while accelerating its ecological transformation impact with the following objectives for 2027:

- grow in priority segments (energy, hazardous waste and water technologies);
- decarbonize with the objective of a 30% increase in metric tons of CO₂ erased through local decarbonizing energy and the circular economy;
- preserve and regenerate resources by reducing its footprint on drinking water resources abstracted by over 1.5 billion m³;
- combat pollution and preserve the health of populations, by processing 9 million metric tons ⁽¹⁾ of hazardous waste.

This ambition is supplemented by an activity decarbonization trajectory, in accordance with the Paris agreements, for both its own operations and the assets of its customers. Veolia has pledged to:

- reduce its scope 1 and 2 emissions by 50% by 2032 while stepping up its investments mainly to phase-out coal in Europe and capture biogas in landfills sites;
- increase scope 4* erased emissions by 50% by 2030;
- achieve Net Zero in 2050.

At the end of 2023, this accelerated plan was submitted to the approval of the SBTi. Veolia will achieve this reduction in emissions by:

- reducing the emissions of its Energy activities by phasing out the use of coal in Europe (investment plan of €1.6 billion between 2018 and 2030), while relying more on green energies and capitalizing on its expertise in energy efficiency;
- reducing the emissions of its Waste activities mainly by capturing biogas, using low-emission vehicles and removing plastics in its waste-to-energy facilities;
- the Water activity will also contribute by increasing the use of green energies.

⁽¹⁾ Scope impact associated with the disposal of RGS (United States).

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

Rigorous management based on a multifaceted performance

From creation to implementation, Veolia's Purpose has been supported and steered at the Company's highest level. It is widely distributed and shared throughout the Group. The Board of Directors validated the text of the Purpose and the multifaceted performance objectives and related metrics and controls its proper performance. To this end it calls on the Purpose Committee, a Board committee which monitors progress achieved by the Group and directs choices relating to the Purpose and multifaceted performance.

The Group Executive Committee and Management Committee directly monitor its implementation. They are assisted by a Purpose steering committee which monitors progress and difficulties encountered and proposes new lines of action. The opinion of the Critical Friends Committee of independent experts is regularly sought, with the aim of challenging the Company and helping it stay on course. The Strategy and Innovation Department steers Veolia's strategy with a multifaceted performance perspective, aligned with the Group's Purpose.

An executive committee member was tasked specifically with stakeholder issues. The aim is to find an innovative approach to Group relations with stakeholders and support Group Business Units in this area, as well as to strengthen the relationship of trust and cooperation with stakeholders. The creation of partnership ecosystems offers a means to deploy Group solutions sustainably. A network of Purpose Officers in the Business Units and head office support functions seeks to mobilize and support local teams with the roll-out of the Purpose. Finally, employees are mobilized by their managers through internal networks and during special events, to make them the leading players in their Company's Purpose.

To steer this new program, Veolia will focus on its multifaceted performance guided by its purpose. A veritable tool to monitor all aspects of performance (shareholders, customers, employees, society, planet), the multifaceted performance indicators were reviewed and simplified. An Executive Committee member was appointed as sponsor to support each objective and ensure their achievement. Fifteen new metrics will be taken into account in the remuneration of at least 16,000 Group managers to unite all employees around this ambition.

Each metric relating to the objectives is measured and published regularly during the course of the program to monitor progress. These metrics are verified through agreed procedures.

Profitable growth

Veolia is committed to financial targets during the GreenUp program:

- solid and resilient revenue growth⁽¹⁾;
- efficiency generating €350 million of savings per year;
- EBITDA equal to or more than €8 billion in 2027;
- current net result Group share with a CAGR of around 10% over 2023-2027⁽²⁾;
- net debt/EBITDA below or equal to 3x EBITDA;
- dividend growth in line with that of NEPS.

1.2.2 SECOND-YEAR REVIEW GREENUP

2025 was a pivotal year for Veolia, with the successful completion of the Suez integration chapter and the reorientation of the Group's portfolio in order to accelerate growth and its international positioning.

In the first two years of the GreenUp plan, Veolia has demonstrated the strength of its unique position as a global leader in environmental services, as well as the strength of its multilocal positions that ensure exceptional resilience in an uncertain world.

Veolia resolutely resumed external growth in 2025 with two major acquisitions in Water Technologies and Hazardous Waste in the United States, accelerating the Group's transformation toward international expansion and technological innovation: more than €8.5 billion in assets will have thus been reoriented through the GreenUp plan. We are starting 2026 stronger and more agile, with significant sustainable growth potential.

⁽¹⁾ Excluding the energy price impact.

⁽²⁾ At constant exchange rates.

1.3 Business lines AFR

1

1.3.1 DESCRIPTION

Veolia has three main business lines, Water, Waste and Energy management and operates in two key markets, the municipal market and the industrial market, which includes the service sector. The company's growth is built on strongholds and boosters. Veolia considers its strongholds to be Water Operations, Solid Waste and District Heating and Cooling Networks. Boosters include Water Technologies, Hazardous Waste and Bioenergy, Flexibility and Energy Efficiency. In addition, an important growth driver is created by combining these activities.

Business line	2025	Group revenue
 Municipal water & Water Technologies	110 million people supplied with drinking water	
	97 million people connected to sanitation systems	€17,693 million
	3,825 drinking water production plants managed	39.9%
	3,202 wastewater treatment plants managed	
 Solid Waste & Hazardous Waste Treatment	42 million people provided with collection services on behalf of local authorities	
	64 million metric tons of treated waste	€15,443 million
	845 waste processing facilities operated	34.8%
	561,051 business customers	
 District Heating, Bioenergy, Flexibility & Energy Efficiency	45 million MWh produced	
	48,538 thermal installations managed	€11,260 million
	494 heating and cooling networks managed	25.4%
	more than 2,550 industrial sites managed	

1.3.1.1 Water management

Thanks to its entities and subsidiaries located around the world, Veolia is a leading expert in water cycle management, enabling it to respond to the numerous demands of municipalities and industrial companies: **resource management; production and transport of drinking water and industrial process water; collection, treatment and recovery of wastewater from all sources and treatment of by products (organic materials, salts, metals, complex molecules and energy); customer relationship management; design and construction of treatment infrastructure and networks.** This expertise enables Veolia to assist its customers implement an integrated and sustained water resource management approach, with solutions incorporating climate change challenges and promoting the circular economy.

Sustainable management of water resources

Veolia is active in all stages of the water cycle, from abstraction through to returning it to the natural environment. The Group has cutting-edge expertise based on several decades of experience in water resource management.

The Group is committed on a daily basis to optimizing how the water cycle is managed, as well as to saving this increasingly scarce resource, guaranteeing its quality and ensuring that it is replenished. It helps its customers develop holistic, integrated policies for managing water resources that emphasize the need to preserve ecosystems and biodiversity. Around the world, Veolia is providing solutions such as desalinating seawater, recycling and re-using wastewater and the optimization and management of pipeline networks that help to optimize how this precious resource is managed.

Collection and transport of water

At each stage of the water cycle, Veolia:

- ensures water traceability to guarantee that the quality of drinking water is preserved from the moment it leaves the plant to the point at which it reaches the consumer;

- monitors and measures the quality of effluents collected to ensure that the treatments carried out at the wastewater treatment plants operated by the Group are as effective as possible;
- provides asset management services for networks to ensure that they deliver outstanding performance and that money spent on them delivers optimal value (replacement and operating costs).

Water treatment

As a water treatment expert, Veolia has significant expertise in monitoring water quality at every stage of the process, from abstraction through to discharge back to the natural environment and develops solutions that respond to the needs of public authorities and industrial companies:

- engineering and designing treatment plants;
- producing drinking and industrial process water;
- decontaminating wastewater;
- recycling wastewater and industrial effluents;
- operating, maintaining and optimizing treatment plants;
- automation and digitalization;
- producing "green" energy from wastewater and sewage sludge (e.g. through anaerobic digestion, cogeneration and micro turbines).

Innovation is central to the Group's strategy and new processes are therefore being developed in the field of process intensification (MABR, MBR, MBBR) and process modularity (membranes), for use in the following areas: wastewater reuse, salt recycling, energy savings, "green" energy production (e.g. using heat pumps to capture the calories found in wastewater and producing biogas from the anaerobic digestion of sewage sludge) and material recovery for use in fertilizers.

Customer service

Customer satisfaction and best practices are extremely important to Veolia and it implements reception and digital solutions enabling it to guarantee a high level of service and develop a close relationship. These solutions call on a range of multichannel customer relationship management tools, including:

- customer service centers, where Veolia can respond to a range of consumer inquiries;
- local and mobile branches;
- digital solutions;
- mobile applications that customers can download onto a smartphone and use to carry out key transactions relating to their water service;
- a range of payment and social support solutions.

Water treatment equipment, technologies and facilities

The Group has a portfolio of more than 550 proprietary technologies. These technologies include physiochemical, biological, thermal and hybrid treatments. These include ultrafiltration, nanofiltration, reverse osmosis, electro-separation, oxygen diffusion, ozone production, biological densification and chemical formulations.

These technologies provide the ability to treat the most advanced water issues (organic matter, PFAS, viruses, micropollutants). They also ensure the reuse of water for various applications, such as drinking water, industrial wastewater, process water, wastewater and seawater.

Water Tech, a subsidiary of Veolia Environnement, is a key strategic partner. It operates in many fields including drinking water, process water, wastewater treatment, sludge management, recycling and reuse. The company also recovers by-products such as salts, metals, raw materials and energy.

Its main activities are varied and include the optimization of industrial water uses. They also include tailor-made solutions for process water treatment. It also produces drinking water and desalinated water for isolated sites.

Water Tech combines technological expertise and engineering service. It offers solutions that meet temporary or permanent needs. These solutions, can take various forms, including packaged products customized and turnkey systems full-scale complex systems.

The company is also innovating in the field of sanitation. It transforms wastewater into valuable resources. These resources include reusable water, fertilizers, nutrients and thermal and electrical energy.

Digitalizing the business

Veolia uses and develops technologies using artificial intelligence as a lever to address environmental challenges, strengthen the performance of its installations and improve customer service:

- Control centers integrated into operations, which monitor service levels in real time and communicate any anomalies to the customer service centers to program on-site visits;
- An energy management system, which closely monitors the consumption of "water" installations operated by the Group and identifies areas and stages of the process for optimization.

Veolia has also developed an "e-monitoring" service enabling private individuals, local authorities and industrial companies to better manage their consumption.

1.3.1.2 Waste management

Veolia is one of the leading players in the management of liquid, solid, non-hazardous and hazardous waste.

The Group operates across the entire waste life cycle, **from collection to final processing and makes waste recycling and recovery a priority. Veolia plays a key role in the circular economy**, developing innovative solutions to increase rates of waste recycled and recovered as materials and energy.

Waste collection

Due to the wide range of waste categories (household waste, non-hazardous commercial and industrial waste, construction waste, green waste, hazardous industrial and service sector waste), waste collection is a major logistics challenge. Veolia provides door-to-door household waste collections, as well as collecting waste from communal disposal points, non-hazardous commercial and industrial waste and green waste (keeping green spaces clean). It also collects hazardous waste from industrial and service sector customers, including biomedical waste from hospitals and laboratories and waste oil (e.g. from ships and gas stations).

Waste of the same type is taken either to transfer stations, where it is picked up by larger trucks, or to sorting centers, where it is separated by type and then sorted before being sent to the appropriate processing site.

Veolia offers its customers a range of collection systems that can be adapted to suit their specific economic and regional requirements. New technologies have been developed in France, such as vehicles powered by biofuel, hybrid vehicles and alternative methods of transporting waste (e.g. by river or rail).

Recycling and recovering materials from waste

Veolia's goal is to treat waste with a view to reintroducing it into the industrial production cycle and achieving the highest possible rate of recycling and material recovery.

Veolia works upstream in partnership with local regions and industrial companies to structure the sorting and recycling sectors. Veolia manages high-performance sorting centers for non-hazardous industrial waste and waste from selective collections, which guarantee recovery rates of over 50%. The Group's research and development center developed TSA2, a patented process for industrial application that enhances the performance of sorting facilities and enables the production of high-quality secondary raw materials. Thanks to a remotely operated sorting procedure, it is now possible to refine the sorting process even further to achieve recovery rates of over 95%.

Veolia works downstream, in partnership with industrial companies, to address ecological transition challenges by developing plastic recycling solutions (PET, PP, PE, etc.). Veolia is now a partner of choice for the production of recycled (or circular) polymers meeting the highest performance standards demanded by the market for mechanical recycling processes. Veolia has introduced PlastiLoop at all its recycling sites to offer its customers a wide range of high-performance, environmentally friendly recycled plastics, covering several hundred industrial applications.

Veolia also provides recycling services for complex waste, such as electrical and electronic devices and fluorescent bulbs.

Recovery of organic waste

Wastewater treatment plant sludge and green waste as well as organic waste produced by households, restaurants, the food and beverage sector and agriculture, are recovered for use in specific biological sectors.

Processing involves either controlled composting or anaerobic digestion at anaerobic digestion installations. Compost produced is used as fertilizer in agriculture and methane generated by fermentation is recovered using the same process as for biogas at landfill sites.

Waste-to-energy recovery

Non-hazardous waste that cannot be recycled is transported to incineration plants or landfill sites. Veolia is also working on the transformation of non-hazardous waste that cannot be recycled into refuse-derived fuels for use by public authorities and industrial companies in combustion and energy production processes.

The incineration process produces energy in the form of steam that can either be used to power urban or industrial heating networks or converted to energy using turbines. The electricity produced is then fed into the national grid.

At landfill sites, Veolia captures biogas produced by the fermentation of organic waste. This biogas may then be fed directly into a distribution network, used to produce electricity with turbines or engines, or used as fuel for vehicles.

Decommissioning and decontamination

Veolia manages decommissioning projects for industrial facilities and end-of-life equipment, such as aircraft, ships, trains and oil platforms. The Group provides dismantling, asbestos removal, material recovery, final waste treatment and site decontamination services.

Veolia also participates in the rehabilitation of areas where the soil was previously contaminated, for example, its subsidiary, SARP Industries, rehabilitates brownfield sites, cleans up accidental pollution and brings active industrial sites into line with applicable environmental regulation.

Treatment of hazardous liquid waste

Through its specialist subsidiaries, Veolia is a world leader in processing, recycling and recovering hazardous waste and decontaminating land.

Depending on the source and composition of the hazardous waste it may be incinerated or processed using physiochemical or biological techniques at specialized facilities or stabilized and buried in special landfill sites.

For waste from nuclear activities, Veolia cleans up nuclear facilities and treats low and medium-level radioactive waste, through the entity Veolia Nuclear Solutions.

Urban and industrial cleaning services and sanitation

The cleanliness of streets and public areas is an important factor in cities' appeal and is a major public health and safety issue for citizens.

Veolia provides urban cleaning services 24/7 founded on performance commitments: upkeep and cleaning of public spaces, mechanical street and facade cleaning solutions.

Veolia offers industrial customers production line upkeep and maintenance services and a comprehensive range of specialized services to optimize the performance of the industrial tool and extend its life.

The Group has also developed emergency services to treat accidental pollution on public roads or at industrial sites.

Through its specialized subsidiary Veolia Maintenance et Assainissement, Veolia provides liquid waste management services, for example, that largely involve pumping and transporting sewer network liquids and oil industry residues to processing centers. The Group has developed a range of environmentally friendly procedures for liquid waste management, including on-site collection and the recycling of water during treatment. Used oil, which is hazardous for the environment, is collected before being processed and regenerated by SARP Industries, a specialist in hazardous waste management.

1.3.1.3 Energy management

In the energy sector, Veolia focuses its activities on the **energy performance of regions and industrial companies**: heating and cooling networks, local supply loops, energy services for buildings, energy services for industrial companies (industrial utilities). Veolia's value proposition seeks to guarantee the energy performance of the regions and industrial companies (i) by reducing end consumption; (ii) while optimizing local energy production; (iii) improving the energy mix by promoting renewable energies and recovering waste energy; and (iv) developing and managing flexibility services to optimize and build the resilience of regional infrastructures.

This positioning allows the Group to respond to the challenges facing all customer segments, both municipal (energy optimization, development of renewable energies and network balance in developed countries, development of regional infrastructure and the need for autonomy in emerging countries) and service sector and industrial (energy optimization, security of supply, corporate social and environmental responsibility in developed countries, security of supply and need for autonomy in emerging countries).

Veolia supports ecological transition both in its own installations and in partnership with customers by implementing solutions aimed at eliminating the use of coal as the primary energy.

Heating and cooling networks

Veolia is one of Europe's leading companies for managing urban heating and cooling networks, particularly in Central and Eastern Europe. The operation and maintenance of heating and cooling networks enables the supply of heating, hot water and air conditioning to public and private facilities, including schools, health centers, office buildings and apartment blocks. Heating networks help improve air quality as the centralized units are equipped with better flue treatment systems. Cooling networks also help remove heat islands by centralizing production.

Through the use of cogeneration units and waste heat, the recovery of heat or cold from a network makes it possible to achieve much higher yields in the use of primary energy, thus contributing to better energy efficiency.

Heating and cooling networks also enable the use of energy mixes that favor renewable and recovered energies: geothermal, biomass and solar thermal. They thus contribute to reducing the city's carbon footprint and also make it possible to connect heat or cooling emitter and receiver sites, thereby optimizing energy use across the entire region.

Veolia uses its unique expertise to design, build, operate and maintain heating and cooling networks, manage energy supplies (particularly those from renewable sources) and deliver services to end customers.

Bioenergy and flexibility

Veolia's offerings focus on the production (cogeneration, biomass, waste-to-energy recovery, biogas, hydraulic, etc.) and distribution of electricity (distribution voltage of 50 kilovolts or less) at regional level (city, district, industrial park) and electricity distribution alone when operating together with another Veolia activity (Waste or Water), as in Morocco.

Energy services for buildings and industry

Veolia develops energy services to reduce the energy consumption and CO₂ emissions of buildings and industrial sites. Veolia carries out energy audits of buildings, which are then used to draft improvement plans encompassing the installation of more efficient energy equipment, tools for monitoring consumption and managing the building's performance and measures encouraging energy saving.

Its Energy solutions encompass the entire conversion cycle, from purchasing energies entering a site (fuel oil, gas, biomass and biogas) to building new facilities or modernizing existing ones and selling the electricity produced on the market. Veolia works with its customers to help them optimize their energy procurement and upgrade their facilities to improve their energy efficiency, both in terms of cost and atmospheric emissions.

Veolia's energy solutions meet the comfort, reliability, quality, availability, and cost requirements of building managers and industrial companies for whom energy is an essential element of their competitiveness. The Group optimizes the production of steam, heat, cold, electricity, and compressed air, as well as the use of process energy and the energy consumption of buildings.

Veolia thereby contributes to securing its customer's energy supply and reducing their energy and carbon footprint:

- optimizing utilities: heat, cooling, steam, electricity and compressed air;
- optimizing the use of process energy (aligning use with needs and identifying sources of waste energy and recoverable by-products);
- optimizing the energy consumption of buildings;
- reducing greenhouse gas emissions.

Veolia offers its customers:

- a secure supply and effective mix of energy in terms of quantity, quality and cost;
- a guarantee that their facilities will remain operable, in the form of specific service commitments.

Veolia has created a hypervision system and management service to control the energy efficiency of buildings and infrastructures: Hubgrade. Designed as an integrated management platform, Hubgrade collects data in real time which is then analyzed by the Group's experts to optimize on-site visits. In terms of building energy efficiency, this tool generates up to 15% additional energy savings in comparison to existing energy efficiency services available on the market. Hubgrade also enables the centralized monitoring and improvement of other environmental indicators, such as water consumption, waste production or indoor air quality. Veolia currently manages 33 Hubgrade centers around the globe.

Veolia is also developing indoor air quality monitoring and improvement offerings for its customers (care facilities, leisure buildings, office buildings, etc.) for whom indoor air quality is becoming a major issue. These offerings are based on audits, improvement measures involving purifiers or the renovation of ventilation systems and the monitoring of performance indicators.

1.3.1.4 Multi-business contracts with industrial customers

Integrated offerings

The industrial market is characterized by:

- increasing requests for integrated services from technical and multi-services business lines, often accompanied by a demand for environmental optimization services; and
- an international, or at the very least continent-wide, customer offering with the industrial customers adopting increasingly multi-site and/or multi-country approaches.

From an operational standpoint, there are necessary changes to the customer relationship: the service provider becomes the industrial customer's sole point of contact and a dialogue develops to seek solutions which satisfy the interests of both parties. By outsourcing the management of technical and multi-services to a specialist, the customer can refocus on its core business and benefit from best practices for the services delegated. The combination of these two factors helps improve the performance and competitiveness of industrial sites.

By placing its business synergies, its know-how, its international spread and its solid reputation at the service of industrial customers, Veolia has established itself as the benchmark for multi-business integrated offerings in industrial markets.

Multi-business contracts

Multi-business operations have a significant international dimension, particularly when industrial customers invest in the construction of new plants abroad ("greenfield" plants).

Veolia holds a unique position in the multi-business contracts for the industrial customers market and has a wide range of references:

- the design, build and operation of the first automobile plant with zero carbon emissions and zero water discharges, for Renault in Tangier, which mobilized the expertise and know-how of the Group's various business lines;
- the ability to assist leading pharmaceutical customers throughout Europe applying the same standards, as demonstrated by contracts with Pfizer and Novartis.

1.3.1.5 Other businesses

Veolia Ingénierie et Conseil hosts the Group's engineering consulting and operational and strategy assistance activities. It designs tailored solutions for challenges surrounding accessing essential services, sustainable resource management, environmental protection and performance improvement for municipalities, industrial companies and the service sector.

Its teams are involved in the water, waste recovery and processing and energy business, from the draft project phase through to operational implementation and provide a wide range of services including audits and studies, design and project management, strategic and operational assistance, training and skills transfer.

Active in over 70 countries across five continents, Seureca is supported by local offices, business synergies and an operational talent pool of over 300 engineers that can be mobilized to work on short-, medium- or long-term projects around the world.

Veolia also has a subsidiary specialized in the environmental and health performance of buildings and expertise in monitoring and improving air quality (Veolia Maintenance et Assainissement).

1.3.2 FACTORS THAT COULD INFLUENCE THE GROUP'S BUSINESS LINES

1

Veolia provides essential services for municipalities and industrial customers in all major geographies of the world, making the Group particularly resilient to external shocks and crises. The Group's business models are not affected by customs tariffs or variations in exchange rates, given the multi-local activities based on long-term contracts (with an average term of 11 years), up to 70%, and 85% indexed to inflation, and resilient to cyclical fluctuations as a result of geographic diversification and a broad customer portfolio.

The Group's main business lines can be influenced by key factors, certain of which are set out in Chapter 2, Section 2.2, Risk factors, below.

WATER

- Changes to billed volumes (particularly changes in domestic water consumption as a result of weather variations);
- the ability to achieve, within the planned timeframe, rate increases in line with cost increases when contracts are not automatically indexed;
- the ability to implement cost-cutting programs;
- the pace of the projects of municipal customers and some larger industrial customers (for designing and building installations);
- the ability to meet service commitments negotiated with customers or regulators;
- continued technological leadership particularly to meet expectations and comply with new health and environmental protection standards;
- a full grasp of the constraints and technical solutions in relation to contract performance;
- thoroughness in negotiation and performance (particularly as regards the ability to respect deadlines and cost budgets for designing and building installations);
- operational resilience of sites due to climate conditions (flood risk or water stress).

WASTE

- The Group's presence at all points of the waste value chain, from pre-collection through all aspects of processing and recovery, in a representative range of geographic zones, in order to identify and manage innovative, tailored solutions that set the Group apart from its competitors in the market;
- public policies supporting the circular economy and ecological transition;
- the quality of employee management in sectors that are often labor-intensive (limiting absenteeism and strikes, and developing skills and training);
- operating efficiency (procurement, sales, logistics and maintenance management) to optimize unit costs and the utilization rate of equipment, while ensuring the high level of quality required for the products and services delivered;
- management of economic and financial risks: in particular, volume fluctuations, reducing exposure to volatility in raw material prices (fuel, and secondary raw materials, such as paper, plastic and metals), see below;
- industrial risk management (fire, explosion, pollution, etc.), notably for the Hazardous Waste activity.

ENERGY

- Public policies supporting energy transition (energy efficiency, the development of renewable energy sources, etc.) and the reduction of pollutant emissions;
- changes in the energy market, particularly in terms of the selling price of electricity and heating, the accessibility and production cost of fuels, and CO₂ allowances (see below);
- urbanization dynamics and weather variations from year to year, which can affect sales of heating and cooling;
- the economic environment and its influence on the activity levels of industrial sites;
- the integration of renewable energies and the need for flexibility in the electricity management system;
- a higher regional energy self-sufficiency target that can be achieved by reducing energy needs (energy efficiency) and local energy production.

Factors common to the three business lines:

- the ability to renew existing contracts under satisfactory conditions in a very competitive environment;
- the ability to propose innovative models;
- the ability to control costs and impose favorable conditions for sharing risks and profits;
- the management of risks relating to environmental protection, and to the safety of individuals and facilities;
- the ability to innovate using new technologies and innovative processes founded on an effective technology-, regulator- and competition-monitoring system;
- investment management in certain capital-intensive businesses (selectivity, risk analysis and facility size);
- the quality of contractual management for long-term contracts (major clauses, price review formula, guarantees and sureties, etc.);
- the diversity of regulatory frameworks and changes therein, particularly concerning environmental issues.

The **Water** and **Energy** business lines are subject to seasonal changes and weather uncertainty (see chapter 2, section 2.2.2.1, below).

Price variations in electricity CO₂ and primary raw materials (particularly fuel, coal and natural gas) on the one hand, and of secondary raw materials (paper, cardboard, plastic, ferrous scrap and non-ferrous metals) on the other hand, can have varying effects on Veolia's businesses (see chapter 2, section 2.2.2.3, below).

Energy and raw material prices are heavily influenced by supply and demand, weather conditions, the geopolitical context and macroeconomic decisions.

Raw material prices remained relatively stable in 2025 due to solid fundamentals in terms of supply and demand: comfortable European gas stocks at the start of the year, excellent availability of the French nuclear fleet, and strong renewable energy production.

- **Natural gas:** average prices for the main European interconnection points, including the TTF (Netherlands), increased slightly by +4.5% on average with volatility remaining very low compared to 2025.

In 2025, the spot price of gas was less volatile than in previous years, thanks in particular to comfortable market fundamentals. On the supply side, the year began with high gas stocks (53%) and significant liquefied natural gas (LNG) imports. As a result, the European Union's official announcement that it would no longer import Russian gas and pipeline maintenance in Norway did not have a significant impact on prices. On the demand side, prices were particularly volatile during periods of extreme cold or heat in order to support heating and electricity production.

Although gas prices rose slightly compared with 2024, the TTF nominal price fell sharply at the end of the year, settling at €28.3 per megawatt hour on December 31, 2025, compared with a peak of €48.275 per megawatt hour on December 31, 2024.

- **Electricity:** average prices in the German, French and Spanish markets, among the most liquid in Europe, were up overall by around +7% on 2024.

The year 2025 showed that the price of electricity is strongly linked to weather conditions. On the one hand, electricity demand is directly correlated with temperature, with prices rising during periods of extreme cold or heat. On the other hand, with 24.6% of renewable energy in the European energy mix, wind and sunshine conditions also have a direct impact on the spot price of electricity.

In France, the high availability of nuclear power plants in 2025 mitigated the impact of weather on spot prices.

The rise in European prices is mainly driven by Germany (+12.3%), due to the high dependence of its energy mix on renewable production (60.5%).

- **CO₂:** the average price of carbon allowances on the European market is up +13% compared to 2024.

The spot price of EUA emission allowances is strongly influenced by gas demand in Europe. When demand increases, allowance consumption rises, spiking the price. This upward effect occurs particularly when renewable production is low and/or during periods of high demand for heat and electricity.

In addition, 2025 is marked by an increased presence of financial players in the market. Taking advantage of the price decline observed in 2024, these investors had bought quotas en masse (long positions), creating upward pressure on prices.

This dynamic led to a significant increase, bringing prices back to levels comparable to those of 2023, i.e., €85.24 per metric ton as of December 31, 2025.

- **Fuel:** average fuel prices (ULSD 10 ppm) were down by around -12% compared with 2024.

Despite geopolitical tensions in the Middle East, which could lead to uncertainty about production, and the trade war between the United States and China, oil prices fell sharply throughout the year.

This downward pressure has been sustained by repeated decisions by OPEC+ to maintain production forecasts that exceed demand, against a backdrop of economic slowdown among the main consumers (the United States and China) and downward revisions to future global demand forecasts by international agencies.

Together these changes had a fairly positive impact on the fuel purchases of the Waste business, which reduced its overall cost by **€15.8 million**.

A portion of the revenue of the **Waste** business line is generated by its sorting/recycling and trading businesses, which can be sensitive to fluctuations in the price of secondary raw materials (paper, cardboard, plastic, ferrous scrap and non-ferrous metals).

- **Recycled cardboard and paper (NFSI OCC 1.04):** the price of recycled paper remained around €77 per metric ton in 2025, with a surge in the spring reaching nearly €127 per metric ton in June. This increase was due to increased demand linked to stockpiling in anticipation of the summer break.

The price then fell sharply to return to its level at the beginning of the year due to weak demand.

- **Scrap metal (E40 price reference):** on the European market, the price of E40 scrap metal fell overall for much of 2025 (-4%), with prices declining month after month.

This trend was influenced by weak demand from steelmakers combined with a market surplus that has persisted for several years. This situation is expected to continue until 2027.

- **Plastic:** the recycled plastic market benefited from European regulations requiring the use of at least 25% recycled plastic in the manufacture of bottles from January 1, 2025. Despite this, prices have remained stable thanks to the sustained supply of recycled materials.

Recycled polyethylene terephthalate (rPET) (balls, flakes and pellets) remained stable throughout the year as a result of balanced supply and demand.

In 2025, the sorting/recycling and trading business generated a **+€13 million** uplift in revenue from the **Waste** business, against a backdrop of price stability and an expansion of Veolia's activities.

1.3.3 CONTRACTS TAILORED TO THE MARKETS

The variety of the business models implemented by the Group results in diverse contract forms tailored to suit local legal systems, and the type (public vs. private), requirements (in terms of financing and performance) and size of customers.

Veolia therefore strives to take its customers' expectations into account in its contract negotiations, building a partnership-based relationship that is attentive to the customer's concerns, and a shared approach to improvement and productivity. It sets out clearly defined commitments to performance and sharing the value created, while meeting regulators' transparency requirements, from the tendering stage and throughout performance of the contract.

The duration of the vast majority of our contracts, combined with contractual indexing of compensation, illustrates the robustness of our business models and allows the Group to better withstand changes in external uncertainties.

1.3.3.1 Contractual relationships with public authorities

Contractual relationships with public authorities for services to local inhabitants (public services or services of general economic interest, for which the municipality is responsible), vary with the level of involvement of the public authority and the contractor.

Most often, these public services fall under the responsibility of the competent public authorities, which are directly involved in their management in various ways. They may:

- **operate the service themselves** (direct or internal management by a state-owned enterprise) using their own resources or resources entrusted to a body that the public authority controls, similarly to the way it controls its own departments (or "in-house" under EU regulations);
- **engage the services of a private, part-public or public company**, which operates all or part of the service on their behalf (in its entirety, for support assignments related to the service, or within a limited scope) and for which they form the customer base;
- **transfer or delegate, to a private, part-public or public company**, responsibility for operating all or part of the service, allocating the human, material and financial resources and, where applicable, designing, building and financing the facilities needed to operate the service.

In certain cases, service users may directly form the customer base of the Group's entities.

The variety of approaches to managing public services thus gives rise to contractual mechanisms that Veolia adapts to suit each customer, depending on whether or not the company is made fully responsible for providing the service, how it is financed and the relationship with end-users.

Contracts generally fall into one of three categories:

- **Public contracts:** the public entity charges the contractor with delivering supplies, work and/or services in exchange for payment by the former as the services are performed. These contracts may have a limited purpose (for example, operating a heat production plant, a waste treatment facility, a wastewater treatment plant, etc.). Increasingly, however, public authorities are turning to comprehensive public procurement contracts, whereby the Company is tasked with designing, building, operating and maintaining facilities; these may include remuneration mechanisms (particularly Design, Build, Operate, Maintain (DBOM) procurement contracts) or Design, Build, Operate (DBO) contracts for international markets, including design but no financing;
- **Partnership contracts on the basis of Build, Operate, Transfer (BOT), or Build, Own, Operate (BOO)** contracts for international markets with financing: contracts whereby the public entity assigns the overall task of designing, building and/or operating facilities, which may include partial or total financing and an end-of-operations asset

transfer clause. These contracts may be performed by Group companies acting alone or as part of a consortium with third parties or, where facilities are subject to financing, through ad hoc companies that enter into the contract and take on the debt, without the lenders being able to launch proceedings against the borrower's shareholders. In this type of contractual arrangement, it is also common to create an operating company to operate and maintain the facility. Group companies may, for a single project, invest to varying degrees in the construction consortium, in the share capital of the ad hoc company awarded the main contract or in the share capital of the operating company;

- **Public service concession contract:** the public entity grants the contractor the concession to manage a public service, taking on all or part of the operating risk. It is most common for this to result in remuneration paid, in whole or in part, by the service user.

Although some established models still dominate, depending on the country and the operations carried out by the Group, contractual models may evolve to address new priorities faced by public authorities, providing them with innovative financing solutions and remuneration mechanisms based on the savings achieved and/or the performance of the service.

The term of these contracts varies with the task assigned: they are often medium or long-term contracts (average of eight to twenty years, public contracts generally having a shorter term). Long-term contracts may include a periodic review of financial terms and conditions.

1.3.3.2 Partnerships with industrial and service sector companies

Partnerships with industrial and service sector businesses can also take a variety of contractual forms; the minimum these include is a service of limited scope, but they can also cover the design, financing, construction and full operation of a facility. These contracts are customized because they seek to address exactly the specific issues facing each customer:

- **Outsourcing a group of services** not included in its core business, such as site management (steam, compressed air, electricity, cooling towers, cooling unit, heating, ventilation, air-conditioning, etc.), the water cycle (drinking water, process water and effluents) and waste management. More broadly, the Group can manage the full range of production support services at industrial sites: building maintenance, lifting equipment, fire detection, mechanical and electrical maintenance, calibration, instrumentation, etc.;
- **Exploring and implementing innovative or hi-tech solutions** to address complex problems: e.g. in the fields of decontamination, recovery of hazardous waste, greenhouse gas emission reductions through projects with a significant environmental component (biomass or solar facilities), the production of water used in the customer's industrial process, and the treatment or reuse of industrial wastewater by zero wastewater discharge projects.

In most cases, the contracts set performance targets, on which Veolia's remuneration is partly based.

As with public authorities, the term of contracts with industrial companies varies and is on average three to ten years.

The Group is also very careful to strive for economic balance in its contract portfolio, particularly when investments need to be financed. The contracts managed are complex and long-term, so the Group is skilled in analyzing and monitoring contracts. The content of tenders is approved by Veolia Environnement's Investment Committee (for the most important ones), or by the regional or country Investment Approval Committees. The Group's central Functional Departments are involved in the process of negotiating and drawing up tenders for major contracts, on the initiative of the operational companies. Controls are put in place covering the implementation of tenders and contracts. Each year, the Veolia Environnement Internal Audit Department's schedule includes a review of the contractual and financial challenges of the most significant new contracts.

1.3.4 MARKETS AND COMPETITION

1.3.4.1 Markets

Veolia provides environmental services to municipalities (56% of its customers) and industrial customers (44% of its customers across all sectors, including service companies and hospitals). These environmental services include drinking water treatment and distribution, wastewater treatment and waste management, as well as energy services: production and/or distribution of heat, cold, gas or electricity; energy efficiency of buildings and industrial sites. These services also encompass the design, construction and, where applicable, financing of the facilities necessary for their supply.

These services are intended for:

- public authorities and private individuals (municipal market);
- industrial or service companies and establishments (industrial market).

Environmental services are a growing market, driven by:

- population growth and increasing urbanization (70% of the world population will live in cities by 2050)⁽¹⁾;
- still-significant requirements worldwide to access drinking water and sanitation systems (some 700 million people still do not have access to drinking water and over 2 billion have no access to sanitation systems)⁽¹⁾;
- increased awareness of the need to take steps to protect the environment, with a regulatory framework that is becoming more stringent;
- cost constraints for services coupled with performance requirements, which encourage the outsourcing of services to specialists;
- a change in consumer behavior: increasingly knowledgeable about health, environmental protection and lifestyle changes aimed at a higher standard of living; increasingly sensitive to the roles of recycling and the collaborative economy; and wanting greater transparency in service governance.

1.3.4.1.1 Municipal markets

For Veolia, the municipal market encompasses services aimed at users, performed under contracts with local public authorities and groups of local public authorities, or regional or national governments: distribution of drinking water, collection and treatment of wastewater, waste management, management of energy networks (electricity, heating, cooling).

Global warming, natural disasters, pollution, economic appeal, social inequality, populations, increased mobility, accelerating urbanization (particularly in coastal zones), stress on resources and infrastructure, digitalization, and the vulnerability of information systems are some of the challenges to which cities must respond.

Veolia offers solutions that improve security for municipalities and citizens by providing access to critical resources such as water and energy, as well as essential services such as cleaning, recycling and decontamination. By deploying solutions based on local resources, the Group ensures the reliability of these essential services, with guaranteed prices in a volatile environment caused by repeated crises – whether environmental or geopolitical. For example, Veolia harnesses new technologies to search for and repair water leaks and to treat new pollutants such as micropollutants in water or soil. The Group also reduces the energy impact of municipalities by rolling out renewable energy (biomass, biogas, etc.) across all regions of the world.

In addition, the Group promotes universal access to essential services, particularly for the most vulnerable populations, by offering reliable, available and affordable services. They also encourage the involvement of citizens and all stakeholders in their operation. Through its presence and knowledge of local players, Veolia accompanies economic and social initiatives promoting access to essential services for the greatest number.

1.3.4.1.2 Industrial markets

Veolia's industrial markets cover Water, Waste and Energy management services, offered to industrial or service sector customers. The Group provides industrial and service sector customers with a full range of construction and/or service offerings, assuring them of the right to operate, the reduction in their carbon footprint, maximum asset availability and performance, lower costs and risks, and regulatory compliance. Veolia provides operational support to industries by providing innovative, reliable and affordable solutions to the challenges they face in terms of water access and treatment, waste treatment and performance by positioning itself as a long-term partner for all environmental issues with a tailored range of offerings.

⁽¹⁾ According to a United Nations report dated March 31, 2015.

1.3.4.2 Competition

Markets for environmental services are generally very competitive and are characterized by increasing technological challenges due to changes in regulation, as well as by the presence of experienced competitors. Although the competitive landscape is highly diversified, Veolia's competitors can essentially be broken down into three major categories.

1.3.4.2.1 Global players

Global specialists are companies that operate in one or more of Veolia's business lines and have a worldwide presence.

- Veolia is a major global player covering three business lines – Water, Waste and Energy – with a wide range of services.
- Suez, FCC and Remondis, other global multi-service specialists, are only present in Water and Waste.
- New players, primarily Chinese, are developing global activities in Water, Waste and Energy, through strategies founded on sustained external growth (Beijing Group, China Everbright Group).

Veolia is set apart by its larger geographic footprint; its more extensive range of services, including energy services; and the synergies between its three business lines, Water, Waste and Energy.

- Veolia is one of the world leaders in Water, with its portfolio of technologies enabling it to address all water treatment issues, and its geographic footprint, with many industrial customers in all regions of the world. Large equipment manufacturers and suppliers of water packaging products, such as Xylem, Dupont Water Solutions, Ecolab, Kurita, Solenis, Itron and Doosan, have a presence in both the municipal and industrial markets. Their growth strategy focuses on developing digital offerings, including control centers and the Internet of Things.
- In emerging countries, Veolia faces off against Spanish and Brazilian civil-engineering firms (ACS, Sacyr, Acciona, Odebrecht), particularly in seawater desalination projects, or Asian equipment manufacturers, such as Hyflux (based in Singapore) and Wabag (based in India), which are gradually moving into operations.

Veolia's business model is distinct from the business models of these companies through its very broad positioning on the value chains of the Water, Waste and Energy business lines and through its combined engineering/construction and operational capabilities, which enable it to guarantee its customers long-term reliability and performance.

1.3.4.2.2 Local or regional specialists

Unlike global specialists, local or regional specialists have a geographic footprint limited to one or more countries or regions of the world. They set the standard in their sectors, with a range of expert offerings positioned in specific business lines. This category represents a significant proportion of Veolia's competitors. In fact, Veolia faces a multitude of local specialists in the various countries of the world, such as:

- In the United States, Veolia's main competitors in Water are American Water or H2O; in Waste, Veolia's main competitors are: Waste Management and Republic Services, which are developing circular economy offerings; Clean Harbors, which specializes in services to industrial firms and hazardous waste treatment; Heritage, a hazardous waste specialist; and Enviri, which also specializes in hazardous waste;
- In France, Idex and Dalkia (EDF group) are positioned in local energy loops, Equans and Cofely in energy efficiency services; Saur concentrates on water activities; Paprec focuses on waste recycling and recovery;
- In the majority of countries, there are municipalities managing water, waste or energy services within well-defined geographic boundaries.

Veolia sets itself apart from these companies through its geographical footprint, its ability to offer comprehensive services (multi-site and multi-business) and its combined construction and operation capabilities, enabling it to guarantee long-term reliability.

1.3.4.2.3 Local/regional multi-service companies

In some developing countries, private or public/private companies have a large local footprint and are the leading players in local services where Veolia operates. Accordingly, the Singapore-based Sembcorp Group is a competitor of Veolia in the Water and Energy businesses and focuses on construction and operation in emerging countries.

Veolia sets itself apart from these companies through its local footprint and its ability to offer comprehensive services (multi-site and multi-business).

1.4 Research and Innovation

GreenUp: the strategic program accelerating the ecological transformation and spurring innovation

Veolia's GreenUp strategy is based on an approach that combines environmental ambition with practical solutions. The aim is to make the activities that are essential to our society greener in the long term.

It is built around three pillars of transformation:

- decarbonization: CO₂ emissions reduction and integration of renewable energy;
- depollution: removal of pollutants and preservation of ecosystems;
- regeneration of resources: optimized management of water, waste and raw materials.

To accelerate this transformation, GreenUp relies on three **growth boosters**:

- decarbonized local energy, including bioenergy and energy efficiency;
- Water technologies, and new solutions, to ensure access to and preservation of the resource;
- hazardous waste treatment, to remove pollutants and protect public health.

These levers of innovation are supported by **Veolia's core businesses** – municipal water, solid waste management and heating networks – which underpin this transformation.

The aim is to combine expertise and innovation to offer comprehensive, lasting solutions, while ensuring long-term economic and environmental performance.

Innovation at the heart of the ecological transformation

Innovation is an essential lever to respond to climate and environmental challenges. Through a collaborative approach involving customers, manufacturers, startups, scientists and citizens, it encourages the collective design of solutions and speeds up their implementation.

This dynamic is based on key focus areas – scientific, technological, commercial and societal – and on a structured ecosystem:

- **research centers** and operational units, dedicated to the development and industrialization of solutions;
- **Innovation Hubs**, accelerating the Group-wide rollout of innovations with their global reach;
- **strategic partnerships**, with academic, institutional and industrial actors and an increased commitment to startups.

With **GreenUp**, Veolia transforms environmental challenges into sustainable opportunities by leveraging **collective and open innovation** to accelerate the ecological transition.

1.4.1 RESEARCH AND INNOVATION SUPPORTING THE GROUP'S ECOLOGICAL TRANSFORMATION

Veolia uses its scientific and technological resources to drive innovation in support of the ecological transformation, in line with its GreenUp strategy. Innovation relies on a multidimensional approach to depollute, decarbonize and regenerate essential resources.

Priority research areas include:

- Decarbonization and energy conservation: reducing CO₂ emissions with solutions such as the production of bioenergy from non-recyclable waste, recovery of heat and cold, energy efficiency and CO₂ capture;
- Climate change adaptation: developing resilient solutions to protect critical infrastructure and ensure the sustainability of essential resources;
- Natural resource regeneration: implementing solutions to preserve and restore ecosystems, while promoting reuse and recycling of materials and the circularity of resources;
- Technologies and new solutions for water: reusing treated wastewater, treating pollutants (PFAS, microplastics, etc.), and producing drinking water using state-of-the-art technology;
- Hazardous waste treatment: promoting the circular economy and scaling up lithium-ion battery recycling with innovative solutions.

Veolia's research and innovation actions are developed and coordinated within two key central departments:

- The Strategy and Innovation Department, which supports the Business Units in rolling out custom solutions for local authorities and municipal, industrial and tertiary customers. Its aim is to anticipate future challenges and create new growth opportunities;
- The department of scientific and technological expertise, part of the Business Support and Performance Department, which is central to the Group's strategy and is Veolia's authority on science and technology.

This organizational structure promotes operational excellence by providing practical solutions to customers' environmental and economic challenges.

Research centers and technical resources

In 2025, Veolia had **26 laboratories and research and development centers** worldwide. This infrastructure is equipped with advanced technologies and accompanied by industrial pilots to test innovations on the ground:

- **In France, four centers** specialize in research on the Group's three business lines (Water: wastewater, drinking water, industrial water; Energy: energy production and efficiency; and Waste: waste to energy, recovery). These sites include the necessary resources to analyze solid, liquid and gas matrices. To strengthen its innovation capabilities, the Group is investing in a new center of excellence that will bring together these four centers and their complementary expertise, and is scheduled to open in 2026;
- **In Spain** (Barcelona, Andalusia and Galicia) **and Chile, four Cetaqua research centers** focus on topics such as water resource planning and management, the production of new resources, zero waste and decarbonization, territorial and social sustainability, and digital services and artificial intelligence applications;
- Within the Water Technologies zone, **18 laboratories and research and development centers**, located in 13 countries around the world, including North America, Europe, and Asia, specialize in the development of water treatment technologies and solutions: membranes, systems and applications, chemical products, laboratory water purification equipment and analytical instruments, and biological wastewater treatment.

Innovation Hubs

The Strategy, Innovation and Development Department has set up **nine Innovation Hubs**, research initiatives designed to promote innovation and develop solutions that can be replicated across the Group.

The objectives of these Hubs are to:

- accelerate the development and roll-out of innovative solutions that can be replicated across the Group;
- anticipate new trends and technologies by working closely with innovation ecosystems and local partners;
- develop innovations aligned with market needs and the Group's strategic priorities.

The Hubs cover topics aligned with the objectives of the ecological transformation: health and new pollutants; organic matter; new material loops; decarbonization; new metal material loops; energy efficiency; water positive; territorial energy; Water Technologies.

Innovation ecosystems and startups

In addition, Veolia favors a collaborative and open innovation approach, relying on strategic partners, including startups, to work with it on developing innovative solutions and accelerating the ecological transformation by sharing expertise and resources.

Veolia relies not only on its internal expertise, but also on an ecosystem of players working together to promote innovation. This ecosystem includes a network of more than 600 partners around the world: academics recognized for their scientific excellence, industrial customers, associations and public authorities at the forefront of their areas of activity.

Veolia organizes its open innovation around three complementary strategic roles:

- **the role of supporting Veolia's Business Units** and facilitating the open innovation community by sharing experiences and information from the Innovation Hubs. The objective is to promote the incubators to which Veolia contributes, such as Imagine H2O for water-related topics, C2V and Greentown Labs for decarbonization technologies, and the partnership with Plug & Play in the waste sector. Collaboration with Plug & Play in China led to the identification of Vortex, a startup offering smart, modular recycling containers;

- **the role in strategic intelligence**, thanks to the Innovation and Development Department's Innovation & Technology Intelligence service, which transforms information into a lever for action. Its responsibilities include technology and market monitoring, identification and evaluation of innovative solutions or partners, company profiling and market analysis for the development of offerings;
- **the role as a partner in Axeleo Capital's GreenTech Industry I fund**, investing €30 million to support the GreenUp program by identifying and rolling out innovative solutions in depollution, decarbonization, and resource regeneration. The fund has already invested in three startups: Sweetch Energy in France (osmotic energy); Oxyle in Switzerland (PFAS degradation); and Bioweg in Germany (biodegradable ingredients to replace microplastics).

This internal service collects, structures and analyzes data on technologies, players and the market via public sources, databases, artificial intelligence and visualization tools. Its dynamic and actionable analyses facilitate the identification of innovations and partners, the strengthening of offerings, and the creation of commercial opportunities.

Each year, the innovation community gathers for Innovation and Development Days (IDDS) to strengthen collaboration and propose differentiated solutions to customers in line with GreenUp's objectives.

Human resources and investments

Veolia's R&I activities involved more than 645 researchers and experts in 2025. The overall research and innovation budget was 194 million of euros, reflecting the Group's commitment to make research and innovation a decisive lever for the ecological transformation.

1.4.2 SCIENTIFIC AND TECHNOLOGICAL SOLUTIONS - SUCCESS AND PROGRESS

The achievements presented below are concrete actions of Veolia Research and Innovation serving customers and Group growth and contributing to Veolia's ecological innovation.

1.4.2.1 Innovating in our growth areas

Water technologies and new solutions

Tackling PFAS through innovation

Veolia is actively continuing its research into PFAS treatment technologies to respond to environmental and regulatory challenges.

Around the world, per- and polyfluoroalkyl substances (PFAS) are a major concern for Veolia. These persistent compounds pose complex environmental challenges. Veolia closely monitors regulatory and scientific developments to meet its customers' expectations and minimize its own exposure to PFAS risk.

As proof of this, in 2024 it launched the BeyondPFAS offer of integrated end-to-end PFAS management solutions, from detection to final treatment.

The Group is already rolling out mature treatment solutions and is continuing its research and innovation efforts to boost treatment efficiency. These efforts focus on improving treatment technologies, in particular by studying the degradation conditions of PFAS under different heat treatment regimes (sludge and waste).

In this regard, the pilot developed by the Research and Innovation teams made it possible to determine the optimal treatment conditions to achieve destruction and removal efficiency (DRE) rates of 99.999% for PFOA, PFOS, and PFHxS, in accordance with Environmental Protection Agency (EPA) protocols. These results validate the performance of high-temperature incineration on PFAS under the operating conditions at Port Arthur, Texas and represent a key milestone in Veolia's BeyondPFAS strategy. Veolia now offers a comprehensive range of PFAS treatment services, from detection to treatment and final disposal.

Veolia also works with partners in the public and private sectors to explore these innovations and prevent pollution transfer.

Veolia is developing research projects for PFAS decontamination in soil.

- A soil thermal treatment pilot project led by Veolia in Denmark involves the decontamination of 30 metric tons of soil using conductive thermal heating technology, which significantly reduces PFAS concentrations by heating the soil to between 350°C and 500°C for one week.

Veolia is expanding its efforts to other types of pollution, both emerging and established, by developing targeted technologies.

- Treatment of pharmaceutical residues in hospital effluents: the **LIFE GENESYS project** is developing a new-generation treatment system capable of eliminating pharmaceuticals, resistant bacteria and antibiotic resistance genes directly at the source. It incorporates a digital alert platform that monitors antibiotic concentrations in real time. This comprehensive approach aims to significantly reduce the environmental impact of healthcare facilities while providing long-term protection for aquatic ecosystems.

- **Hydrotech™ Cloth Filter, Confidence Series:** water utilities must fulfill strict regulations for the removal of Total Suspended Solids (TSS) and Total Phosphorus (TP) to protect rivers, lakes, and water supply. To meet these environmental needs, some customers request cloth filters as the preferred solution. While effective, traditional cloth filters require frequent maintenance generating carbon emissions, waste, and resource consumption. This is why, Veolia has developed Hydrotech™ Cloth Filter, Confidence Series, an advanced patent-pending solution that significantly reduces these environmental impacts through: lightweight and compact panels, easy to handle; on-site filter cleaning, eliminating waste and reducing maintenance visits; micropollutant reduction when combined with other Veolia treatment technologies (ozone, MBBR, cloth filtration).

Wastewater treatment optimization

ZeeWeed™ MBR with zeeDENSE™: Veolia optimizes the performance of membrane bioreactors.

Market requirements call for continuous optimization of biological treatment processes to minimize operational costs while enhancing system resilience. To meet this challenge, Veolia developed ZeeWeed™ MBR with zeeDENSE™ in partnership with the University of Notre Dame (United States), EAWAG (Switzerland), and the University of California.

This innovative technology improves biological treatment by optimizing floc size to optimal filtration levels, thereby enhancing the membrane and biological performance of the ZeeWeed™ MBR.

ZeeWeed™ MBR with zeeDENSE™ was first implemented at the Detroit Lakes facility in Minnesota (United States) in 2023. After three years of operation, the solution is performing to the complete satisfaction of the operator. With ZeeWeed™ Evolve™ cassettes, and ZeeWeed™ MBR with zeeDENSE™, Veolia confirms its leadership in membrane bioreactor innovation.

Cella™: the new generation of MBBR technology for wastewater treatment.

To meet the need for compact wastewater treatment solutions with attractive lifetime investment costs, Veolia has developed Cella™, a new generation MBBR (moving bed biofilm reactor) technology for carbon and nitrogen removal.

This innovation uses a bio-based biofilm support material, replacing traditional plastic supports. The first full-scale installation, built in Denmark and commissioned in 2024, has demonstrated convincing results after more than a year of operation: a 50% increase in overall capacity using less than 20% of the existing footprint, with stable performance and low nitrous oxide emissions. Backed by this validation, Veolia launched Cella™ commercially in 2025.

Direct reuse of drinking water

Veolia is developing innovative initiatives for the direct reuse of drinking water through advanced treatment of recycled wastewater, without prior discharge into rivers or aquifers. The **DECIDEIX project** in Spain, a pioneering initiative in Europe, aims to demonstrate the technical and decision-making framework needed to enable the safe and regulated direct reuse of drinking water.

Decarbonized local energy

From the production of bioenergy from non-recyclable waste to heat and cold recovery, energy efficiency solutions and CO₂ capture, the Group produces local, affordable and low-carbon energy.

The innovative Ecothermal Grid offering to strengthen resilience, stability, and local autonomy

To meet the energy challenges facing cities and guarantee their security of supply, **Veolia is launching Ecothermal Grid**, a new innovative offering based on a comprehensive approach to carbon-neutral district heating through the decarbonization of existing networks and the development of new district heating infrastructure, targeting revenue of €350 million by 2030.

Designed for small local urban heating networks, the offering combines renewable energies, waste heat recovery, heat pumps, electric boilers and AI-based digital tools to maximize efficiency, reduce emissions and provide sustainable and cost-effective energy to municipalities, private operators and campuses. Ecothermal Grid positions Veolia as a key player across the entire value chain, from identifying renewable energy sources to rolling out and optimizing the network.

The offering includes: advanced technologies for renewable and waste heat sources; treatment solutions adapted for network decarbonization; innovative processes for waste heat recovery; energy storage solutions; AI and digital tools to optimize performance and management; and consulting and support services.

Converting waste into low-carbon fuels: two innovations from Veolia for carbon-free mobility

From experimentation to industrialization: approval of the low-carbon hydrogen production process.

After rigorous technological validation of the hydrogen production process using biogas steam reforming at the Almanarre wastewater treatment plant in Hyères (France) in 2021, the project was rolled out on an industrial scale at the South East New Territories Landfill Extension (SENTX) site in Hong Kong.

This pilot experiment demonstrated the performance and reliability of the biogas steam reforming process, with high-purity low-carbon hydrogen production that meets the requirements of hydrogen-powered vehicles. The technical and environmental assessment confirmed the competitiveness of this solution, particularly in situations where biogas cannot be injected into the gas network due to a lack of infrastructure or limited access to it. Beyond energy recovery, the project contributes to the decarbonization of assets by avoiding biogas flares.

By providing a local source of low-carbon hydrogen for mobility and capturing CO₂ for industrial applications, this solution illustrates Veolia's ability to develop innovations that create environmental and economic value, from the experimental stage to industrial scale.

From the wastewater treatment plant to the city bus: conversion of sludge into renewable fuel.

The **European LIFE NIMBUS project**, coordinated by Cetaqua and rolled out at the Baix Llobregat plant (Spain), has demonstrated the viability of a complete process over five years: sewage sludge is converted into biogas through anaerobic digestion, then enriched with fuel-grade biomethane through biological anaerobic digestion (power-to-gas), increasing the energy recovered by 70%. This biomethane powers the Transports Metropolitans de Barcelona pilot bus, which has traveled 14,000 kilometers per year, reducing its carbon footprint by 80% (28 metric tons of CO₂ avoided). Replicable on a large scale, this innovation meets European targets, aiming to reach 30% renewable fuels by 2030, and opens up new prospects for urban and freight transport.

From waste to resource: CO₂ capture and recovery

Veolia, in partnership with Le Mans Métropole (France), is launching an **industrial demonstration project for CO₂ capture and recovery** at the Le Mans energy recovery unit. This facility is capable of capturing up to 10 metric tons of CO₂ per day with a capture rate of 90%. The project is part of the GreenUp strategic program and represents an investment of €12 million by 2028. After capture using solvents and then liquefaction, the CO₂ becomes a new resource for the region. Veolia will explore the various avenues for CO₂ recovery, favoring local applications: agriculture, local industry, or conversion into recoverable materials.

Automating the control of heating networks using artificial intelligence

As a major player in the decarbonization of heating, heating networks must constantly evolve. Operators must both ensure quality of service for the delivery of heat to their customers and minimize consumption and CO₂ emissions. In this context, determining the optimal power to supply to each building while respecting production constraints has become a major challenge for the overall efficiency of the network.

Veolia has developed an artificial intelligence solution that automates the control of heating substations. Using an advanced algorithm combining optimization and predictive models, the solution takes into account all the constraints of the heating network and delivers daily distribution planning for the substations. The results show reduced energy consumption and lower CO₂ emissions.

Industrialized in September 2025, this innovation is operational in more than 90% of the residential buildings in the Harbin (China) heating network operated by Veolia. The rollout proceeded according to plan, with an increasing number of substations involved during the heating season.

Several networks operated by Veolia in China and Eastern Europe have been identified for the application of the solution, designed to facilitate its roll-out.

Innovative solutions for data centers

Faced with the exponential growth of data centers and their major environmental impacts, Veolia is developing innovative solutions to drastically reduce their ecological footprint in two key areas: water management and waste heat recovery.

- **Innovation in water management:** Veolia has developed comprehensive systems to purify, manage, and optimize water use, including inlet and outlet water treatment, chemical management, and reuse of municipal wastewater for data center cooling. Coupled with the Hubgrade digital monitoring platform, smart chemical feeding systems, and real-time performance analytics, these innovations ensure water safety and maximum operational reliability. This comprehensive offering generates substantial savings through reduced water consumption and improved energy efficiency, while ensuring regulatory compliance.
- **Waste heat recovery:** using advanced heat pumps, Veolia designs customized systems to capture and recover low-temperature residual heat, supplying district heating networks, industrial processes and agricultural applications. This innovation is intended to transform the data center from energy consumer into heat supplier for local communities and businesses. Veolia's turnkey offering, from design to operation and continuous optimization, reduces carbon footprint and cooling costs, creates new sources of revenue, and enhances the social acceptability of digital infrastructure.

Hazardous waste treatment

Electric battery recycling: industrial roll-out and innovation

With the rise of electric vehicles, lithium-ion battery recycling is becoming a crucial issue in ensuring sustainable mobility. These batteries contain strategic metals such as lithium, cobalt and nickel. Conventional methods used to extract them are costly and polluting. Veolia has developed a comprehensive range of services along this value chain, offering collection, safety control and dismantling services on the one hand, and recycling solutions on the other.

The Veolia Group is currently active in these markets in the United States, Europe (France, United Kingdom, Switzerland, Slovenia) and Asia (Japan). This global presence allows us to distinguish our services and logistics activities, which are particularly dynamic in the United States, from our industrial processing capabilities, which are concentrated in Europe. Veolia also has an industrial-scale plant that chemically processes black mass using the hydrometallurgical process to recover the strategic metals so that they can be put back on the market. The challenge for research and innovation is now to improve the extraction of materials that are still insufficiently recycled (electrolyte, graphite) and to adapt our processes to future battery chemistries.

1.4.2.2 Innovating in our strongholds

Municipal and regulated water management

Tracking emerging pollutants in the water cycle

Veolia uses advanced technologies to quantify and remove microplastics and micropollutants in water.

Faced with the environmental challenges posed by emerging pollutants in aquatic systems, Veolia is involved in three European projects to improve the quality of wastewater discharges, surface water and groundwater.

The **MagNa project** proposes a circular economy approach by extracting magnesium hydroxide (Mg(OH)₂) and sodium chloride (NaCl) from desalination brine, traditionally considered waste. This project is developing an innovative resource recovery treatment process to produce high-purity Mg(OH)₂. MagNa, funded under EIT Raw Materials, reduces the environmental impact of desalination and contributes to European strategic autonomy by securing the supply of critical raw materials.

Water scarcity is an urgent global challenge. The **i3WaterS project**, coordinated by the Polytechnic University of Catalonia and funded by the European Union, is intended to strengthen the robustness of water distribution systems by mapping the links between daily operations, extreme events and failures. By combining data, expertise, and AI in an intelligent decision support system, i3WaterS will enable scientific water management. Fifteen doctoral students will be trained in monitoring, modeling, AI, microbiology, and ethics to develop the resilience of critical infrastructure.

Improving the resilience of water services to climate change: nature-based solutions

Nature-based solutions (NbS) harness natural processes to provide responses to environmental and climate challenges. This approach helps strengthen the resilience of ecosystems in the face of extreme weather events and is often more cost-effective in the long term than conventional infrastructure.

Veolia is involved in the resilient management of the large water cycle and has developed over 25 NbS around the world in recent years, responding to the challenges of climate change adaptation.

- In 2025, Veolia was involved in three European research and innovation projects on this topic, aimed in particular at standardizing the identification of relevant sites in the catchment area and monitoring NbS performance.
- Veolia has launched four feasibility studies in France, Spain and the United States to demonstrate the value of these solutions as a complement to existing treatment facilities.

Veolia has shared its experience of nature-based solutions at external events such as the Paris Dialogue on innovative finance for nature organized by the the French Development Agency (AFD) in Paris (France), World Water Week in Stockholm (Sweden), the IUCN World Conservation Congress in Abu Dhabi (United Arab Emirates), and the IWA Water and Development Congress & Exhibition in Bangkok (Thailand).

Promoting the ecosystem services of green infrastructure

Beyond their climate resilience function, green infrastructure linked to the urban water cycle generates high-added-value ecosystem services. The **BIOVERA project** seeks to identify, quantify and monetize the services, such as thermal regulation, biodiversity, air quality and social well-being, to demonstrate their environmental, economic and social value. This approach supports climate-resilient planning in Mediterranean and semi-arid regions by integrating the benefits of nature-based solutions into business models and investment decisions.

From wastewater to agricultural resource

NUTRILOOP is a demonstration pilot project to validate the use of nutrient-rich recycled wastewater for agricultural irrigation. Through advanced treatment and nutrient recovery, such as nitrogen and phosphorus, the project creates a virtuous cycle between urban water management and agriculture. This approach improves resource efficiency, reduces dependence on chemical fertilizers, and supports a more circular, low-carbon agricultural system, illustrating Veolia's ability to transform wastewater into high-added-value resources.

Waste treatment and circular economy

Transforming waste into high-added-value resources

In Galicia (Spain), Veolia participated in the **CIGAT Circular project**, which transforms industrial, urban and agricultural waste into high-added-value resources through water reuse, renewable energy, waste recovery and digital tools. The project, now complete, has created AQUARGA, the region's first regenerated water refill point at the Ourense eco-factory, reducing the water footprint by 60% and accelerating the development of innovative products such as biofertilizers, eco-cellulose and biocomposites.

High-performance refractory tiles

To counter the corrosion of tiles located in the lower zone of the furnaces, prematurely degraded by high temperatures and chemical reactions with waste deposits, Veolia has begun to roll out a new high performance refractory tile solution. These innovative tiles are the result of a close collaboration with refractory manufacturer Bony and CNRS (France) academic laboratories specializing in modeling and corrosion (Mines Saint-Étienne, CEMHTI Orléans). They have been rolled out at six plants to date. This innovation allows maintenance operations to be spaced out, thereby increasing the operational availability of sites while securing the supply of these critical components.

Sustainable mobility: Forvia and Veolia, pioneers in recycled plastic for vehicle interiors

Faced with decarbonization challenges and future European regulatory requirements on vehicle circularity, MATERI'ACT (the Interiors subsidiary of the Forvia Group) and Veolia have established a strategic partnership to develop, produce and market innovative materials for vehicle interiors, with the objective of maximizing the content of post-consumer recycled (PCR) plastic.

The complementary nature of the expertise has enabled them to jointly develop a consistent range of grades with a high content of PCR plastic, covering a wide spectrum of applications:

- NAFILean-R – reinforced composite grade, intended for the non-visible structural parts of the vehicle interior;
- several grades of IniCycled PlastiLoop – IniCycled-P NP34M PlastiLoop, IniCycled-P VP24M PlastiLoop, IniCycled-P VP34M PlastiLoop – for visible parts (dashboards, door panels, center consoles). These materials are already approved or in the process of being approved by several manufacturers.

This new generation of materials containing 40% recycled PCR-PP (post-consumer recycled polypropylene) has been in industrial production on Forvia's production lines since the end of 2024. It combines esthetic requirements, industrial performance and a high level of circularity, demonstrating the industrial feasibility of compounds with a high PCR content without compromising on technical performance.

Building on these successes, the two companies intend to accelerate the rollout of these recycled plastic-based circular solutions and expand their automotive applications.

1.4.2.3 Our strategic and scientific partnerships

To carry out its research and development programs, Veolia forges numerous scientific partnerships worldwide. The aim is to tap the best global expertise in disciplines that are strategic for the Group, to supplement its in-house areas of expertise and to steer academic research toward key issues for the industrial and ecological transformation.

French strategic partnerships

- Veolia and the **AFD (Agence française de développement – the French Development Agency)** signed a three-year strategic partnership agreement in July 2025. Under this agreement, Veolia seeks to combine its technical expertise and know-how in terms of ecological safety with the AFD's strong presence in emerging and developing countries (as a priority in Latin America, Central Asia, the Balkans, Africa, and the Middle East) to address environmental challenges. The partnership focuses on three key sectors: water and sanitation, waste management, and energy.
- In June 2025, Veolia and the **CNRS (Centre national de la recherche scientifique – the French National Center for Scientific Research)** signed a strategic framework agreement to develop their scientific cooperation in water, waste, energy, biodiversity and environmental artificial intelligence. This cooperation aligns with the vision of the GreenUp plan and is structured around five areas: public/private transformation, promotion of research, long-term projects, agile governance and empowerment of teams.
- **TotalEnergies** and Veolia have signed a memorandum of understanding to strengthen their cooperation for the energy transition and circular economy, in line with the objectives of reducing GHG emissions and the water footprint. The areas of cooperation are: the reduction in methane emissions from landfill; the reduction in the industrial sector's water footprint; more sustainable desalination due to low-carbon energy; the recovery of resources from waste.
- In addition, Veolia is continuing its collaboration with long-time partners such as the **CEA (Commissariat à l'énergie atomique et aux énergies alternatives – the French Alternative Energies and Atomic Energy Commission)**, the **BRGM (Bureau de Recherches Géologiques et Minières – the French Geological Survey)**, and the **INRAE (Institut national de recherche pour l'agriculture, l'alimentation et l'environnement – the French National Research Institute for Agriculture, Food and the Environment)**.

Academic collaborations and European research programs

- **Worldwide**, Veolia participates in **25 research consortia**, with an overall budget of €105 million. The Group relies on the Horizon Europe program for disruptive technologies – through projects carried out by Cetaqua in Spain – such as 6G technology or microalgae, and on national and regional funds for Veolia's industrial base, for example in Belgium with the electricity flexibility project. These funded projects support the Group's strategic priorities: regulated water management, artificial intelligence for energy (EnerTEF consortium led by Veolia Facilities) and carbon capture, utilization and storage (CCUS).
- Veolia participates in the international **GLOWACON** program for wastewater and environmental monitoring, which seeks to create a sentinel system for early detection of pandemics and chemical pollution. Via **EU4Health**, Veolia draws on the expertise of Spanish partners – the Spanish National Research Council (CSIC), Cetaqua, the University of Santiago de Compostela (USC) – by applying the "One Health" approach and the urban wastewater directive, to use wastewater as an early warning tool and strengthen European health sovereignty. This strategic commitment positions Veolia as a key player in global health, particularly at the One Sustainable Health Forum in Lyon in November 2025. It also highlights the implementation of the GreenUp plan, which prioritizes the connection between the environment and the public health in its strategy.

- **In Spain**, Cetaqua collaborates with around 150 universities and research centers to amplify its impact in the regions, including the USC and CSIC mentioned earlier, the Polytechnic University of Catalonia (UPC) and the University of Malaga (UMA). Cetaqua is also a founding member of Aqua Research Collaboration (ARC), a European model for collaborative research on the water cycle.
- **In Canada**, a collaboration between Veolia and the **Industrial Research Chair on Drinking Water at Polytechnique Montréal** is also underway, covering topics such as micropollutants (PFAS, micro- and nanoplastics), or the use of artificial intelligence in chemical testing.

Participation in international scientific networks

- Veolia, through the **Global Water Research Coalition (GWRC)**, a non-profit organization for scientific cooperation among global players in the water sector, contributed to work on emerging topics such as microplastics, nitrous oxide (N₂O) emissions, endocrine disruptors, effect-based monitoring (EBM) and analytical tools, as well as antibiotic resistance.
- Veolia actively participates in the Steering Committee of the **International Water Association (IWA) biofilms specialist group**, contributing to global scientific and technical exchanges on biofilm management in aquatic systems.

1.4.2.4 Scientific outreach

Veolia is a key player in scientific research applied to the ecological transition through its events and publications and its innovation awards:

- **The Veolia Institute** organizes high-level conferences on major health and environmental issues. Attended by renowned international experts, these events address key and forward-looking issues such as decarbonization and the applications of low-carbon hydrogen in the energy transition;
- In France, the **Chair "Mathematical Modeling and Biodiversity"**, supported since 2009 by a partnership between the École Polytechnique, the École Polytechnique Foundation, the French National Museum of Natural History and Veolia, regularly organizes multidisciplinary scientific conferences. These events explore the role of mathematical modeling in developing solutions for major environmental challenges;
- In the United States, Veolia participated in the **Massachusetts Institute of Technology (MIT) Water, Food and Agriculture Innovation Prize**, which supports students in transforming their research and ideas into commercially viable, sustainable solutions by giving them access to mentors and resources;
- In November 2025, Veolia won the **France-China Committee Innovation Award** for AHEAD, an artificial intelligence solution dedicated to the energy efficiency of district heating networks. This solution leverages the thermal inertia of buildings to reduce energy consumption and CO₂ emissions;
- Worldwide, in 2025, **more than 80 scientific publications were published by Veolia researchers**, including in collaboration with academic and industrial research partners. This is a testament to the Group's scientific influence and its contribution to the advancement of knowledge in the field of ecological transformation.

1.4.3 CONTROLLED GENERATIVE AND AGENTIC ARTIFICIAL INTELLIGENCE TO BOOST DIGITAL INNOVATION

Introduction

The emergence of generative artificial intelligence (AI) is a major technological breakthrough with implications for regulatory compliance, cybersecurity, intellectual property protection, business process transformation, and environmental and ethical considerations. In response to these challenges, Veolia established a collaborative global governance framework early on, tailored to its decentralized business model, which enables it to secure usage, maximize synergies, and prioritize investments.

As for the previous year, 2025 was largely devoted to acculturation and the construction of the technological foundations necessary for the transition to the operational scale of the “**AI for GreenUp**” program planned for 2026. This consolidation phase reinforces the three essential axes to deliver the expected value of generative and now agentic AI: robust governance, industrial-grade data and secure platforms.

The “AI for GreenUp” program makes AI a key driver of the Group’s environmental ambitions of decarbonization, depollution and regeneration. It is built around three strategic pillars: **Augment Employees, Augment Operations and Augment Customers**.

This structured and responsible approach positions Veolia as a leader in AI at the service of ecological transformation.

AI for GreenUp governance: a global collaborative framework for responsible and efficient AI

Considering AI as a lever for systemic transformation and not just a technological subject, Veolia has developed its “AI for GreenUp” program around a global Collaborative Framework for AI. This cross-functional governance is co-led by the Digital Business & Technology Department, Business Support and Performance Department, Innovation and Development Department, Human Resources Department and the geographic zones, in collaboration with the business segments and support functions.

This multidisciplinary structure ensures that AI expertise is directly diffused within the Group’s strategy and its operations. This governance model also guarantees the systematic identification of priority use cases, the pooling of expertise, compliance with regulations (in particular the GDPR and the European AI Regulation) and compliance with strict ethical principles.

This governance is structured around a committee system and documented procedures:

- **a steering committee (AI for GreenUp SteerCo)** bringing together the Digital Business & Technology, Business Support and Performance, Innovation and Development and Human Resources Departments, as well as geographic zones, and ensuring cross-cutting coordination and prioritization of investments aligned with the Group’s decarbonization, depollution and regeneration objectives;
- **a network of AI managers** by zone (Zone AI Strategy Leads) and by business segment and function (Group AI Coordinators), ensuring a subsidiary approach while promoting the sharing of best practice and the Group’s leverage effect;
- **a centralized AI Use Case Register**, enabling full traceability of initiatives, identification of synergies, and prevention of duplication;
- **the Golden Rules**, defined jointly by the Group and the zones, governing the rollout of AI tools and initiatives, particularly in the areas of security, ethics and budget management;
- **strict validation procedures, including a mandatory Design & Legal Assessment process** for any new AI project, involving local Data Protection Officers and ensuring intellectual property protection, data privacy and regulatory compliance;

- **a network of more than 1,500 AI champions**, trained and deployed in all geographic zones, ensuring acculturation, user support and reporting of field needs.

Veolia has also implemented a compliance framework anticipating the requirements of the European AI Regulation (AI Act), with a risk assessment approach by use case. Veolia is one of the founding members of the Coalition for Sustainable AI, launched in February 2025 at the AI Action Summit in Paris, demonstrating the Group’s responsibility in the face of the environmental and societal issues around AI.

This structured and transparent governance allows Veolia to maximize AI value creation while controlling risks and respecting the highest ethical and regulatory standards. It positions the Group as a responsible AI leader at the service of ecological transformation, meeting the growing expectations of our internal and external stakeholders.

Augment Employees: AI to augment employee performance and make employees’ daily lives easier

Veolia Secure GPT: toward an agentic AI platform

The year 2025 marked a major technological evolution for the Group’s internal platform. Initially rolled out as a conversational generative AI tool (secure chat), Veolia Secure GPT has been transformed into a genuine agentic AI platform. This transition now makes it possible to deploy smart agents that are not only capable of generating content, but also of performing complex tasks autonomously under human supervision, thereby increasing the operational capacity of employees tenfold.

As of December 31, 2025, this strong development has resulted in a widespread adoption and industrialization of use cases:

- **Global adoption:** the platform now has over 80,000 active users (who have sent at least one prompt since it was created), confirming its status as an essential technology platform;
- **Agent roll-out:** nearly 1,800 AI agents have been rolled out on the platform, marking an exponential acceleration compared with the 130 assistants recorded a year earlier.

To support this paradigm shift – from “prompter” user to “agent supervisor” user – Veolia has expanded its support system. The acculturation network now relies on 1,500 AI champions (compared to 400 in 2024), who act as catalysts for transformation at all levels of the organization.

Support functions: securing and optimizing critical processes

Beyond the general use of Veolia Secure GPT, the Group rolls out specialized AI assistants to transform the efficiency of support functions and reduce operational risks:

- **Health and safety:** the integration of AI with existing video protection systems now enables real-time detection of high-risk situations. Rolled out on a pilot basis in the Asia-Pacific zone, this technology has led to an anticipated reduction of 90% in dangerous behavior, directly contributing to the Group’s “Zero Accidents” objective;
- **Human resources:** an AI assistant now helps employees create personalized career paths, facilitating career development and talent retention;
- **Purchasing and efficiency:** the SAVIA (Savings AI Assistant) has been rolled out to secure and optimize the Group’s spending base. It allows for automated quote analysis and expense classification, assisting nearly a quarter of employees placing orders to identify savings opportunities;

- **Financial management and reporting:** the redesign of the financial information system now includes generative AI support capabilities to simplify management analysis and modernize financial reporting;
- **IT developments:** to support the development teams, the Group rolled out AI coding assistants in 15 Business Units, generating a measured productivity gain of 8% on code production. This AI assistance approach applies to all of the Group's development projects.

These initiatives not only aim to improve the individual performance and work experience of employees, but to enhance Veolia's attractiveness as an innovative, forward-looking employer.

Augment Operations: AI to augment operational performance

Talk to My Plant: Agentic AI at the heart of industrial performance

Launched as Proof of Value in 2025, the **Talk to My Plant program** embodies Veolia's vision for AI: giving operational sites and assets a "voice" to transform operational oversight. This pilot program enables the rollout of innovative technologies to make facilities smart, with operators interacting with systems in natural language to identify anomalies in real time, optimize processes, and trigger proactive actions.

The power of this system is based on the convergence of two fundamental technological foundations of the Group:

- The **Industrial AI Platform (IAIP)**, which is designed to collect and process time series data, an essential raw material for site intelligence;
- **Veolia Secure GPT's agentic capability**, which acts as an orchestration layer to transform conversational interaction into the execution of complex tasks via autonomous industrial agents under human supervision.

Hubgrade: Industrialization and global rollout of Veolia's digital and AI services

For several years, Veolia has successfully embedded artificial intelligence in its digital service offerings. These are brought together under the umbrella brand Hubgrade by Veolia, which covers all historical businesses (Water, Energy and Waste), generating tangible, meaningful results for operations and customers.

In 2025, the integration of AI into operations reached a major industrialization milestone, moving from experimentation to global rollout to maximize operational excellence and environmental impact:

- **Water business: Hubgrade's Wastewater Plant Performance solution**, which uses a digital twin to optimize wastewater treatment, is now rolled out at over 120 wastewater treatment plants worldwide. It reduces N2O emissions by up to 90%, energy consumption by up to 40% and the carbon footprint by up to 60%. At the same time, smart aeration control via Purecontrol solution has been extended to more than 200 sites, generating an average energy saving of 10% according to initial estimates;

- **Waste business:** Veolia focuses on the development of algorithms based on operational data to improve the performance of waste-to-energy facilities. This approach optimizes the waste recovery process, increasing energy efficiency and mitigating the environmental impact. On the waste collection scope, route optimization allows cost savings of up to 6%. The **Hubgrade Waste Quality Monitoring** solution enables real-time analysis of waste purity using an integrated camera system, improving the accuracy of waste sorting and reducing costs and environmental impact. For example, 2025 saw the launch of the BOM DIA offering for industrial waste, a native AI solution that limits the pollutant content in recyclable waste streams to 5% through continuous characterization. Improving the performance of hazardous waste incineration with AI is also being studied. Currently, AI optimizes the entire value chain. At treatment sites, the material mix algorithms (MasterChef) aim to increase the treatment capacity of Hazardous Waste incinerators by 5%;

- **Energy business:** for its energy-related activities, Veolia prioritizes AI solutions to improve energy performance across the entire value chain: production, distribution and consumption, in buildings, industry, urban heating and cooling networks and the electricity flexibility market. These solutions cover forecasting (load, price, renewable production), monitoring of networks and assets, as well as optimization of control and production assets, in order to increase reliability, reduce costs and the carbon footprint of our customers. This approach is reinforced by an agentic layer that assists teams on a daily basis (quick access to information, diagnostics, summaries and recommendations), to transform data into operational decisions. For example, within **Hubgrade Energy Optimization**, AI-driven energy efficiency solutions, such as EnEffCo and Eureka, have been successfully implemented in over 2,000 projects across 38 countries, resulting in energy savings of up to 30% for industrial customers;

- **Operational performance:** to maintain operational excellence, Veolia rolls out AI within its maintenance, operation and control systems. **Hubgrade Asset Management**, a solution rolled out to 75% of Veolia's key assets, has been enriched with an agent allowing maintenance teams to access the maintenance history of equipment and create work orders in natural language. **Hubgrade Plant Operation**, a solution rolled out across more than 500 sites, allows the identification and control of filamentous bacteria development by analyzing images taken with a smartphone. Lastly, an agent allows the environmental data management system to be queried and errors to be identified in the campaigns that feed into the Group's ESG reporting.

Augment Customers: AI to augment sales performance and customer experience

In 2025, the application of AI to business processes and customer relationships continued to grow, with a gradual transition from the pilot phase to operational roll outs to drive revenue and customer satisfaction:

- **Commercial Efficiency (Business Hub).** The Business Hub business intelligence platform, powered by Veolia Secure GPT, has now been rolled out in 50 Business Units. With more than 2,600 active users at the end of 2025, it allows marketing and sales teams to generate tailor-made content and proposals, freeing up an average of two hours per week per user for higher-added-value tasks;
- **Customer experience.** The integration of generative and agentic AI into customer portals and call centers has greatly improved quality of service. New conversational agents (chatbots) reduce the processing time of simple requests by 70% (from 10 to 3 minutes) and reduce the cost per interaction by 40% to 60%, while ensuring 24/7 availability;

- **Hubgrade by Veolia services for customers.** Covering its three businesses, the Hubgrade by Veolia range of digital services is intended for municipal, industrial and tertiary customers and aligns with Veolia's decarbonization, depollution and regeneration goals. These services are powered by data from tens of thousands of service contracts and from thousands of Veolia plants worldwide. They are based on algorithms developed from the expertise that Veolia has built up throughout its long history. They align with Veolia's pursuit of excellence, from operational asset management to customer information. Experiments with generative AI implementation into the Hubgrade Carbon Footprint solution significantly reduced data entry and thereby minimized associated risks. Based on this experience, Veolia decided to make the introduction of agents widespread across all its solutions. The introduction of IA agents across the Hubgrade Asset Management solution will enable all information on a defined scope of assets to be retrieved in natural language, allowing for greater speed and a higher level of analysis while democratizing access for less expert users.

1.4.4 DEVELOPMENT OF THE INNOVATION CULTURE

The Innov'Academy

Launched in 2023, the Innov'Academy is central to Veolia's strategy for embedding a culture of innovation. It aims to strengthen skills, disseminate this culture, and bring together a community of innovators.

In 2025, its rollout continued, focusing on three training courses:

- **Innovation Behaviors:** workshops to raise awareness of behaviors that promote innovation, enabling participants to envisage how they can put these behaviors into practice;
- **Design Thinking:** methodological training for managers and project leaders, enabling them to apply the approach to Veolia's challenges;
- **Innovation Passport:** e-learning program (10 short modules, 13 languages) accessible to all managers and employees to consolidate the culture of innovation globally.

The impact has been significant: more than 6,250 participants have completed the Innovation Passport course and more than 500 have participated in the Innovation Behaviors workshop since 2023. The Group's HR Talents programs supplement this offering to spread the culture of innovation.

Acculturation and Promotion

Finally, as part of the global "AI for GreenUp" collaboration, our philosophy of augmenting human capabilities positions AI as a tool that frees employees from repetitive tasks so they can focus on innovation, solving complex problems, and creating added value, while preserving human judgment and business expertise at the heart of our innovation processes.

To bring this vision to life, "Acculturation & Promotion" relies on three complementary levers: the democratization of AI tools; skills development; and fostering a learning community via the network of AI champions (for more details, see Section 1.4.3).

This dynamic of innovation is accompanied by a responsible approach to anticipating and managing impacts. Impact studies were conducted in 2025 to evaluate the consequences of AI on jobs and skills. The Group has also launched the AI Observatory, a dedicated field monitoring system that will be rolled out from the first quarter of 2026 to identify the real uses of AI, analyze the consequences for business families, and inform social dialogue with factual data, consolidating Veolia's position on responsible AI.

1.5 Organization of the Group and other information relating to its operations AFR

1.5.1 LEGAL AND MANAGEMENT ORGANIZATION

1.5.1.1 Managerial organization

The fundamental principles of Veolia's organization are based on a clear distribution of roles between the headquarters, zones and business units (BUs).

Each BU is responsible for implementing the Group's strategy within its area. In most cases, this corresponds to a country, to reflect the local nature of the activities.

The exception is transversal BUs corresponding to the Group's business lines (Hazardous Waste Europe, Water Technologies, VNS and SEURECA). Subsidiarity is the norm for the Group: activities are carried out locally wherever it is more efficient.

The BUs are mostly grouped into zones managed by Executive Committee members, who report directly to the Chief Executive Officer, to facilitate dialogue between the local level and headquarters.

Headquarters is responsible for the Group's strategic and administrative management. It sets the multifaceted performance objectives for the BUs, monitors their achievement and defines operational requirements.

The BUs cooperate with each other and rely on the zones and headquarters (know-how, expertise, resources) to drive their development and scale-up by "copying and adapting" best practices and innovations.

Managerial organization as of April 2, 2026:

VEOLIA ENVIRONNEMENT	France and Hazardous Waste Europe	Water France	Waste Recycling and Recovery Solutions France	Energy & Decarbonization	Hazardous Waste Europe	Sanitation & Maintenance France	Agriculture France	Nuclear Solutions	Energy Performance			
	Central & Eastern Europe	Czech Republic	Poland	Romania	Hungary, Serbia, Slovenia	Slovakia	Bulgaria, Greece, Albania	Armenia	Uzbekistan	Ukraine	Lithuania	
	Northern Europe	United Kingdom	Ireland	Belux	Netherlands	Nordics						
	Asia-Pacific	Mainland China	Japan	South Korea	Taiwan	Hong Kong & Macau	South-East Asia	India	Australia - New Zealand	Australia	New Zealand	
	Iberia and Latin America	Spain	Portugal	Latin America	Chile regulated	Chile & Peru	Colombia & Panama	Argentina & Uruguay	Ecuador	Mexico	Brazil	
	North America	United States	Canada									
	Africa, Near and Middle-East	Morocco	ENOVA	Near and Middle-East	West Africa	Southern Africa	Engineering & Consulting					
	Water Technologies	Water Tech										
	Germany											
	Italy											

Key:
The Group's operations are organized into BUs, which are mostly grouped into geographic zones (with the exception of Water Technologies).

7 zones 5 delegated zones 53 BUs (non-exhaustive)

1.5.1.2 Legal organization

The following organizational chart is a simplified chart of the main subsidiaries owned by Veolia Environnement, directly and/or indirectly, on December 31, 2025, categorized by geographic zone.

Its purpose is to present the organization of the Group by geographic zone through the main subsidiaries controlled directly and/or indirectly by Veolia Environnement, and not to reflect the Group's organizational structure in legal terms.

The list of the main companies included in the 2025 consolidated financial statements is presented in chapter 6, section 6.1, note 16 below.

The main changes in the consolidation scope and Group structure are presented in chapter 5, section 5.2.3 below.

Companies are included in the geographic zone where the majority of their activities are conducted.

VEOLIA ENVIRONNEMENT	Other French Holdings	*Veolia Energie International 99.9%	*Vigie Groupe 100%						
	France and Europe Special Waste	*Veolia Eau-Compagnie Générale des Eaux 100%	*Veolia Propreté 100%	*Veolia Industries Global Solutions 100%	*Veolia Energie France 99.9%	*SARP 99.7%	*SARP Industries 99.86%	*Veolia Nuclear Solutions Europe 100%	*Veolia Agriculture France 100%
	Central and Eastern Europe	*Veolia Central & Eastern Europe 100%	Veolia Energia Polska 59.9% (Poland)	Veolia Energie CR 83.05% (Czech Republic)	Veolia Energie Deutschland GmbH 100% (Germany)	Veolia Umweltservice GmbH 100% (Germany)	Veolia Energy Hungary 98.97% (Hungary)		
	Northern Europe	Veolia Water UK Ltd 100%	Veolia Environmental Services Group (UK) Ltd 100%	Veolia Energy UK Ltd 99.99%	Veolia NV 100% (Belgium)	Veolia Nederland BV 99.99%	Veolia Nordic AB 99.9% (Sweden)

	North America	Veolia Water North America Operating Services 100%	Veolia Environmental Services North America 100%	Veolia North America Paramus 100%					
	Water Technologies	*Veolia Water Technologies 100%							

Key:
* Company with its registered office in France
% Veolia Environnement's direct and indirect percentage holding as of December 31, 2025

1.5.2 GEOGRAPHICAL ORGANIZATION

The following table sets out the geographic spread of Veolia's 2025 revenue by operating segment.

Following the application of IFRS 10, 11 and 12, the Group's joint ventures are consolidated using the equity method. Therefore, their revenue (and particularly the revenue of the main joint ventures, that is, the Chinese Water concessions) are not included in the table below.

2025 revenue

(€ million)	Total
Americas, Asia Pacific, Africa Middle-East ⁽¹⁾	11,316
North America	3,145
Latin America	1,889
Asia	2,427
Pacific	2,027
Africa/Middle East	1,828
Europe ⁽²⁾	19,206
Central and Eastern Europe	10,969
United Kingdom and Ireland	2,812
Northern Europe	1,460
Iberia	2,987
Other Europe excluding France	978
France & Hazardous Waste Europe ⁽³⁾	8,914
Water France	3,163
Waste France	2,853
Others	2,898
Water Technologies	4,954
Other	6
TOTAL GROUP	44,396

⁽¹⁾ Americas, Asia Pacific, Africa Middle-East, new IFRS8 segment designation previously "Rest of the World".

⁽²⁾ Europe, new IFRS8 segment designation previously "Europe excluding France".

⁽³⁾ France and Hazardous Waste Europe, new IFRS8 segment designation previously "France and Special Waste Europe".

Comments on revenue trends and results for the various segments may be found in Chapter 5, Section 5.2 below.

1.5.2.1 Americas, Asia Pacific, Africa Middle-East

The Americas, Asia Pacific, Africa Middle-East segment consists of four zones or delegated zones: North America, Latin America, Asia, Pacific, Africa/Middle East.

As of December 31, 2025

Revenue (€ million)	% Group revenue	EBITDA (€ million)	% Group EBITDA
11,316	25.5%	2,009	28.5%

North America

With a century-long presence, Veolia has established itself as one of the top 3 environmental service companies for the Water and Hazardous Waste businesses in North America, and has seen significant growth in recent years. The Company provides comprehensive solutions in water, energy, and waste management to municipal, industrial, and commercial customers throughout the United States and Canada.

Veolia is a leader in drinking water and sanitation services with its regulated water activities in 6 states (New Jersey, New York, Pennsylvania, Idaho, Delaware, Rhode Island) and its unregulated O&M water activities, with contracts with municipalities such as Nassau (New York) and Milwaukee (Wisconsin).

Veolia is also a leader in hazardous waste in North America, where the Group has 15 EPA-licensed treatment, storage and disposal facilities (TSDF). Veolia operates incineration facilities: in Gum Springs in Arkansas, Port Arthur in Texas and Sauget in Illinois. In particular, a new high temperature incinerator is under construction in Gum Springs. Construction is scheduled for completion in late 2026 or early 2027, after which operation will be gradually ramped up over two years. The new facility will be outfitted with the most advanced technologies for recovering waste heat and processing flue gas contaminants.

In 2025, Veolia entered into an agreement with Enviri to acquire Clean Earth (subject to closing), marking its largest and most transformative acquisition since the merger with Suez, to accelerate its growth in the United States and in the Hazardous Waste sector.

With 82 sites, including 19 treatment, storage, and disposal facilities (TSDF) licensed by the EPA and more than 700 operating licenses across the country, Clean Earth's portfolio is highly complementary to Veolia's. The synergies of the new entity will accelerate growth through greater operational efficiency, improved logistics, and expanded treatment capabilities, including the treatment of PFAS and new pollutants. This also enables Veolia to expand into less developed geographic zones, such as the South East and North West Pacific. This major national acquisition follows several smaller strategic regional acquisitions (New England Med Waste, New England Disposal Technologies, Ingenium and Chameleon Industries) made during the year.

For industrial customers, Veolia is primarily involved in management of Water, Hazardous Waste and Energy for microelectronics, pharmaceuticals, chemicals, data centers, metals and other industries.

In addition, Veolia has completed the acquisition of Ictec, a digital and decentralized energy management company. This additional acquisition will strengthen Veolia's existing energy service offerings in North America and provide additional functionality to the Hubgrade digital platform. In a context of increased electricity market volatility and grid voltage instability, Ictec's customers will benefit from Veolia's wide range of services to improve their environmental performance.

Latin America

In Latin America, Veolia is present in the three business lines (Water, Waste and Energy). In 2013, Veolia consolidated its operations in Latin America with the acquisition of 100% of Proactiva Medioambiente, accompanied by a rebranding and integration strategy. The region includes seven Business Units covering nine countries (Aguas Andinas, Argentina and Uruguay, Brazil, Chile and Peru, Colombia and Panama, Ecuador, and Mexico).

Veolia Latin America offers several services based on:

- access to water and sanitation: strong track record in water concessions and a significant presence in Chile (Aguas Andinas), Ecuador and Colombia. The five-year price renegotiation with Aguas Andinas was finalized in 2024, with an initial price update in 2025;
- treatment, recycling and recovery of solid waste: our track record in solid waste is mainly found in Brazil, Chile, Colombia and Argentina;
- liquid and hazardous waste treatment and recovery: this activity is present in all the countries in which we are positioned;
- on-site services for industry: this activity is also present in all countries with a "Key Accounts" strategy, targeting more than 150 industrial customers to support them in their water, waste and energy activities;
- energy services for buildings: our track record includes several contracts (shopping centers, tertiary market and public sector), mainly in Argentina and Mexico. On-site services for industry and energy services for buildings are increasingly focused on decarbonization solutions and resource efficiency, to help customers reduce their emissions and optimize their environmental footprint.

Asia Pacific

Asia

In Asia, Veolia operates in its three major business lines. The main drivers of development in Asia are the growth of urban populations and support for traditional or emerging industrial channels in a long-term approach with regard to water footprints and pollution treatment.

In Japan, Veolia is primarily focused on concession-model water services and performance contracts, energy production from renewable resources and the production of recycled plastic. Since 2021, Veolia has also been a decisive player in Hazardous Waste Treatment and has continued to develop its activities in this sector with an additional acquisition in 2025.

In China, the Group holds traditional concession contracts through joint ventures for drinking water production and wastewater services (e.g. Shanghai Pudong, Kunming, Changzhou). In the Waste segment, Veolia is one of the leading players in hazardous waste management throughout the region and has been developing emerging plastic recycling activities over the past few years. The Group is also highly involved in the energy sector through heating networks (Harbin, Jiamusi) and industrial utilities contracts.

In Hong Kong, the Group is historically present in waste processing (landfills, sludge, organic and hazardous waste treatment) and more recently in optimizing energy services for buildings.

In Taiwan, Veolia operates in waste processing (incineration), soil and water decontamination and more recently, has moved into industrial services, with a focus on resource regeneration for key industries.

In South Korea, Veolia is primarily focused on the industrial services market, historically on water treatment and supply and more recently on the treatment of industrial waste, as well as energy services for industry, using a decarbonization approach.

In South East Asia, Veolia mainly develops hazardous and non-hazardous waste processing activities (incineration) and industrial client services (process water and effluents, plastic recycling).

In India, Veolia is present in Municipal Water and industrial services, and notably Hazardous Waste Treatment.

Veolia's traditional markets in Asia are based on its core business of municipal water treatment, waste management and energy recovery, as well as energy production and distribution, sustained by a high level of urbanization. The growth of our business is also supported by the challenges of developing cutting-edge export industries (microelectronics, pharmaceuticals, etc.) and by the ecological transition of traditional industries amid a climate emergency and increasing water stress.

Australia and New Zealand

In Australia and New Zealand, Veolia is the 2nd largest player in the waste sector. The Group's activities also include water and energy services. The main contributors to revenue are waste collection and resource recovery (which includes the management of various treatment, sorting and disposal facilities). Customers are municipalities and commercial and industrial companies.

Australia represents a key strategic market for the Veolia Group and one of the three booster geographic zones identified as part of the Veolia Group's GreenUp plan.

Against this backdrop, Veolia is asserting itself as a growing player in all these areas, strengthening its position and accelerating the rollout of renewable energy production, waste-to-energy recovery, decontamination and remediation solutions, as well as desalination and recycling.

In New Zealand, Veolia is a leader in municipal water treatment. In a changing regulatory landscape, Veolia is looking to strengthen its concession model in partnership with local authorities, with a view to making a significant contribution to the country's long-term vision and environmental objectives.

Africa/Middle East

Africa and the Middle East are dynamic regions driven by strong population growth and industrialization.

Improving the coverage of essential services remains necessary to the development of the African continent and therefore significantly structures the municipal market. Veolia's presence in Africa is focused in Morocco and two regional clusters, one in Western Africa (Ivory Coast and Ghana), and the other in Southern Africa (South Africa, Namibia and Botswana). In Morocco, Veolia provides electricity and water distribution services and wastewater treatment services for the agglomerations of Rabat, Tangier and Tetouan through three concession contracts. It is also developing solutions for treated wastewater reuse and recovery of industrial waste.

In Ivory Coast, Veolia produces drinking water for several cities such as the Abidjan, Bouaké and San Pedro regions.

In Namibia, Veolia supplies water to the city of Windhoek from wastewater made fit for human consumption and treats industrial wastewater in a dedicated plant built under a BOT scheme. In South Africa, our activities include the supply of reuse water to industrial clients, hazardous waste management and on site services for industrial customers, as well as water services for municipalities.

The Group is also particularly attentive to the emergence on the continent of new methods of accessing basic services, alongside traditional centralized network solutions.

In the Near & Middle East, one of the geographical boosters of the GreenUp strategic program, the Group is present in its three business lines in all Gulf States, working with municipalities, industrial companies and the tertiary sector. Throughout the region, thanks to seawater desalination, the Group supplies 4.57 million inhabitants with drinking water.

The Group operates in Saudi Arabia (seawater desalination, wastewater treatment, Hazardous Waste Treatment), the United Arab Emirates (wastewater treatment, Hazardous and Non-Hazardous Waste collection and treatment), Jordan (drinking water supply and wastewater treatment in Amman), Oman (wastewater collection and treatment, operation of landfills, seawater desalination), Qatar (wastewater and drainage management), Lebanon (operation of wastewater treatment plants) and Turkey (municipal waste management).

Pressure on water demand remains high in the region, where desalination projects continue and are often for extremely high-capacity plants. The same is true for wastewater treatment plants. Sustainable operation and maintenance contracts for water and wastewater services are also emerging; trends that also include decarbonization.

Veolia has a historical presence in these market segments and recently strengthened its position as co-leader, notably in the United Arab Emirates, where Veolia started Hazardous Waste Treatment operated under a consortium treating the industrial waste of ADNOC Refining, a leading industrial group, their subsidiaries and joint ventures and in the Kingdom of Saudi Arabia (in the petrochemical complex of Jubail), where Veolia's major new treatment site was recently commissioned and is already receiving Hazardous Waste.

At the same time, Veolia continues to penetrate the industrial market targeting leading local petrochemical players, which call on the Group for the treatment of their effluents and hazardous waste, as well as the supply of process water. In this regard, Veolia and its partners recently signed a historic agreement with SATORP (a joint venture between Saudi Aramco and TotalEnergies) to implement a major project to recycle water from complex industrial effluents in the industrial city of Jubail, the largest petrochemical hub in the Middle East.

The service sector accounts for over half Veolia's activities in the Middle East through its subsidiary ENOVA, a joint venture with Majid-Al-Futtaim. ENOVA develops inter alia Energy performance based contracts targeting significant reduction in its clients' buildings energy consumption, thanks to custom made digital monitoring tools (Hubgrade).

Main contracts signed in 2025 in the Americas, Asia-Pacific, Africa Middle-East:

Municipality or company and location therefor	Month of signature of contract	New contract, or extension or renewal	Contract term (years)	Estimated cumulative revenue ⁽¹⁾⁽²⁾ (€ million)	Services provided
ACT MRF <i>Australia</i>	January	New contract	20	477	Organic waste treatment
Hunter Water - Water and Wastewater Treatment Operations Services Outsourced Alliance <i>Australia</i>	June	Renewal	10	305	Drinking water production and distribution, wastewater collection and treatment
Gobierno de la Provincia de Misiones <i>Argentina</i>	July	Renewal	10	240	Municipal solid waste collection
Water 6 <i>Australia</i>	September	Renewal	15	102	Drinking water production and distribution
Direcção dos Serviços de Protecção Ambiental <i>Macao</i>	September	Renewal	10	375	Municipal solid waste collection

(1) Revenue from the contracts indicated represents the portion due to Veolia under these contracts. Accordingly, the sums indicated may differ from the figures provided in the press releases issued by the Group.

(2) Aggregate revenue is estimated based on the contract amount translated into euro at the 2025 average exchange rate.

Furthermore, in 2025 Veolia announced the signing of an agreement between the consortium composed of Veolia, Marafiq and Lamar, and SATORP (a joint venture between Saudi Aramco and TotalEnergies Raffinage Chimie) for a major project to recycle water from complex industrial effluents in the industrial city of Jubail – the largest petrochemical hub in the Middle East. The project involves the construction of a US\$500 million state-of-the art water treatment plant on an unprecedented scale, for which the civil engineering works have been entrusted to Veolia and Orascom, as well as a 30-year operation and maintenance contract awarded to Veolia, due to start in 2028.

In addition, the Group has been designated as a technology supplier and has been awarded 15-year operating and maintenance contracts for future water production plants in Bhandup and Panjrapur in Mumbai, India.

1.5.2.2 Europe*

The Europe* segment consists of two zones: Central and Eastern Europe, and Northern Europe. Spain, Portugal and Italy are included in "Other European countries".

As of December 31, 2025

Revenue (€ million)	% Group revenue	EBITDA (€ million)	% Group EBITDA
19,206	43.3%	2,758	39.1%

Central and Eastern Europe

For over twenty years, Veolia has been present in several Central and Eastern European countries, where its businesses had steady and sustained growth.

Mainly present in the water and energy markets, the Group manages municipal drinking water and/or wastewater systems for major cities including the capital cities Prague, Sofia, Budapest and Bucharest. Veolia teams also manage all water distribution activities in Armenia. In the energy market, the Group has a strong presence in the operation of heating networks (production and/or distribution), in particular in Poland (dominant position due to its presence in Warsaw, Poznań and Łódź), the Czech Republic (Prague and Ostrava), Slovakia (Bratislava and Levice) and Hungary (Budapest, Dorog, Pecs and Szakoly).

In Germany, the Group is present in the three businesses – Water, Waste and Energy – through partnerships with public authorities, industrial customers and service companies. Veolia actively participates in reducing CO₂ emissions in Germany, particularly through its subsidiary BS Energy, with the commissioning of a biomass and coal power plant in Braunschweig as part of the transformation of the Group's European coal assets. In 2023, Veolia acquired Schraden Biogas, specializing in biogas from waste.

In Poland and the Czech Republic, the number of connections to urban heating networks increased in a context of higher energy prices, notably for industrial and tertiary customers. The Group began decarbonizing its heating networks in 2018 and aims to phase out coal as a fuel by 2030, replacing it with gas and renewable energies such as biomass and geothermal energy. 2025 was thus marked by the commissioning of the Poznań gas plant in Poland, an important step in the decarbonization of one of the largest heating networks in the country. In Uzbekistan, the Tashkent urban heating network management contract commenced in 2022.

Most of Veolia's activities are public service concessions for local authorities carried out under concession contracts, infrastructure leasing/operation contracts or institutionalized public/private partnerships at prices regulated by local authorities. Veolia also provides services to industrial companies in Central and Eastern European countries. For all customers, Veolia's involvement accelerates the improvement and modernization of services and infrastructures, notably through the development of digital solutions and the Internet of Things.

In Central Europe, the Group's actions are driven by European policies and associated regulations relating to the environment and energy (energy efficiency, support for renewable energies and high-efficiency cogeneration) and climate change mitigation or adaptation solutions.

Northern Europe

In the United Kingdom, despite continued budgetary pressure on local authorities, the 25-year 2023 Environmental Plan and the 2021 environmental law offer a favorable framework for the development of Veolia's activities. These texts define ambitious objectives to move toward a circular economy and reduce CO₂ emissions in order to attain carbon neutrality by 2050.

As a long-term partner of UK local authorities, Veolia proposes bespoke waste processing solutions aimed at optimizing the use of resources and reducing waste. Under household waste infrastructure contracts (PPP - PFI), Veolia develops and operates innovative sorting and recycling facilities for recyclable household waste, waste-to-energy facilities producing electricity and heat from residual household waste and facilities transforming organic matter to compost to be applied to land. Veolia also provides waste collection services on behalf of local authorities as well as commercial customers, developing bespoke collection solutions aimed at minimizing waste sent to landfill.

Veolia offers a comprehensive range of innovative solutions to develop the circular economy and transform recycled materials into resources. These recovery activities generate high quality secondary raw materials from recycled plastic and glass.

Veolia also provides services to regulated water companies to reduce their water consumption and produce energy from wastewater.

Veolia provides industrial customers in the United Kingdom and Ireland with integrated energy, water and waste solutions, aimed at reducing resource consumption and CO₂ emissions, while securing supply in the context of demanding industrial processes. To achieve this, Veolia develops bespoke solutions focusing on resource efficiency, low carbon emissions and circular processes. Veolia also proposes industrial cleaning, decontamination and dismantling services, as well as the collection, processing and recovery of Hazardous Waste through a major network of dedicated infrastructure.

In Belgium and Luxembourg, Veolia is now active in the Energy, Water, Waste and industrial services businesses, particularly at the Antwerp petrochemical site (Doel). The Group is actively involved in the implementation of innovative solutions for energy management in buildings and local heating distribution networks, thereby contributing significantly to CO₂ emission reductions by its customers and partners.

In the Netherlands, Veolia's activities are divided equally between managing heating networks and utilities at industrial sites and plastic and paper.

In the Nordic countries, Veolia is primarily present in Finland through industrial ecology contracts: supply of steam and electricity to the Neste refinery and the Borealis petrochemical plant in Porvoo, supply of industrial utilities to a customer portfolio including Boliden, Nornickel and BASF in the Harjavalta Industrial Park.

In Northern Europe, Veolia proposes a wide and varied range of offerings relating to the circular economy: recycling, waste-to-energy recovery, sludge recovery, biogas, Water and Energy performance contracts (for example, building energy efficiency), multi-business line contracts for municipalities or industrial sites intended to reduce their environmental footprint. Veolia's regional coverage enables the combination of the three businesses associated with Veolia Water Technologies' global businesses, which have a strong presence in the countries in this zone.

Other European countries

Veolia's activities in Portugal and Spain are managed by the Iberia and Latin America zone.

In Spain, Veolia operates in the Group's three business lines:

In Municipal Water, Veolia is a leading player in water-related activities and operates across the entire water cycle: abstraction, transport, treatment and distribution of drinking water; collection, treatment and reuse of wastewater; recovery of sewage sludge; and customer relationship management. The Company's main customers are local public authorities. Veolia's operations include flagship projects with local partners such as the Área Metropolitana de Barcelona (AMB), in partnership with Criteria Caixa; the Andalusian region with Unicaja; the Extremadura region with Ithaca Partners; and the Canary Islands with Archipiélago Aguas.

* Excluding France.

* Excluding France.

In Water Solutions, Veolia offers a complete portfolio of services such as engineering, network technologies, design, construction, operation, logistics and environmental health laboratories. Our customers are public authorities and industrial customers. Notable projects include the Navarre Irrigation Community, in partnership with Serena, and the Segarra Garrigues Irrigation Community in Catalonia, in collaboration with FCC & Copcisa.

In Energy, Veolia is the tertiary market leader in Spain, while also serving industrial and municipal customers. Veolia offers a vast portfolio of services and solutions: operation of green district heating and cooling networks, building energy efficiency, green energy production, waste-to-energy recovery and decarbonization solutions. Veolia is developing renewable energy solutions in Spain using technologies such as solar, geothermal and biomass. Key projects include several initiatives in Catalonia, such as District Heating Barcelona (Ecoenergies) and Cuatrecamins Prison in partnership with Copisa, as well as Vigo Hospital with partners Meridiam, RiverRock & Grupo Puente.

In the Waste business, Veolia Spain offers integrated services to manage all types of hazardous and non-hazardous liquid and solid waste. Veolia operates across the entire value chain, covering waste collection, recycling and final recovery for its industrial and service sector customers.

Veolia has been operating in Portugal since 1992, managing water, energy, and waste for industrial, municipal, and tertiary sector clients.

In the Energy business, Veolia provides efficient energy management solutions, promotes decarbonization and digitalization, and offers carbon footprint calculation and roadmap implementation. Manages energy efficiency in public hospitals through ACE Such-Veolia, including cogeneration and technical services. HL Manutenção and Haçor M maintain hospital buildings and installations.

In the Water segment, Veolia serves key industrial markets, especially automotive and food & beverage. It supports water and sanitation management entities with engineering, construction, and technology implementation.

In the Waste business, it manages over 500,000 tons of waste annually. Key operations include LIPOR Energy Recovery Plant, industrial and commercial waste management through three operational centers, and urban waste collection, including bio-waste, street cleaning, and municipal recycling center management in Aveiro. The 2024 acquisitions of Micronipol and Ambitrevo strengthened plastic recycling and organic valorization capabilities.

Activities in Italy are managed by the Italy and Africa/Middle East zone.

In Italy, Veolia is active, through its subsidiary Veolia Italie, in energy efficiency integrated management services, local production of renewable energy, water operation and waste management contracts (sludge, medical waste). Veolia Italie manages over 5,000 thermal plants for public and private customers. Veolia offers energy performance and multi-service contracts for the service sector with a strong market presence in hospitals (e.g. Bergamo, Udine and Florence Careggi hospitals), the public administration sector with 13,000 buildings (e.g. the University of Parma, public buildings in Milan) and the industrial sector, where it manages around 150 industrial sites (e.g. multi-technical contracts with Hitachi and Leonardo, EPC contracts with Leonardo, Marelli and Bolton Food). Veolia integrates energy efficiency solutions into local renewable energy production (biomethane, photovoltaics, biomass, hydrogen, geothermal, heat pumps), thus ensuring the energy security, decarbonization and competitiveness of its customers. In the Water segment, Veolia manages 200 wastewater plants. In the waste segment, Veolia manages hospital waste for around 100 customers (e.g. hospitals in Bergamo and Venice).

Main contracts signed in 2025 in Europe:

Municipality or company and location thereof	Month of signature of contract	New contract, or extension or renewal	Contract term (years)	Estimated cumulative revenue ⁽¹⁾⁽²⁾ (€ million)	Services provided
London Borough of Sutton United Kingdom	February	Renewal	8	104	Municipal solid waste collection
Lipor Serviço Interm. Gestão de Resíduos Grande Porto Portugal	April	New contract	10	178	Waste-to-energy recovery
East/North Herts Council United Kingdom	May	New contract	8	124	Municipal solid waste collection
London Borough of Croydon United Kingdom	June	Renewal	8	190	Municipal solid waste collection
Haviřovská teplárenská společnost, a.s. Czech Republic	December	New contract	15	264	Thermal energy supply

(1) Revenue from the contracts indicated represents the portion due to Veolia under these contracts. Accordingly, the sums indicated may differ from the figures provided in the press releases issued by the Group.

(2) Aggregate revenue is estimated based on the contract amount translated into euro at the 2025 average exchange rate.

1.5.2.3 France and Hazardous Waste Europe

This zone groups together eight operational entities: Eau France, Waste Solutions, Hazardous Waste Europe (formerly SARPI), Assainissement et Maintenance France (formerly SARP), Veolia Énergie et Décarbonation, Agriculture France, Énergie Performance (formerly VIGS) and Veolia Nuclear Solutions (VNS).

As of December 31, 2025

Revenue (€ million)	% Group revenue	EBITDA (€ million)	% Group EBITDA
8,914	20.1%	1,475	20.9%

France Water

The Water France activity:

- is conducted by Veolia Eau - Compagnie Générale des Eaux and some of its French subsidiaries;
- is the leading French operator in water services⁽¹⁾;
- supplies drinking water to around 23 million people and wastewater services to 21 million people;
- reported revenue of €3,163 million in 2025⁽²⁾, i.e. 7.1% of Group revenue for the year ended December 31, 2025.

In France, Veolia is a major player in the management of water and wastewater services on behalf of public authorities. Veolia Eau in France have significant expertise in the treatment and monitoring of water quality at all stages of the water cycle, from pumping from the natural resource to discharge into the environment. In addition to this expertise, Veolia Eau in France innovates daily to improve the performance of services, treatment processes and installations and ensure a high quality of water and wastewater services.

A range of integrated services also allows Water France to meet every requirement of the large water cycle:

- the resource and its conservation;
- large-scale management and operation of water production and treatment plants;
- recovery of materials or products contained in effluents;
- reuse of treated effluents;
- environment conservation.

Veolia Eau in France is rolling out its strategy, seeking to give Water its rightful place in ecological transformation. It aims to be the uncontested trusted partner of public authorities to support them with their ecological transformation plans and in adapting their water and wastewater services.

Its local roots are reflected by its presence in all business regions, placing responsibility and decision-making as close as possible to field level. Water France's corporate project aims to sustainably create value and preserve resources.

Main contracts signed in 2025 by the France Water delegated zone:

Municipality or company and location therefor	Month of signature of contract	New contract, or extension or renewal	Contract term (years)	Estimated cumulative revenue ⁽¹⁾ (€ million)	Services provided
France Water					
Béziers Méditerranée Conurbation Community	July	New contract	12	139	Drinking water production and distribution
Arras Urban Community	October	Renewal	9	198	Drinking water production and distribution Wastewater collection and treatment
Golfe de Saint-Tropez Intermunicipal Community	October	Renewal	8	175	Drinking water production and distribution
Grand Paris Seine et Oise Urban Community	October	Renewal	8	100	Drinking water production and distribution
Western Briard Joint Authority for Drinking Water Supply	December	Renewal	15	156	Drinking water production and distribution
Dinan Agglomeration Community	December	New contract	10	127	Wastewater collection and treatment
		Renewal			Drinking water production and distribution

(1) Revenue from the contracts indicated represents the portion due to Veolia under these contracts. Accordingly, the sums indicated may differ from the figures provided in the press releases issued by the Group.

Waste Solutions

The Waste Solutions activity:

- is conducted by Veolia Propreté and certain of its French subsidiaries;
- reported revenue of €2,853 million in 2025⁽³⁾, i.e. 6.4% of Group revenue for the year ended December 31, 2025.

In a mature French waste market, legal and regulatory developments offer a favorable framework for the transition to a circular economy.

The circular economy roadmap, energy transition law, and green growth establish ambitious targets for reducing the tonnage of waste landfilled (-50% between 2010 and 2025) by recycling and the use of waste as a resource to recover energy.

The Waste Solutions business is implementing a new customer strategy to give effect to ecological transformation. It is prioritizing the development of recycling and the production of renewable energy, by placing collection activities at their service. This approach focuses on three defining objectives:

- Supporting our customers in optimizing their recycling and material recovery policies by developing complete circular loops and strengthening industrial management of material flows to improve traceability and customer benefits, produce higher-quality recycled materials, and promote the reintroduction of these materials into production cycles in France;
- Increasing green energy production from non-recyclable waste, in particular by improving the industrial performance of facilities (waste-to-energy facilities and technical landfill sites), while securing resale prices through an internal Energy Hub and developing new energy production facilities based on solid fuel derived from waste;
- Developing new waste collection and sorting models for our customers using new technologies (cutting-edge technical investments, digital tools, artificial intelligence) and contractual arrangements that combine performance, value sharing, and the search for innovative partnerships.

(1) According to the BIPE 2019 report.

(2) Comments on revenue trends and results for the various segments may be found in Chapter 5, Section 5.2 below.

(3) Comments on revenue trends and results of this business unit may be found in Chapter 5, Section 5.2 below.

Main contracts signed in 2025 for the Waste Solutions delegated zone:

Municipality or company and location therefor	Month of signature of contract	New contract, or extension or renewal	Contract term (years)	Estimated cumulative revenue ⁽¹⁾ (€ million)	Services provided
Waste Solutions					
Limoges Metropolis	August	Renewal	14	149	Energy recovery from waste
Smitom Lombic	December	Renewal	15	480	Energy recovery from waste

(1) Revenue from the contracts indicated represents the portion due to Veolia under these contracts. Accordingly, the sums indicated may differ from the figures provided in the press releases issued by the Group.

Hazardous Waste Europe

Hazardous Waste Europe, formerly SARP Industries (SARPI), is the leader in the treatment and recovery of Hazardous Waste and polluted sites in Europe.

Present in 10 countries with more than 110 industrial sites, the subsidiary relies on a network of dedicated tools and services (covering the entire treatment and recovery chain, including the storage of final residues), enabling it to control the health and environmental risks associated with Hazardous Waste and thus ensure the long-term sustainability of industrial activity and regional development.

Hazardous Waste Europe has proven technologies to handle complex and difficult pollution (particularly PFAS). A pioneer in Hazardous Waste treatment, Hazardous Waste Europe innovates on a daily basis to meet its customers' technological, economic, and environmental challenges, with innovations in the areas of decarbonization, decontamination, and resource regeneration (strategic metals and plastics). This is particularly evident in the 2024 launch of the first industrial facility for recycling strategic metals (nickel, cobalt, lithium) contained in black mass from used electric vehicle batteries, which will ultimately create a local supply source for European manufacturers.

A booster activity within Veolia's GreenUp 2024-2027 strategic program, the treatment and recovery of Hazardous Waste is a market with strong growth potential. The commissioning of a new incinerator in Germany at Evonik's chemical plant in Rhineland further strengthens Veolia's business network and European growth ambitions.

Assainissement & Maintenance France

Assainissement & Maintenance France, formerly SARP, and its subsidiaries specializing in liquid waste management, conduct their business in wastewater treatment, building and air hygiene, waste collection and recovery and industrial maintenance.

With 6,500 employees spread across a network of 300 branches in France, Veolia's Sanitation & Maintenance business offers a full range of services divided into five key segments:

- Performance and asset management services for public service wastewater facilities, which aim to preserve and anticipate optimal operation of local authority public wastewater networks and, if necessary, provide trenchless rehabilitation.
- Performance and asset management services for non-public service wastewater facilities.
- Building hygiene and asset management services: maintenance and rehabilitation of wastewater facilities for collective, individual or tertiary housing.
- Hazardous and Non-Hazardous Waste decontamination, collection and recovery: this historical business, which capitalizes on a logistically optimized geographical and national network, from collection to processing.
- The performance of industrial infrastructure and facilities: its expertise in "Maintenance & Industrial Services" is specific to the petrochemical, metallurgy and nuclear industries, both in plant shutdowns and the environmental and energy optimization of customer processes.

Energy and decarbonization

Veolia Energy and Decarbonization offers its tertiary and industrial clients and public authorities a comprehensive solution to decarbonize local energy focusing on three primary activities:

- Networks and energy performance of buildings: management of heating/cooling networks and comprehensive solutions for managing the energy performance of buildings.
- Developing renewable energy production projects and managing flows of gas/electricity with the objective of helping regions move toward energy independence.

Agriculture France

Veolia Agriculture France (formerly SEDE Environnement) is the leading producer of organic fertilizers and soil improvers in France (over one million metric tons).

Derived from the circular economy (biowaste, sludge, by-products from the food industries), these fertilizers contribute to solutions for a sustainable food model.

In the same spirit of circularity in the regions and to meet decarbonization and energy self-sufficiency challenges, Veolia Agriculture France also offers a complete agricultural anaerobic digestion solution based on supply to facilities by returning digestate to the soil and capital-based partnerships.

Veolia Agriculture France confirms its role as a key partner in the farming world by supporting the ecological transformation of agriculture while helping it to address the dual challenge of food supply and decarbonization.

Energie Performance

Veolia Énergie Performance is primarily involved in the management of energy and technical resources of buildings and industrial sites.

Its approach consists of maximizing the ecological and energy performance of customer sites (energy and utility management, energy efficiency management, audits, installation and site energy improvements) and ensuring installation performance (optimization of technical performance through multi-technical maintenance, preventive and corrective regulation of steam, electricity, heat, HVAC, compressed air, electrical and mechanical engineering installations, etc.).

Nuclear Solutions (VNS)

Veolia Nuclear Solutions (VNS) specializes in the nuclear sector and stands out for its expertise in waste management and complex installations, as well as its ability to design and lead projects for the development of technology building blocks.

VNS operates according to two value creation models:

- Operating activities for on-site services and operations at its customers' premises; it also has its own ICPE (Installations Classées pour la Protection de l'Environnement – Facilities Classified for Environmental Protection) permit, allowing it to receive waste and carry out sorting, treatment and storage operations;
- Activities focused on developing core technologies, processes, and robotics through major projects, notably with EDF for the delivery of a mobile treatment unit for use in the event of a serious accident and the development of remote/automated technologies that combine robotics and AI.

1.5.2.4 Water technologies

As of December 31, 2025

Revenue (€ million)	% Group revenue	EBITDA (€ million)	% Group EBITDA
4,954	11.2%	669	9.5%

Water Technologies

This segment brings together the former activities of Veolia Water Technologies and Water Technologies & Solutions following the Suez merger. In 2025, Veolia finalized the acquisition of the remaining 30% held by the CDPQ in Water Technologies & Solutions, giving the Group full ownership of its Water Technologies business. This transaction simplifies Veolia's organizational structure and is in line with its GreenUp strategic program. Veolia's Water Technologies business is now structured within a single Water Tech zone, organized around four complementary business lines targeting industrial and municipal water markets worldwide:

- Technologies & Products (T&P): innovative range of complementary water treatment technologies and products;
- Engineering & Procurement Projects (EPP): design, implementation and management of customized treatment systems using advanced technologies and customer-centric engineering and procurement models, backed by robust guarantees;

- Mobile Water and Integrated Services (MWIS): integrated on-site and mobile services enabling customers to benefit fully from water treatment technologies and improved operational efficiency;
- Chemical Services & Monitoring (CSM): provision and monitoring of high-added-value chemical services to protect customers' assets and optimize operations.

With more than 4,400 patents developed over the last ten years, the Group ranks first in Europe for patent filings for Water Technologies.

Water Technologies are one of the three growth accelerators of the GreenUp strategic program, with five priorities: the treatment of micropollutants (including PFAS); intensified wastewater treatment prior to reuse; the recovery of rare metals (including lithium) and brine salts; the supply of ultrapure water in the advanced pharmaceutical and microelectronics sectors; and lastly sustainable solutions for seawater desalination.

1.5.3 OTHER ACTIVITIES

1.5.3.1 Intellectual property

The Group is committed to protecting its intellectual property rights - particularly trademarks and patents - and its know-how, as they set it apart from the competition and contribute to its ambition of making Veolia a benchmark for ecological transformation.

The Company owns a number of trademarks including the **"Veolia" brand, which is protected in France and internationally**. The Group applies a brand strategy that brings together the Water, Waste and Energy businesses under a common brand name, "Veolia".

Innovation is a key factor in the development, growth and profitability of Veolia. Veolia capitalizes on its know-how by **developing innovative technologies, processes and devices, as well as creating tools combining the expertise of the Group's businesses and new technologies, including artificial intelligence**. Veolia seeks to protect these innovations by appropriate means.

Patented inventions demonstrate the Group's capacity for technological innovation and help differentiate its offerings. **According to the study "Innovation in water-related technologies"**, published by the European Patent Office, **Veolia was ranked as the world's leading patent applicant for water-related technologies** between 1992 and 2021.

In Veolia's opinion, its business is not dependent on the existence or validity of one or more of these patents, or on any contract covering one or more intellectual property right(s).

1.6 Environmental regulation

1

The Group's activities are subject to extensive, evolving and increasingly stringent environmental regulations. These regulations are generally technical and complex and impose significant constraints, the most important of which are presented below.

Most Group activities require operating permits or authorizations that define the rules governing the operation of installations. These operating permits are issued by public authorities pursuant to authorization procedures encompassing the performance of specific studies presenting, in particular, the environmental impact of the facilities.

1.6.1 INTERNATIONAL REGULATIONS

At international level, there are no binding general environmental regulations applicable to all countries, but rather a great many international agreements that are often sector-based as well as statements of principles. It was in this context that the draft Global Pact for the environment was proposed in 2017, seeking to assemble the principles of environmental law within a single regulation.

World Health Organization Directives on health and water are issued for countries to help them draft internal regulations governing water quality. They set guidelines for the quality of drinking water and emphasize the importance of the preventive management of health risks. The fourth edition of the Guidelines for drinking-water quality was published in March 2022. In September 2021, WHO published new air quality guidelines.

The right of access to water is recognized by the majority of countries, and access to clean water and sanitation was recognized by the United Nations as a human right on July 28, 2010.

1.6.2 EUROPEAN AND FRENCH REGULATIONS

1.6.2.1 European regulations

Environmental regulation in European Union (EU) countries is primarily tied to European Directives and regulations.

On December 11, 2019, the European Commission presented the European Green Deal in its communication to the European Parliament and the Council (ref. COM [2019] 640 final). This European Green Deal represents the new sustainable growth strategy in all EU areas of action, aimed at guaranteeing a just and inclusive transition. It provides a roadmap of actions aimed at promoting the efficient use of resources notably by moving to a circular economy, and reducing greenhouse gas emissions, biodiversity loss and air, water and soil pollution. It details the investment necessary and the financing instruments available.

The European Green Deal represents a new transversal framework for the adoption of concrete measures in the short to medium term. It has led to the revision of numerous European directives and regulations.

Directive (EU) 2024/1203 of April 11, 2024 on the protection of the environment through criminal law, also known as the Environmental Crime Directive, entered into force on May 20, 2024. The new directive is much more detailed than the previous directive of November 19, 2008. A notable development is the definition of a minimum threshold for penalties and the expansion of the scope of criminal offenses. Its purpose is to establish "minimum rules with regard to the definition of criminal offenses and penalties in order to protect the environment more effectively, as well as with regard to measures to prevent and combat environmental crime and to effectively enforce Union environmental law" (Article 1).

Regulations common to the three business lines

- Assessment of the effects of certain public and private projects on the environment:** Directive 2011/92/EU of December 13, 2011 revised. It introduced minimum requirements with regard to the type of projects subject to assessment, the main obligations of developers, the content of the assessment and the participation of the competent authorities and the public;
- Reducing pollution:** Directive 2010/75/EU of November 24, 2010 on industrial emissions (known as the IED Directive). This directive recast the 1996 integrated pollution prevention and control directive (IPPC) and six sector-based directives. The scope of this directive was extended to new activities, and administrative permits should be issued based on the implementation of "best available techniques" (BAT) for reducing pollution and on an integrated approach, taking into account emissions into air, water and soil, waste management and energy efficiency. Obligations to monitor emissions likely to contaminate soil and groundwater have been introduced (new emission limit values). The IED Directive has been amended and version 2.0, Directive (EU) 2024/1785 of April 24, 2024, mainly provides for the enlargement of its scope, the strengthening of public access to information and new rules for emission limit values. This directive is associated with a new Regulation (EU) 2024/1244 of 24 April 2024 establishing an Industrial Emissions Portal. This portal will replace the current E-PRTR (European Pollutant Release and Transfer Register) from January 1, 2028;
- Chemical products:** Regulation (EC) 1907/2006 of 18 December 2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH). This regulation seeks to reduce the health and environmental risks associated with the manufacture and use of chemical substances and improve the management of these risks throughout the life cycle of the chemical products, in order to ensure better health, safety and environmental protection. For the Group, as a user and producer of such substances, this involves greater cooperation and a better exchange of information with suppliers and customers. With the same purpose as the REACH regulation, Regulation (EC) 1272/2008 of 16 December 2008 on Classification, Labeling and Packaging (CLP), harmonized the existing provisions and criteria concerning the classification, packaging and labeling of hazardous substances taking account of the adoption of the United Nations' Globally Harmonized System (GHS). As part of the Commission's strategy on sustainability in the area of chemical products, the CLP Regulation was amended by Regulation (EU) 2024/2865 of the European Parliament and of the Council of 23 October 2024. The relevant legal entities are in compliance with the schedule set by the REACH Regulation for chemicals requiring registration within the Group. After the systematic pre-registration of all substances that may be concerned, various deadlines are being monitored along with changes to the regulation and updates to its annexes. The regulations on persistent organic pollutants (POPs) (Stockholm Convention and Regulation (EU) 2019/1021 of 20 June 2019) also have an impact on the Group's activities. There is no specific text on PFAS, which are regulated under the REACH and POP regulations;
- Biocides:** Regulation (EU) 528/2012 of May 22, 2012 concerning the making available on the market and use of biocidal products. This regulation strengthened the control of biocides and harmonized authorization procedures;
- Biodiversity:** the Rio Convention (1992) on Biological Diversity sought to protect the diversity and wealth of ecosystems. In 2010, the 10th Conference of Parties (COP) to this convention adopted the Nagoya Protocol. This protocol provides for the adoption of a strategic plan covering the 2011-2020 period and an agreement to create the IPBES (Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services). In order to guarantee the application of this protocol at European level, Regulation 511/2014 of 16 April 2014 established new rules governing compliance with obligations concerning access to genetic resources and the sharing of benefits arising from their utilization.; Hosted by Canada and chaired by China at the end of 2022, COP15 saw the adoption of a Global Biodiversity Framework for the period 2020-2030. This global framework is based on four objectives (enhanced integrity of ecosystems, species and genetic diversity; contribution by nature to development goals; sharing of genetic resources; financial means) accompanied by 23 targets to be achieved by 2030. Regulation (EU) 2024/1991 of the European Parliament and of the Council of 24 June 2024 on **nature restoration** has the objective of ensuring the long-term and sustained recovery of biodiverse and resilient ecosystems across the Member States' land and sea areas through the restoration of degraded ecosystems. It aims to put in place measures to restore at least 20% of land areas and sea areas in the EU by 2030, and all ecosystems in need of restoration by 2050;
- Major risks:** Directive 2012/18/EU of July 4, 2012 on the control of major accident hazards involving hazardous substances (Seveso III). This directive repeals the Seveso II Directive and establishes new prevention rules primarily integrating the changes introduced by the Classification, Labelling and Packaging (CLP) regulation;
- Fight against atmospheric pollution:** Directive 2016/2284 of December 14, 2016. The directive sets emission reduction commitments for sulfur dioxide, nitrogen oxides, non-methane volatile organic compounds, ammonia and fine particulate matter. Directive (EU) 2024/2881 of the European Parliament and of the Council of October 23, 2024 on ambient air quality and cleaner air for Europe lays down rules for air quality with the objective of "zero pollution";
- Greenhouse gases (GHG) in the atmosphere:** their increase has led certain countries, as well as the international community, to implement regulatory measures in order to limit this trend:
 - the Kyoto Protocol set a 2008-2012 greenhouse gas reduction target of 8% for the European Union, based on 1990 emission levels. Directive 2003/87/EC of October 13, 2003 created a community-wide emissions trading schemes (EU ETS) that came into force in 2005 and resulted in the creation of national allowance allocation plans (NQAPs) for the period 2005-2007 and then 2008-2012, corresponding to the commitment period of the Kyoto Protocol. Directive 2009/29/EC of April 26, 2009 extended the EU ETS to cover a third period (2013-2020), with a gradual reduction in allowances allocated and new allocation procedures in order to achieve a 20% greenhouse gas emission reduction by 2020 (compared with 1990 levels). The Kyoto Protocol was not extended by recent COPs (Conference of the Parties), with only an obligation to limit global warming to 2°C included in the 2015 Paris Agreement;

- Directive 2018/410/EU of March 14, 2018 extends and redefines European Union emission trading system rules for a fourth period (2021-2030 - phase IV). Combustion facilities with a thermal output greater than 20 megawatts and certain industrial companies falling within the scope of the directive are subject to the European Union emission trading system and registered in the national allowance allocation plans introduced since 2005 in all EU Member States. As from 2021, the allowances available in the European Union emission trading system will be reduced on a linear basis by 2.2% per year and Member States shall auction at least 57% of allowances. The free allocations stipulated for the heating sector will also be gradually reduced, except for urban heating networks which will still receive free allocations of 30% of their allowances until 2030. The calculation and benchmark methodologies for estimating required allowances based on past pollution levels were also adjusted for phase IV. A cross-sector correction factor may also be applied by the European Union to adjust any over or under allocation of allowances;
- To support a robust price signal, a stability reserve was implemented in early January 2019 in accordance with decision 2015/1814 and the revision of phase IV. This withdrew the surplus accumulated in previous periods that resulted in an excess supply in the European Union emission trading system. Between 2014 and 2020, 900 million allowances were also withdrawn from the market through a backloading scheme. The arrival of phase 4 and the reserve had a major impact on the European Union emission trading system, with early January 2020 prices of up to €25/t CO₂ and the participation of new speculative players;
- In July 2021, the European Commission unveiled its plan to reduce CO₂ emissions by at least 55% by 2030 as compared to 1990 levels ("Fit for 55 package");
- The Council and the European Parliament reached an agreement on this reform of the ETS, which was adopted in April 2023, agreeing:
 - to increase the overall ambition for emission reductions by 2030 to 62% compared to 2005 levels;
 - to increase the annual reduction rate of the emission cap by 4.3% per year from 2024 to 2027 and 4.4% from 2028 to 2030 ("linear reduction factor");
 - to reduce free allowances for the sectors concerned until they are phased out in 2036,
 - to introduce a carbon tax at the EU borders (Carbon Border Adjustment Mechanism – CBAM),
 - to extend the ETS mechanism to the land transport and building sectors,
 - and to strengthen the Market Stability Reserve (MSR) by setting a threshold of 400 million allowances, with the surplus eliminated.
- With regard to the waste business, the Commission will assess the possibility of including the municipal waste incinerator sector in the ETS, with a view to including it from 2028 and the need for a possible opt out until December 31, 2030. A report on this issue will be presented no later than July 31, 2026.
- The launch of the ETS 2 mechanism for the road transport, buildings and small industry sectors has been postponed from 2027 to 2028.
- In 2025, ETS 1 prices rose sharply by +15% in January due to a harsh winter, before decreasing as a result of the milder temperatures and stable renewable production, leveling out at around €61/t in early April. Prices rebounded in early May to reach €70/t, mainly owing to Donald Trump's "Liberation Day" announcements, followed by a more stable period with prices ranging between €69 and €75/t until the beginning of September. Prices inched up to around €88/t at the end of the year, fueled by speculative investors;
- Following the repeal of Regulation (EC) 2037/2000, Regulation (EC) 1005/2009 of 16 September 2009 requires the strict management of substances that destroy the ozone layer and, in particular, CFC and HCFC **refrigerating fluids** used in cold production plants;
- Regulation (EC) No 842/2006 of 17 May 2006 imposed rigorous traceability and management of fluorinated greenhouse gases such as HFC refrigerants or SF₆ electrical insulation. The new regulation on fluorinated greenhouse gases, Regulation (EU) 2024/573 of the European Parliament and of the Council of 7 February 2024 repealed Regulation (EU) No 517/2014 (which repealed Regulation (EC) No 842/2006); it aims to accelerate the reduction of fluorinated GHG emissions by introducing new measures to prevent emissions and restrictions on the placing on the market of these gases.
 - At the same time, Regulation (EU) 2024/590 of the European Parliament and of the Council of 7 February 2024 on substances that deplete the ozone layer, and repealing Regulation (EC) No 1005/2009, prohibits these substances from almost all possible uses and allows only a few limited exemptions.
- **Pressure equipment:** Directive 97/23/EC of May 29, 1997 (DESP) establishes design and manufacturing requirements for pressure equipment and imposes an inspection of the compliance of this equipment and their housing units since 2002;
- **European Climate law:** Regulation (EU) 2021/1119 of 30 June 2021 establishes the European Union framework for reducing GHG emissions for the Union by 2050. It establishes two binding objectives: climate neutrality in the Union by 2050, with a view to achieving the long-term temperature objective set by the Paris agreement and reducing net greenhouse gas emissions in the Union by at least 55% by 2030 as compared to 1990;
- **Fit for 55 package:** unveiled by the Commission on July 14, 2021, this contains proposals aimed at attaining the objectives set in the European Climate Law. These proposals have resulted in several directives and regulations (in particular Directive (EU) 2023/959 of the European Parliament and of the Council of 10 May 2023 amending Directive 2003/87/EC and Regulation (EU) 2023/956 of the European Parliament and of the Council of 10 May 2023 establishing a carbon border adjustment mechanism);
- in addition, the **REPowerEU** plan presented by the Commission on May 18, 2022 aims to raise the targets proposed in the Fit for 55 package to increase Europe's independence from Russian fossil fuels. This plan aims to achieve energy savings, produce clean energy and diversify energy supply sources. The accelerated roll-out of renewable energies is one of the pillars of this plan.
- Regulation (EU) 2024/1735 of the European Parliament and of the Council of 13 June 2024, also known as the Net Zero Industry Act (NZIA), establishes a framework to ensure the EU's access to a secure and sustainable supply of net-zero technologies, covering 19 green technologies.
- Since soil is the only natural element without a specific regulation, Directive (EU) 2025/2360 of November 12, 2025 establishes a framework and measures concerning (i) soil health monitoring and assessment, (ii) soil resilience and (iii) management of contaminated sites.

Regulations specific to each business line

WATER

The objective underlying regulation is the availability of drinking water which complies with directives, and a satisfactory chemical, ecological and quantitative status for groundwater and surface water, and a wastewater treatment system that protects the receiving environment.

The objective of attaining a satisfactory chemical state of water is the result of several European legislative texts, particularly Directive 2000/60/EC of October 23, 2000, which establishes a framework for community action in the field of water policy (the **Water Framework Directive**) that concerns the quality of water (surface and groundwater) more generally. Directive 2006/118/EC of December 12, 2006 on the protection of groundwater (daughter directive of the framework directive) sets up oversight and restrictions on chemical substances in water by 2015.

The framework directive set objectives for 2015 but the implementation timetable covers the period to 2027.

Directive 2008/105/EC of December 16, 2008, amended by Directive 2013/39 of August 12, 2013, sets out environmental quality standards for 45 priority substances, including priority hazardous substances that present a major risk to the environment or to public health in the water sector. These texts provide for the elimination of priority hazardous substances in 2021 and other hazardous substances in 2028 from continental and coastal surface water.

To protect the receiving environment, the collection, treatment and discharge of urban, industrial and commercial wastewater is governed by Directive 91/271 of May 21, 1991, as amended, concerning **urban wastewater treatment**. The objectives of this directive were confirmed and extended by the Water Framework Directive. This directive was recast by Directive (EU) 2024/3019 of the European Parliament and of the Council of November 27, 2024, which provides for stricter rules, an enlarged scope, an obligation to ensure energy neutrality of wastewater treatment plants, encouragement of treated wastewater reuse and a new requirement to assess risks to health and the environment.

Wastewater treatment is also directly affected by Directive 2008/56/EC of June 17, 2008, which establishes a framework for community action in the field of marine environmental policy and Directive 2006/7/EC of February 15, 2006 concerning "bathing water" which imposes new restrictions on the monitoring and management of bathing water and information provided to the general public.

WASTE

Directive 2008/98/EC of November 19, 2008 (the **Waste Framework Directive**) establishes a hierarchy of different waste management measures and favors (i) the prevention of production, primarily by requiring Member States to draft national programs; (ii) reuse; (iii) recycling, by defining new objectives to be achieved by Member States by 2020; (iv) other forms of recovery; and (v) safe disposal.

It also clarifies the concepts of recovery, elimination, end-of-waste status and by-products. The aim of this directive is to promote recycling, composting and waste-to-energy recovery of household waste.

With respect to ship recycling, Regulation (EU) 1257/2013 of 20 November 2013 seeks to better monitor their recycling in accordance with hazardous waste standards.

With respect to the **cross-border transportation of waste**, Regulation 1013/2006 of 14 June 2006 sets out conditions for monitoring and inspecting waste transfers and clarifies current procedures for monitoring the transfer of non-hazardous waste for recycling. This regulation was repealed with transitional provisions by Regulation (EU) 2024/1157 of the European Parliament and of the Council of 11 April 2024, which provides for stricter rules on the export of waste from the EU to third countries, applicable from May 21, 2026. It also establishes new traceability rules and strengthens the means of control.

In December 2015, the European Commission published the **Circular Economy Package** comprising (i) an action plan of measures aimed at "closing the loop" of product life cycles, from production and consumption to waste management and the development of a market for secondary raw materials from recycling, and (ii) proposed revisions to waste legislation.

Four directives of May 30, 2018 (2018/851, 2018/850, 2018/852 and 2018/849) amended the Waste Framework Directive, the Landfill Directive, the Packaging and Packaging Waste Directive, the End-Of-Life Vehicle Directive, the Waste Batteries and Accumulators Directive and the Waste Electrical and Electronic Equipment Directive. The new regulations seek to prevent waste production and its adverse impacts, promote waste reuse, recycling and recovery and gradually reduce landfill waste.

ENERGY

Large combustion plants (with a thermal output of 50 megawatts or more) have been governed since January 1, 2016 by the **IED Directive** of November 24, 2010 on industrial emissions, which imposes, inter alia, the systematic application of best available techniques (BAT). Directive 2015/2193 of November 25, 2015 **regulating medium combustion plants** (i.e. with a thermal output of between 1 and 50 megawatts) set emission caps for certain atmospheric pollutants.

In December 2018, the European Commission voted a **Clean Energy Package** revising European regulations on renewable energy, energy efficiency, the energy performance of buildings, electricity markets and consumer rights. It prioritizes energy efficiency and the development of renewable energy and promotes a fair deal for electricity consumers and flexible conditions.

With regard to **energy efficiency**, Directive 2012/27/EU of October 25, 2012 was recently amended by Directive (EU) 2018/2002 of December 11, 2018 and recast by Directive (EU) 2023/1791 of the European Parliament and of the Council of September 13, 2023 on energy efficiency, which lays down new obligations and refines the energy targets to be reached by 2030.

With regard to **renewable energy**, a target of 32% renewable energy in the European energy mix by 2030 was set (with a clause for an upward revision by 2023). Directive 2018/2001/EU of December 11, 2018 was the primary legislative framework governing heating networks and recognizing waste heat. This review of renewable energy regulations enabled the adoption of a harmonized framework for biomass sustainability criteria.

Likewise, Regulation (EU) 2018/1999 on the Governance of the Energy Union of 11 December 2018 defines for member countries the ways and means of achieving the targets set for 2030 in the previous directives and requires them to draw up National Energy and Climate Plans (NECPs).

In December 2021, the best available techniques conclusions for large combustion plants were published, extending, for procedural reasons the conclusions of July 31, 2017.

WATER (continued)

Regarding flood risks, Directive 2007/60/EC of October 23, 2007 on the assessment and management of flood risks requires Member States to identify and map high-risk river basins and coastal areas and to produce management plans.

In the face of increasing pressure on water resources leading to scarcity and a deterioration in quality, the reuse of treated water is a solution consistent with circular economy principles. Regulation (EU) 2020/741 of 25 May 2020 therefore seeks to promote the reuse of treated urban wastewater for agricultural irrigation.

The 1998 Directive on the quality of water intended for human consumption was revised and replaced by Directive (EU) 2020/2181 of December 16, 2020. This directive:

- confirms the right to access drinking water for all in all regions;
- revises the parameters to be monitored in water and includes new parameters, such as perfluorinated compounds;
- revises the quality requirements associated with these parameters;
- establishes water safety management plans, from abstraction to the consumer's tap, for all relevant stakeholders;
- provides for better information on the quality of drinking water for all users.

WASTE (continued)

In August 2018, the best available techniques conclusions for the waste treatment sector were published. These were obtained following a review of the EU Best Available Techniques reference documents on waste treatment.

2018 was marked by discussions on plastic: the Commission published its plastic strategy in January 2018 and Directive 2019/904/EU of June 5, 2019 on the reduction of the impact of certain plastic products on the environment imposed bans on the commercialization of certain single use plastics.

In December 2019, the decision establishing best available techniques for waste incineration was published.

In December 2021, the best available techniques conclusions for large combustion plants were published, extending, for procedural reasons the conclusions of July 31, 2017.

The treatment of waste batteries is governed by Regulation (EU) 2023/1542 of July 12, 2023 concerning batteries and waste batteries; this text introduced minimum requirements for extended producer responsibility, the collection and treatment of waste batteries and disclosure of information.

Regulation (EU) 2025/40 of December 19, 2024 on packaging and packaging waste sets out environmental sustainability and labeling requirements covering the entire life cycle of packaging. It also lays down requirements for extended producer responsibility, the prevention of packaging waste, and the collection and treatment, including recycling, of packaging waste.

Directive (EU) 2025/1892 of the European Parliament and of the Council of September 10, 2025 amends framework Directive 2008/98/EC of November 19, 2008 and seeks to reduce the impact of food and textile waste on the environment and climate, particularly through the introduction of extended producer responsibility for textiles.

Regulation (EU) 2025/2365 of November 12, 2025 on preventing plastic pellet losses to reduce microplastic pollution lays down obligations for handling plastic pellets to prevent losses at all stages of the plastic pellet supply chain.

ENERGY (continued)

In addition to the REpowerEU plan, the Commission proposed and adopted an emergency regulation establishing a framework to accelerate the deployment of renewable energies (Regulation (EU) 2022/2577 of 22 December 2022). It has temporary application and contains administrative simplification measures to accelerate the rollout of renewable energy. Certain provisions of that regulation were extended by Council Regulation (EU) 2024/223 of 22 December 2023 until June 30, 2025, while taking into account the European Renewable Energy Directive (RED III).

In 2023, Directive (EU) 2023/2413 of the European Parliament and of the Council of 18 October 2023 (known as RED III) amended Directive (EU) 2018/2001, Regulation (EU) 2018/1999 and Directive 98/70/EC as regards the promotion of energy from renewable sources.

1.6.2.2 French regulations

European regulations significantly influence French law. They are enacted into law through legislative texts and regulations, codified in particular in the French Environmental Code, the French Public Health Code, the French Energy Code and the French General Local Authorities Code.

French regulations are constantly being reformed due to the enactment of European laws and the roll-out of national environmental policy.

In France, the administrative authorities (DREAL - Regional Departments for the Environment, Planning and Housing) are responsible for the monitoring and control of facilities.

For all the areas presented below, violation of most of these laws is punishable under both administrative and criminal law and a company may even be found criminally liable.

To strengthen the criminal justice response to environmental crimes, Law no. 2020-1672 of December 24, 2020 on the European public prosecutor's office, environmental justice and specialized criminal justice, set-up specialized environmental regional divisions, created an environmental public interest judicial convention and strengthened the powers of environmental inspectors.

Regulations common to the three business lines

- **Environment Charter:** promulgated by Constitutional law 2005-205 of March 1, 2005, this charter has constitutional standing. It forms part of the body of constitutional rules of French law, acknowledging the fundamental rights and duties relating to the protection of the environment;
- The majority of facilities operated by the Group fall under the scope of the “**ICPE**” regime (**Facilities Classified for Environmental Protection**). This central regime for environmental law lists facilities that are likely to present disadvantages or dangers to the environment as a result of their activities or the substances handled and subjects them to a range of different requirements (such as declarations, registration and authorizations). The environmental permitting and assessment procedures are regularly overhauled to comply with EU law in particular;
- **Grenelle 1 law** (August 3, 2009) and **Grenelle 2 law** (July 12, 2010): the first is a planning law aimed at implementing the Grenelle de l'environnement decisions, supplemented by the second law comprising national environmental commitments. These laws seek to implement six major projects, which have significant implications for each of the Group's business line (construction, transport, health, waste, water and biodiversity, energy, environmental governance and information transparency);
- **Law of August 17, 2015 no 2015-992 on energy transition for green growth:** significantly amends French environmental legislation and seeks to enable France to contribute more efficiently to combating climate change and to strengthen its energy independence through a better balance between supply sources. In application of this law, the National Low-Carbon Strategy (NLCS) contains guidelines for the implementation of the greenhouse gas emissions reduction policy. Carbon budgets are national greenhouse gas emission caps set for the periods 2019-2023, 2024-2028 and 2029-2033. Another major energy policy document, Energy Multi-Annual Planning Document (EMAPD) defines priority actions for public authorities covering the management of different types of energy and sets objectives for the period 2019-2028;
- **New EMAPD, NLCS and national carbon budgets:** adopted by two decrees on April 21, 2020, these documents were revised with the aim of achieving carbon neutrality in 2050;
- **Energy-Climate law no. 2019-1147 of November 8, 2019:** this raises France's targets by aiming for carbon neutrality by 2050; (i) target decrease of 30% to 40% in fossil energy consumption compared with 2012 by 2030; (ii) ban on electricity production using coal by 2022; (iii) framework more favorable to the development of renewable energies and own use. In addition, it modifies the system introduced by the law of 2015 by providing for the adoption of a five-year law that will set the objectives and priority actions of the national energy policy and with which the EMAPD and NLCS will have to be compatible. Finally, the law institutionalizes the existence of the High Council for the Climate, which has a significant institutional role;
- **Biodiversity, Nature and Landscape law (no. 2016-1087 August 8, 2016):** amendment of environmental law and biodiversity protection principles (introducing principles of ecological solidarity and non-regression) and addition of remediation of ecological damage into the French Civil Code. From an institutional point of view, the most important development was the creation of the French Office for Biodiversity on January 1, 2020;
- **National plan to reduce emissions of atmospheric pollutants (PREPA)** (Decree of May 10, 2017 and Order of December 8, 2022 for the period 2022-2025): these texts set the national emission reduction targets for 2020, 2025 and 2030 and the actions to be taken.

- Law "PACTE" law no. 2019-486 of May 22, 2019: **on company growth and transformation** this law modifies the French Civil Code by establishing that "the company is managed in its corporate interest, taking account of the social and environmental issues of its business". It also introduces the ability for a company to adopt a purpose, with the objective of rethinking the place of companies in society. The Group has adopted a Purpose (see Chapter 1.1.2 above);
- **ASAP** law (Law 2020-1525 of December 7, 2020 on **accelerating and simplifying public action**);
- **"Climate and Resilience"** law no. 2021-1104 of August 22, 2021: draws from the work of the Citizen Climate Convention and supplements provisions already introduced by the 2019 "Energy Climate" law and the 2020 "AGEC" law. It seeks to change lifestyles through its titles (consumption, production and work, transport, housing and food). It also introduces advances relating to the fight against soil artificialization and numerous measures to promote energy performance and creates new criminal offenses in the environment code: environmental endangerment, violation of natural environments and ecocide;
- Law on **accelerating the production of renewable energy** (n°2023-175 of March 10, 2023): first legal text wholly dedicated to renewable energies;
- Law on **green industry** (2021-973 of October 23, 2023): sets three major objectives: finance green industry, facilitate and accelerate the installation of industrial companies and strengthen the inclusion of environmental issues in public procurement;
- French laws containing various provisions for alignment with EU law transpose EU legislation on a near-annual basis, particularly with regard to the environment;
- in terms of PFAS, the April 2024 interdepartmental plan replaced and supplemented that of 2023. Ministerial decrees require campaigns to measure PFAS in aqueous discharges of ICPEs (decree of June 20, 2023) or in atmospheric emissions of some incineration plants (decree of October 31, 2024). During the year, PFAS Law no. 2025-188 of February 27, 2025 was supplemented by Decree no. 2025-958 of September 8, 2025 on the implementation of the national strategy for the progressive phase-out of PFAS from industrial effluents, and by a decree of September 3, 2025 on a monitoring campaign for PFAS in urban wastewater treatment plants;
- The third national plan for climate change adaptation (NAP) was published in March 2025;
- In 2025, two laws relating to agriculture had the effect of amending the applicable laws on damage to protected species, water abstraction and storage works, the environmental permitting procedure and the powers of environmental inspectors (Law no. 2025-268 of March 24, known as the "Food Sovereignty Law", and Law no. 2025-794 of August 11, known as the "Duplomb Law").

Regulations specific to each business line

WATER

Many laws and regulations govern the production of drinking water, wastewater treatment and water pollution.

Certain discharges, disposals and other activities with a potentially negative impact on the quality of surface or groundwater sources require administrative authorization or notification. This is known as the "IOTA" (facilities, structures, works and activities) system and is subject to the water policy. For instance, public authorities must be notified of any facility that pumps groundwater in amounts that exceed specified volumes and of the discharge of certain substances into water.

Law no. 2006-1772 of December 30, 2006 on water and aquatic environments (LEMA) addressed EU requirements for high-quality water and significantly amended French water legislation.

WASTE

The majority of hazardous and non-hazardous waste treatment facilities are subject to the regulations governing facilities classified for the protection of the environment (ICPE). A number of decrees and ministerial and administrative orders establish rules applicable to these sites (design, construction, operation, etc.).

Hazardous and non-hazardous waste is subject to strict monitoring (waste monitoring slips, BSD) and tracking (chronological waste register).

Energy recovery plants are subject to numerous restrictions, including limits on pollutant emission levels.

Ministerial orders clarify the technical requirements applicable to the various waste treatment facilities.

The Grenelle 2 law strengthened and widened the Extended Producer Responsibility (EPR) scheme and specific recovery and associated processing sectors. Finally, it provided for the planning of construction and public works waste management and the performance of a pre-demolition appraisal.

The Waste Framework Directive of November 19, 2008 was enacted by Order 2010-1579 of December 17, 2010. This enactment clarified certain definitions, introduced a hierarchy of waste treatment methods (reuse, recycling, recovery and disposal) and clarified the responsibilities of producers and holders of waste.

Chapter 4 of the law of August 17, 2015 on energy transition for green growth focuses on combating wastage and promoting the circular economy: it amends waste law principles by introducing new objectives with quantified targets into the national waste policy and enshrines the definition of the circular economy in the major principles of environmental law.

It amends the law governing environmental bodies and creates new Extended Producer Responsibility (ERP) sectors. The application texts for these new provisions, and particularly those concerning the ERP sectors, were subsequently published.

ENERGY

The French Energy Code and the French Environmental Code define the regulatory framework governing energy policy.

The majority of installations are subject to the regulations governing facilities classified for the protection of the environment (ICPE) set out in the French environment code.

The Grenelle 2 law boosted the development of energy efficiency and renewable energies.

This continued with the law of August 17, 2015 on energy transition for green growth which seeks to balance the different energy supply sources in France. Chapter 5 of this law on renewable energies introduces a new purchase contract regime for electricity produced by facilities using renewable energies, while slightly modifying the regime governing anaerobic digestion plants and the law governing hydroelectric concessions. Chapter 8 introduces two major documents for the energy policy: the National Low-Carbon Strategy and the energy multi-annual planning document. It modifies the steering and production of electricity and covers energy transition in the regions. Numerous application texts for these new measures were subsequently published.

Ministerial orders clarify the technical requirements applicable to combustion facilities according to their size.

Veolia also contributes to the French capacity market via its electricity production facilities in line with Decree 2012/1405 of December 14, 2012. Certain facilities are also impacted by regulation on the power purchase obligation and the market-based premium for renewable energies.

Similarly, the conditions for marketing, using, recovering and destroying substances used as refrigerating fluids in refrigerating and air-conditioning equipment are also regulated.

The legal arsenal of French regulations is completed by numerous other orders clarifying the means of quantifying and handling fluids and the set-up of training and recovery sectors.

WATER (continued)

Special attention is paid to protecting catchment areas and regulation covers pollutants such as nitrates, pesticides and micro-pollutants.

Autonomous wastewater treatment is subject to strict regulation to protect the quality of the receiving environment, sanitary conditions and public health.

Depending on their size, treatment plants are subject to increasing requirements and, particularly for the largest plants, reporting obligations such as an annual declaration of polluting emissions and waste.

Treated wastewater reuse was regulated to a limited extent and only with respect to the irrigation of crops and green spaces (Order of August 2, 2010, as amended). Decree no. 2022-336 of March 10, 2022 defines the rules regulating new uses of treated wastewater and introduces an authorization procedure. This decree was repealed by Decree no. 2023-835 of August 29, 2023, which simplifies the authorization procedure for treated wastewater reuse and defines the conditions for non-domestic use of rainwater. This framework is supplemented by Decree no. 2025-239 of March 14, 2025, and its implementing decree of the same day.

To be used in agriculture, sewage sludge produced at wastewater treatment plants must comply with strict traceability regulations in respect of the organic materials and trace metals it is likely to contain (heavy metals such as cadmium, mercury or lead). To be recovered as biogas that is likely to be injected into natural gas networks, it must also comply with a list of authorized inputs in relation to sludge composition.

Decree no. 2020-828 of June 30, 2020 introduced major reforms concerning IOTA wastewater installations.

The December 2020 European drinking water directive was enacted by Order no. 2022-1611 of December 22, 2022, Decrees no. 2022-1720 and 2022-1721 of December 29, 2022 as well as 13 orders issued on December 30, 2022 and two orders issued in January 2023.

A new reform of water agency fees entered into force on January 1, 2025. This is intended to improve the performance of sanitation systems and drinking water networks, increase the tax on withdrawals in a context of water scarcity and reinforce the polluter pays principle.

Law 2025-188 of February 27, 2025 strengthens the health control of water intended for human consumption as regards PFAS and provides for better information to the public. This law was supplemented by Decree no. 2025-1287 of December 22, 2025.

WASTE (continued)

Law no. 2020-105 of February 10, 2020 on fighting waste and the circular economy (the AGECE law) seeks to accelerate the change in production and consumption models in order to reduce waste and preserve natural resources, biodiversity and the climate. The AGECE law is a product of the circular economy roadmap published on April 23, 2018 and is part of a European framework strengthened by the adoption, on May 30, 2018, of Circular Economy Package directives.

It focuses on several objectives: (i) reducing waste and the end of disposable plastic; (ii) better consumer information; (iii) fighting waste and inclusive reuse; (iv) producer responsibility; and (v) fighting fly-tipping.

Order no. 2020-920 of July 29, 2020 on waste prevention and management further enacts the Circular Economy Package in French law and implements certain provisions of the circular economy roadmap.

The AGECE law focuses specifically on strengthening the traceability of waste, excavated soil and sediment. This gave rise to changes set out in Decree no. 2021-321 of March 25, 2021: dematerialization of waste monitoring slips, extension of the obligation to keep chronological registers and obligation to communicate the content of chronological registers.

As the AGECE law significantly modified the extended producer responsibility system and waste prevention and management provisions, numerous implementation decrees have been published since 2020.

A decree of August 7, 2023 identifies and prescribes Best Available Techniques (BAT) for non-hazardous waste storage installations.

ENERGY (continued)

Order no. 2020-866 of July 15, 2020 together with three decrees and six orders enact the energy efficiency, renewable energy and energy performance of buildings directives and group together building and heating and cooling network issues.

Three orders issued on March 3, 2021 (no. 2021-235, no. 2021-236 and no. 2021-237) enacted Directive 2018-2001 (known as "RED II") into French law by setting sustainability and GHG emission reduction requirements for bioenergy sectors and imposing provisions relating to guarantees of origin and self-consumption and setting new rules for the domestic electricity market.

The production and sale of biogas are strictly regulated by numerous texts.

Finally, with regard to the production of domestic hot water, the Group is particularly concerned by European Directive 2020/2181 of December 16, 2020 on the quality of water intended for human consumption, which now includes obligations regarding legionnaires' disease.

The year 2024 saw the publication of many texts regarding the growing number of solar panels installed.

The decree of January 30, 2025 transposes the best available techniques for large combustion plants in order to integrate the requirements of Commission Implementing Decision (EU) 2021/2326 of November 30, 2021 (BREF LCP).

Order no. 2025-979 of October 14, 2025 and Decree no. 2025-1382 of December 29, 2025 transposed Directive (EU) 2023/1791 on energy efficiency.

1.6.3 AMERICAN REGULATIONS.

With regard to **water**, the main federal laws concerning water and wastewater quality are the Water Pollution Control Act (also known as the Clean Water Act), the Safe Drinking Water Act, and related regulations promulgated by the Environmental Protection Agency (EPA). These laws and regulations establish drinking water standards for public water systems and permitting requirements for pollutant discharges to surface waters subject to federal jurisdiction. EPA has delegated program management authority for most of the drinking water and wastewater regulations to the states, but retains oversight and enforcement authority. The federal standards establish the regulatory baseline, but states are free to establish criteria and standards that are stricter than those set by EPA, and a number of states have done so. States also have the authority under state law to regulate more broadly than the federal government, and can impose additional regulation on non-federal waters and groundwater within individual state geopolitical boundaries. Water quality regulation in the US is therefore a hybrid system of government and may impose different standards on similar operations depending on the geographic location of the regulated operation.

The main statutes governing the Group's **waste** management activities include the Resource Conservation and Recovery Act, the Toxic Substances Control Act, the Comprehensive Environmental Response, Compensation and Liability Act (also known as CERCLA or the Superfund law), the Clean Air Act, and the Clean Water Act. EPA is responsible for implementing these statutes at the federal level, but has delegated program management responsibility to the states for significant portions of the Resource Conservation and Recovery Act and Clean Air Act. Each state in which the Group operates also has its own laws and regulations governing the production, collection and processing of waste, including, in most cases, the design, operation, maintenance, closure and post-closure maintenance of landfill sites and other hazardous and non-hazardous waste management facilities.

With regard to **energy**, the federal government has jurisdiction over interstate commercial activities (involving parties from different federal states), including in the electricity wholesale market. Accordingly, as an owner of electricity production facilities, the Group is subject to Federal Energy Regulatory Commission (FERC) regulations pursuant to the Federal Power Act, the Public Utility Regulatory Policies Act, and the Public Utility Holding Company Act. With regard to its US thermal energy activities, the Group is subject to the laws of the several states in which it operates, including regulations issued by certain public service local commissions. Applicable local law varies from state to state and may comprise no specific regulations related to thermal energy or, conversely, set-out a precise regime including the setting of rates. Finally, energy activities involve atmospheric emissions, surface water discharges, and the consumption of water for industrial purposes and as such require the Group to comply with applicable federal and state air, water and waste management regulations.

Over the past decade, the contamination of drinking water and other environmental media by per- and polyfluoroalkyl substances (PFAS) has become a priority public and environmental health concern. EPA and other federal and state agencies have launched a multifaceted approach to combat exposure to certain PFAS and regulate specific PFAS compounds in consumer products, soil, groundwater, wastewater and drinking water. This holistic approach should, over time, reduce the likelihood of PFAS getting into drinking water and the food supply, but it also creates the risk that treatment residuals may end up being classified and regulated as materials containing hazardous substances.

In April 2024, EPA finalized new maximum contaminant levels for six PFAS compounds in drinking water under the Safe Drinking Water Act, and recently completed national water quality monitoring for a few dozen additional PFAS compounds under its Unregulated Contaminant Monitoring Rule authority. In 2024 EPA also finalized the designation of two types of PFAS - perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) - as "hazardous substances" under CERCLA. Under CERCLA, the federal government has statutory authority to investigate, monitor and respond to hazardous substances that have been released, or are under threat of release, into the environment. CERCLA also provides an enforcement mechanism for the government and private entities to hold parties responsible for cleanup costs if they are found to be liable for the release of substances (i) specifically designated as hazardous substances under CERCLA or (ii) determined to present an "imminent and substantial danger to the public health or welfare". Each of these regulations remain in force, but face ongoing litigation challenging the substance and procedural development of the rules.

In September 2024, EPA finalized updates to the federal Lead and Copper Rule under the Safe Drinking Water Act, mandating removal of all remaining lead service lines within a decade. The rule remains in force but continues to face litigation challenging its substance and procedural development.

In 2025, EPA initiated a series of rulemakings to accelerate energy, manufacturing and infrastructure development, particularly in the air emissions program, but has not materially altered or proposed to alter the core regulatory framework for drinking water, wastewater and waste management services. EPA also continued to study updates to its microbial and disinfection by-products drinking water rule and assessed extensive public comment on its draft risk assessment for PFAS in biosolids that are land applied for agronomic or disposal purposes. EPA also committed to updating its interim destruction and disposal guidance for PFAS on an annual basis.

1.6.4 AUSTRALIAN REGULATIONS

Federal, State and local governments jointly administer environmental protection laws through bilateral agreements.

The 1999 Environment Protection and Biodiversity Conservation (EPBC) Act is the keystone of the Australian government's environmental legislation. It provides a legal framework protecting and controlling plants, wildlife and the environment in the widest sense, at national and international level. Nonetheless, the most critical environmental regulations are administered at State level by the Environmental Protection Authorities. State and regional laws apply to specific economic activities and are administered by the State and local authorities through licenses and permits.

Overall, Australia has more than 300 laws (and numerous associated application regulations) governing environmental issues. Environmental legislation regulates the way land may be acquired and used. Federal and State legislation also requires the performance of an environmental impact assessment for all major projects. The construction of buildings, pollution, contamination and waste production and tracking is also regulated. The authorities ensure compliance with legislation by applying fines and penalties or by imposing the strict liability of companies or management at a personal level.

Each State and region has legislation establishing an Environmental Protection Authority (EPA) which is the statutory decision-maker for environmental regulations and policy issues. The EPA administers legislation covering air and water quality, waste, contaminated land, noise, pesticides and hazardous waste. The EPA and industrial companies also play a role in the drafting of voluntary codes of practice concerning the impact of industry on the environment.

In late 2025, changes were made to the NSW Planning and Assessment Act 1979, notably:

- the paring back of the involvement of agencies outside the consent authority;
- centralising development assessment functions within the Department of Planning;

- greater standardisation and a more stratified approach to development assessment with new streamlined pathways for lower risk development applications and modifications;
- a key change is the requirement to consider likely significant impacts, rather than all impacts.

The 2007 **Water Act**, enacted at federal level, is the keystone of legislation governing the treatment of water and wastewater. However, in terms of controls on the quality of water, it is the EPA in each State or region that is responsible for enforcing water quality regulations. In New South Wales, for example, the 1997 Protection of the Environment Operations (POEO) Act defines the legal framework for the management of water pollution and quality. It is supplemented by the 2009 Protection of the Environment Operations Regulation, which lays down certain points for the definition of water pollution.

The EPA of each State and region is responsible for **waste** and landfill regulations. In New South Wales, waste is regulated by the Environment Protection Authority (NSW EPA) using tools and programs to prevent pollution, reduce the use of resources, improve material recovery from waste flows and ensure the appropriate elimination of waste. The NSW EPA also controls the regulatory framework which establishes a level playing field for waste and recycling operators. This framework includes the obligation to hold an environment protection license, if certain thresholds are reached and the obligation to register and inform the EPA of the type and quantity of waste that transits via the facilities.

The National Greenhouse and **Energy** Reporting Act 2007 (NGER) established the legal framework of the NGER scheme, a national framework for the reporting of greenhouse gas emissions and projects as well as energy consumption and production by Australian companies.

2

RISK FACTORS AND CONTROL

2.1	RISK MANAGEMENT, INTERNAL CONTROL AND INTERNAL AUDIT	67
2.1.1	Coordinated risk management system	68
2.1.2	Coordinated internal control system	69
2.1.3	Functional Departments	71
2.1.4	Internal Audit	72
2.1.5	Procedures related to the preparation and processing of financial and accounting information	72
2.1.6	Insurance	73
2.1.7	Disclosure Committee	73
2.2	RISK FACTORS	74
2.2.1	Summary and methodology	74
2.2.2	Description of risk factors	76

Information from the Annual Financial Report is clearly identified in the table of contents by the pictogram 

As a major player in the development, preservation and renewal of resources through the diversity of its activities, sites and development, Veolia is exposed to various types of risk (see section 2.2 below).

The Group operates in constantly changing environments, potentially generating exogenous risks with an impact on Veolia's risk profile.

The main risks presented below and developed in Section 2.2 are those identified by Veolia, at the date of this Universal Registration Document, as capable of materially impacting the Group's results, business activities,

financial position or of generating a significant drop in the Company's share price.

However, other risks not considered material or as yet unidentified could also impact the Group, its financial position, reputation, outlook or the Company's share price.

Investors are therefore invited to closely consider the risks presented below before making their investment decision.

Category	Risk factors	Sections
Risks related to the business environment in which the Group operates	Geopolitical and political risks; risks related to climate change and natural disasters; risks related to market changes; economic risks.	2.2.2.1
Operational risks	Risks related to employee health and safety; environmental and industrial risks; cybersecurity risks; risks related to innovation and the digital transition; risks related to skills management and changes in business lines; purchasing, supply and logistics risks; security risks for persons and tangible property; transformation risks related to multifaceted performance; risks related to the selection and integration of acquisitions.	2.2.2.2
Financial risks	Risks inherent to changes in energy prices and in the costs of commodities and raw materials; counterparty risks related to operating activities; liquidity risks; risks related to tax developments; risks related to meteorological effects; currency risk.	2.2.2.3
Regulatory, ethical and legal risks	Risks related to regulatory changes, particularly in the areas of health or the environment; corruption and business integrity risks; human rights risks.	2.2.2.4

These risks are managed within the Group in accordance with the three lines of defense model (see section 2.1 below), through a coordinated risk management (see Section 2.1.1 below) and internal control (see section 2.1.2 below) process and internal audit (see section 2.1.4 below). Special attention is also given to compliance with ethical rules, which are constantly strengthened within the Group and the roll-out of compliance programs (see chapter 4, Section 4.1.4.1 below).

In 2025, the Group identified three priority actions in line with its strategy:

- the implementation and monitoring of the GreenUp strategic program in the Zones and Business Units;
- dialogue with our stakeholders to accelerate the ecological transformation of activities and to achieve the multifaceted performance objectives;
- specific actions to strengthen information systems and the digital trajectory of acceleration of artificial intelligence in our businesses.

2.1 Risk management, internal control and internal audit

The various parties involved in managing and controlling Group risks are presented below and can be illustrated using the three lines of defense model defined by IFACI (French Institute of Auditors and Internal Controllers).

Systems supervision	- The board of directors defines the composition, roles and operating methods of the accounts and audit committee and approves the information required by Article L. 232-1 of the French Commercial Code and contained in the management report. - The accounts and audit committee is notably responsible for monitoring the efficiency of the Company's risk management and internal control systems, in accordance with Article L. 821-67 of the French Commercial Code. - Executive Management implements the Group's strategic direction and ensures the roll-out of risk management and internal control systems.
1 st line of defense: conduct of operations	Consisting of operational managers , this first line of defense is responsible for assessing, avoiding and managing risks, notably by implementing an appropriate control system covering processes under their responsibility. The operating managers control activities and operations on a daily basis, by implementing the most effective risk management practices at process level.
2 nd line of defense: risk management and internal control	Coordinated by the risk management and internal control system (see sections 2.1.1. and 2.1.2 below) and the functional departments (see section 2.1.3 below), responsible for their areas of expertise. Its aim is to structure and maintain the system controlling the organization's activities, particularly by: - assisting operating staff in the identification and assessment of the main risks within their scope of expertise; - proposing Group policies and procedures by area of activity; - contributing, with operating staff, to designing the most relevant controls; - developing exchanges on best practice, by observing and reporting on the effectiveness of processes.
3 rd line of defense: internal audit	The independent internal audit function is certified since 2006 and reports to the General Counsel while having access, as necessary, to the highest level of the organization. This third line of defense provides the Company's Board of Directors and Executive Management with reasonable assurance, through a risk-based approach (see section 2.1.4 below).

2.1.1 COORDINATED RISK MANAGEMENT SYSTEM

Objectives

The Group has established an integrated risk management policy aimed at providing a comprehensive overview of the risk portfolio, using the same tools and methodologies across all Business Units and functional departments. Veolia also builds long-lasting relationships with its customers based, in particular, on its ability to manage risks delegated by them. The Group responds to this challenge, which is of fundamental importance to its development, by setting up a coordinated risk prevention and management system.

The risk management system has the following objectives:

- identify and anticipate: ensure the constant oversight of the Group's major risks so that no risk is overlooked or underestimated, understand and monitor the environments in which the Group operates and anticipate changes in the nature or intensity of those risks;
- organize: ensure that the main identified risks are effectively addressed at the most appropriate level within the Group. Numerous operational risks are managed at Business Unit level. Others, which require specific expertise or are of a primarily transversal or strategic nature, are handled directly at head office;
- mitigate: ensure that the structure and resources employed are effective so as to reduce, limit and control as best as possible the identified risks, in line with the Group's values and strategy;
- communicate: raise awareness, inform and develop the culture of risk and risk management methods within the Group, but also communicate about the risks, financial and non-financial, to the various stakeholders.

Organization

Within the risk and Insurance department that reports to the Group's general counsel, the risk department coordinates and serves as the entry point for the Group's strategic risks and facilitates the risk management system through its network of risk managers in the zones and Business Units. The risk department holds monthly meetings with its network of risk managers in the zones and Business Units. The aim of these meetings is to communicate key Group information, share feedback and consider issues in greater depth by setting up working groups on specific topics. In 2025, the network of risk managers also met during the annual risk seminar.

The risk committee is responsible for validating and monitoring the effectiveness of the action plans covering the major risks identified in the risk mapping. It ensures and supports the proper functioning of the risk management systems. It may also decide on which risks are unacceptable within the context of the business. The risk committee brings together the Veolia Executive Committee members, establishing a direct link between the Group's strategy and the risk management process. It is facilitated by the chief risk and insurance officer and chaired by the Group's general counsel.

The Group risk committee meets to examine the Group's risk mapping and the management systems to mitigate these risks. Risk committees by zone and/or country meet to monitor and approve the risk mappings for their scope of activities and the implementation of the related action plans.

The risk department works with all functional departments and more particularly with:

- the internal control department, to link up the identified risks and Veolia's organizational rules, processes and policies, and propose changes where appropriate (see Section 2.1.2 below);
- the compliance department, to strengthen the Group's compliance programs (see Chapter 4, Section 4.1.4.1 below);
- the internal audit department, to contribute to defining its annual audit program. Audits carried out serve to enhance the risk assessments already conducted within the Group. By verifying the Company's key processes, the Internal Audit Department provides assurance that internal control and risk management procedures have been implemented and are effective. These procedures are regularly assessed within the Group to ensure that the Group has the appropriate risk management tools and processes: risk identification, implementation of action plans, updating risk mapping and deployment of the risk management function throughout the Group.

Main programs

Veolia's Risk Department has implemented an integrated risk management system covering far-reaching issues regarding (i) strategy; (ii) performance; and (iii) compliance. It is supported by a network of risk managers and deploys its risk management system in the functional departments and special-purpose committees, as well as in the zones and Business Units.

In 2025, the risk department primarily worked on:

- the ongoing roll-out of the common methodology to the network and with the functional departments, and in particular:
 - support for risk managers in the use of the new digital Governance Risk and Control (GRC) tool developed in 2023,
 - continued awareness-raising and support for the network of risk managers on the Group's major risks, primarily during monthly meetings,
 - enriching the list of Group risks (Veolia Risk Universe) which enables the use of a common language for risks and their description. This year, risks related to data management and the development of artificial intelligence, in particular, were reviewed in the Veolia Risk Universe;
- specific risk analyses for the Group, to support the completion of the GreenUp strategic program.

Finally, in 2025, the Risk Department continued to contribute to the work of the Sustainable Finance and Sustainable Development Departments and the Governance division on implementing the new European sustainability reporting requirements.

The main activities of the risk department and its network are:

Risk mapping

Together with its network, the Risk Department has developed a common process designed to identify and prioritize events that may prevent the Group from reaching its objectives. It is founded on a common and single methodology and a Governance Risk and Control (GRC) digital tool, enabling the consolidation of major risks by zone and Business Unit. After consolidating the risks, interviews are held with head office functional departments to complete the identification and assessment of Group risks. Members of the Board of Directors also participate in the risk mapping, providing an external perspective of Veolia's risks.

The Group's risk mapping is updated each year.

In accordance with this Zones and Business Units have a risk mapping, prepared in compliance with the main market benchmarks (notably COSO - Committee of Sponsorship Organizations of the Treadway Commission) and in accordance with ISO 31000 on risk management. The identified risks are assessed in terms of their impact and frequency, taking account of risk control measures. The "risk owners" are in charge of designing and implementing action plans in liaison with the risk managers for their zone and/or country and/or head office, so as to limit and manage exposure to risks. The network of risk managers contributes to defining the corresponding action plans and steering the overall process. It also plays a role of warning and coordination for emerging risks.

Country risk and opportunities program

The Risk Department conducts specific analyses by country, through its "country risk and opportunities" program (see Section 2.2.2.1 below). This program assesses, in particular, political risks, economic risks, the risk of institutional instability and corruption risks using external metrics. This information is hosted on a digital platform around four pillars: environmental, societal, economic and business, and political and geopolitical. Lastly, these elements provide the Commitment Committees with the information necessary to assess external factors potentially impacting Group and zone investment projects. In 2025, the country risk program continued its development and deployment within the Group.

Contribution to the Sustainability Reporting - Corporate Sustainable Reporting Directive (CSRD)

The Risk Department contributes to sustainability reporting (see Chapter 4) in particular with regard to the determination of impacts, risks and opportunities (IROs), and the analysis of double materiality. The results of the risk mapping presented to the Executive Committee every year contribute to the annual update of the double materiality study.

2

2.1.2 COORDINATED INTERNAL CONTROL SYSTEM

Objectives

Internal control provides reasonable assurance that a company's primary financial, compliance and operational risks are contained within acceptable limits defined by general management and governing bodies. It ensures that management acts fall within the framework defined by applicable laws and regulations and the Group's values and rules, and that the accounting, financial and management information communicated to the corporate decision-making bodies fairly reflects the activity and position of the Group.

In addition, the internal control system implemented by the Group seeks to contribute to the efficiency of processes and improve the reliability of attaining strategic objectives and multifaceted performance objectives. It thus enables the Group to create and protect value. Since end-2020, internal control is part of a wider approach encompassing all activities, beyond financial and transactional processes, and adopts an operational and continuous improvement rationale.

Organization

In line with the internal control reference framework, the application guidance recommendations published by the French Financial Markets Authority (AMF), and the principles of the Committee of Sponsoring Organizations (COSO), the Group's internal control organization evolved in 2020 to strengthen its transversal positioning and the consistency of the general process encompassing all Group functions and activities.

The Internal Control Department is organized as follows:

Internal control is coordinated as follows:

- **the Accounts and Audit Committee** ensures that the structures and processes are in place to provide reasonable assurance that the Group's objectives will be attained and risks controlled;
- **the Executive Committee** supervises the overall system. It reviews and validates progress with the internal control systems;
- **the Internal Control Department** coordinates and supports all functional departments in defining their control environment. It ensures the comprehensive nature of rules and procedures with regard to the main risks and the overall consistency of the system. It communicates on this system and coordinates its assessment, in particular through assessments conducted annually by the Business Units.

The Internal Control Department works closely with:

- **the Risk Department**, to ensure that control activities focus on identified risks;
- **the Internal Audit Department**, to share with it the results of assessment campaigns and to take into consideration areas of improvement identified by this department when verifying the application of the control environment.

A Coordination Committee allows discussions between the Risk, Compliance, Internal Control and Internal Audit Departments, as well as with internal control correspondents from other functional departments, to ensure the consistency of actions and developments on the subject, and the mobilization of each function.

Main components of the internal control systems

The Internal Control Department organizes the control systems implemented by the functional departments, the zones and the Business Units, by ensuring their clarity, efficiency and consistency. It therefore interacts with all the Group's functions and Business Units, and runs a working group bringing together the zones' internal control managers to support the changes in the internal control systems.

During 2025, the Internal Control Department coordinated an update of the Group's documents and procedures associated with the Essentials manual, which contains Veolia's fundamental rules.

The Finance function has a strong internal control structure. It has defined, standardized and rolled out the control framework covering the preparation of financial information. Financial Internal Control and its network of internal controllers in the zones and Business Units ensure in particular the standardization and roll-out of key controls covering financial transaction processes and processes for the production of financial and accounting information.

In 2025, Financial Internal Control in particular:

- performed 21 specific diagnostic and support assignments when occasionally requested by the entities;
- supported efforts to reinforce the reliability of social and environmental reporting in the context of the implementation of the CSRD, mobilizing the internal controllers of the Business Units;
- continued to share best practices within its network of internal controllers.

Assessments are conducted annually by all Business Units to measure the efficiency of the internal control systems they have implemented for their activities. This work, which is coordinated by the Internal Control Department, is carried out for functional department processes in conjunction with the managers in these departments. The Internal Control Department presents a summary report to the Accounts and Audit Committee and the Group Management Committee. Working together with the functional departments, it reviews the results and discusses the improvement actions that have been implemented with the zones. The industrial and environmental risk management system completes the internal control systems on operational risks (discharges and emissions, fire and explosion, etc.).

The main developments in 2025 are aimed at ensuring that assessments of the Business Units are relevant and robust. Following on from its introduction in 2024 for operational processes, the two-year rotation principle was extended to cover part of the financial cycles. Questionnaires covering the financial and operating cycles, which are the most fundamental, will continue to be conducted annually. Cross-assessments by the head office's functional departments are now carried out on financial cycles, compliance and cybersecurity for certain Business Units.

Based on the results of the self-assessment, the Business Units define action plans, through discussion with the head office functional departments, in order to improve their control of processes and risks. In this way, Internal Control incorporates its actions in a continuous improvement process.

2.1.3 FUNCTIONAL DEPARTMENTS

Each functional department of the Group is responsible for its area of expertise and for the processes that contribute to mitigating risks and controlling their activities and notably:

- defining rules, processes and policies and Group procedures and updating them as required (all departments reviewed the main procedures in 2023);

- assisting their networks with complex issues or issues common to several Business Units;
- encouraging the sharing of best practices and developing appropriate training programs where necessary;
- analyzing failings and the results of internal control self-assessments and audits to improve existing processes.

2

Functional Department	Primary role
Finance Department	• protect the Group's assets • implement a financial control framework for transactions and financial operations • steer the Group's financial performance • prepare the financial statements (see chapter 6.1 and section 2.1.5 below) • ensure compliance with prevailing tax regulations and legislation
Legal Department	• serve: support the Group's commercial development while defining common key procedures • control: guarantee regulatory compliance • protect: provide legal protection for both the Company's assets and its employees
Compliance Department	• strengthen, roll-out and monitor compliance programs within the Group • control adherence to compliance principles and procedures and deal with non-compliance
Security Department	• identify and prevent threats • manage malicious acts against employees, tangible and intangible property, securities and information systems to help maintain the continuity of the Group's activities
Insurance Department	• protect the Group against insurable risks by taking-out centralized insurance policies • manage the various liability and property damage insurance policies protecting the Company, its agents, employees and assets • steer the management of insured claims and Group prevention measures
Human Resources Department	• manage and develop Veolia's human resources and social model to meet the needs of the activities • accompany the Group's growth by guaranteeing constant improvement in prevention, health and safety • define Group policies setting collective ambitions for the development and management of human resources
Business Support and Performance Department	• ensure technological development and the industrial scale-up of innovations • provide operational support to entities and monitor Group performance • assist with the implementation and better execution of the Group's strategic program by the Business Units, with regard to both growth and efficiency
Procurement Department	• define and deploy procurement strategies to optimize costs and ensure the continuity of the Group's business • share methods and procedures contributing to strengthened control of procurement processes and risks, and particularly risks relating to quality, supply, compliance and CSR
Stakeholders and Communications Department	• define, implement and steer the Group's overall communication strategy and dialogue with stakeholders, ensure its consistency and monitor compliance in all geographies
Strategy, Innovation and Development Department	• contribute to the definition, steering and application of the growth strategy in accordance with historical business models and also through the emergence and communication of innovative solutions, technologies and business models
Digital Business & Technology Department	• accompany digital transformation, while rationalizing IT structures and operations to improve service quality and operating performance within the Group • develop the capabilities of information, digital and data technologies to strengthen the Group's value creation, with particular attention to AI challenges and opportunities
Multifaceted Performance and Sustainable Development Department	• define and facilitate the roll-out of Veolia's sustainable development commitments • report and highlight the Group's CSR actions and performance • contribute to multi-actor dialogue on environmental and societal issues

2.1.4 INTERNAL AUDIT

The internal audit department comprises 30 individuals in 2025, and performs assignments throughout the entire Group, according to a charter and an annual program. It has been certified by the French Audit and Internal Control Institute (IFACI) since 2006.

The objectives of the Internal Audit Department are:

- to assess the corporate governance, risk management and control processes;
- to help improve these procedures using a systematic and methodical approach.

This approach covers all aspects of internal control and in particular the accuracy and integrity of financial information, the effectiveness and efficiency of operations, the protection of assets and compliance with laws, regulations and contracts.

The Internal Audit Department implements an annual audit program approved by the Accounts and Audit Committee. It uses dedicated tools to prepare assignments upstream and to organize the assignments themselves, as well as to monitor recommendations after the audit. The department may also be tasked with occasional assignments, primarily to investigate suspected or identified frauds during the year.

The Audit Department reports to the General Counsel. The Audit Director:

- attends meetings of the Accounts and Audit Committee and periodically presents an activity report summarizing audit assignments performed, the follow-up of recommendations as well as the annual audit program;
- has direct access as is needed to the Chief Executive Officer and Chairman of the Audit and Accounts Committee.

The Internal Audit Department conducted 53 assignments in 2025. In this context, these assignments covered, in more or less equal parts, internal control efficiency, including with regard to cybersecurity, and the assessment of other risks and primarily risks relating to development and contractual models, strategy, governance and operations.

2.1.5 PROCEDURES RELATED TO THE PREPARATION AND PROCESSING OF FINANCIAL AND ACCOUNTING INFORMATION

2.1.5.1 Main responsibilities of the Finance Department

The Group Finance Department is responsible for preparing the Group's forecast and actual consolidated financial statements and financial documentation, and for defining and implementing its accounting policies.

2.1.5.2 Organizational structure

To this end, the Finance Department is supported by:

- the Financial Control Department, which is responsible for Zone Financial Supervision, serving as a link between Zone Directors, the Group Finance Department, the Reporting, Analysis and Financial Planning Department and the Chief Financial Officers for each country (corresponding to the Business Units). It also oversees the preparation of the forecast and actual consolidated financial statements, analysis of operational financial performance and Group strategic financial planning;
- the Standards, Internal Control and Sustainable Finance Department, which ensures the correct valuation in the Group's balance sheet of all transactions impacting the Company assets. It oversees the preparation of non-financial information, and supports the Business Units in implementing and securing the Group's financial processes;
- the Financial Operations Department, which identifies, evaluates and structures external growth operations, disposals and strategic partnerships, and ensures their smooth execution. It helps set up management rules and procedures for arranging financing, managing cash surpluses and managing interest and foreign exchange rates within the Group;
- the Group's Tax Department contributes to the definition of consistent procedures for the management of taxes within the Group. Organized by zone, it is responsible for applying tax procedures;
- the Financial Communication Department, whose role is to ensure the transparency, consistency and conformity of the financial information disclosed to stakeholders (investors, financial markets, regulators, etc.).

The Group's control structures are deployed by Business Unit, country and zone. Several Group procedures have been revised and implemented at country level.

Specific procedures may be implemented in each subsidiary, particularly with respect to the activity or the breakdown of the Company's share ownership.

2.1.5.3 Control procedures

Procedures

In addition to the Group processes manual covering the preparation and processing of Group financial information, an instruction memorandum is sent by the Group's Financial Reporting Department to the Finance Departments of the Business Units, entities and zones, prior to each accounts closing. It identifies all of the information necessary for preparing the published financial documents. It also sets out the new accounting regulations and texts and details their application procedures.

Upon receipt of the financial statements, review meetings are organized between the Group and Business Unit Finance Departments. Their purpose is to verify that the financial statements were prepared according to the rules, to understand changes in the main aggregates and indicators in relation to the previous accounting year and budget forecasts as well as to analyze the substantiation of the main balance sheet components. The Statutory Auditors also have access to the analyses performed by the Group Finance Department through attendance at review meetings at Group and operational level.

2.1.5.4 Representation letters

Entity CEOs and CFOs submit representation letters to Veolia Environnement's Executive Management attesting, in particular, to the accuracy of the financial and non-financial information communicated to the Company and to compliance with prevailing laws and regulations.

2.1.5.5 Code of conduct

A finance manager Code of conduct was drawn up by the Chief Financial Officer in November 2011. Under this Code, finance managers report to both functional and line management and the responsibility and autonomy of finance managers in the effective performance of their operational control function is formally reiterated. The Code was updated in 2018 to strengthen the detection and prevention of corruption risk and signed again by all finance managers. Each year, the Financial Internal Control Department confirms the signatories of this Code of Conduct are updated.

2.1.6 INSURANCE

2.1.6.1 Organization

The Insurance Department is responsible for protecting the Group's interests against insurable risks by:

- taking out common insurance policies to implement a consistent risk transfer and coverage policy designed to maximize economies of scale, while taking into account the specific characteristics of the Group's businesses and legal or contractual constraints;
- optimizing thresholds and the means of accessing the insurance or reinsurance markets through the use of appropriate deductibles.

The process of covering risks through insurance is implemented in coordination with Veolia's overall risk management policy. This takes into account the insurability of risks associated with the Group's activities, the availability of insurance and reinsurance coverage on the market and the premiums proposed compared with the level of coverage, exclusions, limits, sub-limits and deductibles.

The Risk Department and the Insurance Department are supported by a joint, international network of risk managers organized by country to take into account changes in the Group's organization.

During 2025, the Risk and Insurance Department combined their expertise even further, to ensure that specific risk analyses contribute to the structuring of the Group's insurance programs.

2.1.6.2 Insurance policy

The insurance policy continues to be updated in response to the ongoing appraisal of risks, market conditions and available insurance capacity. Veolia Environnement ensures that the main accidental and operational risks brought to its attention are covered by the insurance market, when insurance is available on the market and it is economically feasible to do so.

The Group's insurance policy involves:

- defining the overall insurance coverage policy for the Group's business activities particularly based on the expression of needs of Business Units;
- selecting and entering into contracts with outside service providers (brokers, insurers, loss adjusters, etc.);
- managing the consolidated subsidiaries specializing in insurance or reinsurance services;
- facilitating and coordinating the network of insurance managers for the main Business Units.

2.1.6.3 Main insurance policies covering all Business Units and Group subsidiaries

2.1.6.3.1 Third-party liability

The international general third-party liability insurance program was renegotiated effective January 1, 2025. Initial coverage of up to €75 million per claim was subscribed outside the United States and Canada. In the United States and Canada, North American subsidiaries are covered locally by a specific insurance program.

The international general third-party liability insurance program comprises a series of policies with sub-limits depending on the policy and cover.

This program encompasses liability resulting from environmental damage sustained by third parties as a result of a sudden and accidental event.

Certain activities, such as maritime transport, automotive and construction, have their own specific insurance policies. The Group may also be required to take out "political risk" insurance coverage for a project depending on its risk profile.

2.1.6.3.2 Property damage

All the Group's subsidiaries are covered by an international property damage insurance program, insuring the installations and equipment that they own as well as those that they operate on behalf of customers.

This program covers all Group businesses (Water, Energy, Waste). It must be used in priority to any other solution for financing damage risk.

The program adopts an "all risks except" approach and provides either "business interruption" coverage or "additional operating cost" coverage depending, in particular, on each subsidiary's ability to implement rapid substitution solutions to ensure service continuity after an incident. The Group program comprises a "Master" policy and local policies reinsured by this policy (Fronting policies), issued on a "Good local standards" basis in accordance with obligations and practices in the insurance markets of the countries where the Group operates.

The Group's property damage insurance program was renewed on January 1, 2025.

The coverage terms and conditions (limits, sub-limits and deductibles), and particularly the conditions governing the coverage of exceptional or catastrophic events, such as natural disasters, as well as premium levels, reflect the structure of the program negotiated with the insurance and reinsurance market and the conditions proposed or sometimes imposed by these markets.

2.1.6.3.3 Self-insurance and retained risks

For any insured claim or loss, Group companies remain liable for the deductible amount set out in the policy. This amount may range from several thousand euro to more than one million euro. The Group's self-insurance scheme is mainly based on its reinsurance subsidiary, Veolia Environnement Services-Ré, which has set up reinsurance contracts to optimize the conditions under which insurable risks are transferred to the insurance and reinsurance market.

2.1.7 DISCLOSURE COMMITTEE

The Disclosure Committee responsible for producing the Universal Registration Document has the following main duties:

- overseeing the implementation of internal procedures for gathering and verifying information to be made public by the Company;
- defining the procedures for preparing and drafting publications and communications;
- reviewing recent regulatory developments that could impact information intended for the market;
- reviewing information communicated and approving, in particular, the content of the Universal Registration Document to be filed with the French Financial Markets Authority (AMF).

It is assisted by a Proofreading Committee responsible for validating the draft Universal Registration Document.

It is chaired by the Chief Executive Officer and comprises certain members of the Company's Executive Committee, including the Deputy CEO Finance, Digital and Procurement, as well as several of the Group's main functional or operational managers.

The Committee meets once a year to launch the process of gathering information and drafting the annual reports.

2.2 Risk factors

2.2.1 SUMMARY AND METHODOLOGY

2.2.1.1 Main risk factors and management measures

The main risks that Veolia faces are mapped annually via a process involving all of the Group's subsidiaries and functions. In April 2025, Veolia updated this risk mapping, which is transcribed and summarized in the risk matrix presented below: risks are classified here according to their potential impact and probability of occurrence, and ranked within each unit.

This risk matrix reflects the Group's exposure to risks, integrating the control actions in place to reduce their impact and probability. Furthermore, the Group's internal rules and procedures are uncompromising with regard to the application of safety at work, ethics and compliance internal rules and standards. These rules and are qualified as "non-negotiable".

The related risk factors are indicated in bold below. The Group strengthens its control system over the long-term, as part of a preventive approach, to minimize the probability of this type of risk occurring.

As defined at the head of this chapter, in each category, the risk factors are presented in decreasing order of importance as determined by the Company at the date of this Universal Registration Document. Veolia may change its assessment of this order of importance at any time, notably as a result of new external events or events specific to the Company.

In addition, for an analysis of the factors that may influence our business lines, please refer to Chapter 1, Section 1.3.2.

Group risk matrix

IMPACT	High	- Corruption and business integrity risks (REG-02) - Human rights risks (REG-03)	- Risks related to employee health and safety (OPE-01) - Environmental and industrial risks (OPE-02)	
	Moderate	- Security risks for persons and tangible property (OPE-07) - Transformation risks related to multifaceted performance (OPE-08)	- Risks related to innovation and the digital transition (OPE-04) - Risks related to skills management and changes in business lines (OPE-05) - Purchasing, supply and logistics risks (OPE-06)	- Geopolitical and political risks (EXT-01) - Cybersecurity risks (OPE-03) - Risks related to climate change and natural disasters (EXT-02) - Risks related to market changes (EXT-03) - Economic risks (EXT-04) - Risks related to regulatory changes, particularly in the area of health or the environment (REG-01)
	Low	- Risks related to the selection and integration of acquisitions (OPE-09) - Currency risk (FIN-06)	- Risks related to changes in energy prices, consumables and raw materials (FIN-01) - Counterparty risks related to operating activities (FIN-02) - Liquidity risks (FIN-03) - Risks related to tax developments (FIN-04) - Risks related to meteorological effects (FIN-05)	
		Low	Moderate	High
PROBABILITY OF OCCURRENCE				

2.2.1.2 Methodology

Risk mapping process

The Group's risk mapping was updated using the methodology described in Section 2.1.1 above.

The risk mapping process changes each year, in order to constantly improve the assessment, quantification and monitoring of risks.

In 2020, the risk assessment methodology was changed to optimize the assessment of the level of risk control. Five criteria were defined (governance, organization, processes and controls, training, assessment) in order to prepare a more detailed appraisal of the net risk and strengthen the effectiveness of action plans.

Double materiality

Veolia's business model is built around the Group's multifaceted performance linking the financial and economic dimension to the issues of social, environmental and societal responsibility as an inseparable whole. Thus, the risk factors mentioned in this Chapter 2 may have a twofold impact:

- a significant negative impact on the business, i.e. on the Group's financial situation and results, its image, its outlook or on the Company's share price;
- as part of the Group's impacts on its ecosystem and stakeholders.

Stakeholders

1. Since 2020, as part of its Impact 2023 strategic program, Veolia group has identified five categories of stakeholders: customers, employees, shareholders, the planet and society. The Group's commitments with and to these stakeholders are expressed in Veolia's multifaceted performance as described in Section 4.1.1.6 below.
2. For each of the risk factors described below, and in line with the Corporate Sustainability Reporting Directive, the main stakeholders who may be positively or negatively impacted by the materialization of the risk have been specified in this chapter.

2.2.2 DESCRIPTION OF RISK FACTORS

2.2.2.1 Risks related to the business environment in which the Group operates (EXT)

Geopolitical and political risks (EXT-01)

Risk identification

Description of the risk

The Group operates in an increasingly volatile international environment in which diplomatic, economic and security relations are growing more strained.

The Group's presence outside France, particularly in North America, Europe, Asia-Pacific and the Middle East, exposes it to fluctuating conditions locally, although its direct vulnerability to geopolitical tensions remains limited.

Given the essential nature of its activities and its long-term contractual commitments, the Group's performance very much depends on the political, economic and social stability of the regions in which it operates. This exposure mainly takes the form of developments in the national legislative and regulatory framework: substantial changes in the regulations, or their inadequate and unpredictable enforcement by local authorities, can significantly alter the economic balance of the contracts. These developments affect the establishment and revision of tariffs for public services, sometimes preventing the price adjustments necessary to cover operating expenses and to ensure fair compensation for the Group.

Apart from the regulatory framework, other geopolitical factors may jeopardize normal business activities, such as targeted political opposition to international operators, security instability in certain areas of operation, or the rise of national preferences in sectors deemed strategic by governments. These dynamics could hinder the enforcement of contractual provisions, limit access to the renewal of public contracts, or even threaten the future of some positions.

Lastly, in some jurisdictions with fragile or insufficiently independent judicial systems, the Group may face the impossibility of effectively defending its contractual rights or enforcing court decisions in the event of a dispute with local public bodies. This would directly affect the legal security of its investments and the predictability of its long-term income.

Potential effects for the Group

- Challenge of contractual commitments
- Economic balance of contracts compromised
- Time needed to obtain operating permits or authorizations
- Difficulty in gaining new market share
- Decrease in existing market share
- Renewal of municipal contracts
- Decrease in sales volume

Correlated risks

- Risks related to tax developments
- Corruption and business integrity risks
- Risks inherent to changes in energy prices and in the costs of commodities and raw materials
- Risks related to regulatory changes, particularly in the area of health or the environment

Stakeholders

- Society
- Customers
- Employees
- Shareholders

Risk management

The Group's business model is based on diversification across its geographic footprint, financial structure, business models, and contractual models, and is supported by a "Country risk and opportunities" program, prospective analysis, and contractual risk analysis and management, enabling it to proactively manage its exposure to geopolitical and political risks. For example, the Group's contract management processes contribute to the effective application of contractual mechanisms to mitigate the impact of these risks.

The Group has a diversified portfolio and is present in all major geographic areas. Potential operations in new countries are subject to prior in-depth country risk analyses.

Business models are also adopted based on exposure to geopolitical and political risks. In recent years, the Group's development has accelerated in the industrial and service sector markets, which are less exposed to the risks of political and regulatory instability. In its municipal activities, the Group works with local partners to reduce the risks associated with political instability.

In addition, the Group limits the use of its equity in countries with significant risks. The Group may also be required to take out "political risk" insurance coverage depending on the risk profile of the project. Lastly, the Group uses financial de-risking strategies to limit its risk exposure.

Projects are evaluated by considering country risks, in particular on the basis of the country risks program and security framework, in order to inform the Group or Zone engagement committee in decision-making.

The network of international risk managers allows for an assessment of risks and their geopolitical management in the different regions.

The country risk analysis reveals that some countries are more sensitive than others to geopolitical and political tensions. However, these studies show that the impact of risk remains limited, particularly given the Group's local presence and the provision of essential services, two factors that limit the Group's exposure to political and geopolitical risks.

The Group pays close attention to the jurisdiction clauses of all its major contracts. The purpose of these clauses is to designate the competent jurisdiction to settle a dispute with a customer or partner concerning the validity, performance or termination of a contract.

Where possible and warranted by the issues, the Group strives to use dispute resolution forums with strong guarantees of independence and impartiality, such as arbitration. In particular, these forums allow us to avoid the leverage that a customer or partner may exercise in a local jurisdiction.

Risks related to climate change and natural disasters (EXT-02)

Risk identification

Description of the risk

The Group's activities and those of its customers, due to their nature and geographic locations, may be exposed to risks related to climate change. These are likely to increase the frequency and magnitude of natural disasters.

Risks related to climate change, as defined by the TCFD (Task Force for Climate Financial Disclosures), fall into two categories according to their source:

- risks related to the physical impacts of climate change (so-called "physical risks");
- risks related to the transition to a lower-carbon economy (so-called "transition risks").

Physical risks

Climate change results in two kinds of physical events:

- an increase in the frequency and severity of extreme (or "acute") events such as floods, droughts, heat waves, etc. This implies an increase in the risks more traditionally associated with natural disasters;
- long-term shifts in average (or "chronic") weather conditions, that may cause, for example, a rise in sea levels, higher average temperatures, modified seasonal rain patterns or chronic water stress.

The services and assets operated by the Group are exposed to these acute and chronic physical climate risks, which may have operating consequences for all Veolia businesses (service interruption, material damage to infrastructure and equipment, reduced service and treatment quality, higher operating costs, etc.). The physical effects of climate change also alter the working conditions of Group employees involved in outdoor activities, such as during heat waves.

In addition to these operating and human impacts, some of the Group's activities are more particularly sensitive to physical risks. In the water business, in particular, droughts, chronic water stress or turbidity can affect the availability and quality of the resource. They can also adversely affect water production and treatment activities and relationships with local stakeholders. Similarly, the Energy business is highly sensitive to temperature and an increase in average temperatures could reduce the need for heat, leading to a loss in revenue.

Transition risks

Combating climate change requires the transition to a low-carbon economy. While generating significant business opportunities for the Group, this transition may also give rise to a number of risks. These transition risks can take many forms: regulatory, technological, market, reputation.

Note that transition-related IROs are defined in Sections 4.1.2.1.3, 4.1.2.1.4 and 4.1.2.1.5.

The Group plans to build out its identification and analysis of transition risks and opportunities by 2027 to inform the preparation of its next strategic program.

As a combustion plant operator in the Energy business, the Group is particularly exposed to the risks inherent to the greenhouse gas Emissions Trading Scheme (EU ETS) introduced by the European Union in 2005 (see Chapter 1, Section 1.6.2 above and Section 4.1.2.1.6 below). The quantity of free allowances granted and the cost of carbon on this market could generate additional costs.

Potential effects for the Group

- Operational performance of facilities
- Change in production volumes (Water and Energy activities)
- Business continuity of facilities and services
- Group's image

Correlated risks

- Risks related to meteorological effects
- Risks related to regulatory changes, particularly in the area of health or the environment
- Environmental and industrial risks

Stakeholders

- Planet
- Society
- Customers
- Employees
- Shareholders

Risk management

Managing the risk of transition to a low-carbon economy

In 2020, the Group conducted a study on the resilience of its business model and its associated strategy, including two low-carbon transition scenarios (< 2°C) by 2030. This has made it possible to target the risks associated with the transition to a low-carbon economy (e.g. carbon markets, withdrawal from thermal coal, reduction in landfill, heat production, electrification, reduction in certain activities).

Veolia was very quick to adopt an active strategy to manage its greenhouse gas emissions and allowances, by implementing an appropriate structure and creating a special-purpose legal entity to purchase, sell and value different types of greenhouse gas emission allowances.

Management of physical risks related to climate change and natural disasters

Veolia limits the impacts of the risk of natural disasters and the physical impacts of climate change on its results through its climate policy, actions taken (see Chapter 4, Section 4.1.2.1.6 below) and the geographic spread of its operations.

In order to identify the best adaptation strategies, the work to assess operational risks (direct and across the entire value chain) related to climate change is structured at all levels of the organization, around:

- the analysis of the exposure of operating assets;
- understanding the vulnerability of activities;
- identification of adaptation actions and their deployment.

This work is integrated into the Group's existing risk assessment processes and is led at a high level by a dedicated team from the Multifaceted Performance and Sustainable Development Department. It is carried out in coordination with the various head office departments and closely involves local teams (Business Units and operating sites).

Since 2020, Veolia has incorporated the IPCC's climate projections into its strategy, in particular the RCP 8.5 scenario, an overall warming of + 4 °C by 2100.

- In 2020, the Group studied the resilience of its business model. This study was conducted for two physical risk scenarios: RCP 2.6 (2°C scenario) and RCP 8.5 (over 4°C scenario), covering a time horizon that extends to 2030 and 2050. This has made it possible to target and characterize the physical risks associated with climate change for the Group (e.g. increase in average temperature, heat wave, flood, water stress).
- In 2022 and 2023, the Group conducted a global analysis of exposure to physical climate risks at more than 2,000 operating sites. This analysis, based on the RCP 8.5 scenario up to 2030 and 2050, focused on seven types of climate change that could potentially impact the Group. This work, carried out jointly by the departments of Internal Audit, Risk and Insurance and Sustainable Development, has made it possible to identify the Business Units where vulnerability studies and the deployment of action plans are a priority. The operational roll-out of a new exposure tool is planned for 2026, which will allow the study to be updated.

As part of its purpose and Greenup strategic program, Veolia has renewed its commitment to combating climate change. To illustrate this objective, the Group defined two targets, one to reduce GHG emissions, the other to increase avoided or offset GHG emissions thanks to its activities. Veolia also develops resource use models that are more restrained and efficient and primarily founded on circular economy principles.

Through its Energy businesses, the Group allocates a significant share of its investment each year to reducing greenhouse gas emissions. In particular, these investments are designed to modernize the Group's installations, which today are mostly either gas-fired or coal-fired, by transitioning to installations using biomass or combining gas and biomass so as to increase energy recovery and encourage reduced consumption.

- Vulnerability studies are also conducted on site to strengthen understanding of operational risks related to climate change (direct and across the entire value chain). Based on the OCARA framework developed by Carbone 4, these studies contribute to the identification and deployment of targeted adaptation actions. They integrate local projection data. The climate-related hazards, time horizons and projection scenarios (minimum: the RCP 8.5 scenario) are defined according to the specific features and challenges of the site (particular climate risks, contract durations or lifespan of the installations). Since 2022, more than 30 on-site studies have been conducted. These studies, carried out primarily in the geographies most exposed to climate change, now cover the Group's main activities.

Capitalization on the work carried out since 2022 and the expertise of teams contribute to the development of tools or benchmarks such as vulnerability profiles and adaptation solution catalogs, by activity.

In 2024, these tools and frameworks covered:

- drinking water production and distribution;
- wastewater collection and treatment;
- as well as the management of non-hazardous waste (sorting, incineration and landfill).

In 2025, the scope of these benchmarks was expanded to include energy production and distribution, waste collection and hazardous waste treatment. These tools are resources for local entities (Business Units and operating sites) which can identify adaptation measures and implement action plans to strengthen their resilience and that of their customers. They will also serve as a basis for developing a financial quantification method for risks and opportunities, combining analysis of past events with vulnerabilities and short-, medium- and long-term climate projections.

In addition, the residual risk of extreme weather events is transferred to insurance companies via the Damage program. Under this program, some assets are visited by insurance company prevention officers who assess their exposure, in particular, to current natural and climate risks.

Risks related to market changes (EXT-03)

Risk identification

Description of the risk

In a context of changing markets, the Group may face contract losses and difficulties in renewing existing contracts, with a potential loss of profitability. Declines in volume demand could affect the sectors in which the Group operates, which are also at risk of increased competition and lower prices. Thus, in certain mature regions (in Europe for example), we are witnessing a change in household consumption behavior and habits in a bid to reduce energy consumption.

The Group can also face competition risks embodied by large international companies, "niche" companies and companies whose overheads or profitability requirements are lower than those of Veolia (see Chapter 1, Section 1.3.4.2 above). In addition, the desire of certain public authorities to resume the direct management of water or waste services (particularly under management contracts) may lead to the non-renewal of certain contracts.

In this context, the Group could lose market share and find it difficult to win new contracts. The Group may also encounter difficulties developing new services and prices encouraging resource optimization.

Potential effects for the Group

- Decrease in existing market share
- Pressure on the sales price of services
- Difficulty of winning new contracts
- Loss of municipal contracts
- Decrease in sales volume

Correlated risks

- Risks related to skills management and changes in business lines
- Risks related to the selection and integration of acquisitions
- Risks related to climate change and natural disasters

Stakeholders

- Employees
- Shareholders

Risk management

The Group has to carefully select its projects in these traditional business segments, offer innovative business models and steer its activities toward the most dynamic industrial clients and geographies. Its development strategy is based on anticipating and listening to its customers, concentrating on the best development opportunities in each region, innovation and the professionalization of its commercial activities.

The Group is continuing to transform its cost structure in order to boost its competitiveness and counter the risk of increased competition, while limiting the costs of its restructuring. The transformation of its structure and commercial activities has already enabled Veolia to leverage its know-how in certain growth markets where its expertise sets it apart from its competitors and to become a growth partner for its customers. Veolia capitalizes on its experience and multiple global references to provide customers with more innovative and unique offerings.

Its aim is to provide cutting-edge tailored solutions, through offerings based on attractive business models (remuneration based on the performance of its solutions, innovative financing, etc.). The strengthening of the Group's contract management processes contributes to anticipating the need for changing business models and to ensuring the effectiveness of contractual mechanisms aimed at mitigating the impact of risks related to market developments. Veolia's sales and marketing approach is also founded on the creation of industrial partnerships and a network of key account managers, mass roll-out of high-potential offerings, and the development of innovative business models, closely coordinated with the zones and operational teams.

The strategy and innovation department has a development plan to accelerate the Group's growth. Veolia is therefore strengthening and transforming its salesforce and has implemented a GreenUp strategic program, organized around priority targets identified by the Group and high-added-value service offerings, supported by Group research and innovation efforts (see Chapter 1, Section 1.2.1 above).

Economic risks (EXT-04)

Risk identification

Description of the risk

In 2025, the global economic environment remained shrouded in uncertainty. Persistent geopolitical tensions, particularly related to the conflicts in Ukraine and the Middle East, as well as the increased fragmentation of international trade, continue to weigh on market stability, energy costs and supply chains. In addition, several major economies maintained relatively restrictive monetary policies, despite a gradual easing of inflation, holding back investment and the recovery in demand.

Global growth therefore remains moderate with regional disparities. European economies remain penalized by a fragile industrial and energy environment, while the structural slowdown in China's economy, with sluggish domestic demand and persistent tensions in the property sector, continues to affect global trade and commodity flows.

In this context, the economic slowdown witnessed in several regions could impact Group activity, particularly through the decrease in industrial volumes, fluctuations in recycled material prices, increased pressure on customer investments, and a heightened risk of default by certain counterparties. Some of the Group's businesses, particularly Waste-related activities, remain more sensitive to these economic cycles, which could have significant effects on the Group's financial performance.

Potential effects for the Group

- Decrease in investments by customers
- Business continuity of facilities and services placed in jeopardy
- Pressure on the sales price of services
- Decrease in sales volume
- Non-payment or late payment by customers
- Economic balance of contracts compromised

Correlated risks

- Counterparty risks related to operating activities
- Currency risk
- Risks inherent to changes in energy prices and in the costs of commodities and raw materials
- Liquidity risks

Stakeholders

- Society
- Customers
- Employees
- Shareholders

Risk management

The Group's resilience to a global economic slowdown is managed through debt control actions, active management of efficiency efforts, management of investments and Group performance.

Veolia operates in a varied portfolio of activities, business models and regions, which supports its resilience to potential economic shocks. In order to anticipate such economic conditions, initiatives were taken in the context of favorable market conditions.

In the face of current global economic uncertainties, the Group pursued a prudent liquidity management policy in 2025. The Group thus has a commercial paper program capped at €6.5 billion, used in the amount of €5 billion at the end of 2025. It also has a multi-currency syndicated credit facility for a total undrawn amount of €4.5 billion as of December 31, 2025, and bilateral credit facilities for a total undrawn amount of €1.4 billion.

Its gross liquidity is therefore €15.9 billion as of December 31, 2025, (compared with €17.8 billion at end-2024), and net liquidity is €6.9 billion (compared with €8.3 billion at end-2024).

The Group is also continuing its efficiency actions with a strong commitment to savings in the strategic program. Synergies and efficiency levers are anticipated in investment projects. Finally, Capex management and the monitoring of financial performance are ensured through monthly activity reviews between the Business Units and head office.

2.2.2.2 Operational risks (OPE)

Risks related to employee health and safety (OPE-01)

Risk identification

Description of the risk	Potential effects for the Group
Employee health and safety is a priority for the Group.	- Operational performance of facilities - Difficulty in gaining new market share - Business continuity of facilities and services - Group's image
Constant vigilance, particularly with regards to health and safety, is essential, given the range of business sectors, geographic zones and working environments in which Veolia operates.	
The management of employee health and safety is particularly important, considering the labor-intensive requirements of some of the Group's activities, their nature and the wide geographic spread of Veolia's employees in the field (in particular, on public roads and at customer sites).	
As of December 31, 2025, the Group has 215,965 employees worldwide.	
Furthermore, due to our activities, the operating conditions in which our employees work may be detrimental to their health (physical or mental), potentially making the jobs less attractive.	
Despite the Group's specific focus on these issues and regular progress, serious and fatal accidents continue to occur and could potentially increase, accompanied by a rise in the frequency and severity rates of workplace accidents. The upsurge in occupational diseases also remains a risk.	
Correlated risks	
- Security risks for persons and tangible property - Environmental and industrial risks - Risks related to skills management and changes in business lines - Risks related to climate change and natural disasters

Risk management

The Group's most valuable resource and consequently its primary asset is the employees working at Veolia. Sustainably protecting the health and safety of employees, and all service providers, sub-contractors or third-parties present on its sites while protecting customers and communities served by the Group is an absolute priority.

The Health and Safety and Industrial Risk Prevention Policy aims to ensure the physical and mental integrity of people working for or under the control of Veolia. It is "non-negotiable" and is based on a demanding, caring and fair behavioral approach, in accordance with Essentials, Management Behaviors@Veolia and Veolia Cares. This policy is part of a process for continuous improvement in health and safety prevention performance. Health and safety are an integral part of Veolia's Purpose and the GreenUp 2024-2027 strategic program (see chapter 4, section 4.1.3.1.3 below).

In 2023, strategic considerations led to the development of GreenUp's health and safety component:

- strengthening sharing and dynamics in health, and more broadly in well-being, taking into account stakeholders, with increased attention to temporary workers and subcontractors, and anticipating risks such as those related to chemical transition, climate change, as well as those related to Veolia's new business lines (e.g. battery recycling, etc.) and new ways of working (working from home, AI, etc.);
- a metric of Veolia's multifaceted performance: the lost time injury frequency rate (2025 target: 4.3; 2027 target: 4.1).

Veolia's health and safety prevention policy applies, is communicated and is broken down as follows:

- for all levels of the organization: employees, temporary workers and partners of the Group's joint ventures;
- for the Group's subcontractors;
- for all regions where the Group is present;
- for all activities carried out.

The prevention, health and safety policy is supported at the highest level of the undertaking by the Chief Executive Officer, Mrs. Estelle Brachlianoff. It was formalized in a letter committing her and all Executive Committee members. It was updated in September 2024 as part of GreenUp to reflect the new lines of work.

Established in line with the International Labour Organization (ILO) Guidelines and compliant with national regulations and standards, the prevention policy incorporates additional requirements from the Group's best practices and feedback on accidents.

The policy is established by the Group Prevention, Health and Safety Department. The Group Prevention, Health and Safety Department is supported by the Health and Safety Center of Excellence, a body that brings together some 30 international experts from all the Group's geographies and businesses.

Veolia's health and safety policy guidelines are illustrated through five cross-cutting pillars that are reflected in all Group approaches:

- involve the entire managerial line;
- mitigate health and safety risks;
- communicate and discuss;
- train and involve all employees;
- monitor and control health and safety performance.

They are gathered in the "Management guidelines for health and safety at work" which structure and define clear requirements to enable the managerial line to create and implement the continuous improvement plan for each BU, formalized annually in the Health and Safety performance contracts between the management of each BU and the Group's Prevention, Health and Safety Director.

Environmental and industrial risks (OPE-02)

Risk identification

Description of the risk

Veolia can face environmental and industrial risks when operating its installations or those of its customers. The waste treatment sector is particularly exposed to these risks.

Several Group sites in France are classified "Installations Classées pour la Protection de l'Environnement" (ICPE or its equivalent outside France, e.g. IPPC/IED Directive in Europe). Certain Group subsidiaries operate or conduct activities at sites subject to tightened regulations, classified under upper-tier or lower-tier Seveso facilities in Europe or under their foreign equivalent (e.g. Directive 2012/18/EU, known as "Seveso III" in Europe, COMAH in the United Kingdom, OSHA 1910 in the United States, MHF in Australia). These industrial sites are closely monitored by the Group and the competent authorities.

The main environmental and industrial risks to which the Group may be exposed are fire, explosion, machinery breakdown, or the discharge of toxic substances that could impact the installation, employees, local residents and the environment, including biodiversity. The Group may also be exposed to a risk of chronic pollution.

In addition to the financial impacts of damages supported directly by the Group or resulting from business interruption, the Group may be held liable for third-party damages. The Group may have to incur significant expenses to further secure its sites.

Potential effects for the Group

- Group's image
- Loss of municipal contracts
- Difficulty in gaining new market share
- Renewal of municipal or industrial contracts
- Business continuity of facilities and services

Correlated risks

- Risks related to employee health and safety
- Risks related to regulatory changes, particularly in the area of health or the environment
- Risks related to climate change and natural disasters
- Risks related to skills management and changes in business lines

Stakeholders

- Planet
- Society
- Customers
- Employees
- Shareholders

Risk management

Protecting the environment and the health and safety of internal and external stakeholders are central to Veolia's Purpose. The Group therefore ensures compliance across all its installations with regulations and standards and particularly those relating to managing environmental and industrial risks.

In addition, the Group deploys in all its Business Units a Health and Safety and Industrial Risk Prevention Policy, the objective of which is to guarantee the physical and mental integrity of the people working for or under the control of Veolia. It is "non-negotiable" and is based on a demanding, caring and fair behavioral approach, in accordance with the Essentials, Management Behaviors@Veolia and Veolia Cares. This policy is part of a process for continuous improvement in prevention performance. Finally, the prevention of health and safety and industrial risks is an integral part of Veolia's purpose and the GreenUp strategic program.

Faced with the risk of being held entirely or jointly liable with its customers in the event of serious environmental or industrial pollution or accidents, the Group strives to satisfy its own obligations while helping to ensure that its customers do the same. The Group's environmental and industrial risk management policy seeks to:

1. identify and analyze risks (i.e. annual risk mapping of environmental and industrial risks, hazard studies, HAZOP studies, feedback);
2. define, for all high-risk processes, tailored prevention and protection measures using prevention guidelines, drafted by internal technical experts in conjunction with insurance company prevention experts. When designing new installations, technical specifications are sometimes more demanding than current design regulations and/or standards;
3. roll-out action plans at site, Business Unit or Group level. When a major exposure has been identified, global investment plans may be rolled out directly by the Group or in conjunction with the owners (where they retain investment responsibility for installations operated by the Group). For example, a fire prevention and protection plan has been implemented at sorting centers since 2019 (sprinkler systems have been installed at 40 sorting centers since 2019 in France, for a total investment in excess of €25 million).

Additional action plans are currently in progress throughout the world to reduce the Group's exposure to the environmental and industrial risks generated by its liquid and hazardous waste treatment facilities, its solid fuel facilities, its energy recovery facilities and all Group facilities that receive, store or handle hazardous chemical materials or products (e.g. installation and maintenance of pollution prevention systems at these facilities);

4. control and audit residual exposure to these risks, particularly through prevention visits (fire, machinery breakdown) conducted by Group and insurance company experts (around one hundred sites audited on average each year, reflecting a representative sample of the Group's different activities).

The Group has implemented an Environmental & Industrial Management system in all Business Units to manage its environmental performance (see chapter 4, section 4.1.1.5.1 below), with the dual aim of measuring the achievement of their environmental objectives and their exposure to environmental and industrial risks generated by their activities. This framework common to all Group BUs is strengthened locally by environmental and industrial management systems recognized externally: for example ISO 14001 and ISO 50001 certification, Process Safety Management, labels, compliance with contractual commitments.

All environmental and industrial risk prevention actions resulting from the Group policy are deployed in the Group Business Units and coordinated with the various functional departments (Legal, Business Support and Performance, Sustainable Development, Prevention, Health and Safety, Risks and Insurance).

Under the Group Asset Management Strategy, these action plans also include an asset management component for priority sites and operations since 2020. This strategy states that priority sites and operations must have an asset management program clearly aligned with the Group framework, particularly with regard to updating the asset register, work preparation and performance procedures, documentary management processes and spare parts management. The objectives identified for each of these categories become integral components of the site asset management plan. Any deviations identified in these areas from the objectives set by the Group are monitored in corrective action plans. These action plans for priority sites and operations are monitored and reviewed jointly by teams of experts from the Business Units and those of the Group to ensure their progress. Regular audits are also organized.

In conjunction with these audits, reliability centered maintenance plans are deployed for critical equipment, specifically to avoid machine breakdowns and ensure business continuity. Internal training sessions are available to help the Group Business Units take ownership of these methods. They allow preventive measures to be defined, from on-site management of spare parts inventory to back-up stock (to limit periods of immobilization), or the installation of redundancy or back-up equipment (to ensure the operation of the most critical systems even in the event of equipment breakdown).

The activities also benefit from the support of the Strategy and Innovation Department and Veolia Environnement's office in Brussels, which monitors changes in regulation. When the Group provides services at a "Seveso" site or its foreign equivalent, it complies with the different health and safety measures implemented at these sites.

Group employees are required to undergo mandatory training and participate in Health, Safety and Working Conditions Committee meetings at industrial customers' sites and comply with the Major Accident Prevention Policies (MAPP) implemented by its customers. Seveso facilities are also subject to specific internal measures that seek to prevent accidents and protect employees, the public and the environment. In addition to MAPPs, Internal Emergency Plans (IEP) also apply to these facilities, as well as emergency response measures coordinated with public authorities in the event of an incident (Emergency Response Plans, ERP).

Finally, the Group transfers the residual risk to insurance companies by taking out insurance policies covering these risks (property damage and business continuity policy, third-party liability policy (see section 2.1.6 above).

A steering committee (Prevention Committee) comprising Group Executive Committee members is responsible for periodically monitoring these action plans, facilitates their implementation, and updates the Group's residual exposure to these risks as the plans advance.

Cybersecurity risks (OPE-03)

Risk identification

Description of the risk

The protection of the Group's tangible property, intangible property and information systems is subject to extremely strict constraints and particularly regulatory constraints, which could expose a Group company to liability. The Group may be the target of cyberattacks targeting its assets, due to the nature of its activities (Water, Waste and Energy) and its geographic locations.

These risks may have a decisive impact on the continuity of its activities and for several stakeholders. In particular, the drinking water sector is an activity of vital importance due to the related public health considerations.

Information systems are indispensable tools for carrying out the Group's operating activities and managing its functional departments (Finance, Human Resources, etc.). Information system downtime resulting from a disaster or a malicious act involving one or more of its information systems could have major consequences for the quality or even the continuity of the service delivered and for the availability, integrity and confidential and strategic nature of the data hosted by the Group, and could thus potentially have an impact on the activity of its customers.

The deterioration of the international security environment and the proliferation of cyber attacks facilitated by new information and communication technologies, such as generative artificial intelligence, amplify the risks associated with cybersecurity.

Potential effects for the Group

- Operational performance of facilities
- Business continuity of facilities and services
- Data leakage, loss, theft
- Group's image

Correlated risks

- Environmental and industrial risks
- Geopolitical and political risks
- Risks related to regulatory changes particularly in the area of health or the environment

Stakeholders

- Society
- Customers
- Employees
- Shareholders

Risk management

Due to the nature of its businesses and the scope and diversity of its sites, the Group is exposed to sophisticated cyberthreats targeting its information systems, its sensitive data, and the continuity of its operations; it therefore pays close attention to these risks.

Cybersecurity management within the Security Department

The primary roles of the Security Department are to avert security threats potentially affecting the Group and its employees and to manage violations possibly impacting employees, tangible and intangible property and securities of the Group in France and abroad. It joins the Cybersecurity Department, responsible for protecting the Group's information systems (OT and IT) and data against cyberthreats. The Security Department is responsible for coordinating crisis management and whistleblowing systems. It provides advice and assistance to country managers on issues related to security and cybersecurity within the framework of current laws and regulations. The organization of crisis management at Veolia revolves around two separate but complementary arrangements that come together to deal rapidly and efficiently with any deteriorated or critical situation that the Company or its entities may encounter, particularly for cybersecurity events.

A whistleblowing system that operates 24 hours a day and is deployed across all the Group's locations, escalates information quickly up the line to the Company's Executive Management on any critical or sensitive situation. This process is updated regularly, primarily to take account of changes in the Group's organizational structure. It then moves into crisis management mode and, if the situation is critical enough, operational cells can be quickly mobilized bringing together all the necessary functional skills and the departments concerned (including the Cybersecurity Department in the event of a cyber incident). This process is constantly refined on the basis of feedback and post-crisis evaluations of each of the situations that have been managed.

In order to prepare the BUs for crisis management, exercises are regularly organized by the Security Department for BU Management Committees. They use immersive, realistic scenarios to test procedures, improve coordination and decision-making under pressure, and develop the necessary reflexes to react quickly in the event of a crisis.

Cybersecurity governance and organization

A cyber security governance has been implemented since 2013. Led by the Cybersecurity Director, a member of the Group Security Department and in conjunction with the Group's headquarters and local management, it also relies on a network of local correspondents. There are cybersecurity managers in all the countries where the Group is present, responsible for implementing the cybersecurity directive issued by the Cybersecurity Director. These correspondents are the main contacts locally for cybersecurity issues, internally (with operational functions and support) and externally with local government agencies involved in cybersecurity activities (e.g. to share, retrieve best practices, alerts and feedback, etc.). The Group's cybersecurity strategy is based on a normative framework with risk reduction and Group business resilience objectives. Veolia cooperates and shares cybersecurity information with the relevant government agencies. Its head office works with the ANSSI (*Agence nationale de la sécurité des systèmes d'information* – the French national cybersecurity agency), while local business units liaise with their respective national cybersecurity agencies.

At Group level, the Cybersecurity Steering Committee validates and monitors the implementation of the cybersecurity directive. It meets once a month, chaired by the Group's General Counsel and brings together the central departments (finance, risk and insurance, internal control, technical, safety, information systems) and the Cybersecurity Officer. The General Counsel, Security Director and the Cybersecurity Director report twice a year to the Group Executive Committee and the Audit and Accounts Committee of the Board of Directors to present the Group's roadmap with regard to risks, the cybersecurity strategy and the follow-up of the actions implemented. During these committees, metrics are shared to track phishing campaigns and cyber crisis exercises, alerts from monitoring and supervision services, the program to secure industrial sites, vulnerabilities identified during intrusion tests and vulnerability scans, the evolution of the cyber maturity of the BUs and the cybersecurity budget.

In order to integrate the emergence of risks relating to increasingly connected industrial environments, the Cybersecurity Officer facilitates, together with the Business Support and Performance Director and the Information Systems Director, the Top Critical Industrial Sites program. The objective of this program is to secure the 100 most critical plants in order to protect them to the maximum extent, through support, tools and monitoring. These sites have been identified through a risk-based approach, and their evolution is tracked through a dashboard. This program also responds to geopolitical threats and regulatory developments, such as the NIS2 Directive and the equivalents in other regions.

In response to the resurgence of cyberattacks, including ransomware attacks, measures for detection and protection of information systems were supported by Endpoint Detection and Response (EDR) and other cyber defense tools. This is accompanied by a 24/7, global Security Operation Center (SOC) system, managed by the Group's Cybersecurity Department and implemented within the BUs, which includes support for industrial incident response, and the Computer Emergency Response Team (CERT), which allows for broader and faster identification and resolution of cyber threats and attempts. This was done within the framework of the cyber defense organization already in place, with several measures, such as: continuous 24/7 monitoring of cybersecurity threats (for example, CTI), the cybersecurity alert, incident and crisis process, a security team trained and competent in information technology and operational technologies (for example, plants), ensuring Veolia has the ability to respond to cyberattack emergencies. These detection and prevention measures run in parallel with the preparation of business continuity plans, including the management of cybersecurity events.

Cybersecurity policies, including for the industrial sector, are implemented in all Veolia entities under the supervision of the Cybersecurity Director and local cybersecurity managers. These ensure the protection and integrity of data and the ongoing improvement in the security of our systems. To control the application of these policies, annual self-assessments, cross-checks, security reviews and internal audit missions are carried out on the basis of an internal cybersecurity repository called "Fix the basics" in all entities.

In addition, audit and assistance missions are carried out by internal or external experts in accordance with international standards (e.g.: ISO, NIST) in the highest risk entities and on the most exposed systems. Action plans approved and validated by the Information Systems Department and the BU director are then defined and implemented. Monitoring and Assistance missions are organized every year to help low-maturity BUs and facilitate the deployment of best cybersecurity practice. The resulting action plans are presented to and monitored by the cybersecurity steering committee. In addition, several Group entities are certified ISO 27001, or equivalent. Regular campaigns for risk analysis and information system technical audits are organized annually locally by BU and supplemented by the Group cybersecurity department or external experts: vulnerability scans, cyber technical audits, intrusion tests and bug bounty campaigns. As part of our overall risk management strategy, we are also implementing a rigorous process for assessing the cybersecurity of our suppliers and analyzing vulnerabilities. This is to ensure the integrity and security of our supply chain.

The cybersecurity roadmap is supplemented by cyber awareness-raising initiatives and training actions, to support users and IT and OT experts across the Group in the implementation of IT hygiene and cybersecurity rules. An awareness-raising program for all employees and a training program for certain specific functions have been defined. These serve as a reminder of individual responsibilities in the face of cybersecurity threats. These actions are carried out through IT charters disseminating information on best practices in cybersecurity and specific actions, such as specific events during the European Cybersecurity month created by the European Union Agency for Cybersecurity (ENISA) (in October of each year). Awareness-raising and e-learning training sessions are regularly provided and updated. Phishing campaigns are carried out each month to test employees' cybersecurity reflexes in a fun way, particularly identification and reporting. Finally, cybersecurity crisis exercises are carried out annually to train management, IT and OT actors, and cybersecurity experts and to test the incident and activity recovery procedures.

Risks related to innovation and digital transformation (OPE-04)

Risk identification

Description of the risk	Potential effects for the Group
Risks related to innovation and Research & Development The Group operates in constantly changing markets (decarbonization, decontamination, wastewater treatment, battery recycling, bioenergy). Technological agility and our business models have become key differentiators. The main risk lies in the inability to anticipate technological developments or to predict structural market trends in order to adapt the innovation and R&D roadmap to keep up with the market. Insufficient investment or slow time-to-market of new solutions (especially those related to strategic boosters) would create a gap between the Group's offering and customers' expectations. This delay would result in a lack of differentiation and a significant loss of competitiveness and profitability, placing the Group at a competitive disadvantage. The growth strategy is based on the ability to quickly standardize and replicate complex innovations across different geographies ("Copy & adapt" approach). The Group is exposed to the risk of being unable to scale up its industrial operations profitably, which could hinder the widespread roll-out of the solutions developed. In addition, with a portfolio of critical technologies, the Group is exposed to the theft of know-how or the inability to protect its intellectual property rights (patents, trade secrets), which could erode its long-term competitive advantage.	• Loss of competitiveness and market share • Regulatory and financial sanctions • Operational inefficiency • Damage to the Group's reputation
	Correlated risks • Risks related to market changes • Risks related to skills management and changes in business lines • Transformation risks related to multifaceted performance
	Stakeholders • Society • Customers • Employees • Shareholders
Risks related to data management Data is the bedrock of environmental performance and operational efficiency. The increasing volume and complexity of data (nature, availability, security and quality) could compromise the relevance of decision-making and the operational optimization of infrastructure and tools. Any failure to structure and govern data would hamper innovation by preventing the Group from exploiting the full potential of the data-driven technologies needed to offer high-added-value services to its customers. The Group must address the growing issues of data sovereignty, location and residency. Failure to do so could result in severe regulatory penalties and lasting reputational damage. Lastly, the increasing use of artificial intelligence systems, particularly via external platforms, amplifies the security risks: unauthorized access, sensitive data leaks or accidental exposure of confidential information when training or using AI models could compromise the Group's competitiveness and render it legally liable.	Risk related to the adoption and societal acceptability of innovation Technological innovation, however efficient it may be, can only generate value if it is adopted by our stakeholders – our employees who operate it and/or our customers and the end users who benefit from it – and is accepted by society. The Group faces the risk of rejection or resistance to certain innovations, including wastewater reuse, service digitalization or process automation. These reservations may stem from health, environmental, cultural or social concerns, which are often exacerbated by a lack of communication or information. Lack of acceptability would hamper the commercial roll-out of strategic solutions, limiting their impact and profitability. For example, many regions still experience significant psychological barriers to reusing treated wastewater for the irrigation of farmland or green spaces, or for certain industrial applications. Despite stringent health regulations and advanced treatment technologies that ensure normal water quality, some local decision-makers and segments of the public have expressed concerns due to the perceived health risk, "yuck factor" or unfounded fears of contamination. Such resistance may prevent the Group from obtaining operating permits, delay strategic projects or limit access to growth markets in water-stressed areas. Without a proactive strategy of communication, transparency and engagement with local communities, authorities and customers, the Group risks seeing its R&D investments in treated wastewater reuse underexploited, thereby compromising its contribution to water security and its growth in this future segment. In addition, the digital transformation and increasing automation of operations and support functions may raise concerns among our employees (fear of job losses, loss of direction and meaning at work, transformation of processes and relationships), requiring extensive and ongoing change management support across the Group. The inability to anticipate and manage these social and societal aspects could expose the Group to the risks of operational disruption and industrial conflict, undermining its image with stakeholders.
Risk associated with partnerships and "Make or Buy" The Group relies on an ecosystem of technological, academic and industrial partners to drive innovation and tap additional expertise. The major risk lies in strategic "make-or-buy" decisions: excessive insourcing could commit significant resources without securing a lasting competitive advantage, whereas poorly managed outsourcing would expose the Group to critical dependence on external partners. The failure of a key partner, the termination of a strategic agreement or the inability to contractually secure intellectual property rights in the context of co-development could significantly delay the roll-out of innovative solutions. In addition, poor coordination with partners during the industrialization phase (technology transfer, ramp-up) could compromise quality, costs and time-to-market, directly affecting the Group's competitiveness. In addition, excessive dependence on external technology providers (cloud, proprietary AI solutions, critical platforms, start-ups) could erode the Group's decision-making and operational autonomy, particularly if those providers amend their terms of business, suspend their services or fail to comply with the necessary security and sovereignty standards.	

Description of the risk

Risks related to artificial intelligence (AI) and technological developments

Generative AI is a key driver of productivity and differentiation. The risk lies in the pace of adoption and the technological and ethical oversight. Belated or insufficient integration of AI into offerings and internal processes would place the Group at a disadvantage compared with competitors able to capture productivity gains more quickly and improve the customer experience.

The use of AI introduces specific risks linked to the reliability of the models: algorithmic bias, hallucinations or non-transparent use could lead to questionable operational outcomes (e.g. autonomous or semi-autonomous plant management) or discrimination, rendering the Group liable and harming its reputation.

The roll-out of AI must adapt to emerging legislative frameworks, such as the EU AI Act. Failure to comply with such legislation could expose the Group to heavy financial penalties and the obligation to suspend certain services.

Lastly, the environmental footprint of technological innovations, including the energy consumption of AI systems and digital infrastructures, must be kept in check to ensure consistency with the Group's climate commitments.

Risk management

Risk management related to innovation is based on four key areas:

1. Governance and strategic management

- Group-level Innovation & Technology Committee to decide on R&D investments and monitor time-to-market
- AI governance: AI for GreenUp program, including the committee process, procedures and documentation, defining an overarching collaborative framework on the use and roll-out of generative and agentic AI within the Group
- Data governance: Group policy on quality, sovereignty, location and security, with regular audits of AI systems
- Code of ethics for AI use and proactive compliance with the EU AI Act (AI Pledge signed in February 2025)

2. Protection and security

- Enhanced patent filing and protection policy for critical technologies (e.g. high-performance refractory tiles, recycling processes)
- Reliability testing and detection of algorithmic bias before the operational roll-out of AI systems
- Optimization of the energy footprint of AI infrastructures to ensure consistency with decarbonization objectives

3. Support for transformation and skills development

- Network of 1,500 AI champions, trained and deployed in all geographic zones for acculturation and field support
- Continuous training programs: Innov'Academy (6,250 participants in the "Innovation Passport" program), integration of AI modules into leadership programs
- Transparent communication strategies on sensitive innovations (e.g. the DECIDEIX project in Spain on the direct reuse of drinking water) and proactive engagement with local stakeholders

4. Monitoring, anticipation and industrialization

- Active participation in innovation ecosystems: 25 European research consortia, strategic partnerships (CNRS, CEA, BRGM, AFD); closer links with leading academic players in areas of interest to the Group; support from Critical Academic Friends to obtain advice and guidance on innovation strategy
- Standardized "Copy & Adapt" methodology with capitalization of feedback between geographies (e.g. industrial roll-out of Cella™ in Denmark)
- Industrial pilots and/or implementation of process modeling tools before large-scale deployment (e.g. CO₂ capture demonstrator in Le Mans, low-carbon hydrogen production in Hong Kong)

This structured approach enables Veolia to manage innovation risks while accelerating the ecological transformation and creating sustainable value for all stakeholders.

Risks of skills management and changes in business lines (OPE-05)

Risk identification

Description of the risk	Potential effects for the Group
In 2024, with the launch of its new GreenUp strategic program, the Group identified fundamental issues related to decarbonization, decontamination and regeneration. To meet these challenges, Veolia offers innovative solutions and service offerings around health, new pollutants, new material loops, water resources and the reduction of the carbon impact of its customers (see Chapter 1, Section 1.2.2 above). Due to their strong potential for innovation, these fields are particularly subject to automation, digitization, the use of artificial intelligence, but also to the adaptation of certain skills. With a view to positioning itself as an effective and differentiated player in these areas, Veolia must continue to evolve and transform itself in relation to its sector of activity. This is particularly the case with regard to the skills of its employees. Veolia may struggle to recruit or retain the staff necessary to implement the transformations planned under the GreenUp program. This could lead to difficulties in honoring the contractual commitments made locally to our customers. Lastly, the Group may be unable to mobilize the skills needed to implement complex, large-scale projects.	• Difficulty in gaining new market share • Competitive pressure from certain sectors • Operational performance of facilities • Group's image
	Correlated risks • Risks related to innovation and the digital transition • Risks related to market changes
	Stakeholders • Planet • Society • Customers • Employees • Shareholders

Risk management

The Group has set up a strategic program, GreenUp, in connection with the definition of new expertise and skills requirements for its new development challenges.

In a context of rapid change in business lines and subsequent working methods, Veolia has strengthened its ability to anticipate and analyze emerging businesses, particularly under the GreenUp strategic program, and the new skills needed to support the roll-out of innovations.

In addition to this analytical work, the Group is strengthening its network of partnerships with companies in the industrial and service sectors, to identify innovative solutions to support the development of its business lines.

In addition, the role of the Human Resources Department is to define and promote the Group's policies relating to mobility, career management, and talent identification and management at all of the Group's establishments.

Veolia strives to attract, train, develop and retain its staff at all levels of qualification and in all areas of employment in which it operates.

Through training, Veolia ensures that its employees, the vast majority of whom are manual workers and technicians, develop their skills. Veolia believes in the responsibility and autonomy of its employees at all levels of the organization and in all countries. This is why the Group has made a commitment to increase its training efforts with a target of 30 hours training on average per employee by 2027.

In a context of rapid changes in work techniques and organizations, Veolia ensures that there is a balance between the skills and expertise available and those needed in new business lines. This forms part of the provisional management policy for jobs and careers, in particular for the industrial market.

An agreement on the forward-looking management of jobs and skills was signed in 2017 with all representative trade unions for France. For Europe, this took the form of a letter of commitment, signed by the Group European Works Council in 2018 (amended in 2021), on changes in the business lines and skills. The two agreements set out the approach to skills development in view of the Company's strategic priorities.

Through these agreements, Veolia focuses on anticipating changes in its businesses in line with the Group's transformation, supporting and encouraging career development and offering the right training solutions.

Veolia decided to update these agreements with the opening of negotiations on jobs and career management in 2026. Changes in the business lines, skills and organization are built around the GreenUp plan. The challenges of the digital and environmental transformation are also addressed each year by the joint committee on strategic direction (consisting of employee and trade union representatives from the Group's European and French Works Councils) to define an action plan and the necessary support.

In addition, the rapid roll-out of artificial intelligence, particularly generative AI, requires a shift in workplace culture, including within the regulatory framework of the countries concerned (EU AI Act), coupled with a training plan aimed at proponents of AI use cases. AI governance has been set up to support the roll-out of AI, ensuring that human decision-making remains intact and that users' skills are maintained and developed.

In addition, the Group's Learning Department offers a training program (see Chapter 4, Section 4.1.3.1.4.1 below):

- supporting digital, data and AI literacy through a series of tailored solutions (e-learning, workshops, talks) and the facilitation of a network of AI champions within all BUs;
- developing strategic skills for the Group through Business Line Academies (Energy Academy, Water Academy, Hazardous Waste Academy, Waste Academy, etc.) and cross-functional academies (sales and marketing, project management, innovation, digital, finance, human resources): the academies deliver new programs on hazardous waste and decarbonization, for example;

- strengthening Veolia's management culture and ownership of the GreenUp strategic plan, and supporting the ecological transformation (particularly through the ecological transformation fresk, the 2 tonnes workshop, the e-learning module on planetary boundaries, the Unlock Local Energies program, a workshop to learn more about the different decarbonized energy solutions available in a region, and more than 20 e-learning pathways in partnership with Climate School);

- accompanying changes in the businesses: energy solutions in the water and waste businesses, bioconversion, sustainable procurement, green finance, etc.

The Group's considerable efforts in the area of talent management (identification, dedicated training programs, roll-out of the Management Behaviors@Veolia guidelines, manager engagement survey), and commitments to diversity and internationalization serve to strengthen the loyalty and professionalism of Group talents (see Chapter 4, Section 4.1.3.1.4 below).

Lastly, Veolia has a comprehensive compensation policy that considers all aspects, including compensation, welfare benefits, employee share ownership, employee savings and retirement. It is supplemented by the Veolia Cares employee benefit program, expanded to all geographies since 2023, which makes the Company more attractive and is a source of pride for existing and future employees.

Purchasing, supply and logistics risks (OPE-06)

Risk identification

Description of the risk

Given the extensive coverage of its activities and its necessarily global supply chain, the Group may encounter difficulties in obtaining the energy, equipment, consumables, commodities or services necessary to ensure the continuity of its activities.

The Group can be faced with a shortage of critical products and materials for procurement categories under pressure.

Certain procurement categories may be considered critical due to the limited number of suppliers available, which can affect the prices and/or availability of these products.

The supply chain is also subject to many external hazards (geopolitical, political, climate, etc.) that could result in a service interruption in our businesses and/or delays.

Potential effects for the Group

- Difficulty in ensuring business continuity
- The Group's image, compliance with regulations and operational performance
- The deterioration of the Group's financial performance

Correlated risks

- Economic risks
- Geopolitical and political risks
- Risks inherent to changes in energy prices and in the costs of commodities and raw materials

Risk management

The procurement function has sourcing and risk management procedures that allow, among other things, high-risk procurement categories to be identified. The processes defined therein, in particular Category Management, allow the Group's exposure to business interruption risks to be limited.

To limit dependency on critical suppliers and ensure continuity of supply, each procurement structure (local or global) implements procurement strategies for the categories for which it is responsible. These strategies are based on the Group Category Management policy and are adapted to the specific characteristics of each of the procurement categories (identification of needs, supplier market, geopolitical context, etc.). To ensure continuity of service, the entities implement locally appropriate inventory policies for the product categories that require it.

In addition, the Group relies on a structured sourcing process that sets out the tendering rules and includes a risk identification and management stage. If the risk of continuity of supply is critical during this process, the purchasing team puts in place the appropriate action plans, such as finding alternative suppliers.

Furthermore, during the tender phase, the main critical risks to which the Group is exposed are analyzed. These are:

- compliance risks (ethics, fraud, competition, sanctions, regulatory compliance, etc.),
- risks related to corporate social and environmental responsibility (human rights, health & safety, environment),
- financial risks (solvency, dependence, inflation),
- operational risks (continuity of supply, quality, geopolitics, IT and cybersecurity).

Security risks for persons and tangible property (OPE-07)

Risk identification

Description of the risk

The security of Veolia's employees and tangible property remains a major challenge, requiring appropriate protective measures to be taken in order to comply with regulations.

The scope of activities, particularly on the international scene, exposes the company and its employees to a multitude of risks of malicious actions.

Infrastructure and equipment are exposed to risks of malicious or even terrorist acts due to the critical nature of the services provided (Water, Waste and Energy) and potentially the geographic location of the sites.

In parallel, for business travelers or expatriate employees, occupational risks are potentially multiplied: health risks, physical attacks, theft, kidnapping and, more generally, workplace accidents or transport.

The response to these risks is multifaceted.

Employee security is based on Article L. 4121-1 of the French Labor Code: "The employer takes the necessary measures to ensure the safety and to protect the physical and mental health of workers". These are actions to prevent occupational risks and/or disseminate information, as well as the establishment of appropriate organization and resources. Although the geographical scope of these texts is not specified, some case law fills this gap.

Due to the nature of their projects, Veolia employees are driven to work or travel to areas where political, geopolitical, economic or social instability can expose them to dangers such as crime, terrorism or other forms of violence. The overall deterioration of the security climate on the international scene, coupled with the proliferation of misinformation and media threats (facilitated by the evolution of communication technologies, particularly social media), increases the risks to employee safety.

Faced with these challenges, Veolia must implement protection measures.

The objective is to ensure employee safety while allowing the company to continue its activities in complex and sometimes hostile environments.

Potential effects for the Group

- Group's image
- Business continuity of facilities and services
- Loss of market share in sensitive zones

Correlated risks

- Geopolitical and political risks
- Risks related to employee health and safety
- Environmental and industrial risks

Stakeholders

- Employees
- Society
- Shareholders

Risk management

The Group's Security Department monitors the evolution of the geopolitical and security situations of countries on a global scale. It analyzes security conditions in depth and focuses particularly on high-risk areas where Group entities operate. This vigilance is reflected in the establishment of a monthly classification of countries at risk which dictates the instructions regarding protection and vigilance measures in respect of business travel.

A specific procedure applies to travel in sensitive areas. For the most critical destinations, the Security Department individually evaluates each travel request, providing recommendations tailored to the local context, type of assignment and employee profile. If necessary, it may refuse travel permission if it considers the security conditions inadequate.

E-learning is available to help employees learn about best practices in prevention and protection when traveling to high-risk countries. This is mandatory for the countries most at risk and recommended for others.

In 2025, 2,996 travel requests were processed.

Face-to-face training sessions can also be provided depending on the specific needs of the teams and the duration of assignments.

A whistleblowing system that operates 24 hours a day and is deployed across all the Group's locations, escalates information quickly up the line to the Company's Executive Management on any critical or sensitive situation. This process is updated regularly, primarily to take account of changes in the Group's organizational structure. It then moves into crisis management mode and, if the situation is critical enough, operational cells can be quickly mobilized bringing together all the necessary functional skills and the departments concerned.

Predetermined objective criteria are used to assess the seriousness of the situation. This process is constantly refined on the basis of feedback and post-crisis evaluations of each of the situations that have been managed.

In order to prepare the BUs for crisis management, exercises are regularly organized by the Security Department for BU Management Committees. They use immersive, realistic scenarios to test procedures, improve coordination and decision-making under pressure, and develop the necessary reflexes to react quickly in the event of a crisis.

Security plans are drawn up for the most sensitive countries where the Group operates, to facilitate the Group's responsiveness and that of local staff in the event of a crisis. A local security correspondent acts as a point of contact between the central management and the teams or staff on site. Upstream of projects in high-risk areas, the Security Department assesses and budgets the necessary security measures, thus ensuring a proactive approach to risk management.

This global strategy aims to create a safe working environment and enable the Group to continue its international activities by limiting exposure to risks for its employees.

Transformation risks related to multifaceted performance (OPE-08)

Risk identification

Description of the risk	Potential effects for the Group
As part of the implementation of its GreenUp strategic program, the Group adopted an ambitious multifaceted performance plan aligned with its Purpose. This multifaceted performance is founded on five performance pillars: human resources performance, corporate social performance, environmental performance, commercial performance and economic and financial performance.	• Group's image
A commitment is associated with each performance and broken down into objectives, with quantified metrics for 2027. In total, there are 15 objectives, 15 metrics and 15 targets that the Group must reach by 2027. The attainment of these targets is subject to the Group's ability to transform its organization and internal operating methods and processes. Applying the same level of requirement to the five performance pillars by 2027 is challenging for the Group. In addition, constant stakeholder engagement is a major factor in helping them appropriate these multifaceted performance principles. Failure to achieve the multifaceted performance targets could negatively affect the Group's credibility in deploying its Purpose, damaging its image with stakeholders and weakening employee commitment.	Correlated risks • Risks related to the selection and integration of acquisitions • Risks related to skills management and changes in business lines • Risks related to climate change and natural disasters Stakeholders • Planet • Society • Customers • Employees • Shareholders

Risk management

To address its 2027 strategic challenges and, in particular, its multifaceted performance commitments, the Group implemented a management system at the highest level of the organization and launched a campaign for the appropriation of its Purpose and multifaceted performance challenges by all Group employees.

This system is supported by:

- the Board of Directors, which controls the proper implementation of the GreenUp strategic program;
- a Purpose Committee, created in 2021;
- the Group's Executive Committee, which is responsible for its monitoring;
- the ESG Committee, which ensures that these points are taken into account in the list of material IROs;
- the Strategy and Innovation Department, which steers Veolia's strategy with a multifaceted performance approach, aligned with the Group's Purpose;

- a two-person team comprising an Executive Committee sponsor and a Group "Objective Officer", responsible for steering each multifaceted performance objective;
- a network of Purpose Officers in the BUs, supporting managers and accelerating the roll-out of Veolia's Purpose and multifaceted performance in their entities;
- a bonus policy aligned with objectives for 25,000 Group managers.

Risks related to the selection and integration of acquisitions (OPE-09)

Risk identification

Description of the risk

The Group develops through both organic growth and external growth through acquisitions. In this context, it may acquire companies that are over-valued that could subsequently generate asset impairment.

Furthermore, the operational performance of companies acquired could also deviate from forecasts.

Finally, these acquisitions could encounter some difficulties in implementing expected synergies, in particular during the employee integration phase, the realization of savings from the pooling of purchases or the implementation of common information systems.

Potential effects for the Group

- Asset impairment
- Difficulty in gaining new market share
- Competitive pressure from certain sectors
- Operational performance of facilities

Correlated risks

- Risks related to skills management and changes in business lines
- Cybersecurity risks
- Security risks for persons and tangible property
- Risks related to market changes

Stakeholders

- Society
- Customers
- Employees
- Shareholders

Risk management

The Group is implementing an integrated acquisition strategy and is strengthening its system for selecting and integrating acquisitions (procedures, training, etc.).

The merger and acquisition process is part of the Group strategic approach. The relevant BU performs a detailed analysis of each acquisition project from both a strategic, commercial and financial point of view. Acquisition projects are reviewed and approved by the Country, Zone and Group Commitment Committees according to financial thresholds and particularly investment thresholds. These projects are subject to systematic, comprehensive review (strategic, technical, operational, financial, legal, human resources, compliance, etc.) in which all risks and opportunities are analyzed and assessed. Business development procedures have been strengthened to detail acquisition procedures, both upstream and downstream.

In addition, a procedure for integrating acquisitions and post-acquisition follow-up has been established and published on the Group's Intranet and is included in the Group's Essential guidelines. Post-acquisition audits are carried out to enable better monitoring of projects approved by the Commitment Committees and to encourage the sharing of experience within the Group. For projects that do not meet the objectives of the initial business plan, action plans are drawn up and new investments are deferred in the Business Unit concerned. The sharing of these practices within the community of development directors contributes to the appropriation of acquisition-related issues by operational teams in the upstream and downstream phases of acquisitions.

Veolia Suez merger

The Veolia and Suez merger completed in 2022 was a success, with synergies realized in many areas. The excellent implementation of the Suez merger demonstrates Veolia's ability to integrate acquisitions and even very large acquisitions. In particular, the 2023 and 2024 Voice of Resources barometers showed a high level of commitment among employees from all origins, and subscription rates to employee share ownership transactions are also a sign of confidence in the Group's future.

2.2.2.3 Financial risks (FIN)

Risks inherent to changes in energy prices and in the costs of commodities and raw materials (FIN-01)

Risk identification

Description of the risk

Purchases of energy, commodities and raw materials represent a major operating expense in the Group's activities.

In particular:

- coal, gas and biomass for energy service activities;
- electricity for water treatment and distribution activities;
- diesel for waste collection activities;
- Broadly speaking, the fall in prices that began in 2024 continued in 2025, despite some fluctuations, often due to geopolitical events.

Group contracts generally contain indexing mechanisms. However, these mechanisms do not always enable these costs to be covered (existence of time lags between price increases and the moment the Group is authorized to increase its prices to cover its additional costs or an inappropriate update formula given the cost structure, including taxes). Any steady increase in purchase prices and/or taxes could, by increasing costs and reducing profitability, undermine the Group's activities, insofar as it would be unable to increase its prices sufficiently to cover such additional costs.

The sorting, recycling and trading activities are particularly exposed to changes in the price of secondary raw materials (paper, plastic, scrap and non-ferrous metals). A significant and long-term drop in the price of these secondary raw materials, potentially combined with the impact of the economic environment on volumes, could affect the Group's results.

Group activities also include electricity production in Central Europe, Asia, Germany, the United Kingdom and France. A significant portion of these sales concerns "waste" energy production, co-generated with heat. The Group is also exposed to price volatility in the electricity market and price changes imposed by the regulator, in countries where the price of electricity is regulated. A significant long-term decline in the market price of electricity in these countries could therefore impact the Group's results.

For further information, please refer to chapter 6.1, note 8.3.1.3 to the consolidated financial statements below.

Potential effects for the Group

- Economic balance of contracts compromised
- Change in consumption volumes (Water and Energy activities)

Correlated risks

- Economic risks
- Risks related to market changes
- Geopolitical and political risks
- Risk related to tax developments
- Purchasing, supply and logistics risks

Stakeholders

- Society
- Customers
- Shareholders

Risk management

Most contracts have clauses, including indexation formulas, that allow any changes in the price of energy, commodities and raw materials to be passed on.

The Group has a raw materials risk management policy, which aims to establish a progressive hedge over three years (where possible) in order to limit results volatility; these hedges may take the form of market derivatives. For global procurement contracts most exposed to changes in energy prices and in the costs of commodities and raw materials, the procurement department negotiates update formula with suppliers, enabling a rational adjustment of prices and the sharing of risks.

Most of the contracts entered into by the Group companies include clauses aimed at passing on any fluctuations in energy, commodity and secondary raw material prices to the Group's revenue sources, particularly by means of indexation formulas. Furthermore, in certain countries and for certain energy sources, the supply of energy may be covered by long-term supply contracts.

Counterparty risks related to operating activities (FIN-02)

Risk identification

Description of the risk	Potential effects for the Group
The Group's financial and operating activities expose it to the risks of failure of its counterparties (customers, suppliers, partners, intermediaries, banks).	• Non-payment or late payment by customers • Economic balance of contracts compromised • Decrease in investments by customers
Counterparty risk can arise at the time of payment or delivery of the services and supplies purchased. It can also concern losses on assets, such as financial investments or the bankruptcy of a customer or supplier.	Correlated risks • Economic risks • Geopolitical and political risks
Finally, counterparty risk is the risk that a Group entity is unable to respect its financial commitments (debt repayment, breach of guarantees, offset under a derivative transaction, etc.). See chapter 5.3, Financing, below.	Stakeholders • Society • Customers • Shareholders
The economic and geopolitical environment in which the Group is currently operating is a major risk factor.	

Risk management

The Group anticipates the occurrence of counterparty risks related to its operating activities by assessing potential volumes of receivables.

The Group carries out an upstream analysis of the creditworthiness of its customers in order to assess potential volumes of receivables and anticipate the occurrence of risks. Credit risk on operating financial assets is appraised via the rating of primarily public customers. The risk on other operating receivables is assessed through the analysis of customer late payments/failures, taking into account their nature (public/private).

In addition, the Group limits its exposure to the risk of default by its counterparties through the diversity and number of its customers.

Finally, the Group has strengthened its contract management processes, which are aimed in particular at anticipating and managing the risk of default by its counterparties.

Liquidity risks (FIN-03)

Risk identification

Description of the risk

The Company's gross liquidity is defined as all available cash and confirmed bank lines. Net liquidity corresponds to gross liquidity less current financing requirements. The Group could be exposed to liquidity risk and not have sufficient financial resources to meet its contractual commitments.

Potential effects for the Group

- Difficulty repaying debt
- Difficulty in gaining new market share

Correlated risks

- Economic risks
- Counterparty risks related to operating activities

Stakeholders

- Society
- Customers
- Shareholders

Risk management

The operational management of liquidity and financing is managed by the Financing and Treasury Department.

This management involves the centralization of major financing and material excess cash balances to optimize liquidity and cash.

To reduce liquidity risk and protect itself from temporary unavailability on the medium- and long-term financing markets, the Group has:

- a multicurrency syndicated loan facility with a total amount of €4.5 billion undrawn as of December 31, 2025,
- bilateral credit facilities with a total amount of €1.4 billion undrawn as of December 31, 2025,
- a commercial paper program capped at €6.5 billion, which covers short-term needs and helps manage the timing of bond issues. This program compares with net liquidity of €6.9 billion as of December 31, 2025.

The Group has refinanced its significant bond maturities in order to reduce liquidity risk. Veolia issued its first green bond on May 13, 2025 in the form of a €500 million green hybrid bond. This was followed on September 17 by a hybrid bond in the form of a perpetual deeply subordinated bond issue in the amount of €850 million. In addition, €1.5 billion was issued on June 10, 2025 to finance the acquisition of the 30% of Veolia Water Technology & Solutions held by the Caisse de dépôt et placement du Québec (CDPQ).

On January 1, 2025, the Group also redeemed its remaining bonds with an option to be converted into and/or exchanged for new or existing shares (OCEANE bonds) for €336 million, and its bonds maturing in April and September 2025 for €500 million each (€1 billion in total).

Group gross liquidity is therefore €15.9 billion as of December 31, 2025, (compared with €17.8 billion at end-2024), and net liquidity is €6.9 billion (compared with €8.3 billion at end-2024).

For further information, please refer to Chapter 6.1, Note 8.1.1 and Note 8.3.2.2 to the consolidated financial statements below.

Risks related to tax developments (FIN-04)

Risk identification

Description of the risk

Veolia operates throughout the world in numerous countries with different tax regimes. Tax risk is the risk associated with changes in laws and regulations (potentially with retroactive effect), the interpretation of those laws and regulations and changes in case law concerning the application of tax rules.

These rules in the different countries where the Group operates are constantly changing and the tax regimes and tax rates applicable may be subject to interpretation and/or amendment. The Group cannot provide an absolute guarantee that its interpretations will not be challenged, with negative consequences for its financial position or results. Furthermore, the Group is involved in standard tax audits and appeals.

The main current tax audits and disputes are disclosed in chapter 6.1, note 11.3 to the consolidated financial statements below.

Potential effects for the Group

- Economic balance of contracts compromised
- Pressure on the sales price of services

Correlated risks

- Risks inherent to changes in energy prices and in the costs of commodities and raw materials
- Risks related to regulatory changes, particularly in the area of health or the environment
- Geopolitical and political risks

Stakeholders

- Society
- Customers
- Shareholders

Risk management

In order to comply with local tax laws and regulations, Veolia calls on the Tax Department and a network of tax professionals to ensure compliance with tax obligations and thereby reduce the tax risk to a reasonable and normal level.

The tax authorities have carried out various tax audits in Group companies that are both consolidated and not consolidated for tax purposes. To date, none of these reviews have led to liabilities to the tax authorities materially in excess of amounts estimated during the review of tax risks.

In estimating the risk as of December 31, 2025, the Group took account of the expenses that could arise as a consequence of these audits, based on a technical analysis of the positions defended by the Group before the tax authorities. The Group periodically reviews the risk estimate in view of developments in the audits and legal proceedings.

Risks related to meteorological effects (FIN-05)

Risk identification

Description of the risk	Potential effects for the Group
The Group's activities are, by nature, subject to the variability of the weather from one year to the next. Energy services are primarily delivered during periods of the year when people heat their homes. In Water activities, domestic water consumption and wastewater treatment are more significant during summer periods.	• Change in production volumes (Water and Energy activities)
	Correlated risks
	• Risks related to climate change and natural disasters
	Stakeholders
	• Shareholders

Risk management

The Group limits its exposure to the effects of the weather through the diversity of its locations and portfolio of activities as well as by the implementation of contractual models that include a sharing of value created for the customer.

The Group offers contractual models that are independent of volumes, such as performance contracts that include a sharing of value created for the customer, regardless of consumption, which may be influenced by the weather. In addition, the Group provides cutting-edge solutions to the most complex issues encountered by customers and offerings founded on attractive business models such as performance-based payment terms, to mitigate the risks related to meteorological effects.

In the same spirit, the Group favors, where possible, remuneration models that include a flat-rate share, independent of usage and consumption levels.

Currency risk (FIN-06)

Risk identification

Description of the risk

The Group presents its financial statements in euro and must translate certain of its assets, liabilities, income and expense items into euro at the applicable exchange rates. Consequently, fluctuations in the exchange rate of other currencies against the euro can affect the value of these items in the financial statements, even if their intrinsic value is unchanged in the original currency.

An increase in the value of the euro may therefore result in a decrease in the reported value, in euro, of the Company's investments held in foreign currencies. Currency risk is linked to the Group's international business conducted outside the euro area, which generates cash flows in numerous currencies. A 10% appreciation in the main currencies of the countries used by the Group against the euro would increase net assets by €1,643 million, while a 10% depreciation in these currencies would reduce net assets by -€1,345 million.

Potential effects for the Group

- Group's results and equity

Correlated risks

- No correlated risks

Stakeholders

- Society
- Customers
- Shareholders

Risk management

The Group Financing and Treasury Department manages currency risk centrally

Residual transaction foreign exchange risk can be hedged using derivatives (forward purchases or sales, swaps). With regard to net asset translation risk (also known as foreign exchange risk on the assets), for the most important assets, the Group favors the implementation of financing in foreign currencies or derivatives.

For further information, please refer to chapter 6.1, note 8.3.1.2 to the consolidated financial statements below.

2.2.2.4 Regulatory, ethical and legal risks (REG)

Risks related to regulatory changes, particularly in the area of health or the environment (REG-01)

Risk identification

Description of the risk	Potential effects for the Group
The Group's activities are subject to extensive, evolving and increasingly stringent environmental regulations. These regulations sometimes impose significant constraints (see chapter 1, section 1.6 above). Most Group activities require operating permits or authorizations that define the rules governing the operation of installations. These operating permits are issued by public authorities pursuant to authorization procedures encompassing the performance of specific studies presenting, in particular, the environmental footprint of the installations. In particular, these regulatory compliance obligations concern water discharges, drinking water quality, waste treatment, the pollution of soil and ground water and the characteristics of atmospheric emissions. Failure to meet these compliance obligations could be prejudicial to the Group and damage its reputation. Furthermore, environmental laws and regulations are constantly changing. These amendments can generate significant compliance expenditure or investment for our installations. While regulatory changes offer new market opportunities for the Group's activities, they also generate a number of risks. Veolia Group is constantly required to invest to ensure the continued compliance of installations under its responsibility. If it has no investment responsibility, Veolia advises its customers to ensure they undertake the necessary compliance work themselves. In contrast, public authorities have the power to launch proceedings which could lead to the suspension or cancellation of permits or authorizations held by the Group or injunctions to suspend or cease certain activities, if they identify the slightest instance of non-compliance. These measures may be accompanied by fines and administrative or criminal sanctions which could have a significant negative impact on the Group's reputation, activities, financial position, results or outlook. Finally, the field of finance is also impacted by regulations related to the environment. Indeed, the European regulation EU/2020/852 of June 18, 2020 "Taxonomy regulation" is part of the sustainable finance policy deployed by the European Union (EU). It defines a framework intended to promote sustainable investments through improved information for financial market players. The Group has therefore organized itself to qualify its activities.	• Difficulty in gaining new market share • Time needed to obtain operating permits or authorizations • Non-renewal of municipal contracts • Difficulty of obtaining "sustainable" investments
Correlated risks	Stakeholders
• Environmental and industrial risks • Risks related to market changes • Risks related to climate change and natural disasters	• Planet • Society • Customers • Employees • Shareholders

Risk management

In accordance with legal, regulatory and administrative requirements (see chapter 1, section 1.6 above) or for specific preventive or protection measures, Veolia is constantly required to incur expenditure or invest in installations under the Group's responsibility to ensure their continued compliance.

Veolia continues to commit the necessary means to comply with its environmental, health and safety obligations and to manage sanitary risks. When the Group has no investment responsibility, Veolia advises its customers to ensure they undertake the necessary regulatory compliance work themselves.

Believing that mere compliance with regulatory requirements is not sufficient to ensure adequate control of health and environmental risks, Veolia has also voluntarily implemented a number of actions based on strict prevention and control procedures as part of a global approach, particularly with respect to its multi-service contracts (for example, hazard studies, impact assessments and checkpoint controls and inspections).

The Group also carries out active research monitoring on topics such as emerging biological parameters and the toxicity of mixtures. It develops research projects, alone or in partnership with research centers or French or foreign specialized bodies, on certain subjects that are deemed a priority.

To implement the taxonomy, Veolia took action from the end of 2020, under the impetus of the Executive Committee, so as to be able to provide all the required information. The technical and financial teams (at head office and in the Business Units, close to the installations) implemented a protocol aimed at defining the means of applying the Delegated Regulations to Veolia's activities (see chapter 4, section 4.1.2.6 below).

Corruption and business integrity risks (REG-02)

Risk identification

Description of the risk

Actions by employees, corporate officers or external stakeholders which contravene the principles set out by the Group in its compliance programs could expose Group companies to criminal and/or civil penalties as well as harm to its reputation.

The prevention of corruption and other unethical business practices is a material issue for the Group and all its employees. The Group must be particularly vigilant regarding these risks, particularly due to the nature of its contracts, the investments made and the difficulties unique to certain countries where it operates.

In addition, one or more Group companies may be accused of discriminatory practices toward certain suppliers or customers, or unfair commercial practices aimed at restricting competition. Such practices are contrary to competition laws and compliance programs deployed within the Group. They can lead to fines and legal action, reputational damage and loss of market share.

Potential effects for the Group

- Group's image
- Difficulty in gaining new market share
- Loss of public and industrial contracts
- Renewal of public and industrial contracts

Correlated risks

- Geopolitical and political risks
- Risks related to the selection and integration of acquisitions

Stakeholders

- Society
- Customers
- Employees
- Shareholders
- Planet

Risk management

The Compliance Department is responsible for strengthening the compliance culture within the Group and in its relations with third parties, detecting breaches and dealing with them in the most appropriate manner, so as to protect the Group against these risks.

The Group therefore implements compliance programs notably comprising norms, procedures, a whistleblowing system and training, as well as assessment and control actions.

Managing third parties (customers, suppliers, partners, etc.) represents a key compliance challenge, as they constitute a non-negligible potential source of exposure to compliance risks for the Group.

Veolia deals with this issue through a third-party comprehensive assessment process, implemented by key functions, such as the Security, Procurement and Compliance Departments.

The system for managing these business integrity and corruption risks is described in detail in chapter 4, section 4.1.4.1.2 below.

Human rights risks (REG-03)

Risk identification

Description of the risk

Due to the geographic scope of its activities, the Group is exposed to the risk of non-compliance by stakeholders with the principles set out in the Group's human rights policy, notably external stakeholders (subcontractors, suppliers, partners).

Potential effects for the Group

- Group's image
- Difficulty in gaining new market share
- Loss of public and industrial contracts
- Renewal of public and industrial contracts

Correlated risks

- Risks related to employee health and safety

Stakeholders

- Society
- Customers
- Employees
- Shareholders
- Planet

Risk management

The Group has been working hard for years to uphold the human rights not only of its employees, subcontractors and suppliers, but also of the communities living in the regions where it operates.

The Veolia Human Rights program seeks, within the strict application of the Group's values, to retain the trust of internal and external stakeholders, reinforce appeal and commercial differentiation and protect the Group's reputation. This program is fully in line with Veolia's Purpose.

This dedication to human rights is reflected in its sustainable development commitments (see section 4.1.1.5 below) and its fundamental values and principles set out in its Ethics Guide (see section 4.1.4.1.2 below).

The system for managing Human Rights risks is described in detail in chapter 4, section 4.1.3.5.5 below.

3.1 Members of the Board of Directors

3.1.1 MEMBERS OF THE BOARD OF DIRECTORS AND POSITIONS AND OFFICES HELD BY DIRECTORS

3.1.1.1 Profile of the Board of Directors as of December 31, 2025

With the exception of the Directors representing employees and the non-voting member (*censeur*), the members of the Board of Directors are elected individually by shareholders at Ordinary General Meetings at the recommendation of the Board, which, in turn, receives proposals from the Nominations Committee. Board members may be removed at any time pursuant to a decision of the General Shareholders' Meeting. With the exception of Directors representing employees and the Director representing employee shareholders, each director must hold at least 750 registered shares in the Company.

Finally, the Company's Board of Directors also includes a representative from the Veolia Environnement SA Social and Economic Committee, who attends the Board of Directors' Meetings in a non-voting advisory capacity.

Changes in the composition of the Board of Directors and its Committees are presented in section 3.2.1.2 below and in section 3.2.2 below.

⁽¹⁾ Excluding Directors representing employees and Director representing employee shareholders in accordance with the AFEP-MEDEF Code.

⁽²⁾ Excluding Directors representing employees and Director representing employee shareholders in accordance with Articles L. 225-27 and L. 22-10-7 of the French Commercial Code. As of the date of filing of this document, the percentage of female Directors is 54%, in accordance with the legal and regulatory provisions in force.

Director representing employees of Veolia Environnement*; Member of the Accounts and Audit Committee; Member of the Compensation Committee; Member of the Purpose Committee

Franck Le Roux joined Compagnie générale des eaux as a drinking water network technician on August 31, 1983 for the Syndicat des Eaux d'Ile-de-France (SEDIF) contract. He passed the inspector's examination in June 1986. In 1984, he joined the Confédération Générale du Travail (CGT) trade union and his first term as staff delegate was in 1985. Elected to the Executive Board of the public services CGT Federation and leader of the federal water collective section, he acted as negotiator on the collective agreement for water and sanitation between 1997 and 2009. He has been the central union delegate for the Compagnie Générale des Eaux and then the Veolia Eau economic entity since 1999. He has also been the Veolia Group CGT union representative since its creation (Vivendi Environnement) and negotiated the first agreement with the Group in 2002.

He currently works as Social Protection Officer within the Veolia Eau-Compagnie Générale des Eaux^{VE} Human Resources Department.

3.1.2 RENEWALS AND APPOINTMENTS PROPOSED TO THE GENERAL MEETING OF APRIL 23, 2026

Preparations to renew the Board of Directors were initiated at a very early stage by the Nominations Committee. On its recommendation, the Board of Directors, at its meeting of November 5, 2025, decided to recommend to the Combined General Meeting of April 23, 2026 to renew the terms of office of Mr. Antoine Frérot and Mrs. Estelle Brachlianoff as directors for a period of four years expiring at the end of the 2030 Ordinary General Meeting held to approve the financial statements for the year ending December 31, 2029.

Subject to the General Meeting's vote, the Board of Directors will reappoint Mr. Antoine Frérot as Chairman of the Board of Directors, it being stipulated that in 2028 he will reach the age limit for chairing the Board of Directors as defined in the Articles of Association. The Nominations Committee and the Board of Directors will, in 2026 and 2027, consider the succession plan for the Chairman of the Board of Directors. Furthermore, the Board of Directors will confirm Mrs. Estelle Brachlianoff as Chief Executive Officer.

The Board of Directors, at its executive session on July 30, 2025, praised the quality of the work performed, the strength of management and the relevance of the management team's strategic vision. Under their leadership, the integration of Suez has been a success. Veolia also strengthened its international expansion and capture of new markets, posting steady quarter-on-quarter growth and demonstrating its resilience. Under their authority, the Company will continue its growth trajectory while strengthening its position as a technology leader.

Furthermore, in accordance with article 11.3 of the Company's Articles of Association, at its meeting of March 10, 2026, at the recommendation of its Nominations Committee, the Board of Directors decided to recommend to the Combined General Meeting of April 23, 2026 to appoint Mr. Jean-Christophe Taret as Director representing employee shareholders and Mrs. Sandra Cortese as replacement for a period of four years expiring at the end of the 2030 Ordinary General Meeting held to approve the financial statements for the year ending December 31, 2029, replacing Mrs. Agata Mazurek-Bak and Mr. Romain Ascione, respectively, who did not seek reappointment.

3.1.3 CONVICTIONS, BANKRUPTCIES, CONFLICTS OF INTEREST AND OTHER INFORMATION

Based on statements made by the members of the Board of Directors to Veolia Environnement, there are, to the best of the Company's knowledge, no family ties among the members of the Company's Board of Directors and, during the last five years: (i) no member of the Board of Directors of Veolia Environnement has been convicted of fraud; (ii) no member of the Board of Directors has been involved in a bankruptcy, receivership or liquidation proceedings; (iii) no authority (including professional organizations) has made any official public accusation and/or imposed a penalty on these persons; and (iv) no director has been forbidden by a court decision from holding a position as a member of a Board of Directors or of a Management or a Supervisory Body of a company or from participating in the management or business operations of a company.

To the best of the Company's knowledge, no member of the Board of Directors has an actual or potential conflict of interest with Veolia Environnement. In addition to the provisions of the French Commercial Code concerning regulated agreements, the Board of Directors' internal regulations stipulate that directors must inform the Board of Directors of any existing or potential conflicts of interest and abstain from voting in any situation where such a conflict of interest exists. No service agreement, financial relationship and/or business relationship providing for the grant of benefits exist between a director or the Chief Executive Officer and the Company or its subsidiaries.

To the best of the Company's knowledge, with the exception of the appointment of the directors designated by BPI France and Criteria Caixa⁽¹⁾ by the shareholders general meeting of April 24, 2025, no arrangement or agreement has been signed by the members of the Board with the Company's principal shareholders, customers, suppliers or other party pursuant to which they would have been selected as members of the Board of directors or to hold an Executive Management position in the Company.

Finally, to the best of the Company's knowledge, the members of the Board of Directors have not agreed to any restrictions on their ability to transfer any stake they may hold in the share capital of Veolia Environnement, with the exception of:

- the provision in the Articles of Association stipulating that, excluding the Directors representing employees and the Director representing employee shareholders, each director must own at least 750 registered shares of the Company;
- the decisions involving the retention of a portion of the share bonus vested to Mr. Antoine Frérot, as Chairman and Chief Executive Officer until June, 30, 2022, inclusive, under the long-term incentive plan known as the Management Incentive Plan (MIP), a portion of the shares vested under the performance share plans of May 2, 2018, April 30, 2019, May 5, 2020 and May 4, 2021;
- the decisions involving the retention of a portion of the shares vested to Mrs. Estelle Brachlianoff, as Chief Executive Officer from July 1, 2022, under the performance share plan of August 2, 2022 and a portion of the shares that would be vested under the performance share plans of May 3, 2023, May 13, 2024 and May 6, 2025 (see Section 3.4.1 below).

⁽¹⁾ [Press release dated March 17, 2025](#)

3.2 Activities of the Board of Directors and its Committees

3.2.1 ACTIVITIES OF THE BOARD OF DIRECTORS

3.2.1.1 Corporate Governance principles and the AFEP-MEDEF Code

The Company applies a Corporate Governance Code in accordance with the provisions of the French Commercial Code and as part of the listing of its shares on the Euronext Paris regulated market.

The Company's Board of Directors confirmed that the Company follows the AFEP-MEDEF Corporate Governance Code of listed corporations (hereinafter the "AFEP-MEDEF Code") (<http://www.afep.com/publications/code-afep-medef/>).

In accordance with the "comply or explain" rule introduced by the AFEP-MEDEF Code, the Company notes that no recommendations of this Code were disregarded in fiscal year 2025.

3

3.2.1.2 Change in the composition of the Board of Directors

In accordance with the AFEP-MEDEF Code, Article 11 of the Company's Articles of Association provides for a four-year term of office for directors and the renewal of the offices of one quarter of Board members.

Changes in 2025

The Board of Directors' Meeting of March 11, 2025, duly noted that Mrs. Marion Guillou did not seek the renewal of her term of office as director, which expired at the end of the General Meeting of April 24, 2025.

Furthermore, the Board of Directors duly noted that the term of office of Mr. Francisco Reynés would be terminated, upon his request, at the end of the General Meeting of April 24, 2025.

The Combined General Meeting of April 24, 2025 renewed the terms of office as director of Mr. Pierre-André de Chalendar and appointed Mr. Philippe Brassac, Mr. Arnaud Caudoux and Mrs. Elena Salgado as Directors for a period of four years expiring at the end of the 2029 Ordinary General Meeting held to approve the financial statements for the year ending December 31, 2028.

Date	End of term of office	Renewal	Appointment
	Marion Guillou	Pierre-André de Chalendar	Philippe Brassac
April 24, 2025	Francisco Reynés		Arnaud Caudoux
			Elena Salgado

Planned changes in 2026⁽¹⁾

As part of the annual re-election of the Board, the Board of Directors' meeting of November 5, 2025 noted the expiration of the terms of office of three directors at the end of the General Meeting of April 23, 2026 (Mr. Antoine Frérot, Mrs. Estelle Brachlianoff and Mrs Agata Mazurek-Bąk) and that Mrs. Agata Mazurek-Bąk as well as her replacement Mr Romain Ascione did not seek the renewal of her term of office at the end of that General Meeting.

At the recommendation of the Nominations Committee, the Board of Directors decided to recommend the renewal by the Combined General Meeting of April 23, 2026 of the terms of office as director of Mr. Antoine Frérot and Mrs. Estelle Brachlianoff for a period of four years expiring at the end of the 2030 Ordinary General Meeting held to approve the financial statements for the year ending December 31, 2029.

Subject to the General Meeting's vote, the Board of Directors will reappoint Mr. Antoine Frérot as Chairman of the Board of Directors, it being stipulated that in 2028 he will reach the age limit for chairing the Board of Directors as defined in the Articles of Association. The Nominations Committee and the Board of Directors will, in 2026 and 2027, consider the succession plan for the Chairman of the Board of Directors. Furthermore, the Board of Directors will confirm Mrs. Estelle Brachlianoff as Chief Executive Officer.

In addition, at the recommendation of its Nominations Committee, the Board of Directors also decided to recommend to the Combined General Meeting of April 23, 2026 that Mr. Jean-Christophe Taret be appointed as Director representing employee shareholders and Mrs. Sandra Cortese be appointed as replacement for a period of four years expiring at the end of the 2030 Ordinary General Meeting held to approve the financial statements for the year ending December 31, 2029, replacing Mrs. Agata Mazurek-Bąk and Mr. Romain Ascione, respectively.

Following these proposed renewals and appointment, and subject to their approval by the General Meeting of April 23, 2026, the Board of Directors would have 15 members, including 2 Directors representing employees, 1 Director representing employee shareholders, 6 women (i.e. 46%⁽²⁾), and one non-voting member (censeur).

⁽¹⁾ Subject to the approval of shareholders at the Combined General Meeting of April 23, 2026.

⁽²⁾ In accordance with Articles L. 225-18-1 and L. 22-10-3 of the French Commercial Code and excluding the Directors representing employees pursuant to Articles L. 225-27-1 and L. 22-10-7 of the French Commercial Code.

Length of service of directors as of December 31, 2025

Using the following skills matrix, the Nominations Committee advises the Board of Directors on the selection of candidates, where appropriate with the assistance of an independent external firm, for the purpose of renewing the composition of the Board of Directors primarily based on the following criteria:

- management skills acquired in major French and non-French international corporations;
- familiarity with the Group and its industry;
- professional experience;
- financial and accounting expertise;
- CSR, R&D and digital skills;
- sufficient availability;
- any specific expertise identified during the annual assessment of the activities of the Board of Directors.

Diversity policy - Selection criteria for directors

In addition to increasing the number of female directors, the Board is striving to diversify the profiles of its members, of both French and non-French nationality, while ensuring the balanced representation of the Company's various stakeholders. As of the date of filing of this document, the Board has five non-French directors (Mrs. Isabelle Courville, a Canadian citizen, Mrs. Julia Marton-Lefèvre, who has dual French/American nationality, Mrs. Agata Mazurek-Bąk, a Polish citizen, Mr. Pavel Páša, a Czech citizen and Mrs. Elena Salgado, a Spanish citizen), representing about 33% of total Board members.

Mr. Enric Xavier Amiguet i Rovira (non-voting member - *censeur*) has experience in Veolia's businesses, international experience and expertise in public affairs and CSR. These skills are not included in the present skills matrix.

Training and integration of directors

At the request of the Board of Directors, the Company organizes training for new directors on the specific aspects of the Group's businesses to facilitate their integration, particularly through site visits. Moreover, to facilitate their integration, new Board members may meet the Group's key executive officers.

Thus, in the context of the integration of two Directors representing employees at the end of 2014, the Company organized in 2014 and 2015 an internal training session for them and enrolled them in an outside training program designed by the French Institute of Directors (IFA) and Sciences Po which led to the issue of a Corporate Director's Certificate. This training program was repeated in 2019 for Mr. Franck Le Roux. Following her appointment as a director representing employee shareholders on June 15, 2022, Mrs. Agata Mazurek-Bak commenced a training program with the IFA.

In addition, since 2015, the Company has organized meetings between directors and economic and political leaders and visits to operating sites,

including exchanges with Group operating teams, notably in the Czech Republic, the United Kingdom, China, Hungary, the United States, Spain, Chile and the Middle East. These annual visits, which were interrupted during the health crisis, contribute to a better understanding of Veolia's businesses and their many challenges and particularly environmental and social (CSR) issues, in the different geographies.

The Company also regularly devotes an agenda item at Board of Directors' Meetings to the detailed presentation of one of its businesses and its environmental and social (CSR) issues. Also interrupted during the health crisis, these presentations restarted in 2021, with in particular presentations on building energy efficiency, waste recycling and recovery and the climate through the work of the Research, Innovation and Sustainable Development Committee.

3

3.2.1.3 Independence of directors

Director independence criteria

According to the internal regulations of the Board of Directors, regularly updated to incorporate legal and regulatory changes, members are considered independent if they have no relationship with the Company, its Group or its management that might compromise their ability to exercise their judgment objectively. The internal regulations adopt the Independent Director criteria set-out in the AFEP-MEDEF Code:

Criterion 1	Employee or Executive Officer during the course of the previous five years Not to be and not to have been during the course of the previous five years: • an employee or executive corporate officer of the Company; • an employee, executive corporate officer or director of a company consolidated by the Company; • an employee, executive corporate officer or director of the Company's parent company or a company consolidated by this parent company.
Criterion 2	Cross directorships Not to be an executive corporate officer of any company in which the Company directly or indirectly holds a directorship, or in which an employee appointed as such or an executive corporate officer of the Company (current or within the past five years) is a director.
Criterion 3	Significant business relationships Not to be a customer, supplier, investment banker, commercial banker or consultant: • that is significant to the Company or its Group; • or for which the Company or its Group represents a significant portion of its business. The evaluation of the significance or otherwise of the relationship with the Company or its Group is debated by the Board, and the quantitative and qualitative criteria that led to this evaluation (continuity, economic dependence, exclusivity, etc.) explicitly stated in the annual report.
Criterion 4	Family ties Not have any close family ties with a director or corporate officer.
Criterion 5	Statutory Auditor Not have been a Statutory Auditor of the Company within the past five years.
Criterion 6	Directorship of more than 12 years Not have been a director of the Company for more than twelve years. Loss of the status of Independent Director occurs on the date when this period of twelve years is reached.
Criterion 7	Status of non-executive corporate officer A non-executive officer cannot be considered independent if he or she receives variable compensation in cash or in the form of shares or any compensation linked to the performance of the Company or the Group.
Criterion 8	Status of major shareholder Directors representing major shareholders of the Company or its parent company may be considered independent, provided these shareholders do not take part in the control of the Company. In the case of directors holding 10% or more of the Company's share capital or voting rights, the Board, based on a report from the Nominations Committee, shall systematically consider whether or not they are independent, taking into account the composition of the Company's share capital and the existence of any potential conflicts of interest.

The criteria are assessed and weighted by the Board of Directors, which may decide that a director who does not meet the criteria defined in the internal regulations may nevertheless be described as independent in light of his/her particular situation or that of the Company, given its shareholding structure or any other reason, or vice versa.

The internal regulations also stipulate that each year, before publishing the Universal Registration Document, the Board of Directors must assess the independence of each of its members based on the criteria set out in the aforementioned regulations, any special circumstances, the situation of the person in question, of the Company and of the Group and the opinion of the Nominations Committee.

Assessment of the independence of directors

The Board of Directors' Meeting of March 10, 2026 carried out its annual review of the independence of directors after hearing the opinion of the Nominations Committee. The Board strictly applies the independence criteria set out in the AFEP-MEDEF Code and particularly the criterion concerning the length of time a director has been on the Board of Directors.

By carrying out a quantitative and qualitative analysis of criterion 3 relating to significant business relationships with regard in particular to (i) the turnover achieved between the Company and/or the Group and the company or group to which the director concerned belongs, in both absolute and relative terms, (ii) the importance of the business relationship for the director concerned and the Company and/or the Group through possible economic dependence, exclusivity or preponderance in the sector subject to the business relationship, and (iii) the application of normal market conditions to the business relationship, the Board concluded that there were no significant business relationships

and classified the following nine directors as independent (out of a total of 12, excluding the two directors representing employees and the director representing employee shareholders): Pierre-André de Chalendar, Olivier Andriès, Véronique Bédague, Philippe Brassac, Arnaud Caudoux, Isabelle Courville, Julia Marton-Lefèvre, Elena Salgado and Guillaume Texier.

Accordingly, as of the date of filing of this document, the Company's Board of Directors therefore has nine independent members out of a total of 12 directors (the Directors representing employees and the Director representing employee shareholders are not taken into account when determining these percentages), representing a rate of 75%, above the AFEP-MEDEF Code recommendation⁽¹⁾.

The following table presents the compliance of each director with the independence criteria defined by the AFEP-MEDEF Code. The criteria corresponding to the numbers in the following table are presented on the preceding page in the section "Director independence criteria".

	Criterion 1	Criterion 2	Criterion 3	Criterion 4	Criterion 5	Criterion 6	Criterion 7	Criterion 8	
	Employee or Executive Officer during the course of the previous five years	Cross directorships	Significant business relationships	Family ties	Statutory Auditor	Directorship of more than 12 years	Status of non-executive corporate officer	Status of major shareholder	Classification

N/A: Not applicable

At the end of the General Shareholders' Meeting:

- (i) subject to approval of the renewal of the term of office as director of Mr. Antoine Frérot and Mrs Estelle Brachlianoff, proposed to the General Meeting of April 23, 2026, and

- (i) subject to the approval of the appointment of Mr Jean-Christophe Taret as director representative of employee shareholders and Mrs Sandr Cortese as replacement of the director representative of employee shareholders proposed at the General Meeting of April 23, 2026, the Board of Directors would have nine independent directors out of a total of 12 directors (excluding the two Directors representing employees and the Director representing employee shareholders), representing a rate of 75%, above the AFEP-MEDEF Code recommendation⁽¹⁾.

⁽¹⁾ Pursuant to Article 10.3 of the AFEP-MEDEF Code, "the Independent Directors should account for half the members of the Board in widely-held companies without controlling shareholders. In controlled companies, Independent Directors should account for at least one third of Board members. Directors representing employee shareholders and directors representing employees are not taken into account when determining these percentages".

3.2.1.4 Powers and work of the Board of Directors

Powers of the Board of Directors

In accordance with the law, the Board of Directors establishes the policies concerning the Company's business and supervises their implementation. Subject to the powers expressly granted to General Shareholders' Meetings and within the limits of the corporate purpose, the Board of Directors has the authority to consider all matters concerning the proper operation of the Company and, by its deliberations, resolves matters that concern the Board.

In addition to the powers conferred on the Board of Directors by law, its internal regulations impose an internal requirement that certain major decisions of the Chief Executive Officer be submitted to the Board of Directors for prior approval. These internal limits on powers are detailed below (see section 3.3.2 below).

Meeting frequency, duration and attendance

According to its internal regulations, the Company's Board of Directors must meet at least four times a year.

In 2025, the Board of Directors met eight times. Board meetings lasted an average of around two hours and twenty minutes. In addition, on December 11 and 12, the Board members attended a seminar dedicated to the Group's strategy during which they reviewed and discussed strategic issues presented by management over two half-days. Based on expectations expressed during the annual assessment of the Board's activities and those collected from directors, this seminar focused on implementing the 2024-2027 strategic program and primarily considered:

- the provisional assessment of the GreenUp 2024-2027 program;
- the adaptation of this strategic program in view of over-arching trends and the political and geopolitical developments that have taken place since its launch;
- any adjustments to be made to the three booster businesses;
- the progress made and the work still to be done on Veolia's equity story, brand strategy and allies strategy.

The average attendance rate at Board meetings in 2025 was approximately **99%**, compared to 96% in 2024. Electronic communication means were used six times in 2025.

Individual attendance rates are presented in the list of members of the Board of Directors as of December 31, 2025.

Date of Board of Directors' meeting (Fiscal year 2025)	Planned Board meeting	Exceptionnal Board meeting
Attendance rate		
February 26	100 %	-
March 11	100 %	-
April 24	100 %	-
May 6	100 %	-
July 30	100 %	-
September 22	-	93 %
November 5	-	100 %
November 5	100 %	-
TOTAL	100 %	97 %

Work of the Board of Directors in 2025

In 2025, the Board of Directors examined the following points in particular:

Group financial and cash positions and commitments and information regarding sustainability	• review of the 2024 annual financial statements and the 2025 first-half financial statements; • accounting information for the first and third quarters of 2025; • corresponding draft financial communications, including the GreenUp 2024-2027 strategic program; • renewal of the financial and legal authorizations granted in 2022 to the Chief Executive Officer, notably with regard to financing operations and off-balance sheet commitments and authorization of the Group's significant guarantee transactions; • dividend policy, proposed appropriation of net income and payment of the dividend; • Group financing policy; • internal control self-assessment and review; • examination of the summaries and reports issued by its Chairman on the work of the Accounts and Audit Committee concerning notably the tax review, legal reporting, the information regarding sustainability, the Group's insurance programs and fraud reporting and review of the Company's cyber security including, in particular, the cyber risk mapping (see section 3.2.2.1 of the Universal Registration Document).
Monitoring of the Group's strategic direction and major transactions and CSR policy	• review of the 2025 budget and the long-term plan; • review of the program and action plan concerning the Group's compliance system with regard to the report of the Accounts and Audit Committee; • review of the risk mapping and the materiality matrix of CSR issues; • review of the Group's non-financial ratings and the extent of roll-out of its sustainable development commitments; • review of the Group's human resources policy and in particular the management policy for executives and talent, the diversity and gender equality policy in management bodies, employee relations and the health and safety prevention policy; • examination of the summaries and reports issued by its Chairwoman on the work of the Research, Innovation and Sustainable Development Committee focusing in particular on artificial intelligence implemented within the group in support of the GreenUp strategic program's objectives (see section 3.2.2.4 of the Universal Registration Document); • review of Group investment and divestment project; • implementation of the EU Corporate Sustainability Reporting Directive (CSRD); • follow-up on the GreenUp 2024-2027 strategic program.
Corporate governance	• assessment and monitoring of the Company's governance structure (separation of the duties of Chairman of the Board of Directors and Chief Executive Officer); • approval of the compensation policy and compensation of the Chairman of the Board of Directors, the Chief Executive Officer, and the directors; • examination of an employee share ownership plan and a share grant plan; • review of the selection of directors when renewing the composition of the Board; • review of the Group's compliance and ethics actions; • assessment of the independence of directors; • review of the composition of Board committees; • assessment of the organization and activities of the Board and each of its committees; • review of succession plans for Executive Committee members and the executive corporate officer; • examination of metrics monitoring the implementation of Veolia's Purpose (multifaceted performance indicators); • acknowledgment of the regular minutes and reports by their chairman of the work of the Nominations Committee (see section 3.2.2.2 of the Universal Registration Document), the Compensation Committee (see section 3.2.2.3 of the Universal Registration Document) and the Purpose Committee (see section 3.2.2.4 of the Universal Registration Document); • review of compliance with the corporate duty of care and the vigilance plan, regarding the avoidance of severe impacts on human rights and fundamental freedoms, on people's health and safety, and on the environment.
Other	• review of multi-year regulated agreements and commitments and related-party transactions and annual review of agreements in accordance with the everyday agreements procedure implemented pursuant to the PACTE law; • monitoring of changes in the Company's share ownership and report by Executive Management on the roadshows held following publication of the financial statement.

In 2025, the Board of Directors was regularly informed of key commercial developments and the action plans proposed by Executive Management. The Board of Directors, mainly through the reports of the Accounts and Audit Committee, was periodically informed of changes in the Group's financial and cash position and off-balance sheet commitments, as well as changes in significant litigation. The Deputy Chief Executive Officer Finance and Procurement, the Deputy Chief Executive Officer in charge of Stakeholders and Communication and Advisor to the Chairman and the General Counsel regularly attended Board meetings in 2024. The directors receive a monthly report on the Company's share price and a review of analysts' recommendations. Every six months, Executive Management provides the directors with detailed documentation regarding the Group's business activities, research and innovation initiatives, internal matters (appointments and social policy), corporate activities (initiatives with various institutions in France, Europe and abroad, and updates on regulatory changes) and CSR and sustainable development actions.

Since 2017 annual assessment of the Board's activities, the directors have met, since their May 3, 2017 meeting, in an executive session without the attendance of the Chairman and Chief Executive Officer up to June 30, 2022 inclusive and without the attendance of the Chief Executive Officer since July 1, 2022. During these sessions, the directors hold informal discussions on specific topics and current affairs.

A digital platform is available to directors for the performance of their duties since 2014. This BoardVantage platform can be accessed via an application on tablets provided by the Company to all members of the board of directors. The platform provides secure access to documents for Board of Directors' and Committee meetings.

Assessment of the Board of Directors and Executive Management actions

Once a year, the Board devotes one point on its agenda to an assessment of how it operates, to be prepared by the Nominations Committee, and arranges a discussion about the way in which it operates in order to:

- improve its effectiveness;
- check that major issues are suitably prepared and discussed by the Board; and
- measure the effective contribution of each member to the Board's work.

Furthermore, the Board's internal regulations provide that a formal assessment be performed every three years by an external organization under the supervision of the Nominations Committee, with the aim of checking that the operating principles of the Board have been complied with and identifying possible improvements in its operation and effectiveness. Each year, the Nominations Committee produces an annual report for the Board of Directors, which the directors discuss, assessing how the Chairman and directors have performed, as well as the actions taken by Executive Management ⁽¹⁾.

Each year, the Chairman of the Nominations Committee reports to the Board of Directors' Meeting on the results of the assessment of the Board's activities, its Committees and Executive Management action, conducted, every three years, with the assistance of an independent external firm and using a questionnaire sent to each director, completed by individual interviews.

3

⁽¹⁾ In accordance with Article 10.3 of the AFEP-MEDEF Code, "a formal assessment must be performed at least every three years. It may be conducted under the leadership of the appointments or nominations committee or an independent director, with the assistance of an external consultant."

Main conclusions of the assessments presented during Board Meetings between 2024 and 2026

It was generally considered each year that the conditions surrounding the Board's work clearly support the finalization of its operating conclusions.

Date of Board	Strengths	Improvements desired by directors
March 12, 2024 (formal assessment)	- satisfactory composition of the Board in terms of the number of women and the independence of members and in terms of the distribution of expertise, knowledge of Veolia's business and experience; - good Board culture: the Directors recognize that the Board operates as a team, with respect and freedom of expression; - satisfactory composition of the Committees: the Directors commend their efficiency and relevance; - satisfactory control of key processes (succession strategy, risk management); - successful transition tied to the separation of duties: the leadership of the Chairman of the Board, his knowledge of the Group and its customers, as well as his commitment and relationship with the Chief Executive Officer are assets for the Group.	- strengthen "financial markets - equity story" expertise on the Board to improve understanding of Veolia's stock market potential, as assessed by investors; - initiate, as of 2025, consideration of the succession of the Chairman of the Board whose term of office as director expires at the end of the 2026 General Shareholders' Meeting; - clarify the respective roles of the Accounts and Audit Committee, the Compensation Committee and the Purpose Committee with respect to multifaceted performance.
March 11, 2025	- satisfactory composition of the Board in terms of diversity and distribution of the skills of its members; - good momentum and strong cohesion within the Board: directors can express themselves freely and with confidence; - the Board operates efficiently, with excellent collaboration between the Chairman, the Chief Executive Officer and the members of the Board. In addition, the usefulness of the executive sessions, with and without the Chief Executive Officer, is recognized; - quality of discussions and presentations; - good involvement of the Board in the key decisions taken by Executive Management; - satisfactory composition of the Committees: the directors commend their efficiency.	- improve the international diversity of the Board's composition; - strengthen financial expertise and skills in artificial intelligence and new consulting technologies.
March 10, 2026	- satisfactory composition of the Board in terms of size and diversity and distribution of the skills of its members; - good momentum and collective culture and strong cohesion within the Board: directors can express themselves freely and with confidence; - the Board operates efficiently, with excellent collaboration between the Chairman, the Chief Executive Officer and the members of the Board. In addition, the usefulness of the executive sessions, with and without the Chief Executive Officer, is recognized; - quality of presentations that allow for better exchanges within the Board of Directors and its committees.	- hold more discussions on energy-related topics; - hold more discussions on the impact of artificial intelligence on Veolia's activities and its employees; - strengthen the Board's digital skills.

Role of the non-voting member (*censeur*)

The duties of non-voting members (*censeurs*) in public limited companies are not recognized by law. Within Veolia Environnement, the Board of Directors may appoint one or more non-voting members (*censeurs*) pursuant to Article 18 of the Articles of Association. Pursuant to the Articles of Association, the Board of Directors sets the duration of their term of office, which they may terminate at any time.

The role of a non-voting member (*censeur*) is to attend the Board of Directors' Meetings in an advisory capacity, and the Board may freely ask their opinion. In addition, this position also offers a way to integrate one or more director candidates before proposing their appointment to a General Shareholders' Meeting. This technique was adopted with Mrs. Isabelle Courville, who performed these duties prior to her appointment as a director by the General Shareholders' Meeting of April 21, 2016.

At the recommendation of the Nominations Committee, the Board of Directors' Meeting of April 5, 2022 decided to appoint Mr. Enric Amiguet i Rovira, a former director representing employees on the Suez Board of Directors, as a non-voting member (*censeur*). This appointment, effective as at June 15, 2022, is for a period of three and a half years and was renewed by the Board of Directors at its meeting of November 5, 2025, at the recommendation of the Nominations Committee. It will expire once the Group European Works Council appoints a Director representing employees, a process that should be completed by October 2026 at the latest, in accordance with the provisions of Article 11.2 of the Articles of Association.

3.2.1.5 Role of the Chairman of the Board of Directors

The internal regulations of the Board set out the role of the Chairman of the Board of Directors.

The Chairman of the Board of Directors organizes and directs the work of the Board, on which he reports to General Meetings of Shareholders. He is responsible for preparing reports on the organization of the Board's work, internal control and risk management. He chairs General Meetings of Shareholders.

More generally, the Chairman of the Board of Directors ensures the proper operation of the Company's corporate bodies and compliance with good governance principles and practices, in particular regarding the Board Committees. He ensures that the directors are capable of performing their duties and that they are adequately informed. He devotes the time necessary to questions concerning the Group's future and, in particular, those relating to the Group's strategy.

The Chairman of the Board chairs Board meetings and prepares and coordinates the Board's work.

In this regard, in particular, he:

- convenes Board meetings in accordance with the timetable of meetings agreed upon with the directors and decides if it is necessary to convene Board meetings at any other time;
- prepares the agenda for meetings, supervises the preparation of documentation to be provided to the directors and ensures that the information contained in them is complete;
- ensures that certain subjects are discussed by the Committees in preparation for Board meetings and ensures that the Committees perform their duty of making recommendations to the Board;
- leads and directs the Board's discussions;
- ensures that directors comply with the provisions of the internal regulations of the Board and of the Committees;
- monitors the implementation of the Board's decisions;
- prepares and organizes the periodic assessment of the Board's activities in conjunction with the Nominations and Compensation Committees;
- chairs the sessions bringing together the Board members without the attendance of the Chief Executive Officer (executive sessions), as well as discussions assessing the performance and setting the objectives and compensation of the Chief Executive Officer and potentially renewing her appointment. In 2025, the Chairman chaired, at the end of most Board meetings, four executive sessions attended by the Chief Executive Officer and five executive sessions not attended by the Chief Executive Officer (out of a total of six Board meetings);

- may attend or be a member of any Board Committee.

In accordance with the internal regulations, the directors are required to promptly inform the Chairman and the Board of all conflicts of interest, even if only potential, and of all proposed agreements that may be entered into by the Company in which they may have a direct or indirect interest.

The Chairman has all the means required for the performance of his duties.

3.2.1.6 Role of the Chief Executive Officer

The Chief Executive Officer:

- has the widest powers to act in all circumstances in the Company's name;
- acts within the limits of the corporate purposes and within the limits of the internal regulations of the Board of Directors (see section 3.3.2 below).

3.2.1.7 Senior Independent Director

Appointment of a Senior Independent Director

In strict accordance with the independence criteria of the AFEP-MEDEF code, the Board of Directors, at its meeting of March 12, 2024, and upon the recommendation of the Nominations Committee, appointed, at the end of the General Meeting of April 25, 2024, Mr. Pierre-André de Chalendar, Independent Director, as Senior Independent Director, to replace Mrs. Maryse Aulagnon.

Mr. Pierre-André de Chalendar, for his term of office as director and for the duration of his appointment as Independent Director, as determined by the Board, is responsible for performing duties relating to the smooth running of the Company's governance bodies.

The duties of the Senior Independent Director are presented in the internal regulations of the Board of Directors.

Role of the Senior Independent Director

The Senior Independent Director's duties include:

- helping the Chairman ensure that the Company's governance bodies are running smoothly. The Board can task him with specific governance assignments;
- considering conflicts of interest that may arise within the Board of Directors. He examines, in particular, conflicts of interest, including potential conflicts of interest that may concern the Chairman of the Board with regard to the interests of the Company, whether they arise in connection with operational projects, strategic directives or specific agreements. He submits recommendations to the Chairman and the Board, after any necessary consultation with the other independent directors;
- obtaining an understanding of the concerns of major shareholders not represented on the Board regarding governance matters and ensuring that such concerns are addressed;
- adding points to the agenda of Board meetings;
- assisting the Nominations Committee with its assessment of the performance of the Chairman of the Board as part of the assessment of the Board's activities in accordance with its internal regulations.

In addition to his duties as Senior Independent Director, Mr. Pierre-André de Chalendar chairs the Board of Directors when the Chairman is absent or unable to do so.

At the start of the year, as in previous years and since the end of 2016, the Senior Independent Director held a series of annual meetings, in Paris, face-to-face and by video-conference, with proxy advisors and the governance departments of certain major investors. These meetings enabled the Senior Independent Director to identify the expectations of these advisors and investors, to discuss with them a range of issues concerning governance and the compensation policy and report back to the Board of Directors' Meeting of March 10, 2026.

3.2.1.8 Securities trading by corporate officers

Reporting obligations and ban on securities trading

According to the internal regulations of the Board, each director and non-voting member (censeur) must report all transactions in the Company's securities to the AMF (the French Financial Markets Authority) and to the Company and comply, in particular, with the provisions of Article L. 621-18-2 of the French Monetary and Financial Code and section 5 of the AMF's general regulations (a table detailing transactions in Veolia Environnement securities carried out by directors in 2024 is presented in section 3.5.1 below). The members of the Board of Directors and Company executives or key senior management, or any person with close ties to them, shall report all acquisitions, sales, subscriptions or trades in the Company's securities and financial instruments to the AMF, within three working days of completion.

Board members and executive corporate officers are also subject to French regulations on breach of duty and insider trading, which penalize the use or disclosure of insider information. In accordance with Regulation (EU) no. 596/2014 and Commission Implementing Regulation (EU) 2016/347 of March 10, 2016, the Company prepares and updates a list of insiders, which is made available to the AMF.

Board members and executive corporate officers are required to comply with the provisions of the Company's Code of conduct with respect to securities transactions. In that respect, the members of the Board of Directors and of the Executive Committee in particular, may not buy or sell the Company's securities, directly or through a third-party intermediary, during certain periods: during the five-week period up to and including the date of publication of the annual financial statements, the four-week period up to and including the publication of the interim financial statements, and the two-week period up to and including the date of publication of quarterly financial information, or even outside of those periods so long as they possess inside information. In order to prevent any difficulties relating to the application of the Code of conduct, the individuals in question should consult with the Group's Legal Department or the General Counsel and refer, where appropriate, to the decisions of the Inside Information Committee, whose role is to determine the classification of any event or information that could potentially be classified as inside information.

Obligation to hold shares and ban on hedging transactions applicable to executive corporate officers and members of the Executive Committee

Pursuant to the AFEP-MEDEF Code (see Article 24), which requires the Board of Directors to set a minimum quantity of shares to be held by executive corporate officers in registered form until the termination of their duties, and the provisions of Article L. 225-197-1 II, paragraph 4, of the French Commercial Code applicable in the event of performance share grants to executive corporate officers, the Board of Directors decided, at the recommendation of the Compensation Committee, from the implementation of the 2018 performance share plans, to apply a policy requiring the executive corporate officer and Executive Committee members to hold performance shares granted and vested. This policy is constant and intended to be applied unchanged to the proposed 2026 performance share plan (subject to the approval of the 24th resolution by the General Shareholders' Meeting of April 23, 2026). It is recalled that the shareholding obligations applicable to performance share plans are as follows:

- for the executive corporate officer, obligation to hold, until the end of her duties, 40% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until a total shareholding corresponding to 200% of her gross fixed annual compensation is ultimately reached;

- for members of the Company's Executive Committee, obligation to hold, until the end of their duties on the Executive Committee, 25% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until a total shareholding corresponding to 100% of their gross fixed annual compensation is ultimately reached.

In accordance notably with the AFEP-MEDEF Code to which the Company refers, the executive corporate officer and Executive Committee members receiving shares may not enter into risk hedging transactions until the end of the share retention period set by the Board of Directors.

3.2.1.9 Other information on the operation of the Board

This section summarizes mainly the corresponding sections of the Board of Directors' internal regulations.

Rights and obligations of directors

According to the Board's internal regulations, its members are subject to the following obligations:

- to act in the Company's best interests;
- to inform the Board of any conflict of interest, even potential, and to abstain from voting on any decisions in which they may have a conflict of interest;
- to perform their duties in accordance with statutory provisions, notably those concerning limits on the number of offices, and to regularly attend Board and Committee meetings;
- to stay informed in order to be able to deal effectively with the agenda items;
- to consider themselves bound by professional secrecy and by a duty of loyalty;
- to comply with the Company's Code of conduct with respect to securities transactions;
- to promptly report to the Chairman of the Board any agreement signed by the Company in which they have a direct or indirect interest or which was concluded through an intermediary on their behalf.

Information provided to directors

The Chairman provides directors, in a timely manner, with the necessary information for them to fully perform their duties. In addition, the Chairman provides the members of the Board with all significant information concerning the Company on an ongoing basis. Each director receives and has the right to request all necessary information to perform his/her duties, and may also request additional training concerning specific aspects of the Company and the Group.

In order to fulfill their duties, the directors may meet with the key management personnel of the Company and Group, subject to giving prior notice to the Chairman of the Board.

At the request of the Chairman or of a director, the heads of the Group's divisions may be invited to any Board meeting devoted to the outlook and strategy for their business sector.

Meeting attendance by electronic means of communication

Directors may participate in Board discussions by videoconference or other electronic means of communication, in the manner and on the terms set out in Articles L. 225-37 and R. 225-21 of the French Commercial Code and as provided for by the internal regulations of the Board of Directors. In such case, directors are deemed to be present for the purpose of calculating quorum and majority, except with regard to the vote on certain major decisions as provided by law and by the Board's internal regulations (in particular, the approval of the annual financial statements and the preparation of the management report and the consolidated financial statements).

Charter and procedure for assessing everyday agreements entered into at arm's length

Pursuant to the provisions of Article L. 22-10-12 of the French Commercial Code, the Board of Directors' Meeting of February 26, 2020 implemented a procedure to assess agreements concerning everyday transactions entered into at arm's length in order to identify any potential regulated agreements requiring prior authorization by the Board. This procedure (known as the "internal charter") (i) clarifies the concept of "everyday agreement entered into at arm's length" by referring notably to the study produced by the French Institute of Statutory Auditors

(Compagnie Nationale des Commissaires aux Comptes, CNCC) in 2014; (ii) provides for the set-up of an internal assessment committee comprising representatives of the Company's Legal and Finance Departments, charged with collecting and analyzing the agreements that may enter into the scope of the regulation in order to issue an opinion and determine their classification and (iii) indicates that a report will be submitted to the Board (or one of its Committees) annually on the implementation of this procedure; the Board (or the appointed Committee) may, where applicable, instruct any internal or external audit measures and/or update the internal charter if necessary.

3.2.2 COMPOSITION AND ACTIVITIES OF THE BOARD COMMITTEES

The Company's Board of Directors is assisted by:

- an Accounts and Audit Committee;
- a Nominations Committee;
- a Compensation Committee;
- a Research, Innovation and Sustainable Development Committee;
- a Purpose Committee.

3.2.2.1 Accounts and Audit Committee

Members and activities

	Independence	Position	First appointment	Attendance rate	Number of meetings 2025
Guillaume Texier	♦	Chairman	04/18/2019	100%	6
Olivier Andriès	♦	Member	04/27/2023	100%	
Véronique Bédague	♦	Member	04/27/2023	100%	
Arnaud Caudoux	♦	Member	04/24/2025	100%	
Franck Le Roux*	N/A	Member	11/06/2018	100%	
Agata Mazurek-Bak*	N/A	Member	08/02/2022	100%	
INDEPENDENCE RATE		100 %			

* Director representing employees and Director representing employee shareholders, not taken into account when calculating independence percentages pursuant to Article 10.3 of the AFEP-MEDEF Code.

♦ Independent pursuant to AFEP-MEDEF Code independence criteria, as assessed by the Board of Directors.

N/A: not applicable

The Accounts and Audit Committee meets at the initiative of its Chairwoman or at the request of the Chairman of the Board of Directors at least four times a year to review the interim and annual financial statements before their submission to the Board of Directors and periodically assesses its own work. The Accounts and Audit Committee has between three and six members appointed by the Board of Directors from among the directors (excluding those in management positions) on the basis of recommendations made by the Nominations Committee. The Committee's Chairman is appointed by the Board.

According to the internal regulations of the Accounts and Audit Committee, its members are selected for their financial or accounting expertise, and at least one Committee member must have specific financial or accounting expertise and be independent according to the criteria specified in the Board of Directors' internal regulations. The Board considered that the majority of Accounts and Audit Committee members had the required financial expertise and experience, particularly with regard to risk management.

Changes in 2025

Date	End of term	Renewal	Appointment
April 24, 2025			Arnaud Caudoux

Planned changes in 2026

At its meeting on March 10, 2026, the Board of Directors duly noted that Mrs. Agata Mazurek-Bak did not seek the renewal of her term of office as director representing employee shareholders.

No further changes are currently planned.

Duties of the Committee

The duties of the Accounts and Audit Committee, according to its internal regulations adopted by the Board, include the tasks assigned by the regulations governing the internal control of financial and accounting information stipulated by the Order of December 8, 2008 enacting into French law the Eighth Directive on the Statutory Audit of Accounts (Directive 2006/43/EC) and the AMF recommendations.

Furthermore, on the recommendation of the Accounts and Audit Committee, the Board of Directors, at its meeting on July 31, 2024, approved the amendment of the committee's internal regulations to include a sustainability remit, following the transposition of the Corporate Sustainability Reporting Directive (CSRD).

The Accounts and Audit Committee generally monitors issues relating to the preparation and control of accounting and financial information and sustainability information, including in digital form (Article L. 821-67 of the French Commercial Code); it is responsible in particular for monitoring:

- (i) the integrity of the Group's financial statements and the process for preparing financial information and sustainability information;

- (ii) the effectiveness of internal control systems concerning financial and accounting information and sustainability information and the Group's management system for risks expressed in the accounting statements or identified by Executive Management that may affect the financial statements;
- (iii) the Group's compliance with statutory and regulatory requirements where these are relevant to financial reporting or internal control;
- (iv) the assessment of the skills and independence of the Statutory Auditors involved in the performance of the audit and sustainability information; and
- (v) the performance of their duties by the Group's internal audit and statutory audit (annual and half-yearly financial statements) and the certification of sustainability information by the sustainability auditor(s).

In this regard, the Committee monitors more particularly the following activities:

■ **Process of preparing accounting, financial and sustainability information, including in digital form:**

- (i) defining the method and the process for calculating and auditing sustainability data;
- (ii) monitoring the financial and sustainability reporting process and, where appropriate, making recommendations to ensure the integrity of these processes;
- (iii) together with the Statutory Auditors, reviewing the sustainability information, the relevance and consistency of the accounting methods used to prepare the parent company and consolidated financial statements, examining whether major transactions are adequately processed on a Group-wide level;
- (iv) reviewing the scope of the consolidated companies and the procedures for collecting accounting and financial information and seeking the explanations and comments of the Statutory Auditors in this respect, where necessary;
- (v) giving an opinion on the draft interim and annual company and consolidated financial statements prepared by Executive Management before those statements are presented to the Board;
- (vi) consult with the Statutory Auditors, the members of the Executive Management and the Finance Department on the closing process and the accounting and financial information. These meetings may be held without the presence of the Company's Executive Management; and
- (vii) acquainting itself with, and expressing an opinion on the process of preparing press releases on the publication of the annual or interim financial statements and the quarterly information; and in the context of the Board's examination of the press releases concerning, in particular, the annual and interim financial statements, making sure that the presentation of this financial information to the market is consistent with the information in the financial statements, according to the information in its possession.

■ **Internal audit:**

- (i) acquainting itself with the Company's Audit Charter;
- (ii) examining the Group's annual internal audit program on a yearly basis;
- (iii) periodically receiving information from the Company with regard to progress with the audit program and self-assessment of the internal control and risk management system, summaries of the audit assignments carried out and, once a year, an overall analysis of the main lessons learned from the auditing year; and
- (iv) interviewing the head of the Internal Audit Department and giving the Committee's opinion on the organization of the work of this department;

■ **Effectiveness of internal control and risk management systems, particularly in the context of Article L. 823-19 and seq. of the French Commercial Code:**

- concerning the monitoring of the effectiveness of internal control systems:
 - (i) periodically receiving information from the Company about the organization and procedures of internal control relating to financial and accounting information,
 - (ii) interviewing the head of internal control and giving the Committee's opinion on the organization of the work of this department, and
 - (iii) hearing an annual report from the Ethics Committee on the whistle blowing system available to employees with respect to accounting, finance, management control and audit and all ethics issues; having significant matters referred to it by the Ethics Committee in such fields and ensuring the follow-up of those cases with this Committee;
- concerning the monitoring of the effectiveness of the management system for risks expressed in the accounting statements or identified by Executive Management that may have an impact on the financial statements, financial reporting and, where appropriate, information on sustainability:
 - (i) periodically examining the mapping of the main risks identified by Executive Management that may impact the financial statements, including notably risks of an ethical and non-compliance nature,
 - (ii) acquainting themselves with the main characteristics of the procedures for managing those risks and their results, based in particular on the work of the Risk, Insurance and Internal Control Coordination Department, the Compliance Department, the Internal Audit Department and the Statutory Auditors in relation to internal control procedures, and
 - (iii) following up on the implementation of corrective actions in relation to any identified weaknesses that might have an impact on the financial statements.

■ **Statutory Auditors and Sustainability Auditor(s):**

- (i) generally monitoring the performance of the tasks entrusted to the Statutory Auditors and Sustainability Auditor(s);
- (ii) annually examining the plan of activities of the Statutory Auditors and the Sustainability Auditor(s);
- (iii) interviewing the Statutory Auditors, the Sustainability Auditor(s) and the executives in charge of finance, accounting and treasury, in certain cases without the attendance of members of the Company's Executive Management;
- (iv) supervising and making recommendations in respect of the Statutory Auditor and Sustainability Auditor selection process;
- (v) expressing its opinion on the amount of the fees of the Statutory Auditors and the Sustainability Auditor(s);
- (vi) giving its prior approval to the activities of the Statutory Auditors or the Sustainability Auditor(s) that are strictly ancillary or directly complementary to the audit of the financial statements and the certification of sustainability information; and
- (vii) being informed of the fees that the Company and the Group pay to the audit firm and its network, ensuring that the amount of these payments or the share of these payments in the firm's and the network's revenue does not call into question the independence of the Statutory Auditors and the Sustainability Auditor(s), and reviewing together with the Statutory Auditors and the Sustainability Auditor(s) the risks threatening their independence and the precautionary measures taken to reduce such risks.

Activities in 2025

The Accounts and Audit Committee organized its activities, as before, within the framework of a program drawn up for the year and approved by the Committee. Minutes are taken of the meetings and the Committee Chairman produces a report for the Board of Directors.

The Committee may interview persons outside the Company if it deems such interviews useful for the performance of its duties. In addition, the Committee may consult outside experts. It may also interview the Company's financial officers or the Statutory Auditors without the attendance of the Chief Executive Officer. During the past year,

the Chairman of the Accounts and Audit Committee and/or the Committee members interviewed and met: the Chief Executive Officer, the Deputy Chief Executive Officer Finance, Digital and Purchasing, the General Counsel and secretary of the Committee, the Legal Director, the Group Audit Director, the Group Risk, Insurance and Internal Control Coordination Director, the Compliance Officer, the Information Systems Director, the Tax Director, the Chairman of the Ethics Committee, the Financing and Treasury Director, and the Company's Statutory Auditors.

In 2025, the Accounts and Audit Committee considered, in particular, the following issues:

Process of preparing accounting, financial and sustainability information	• review of the main accounting options, the annual and interim half-year financial statements and the associated business reports; • review of impairment tests; • familiarization with financial information and business reports for the first and third quarters of 2025; • monitoring and review of information regarding sustainability in the frame of the Corporate Sustainability Reporting Directive (CSRD); • review of draft financial communications.
Internal audit	• examination of summaries of internal audits conducted in 2024 and the first half of 2025, and approval of the internal audit program for 2026; • review of the external auditors' report on the Group's savings program.
Effectiveness of internal control and risk management systems	• review of at-risk contracts and the main tax risks to which the Company is exposed; • review of the implementation of the tax policy; • familiarization with the summary of the internal control self-assessment for fiscal year 2024 and the Statutory Auditors' opinion; • review of reports on fraud and action plans, as well as the report on the activities of the Ethics Committee; • review of the risk management system including the risk mapping, the risk materiality matrix (including CSR issues) and the Group's insurance program; • examination of the Company's cybersecurity, including its place in Group policy, its organization, the cyber risk mapping and related actions plans and training programs; • review of the program and action plan for the Group's compliance system and the Compliance Department's report on its work.
Statutory Auditors	• review of the Statutory Auditors' assignments for 2025; • review of the Statutory Auditors' fee budget for 2025, non-audit services (NAS) and the distribution of assignments between the joint auditors, as well as of their independence, how they organized their tasks and their recommendations; • supervision of the process and conditions for the renewal of the offices of the Statutory Auditors on their expiry.
Other	• examination of the process of integrating companies acquired by the Group; • familiarization with the planned divestitures and acquisitions and progress with Group restructuring transactions; • review with Company management of the following key processes contributing to its duties: the financial policy and planned financing operations, changes in internal control, investment and divestment procedures and processes, the legal reporting of major disputes; • review of the refinancing of the Group's syndicated loan facilities; • review of the GreenUp 2024-2027 strategic program.

The Committee's work is assessed annually as part of the annual assessment of the Board and its Committee.

3.2.2.2 Nominations Committee

Members and activities

	Independence	Position	First appointment	Attendance rate	Number of meeting in 2025
Pierre-André de Chalendar	♦	Chairman	04/22/2021	100%	4
Maryse Aulagnon		Member	03/25/2014	100%	
Philippe Brassac	♦	Member	04/24/2025	100%	
Isabelle Courville	♦	Member	11/06/2018	100%	
Antoine Frérot		Member	07/01/2022	100%	
INDEPENDENCE RATE		60%			

♦ Independent pursuant to AFEP- MEDEF Code independence criteria, as assessed by the Board of Directors.
N/A: not applicable.

In accordance with its internal regulations, the Nominations Committee is comprised of three to six members, who are appointed by the Board of Directors at the recommendation of the Nominations Committee. The Committee members are selected from among the directors who do not hold management positions. The Committee Chairman is appointed by the Board of Directors at the recommendation of the Committee.

Changes in 2025

Date	End of term	Renewal	Appointment
April 24, 2025		Pierre-André de Chalendar	Philippe Brassac

Planned changes in 2026

No changes are currently planned, subject to the renewal of the term of office as director of Mr. Antoine Frérot by the General Shareholders' Meeting of April 23, 2026.

Duties of the Committee

The duties of this Committee are as follows:

- nominations: the Committee is charged with making recommendations regarding the future composition of the Company's management bodies and, more importantly, it is responsible for selecting the Company's corporate officers and developing a succession plan; it also recommends the appointment of directors and of the members, as well as the Chairman of each Board Committee, striving to ensure diversity in experience and points of view, while making certain that the Board of Directors retains the necessary objectivity and independence vis-à-vis any specific shareholder or group of shareholders. The Committee gives its opinion on the succession plan for the Company's key managers who are not corporate officers of the Company. The Nominations Committee strives to ensure that independent directors account for at least:

- (i) the majority of directors,
- (ii) two-thirds of the members of the Accounts and Audit Committee,
- (iii) the majority of members of the Compensation Committee, and
- (iv) the majority of members of the Nominations Committee.

Each year, the Nominations Committee conducts a case-by-case assessment of each director with regard to the independence criteria set forth in the internal regulations of the Board of Directors and makes proposals to the Board of Directors for the Board's review of the position of each director in question;

- assessment: the Nominations Committee assists the Board in its periodic assessments. It prepares the Board's annual assessment of its organization and operation, and leads the formal assessment of the Board that is carried out every three years by an outside organization. Each year, the Committee provides the Board of Directors with a report assessing the performances of the Chairman and of the directors, as well as the actions of Executive Management.

Activities in 2025

In 2025, the work of the Nominations Committee focused on preparing proposals and recommendations for the Board of Directors on the following matters, in particular:

Appointment	• development and consideration of the composition of the Board and its committees: the committee conducted a selection process for new directors, taking into consideration the needs expressed during the assessment of the functioning of the Board (internationalization of the Board, knowledge of Veolia's businesses and the global sustainable development ecosystem, including climate matters).
Assessment	• assessment procedures and report on the activities of the Board and its Committees; • review of the actions of the Chairman of the Board of Directors and the Chief Executive Officer; • review of the independence of directors.
Succession	• succession plan for key managers.

In addition to the Chairman of the Board of Directors, the Chief Executive Officer, acting as a Director, participates in the activities of the Committee with regard to the succession plan for key managers.

3.2.2.3 Compensation Committee

Members and activities

	Independence	Position	First appointment	Attendance rate	Number of meeting in 2025
Olivier Andriès	♦	Chairman	04/27/2023	100%	3
Maryse Aulagnon		Member	12/01/2017	100%	
Pierre-André de Chalendar	♦	Member	04/27/2023	100%

INDEPENDENCE RATE		75%			

- * Director representing employees, not taken into account when calculating independence percentages pursuant to Article 10.3 of the AFEP-MEDEF Code.
♦ Independent pursuant to AFEP- MEDEF Code independence criteria, as assessed by the Board of Directors.
N/A: not applicable.

In accordance with its internal regulations, the Compensation Committee has between three and six members, who are appointed by the Board of Directors at the recommendation of the Compensation Committee. The Committee members are selected from among the directors who do not hold management positions. The Chairman of the Committee is appointed by the Board of Directors at the recommendation of the Committee.

Changes in 2025

Date	End of term	Renewal	Appointment
April 24, 2025	Marion Guillou Francisco Reynés	Pierre-André de Chalendar	Elena Salgado

Planned changes in 2026

No changes are currently planned.

Duties of the Committee

The duties of this Committee are as follows:

- to study and make proposals regarding the overall compensation of the Company's executive corporate officers, in particular with regard to the rules and criteria governing the variable portion of compensation consistent with the annual assessment of their performance and the medium-term strategy and performance of the Company and the Group, and with regard to the granting of in-kind benefits, share subscription or purchase options and the allocation of free shares, pension plans, termination compensation and any other benefits, ensuring that all such components are taken into account in assessing and setting their overall compensation;
- to recommend to the Board of Directors a total compensation amount for allocation to directors, as well as the rules for its distribution;
- to present its opinion to the Board of Directors on the general policy and terms and conditions for granting share purchase or subscription options and free shares and the setting-up of employee share ownership plans, as well as Company or Group employee profit-sharing measures;
- to make proposals to the Board concerning the granting of stock options and, if applicable, free shares to the Company's corporate officers, as well as with respect to the performance conditions applicable thereto;
- to make proposals to the Board concerning the obligation for the Company's executive corporate officers to hold shares obtained by exercising share purchase and subscription options or, if applicable, as a result of free share grants;
- to present its opinion on the compensation policy for key managers of the Company or of other companies in the Group who are not corporate officers.

As part of its duties, the Compensation Committee may request external technical studies. In this respect, it may notably seek the advice of companies specializing in executive compensation.

Activities in 2025

In 2025, the work of the Compensation Committee focused on preparing proposals and recommendations for the Board of Directors on the following matters, in particular:

Compensation of the executive corporate officer and the Group's top executives	• compensation of executive corporate officers paid or payable in respect of 2024; • 2025 compensation policies of the Chairman of the Board of Directors and the Chief Executive Officer; • definition of the terms and conditions of the 2025 share grant plan for the Chief Executive Officer and top executives.
Directors' compensation	• information on directors' compensation (excluding the executive corporate officer) in respect of 2024; • directors' compensation policy for 2025 i.e. review of the budget and allocation of 2025 compensation granted to directors.
Employee share ownership	• review of the proposed 2025 employee share ownership plan and consideration of a proposed 2026 employee share ownership plan.

3.2.2.4 Research, Innovation and Sustainable Development Committee

Members and activities

	Independence	Position	First appointment	Attendance rate	Number of meeting in 2025
Isabelle Courville	♦	Chairman	04/20/2017	100%	3

* Director representing employees, not taken into account when calculating independence percentages pursuant to Article 10.3 of the AFEP-MEDEF Code.

♦Independent pursuant to AFEP- MEDEF Code independence criteria, as assessed by the Board of Directors.

N/A: not applicable.

According to its internal regulations, the Research, Innovation and Sustainable Development Committee meets when convened by its Chairwoman or at the request of the Chairman of the Board of Directors. It is required to hold at least three meetings per year. The Committee met three times in 2025 (as in 2024).

The Research, Innovation and Sustainable Development Committee has between three and five members, who are appointed by the Board of Directors at the recommendation of the Nominations Committee. The Committee Chairwoman is appointed by the Board of Directors at the recommendation of the Chairman of the Board.

Changes in 2025

Date	End of term	Renewal	Appointment
April 24, 2025	Marion Guillou		Arnaud Caudoux Elena Salgado

Planned changes in 2026

No changes are currently planned.

Duties of the Committee

The main duty of this Committee is to assess the Group's strategy and policies with regard to research, innovation and sustainable development and to issue an opinion to the Board of Directors.

The Committee is informed of programs and priority actions undertaken in the areas within its remit and assesses the results thereof. In particular, it keeps abreast of the budgets and staff levels and gives its opinion regarding the allocation of means and resources and whether they are appropriate in light of the strategic choices made. As regards, more specifically, the Company's environmental policy and issues, the Committee is informed of the information, objectives, commitments and main indicators concerning sustainable development published by the Company in its management report and familiarizes itself with the non-financial ratings obtained by the Group.

The Committee's main contacts are the Chairman of the Board of Directors and the Company's Executive Management and Executive Committee, the Group's Strategy and Innovation, Business Support and Performance and Sustainable Development departments, as well as any other manager within the Company who has information or opinions that may be of use to the Committee.

The Committee may also interview persons outside the Company if it deems such interviews to be of use in the performance of its duties. In addition, the Committee may consult outside experts.

The Committee seeks to analyze the content of Veolia's service offerings, its potential customers, the size of markets, the Group's competitive advantages, its competitors, its research programs, technologies and the best economic balance for each area addressed.

Activities in 2025

In 2025, the Committee particularly focused on the following matters:

CSR	• Group's CSR performance and non-financial ratings; • extent of roll-out of the Group's sustainable development commitments; • PFAS treatment strategy; • global innovation strategy for water technologies; • use of artificial intelligence within the Group to support the objectives of the GreenUp 2024-2027 strategic program.
Ecological transition/ decarbonization	• annual progress report on Veolia's plan to stop coal-based energy production; • decarbonization and climate change adaptation innovation strategy (see sections 4.1.2 of the Universal registration document); • Veolia's positioning with regard to carbon neutrality.

3.2.2.5 Purpose Committee

Members and activities

	Independence	Position	First appointment	Attendance rate	Number of meeting in 2025
Antoine Frérot, Chairman		Chairman	07/01/2022	100%	2
Olivier Andriès	♦	Member	04/25/2024	50%

INDEPENDENCE RATE		71%			

* Director representing employees, not taken into account when calculating independence percentages pursuant to Article 10.3 of the AFEP-MEDEF Code.

♦ Independent pursuant to AFEP- MEDEF Code independence criteria, as assessed by the Board of Directors.

N/A: not applicable.

According to its internal regulations, approved by the Board of Directors' Meeting of April 5, 2022, the Purpose Committee meets when convened by its Chairman or at the request of the Chairman of the Board of Directors. It is required to hold at least two formal meetings per year.

The Purpose Committee comprises members of the Nominations Committee, the Committee Chairmen and one Director representing employees. The Chairman of the Committee is appointed by the Board of Directors at the recommendation of the Chairman of the Board.

Changes in 2025

Date	End of term	Renewal	Appointment
April 24, 2025		Pierre-André de Chalendar	Philippe Brassac

Planned changes in 2026

No change is currently envisaged, subject to the renewal of the term of office as director of Mr. Antoine Frérot by the General Meeting of April 23, 2026.

Duties of the Committee

The role of this Committee is to place the Board in the best possible conditions to assess the dissemination of Veolia's Purpose to all its stakeholders – employees, customers, suppliers, shareholders, partners and regions where the Group operates – so that they know what it means and can contribute to its practical application.

In this context, the Committee:

- reviews the dissemination of Veolia's Purpose to stakeholders and, more broadly, studies the measures for appropriating the multifaceted performance approach implemented to enable its roll-out;

- studies progress monitoring by the Group and advises the Board of its opinion on measures taken with regard to the Purpose and multifaceted performance;
- conducts an annual assessment of financial and non-financial indicators monitoring the implementation of Veolia's purpose (indicators of the multifaceted performance);
- gives its opinion and issues proposals to the Board regarding, where applicable, any adjustments to the Group's Purpose;
- examines any questions submitted by the Chairman regarding the above points.

In this context, the Committee receives all necessary information to perform its duties and issues all opinions within its scope.

Activities in 2025

In 2025, the Committee particularly focused on the following matters:

Dissemination of the Purpose	• review of the results of the 2025 engagement survey; • review of the multifaceted performance indicators in the GreenUp 2024-2027 strategic program; • update of the wording of the Purpose; • outlook for changes to the Purpose.
-------------------------------------	---

3.3 Executive Management and the Executive Committee

3.3.1 ORGANIZATION OF EXECUTIVE MANAGEMENT'S POWERS: SEPARATION OF THE FUNCTIONS

The law provides that the Board of Directors elects a Chairman from among its members, who must be a natural person. The duties of the Chairman are presented in section 3.2.1.5 of the Universal registration document. The Board of Directors entrusts the Executive Management of the Company to either the Chairman of the Board of Directors (referred to as the Chairman and Chief Executive Officer), or to another natural person, who may or may not be a director, referred to as the Chief Executive Officer.

As mentioned in the AFEP-MEDEF Code, the law states no preference between those two options. Accordingly, the Board of Directors may choose between these combined or separate forms of Executive Management in accordance with its specific requirements.

At the recommendation of the Nominations Committee, the Board of Directors' Meeting of January 10, 2022 decided to separate the duties of Chairman of the Board of Directors and Chief Executive Officer from July 1, 2022.

Mr. Antoine Frérot had expressed the wish to cease his duties as Chief Executive Officer, which he had exercised since 2009, on the expiry of his term of office. He therefore asked the Board of Directors to task the Nominations Committee with conducting, with the assistance of a recruitment firm, an in-depth review of the most appropriate governance structure to lead the company, which has changed scale and is continuing to expand internationally.

For Executive Management positions, the Nominations Committee collected internal applications and had them assessed by the recruitment firm. It then assessed them against a list of potential external candidates pinpointed by the specialist recruitment firm.

The Directors informed Mr. Antoine Frérot of their unanimous wish that he remain Chairman of the Veolia Environnement Board of Directors, to continue benefiting from his successful experience at the head of the Group and his commitment to Veolia's values. To this end, shareholders were asked to renew his term of office as a Director at the General Shareholders Meeting of June 15, 2022.

At the recommendation of the Nominations Committee, the Board of Directors also decided that Mrs. Estelle Brachlianoff, Chief Operating Officer up to June 30, 2022 inclusive, would succeed Mr. Antoine Frérot as the Chief Executive Officer of Veolia from July 1, 2022. As Chief Executive Officer, Mrs. Estelle Brachlianoff has the widest powers to act in all circumstances in the Company's name, under the conditions described in section 3.3.2 of the Universal Registration Document. In addition, shareholders were asked to appoint her to the Board of Directors as it is essential that the Chief Executive Officer takes part in the discussions and deliberations of the Board of Directors, which is responsible for defining the Company's strategic direction.

Mrs. Estelle Brachlianoff joined the Executive Committee of the Group in 2013 and was appointed Chief Operating Officer by Mr. Antoine Frérot in 2018. Since July 1, 2022 she is responsible for managing and leading Veolia which, in 10 years, has become the world champion of ecological transformation. In the conduct of her duties, she can count on the support of an Executive Committee and a renewed Management Committee, comprising some of the world's top experts in the water, waste and energy businesses.

The substantial counter-balances within the Board of Directors that existed prior to the change in the governance method remain unchanged:

- the existence of a Senior Independent Director, whose duties, means and prerogatives are presented in section 3.2.1.7 of the Universal registration document;
- the presence of a significant majority of Independent Directors, two Directors representing employees and one Director representing employee shareholders on the Board of Directors;

- the appointment of Independent Directors to chair the majority of Board Committees;
- the organization of an executive session at the end of each Board meeting, without the attendance of the Chief Executive Officer, led by the Chairman;
- the organization of governance roadshows by the Vice-Chairwoman and Senior Independent Director;
- in-depth assessments of the activities of the Board;
- limits on powers set-out in the internal regulations of the Board of Directors providing for approval by the Board of Directors of major decisions of a strategic nature or which are likely to have a material impact on the Company (see section 3.3.2 of the Universal registration document).

The separation of the duties of the Chairman and the Chief Executive Officer was largely motivated by the desire to retain the expertise and experience of the Chairman and Chief Executive Officer at a decisive moment in the Company's history. Notwithstanding the fact that this corporate governance approach is recognized by investors and proxy advisors as the best governance approach for listed companies to ensure transition during the necessary period in the context of the Chairman and Chief Executive Officer's succession, the Board of Directors examines the operation of this separated governance method each year and proposes, where appropriate, any useful changes to shareholders.

The succession plan of the Chairman of the Board of Directors and the Chief Executive Officer, reviewed each year by the Nominations Committee, covers:

- temporary interim succession;
- unexpected succession;
- normal succession;
- succession at the end of the term of office;
- the search for successors, in particular through the identification and development of a pool of candidates meeting the current and future needs of the Company.

On the recommendation of its Nominations Committee, the Board of Directors, at its meeting of November 5, 2025, decided, in the context of the separation of the duties of Chairman of the Board of Directors and Chief Executive Officer, to recommend to the Combined General Meeting of April 23, 2026 to renew the terms of office of Mr. Antoine Frérot and Mrs. Estelle Brachlianoff as directors for a period of four years expiring at the end of the 2030 Ordinary General Meeting held to approve the financial statements for the year ending December 31, 2029.

Subject to the General Meeting's vote, the Board of Directors will reappoint Mr. Antoine Frérot as Chairman of the Board of Directors, it being stipulated that in 2028 he will reach the age limit for chairing the Board of Directors as defined in the Articles of Association. The Nominations Committee and the Board of Directors will, in 2026 and 2027, consider the succession plan for the Chairman of the Board of Directors. Furthermore, the Board of Directors will confirm Mrs. Estelle Brachlianoff as Chief Executive Officer.

The Board of Directors, at its executive session on July 30, 2025, praised the quality of the work performed, the strength of management and the relevance of the management team's strategic vision. Under its leadership, Suez's integration has been a success. Veolia also strengthened its international expansion and capture of new markets, posting steady quarter-on-quarter growth and demonstrating its resilience. Under its authority, the Company will continue its growth trajectory while strengthening its position as a technology leader.

3.3.2 LIMITS ON THE POWERS OF THE CHIEF EXECUTIVE OFFICER

In accordance with the law, the Chief Executive Officer has the widest powers to act in the name of the Company in all circumstances. She acts within the limits of the corporate purpose.

However, the powers exercised by the Chief Executive Officer are limited by the internal regulations of the Board of Directors. The following decisions of the Chief Executive Officer are therefore subject to the prior authorization of the Board of Directors:

- determining the Group's strategic direction;
- Group transactions of an individual amount in excess of 300 million of euros, with the exception of financing operations;

- Group investment or divestment transactions including a commitment of between 150 million of euros and 300 million of euros per transaction, with the exception of financing transactions, after consultation with and the recommendation of the Accounts and Audit Committee;
- financing transactions, whatever their terms, (including the early redemption or repurchase of debt) amounting to more than 1.5 billion of euros per transaction if carried out in a single tranche and 2.5 billion of euros if the transaction is carried out in several tranches;
- transactions in the Company's shares involving an overall amount in excess of 1% of the Company's total shares and, by way of derogation, an overall number greater than 2% of the total number of the Company's shares in the context of share buyback transactions for employee share ownership plans.

3

3.3.3 EXECUTIVE COMMITTEE

The Chief Executive Officer is assisted in the performance of her duties by an Executive Committee, a discussion, consultation and general policy decision-making body which seeks to implement the Group's strategic direction. The Committee is also consulted on major issues concerning the Group's corporate life.

The Executive Committee meets monthly.

As of the date of filing of this Universal Registration Document, the Company's Executive Committee comprises 14 members:

- Estelle Brachlianoff, Chief Executive Officer;
- Emmanuelle Menning, Deputy Chief Executive Officer Finance and Purchasing;
- Laurent Obadia, Senior Executive Vice President, Stakeholders and Communications;
- Sébastien Daziano, Senior Executive Vice President, Strategy, Innovation and Development;
- Gavin Graveson, Senior Executive Vice President, Northern Europe;
- Philippe Guitard, Senior Executive Vice President, Central and Eastern Europe;
- Éric Haza, Chief Legal Officer;
- Anne Le Guennec, Senior Executive Vice President, Worldwide Water Technologies;
- Christophe Maquet, Senior Executive Vice President, Asia Pacific;
- Gustavo Migués, Senior Executive Vice President, Iberia and Latin America;
- Jean-François Nogrette, Senior Executive Vice President, France & Special Waste Europe;
- Helman le Pas de Sécheval, General Counsel;
- Nadège Petit, Senior Executive Vice President, North America;
- Isabelle Quainon, Senior Executive Vice President, Human Resources.

In addition, Executive Committee meetings bring together, each quarter, all the Group's functions and regions to share and commit to the Group's challenges and outlook. As of the date of filing of this Universal Registration Document, this Committee has 36 members, including the 14 Executive Committee members; its composition can be viewed on Veolia's website (www.veolia.com).

As of April 2, 2026, the Executive Committee which will include six non-French members, will be composed as follows:

- Estelle Brachlianoff, Chief Executive Officer;
- Emmanuelle Menning, Deputy Chief Executive Officer in charge of Finance;
- Laurent Obadia, Deputy Chief Executive Officer in charge of Stakeholders and Communication;
- Geoffroy Carlier, Senior Executive Vice President of Operational Integration and Complex Projects;
- Sébastien Daziano, Senior Executive Vice President of Multifaceted Performance and Strategy;
- Gavin Graveson, CEO Asia-Pacific Zone;
- Philippe Guitard, CEO Central and Eastern Europe Zone;
- Éric Haza, Chief Legal Officer;
- Richard Kirkman, CEO Northern Europe Zone and Senior Executive Vice President Development;
- Anne Le Guennec, CEO Water Technologies Zone;
- Christophe Maquet, Senior Executive Vice President of Business Performance;
- Gustavo Migués, CEO Iberia and Latin America;
- Jean-François Nogrette, CEO France and Special Waste Europe Zone;
- Helman le Pas de Sécheval, General Counsel;
- Nadège Petit, CEO North America Zone;
- Isabelle Quainon, Chief Human Resources Officer.

As of the same date, the Management Committee will be composed of 37 members, including the 16 Executive Committee members.

3.4 Compensation and benefits

A summary of compensation paid during or awarded in respect of fiscal year 2025 to corporate officers, as well as the 2026 compensation policy submitted to shareholders' vote at the Combined General Meeting of April 23, 2026, are detailed in section 3.4.4 below.

The information required by Article L. 225-37 of the French Commercial Code in the Corporate Governance Report is presented in this section.

3.4.1 EXECUTIVE AND DIRECTOR COMPENSATION

The Company refers to the AFEP-MEDEF Code, particularly regarding executive corporate officer compensation.

The total compensation paid during or awarded in respect of fiscal year 2025 to corporate officers, directors and other senior executives by the Company and by controlled companies within the meaning of Article L. 233-16 of the French Commercial Code is detailed below.

This Universal Registration Document and, in particular, the tables in sections 3.4.1 and 3.4.3 below (share subscription and/or purchase options, free shares, performance shares) have been prepared in accordance with the format recommended by the AFEP-MEDEF Code and the AMF recommendation no. 2012-02.

3.4.1.1 Executive corporate officer compensation

3.4.1.1.1 Recap of 2025 executive corporate officer compensation policy

The principles and criteria for determining, allocating and awarding the fixed, variable and exceptional components of total compensation and benefits of all kinds that may be awarded to corporate officers in respect of their duties, representing the compensation policy for these individuals, are decided by the Board of Directors at the recommendation of the Compensation Committee and presented for shareholder approval at General Meetings of Shareholders ("ex ante vote on the compensation policy") in accordance with Article L. 22-10-8 of the French Commercial Code.

In addition, pursuant to Article L. 22-10-34 of the French Commercial Code, the General Meeting of Shareholders votes on: (i) the fixed, variable and exceptional components of total compensation; and (ii) benefits of all kinds paid during the fiscal year or awarded in respect of the same fiscal year to corporate officers ("ex post vote on compensation of the prior fiscal year"). Accordingly, the payment of variable or exceptional compensation components in respect of a period is contingent on their approval by the General Meeting of Shareholders called to approve the financial statements for this period. The resolutions on corporate officers' compensation components for fiscal year 2025 submitted to shareholders' ex post vote at the General Meeting of April 23, 2026 are presented in section 3.4.4 below.

In 2025, Veolia Environnement corporate officers were: Mr. Antoine Frérot, Chairman of the Board of Directors and Mrs. Estelle Brachlianoff, Chief Executive Officer.

General principles applicable to executive corporate officer compensation

In accordance with the provisions of the AFEP-MEDEF Code and at the recommendation of its Compensation Committee, the Board of Directors conducts an annual review of all the compensation components of the corporate officers.

It ensures in particular that the compensation policy is aligned with the Group's strategy and considers the appropriate balance between the different compensation components (fixed and variable annual compensation, long-term compensation plan and other benefits and additional compensation components). The review of the compensation components of the Chairman and Chief Executive Officer, the Chairman of the Board of Directors and the Chief Executive Officer also takes

account of compensation studies and benchmarks covering CAC 40 companies and comparable European companies.

Shareholder dialogue

For a number of years, Veolia Environnement has organized annual discussion sessions between the Senior Independent Director, the Chairman of the Board of Directors and the main investors in its share capital as well as proxy advisors. The main questions and comments raised during these meetings are communicated to the relevant Board Committees, which analyze them with regard to market practice and taking account of the Group's governance principles. The committees then report to the Board of Directors.

In 2025, the proposed compensation policies were finalized and approved after a process taking into consideration the opinion of shareholders and proxy agencies.

At the recommendation of the Compensation Committee, the Board of Directors decided to reduce the number of quantitative variable compensation criteria for the Chief Executive Officer from 10 to 9 for 2024. The compensation policy for the Chief Executive Officer was approved by over 90% of the voters at the General Meeting of April 25, 2025.

In line with shareholder expectations, the Board of Directors has continued in recent years to be more transparent on the level of achievement of performance conditions. In 2025, in the interest of continuity, the Board of Directors made no changes to the performance criteria, which are aligned with the GreenUp strategic program.

Chairman of the Board of Directors' compensation policy for 2025

The Chairman of the Board of Directors' compensation policy was adopted by the Board of Directors' Meeting of March 11, 2025 at the recommendation of the Compensation Committee and approved by the General Meeting of April 24, 2025. It consists solely of fixed compensation and benefits in kind, excluding all variable or exceptional compensation, grants of share subscription options or performance shares and compensation for his duties as a director.

Fixed compensation

At the recommendation of the Compensation Committee and in accordance with the compensation policy, the Board of Directors' Meeting of March 11, 2025 decided to retain the gross annual fixed compensation of the Chairman of the Board of Directors unchanged at 700,000 euros.

It is recalled that this compensation was set by a decision of the Board of Directors' Meeting of April 5, 2022, based on a study conducted by the firm Boracay and described in section 3.4.1.1.3 of the 2021 Universal Registration Document.

Annual variable compensation

None.

2025 long-term compensation

None.

Severance payments

None.

Compensation awarded as a director

Since 2012, Mr. Antoine Frérot has decided to waive the compensation awarded for his duties as a director paid by the Company and Group-controlled companies. This waiver remains applicable to his duties as Chairman of the Board of Directors.

Pension plan

Mr. Antoine Frérot benefits from a supplementary defined contribution pension plan applicable since July 1, 2014 and presented in section 3.4.2 below.

He is eligible for the defined benefit pension plan presented in section 3.4.2 below, with a theoretical annuity of nil.

Other benefits

Mr. Antoine Frérot benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the employee category with which he is assimilated for the setting of employee benefits and other ancillary components of his compensation.

Mr. Antoine Frérot enjoys the use of a company car.

Chief Executive Officer compensation policy for 2025

Fixed compensation

At the recommendation of the Compensation Committee and in accordance with the compensation policy, the Board of Directors' Meeting of March 11, 2025 decided to retain the gross annual fixed compensation of the Chief Executive Officer unchanged at 1,030,000 euros.

As a reminder, this compensation was set following the Board of Directors' decision of April 5, 2022 based on the results of a study conducted by the firm Boracay on a group of comparable and rival companies comprising 13 listed European companies such as Centrica, EDP, Enel, Engie, ENI, E.ON, Iberdrola, Schneider Electric, Vinci, ABB, ACS, Air Liquide and Bouygues.

The companies in the peer group:

- share a common mission: employee and environmental quality with local authorities;
- conduct several businesses globally and are present on at least four continents;
- report revenue equal to between 50% and 200% of Veolia's revenue.

In addition to the peer group, the Compensation Committee also assessed the executive corporate officer compensation in comparison with CAC 40 companies.

Details of this study are presented in section 3.4 of the 2021 Universal Registration Documentation.⁽¹⁾

Annual variable compensation

In order to integrate the multifaceted performance indicators relating to the Company's Purpose, the Board of Directors' Meeting of March 11, 2025, at the recommendation of the Compensation Committee, determined the calculation method for variable compensation as follows:

- weight of the auditable quantitative portion (80%) and weight of the qualitative portion (20%) unchanged;
- split of the weight of the auditable quantitative portion (80%) between financial quantitative objectives (50%) and non-financial quantitative objectives (30%) unchanged;
- variable compensation capped (in the event objectives are exceeded) at 160% of fixed annual compensation, or 1,648,000 euros.

In addition, the criteria for the 2025 variable compensation were set as follows:

- **with respect to the quantitative criteria:** in line with the outlook and objectives published on February 27, 2025, the criteria for the quantitative portion of variable compensation break down as follows. The quantitative portion is equal to the total of the components resulting from application of each of these criteria separately:

- For the **50% financial quantitative portion:**

- 20% based on the **Profitability indicator (CNIGS):** Current Net Income, Group Share,
- 15% based on the **Investment Capacity indicator (free cash flow)⁽¹⁾:** before financial acquisitions/divestments and dividends but after financial expenses and taxes,
- 15% based on the **Capital Return indicator (ROCE):** Group ROCE after tax, including the return on capital employed of joint ventures and companies, after IFRS 16 lease adjustments.

The financial quantitative variable compensation portion will be determined based on the attainment of the 2025 budget objectives which are consistent with the outlook announced to the market on February 27, 2025:

- for the **30% non-financial quantitative portion:**

- 5% based on the **Health, Safety and Well-Being indicator:** improvement and reduction in the injury frequency rate,
- 5% based on the **Ethics and Integrity indicator:** % of positive answers to the engagement survey question "Are Veolia's values applied in my entity" across all respondents,
- 5% based on the **Decarbonization of our Assets indicator:** decarbonization investments, including the coal phase-out and methane capture,
- 5% based on the **Growth and Innovation Drivers indicator:** revenue growth in priority business segments (Energy, Water Technologies, Hazardous Waste),
- 5% based on the **Employee Commitment indicator:** commitment rate of employees measured by an engagement survey conducted by an external body (clear objectives, meaning and usefulness, work atmosphere, pride in the Group, willingness to recommend Veolia),
- 5% based on the **Biodiversity indicator:** progress rate of action plans improving the environmental footprint and biodiversity at sensitive sites;

- **with respect to the qualitative criteria:** the qualitative portion (20% of the target bonus) is subsequently based on an overall assessment by the Board of Directors, at the recommendation of the Compensation Committee, based notably on the following individual objectives:

- strategic aspects,
- managerial performance,
- equity story.

In addition, the Board of Directors reserves the right to exercise its power of discretion regarding the determination of the Chief Executive Officer's compensation, in application of legal provisions and in accordance with Articles L. 22-10-8 and L. 22-10-34 of the French Commercial Code. It may do so in the event of special and unforeseeable circumstances (such as the Covid-19 pandemic and its uncertainties) that could justify an exceptional adjustment, upward or downward, without exceeding the ceiling set in the compensation policy (i.e. 160% of fixed annual compensation), to one or more criteria comprising the Chief Executive Officer's annual variable compensation to ensure that application of the criteria described above produces results reflecting the performance of both the Chief Executive Officer and the Group, as well the alignment of the interests of the Company and its shareholders with those of the Chief Executive Officer.

This adjustment may be made to the Chief Executive Officer's annual variable compensation by the Board of Directors at the recommendation of the Compensation Committee, after the Board of Directors has provided adequate reasoning for its decision. Any exercise of this discretion will be made public.

⁽¹⁾ Target free cash-flow used to determine the bonus excludes discretionary and growth investments.

Long-term compensation

In 2023, during discussions with investors and proxy advisors (governance roadshow), there was an expectation for overweighting to be applied to the Chief Executive Officer's long-term compensation. The Board of Directors was eager to achieve a balance between the three components (fixed, variable and long-term) of this compensation.

At the recommendation of the Compensation Committee, the Board of Directors decided that the Chief Executive Officer would receive a performance share grant capped at 133% of her fixed annual compensation (if all performance conditions are met).

The Chief Executive Officer's compensation breaks down as follows:

- annual fixed compensation (€1,030,000) for 30%;
- annual variable compensation (€1,030,000 if objectives are attained) for 30%;
- long-term variable compensation (€1,373,000 or 133% of fixed annual compensation if objectives are attained) for 40%.

In the event of outperformance leading to payment of the maximum amount of variable compensation (equal to the cap of 160% of fixed annual compensation), the breakdown is as follows:

- annual fixed compensation (€1,030,000) for 25%;
- annual variable compensation (€1,648,000 if objectives are exceeded) for 41%;
- long-term variable compensation (€1,373,000 if objectives are exceeded) for 34%.

Compensation awarded as a director

Mrs. Estelle Brachlianoff waived the compensation awarded for her duties as a director by the Company and Group-controlled companies.

Pension plan or other benefits

Information on pension plans, other benefits and severance payments due in the event of termination of the office of Chief Executive Officer and compensation under a non-compete clause is presented in section 3.4.2 below.

3.4.1.1.2 Compensation of the Chairman of the Board of Directors for 2025

The compensation components paid in 2025 or awarded for the same fiscal year to Mr. Antoine Frérot as Chairman of the Board of Directors comply with the compensation policy approved by the General Meeting of April 24, 2025 recalled above and presented in section 3.4 of the 2024 Universal Registration Documentation.

Fixed compensation

The gross annual fixed compensation of Mr. Antoine Frérot was set at €700,000.

Supplementary social protection plan

Mr. Antoine Frérot benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the category of employee with which he is assimilated for the setting of social benefits and other ancillary components of his compensation.

Pension plan

Mr. Antoine Frérot benefits from a supplementary defined contribution group pension plan applicable since July 1, 2014 and presented in section 3.4.2 below.

Other benefits

Mr. Antoine Frérot enjoys the use of a company car.

Summary of compensation received by Mr. Antoine Frérot

The following tables notably present a summary of compensation of all kinds paid or awarded to Mr. Antoine Frérot in respect of fiscal years 2024 and 2025 and have been prepared in accordance with the formats recommended by the AFEP-MEDEF Code and AMF recommendation no. 2012-02. The tables presenting performance shares and share subscription and purchase options can be found in sections 3.4.3.2 and 3.4.3.3 below.

Summary of total compensation, options and shares awarded to Mr. Antoine Frérot (AFEP-MEDEF Code Table 1)

(1) Mr. Antoine Frérot is a beneficiary of the supplementary defined benefit group pension plan set up for category 8 and higher executives of Veolia Environnement closed with effect from June 30, 2014. Since July 1, 2014, he is a beneficiary of the supplementary defined contribution group pension plan set up notably for category 8 and higher executives.

3.4.1.1.3 Compensation of the Chief Executive Officer in respect of 2025

The compensation components paid in 2025 or awarded for the same fiscal year to Mrs. Estelle Brachlianoff as Chief Executive Officer comply with the compensation policy approved by the General Meeting of April 24, 2025 recalled above and presented in section 3.4 of the 2024 Universal Registration Documentation.

Fixed compensation

The gross annual fixed compensation of Mrs. Estelle Brachlianoff was set at €1,030,000.

Annual variable compensation for fiscal year 2025

In accordance with the compensation policy approved by the General Meeting of April 24, 2025 recalled above and based on the attainment of the criteria determining the calculation of the variable portion, the amount of this variable portion for fiscal year 2025 was determined as follows:

- (i) **with respect to the quantitative criteria:** in line with the outlook and objectives published on February 27, 2025, equal to the total of the components resulting from application of each of these criteria separately:
- the attainment level for each indicator of the financial and non-financial quantitative variable compensation portion was determined based on the attainment of the 2025 budget objectives which are consistent with the outlook announced to the market on February 27, 2025. The payment rate follows the payout rule established for each indicator based on the requirements defined in the GreenUp 2024-2027 strategic program,
 - the financial quantitative variable portion (50% of the target bonus) equals €639,424, representing an overall payment rate of 124.2%.** A breakdown of the attainment and payment rates for each of the indicators is presented in the summary tables below. These financial indicators are defined in Chapter 5, section 5.6 of the Universal Registration Document,
 - the non-financial quantitative variable portion (30% of the target bonus) equals €437,235 representing an overall payment rate of 141.5%.** A breakdown of the attainment and payment rates for each of the indicators is presented in the summary tables below. The non-financial quantitative variable compensation portion was determined based on the attainment of the 2025 objectives for the indicators concerned as detailed below;
- (ii) **with respect to the qualitative criteria:** the Board of Directors' Meeting of March 10, 2026 decided to allocate €329,600 to Mrs. Estelle Brachlianoff in respect of the qualitative variable portion (20% of the target bonus) of her 2025 compensation, representing a payment rate of 160% of the qualitative portion based on an overall assessment founded on the attainment of the following individual objectives:
- strategic aspects, with a payment rate of 160%,
 - managerial performance, with a payment rate of 160%,
 - equity story, with a payment rate of 160%.

The qualitative portion takes account of the following items:

- numerous business wins and in particular:

- Veolia has secured a contract with the Australian Capital Territory for the construction and operation of an advanced materials recycling facility. Once operational, this ultramodern facility will recycle 1.3 million metric tons of materials over 20 years from residents of Canberra and neighboring municipalities in the Southern Tablelands and the South Coast. As a result of this facility, combined with an energy-saving rooftop solar power system, the site's carbon emissions will be reduced by more than 26,000 metric tons each year. The construction and operation of the facility will create 136 jobs and avoid the need to transport recyclable materials by truck from Canberra to Sydney, Melbourne or Adelaide, which will significantly reduce carbon emissions from transportation,
- Veolia and SIAAP have inaugurated a new primary settling unit for wastewater treatment to balance industrial performance with environmental conservation at the Seine Aval site. The site represents a new phase in its modernization, with the inauguration of a new primary settling unit for more agile, efficient and energy-saving wastewater treatment, all while reducing nuisances. Built by Veolia, this new facility treats up to 34 cubic meters of wastewater per second, equivalent to more than 50 Olympic swimming pools, representing the largest treatment capacity in Europe. This inauguration is part of the vast modernization project that began in 2009 of Seine Aval, a historical SIAAP plant and the largest treatment site in Europe. It plays an essential role in French sanitation by treating the wastewater of 6 million inhabitants every day,
- Veolia Water Technologies has implemented cutting-edge wastewater reuse technologies for PetStar, a Mexican polyethylene terephthalate (PET) collection and recycling company. This will bring the recycler closer to its water neutrality objectives. PetStar processes 5.5 billion PET bottles annually. The project allows PetStar to process and reuse up to 550 cubic meters of wastewater per day through its recycling process, which meets established quality standards and significantly reduces the use of groundwater,
- Veolia has inaugurated one of the largest PFAS treatment plants in the United States to distribute high-quality drinking water to more than 100,000 Delaware residents. The Stanton treatment plant, which is fully compliant with US Environmental Protection Agency (EPA) regulations, establishes a replicable model for the treatment of PFAS in water on a global scale,
- Veolia has won the operation and maintenance contract for Aguas Pacifico's multi-use desalination plant in Valparaíso – the first in Chile – ahead of five major national and international companies that participated in the tender. The plant has a treatment capacity of 1,000 liters per second,
- Veolia has been chosen to design and deliver Brazil's most advanced municipal wastewater reuse system for industrial applications. The new Águas de Reúso de Vitória water recycling plant (Vitória WRS) marks a major step forward in the country's fight against water scarcity and its sustainability ambitions. With a treatment capacity of 450 liters per second (l/s) – or 38,880 cubic meters per day – the system will regenerate 85% of municipal wastewater from the Camburi basin in Vitória. By redirecting recycled water to industrial users, the project saves and conserves freshwater resources equivalent to the needs of nearly 200,000 people. This solution allows local industries to increase their resilience through the use of alternative resources, while conserving natural reserves, transforming an underutilized waste stream into a resource,

- Veolia has announced the signing of an agreement between the consortium composed of Veolia, Marafiq and Lamar, and SATORP (a joint venture between Saudi Aramco and TotalEnergies Raffinage Chimie) for a major project to recycle water from complex industrial effluents in the industrial city of Jubail – the largest petrochemical cluster in the Middle East. The project involves the construction of a \$500 million plant for the reuse of water from complex industrial effluents on an unprecedented scale, for which the civil engineering works have been entrusted to Veolia and Orascom. It also includes a 30-year operating and maintenance (O&M) contract for Veolia and its partner, due to begin in 2028,
- Veolia has launched its largest plastic recycling project in the UK with a £70 million investment. This project will include the country's first closed-loop tray-to-tray PET recycling facility located in Battlefield, near Shrewsbury, Shropshire. It will process 80,000 metric tons of plastic each year and create more than 130 local jobs, in addition to the construction jobs necessary to modernize the existing site. This initiative is part of the Group's broader commitment to the circular economy in the UK, with total investments of around £1 billion by 2030,
- Veolia has unveiled a major district heating project in Poznań: a multi-energy cogeneration plant that supplies over 50% of the heat to 560,000 residents. Using innovative technology, it has increased its efficiency to 92% and contributed significantly to decarbonization, reducing CO₂ emissions by 25%. This historic initiative paves the way for a fully coal-free district heating network by 2030, using biomethane, hydrogen and other local energy sources;
- pioneering initiatives, new models and results:
 - Veolia has announced a groundbreaking technological development in Europe in the fight against per- and poly-fluoroalkylated substances (PFAS), commonly known as "forever chemicals". Developed in the Group's global research centers, the patented Drop® technology eliminates these persistent pollutants with an efficiency rate of up to 99.9999% for several target PFAS. Veolia is in the process of rolling out the patent across all 20 hazardous waste incineration lines in France, Germany, Spain, Poland, the UK, Switzerland and Hungary,
 - Veolia has invested €2.4 million in a plaster waste recovery unit at its Bourgarré site (Rennes Métropole), operated by its subsidiary Netra. The new plant will be able to process between 18,300 and 20,000 metric tons per year, and will produce 100% recycled gypsum,
 - Veolia and Mistral AI, a key player in generative artificial intelligence, have announced a strategic partnership to transform the management and monitoring of industrial sites for water management, waste recycling and local energy production. By combining Mistral AI's cutting-edge technology with Veolia's data and expertise, the two companies are paving the way for a new era of innovation and efficiency, actively contributing to the ecological transformation,
 - Estelle Brachlianoff has taken over as Chairwoman of Entreprises pour l'Environnement (EpE). The French non-profit brings together some sixty major companies, committed to the ecological transition, which are working together to better integrate environmental matters into their strategies and operations. Estelle Brachlianoff succeeds Patrick Pouyanné, Chairman and Chief Executive Officer of TotalEnergies, for a non-renewable three-year term. Veolia's CEO is on a mission to ramp up corporate engagement on key aspects of the ecological transformation, including public health, local resilience and resource protection. To mark her appointment, 40 executive members of the organization signed a joint opinion piece in support of the ecological transition, entitled "Quand certains envisagent le renoncement, nous maintenons nos engagements" ("When some consider giving up, we stick to our commitments"),
- Veolia has announced its largest and most transformative acquisition since the merger with Suez. The Group has reached an agreement with Enviri to acquire Clean Earth⁽¹⁾, a leading player in hazardous waste management in the United States. With 82 sites, including 19 treatment, storage and disposal facilities licensed by the EPA and more than 700 operating licenses across the country, Clean Earth's portfolio is highly complementary to Veolia's. The combined entity will benefit from synergies that will strengthen the Group's growth through more efficiency. This transaction will allow Veolia to double its footprint in this sector in the United States,
- Veolia has rolled out an advanced AI solution to optimize the sorting and recycling of commercial waste in France: 40 waste containers fitted with optical recognition cameras provided by the French startup Lixo and coupled with artificial intelligence developed by the Group. This innovative solution provides businesses with a customized report on the composition of their waste (wood, cardboard, plastic, etc.). Based on the results, Veolia offers tailored support to improve sorting, for example by providing special containers, installing new signage, training employees or adjusting collection schedules so that its customers can reduce their environmental impact,
- Veolia signed an agreement with CDPQ to acquire its 30% stake in Water Technologies and Solutions (WTS), giving Veolia 100% control, thereby increasing value creation, simplifying the structure, and making additional cost synergies,
- The Sequoia 2025 employee shareholder plan was subscribed to by nearly 85,000 employees, equivalent to a subscription rate of 44.9%, the highest ever recorded at Veolia. In the same way as the plans conducted annually since 2018, the Sequoia 2025 plan confirms Veolia's desire to involve its employees in the development of their Company and its value creation. By the end of Sequoia 2025, the Group's employees had again strengthened their position as Veolia's largest shareholder, holding 9.35% of the Company's share capital at the end of 2025.; To neutralize the dilutive effect of the Sequoia 2025 plan, Veolia proceeded with a capital reduction through cancellation of treasury shares acquired under the share repurchase program;
- with regard to the strategy and equity story:
 - Veolia organized the following four events in 2025:
 - An ESG webinar entitled "Multifaceted performance and value creation" on March 31, which 512 people joined, including nearly 90 analysts/investors,
 - A thematic event on "Sustainable Desalination" on April 8 in Oman, attended by 28 international journalists, with around thirty people joining remotely,
 - A Deep Dive strategic meeting entitled "From Waste to Value" on June 25 at the hazardous waste treatment site in Courrières (France), attended by 20 journalists and 20 analysts/investors, with more than 50 investors following via the webcast,
 - A "New Urban Energy" thematic event on November 25 in Poznań, attended by 36 journalists and 12 investors, with more than 60 investors following via the webcast.

⁽¹⁾ Subject to closing.

Led by Estelle Brachlianoff and Executive Committee members, these events allow Veolia's stakeholders (investors, media, analysts, customers and partners) to learn more about the Group's strategic approach through presentations and, through case studies (site visits and experimenting with the solutions put in place), how it is tackling environmental and growth challenges in partnership with local authorities and businesses.

- **after applying all these criteria, Mrs. Estelle Brachlianoff's total variable compensation** (quantitative and qualitative) **for fiscal year**

2025 is therefore €1,406,259, i.e. 136.5% of her target bonus base. It is recalled that the cap on variable compensation for 2025 was 160% of her target bonus base, which in turn is equal to 100% of fixed compensation.

In accordance with Article L. 22-10-34, II of the French Commercial Code, the variable compensation will be paid to Mrs. Estelle Brachlianoff only after approval of the 9th resolution presented to the General Meeting of April 23, 2026.

Summary of the calculation of 2025 variable compensation

Criteria	Weight	Attainment rate	Percentage of the Target bonus base paid	Amount
Financial quantitative	50%	105.0 %	124.2 %	€639,424
Non-financial quantitative	30%	111.3 %	141.5 %	€437,235
Qualitative	20%	160.0 %	160.0 %	€329,600
TOTAL 2025 VARIABLE COMPENSATION	100%	117.9 %	136.5 %	€1,406,259

Criteria	Weight (base 50%)	Actual	Objective	Attainment rate	Percentage of the quantitative Target bonus base paid
Profitability (CNIGS)	20 %	+9.1%	+9.0%	101.1 %	106.7 %
Investment capacity (free cash flow) ⁽¹⁾	15 %	€1,782 million	€1,608 million	110.8 %	111.6 %
Capital return (ROCE)	15 %	9.4 %	9.0 %	104.4 %	160.0 %
TOTAL	50 %				124.2 %

(1) Target free cash-flow used to determine the bonus excludes discretionary and growth investments.

These calculations are based on the following thresholds:

Criteria	Lower limit (0% payment)	Central limit (100% payment)	Upper limit (160% maximum payment)
Profitability (CNIGS)	90 %	100 %	110 %
Investment capacity (free cash flow) ⁽¹⁾	80 %	100 %	130 %
Capital return (ROCE)	96 %	100 %	104 %

(1) Target free cash-flow used to determine the bonus excludes discretionary and growth investments.

Payment percentages for the 30% non-financial quantitative variable compensation

Indicator	Weight (base 30%)	Actual	Objective	Attainment rate	Percentage of the quantitative Target bonus base paid
Health, safety and well-being	5 %	4.11	4.30	104.4 %	157.0 %
Ethics and integrity	5 %	88 %	83 %	106.0 %	140.0 %
Decarbonization of our assets	5 %	141 M€	136 M€	103.7 %	110.0 %
Growth boosters and innovation	5 %	+8.6 %	+6.0 %	143.3 %	160.0 %
Employee commitment	5 %	88 %	85 %	103.5 %	136.0 %
Biodiversity	5 %	80 %	75 %	106.7 %	145.0 %
TOTAL	30 %				141.5 %

These calculations are based on the following thresholds:

Criteria	Threshold attained		
	Lower limit (0% payment)	Central limit (100% payment)	Upper limit (160% maximum payment)
Health, safety and well-being	4.7	4.3	4.1
Ethics and integrity	75% result	83% result	90% result
Decarbonization of our assets	80 %	100 %	120 %
Growth boosters and innovation	+3 %	+6 %	+8 %
Employee commitment	75% result	85% result	90% result
Biodiversity	73 %	75 %	82 %

Long-term compensation**Performance share grant in respect of fiscal year 2023**

Pursuant to the performance share plan authorized by the General Shareholders' Meeting of April 27, 2023 and at the recommendation of the Compensation Committee, the Board of Directors' Meeting of May 3, 2023 decided to grant 47,450 performance shares to Mrs. Estelle Brachlianoff as Chief Executive Officer (representing approximately 0.007% of the share capital compared with 0.02% authorized by the General Shareholders' Meeting), corresponding to 133% of her 2023 annual fixed compensation.

The detailed features and performance conditions of this plan are presented in section 3.4.3 below.

Performance share grant in respect of fiscal year 2024

Pursuant to the performance share plan authorized by the General Shareholders' Meeting of April 25, 2024 and at the recommendation of the Compensation Committee, the Board of Directors' Meeting of May 13, 2024 decided to grant 47,331 performance shares to Mrs. Estelle Brachlianoff as Chief Executive Officer (representing approximately 0.007% of the share capital compared with 0.02% authorized by the General Shareholders' Meeting), corresponding to 133% of her 2024 annual fixed compensation.

The detailed features and performance conditions of this plan are presented in section 3.4.3 below.

Performance share grant in respect of fiscal year 2025

Pursuant to the performance share plan authorized by the General Meeting of April 24, 2025 and at the recommendation of the Compensation Committee, the Board of Directors' Meeting of May 6, 2025 decided to grant 44,478 performance shares to Mrs. Estelle Brachlianoff as Chief Executive Officer (representing approximately 0.006% of the share capital compared with 0.02% authorized by the General Meeting), corresponding to 133% of her 2025 fixed annual compensation.

The detailed features and performance conditions of this plan are presented in section 3.4.3 below.

Obligation to hold the performance shares granted and vested

Mrs. Estelle Brachlianoff must hold, until the end of her duties, 40% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until an overall shareholding corresponding to 200% of her gross fixed compensation is ultimately reached.

Compensation awarded as a director

Mrs. Estelle Brachlianoff waived the compensation awarded for her duties as a director by the Company and Group-controlled companies.

Supplementary social protection plan

Mrs. Estelle Brachlianoff, benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the category of employees with which she is assimilated for the setting of social benefits and other ancillary components of her compensation.

Pension plan and other benefits

Information on pension plans, other benefits, severance payments in the event of termination of the office of Chief Executive Officer and non-compete compensation, is presented in section 3.4.2 below.

Summary of compensation received by Mrs. Estelle Brachlianoff, Chief Executive Officer

The following tables notably present a summary of compensation of all kinds paid or awarded to Mr. Estelle Brachlianoff and have been prepared in accordance with the formats recommended by the AFEP-MEDEF Code and AMF recommendation no. 2012-02. The tables presenting performance shares and share subscription and purchase options can be found in sections 3.4.3.2 and 3.4.3.3 below.

Summary of total compensation, options and shares awarded to Mrs. Estelle Brachlianoff (AFEP-MEDEF Code Table 1)

(in euros)	Fiscal year 2024	Fiscal year 2025
Compensation awarded for the fiscal year	2,517,372	2,436,259

Employment contract, supplementary pension plan and benefits as of December 31, 2025 (AFEP-MEDEF Code Table 11)

Executive corporate officer	Employment contract		Supplementary pension plan		Compensation or benefits payable or likely to be payable in the event of termination or a change of position		Compensation pursuant to a non-compete covenant	
	Yes	No	Yes	No	Yes	No	Yes	No
Estelle Brachlianoff, Chief Executive Officer Start date of term of office: July 1, 2022 End date of term of office: 2026 GSM			X ⁽¹⁾			X ⁽³⁾	X ⁽³⁾	

(1) Mrs. Estelle Brachlianoff resigned her employment contract on July 1, 2022.

(2) Mrs. Estelle Brachlianoff is a beneficiary of the supplementary defined benefit group pension plan set up for category 8 and higher executives of Veolia Environnement closed with effect from June 30, 2014. In addition, she is a beneficiary of the supplementary defined contribution pension plan set up notably for category 8 and higher executives, as well as an "Article 82" supplementary pension plan. These plans are described in section 3.4.2 below.

(3) Pursuant to a decision adopted by the Board of Directors on April 5, 2022, Mrs. Estelle Brachlianoff is entitled to compensation in the event of termination of her term of office as Chief Executive Officer and non-compete compensation, in accordance with the provisions of the AFEP-MEDEF Code (see section 3.4.2 below).

3

Overview and tables summarizing the compensation of the Chief Executive Officer, Mrs. Estelle Brachlianoff**Fixed and variable compensation⁽¹⁾****Performance of the variable compensation⁽²⁾**

€0 (Voluntary renonciation)

Director's fees

"Article 82" supplementary benefit plan,
leading to a gross payment €365,439 in respect of 2025.

Long-term incentive plan with respect to 2025

2025 performance share plan (maturing May 2028)
Grant of 44,478 performance shares

(1) Variable compensation for 2025 was capped at 160% of the target bonus base, that is €1,648,000.

(2) The objective attainment rate and the amount of the variable compensation were approved by the Board of Directors' Meeting of March 10, 2026 at the recommendation of the Compensation Committee.

(3) The target free cash flow used to determine the bonus excludes discretionary and growth investments.

Fixed and variable annual compensation trends over the past five years (in euros)

This graph shows the change, over the past five years, in executive corporate officer annual fixed and variable compensation (Mr. Antoine Frérot until June 30, 2022, then Mrs. Estelle Brachlianoff from July 1, 2022).

**Fairness ratio (executive corporate officer compensation/median and average compensation of Group employees in France)**

The fairness ratios measuring the difference between total compensation paid to executive corporate officers (as presented in AFEP-MEDEF Code Table 2 in section 3.4.1.1.2 and 3.4.1.1.3 above) and the median and average compensation of employees are presented below.

The employees included in the calculation of the ratio (36,274 in 2025) are those who are directly paid by all French Group companies. In France, nearly 77% of employees are non-management staff, 37% of employees are operators/workers.

Account is only taken of permanent employees, that is employees present during the entire year. Full-time fixed equivalent annual compensation is determined for part-time employees.

Fairness ratio – Comparison with average employee compensation in France

	2021	2022 ⁽¹⁾	2023 ⁽¹⁾	2024	2025
N/N-1 change (in %) in average employee compensation	+4.3%	+5.7%	+5.3%	+3.4%	+2.2%
Fairness ratios					
Chairman and Chief Executive Officer (Antoine Frérot until June 30, 2022) (a)	53	46	17		
Chief Executive Officer (Estelle Brachlianoff from July 1, 2022) (b)		12	40	53	53
Executive corporate officers (a) + (b)	53	58	57	53	53
Change Y/Y-1 (in %)		+9.4%	(1.7)%	(7.0)%	- %
Chairman of the Board of Directors (Antoine Frérot from July 1, 2022)		8	16	15	15
Change Y/Y-1 (in %)				(6.3)%	- %

(1) The separation of duties on July 1, 2022 led to fairness ratios being calculated for only a portion of 2022 (fixed compensation allocated between Chairman and Chief Executive Officer and Chief Executive Officer) and 2023 (variable compensation for 2022 allocated between Chairman and Chief Executive Officer and Chief Executive Officer). The "Executive corporate officer" consolidation provides a comprehensive view.

Fairness ratio – Comparison with median employee compensation in France

	2021	2022 ⁽¹⁾	2023 ⁽¹⁾	2024	2025
Y/Y-1 change (in %) in median employee compensation	+3.2%	+4.1%	+6.1%	+3.8%	+1.8%
Fairness ratios					
Chairman and Chief Executive Officer (Antoine Frérot until June 30, 2022) (a)	61	54	20		
Chief Executive Officer (Estelle Brachlianoff from July 1, 2022) (b)		14	46	62	62
Executive corporate officers (a) + (b)	61	68	66	62	62
Change Y/Y-1 (in %)		+11.5%	(2.9)%	(6.1)%	- %
Chairman of the Board of Directors (Antoine Frérot from July 1, 2022)		10	18	18	17
Change Y/Y-1 (in %)				- %	(5.6)%

(1) The separation of duties on July 1, 2022 led to fairness ratios being calculated for only a portion of 2022 (fixed compensation allocated between Chairman and Chief Executive Officer and Chief Executive Officer) and 2023 (variable compensation for 2022 allocated between Chairman and Chief Executive Officer and Chief Executive Officer). The "Executive corporate officer" consolidation provides a comprehensive view.

Company performance

	2021	2022	2023	2024	2025
Revenue (in € million)	28,508	42,885	45,351	44,692	44,396
Change Y/Y-1 (in %)		+50.4%	+5.8%	(1.5)%	(0.7)%
EBITDA (in € million)	4,234	6,196	6,543	6,788	7,050
Change Y/Y-1 (in %)		+46.3%	+5.6%	+3.7%	+3.9%
Net current income - Group share (in € million)	896	1,162	1,335	1,530	1,643
Change Y/Y-1 (in %)		+29.7%	+14.9%	+14.6 %	+7.4%

3.4.1.1.4 Chairman of the Board of Directors compensation policy for 2026

The Chairman of the Board of Directors' compensation policy was approved by the Board of Directors at the recommendation of the Compensation Committee. It is unchanged and consists solely of fixed compensation and benefits in kind, excluding all variable or exceptional compensation, grants of share subscription options or performance shares and compensation for his duties as a director.

Fixed compensation

At the recommendation of the Compensation Committee and in accordance with the compensation policy, the Board of Directors' Meeting of March 10, 2026 decided to retain the gross annual fixed compensation of the Chairman of the Board of Directors unchanged at €700,000.

It is recalled that this compensation was set by a decision of the Board of Directors' Meeting of April 5, 2022, based on a study conducted by the firm, Boracay, and described in section 3.4.1.1.3 of the 2021 Universal Registration Documentation.

Annual variable compensation

None.

2026 Long-term compensation

None.

Severance payments

None.

Compensation awarded as a director

Since 2012, Mr. Antoine Frérot has decided to waive the compensation awarded for his duties as a director paid by the Company and Group-controlled companies. This waiver remains applicable to his duties as Chairman of the Board of Directors.

Pension plan

Mr. Antoine Frérot benefits from a supplementary defined contribution group pension plan applicable since July 1, 2014 and presented in section 3.4.2 below.

He is eligible for the defined benefit pension plan presented in section 3.4.2 below, with a theoretical annuity of nil.

Other benefits

Mr. Antoine Frérot benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the category of employees with which he is assimilated for the setting of social benefits and other ancillary components of his compensation.

Mr. Antoine Frérot enjoys the use of a company car.

3.4.1.1.5 Chief Executive Officer compensation policy for 2026

In connection with the renewal of the Chief Executive Officer's term of office, the Board of Directors, at its meeting on March 10, 2026, decided—at the recommendation of the Compensation Committee—to establish the Chief Executive Officer's compensation policy as follows. This compensation policy was set taking into account (i) Mrs. Estelle Brachlianoff's experience and expertise, (ii) the change in the Group's size and its strategic evolution and (iii) the compensation amount but also the positioning of these components compared with executive corporate officers with a comparable profile and in CAC 40 companies and comparable European companies, while ensuring the consistency of the Chief Executive Officer's compensation with that of Executive Committee members and compensation practices within the Company.

This decision is based on the results of an analysis of the Chief Executive Officer's compensation positioning within two groups: the companies that make up the CAC 40 index and a peer group consisting of 13 European companies.

Positioning within the CAC 40

Based on data available as of December 31, 2024, Veolia ranks between the median and the third quartile in terms of revenue (relative ranking: 64%), slightly above the first quartile in terms of market capitalization (26%), and above the third quartile in terms of number of employees (78%).

- the Chief Executive Officer's compensation package is as follows:

Comparison of the Chief Executive Officer's compensation with respect to CAC 40 companies

* Fixed compensation + target annual variable compensation

** Fixed compensation + target annual variable compensation + long-term compensation (accounting valuation)

Note: The Chief Executive Officer's total cash compensation ranking within the CAC 40 is assessed based on an ex ante analysis of target compensation and theoretical maximum compensation. This analysis includes the base salary applicable for fiscal year 2025 as approved by the General Meeting or, failing that, the most recently published base salary; the annual bonus at target and maximum levels; and long-term incentive plans at target and theoretical maximum levels, as provided for in the compensation policies.

Within the CAC 40, the 2025 total target and theoretical maximum compensation fall below the first quartile (relative rankings: 11% and 13%).

Positioning within the peer group

In 2026, the Board of Directors decided to update the list of comparable competitor companies following a study conducted with the support of an external firm (Boracay). Compared to the peer group established in 2022, and in order to strengthen the peer group's sectoral consistency, ACS and ENI were replaced by Saint-Gobain and Siemens Energy, whose industrial and infrastructure activities are more comparable to those of Veolia.

The selected peer group consists of 13 listed companies engaged in activities similar to those of Veolia, particularly in the infrastructure, energy, and utilities sectors, and facing significant environmental issues.

This peer group is structured around three categories:

- 6 direct peers, of similar size and with similar business models and similar interactions with public entities: Centrica, E.ON, EDP, Enel, Engie and Iberdrola.
- 4 companies operating in related sectors with comparable economic and industrial characteristics: Air Liquide, Bouygues, Siemens Energy and Vinci.

- 3 benchmark companies, large in size and with comparable organizational complexity: Saint-Gobain, Schneider Electric and ABB.

The selection process identified four strategic priorities shared by all 13 companies:

- strengthening high-added-value expertise;
- expanding service activities;
- accelerating the energy transition and renewable energy;
- evolving business models in response to regulations and ESG challenges.

Within this peer group:

- Based on data available as of December 31, 2024, Veolia ranks at the median in terms of revenue (50%), below the first quartile in market capitalization (15%), and above the third quartile in number of employees (87%);

- the Chief Executive Officer's compensation package is as follows:

Comparison of the Chief Executive Officer's compensation with respect to companies within the peer group

* Fixed compensation + target annual variable compensation

** Fixed compensation + target annual variable compensation + long-term compensation (accounting valuation)

Note: the Chief Executive Officer's total cash compensation ranking within the peer group is assessed based on an ex ante analysis of target compensation and theoretical maximum compensation. This analysis includes the base salary applicable for fiscal year 2025 as approved by the General Meeting or, failing that, the most recently published base salary; the annual bonus at target and maximum levels; and long-term incentive plans at target and theoretical maximum levels, as provided for in the compensation policies.

Within the peer group, the 2025 total target and theoretical maximum compensation fall below the first quartile (relative rankings: 14% and 13%).

After reviewing these various factors and in order to maintain the attractiveness of the compensation policy, the Board of Directors, upon the recommendation of the Compensation Committee, has decided:

- set the gross fixed annual compensation at €1,133,000, up from €1,030,000, noting that the latter had remained unchanged since 2022. This increase is in line with the evolution of salaries for the Group's executive staff over the same period;
- to maintain the target and maximum annual variable compensation unchanged;

- that, in order to take into account the comments from investors who spoke during the governance roadshows in favor of increasing the weight of long-term variable and share-based compensation of, the Chief Executive Officer, meaning she would receive a performance share grant capped at 150% (previously 133%) of her fixed annual compensation.

The breakdown of compensation would be as follows:

- fixed compensation (€1,133,000 annually) accounting for 28.6%;
- target annual variable compensation (€1,133,000 upon achievement of objectives) accounting for 28.6%;
- long-term variable compensation (€1,699,500 or 150% of fixed annual compensation if objectives are attained) for 42.8%.

In the event of outperformance leading to payment of the maximum amount of variable compensation (equal to the cap of 160% of fixed annual compensation), the breakdown would be as follows:

- annual fixed compensation (€1,133,000) for 24.4%;
- maximum annual variable compensation (€1,812,800 if targets are exceeded) for 39%;
- long-term variable compensation (€1,699,500 if objectives are exceeded) for 36.6%.

Following the revision of the compensation policy, the target total compensation would remain below the lowest quartile of the two comparable groups presented above.

Fixed compensation

In accordance with this compensation policy, and noting that the Chief Executive Officer's fixed compensation has not been reviewed since she assumed office on July 1, 2022, the CEO's gross fixed annual compensation has been set at €1,133,000.

Annual variable compensation

The 2026 quantitative objectives are unchanged and keep with the 2026 financial outlook announced to the market on February 26, 2026 and the GreenUp 2024-2027 strategic program.

In order to integrate the multifaceted performance indicators relating to the Company's Purpose, the Board of Directors' Meeting of March 10, 2026, at the recommendation of the Compensation Committee, determined the calculation method for variable compensation as follows:

- weight of the auditable quantitative portion (80%) and weight of the qualitative portion (20%) unchanged;
- split of the weight of the auditable quantitative portion (80%) between financial quantitative objectives (50%) and non-financial quantitative objectives (30%) unchanged;
- 2026 target variable compensation (in the event of attainment of the objectives set by the Board of Directors) set at 100% of the annual fixed compensation ("Target bonus base");
- variable compensation capped (in the event objectives are exceeded) at 160% of annual fixed compensation, or €1,812,800.

To take into account the requests of certain investors and proxy agencies, at the governance roadshow, the Board of Directors, at the recommendation of the Compensation Committee, decided to reduce the number of quantitative criteria for 2024 by removing the criteria relating to the increase in revenue.

In addition, the criteria for the 2026 variable compensation were set as follows:

- **with respect to the quantitative criteria:** in line with the outlook and objectives published on February 26, 2026, the criteria for the quantitative portion of variable compensation break down as follows. The quantitative portion is equal to the total of the components resulting from application of each of these criteria separately:

- For the **50% financial quantitative portion:**

- 20% based on the **Profitability indicator (CNIGS):** Current Net Income, Group Share,
- 15% based on the **Investment Capacity indicator (free cash flow)⁽¹⁾:** before financial acquisitions/divestments and dividends but after financial expenses and taxes,
- 15% based on the **Capital Return indicator (ROCE):** Group ROCE after tax, including the return on capital employed of joint ventures and companies, after IFRS 16 lease adjustments.

The financial quantitative variable compensation portion will be determined based on the attainment of the 2026 budget objectives which are consistent with the outlook announced to the market on February 26, 2026:

- For the **30% non-financial quantitative portion:**

- 5% based on the **Health and Safety and Well-Being** indicator: improvement and reduction in the injury frequency rate,
- 5% based on the **Ethics and Integrity** indicator: % of positive answers to the engagement survey question "Are Veolia's values applied in my entity" across all respondents,
- 5% based on the **Decarbonization of our assets** indicator: decarbonization investments, including the phase-out of coal and methane capture,
- 5% based on the **Growth and innovation drivers** indicator: revenue growth in priority business segments (energy, water technologies, hazardous waste),
- 5% based on the **Employee commitment** indicator: commitment rate of employees measured by an engagement survey conducted by an external body (clear objectives, meaning and usefulness, work atmosphere, pride in the Group, willingness to recommend Veolia),
- 5% based on the **Biodiversity** indicator: progress rate of action plans improving the footprint of environments and biodiversity at sensitive sites.

- **with respect to the qualitative criteria:** the qualitative portion (20% of the target bonus) will be based on an overall assessment by the Board of Directors, at the recommendation of the Compensation Committee, based notably on the following individual objectives:

- strategic aspects,
- managerial performance,
- equity story.

In addition, the Board of Directors reserves the right to exercise its power of discretion regarding the determination of the Chief Executive Officer's compensation, in application of legal provisions and in accordance with Articles L. 22-10-8 and L. 22-10-34 of the French Commercial Code. It may do so in the event of special and unforeseeable circumstances (such as the Covid-19 pandemic and its uncertainties) that could justify an exceptional adjustment, upwards or downwards, without exceeding the ceiling set in the compensation policy (i.e. 160% of fixed annual compensation), to one or more criteria comprising the Chief Executive Officer's annual variable compensation to ensure that application of the criteria described above produces results reflecting the performance of both the Chief Executive Officer and the Group, as well the alignment of the interests of the Company and its shareholders with those of the Chief Executive Officer.

This adjustment may be made to the Chief Executive Officer's annual variable compensation by the Board of Directors at the recommendation of the Compensation Committee, after the Board of Directors has provided adequate reasoning for its decision. Any exercise of this discretion will be made public.

⁽¹⁾ Target free cash-flow used to determine the bonus excludes discretionary and growth investments.

2026 Long-term compensation

Based on the principles and recommendations of the AFEP-MEDEF Code and at the recommendation of the Compensation Committee, the Board seeks to implement long-term compensation in addition to annual variable compensation, proportionate to annual fixed and variable components and subject to demanding performance conditions to be satisfied over several consecutive years. When drafting a new plan, the performance conditions reflect Veolia's long-term strategic priorities and can include performance conditions that are internal and/or external to the Group. This long-term compensation is not intended to concern only the executive corporate officer, but also senior executives and other employee categories of the Group (e.g. high potential employees and key contributors). The scope of beneficiaries is determined on the implementation of each long-term compensation plan. Should the executive corporate officer leave the Group before expiry of the performance criteria assessment period, the multi-year compensation will not be paid, in the absence of exceptional circumstances justified by the Board. In any case, the performance and acquisition conditions will remain unchanged.

Based on the detailed analysis in Section 3.4.1.1.5 above and in order to take into account the comments made by investors during the governance roadshow in favor of increasing the weight of long-term variable and share-based compensation, the Board of Directors, upon the recommendation of the Compensation Committee, has decided that the Chief Executive Officer will be granted performance shares capped at 150% of her fixed annual compensation (provided all performance conditions are met).

In this context, the last three long-term compensation plans and the shareholding obligations are presented in Section 3.4.3 below.

Proposed Performance Share Grant

At the recommendation of the Compensation Committee, the Board of Directors asks shareholders in the 24th resolution presented to the General Shareholders' Meeting of April 23, 2026 to approve an authorization, for a period of 26 months, to grant performance shares to a group of around 580 beneficiaries and comprising top executives, high potential employees and key contributors of the Group, including the Chief Executive Officer. This plan, which is intended to be launched in 2026 with an expiration date in 2029 following the publication of the 2028 financial statements, would succeed the plan granted in 2025.

The Board of Directors, when implementing this performance share plan, will set the number of performance shares that would be granted to the Chief Executive Officer.

The detailed features and performance conditions of this proposed performance share plan are presented in section 3.4.3 below.

Obligation to hold the performance shares granted and vested

At the recommendation of the Compensation Committee, the Board of Directors decided, in the context of implementing this performance share plan, to maintain as follows the holding obligations applicable to performance share plans of the Chief Executive Officer: obligation to hold until the end of her duties, 40% of total performance shares granted under this plan, net of applicable social security contributions and taxes, until she has ultimately reached a total shareholding equal to 200% of her gross annual fixed compensation.

Compensation awarded as a director

Mrs. Estelle Brachlianoff waived the compensation awarded for her duties as a director by the Company and Group-controlled companies.

Retirement or other similar benefits

Information on pension plans, other benefits and severance payments due in the event of termination of the office of Chief Executive Officer and compensation under a non-compete clause, the terms of which are unchanged for 2026, is presented in section 3.4.2 below.

3.4.1.2 Compensation paid to directors⁽¹⁾

Amount and allocation of compensation awarded to directors in 2025

The General Meeting of April 24, 2025, at the proposal of the Board of Directors and the recommendation of the Compensation Committee, set the maximum total annual amount of compensation awarded to directors at €1,500,000. This figure was last amended in 2018. The request to amend the total amount of compensation was prompted by changes in the number of Board members and the composition of the Board committees as result of this addition in 2025, and by the 10% increase in the allocation of basic compensation and additional amounts for specific duties for members starting from 2025.

In addition, the Board of Directors duly noted that Mr. Antoine Frérot, Mrs. Estelle Brachlianoff and Mr. Arnaud Caudoux waived the right to receive compensation for their duties as a director.

⁽¹⁾ Non-executive corporate officers.

The allocation of the basic compensation and the additional amounts for specific duties, based on an attendance rate of 100% and including a fixed portion (40%) and a variable portion (60%), as of December 31, 2025, is as follows:

On a full annual basis	2025 allocation
Directors (basic compensation)	€46,200 *
Additional amount for the Vice-Chairman	€55,000
Additional amount for the Senior Independent Director	€55,000
Additional amount for the Chairman of the Accounts and Audit Committee	€73,920 *
Additional amount for the Chairman of the Nominations Committee	€22,000 *
Additional amount for the Chairman of the Compensation Committee	€22,000 *
Additional amount for the Chairman of the Research, Innovation and Sustainable Development Committee	€22,000 *
Additional amount for the Chairman of the Purpose Committee	€22,000 *
Additional amount for members of the Accounts and Audit Committee	€18,480 *
Additional amount for members of the Nominations Committee	€11,000 *
Additional amount for members of the Compensation Committee	€11,000 *
Additional amount for members of the Research, Innovation and Sustainable Development Committee	€11,000 *
Additional amount for members of the Purpose Committee	€11,000 *
Non-voting member (<i>censeur</i>) (50% of the basic compensation)	€23,100 *
Additional amount payable to directors residing on another continent	€6,600 per trip (for one or more meetings of the Board and its Committees and for the Board strategic seminar) subject to the physical presence of the relevant director
Additional amount payable to non-voting members (<i>censeur</i>) residing on another continent	€3,300 per trip (for one or more meetings of the Board and its Committees and for the Board strategic seminar) subject to the physical presence of the relevant non voting member (<i>censeur</i>)
Additional amount payable to directors residing in Europe outside France	€3,300 per trip (for one or more meetings of the Board and its Committees and for the Board strategic seminar) subject to the physical presence of the relevant director
Additional amount payable to directors	€1,650 per trip (for one or more meetings of the Board and its Committees and for the Board strategic seminar) subject to the physical presence of the relevant non voting member (<i>censeur</i>)
Additional amount payable to non-voting members (<i>censeur</i>) residing in Europe outside France	€6,600 per trip for the Board's annual visit to one or more countries on a continent other than its place of residence subject to the physical presence of the relevant director

A special Board meeting is counted as a quarter meeting, and the strategy seminar as two Board meetings.

The amounts granted are calculated *pro rata* to the effective duration of the term of office during the fiscal year.

* Amount subject to attendance rate.

Table of compensation awarded to directors in 2024-2025 (AFEP-MEDEF Code Table 3)

The table below shows the amount of compensation paid in 2024 and 2025 to members of the Board of Directors of Veolia Environnement by the Company and by controlled companies.

Note that since fiscal year 2019, the variable portion of directors' compensation is paid annually in the first quarter of the following year and is no longer paid quarterly.

N/A: not applicable

(1) Gross amount before tax deductions or withholding tax paid in respect of the fourth quarter of 2023 (fixed portion for the fourth quarter 2023 and annual variable portion for fiscal year 2023) and the first, second and third quarters of 2024 (fixed portion only).

(2) Gross amount before tax deductions or withholding tax paid in respect of the fourth quarter of 2024 (fixed portion for the fourth quarter 2024 and annual variable portion for fiscal year 2024) and the first, second and third quarters of 2025 (fixed portion only).

(3) Mrs. Estelle Brachlianoff was appointed a director by the Company's Combined General Meeting of June 15, 2022. Her full compensation as Chief Executive Officer is presented in Section 3.4.1.1 of the 2025 Universal Registration Document. At its meetings of March 12, 2024 and March 11, 2025, the Board of Directors took note of Mrs. Estelle Brachlianoff's decision to waive receipt of compensation for her duties as a director for fiscal years 2024 and 2025.

(4) Mr. Philippe Brassac was appointed director by the Company's Combined General Meeting of April 24, 2025.

(5) Mr. Arnaud Caudoux was appointed director by the Company's Combined General Meeting of April 24, 2025. The Board of Directors took note of Mr. Arnaud Caudoux's decision to waive receipt of compensation for his duties as director for fiscal year 2025.

(6) His full compensation as Chairman of the Board of Directors is presented in Section 3.4.1.1 of the 2025 Universal Registration Document. At its meetings of March 12, 2024 and March 11, 2025, the Board of Directors took note of the renewal of Mr. Antoine Frérot's decision to waive receipt of compensation for his duties as a director for fiscal years 2024 and 2025.

(7) Mrs. Marion Guillou's term of office expired on April 24, 2025.

(8) Mr. Pavel Páša was nominated as a director representing employees by the Group's European Works Council on October 15, 2014. He joined the Board of Directors at its meeting on November 5, 2014. At its meeting of March 10, 2015, the Board of Directors recorded Mr. Pavel Páša's intention to transfer the compensation awarded for his duties as a director to an organization representing or assisting employees. Mr. Franck Le Roux was appointed by the Group France Works Council on October 15, 2018. Mr. Franck Le Roux's decision to transfer the compensation awarded for his duties as a director to his trade union was recorded.

(9) Mrs. Julia Marton-Lefèvre was appointed a director by the Company's Combined General Meeting of April 25, 2024.

(10) Mrs. Agata Mazurek-Bak was appointed a director representing employee shareholders by the Company's Combined General Meeting of June 15, 2022. Mrs. Agata Mazurek-Bak's decision to retrocede her compensation as a director to the Association of Veolia Environnement Employee Shareholders ("AAVE") in 2024 and 2025 was duly noted.

(11) Mrs. Nathalie Rachou's term of office expired on April 25, 2024.

(12) Mr. Francisco Reynés was appointed director by the Company's Combined General Meeting of April 27, 2023. His term of office ended on April 24, 2025.

(13) Mrs. Elena Salgado was appointed director by the Company's Combined General Meeting of April 24, 2025.

(14) Mr. Enric Xavier Amiguet i Rovira was appointed a non-voting member (censeur) on June 15, 2022. Mr. Enric Xavier Amiguet i Rovira's decision to transfer the compensation awarded for his duties as a non-voting member to his trade union was recorded.

Amount and allocation of compensation awarded to directors in 2026

At its meeting on March 10, 2026, the Board of Directors, following the recommendations of its Compensation Committee, decided to increase by 10% the allocation of basic compensation and additional amounts for specific duties for its members for 2026.

In addition, the Board of Directors duly noted that Mr. Antoine Frérot, Mrs. Estelle Brachlianoff and Mr. Arnaud Caudoux waived the right to receive compensation for their duties as a director.

3.4.1.3 Compensation of executives excluding corporate officers (Executive Committee members)

All Executive Committee members in office on December 31, 2025 (see section 3.3.3 above), (excluding the Chief Executive Officer) received total gross compensation of €11,454,662 in 2025 (for an Executive Committee comprising thirteen members excluding the Chief Executive Officer), compared with €12,987,869 in 2024 (for an Executive Committee comprising 13 members excluding the Chief Executive Officer).

The tables below show the total gross compensation paid to the Company's Executive Committee members as of December 31, 2024 and 2025 (with the exception of the Chairman and Chief Executive Officer

and the Chief Executive Officer), including the fixed and variable compensation paid or payable by Veolia Environnement in respect of these fiscal years, benefits in kind and compensation received by Executive Committee members in respect of directorships held in Group companies in France and abroad.

The quantitative and qualitative portions of variable compensation of Executive Committee members (excluding the Chief Executive Officer) are generally determined based on the same weightings applied to their Target bonus base (quantitative portion of 80% and qualitative portion of 20%) and the same quantitative and qualitative criteria applicable to the Chief Executive Officer. Note, however, that a weighting of the attainment of zone-specific indicators to Group indicators is applied for Executive Committee members who are zone Senior Executive Vice-Presidents.

The average variable compensation of Executive Committee members for 2025 represents approximately 92% of their fixed compensation.

(in euros)	Fiscal year 2024 (13 members)

3.4.2 PENSION PLANS AND OTHER POST-EMPLOYMENT BENEFITS

There is no contract between the members of the Board of Directors and the Company or its subsidiaries that provides for the payment of benefits or compensation that is due, or may be due, in the event of members ceasing or changing their duties within the Company or its subsidiaries, other than the Chief Executive Officer's severance payments and non-compete compensation and the supplementary group pension plans described below.

3.4.2.1 Supplementary group pension plan

3.4.2.1.1 Description

Pension plans applicable to corporate officers

Supplementary defined benefit group pension plan in place until June 30, 2014

The defined benefit group pension plan open to all executives of category 8 and higher (and the Chairman and Chief Executive Officer) was modified, with effect from July 1, 2013, by the Board of Directors' Meeting of March 14, 2013, upon a motion by the Chairman and Chief Executive Officer and after a favorable opinion by the Works Council and the Nominations and Compensation Committee. The pension plan was capped at 10% of the reference compensation, in turn capped at eight times the annual social security ceiling.

In accordance with the provisions of Articles L. 225-38 and L. 225-40 of the French Commercial Code and on the basis of a special report prepared by the Statutory Auditors, the General Shareholders' Meeting of May 14, 2013 approved these changes to the extent that they concern the Chairman and Chief Executive Officer.

This plan was closed with a freeze on entitlements and closure of the plan to new members with effect from June 30, 2014.

Supplementary defined contribution pension plan in place from July 1, 2014

After a favorable opinion of the Works Council and the Nominations and Compensation Committee, the Board of Directors, decided, at its meeting of March 11, 2014, upon a motion by the Chairman and Chief Executive Officer:

- to close the supplementary defined benefit group pension plan for executives of category eight and higher (including the Chairman and Chief Executive Officer who does not hold an employment contract) with a freeze on entitlements and closure of the plan to new members, with effect from June 30, 2014;
- and to amend, effective July 1, 2014, the existing supplementary defined contribution group pension plan.

In accordance with the provisions of Articles L. 225-38 and L. 225-40 of the French Commercial Code and on the basis of a special report prepared by the Statutory Auditors, the General Shareholders' Meeting of April 24, 2014 approved these changes concerning the Chairman and Chief Executive Officer.

In accordance with the recommendations of the AFEP-MEDEF Code, the value of the benefits provided by the supplementary pension plan is taken into account when setting the total compensation of corporate officers. Furthermore, the group of potential beneficiaries is not limited to corporate officers, but also includes category eight and higher executives employed by the Company.

The reference period used to calculate benefits is the average compensation calculated over three years, excluding compensation paid at the time of employment termination or retirement, as well as any other type of extraordinary compensation.

Following the closure of the supplementary defined benefit group pension plan for executives of category eight and higher with effect from June 30, 2014, any entitlement accumulated under this plan will be calculated according to its value as of June 30, 2014. Accordingly, the reference compensation corresponds to the average of the last three calendar years prior to the closure of the plan and the seniority used for calculation purposes will be that as of June 30, 2014.

Defined contribution pension plan governed by the provisions of Article 82 of the French General Tax Code

When defining the Chief Executive Officer's compensation components and based on the study conducted by the firm Boracay (see section 3.4 of the 2021 Universal Registration Document), the Compensation Committee wished to improve the competitiveness of the supplementary pension plan proposed to the executive corporate officer. Accordingly, the Board of Directors' Meeting of April 5, 2022, at the recommendation of the Compensation Committee, decided to set-up a defined contribution pension plan governed by the provisions of Article 82 of the French General Tax Code for Mrs. Estelle Brachlianoff.

3.4.2.1.2 Features

Pension plans applicable to corporate officers

Defined benefit pension plan

Pursuant to the former Article D. 22-10-16 of the French Commercial Code, the main features of this plan were as follows:

1. title of the commitment: defined benefit pension plan;
2. legal provisions enabling the identification of the corresponding plan category: Article 39 of the French General Tax Code; Article L. 137-11 of the French Social Security Code;
3. conditions to benefit from the plan and other eligibility conditions:
 - at least five years' service,
 - completion of the beneficiary's career in the Company,
 - presence in the Company workforce at the time of voluntary or involuntary retirement,
 - settlement of the general plan at the full rate (including mandatory basic pensions or supplementary pensions);
4. method for determining the reference compensation under the relevant plan used to calculate the entitlement of beneficiaries: the reference compensation used to determine the amount of the pension was the average of the last three years' full compensation subject to a maximum of eight times the annual social security ceiling (€376,800 in 2025);
5. vesting features: the maximum annual increase in potential pension entitlements was estimated at 0.4%;
6. existence of a ceiling and the amount and method of setting the ceiling: the pension amount was determined based on the number of years' service in the Group and capped at 10% of the reference compensation for beneficiaries with more than 30 years' service (i.e. €37,680 in 2025);
7. financing terms and conditions: by the Company through insurance contracts subscribed with two external insurance companies;
8. estimated amount of the lifetime annuity at the period end: following the closure of the supplementary defined benefit group pension plan for executives of category eight and higher with effect from June 30, 2014, any entitlement accumulated under this plan will be calculated according to its value as of June 30, 2014. Accordingly, the reference compensation corresponds to the average of the last three calendar years prior to the closure of the plan and the seniority used for calculation purposes will be that as of June 30, 2014;
9. related tax and social security contributions borne by the Company:
 - premiums payable to external insurance companies are deductible for income tax purposes,
 - with respect to the special contribution introduced by the Fillon law and applicable to variable entitlement defined benefit pension plans, Veolia Environnement has elected to apply the tax rate of 32% on annuities to annuities settled after January 1, 2013 (and the tax rate of 16% to annuities settled before December 31, 2012).

Supplementary defined contribution pension plan

Pursuant to Article D. 22-10-16 of the French Commercial Code, the main features of this plan are as follows:

1. title of the commitment: defined contribution pension plan;
2. legal provisions enabling the identification of the corresponding plan category: Article 83 of the French General Tax Code (CGI) until March 31, 2021; mandatory retirement savings plan (Plan d'Épargne Retraite Obligatoire, PERO) from April 1, 2021;
3. conditions to benefit from the plan and other eligibility conditions: until March 31, 2023, the beneficiary category consisted of executives of the Company within the meaning of Article 4 of the AGIRC national collective agreement (the supplementary pension fund for executives), whose compensation is greater than or equal to three times the annual social security ceiling (€141,300 in 2025). As from April 1, 2023, the category of beneficiaries was extended to all Company employees with at least one year's service in the Group. Compensation includes all components subject to social security contributions (fixed salary, variable salary, bonuses, benefits in kind);
4. method for determining the reference compensation under the relevant plan, used to calculate the entitlement of beneficiaries: not applicable;
5. vesting features: not applicable;
6. existence of a ceiling and the amount and method of setting the ceiling: not applicable;
7. funding terms and conditions:
 - funding of the plan: contributions to the plan are equal to a percentage of the compensation of the relevant employees,
 - contribution payments break down as follows: 2.25% employer contribution for tranches A, B and C; 1.25% employee contribution for tranches A, B and C; 4.50% employer contribution above tranche C; 2.50% employee contribution above tranche C,
 - optional individual payments: these may be made up to the available tax and social security limits;
8. estimated amount of the lifetime annuity at the period end:
 - the amount of the supplementary pension is not defined in advance. For each employee, it is calculated on the liquidation date for all mandatory and optional pensions based on the reserves held by the insurance company and other parameters assessed on that date;
9. related tax and social security contributions borne by the Company:
 - employer social security contributions are deductible for income tax purposes, liable to a 20% flat-rate social contribution and excluded from the tax base for social security contributions up to the higher of the following two amounts: 5% of the annual social security ceiling and 5% of the compensation adopted capped at five times the annual social security ceiling.

Defined contribution pension plan governed by the provisions of Article 82 of the French General Tax Code

Pursuant to Article D. 22-10-16 of the French Commercial Code, the main features of this plan are as follows:

1. title of the commitment: defined contribution pension plan;

2. legal provisions enabling the identification of the corresponding plan category: Article 82 of the French General Tax Code (CGI);
3. conditions to benefit from the plan and other eligibility conditions: plan for the sole benefit of Mrs. Estelle Brachlianoff;
4. method for determining the reference compensation under the relevant plan, used to calculate the entitlement of beneficiaries: not applicable;
5. vesting features: not applicable;
6. existence of a ceiling and the amount and method of setting the ceiling: not applicable;
7. funding terms and conditions:
 - plan financing: the Company pays an annual amount equal to 15% of the fixed compensation and the annual variable compensation paid to the Chief Executive Officer, it being stipulated that this amount is paid in cash in half to the insurance company managing the pension plan and in half to the Chief Executive Officer given the tax rules applicable to payments to this type of plan. This annual payment is linked to the performance of the Company in so far as the payment base includes the variable compensation linked to the Group's results;
8. estimated amount of the lifetime annuity at the period end:
 - the amount of the supplementary pension is not defined in advance. It is calculated on the liquidation date for all mandatory and optional pensions based on the reserves held by the insurance company and other parameters assessed on that date;
9. related tax and social security contributions borne by the Company:
 - The contributions paid by the Company are deductible for income tax purposes and fully subject to social security contributions and deductions.

3.4.2.1.3 Pension plans applicable to corporate officers

Pension plans applicable to the Chairman of the Board of Directors

Defined contribution pension plan

Mr. Antoine Frérot benefits from the supplementary defined contribution group pension plan applicable since July 1, 2014 and presented above.

Based on the estimated capital at 2025 year end, Mr. Antoine Frérot's defined contribution pension plan annual annuity payable when he reaches 68 years old and calculated without payment of survivor benefits, is estimated at approximately €77,000.

Defined benefit pension plan

Mr. Antoine Frérot is also eligible under the defined benefit pension plan described above, with a theoretical annuity of nil.

The theoretical annual amount of the lifetime annuity paid by the defined benefit pension plan could represent 6% of his annual reference compensation. This reference compensation is capped at eight times the annual social security ceiling. At 2025 year end, the defined benefit pension plan annuity payable to Mr. Antoine Frérot, calculated without payment of survivor benefits, is estimated at approximately €20,000.

This theoretical annual lifetime annuity would be reduced by the annuities paid by the Group defined contribution pension plan to which the Chief Executive Officer is entitled by virtue of his affiliation with the Group, calculated without payment of survivor benefits. Accordingly, in our example, given the estimated amount of the defined contribution annual annuity calculated without payment of survivor benefits of €77,000, at the age of 68 years old, the estimated amount of Mr. Antoine Frérot's defined benefit annual annuity would be nil.

Pension plans applicable to the Chief Executive Officer

Defined contribution pension plan

Mrs. Estelle Brachlianoff benefits from the supplementary defined contribution group pension plan applicable since July 1, 2014, described above.

Based on the estimated capital at 2025 year end, Mrs. Estelle Brachlianoff's defined contribution pension plan annual annuity payable when she reaches 64 years old and calculated without payment of survivor benefits, is estimated at approximately €51,000 per year.

Defined benefit pension plan

Mrs. Estelle Brachlianoff is also eligible under the defined benefit pension plan described above, with a theoretical annuity of nil.

Provided that she is still present in the Company at the time of retirement in accordance with legal requirements, the theoretical annual amount of the lifetime annuity paid by the defined benefit pension plan to the Chief Executive Officer, could represent 2% of her annual reference compensation. This reference compensation is capped at eight times the annual social security ceiling.

At 2025 year end, the defined benefit pension plan annuity payable to Mrs. Estelle Brachlianoff, calculated without payment of survivor benefits, is estimated at approximately €5,000.

This theoretical annual lifetime annuity would be reduced by the annuities paid by the Group defined contribution pension plan to which the Chief Executive Officer is entitled by virtue of her affiliation with the Group, calculated without payment of survivor benefits.

Accordingly, in our example, given the estimated amount of the defined contribution pension plan annual annuity calculated without payment of survivor benefits of €51,000, at the age of 64 years old, the estimated amount of Mrs. Estelle Brachlianoff's defined benefit annual annuity would be nil.

Defined contribution pension plan governed by the provisions of Article 82 of the French General Tax Code

Mrs. Estelle Brachlianoff benefits from the supplementary defined contribution group pension plan governed by the provisions of Article 82 of the French General Tax Code described above.

Based on the estimated capital at 2025 year end, Mrs. Estelle Brachlianoff's defined contribution pension plan annual annuity payable when she reaches 64 years old and calculated without payment of survivor benefits, is estimated at approximately €18,000 per year.

3.4.2.2 Other benefits

Mr. Antoine Frérot is also entitled to a company car and welfare benefits equivalent to those of employees (healthcare and insurance).

Mrs. Estelle Brachlianoff is entitled to welfare benefits equivalent to those of employees (healthcare and insurance).

3.4.2.3 Severance payments in the event of termination of the office of executive corporate officers

Severance payments in the event of termination of the office of the Chief Executive Officer

In accordance with the AFEP-MEDEF Code recommendation, Mrs. Estelle Brachlianoff resigned her employment contract on her appointment as Chief Executive Officer on July 1, 2022.

The Board of Directors' Meeting of April 5, 2022, recording the termination of Mrs. Estelle Brachlianoff's employment contract and, accordingly, the loss of legal provisions and rights under the collective bargaining agreement applicable in the event of dismissal and at the recommendation of the Compensation Committee, decided to grant a severance payment to Mrs. Estelle Brachlianoff in the event of forced departure from the office of Chief Executive Officer (notably in the event of resignation following a change in control or strategy of the Company or a dismissal not resulting from serious or severe misconduct).

In accordance with the AFEP-MEDEF Code, the maximum amount of this severance payment is capped at twice the total gross annual compensation, including the sum of the fixed portion of her compensation for the previous fiscal year ("Fixed Portion") and the average of the variable portions ("Variable Portion") paid or payable in respect of the last three fiscal years ending before the termination of her duties as Chief Executive Officer ("Reference Compensation").

The amount of this severance payment is based on the attainment of performance conditions, via the application of a performance rate corresponding to the objective attainment rate for the last two variable compensation portions paid (with a weighting of 60% for the objective attainment rate for the last variable portion paid and 40% for the objective attainment rate for the previous variable portion paid), it being stipulated that no payment will be made if the performance rate is below 75%.

Non-compete compensation of the Chief Executive Officer

The Board of Directors' Meeting of April 5, 2022, in consideration for Mrs. Estelle Brachlianoff undertaking, during a period of two years from the end of her duties as Chief Executive Officer, not to exercise, directly or indirectly, a competing activity to that of the Company and Veolia group companies, decided to grant her compensation equal to one year's

compensation (fixed and variable components, the variable portion to be taken into account in calculating this compensation being the average annual variable compensation paid for the last two years), paid in 24 equal and successive monthly installments.

In accordance with the AFEP-MEDEF Code, the total of severance payments plus non-compete compensation cannot exceed two year's compensation (fixed and variable, with variable compensation for the purpose of calculating these payments equal to the average annual variable compensation paid for the last two years). Accordingly, in the event the Board should decide to implement the non-compete clause, severance payments would be capped at one year's compensation.

The Board of Directors may, on the departure of the Chief Executive Officer, waive application of this clause, in which case no compensation would be due.

3.4.3 LONG-TERM INCENTIVE PLANS

3.4.3.1 Company policy for share subscription or purchase options, free shares and performance shares

Long-term incentive plans are set-up each year to build loyalty and associate senior executives, managers and employees with the Group's performance. The grant policy, including holding obligations, the main features of current plans as of December 31, 2025 and adjustments to these plans are presented below.

When the plans concern performance shares, free shares or subscription options, grants are decided by the Board of Directors pursuant to resolutions voted by General Meeting.

It should be noted that, among the beneficiaries in the "high potentials" category, the proportion of women is above 50% and has been increasing over the last three plans implemented (51% in 2023, 54% in 2024, and 58% in 2025). Thus, the Group is positioning itself to achieve its objectives regarding the feminization of its leadership bodies.

Company policy with regard to holding obligations applicable to performance shares granted and vested

From the implementation of the 2018 performance share plans, the Board of Directors, at the recommendation of the Compensation Committee, decided to apply a policy requiring **executive corporate officers and members of the Company's Executive Committee** to hold performance shares granted and vested. This policy is constant and intended to be applied unchanged to the proposed 2026 performance share plan (subject to the approval of the 24th resolution by the General Shareholders' Meeting of April 23, 2026). It is recalled that the shareholding obligations applicable to the performance share plans are as follows:

- for **executive corporate officers**, obligation to hold, until the end of their duties, 40% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until a total shareholding corresponding to 200% of their gross fixed annual compensation is ultimately reached;
- for **members of the Company's Executive Committee**, obligation to hold, until the end of their duties on the Executive Committee, 25% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until an overall shareholding corresponding to 100% of their gross fixed annual compensation is ultimately reached.

Company policy for free share grants in 2023 (Plan n°7)

The Board of Directors' Meeting of May 3, 2023, at the recommendation of the Compensation Committee, set the Company's general policy with respect to incentive and long-term compensation arrangements for executives and managers of the Group for 2023.

In this context, the Board of Directors decided, for fiscal year 2023, to favor the grant of shares subject to a performance condition (with a three-year vesting period relating to fiscal years 2023, 2024 and 2025).

In accordance with the Group's compensation policy and the authorization granted by the Veolia Environnement General Meeting of April 27, 2023, the Board of Directors decided on May 3, 2023, at the recommendation of the Compensation Committee, to grant:

- 1,006,109 performance shares, i.e. 0.14% of the share capital at this date, to approximately 510 beneficiaries including top executives, high-potential employees and key contributors of the Group.

In this context, 47,450 performance shares were granted to Mrs. Estelle Brachlianoff (i.e. approximately 0.007% of the share capital compared with 0.02% authorized by the General Meeting).

In addition, 958,659 performance shares (i.e. 0.13% of the share capital, with a fair value under IFRS 2 of €20,630,342) were granted to other employee beneficiaries as follows:

- key positions (250 beneficiaries including the Executive Committee and the Management Committee): 557,659 performance shares (i.e. 0.08% of the share capital);
- high potential employees (131 beneficiaries): 191,000 performance shares (i.e. 0.03% of the share capital);
- key contributors (132 beneficiaries): 210,000 performance shares (i.e. 0.03% of the share capital).

These performance shares will vest subject to the following conditions:

- beneficiaries must remain with the Group until the end of the three-year **vesting period** i.e. until expiry of the plan scheduled for 2026; and
 - a **performance condition tied to the attainment of the following internal and external criteria assessed over fiscal years 2023, 2024 and 2025** (the "Reference Period"):
- **financial criteria in the amount of 50%,**
 - **non-financial quantitative criteria in the amount of 50% linked to the Company's Purpose.**

The **financial criteria (50%)** comprise:

- a **Profitability indicator (CNIGS) (economic performance criterion)** for **25%** of performance shares granted, assessed on expiry of the plan, based on average annual growth (CAGR) of 10% per year from 2022, in fiscal years 2023, 2024 and 2025 (the "Reference Period"):
 - if CNIGS as of December 31, 2025 is less than or equal to €1.48 billion, no performance shares would vest under this indicator,
 - if CNIGS is equal to or more than €1.65 billion, 100% of performance shares will vest under this indicator,
 - between these two thresholds, the number of shares that vest under this criterion would be determined by linear interpolation (proportionality basis);
- a **relative TSR indicator** (stock market performance criterion) for **25%** of performance shares granted, measuring the relative performance of the total shareholder return (TSR) of the Veolia Environnement share (i.e. including dividends) compared with the Stoxx 600 Utilities (Price) SX6P (European Utilities) index ("the Index"). This performance will be determined as of December 31, 2025 and calculated over the Reference Period as follows.

If the TSR of the Veolia Environnement share over three years:

 - is less than the Index: no shares would vest under this criterion,
 - increases in the same amount as the Index: 50% of the performance shares granted under this indicator would vest,
 - increases by 10% or more compared with the Index: all performance shares granted under this indicator would vest,
 - increases between the Index and 10% higher than the Index: the number of shares that vest under this criterion would be determined by linear interpolation (proportionality basis).

The **non-financial quantitative criteria (50%)** comprise:

- a **Diversity indicator** (for **10%** of performance shares granted) corresponding to the percentage of women among executive officers at the end of 2025:
 - if the indicator is less than or equal to 25.3%, no performance shares would vest,
 - if the indicator is equal to 26%, 50% of performance shares granted under this indicator would vest,
 - if the indicator is equal to 27.3%, all performance shares granted under this indicator would vest,
 - between these thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportional basis);
- an **Access to essential services indicator** (for **10%** of performance shares granted) corresponding by 2025 to the number of inhabitants benefiting from inclusive systems to access or retain access to water and sanitation services under Veolia contracts at constant scope:
 - if the indicator is less than or equal to 8.6 million inhabitants, no performance shares would vest,
 - if the indicator is equal to 9.1 million inhabitants, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Circular economy/Plastics indicator** (for **10%** of performance shares granted) corresponding by 2025 to the revenue of entities that generate over 50% of their revenue (at constant recycle/energy prices) from activities relating to the circular economy:
 - if the indicator is less than or equal to €8.4 billion, no performance shares would vest,

- if the indicator is equal to or more than €9 billion, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Climate indicator** representing **20%** of performance shares granted and comprising two sub-indicators:
 - GHG emissions avoided at Veolia customers due to its services (10% of performance shares granted) corresponding at the end of 2025 to the annual contribution to avoided GHG emissions, in millions of metric tons of CO₂ equivalent (14.1 million metric tons avoided in 2022):
 - if the indicator is less than or equal to 13.2 million metric tons, no performance shares would vest,
 - if the indicator is equal to or more than 14.8 million metric tons, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator is determined by linear interpolation (proportional basis);
 - GHG emissions reduction (scopes 1 and 2) (for 10% of performance shares granted) at the end of 2025, compared with emissions measured in 2021 at sites operated at that time by Veolia:
 - if the indicator is nil, no performance shares would vest,
 - if the indicator is equal to or more than 1.9 million metric tons, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator is determined by linear interpolation (proportionality basis).

Company policy for performance share grants in 2024 (Plan n° 8)

The Board of Directors' Meeting of May 13, 2024, at the recommendation of the Compensation Committee, set the Company's general policy with respect to incentive and long-term compensation arrangements for executives and managers of the Group for 2024.

In this context, the Board of Directors decided, for fiscal year 2024, to favor the grant of shares subject to a performance condition (with a three-year vesting period relating to fiscal years 2024, 2025 and 2026).

In accordance with the Group's compensation policy and the authorization granted by the Veolia Environnement General Meeting of April 25, 2024, the Board of Directors decided on May 13, 2024, at the recommendation of the Compensation Committee, to grant:

- 1,082,914 performance shares, i.e. 0.15% of the share capital at this date, to approximately 550 beneficiaries, including former Suez employees and comprising top executives, high-potential employees and key contributors of the Group;
 - In this context, 47,331 performance shares were granted to Mrs. Estelle Brachlianoff (i.e. approximately 0.007% of the share capital compared with 0.02% authorized by the General Meeting).
- In addition, 1,035,583 performance shares (i.e. 0.14% of the share capital, with a fair value under IFRS 2 of €25,723,882) were granted to other employee beneficiaries as follows:
- key positions (280 beneficiaries including the Executive Committee and the Management Committee): 613,583 performance shares (i.e. 0.08% of the share capital);
 - high potential employees (137 beneficiaries): 195,000 performance shares (i.e. 0.03% of the share capital);
 - key contributors (138 beneficiaries): 227,000 performance shares (i.e. 0.03% of the share capital).

These performance shares will vest subject to the following conditions:

- beneficiaries must remain with the Group until the end of the three-year **vesting period** i.e. until expiration of the plan scheduled for 2027; and
 - a **performance condition tied to the attainment of the following internal and external criteria assessed over fiscal years 2024, 2025 and 2026** (the "Reference Period"):
- **financial criteria in the amount of 50%,**
 - **non-financial quantitative criteria in the amount of 50% linked to the Company's Purpose.**

The **financial criteria** (50%) comprise:

- a **Profitability** indicator (net income (loss) before non-recurring items – Group share, or "**CNIGS**") (economic performance criterion) for **25%** of performance shares granted, assessed on expiration of the plan, based on average annual growth (CAGR) of 9% from 2023, in fiscal years 2024, 2025 and 2026 (the "Reference Period"), at constant 2023 exchange rates:
 - if CNIGS over the reference period is less than 5%, no performance shares would vest under this indicator,
 - if CNIGS is more than 9%, 100% of performance shares would vest under this indicator,
 - between these two thresholds, the number of shares that vests under this criterion would be determined by linear interpolation (proportionality basis);
- a **relative TSR** indicator (stock market performance criterion) for **25%** of performance shares granted, measuring the relative performance of the total shareholder return (TSR) of the Veolia Environnement share (i.e. including dividends) compared with the Stoxx 600 Utilities (Price) SX6P (European Utilities) index ("the Index"). This performance will be determined as of December 31, 2026 and calculated over the Reference Period as follows.

If the TSR of the Veolia Environnement share over three years:

- is less than the Index: no shares would vest under this criterion,
- increases in the same amount as the Index: 50% of the performance shares granted under this indicator would vest,
- increases by 10% or more compared with the Index: all performance shares granted under this indicator would vest,
- increases between the Index and 10% higher than the Index: the number of shares that vest under this criterion would be determined by linear interpolation (proportionality basis).

The **non-financial quantitative criteria** (50%) comprise:

- a **Diversity and inclusion** indicator (for **10%** of performance shares granted) corresponding to the proportion of women among the Group's Executive Committee at the end of 2026:
 - if the indicator is less than 30%, no performance shares would vest,
 - if the indicator is equal to or more than 30%, all performance shares granted under this indicator would vest;
- a **Support to Local Communities** indicator (**5%** of performance shares granted) corresponding by 2026 to the increase in the number of residents benefiting from inclusive solutions to access essential services (all activities) for the Group scope as of January 1, 2024:
 - if the indicator is less than 7.8 million inhabitants, no performance shares would vest,

- if the indicator is equal to or more than 8.3 million inhabitants, all performance shares granted under this indicator would vest,

- between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);

- a **Freshwater savings and resource regeneration** indicator (for **10%** of performance shares granted) corresponding by 2026 to the annual value of freshwater saved, equal to the sum of (i) the annual volume of water reused after treatment, (ii) the annual value of water desalinated and (iii) the annual volume of water preserved by freshwater networks thanks to improvements in yield compared to 2023:

- if the indicator is less than or equal to 6.7 million inhabitants, no performance shares would vest,

- if the indicator is equal to 7.3 million inhabitants, all performance shares granted under this indicator would vest,

- between these two thresholds, the number of shares that vests under this indicator would be determined by linear interpolation (proportionality basis);

- a **Customer and Consumer Satisfaction** indicator (for **5%** of performance shares granted) corresponding by 2026 to the customer satisfaction rate measured using the Extended Net Promoter Score methodology:

- if the NPS is less than 20 **or** the coverage rate is less than 60% of revenue, no performance shares would vest,

- if the NPS is equal to or more than 30 **and** the coverage rate is equal to or more than 75% of revenue, all performance shares granted under this indicator would vest,

- between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis for the score and the coverage);

- a **Decarbonization** indicator representing **20%** of performance shares granted and comprising two sub-indicators:

- Decarbonization of our customers (scope 4*): customer GHG emissions erased thanks to Veolia services (for 10% of performance shares granted) corresponding at the end of 2026 to the annual contribution to GHG emissions erased in metric tons of CO₂ equivalent (13.8⁽¹⁾ million metric tons erased in 2023):

- if the indicator is less than 15 million⁽¹⁾ metric tons, no performance shares would vest,

- if the indicator is equal to or more than 17 million⁽¹⁾ metric tons, all performance shares granted under this indicator would vest,

- between these two thresholds, the number of shares that vest under this indicator is determined by linear interpolation (proportionality basis);

- Reduction in GHG emissions (scopes 1 and 2) (for 10% of performance shares granted) at the end of 2026, compared with emissions measured in 2021 at sites operated at that time by Veolia:

- if the indicator is less than 10%, no performance shares would vest,

- if the indicator is equal to or more than 14%, all performance shares granted under this indicator would vest,

- between these two thresholds, the number of shares that vest under this indicator is determined by linear interpolation (proportionality basis).

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

⁽¹⁾ Assessed using the measurement protocol defined in the Global Report reporting tool.

Company policy for performance share grants in 2025

The Board of Directors' Meeting of May 6, 2025, at the recommendation of the Compensation Committee, set the Company's general policy with respect to incentive and long-term compensation arrangements for executives and managers of the Group for 2025.

In this context, the Board of Directors decided, for fiscal year 2025, to favor the grant of shares subject to a performance condition (with a three-year vesting period relating to fiscal years 2025, 2026 and 2027).

In accordance with the Group's compensation policy and the authorization granted by the Veolia Environnement General Meeting of April 24, 2025, the Board of Directors decided on May 6, 2025, at the recommendation of the Compensation Committee, to grant:

- 1,176,353 performance shares, i.e. 0.16% of the share capital at this date, to approximately 540 beneficiaries including top executives, high-potential employees and key contributors of the Group;
- In this context, 44,478 performance shares were granted to Mrs. Estelle Brachlianoff (i.e. approximately 0.006% of the share capital compared with 0.02% authorized by the General Meeting).

In addition, 1,131,875 performance shares (i.e. 0.15% of the share capital, with a fair value under IFRS 2 of €26,440,600) were granted to other employee beneficiaries as follows:

- key positions (265 beneficiaries including the Executive Committee and the Management Committee): 688,875 performance shares (i.e. 0.09% of the share capital);
- high potential employees (137 beneficiaries): 208,000 performance shares (i.e. 0.03% of the share capital);
- key contributors (139 beneficiaries): 235,000 performance shares (i.e. 0.03% of the share capital).

These performance shares will vest subject to the following conditions:

- beneficiaries must remain with the Group until the end of the three-year **vesting period** i.e. until expiry of the plan scheduled for 2028; and
- a **performance condition tied to the attainment of the following internal and external criteria assessed over fiscal years 2025, 2026 and 2027** (the "Reference Period"):
 - **financial criteria in the amount of 50%,**
 - **non-financial quantitative criteria in the amount of 50% linked to the Company's Purpose.**

The **financial criteria (50%)** comprise:

- a **Profitability** indicator (**CNIGS**) (economic performance criterion) for **25%** of performance shares granted, assessed on expiration of the plan, based on average annual growth (CAGR) of 10% per year from 2023, in fiscal years 2024, 2025, 2026 and 2027 (the "2024-2027 Period"), at constant 2023 exchange rates, in accordance with the objective of the GreenUp program:
 - if the CAGR for the period 2024-2027 is less than 5%, no performance shares would vest under this indicator,
 - if the CAGR for the period 2024-2027 is 10% or more, 100% of performance shares would vest under this indicator,
 - between these two thresholds, the number of shares that vest under this criterion would be determined by linear interpolation (proportionality basis);
- a **relative TSR** indicator (stock market performance criterion) for **25%** of performance shares granted, measuring the relative performance of the total shareholder return (TSR) of the Veolia Environnement share (i.e. including dividends) compared with the Stoxx 600 Utilities (Price) SX6P (European Utilities) index ("the Index"). This performance will be

determined as of December 31, 2027 and calculated over the Reference Period as follows:

If the TSR of the Veolia Environnement share over three years:

- is less than the Index: no shares would vest under this criterion,
- increases in the same amount as the Index: 50% of the performance shares granted under this indicator would vest,
- increases by 10% or more compared with the Index: all performance shares granted under this indicator would vest,
- increases between the Index and 10% higher than the Index: the number of shares that vest under this criterion would be determined by linear interpolation (proportionality basis).

The **non-financial quantitative criteria (50%)** comprise:

- a **Diversity and Inclusion** indicator (for **10%** of performance shares granted) corresponding to the proportion of women among the Group's Executive Committee at the end of 2027:
 - if the indicator is less than 30%, no performance shares would vest,
 - if the indicator is equal to or more than 33%, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Support to Local Communities** indicator (**5%** of performance shares granted), corresponding by 2027 to the number of residents benefiting from inclusive solutions to access essential services (all activities):
 - if the indicator is less than 8.0 million inhabitants, no performance shares would vest,
 - if the indicator is equal to or more than 8.4 million inhabitants, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Saved Freshwater and Resource Regeneration** indicator (for **10%** of performance shares granted) corresponding by 2027 to the annual value of freshwater saved, equal to the sum of (i) the annual volume of water reused after treatment, (ii) the annual value of water desalinated and (iii) the annual volume of water preserved by drinking water networks thanks to improvements in yield compared to 2023:
 - if the indicator is less than 1.4 billion cubic meters, no performance shares would vest,
 - if the indicator is equal to or more than 1.5 billion cubic meters, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Customer and Consumer Satisfaction** indicator (for **5%** of performance shares granted), corresponding by 2027 to the customer satisfaction rate measured using the Extended Net Promoter Score methodology:
 - if the NPS is less than 25 **or** the coverage rate is less than 65% of revenue, no performance shares would vest,
 - if the NPS is equal to or more than 35 **and** the coverage rate is equal to or more than 80% of revenue, all performance shares granted under this indicator would vest,

- between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportional basis for the score and the coverage);
- a **Decarbonization** indicator representing **20%** of performance shares granted and comprising two sub-indicators:
 - Decarbonization of our customers (scope 4*): customer GHG emissions erased thanks to Veolia services (for 10% of performance shares granted), corresponding by the end of 2027 to the annual contribution to erased GHG emissions in millions of metric tons of CO₂ equivalent, expressed as a percentage increase compared with the 2023 baseline⁽¹⁾:
 - if the increase compared with the 2023 baseline is less than 13%, no performance shares would vest,
 - if the increase compared with the 2023 baseline is equal to or more than 30%, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator is determined by linear interpolation (proportionality basis);
 - GHG emissions reduction (scopes 1 and 2) (for 10% of performance shares granted) at the end of 2027, compared with emissions measured in 2021:
 - if the reduction in the volume of scope 1 and 2 greenhouse gas emissions relative to their 2021 level is less than 14%, no performance shares would vest,
 - if the reduction in the volume of scope 1 and 2 greenhouse gas emissions relative to their 2021 level is equal to or greater than 18%, the total amount of performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator is determined by linear interpolation (proportionality basis).

Company policy for performance share grants in 2026

At the recommendation of the Compensation Committee, the Board of Directors asks shareholders in the 24th resolution presented to the General Shareholders' Meeting of April 23, 2026, to approve an authorization, for a period of 26 months, to grant performance shares to a group of around 580 beneficiaries including top executives, high potential employees and key contributors of the Group, including the Chief Executive Officer. This plan, which is intended to be launched in 2026 with an expiration date in 2029 following the publication of the 2028 financial statements, succeeds the plan granted in 2025.

At the recommendation of the Compensation Committee, the Board of Directors stipulated that the Chief Executive Officer would receive a performance share grant equal capped at 150% of her fixed annual compensation (if all performance conditions are met) (see Section 3.4.1.1.5 above). In the same way as for annual variable compensation, the proposed performance conditions for this new plan seek to reflect Veolia's commitment to multifaceted performance under the GreenUp 2024-2027 strategic program, as detailed in Chapter 1 above and Chapter 4 below.

These performance shares would vest subject to the following conditions:

- beneficiaries must remain with the Group until the end of the three-year **vesting period** i.e. until expiry of the plan scheduled for 2029; and
- a **performance condition tied to the attainment of the following internal and external criteria assessed over fiscal years 2026, 2027 and 2028** (the "Reference Period"):
 - **financial criteria in the amount of 50%,**

- **non-financial quantitative criteria in the amount of 50% linked to the Company's Purpose.**

The **non-financial criteria (50%)** comprise:

- a **Profitability indicator (CNIGS)** (economic performance criterion) for **25%** of performance shares granted, assessed on expiration of the plan, based on average annual growth (CAGR) of 8.5% per year from the end of 2024, in fiscal years 2025, 2026, 2027 and 2028 (the "Reference Period"), at constant exchange rates and excluding the Suez and Clean Earth PPAs:
 - if CNIGS over the Reference Period is less than 5%, no performance shares would vest under this indicator,
 - if the CAGR for the Reference Period is 8.5% or more, 100% of performance shares would vest under this indicator,
 - between these two thresholds, the number of shares that vest under this criterion would be determined by linear interpolation (proportionality basis);
- a **relative TSR** indicator (stock market performance criterion) for **25%** of performance shares granted, measuring the relative performance of the total shareholder return (TSR) of the Veolia Environnement share (i.e. including dividends) compared with the Stoxx 600 Utilities (Price) SX6P (European Utilities) index ("the Index"). This performance will be determined as of December 31, 2028, and calculated based on the aggregate results for the three fiscal years 2026, 2027, and 2028 ("Reference Period") as follows:

If the TSR of the Veolia Environnement share over three years:

 - is less than the Index: no shares would vest under this criterion,
 - increases in the same amount as the Index: 50% of the performance shares granted under this indicator would vest,
 - increases by 10% or more compared with the Index: all performance shares granted under this indicator would vest,
 - increases between the Index and 10% higher than the Index: the number of shares that vest under this criterion would be determined by linear interpolation (proportionality basis).

The **non-financial quantitative criteria (50%)** comprise:

- a **Diversity and Inclusion** indicator (for **10%** of performance shares granted) corresponding to the proportion of women among the Group's Executive Committee at the end of 2028:
 - if the indicator is less than 30%, no performance shares would vest,
 - if the indicator is equal to 35%, 50% of performance shares granted under this indicator would vest,
 - if the indicator is equal to or more than 37.5%, all performance shares granted under this indicator would vest,
 - between these thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Support to Local Communities** indicator (**10%** of performance shares granted), corresponding by 2028 to the increase in the number of residents benefiting from inclusive solutions to access essential services (all activities):
 - if the indicator is less than 8.3 million inhabitants, no performance shares would vest,
 - if the indicator is equal to or more than 9.5 million inhabitants, all performance shares granted under this indicator would vest,

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

⁽¹⁾ Assessment using the measurement protocol defined in the Global Report reporting tool.

- between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Saved Freshwater and Resource Regeneration** indicator (for 10% of performance shares granted) corresponding by the end of 2028 to the annual value of freshwater saved, equal to the sum of (i) the annual volume of water reused after treatment, (ii) the annual value of water desalinated and (iii) the annual volume of water preserved by drinking water networks thanks to improvements in yield compared to 2023:
 - if the indicator is less than 1.4 billion cubic meters, no performance shares would vest,
 - if the indicator is equal to or more than 1.6 billion cubic meters, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **Customer and Consumer Satisfaction** indicator (for 10% of performance shares granted), corresponding by 2028 to the customer satisfaction rate measured using the Extended Net Promoter Score methodology:
 - if the NPS is less than 30 **or** the coverage rate is less than 65% of revenue, no performance shares would vest,
 - if the NPS is equal to or more than 40 **and** the coverage rate is equal to or more than 80% of revenue, all performance shares granted under this indicator would vest,
- between these two thresholds, the number of shares that vest under this indicator would be determined by linear interpolation (proportionality basis);
- a **GHG emissions reduction** indicator (scopes 1 and 2) (for 10% of performance shares granted) at the end of 2028, compared with their level in 2021:
 - if the indicator is less than 17%, no performance shares would vest,
 - if the indicator is equal to 19%, half of all performance shares granted would vest,
 - if the indicator is equal to or more than 21%, all performance shares granted under this indicator would vest,
 - between these two thresholds, the number of shares that vest under this indicator is determined by linear interpolation (proportionality basis).

In the context of these plans, the Board of Directors may grant new or existing shares, on one or more occasions and up to a maximum of 0.35% of the share capital, assessed at the date of this General Shareholders' Meeting, subject to a sub-limit of 0.02% of the share capital for performance shares granted to Mrs. Estelle Brachlianoff, the executive corporate officer.

This authorization would be granted for a period of 26 months and cancel the authorization granted by the General Shareholders' Meeting of April 24, 2025 that was used in 2025 for an amount equal to 0.16% of the share capital.

3.4.3.2 Free shares

Overview of performance share grants under current plans as of December 31, 2025 (AFEP-MEDEF Code Table 9)

	Plan no. 7	Plan no. 8	Plan no. 9
Meeting date	04/27/23	04/25/2024	04/24/2025
Date of the Board of Directors' Meeting	05/03/2023	05/13/2024	05/06/2025
Number of shares granted (before adjustment)	1006109	1082914	1176353
▪ of which total number of shares granted (before adjustment) to Mr. Antoine Frérot, Chairman of the Board of Directors from June 30, 2022	-	-	-
▪ of which total number of shares granted to Mrs. Estelle Brachlianoff, Chief Executive Officer from July 1, 2022	47,450	47,331	44,478
Share vesting date	05/04/2026	05/14/2027	05/07/2028
End of lock-up period	05/04/2026	05/14/2027	05/07/2028
Performance condition	See Section 3.4.3.1 above	See Section 3.4.3.1 above	See Section 3.4.3.1 above
Number of shares vested as of 12/31/2025	3,224 ⁽¹⁾	3,538 ⁽¹⁾	-
Total number of shares canceled or expired	55,571	35,099	19,094
Performance shares at the year-end	947,314	1,044,277	1,157,259

(1) Shares vested in anticipation following the death of a beneficiary.

Free share plan no. 5 was implemented on June 15, 2022 by decision of the Board of Directors. This plan expired on June 16, 2025. At the expiration date, 142,200 shares vested to plan beneficiaries.

Performance share plan no. 6 was implemented on August 2, 2022 by decision of the Board of Directors. This plan expired on August 03, 2025. At the expiration date, 932,472 shares vested to plan beneficiaries, corresponding to a performance condition attainment rate of 75.6%.

3.4.3.3 Attainment of performance conditions by expired plans**Attainment of performance conditions by the 2023 performance share plan (Plan no. 7)**

As the performance conditions of the 2023 performance share plan concern fiscal years 2023, 2024 and 2025, the attainment rates for these conditions could be determined with the following results:

Performance Indicator	Weight	Description of the indicator and payment thresholds Minimum threshold: no shares vest Target threshold: 100% of shares vest	Result	Payment rate
Profitability (CNIGS)	25%	2025 CNIGS Mini: €1.48 billion Target: €1.65 billion	€1.643 billion	95.9 %
Relative TSR	25%	3-year progression of Veolia's TSR compared to that of the Stoxx 600 Utilities (Price) SX6P (European Utilities Index) Mini: Veolia's TSR evolution equal to that of the index. Target: Veolia's TSR evolution 10% higher than that of the index.	Veolia's share TSR changed by +1.02 points compared to the benchmark index (+35.62% vs +34.60%).	55.1 %
Diversity	10%	At the end of 2025, proportion of women among senior executives Mini: ≤ 25.3% Target: ≥ 27.3%	33.1% (159 women vs 322 men)	100 %
Access to essential services	10%	At the end of 2025, change in the number of inhabitants benefiting from inclusive systems to access or retain access to essential services under Veolia contracts, at constant perimeter Mini: 8.6 million inhabitants Target: 9.1 million inhabitants	10.3 million inhabitants	100 %
Circular economy/ plastics	10%	At the end of 2025, revenue of entities that generate over 50% of their revenue (at constant recycle/energy prices) from activities relating to the circular economy Mini: indicator ≤ €8.4 billion Target: indicator ≥ €9 billion	€9.5 billion	100 %
Climate - GHG emissions avoided	10%	At the end of 2025, annual contribution to avoided GHG emissions (14.1 Mt CO ₂ in 2022) Mini: contribution ≤ 13.2 Mt CO ₂ Target: contribution ≥ 14.8 Mt CO ₂	17.7 Mt	100 %
Climate - GHG emissions reduction	10%	At the end of 2025, GHG emissions reduction (scopes 1 and 2), compared with emissions measured in 2021 at sites operated at that time by Veolia Mini: nil indicator Target: indicator ≥ 1.9 Mt	3.7 Mt	100 %
TOTAL PAYMENT RATE				87.7 %

Beneficiaries meeting the presence condition will receive 87,7% of the number of shares granted.

Attainment of performance conditions by previous plans

2018 performance share plan (Plan no. 1): plan performance conditions were attained with a payment rate of 100%.

2019 performance share plan (Plan no. 2): plan performance conditions were attained with a payment rate of 100%.

2020 performance share plan (Plan no. 3): plan performance conditions were partially attained with a payment rate of 87.5%.

It is recalled that, for each of these three plans, an adjustment was applied to neutralize fiscal year 2020 for the CNIGS criteria, accompanied by a one-third reduction in the initial number of performance shares granted for this criterion.

2021 performance share plan (Plan no. 4): plan performance conditions were partially attained with a payment rate of 85.0%.

2022 performance share plan (Plan no. 6): plan performance conditions were partially attained with a payment rate of 75.6%.

3.4.3.3.1 Performance shares granted during fiscal year 2025 to executive corporate officers by Veolia Environnement and any other Group company (AFEP-MEDEF Code Table 6)

Executive corporate officer	Plan number and date	Number of shares granted during the fiscal year	Value of shares using the method adopted in the consolidated financial statements	Vesting date	Availability date	Performance conditions
Mrs. Estelle Brachlianoff, Chief Executive Officer	Plan no. 9 2025	44,478	1,039,006 ⁽¹⁾	05/07/2028	05/07/2028	See Section 3.4.3.1 above

(1) Valuation of performance shares granted as of May 6, 2025 based on the fair value of the share pursuant to IFRS 2, i.e. €23.36.

3.4.3.3.2 Performance shares that became available during fiscal year 2025 to executive corporate officers (AFEP-MEDEF Code Table 7)

Executive corporate officer	Plan number and date	Number of shares that became available during the fiscal year
Mrs. Estelle Brachlianoff, Chief Executive Officer ⁽¹⁾	Plan no.5 2022 of 6/15/2022	18,000
Mrs. Estelle Brachlianoff, Chief Executive Officer ⁽²⁾	Plan no.6 2022 of 8/02/2022	21,470

(1) Free shares granted to Ms. Estelle Brachlianoff in connection with her duties as Deputy Chief Executive Officer in charge of operations, and member of the Executive Committee.

(2) Performance shares granted to Ms. Estelle Brachlianoff in connection with her duties as Chief Executive Officer since July 1, 2022.

3.4.3.3.3 Performance shares granted to the top ten employee beneficiaries other than corporate officers and shares vesting to them

Performance shares granted to the top ten employee beneficiaries other than corporate officers and performance shares vesting to them	Number of shares granted/vested	Value of shares using the method adopted in the consolidated financial statements	Plan number
Shares granted during fiscal year 2025 by Veolia Environnement and any company within the scope of the share grant, to the ten employees of Veolia Environnement and any other company included within this scope, having received the greatest number of shares	158,412	3,700,504 ⁽¹⁾	Plan no.9
Shares vested during fiscal year 2025 to the ten employees of Veolia Environnement and the aforementioned companies, to whom the greatest number of shares vested *	76,885	2,253,499 ⁽²⁾	Plan no.6

(1) Valuation of performance shares granted as of May 6, 2025 based on the fair value of the share pursuant to IFRS 2, i.e. €23.36.

(2) Valuation of performance shares vested as of August 3, 2025 based on the vesting price as of August 4, 2025 of €29.31, as August 3, 2025 was a public holiday on the Euronext Paris regulated market.

* Excluding shares vested to employees who have left the Group.

3.4.3.4 Attainment of performance conditions by expired plans

Overview of share subscription and/or purchase option grants as of December 31, 2025 (AFEP- MEDEF Code Table 8)

None.

With regard to the share subscription or purchase option grant policy for Company executive corporate officers, as of the date of filing of this Universal Registration Document, it is recalled that the Company does not intend to grant any financial instruments of this nature to these individuals, nor to seek authorizations from the General Meeting to grant this type of financial instrument.

3.4.3.4.1 Share subscription or purchase options granted to and/or exercised by executive corporate officers in fiscal year 2025

Share subscription or purchase options granted during the fiscal year to executive corporate officers by Veolia Environnement and any other Group company (AFEP-MEDEF Code Table 4)

Executive corporate officer	Plan number and date	Number of options	Value of options	Number of options granted during the fiscal year	Strike price (in euros)	Exercise period
Mr. Antoine Frérot, Chairman of the Board of Directors	None	-	-	-	-	-
Mrs. Estelle Brachlianoff, Chief Executive Officer	None	-	-	-	-	-

Share subscription or purchase options exercised during the fiscal year by executive corporate officers (AFEP-MEDEF Code Table 5)

Executive corporate officer	Plan number and date	Number of options exercised during the fiscal year	Strike price (in euros)
Mr. Antoine Frérot, Chairman of the Board of Directors	None	-	-
Mrs. Estelle Brachlianoff, Chief Executive Officer	None	-	-

3.4.3.4.2 Share subscription or purchase options granted to the top ten employee beneficiaries other than corporate officers and options exercised by them

Share subscription or purchase options granted to the top ten employee beneficiaries other than corporate officers and options exercised by them	Total number of options granted/shares subscribed or purchased	Average weighted price**	Plan number
Options granted during fiscal year 2025 by Veolia Environnement and any company within the scope of the option grant, to the ten employees of Veolia Environnement and any other company included within this scope, having received the greatest number of shares	None	-	-
Options held in Veolia Environnement and the companies referred to above exercised during fiscal year 2025 by the ten employees of Veolia Environnement and the aforementioned companies, having exercised the greatest number of options*	None	-	-

* Excluding options exercised by employees who have left the Group.

** Strike price after legal adjustments.

3.4.4 COMPONENTS OF COMPENSATION SUBJECT TO SHAREHOLDER VOTE IN ACCORDANCE WITH ARTICLE L.22-10-34 AND ARTICLE L.22-10-8 OF THE FRENCH COMMERCIAL CODE

3.4.4.1 Approval of the fixed, variable and exceptional components of total compensation and benefits of all kind paid during 2025 or awarded in respect of the same fiscal year to Mr. Antoine Frérot, as Chairman of the Board of Directors ("Ex post" vote)

(Resolution 8)

Pursuant to the provisions of Article L. 22-10-34 of the French Commercial Code, shareholders are asked in the **8th resolution** to approve based on the Corporate Governance report, firstly, in application of Article L. 22-10-34, I of the French Commercial Code, the information mentioned in Article L. 22-10-9, I of the French Commercial Code which is presented therein and, secondly, in application of Article L. 22-10-34, II of the French Commercial Code, the fixed, variable and exceptional components of total compensation and benefits of all kind paid to Mr. Antoine Frérot in 2025 or awarded in respect of the same fiscal year by virtue of his duties as Chairman of the Board of Directors. Note that all these components are presented in Chapter 3, section 3.4 of the 2025 Universal Registration Document and some of them are summarized in the table below.

Compensation component	Amount	Comments
Fixed compensation	€700,000	In accordance with the compensation policy approved by the General Shareholders' Meeting of April 24, 2025 which provides for gross annual fixed compensation of €700,000. This amount will remain unchanged during his current term of office.
Variable compensation	None	Mr. Antoine Frérot does not receive any annual variable compensation.
Multi-year variable compensation	None	Mr. Antoine Frérot does not receive any multi-year variable compensation.
Exceptional compensation	None	Mr. Antoine Frérot does not receive any exceptional compensation.
Compensation awarded for duties as a director	None	Mr. Antoine Frérot does not receive compensation as a director of Veolia Environnement and in respect of the offices he holds in Group companies.
Grant of stock options and/or performance shares	None	No long-term compensation was granted to Mr. Antoine Frérot in 2025.
Severance payment / Non-compete compensation	None	Mr. Antoine Frérot is not entitled to a severance payment or non-compete compensation.
Supplementary pension plan	€23,118 (Company contribution to the defined-contribution plan)	Mr. Antoine Frérot benefits from the supplementary defined contribution group pension plan applicable since July 1, 2014. His rights under this plan were maintained on the change in his corporate office. Mr. Frérot is also eligible under the defined benefit pension plan described above, with a theoretical annuity of nil.
Collective healthcare and insurance plans	€13,050 (Company contribution to the plans)	Mr. Antoine Frérot benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the category of employees with which he is assimilated for the setting of employee benefits and other ancillary components of his compensation.
Benefits in kind	€2,125	Mr. Antoine Frérot enjoys the use of a company car.

Eighth resolution – Vote on the compensation components paid during 2025 or awarded in respect of the same fiscal year to Mr. Antoine Frérot, Chairman of the Board of Directors

The General Meeting, acting in accordance with the quorum and majority requirements for Ordinary Shareholders' Meetings and having considered the report of the Board of Directors and the Corporate Governance report referred to in Article L. 225-37 of the French Commercial Code, approves, firstly, pursuant to Article L. 22-10-34, I of the French Commercial Code, the information mentioned in Article L. 22-10-9, I of the French Commercial Code which is presented therein and, secondly, pursuant to Article L. 22-10-34, II of the French Commercial Code, the fixed, variable and exceptional components of total compensation and benefits of all kinds paid to Mr. Antoine Frérot in 2025 or awarded in respect of the same fiscal year by virtue of his duties as Chairman of the Board of Directors, as set forth in Chapter 3, section 3.4 of the 2025 Universal Registration Document.

3.4.4.2 Approval of the fixed, variable and exceptional components of total compensation and benefits of all kind paid during 2025 or awarded in respect of the same fiscal year to Mrs. Estelle Brachlianoff, as Chief Executive Officer (“Ex post” vote)

(Resolution 9)

Pursuant to the provisions of Article L. 22-10-34 of the French Commercial Code, shareholders are asked in the 9th resolution to approve based on the Corporate Governance report, firstly, in application of Article L. 22-10-34, I of the French Commercial Code, the information mentioned in Article L. 22-10-9, I of the French Commercial Code which is presented therein and, secondly, in application of Article L. 22-10-34, II of the French Commercial Code, the fixed, variable and exceptional components of total compensation and benefits of all kind paid to Mrs. Estelle Brachlianoff in 2025 or awarded in respect of the same fiscal year by virtue of her duties as Chief Executive Officer. Note that all these components are presented in Chapter 3, section 3.4 of the 2025 Universal Registration Document and some of them are summarized in the table below.

Compensation component	Amount	Comments
Fixed compensation	€1,030,000	In accordance with the compensation policy approved by the General Meeting of April 24, 2025 which provides for gross annual fixed compensation of €1,030,000.
Variable compensation	€1,406,259	The Board of Directors' Meeting of March 10, 2026, at the recommendation of the Compensation Committee, set and approved the total amount of Mrs. Estelle Brachlianoff's variable compensation (quantitative and qualitative components) for fiscal year 2025 at €1,406,259. The 2025 quantitative objectives are in keeping with the 2025 financial outlook announced to the market on February 27, 2025 and the GreenUp 2024-2027 strategic plan.

In order to integrate the multifaceted performance indicators relating to the Company's Purpose, the Board of Directors' Meeting of March 11, 2025, at the recommendation of the Compensation Committee, determined the calculation method for variable compensation as follows:

- weight of the auditable quantitative portion (80%) and weight of the qualitative portion (20%) unchanged;
- split of the weight of the auditable quantitative portion (80%) between financial quantitative objectives (50%) and non-financial quantitative objectives (30%) unchanged;
- target variable compensation (in the event of attainment of the objectives set by the Board of Directors) set at 100% of the fixed annual compensation (“Target bonus base”);
- variable compensation is capped (in the event objectives are exceeded) at 160% of fixed annual compensation for 2025, or €1,648,000.

Using this method and based on the attainment of the criteria determining the calculation of the variable portion, the amount of this variable portion for fiscal year 2025 was determined as follows:

- i) **with respect to the quantitative criteria:** in line with the outlook and objectives published on February 27, 2025, equal to the total of the components resulting from application of each of these criteria separately.

For the 50% financial quantitative portion:

- 20% based on the **Profitability indicator**: current net result Group share; an increase of +9.1% in 2025 (objective of +9.0%), representing an attainment rate of 101.1% and a payment rate of 106.7%;
- 15% based on the **Investment Capacity indicator (free cash flow)**: before financial acquisitions/divestitures and dividends but after financial expenses and taxes; €1,782 million as of December 31, 2025⁽¹⁾, representing an attainment rate of 110.8% (objective of €1,608 million) and a payment rate of 111.6%;
- 15% based on the **Capital Return indicator (ROCE)**: Group ROCE after tax and including the return on capital employed of joint ventures and companies and after IFRS 16 lease adjustments; 9.4% as of December 31, 2025, representing an attainment rate of 104.4% (objective of 9.0%) and a payment rate of 160%.

These financial indicators are defined in Chapter 5, section 5.5 of the Universal Registration Document.

The attainment level for each indicator of the financial and non-financial quantitative variable compensation portion was determined based on the attainment of the 2025 budget objectives which are consistent with the outlook announced to the market on February 27, 2025. The payment rate follows the payout rule established for each indicator based on the requirements defined in the GreenUp 2024-2027 strategic plan.

(1) The target free cash flow used to determine the bonus excludes discretionary and growth investments.

Compensation component	Amount	Comments
Variable compensation	€1,406,259	The financial quantitative variable portion equals €639,424 reflecting an overall payment rate of 124.2%. For the 30% non-financial quantitative portion: • 5% based on the Health, Safety and Well-being indicator: improvement and reduction in the injury frequency rate; 4.11 as of December 31, 2025 (objective of 4.3), representing an attainment rate of 104.4% and a payment rate of 157%; • 5% based on the Ethics and Integrity indicator: percentage of positive answers from respondents across the whole Group to the engagement survey question "In my country, Veolia behaves ethically and adheres to compliance rules in its activities"; 88% as of December 31, 2025 (objective of 83%), representing an attainment rate of 106% and a payment rate of 140%; • 5% based on the Decarbonization of our Assets indicator: decarbonization investments, including the coal phase-out and methane capture; €141 million as of December 31, 2025 (objective of €136 million), representing an attainment rate of 103.7% and a payment rate of 111%; • 5% based on the Growth and Innovation Drivers indicator: revenue growth in priority business segments (Energy, Water Technologies, Hazardous Waste); 8.6% as of December 31, 2025 (objective of 6%), representing an attainment rate of 143.3% and a payment rate of 160%; • 5% based on the Employee Commitment indicator: commitment rate of employees measured by an engagement survey conducted by an external body (clear objectives, meaning and usefulness, work atmosphere, pride in the Group, willingness to recommend Veolia); 88% as of December 31, 2025 (objective of 85%), representing an attainment rate of 103.5% and a payment rate of 136%; • 5% based on the Biodiversity indicator: progress rate of action plans improving the environmental footprint and biodiversity at sensitive sites; 80% as of December 31, 2025 (objective of 75%), reflecting a 106.7% attainment rate and a 145% payment rate. The non-financial quantitative variable compensation portion was determined based on the attainment of the 2025 targets for the indicators concerned as detailed in chapter 3, section 3.4 of the 2025 Universal Registration Document and recalled in the Notice and information brochure to the General Meeting of April 23, 2026. The non-financial quantitative variable portion equals €437,235 reflecting an overall payment rate of 141.5%. (ii) For the qualitative criteria: the Board of Directors' meeting of March 10, 2026 decided to allocate €329,600 to Mrs. Estelle Brachlianoff in respect of the qualitative variable portion (20% of the target bonus) of her 2025 compensation, representing a payment rate of 160% of the qualitative portion based on an overall assessment founded on the attainment of the following individual objectives: strategic aspects, with a payment rate of 160%; managerial performance, with a payment rate of 160%; equity story, with a payment rate of 160%. The assessment of those criteria by the Board of Directors is detailed in Chapter 3 section 3.4.1.1.3 of the 2025 Universal Registration Document. Mrs. Estelle Brachlianoff's total variable compensation for fiscal year 2025 therefore amounts to €1,406,259, equal to 136.5% of her Target bonus base. In accordance with Article L. 22-10-34, II of the French Commercial Code, the variable compensation will be paid to Mrs. Estelle Brachlianoff only after approval of the 12th resolution presented to the General Meeting of April 23, 2026.
Multi-year variable compensation	No payment	Mrs. Estelle Brachlianoff, did not receive any multi-year variable compensation in 2025.
Exceptional compensation	N/A	Mrs. Estelle Brachlianoff did not receive any exceptional compensation.
Compensation awarded as a director	N/A	Mrs. Estelle Brachlianoff has waived her right to receive compensation as a director of Veolia Environnement and in respect of the offices she holds in Group companies.

Compensation component	Amount	Comments
Grant of stock options and/or performance shares	Performance share grant to a group of around 540 Group top executives, high potential managers and key contributors, including the Chief Executive Officer	In accordance with the Group's compensation policy and the authorization granted by the Veolia Environnement Extraordinary General Meeting of April 24, 2025, the Board of Directors decided on May 6, 2025, at the recommendation of the Compensation Committee, to grant 1,176,353 performance shares (representing around 0.16% of the share capital out of a General Meeting authorization of 0.35%), to approximately 540 beneficiaries comprising top executives, high potential employees and key contributors of the Group. In this context, 44,478 performance shares were granted to Mrs. Estelle Brachlianoff as Chief Executive Officer (i.e. approximately 0.006% of the share capital compared with 0.02% authorized by the General Meeting). This allocation was capped at 133% of her fixed compensation (if all performance conditions are met) in accordance with the compensation policy approved by the General Meeting of April 24, 2025. These performance shares will vest subject to the following conditions: • beneficiaries must remain with the Group until the end of the three-year vesting period i.e. until expiry of the plan scheduled for 2028; and • a performance condition tied to the attainment of the following internal and external criteria assessed over fiscal years 2025, 2026 and 2027: • financial criteria in the amount of 50%, • non-financial quantitative criteria in the amount of 50% linked to the Company's Purpose. The performance and presence conditions governing the vesting of the performance shares are presented in Chapter 3, section 3.4.3 of the 2025 Universal Registration Documentation.
Obligation to hold the performance shares granted and vested		At the recommendation of the Compensation Committee, the Board of Directors' Meeting of May 6, 2025 decided, in the context of the implementation of this performance share plan, to renew the following holding obligations: • for the Chief Executive Officer, obligation to hold, until the end of her duties, 40% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until an overall shareholding corresponding to 200% of her gross fixed compensation is ultimately reached; • for members of the Company's Executive Committee, obligation to hold, until the end of their duties on the Executive Committee, 25% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until an overall shareholding corresponding to 100% of their gross fixed annual compensation is ultimately reached.
Termination benefits on forced departure		Mrs. Estelle Brachlianoff is entitled to a severance payment in the event of termination of her duties as Chief Executive Officer, applicable solely in the event of "forced departure". In accordance with the AFEP-MEDEF Corporate Governance Code, the maximum amount of this severance payment is capped at twice the total gross annual compensation (excluding compensation awarded for duties as a director (it being stipulated that she has waived all compensation of this nature) and benefits in kind), including the sum of the fixed portion of her compensation for the previous fiscal year ("Fixed Portion") and the average of the variable portions ("Variable Portion") paid or payable in respect of the last two fiscal years ending before the termination of her duties as Chief Executive Officer ("Reference Compensation"). The amount of this severance payment and its fixed and variable portions depends in both cases on the extent to which performance conditions were attained. The reference compensation is equal to the fixed compensation paid in respect of the last fiscal year plus the average of the variable compensation paid or payable in respect of the last two fiscal years; no payment will be made if the performance rate is below 75%. The severance payment is equal to the maximum amount multiplied by the performance rate, the performance rate being equal to 60% of the objective attainment rate for the last variable portion, plus 40% of the objective attainment rate for the previous variable portion. Mrs. Estelle Brachlianoff resigned from her employment contract on her appointment as Chief Executive Officer on July 1, 2022.
Non-compete compensation		The Board of Directors' Meeting of April 5, 2022, in consideration for Mrs. Estelle Brachlianoff undertaking, during a period of two years from the end of her duties as Chief Executive Officer, not to exercise, directly or indirectly, a competing activity to that of the Company and Veolia group companies, decided to grant her compensation equal to one year's compensation (fixed and variable components, the variable portion to be taken into account in calculating this compensation being the average annual variable compensation paid for the last two years), paid in 24 equal and successive monthly instalments. In accordance with the AFEP-MEDEF Code, the total of severance payments plus non-compete compensation cannot exceed two year's compensation (fixed and variable, with variable compensation for the purpose of calculating these payments equal to the average annual variable compensation paid for the last two years). Accordingly, in the event the Board should decide to implement the non-compete clause, severance payments would be capped at one year's compensation. The Board of Directors may, on the departure of the Chief Executive Officer, waive application of this clause, in which case no compensation would be due.
Supplementary pension	€104,804 (Company contribution to the defined contribution plan)	Mrs. Estelle Brachlianoff benefits from the supplementary defined contribution group pension plan applicable since July 1, 2014. She is also eligible under the defined benefit pension plan described above, with a theoretical annuity of nil.

Compensation component	Amount	Comments
	€365,439 (15% gross contribution payable by the Company in respect of 2025)	Mrs. Estelle Brachlianoff benefits from an "Article 82" supplementary pension plan financed by payments by the Company into an individual account at a net contribution rate of 7.5%, or a gross rate of 15%, with the difference paid to the Chief Executive Officer due to the taxation on entry of contributions to this type of pension plan.
Collective healthcare and insurance plans	€13,250 (Company contribution to the plans)	Mrs. Estelle Brachlianoff, benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the category of employees with which she is assimilated for the setting of social benefits and other ancillary components of her compensation.
Benefits in kind	None	None

Ninth resolution – Vote on the compensation components paid during 2025 or awarded in respect of the same fiscal year to Mrs. Estelle Brachlianoff, as Chief Executive Officer

The General Meeting, acting in accordance with the quorum and majority requirements for Ordinary Shareholders' Meetings and having considered the report of the Board of Directors and the Corporate Governance report referred to in Article L. 225-37 of the French Commercial Code, approves, firstly, pursuant to Article L. 22-10-34, I of the French Commercial Code, the information mentioned in Article L. 22-10-9, I of the French Commercial Code which is presented therein and, secondly, pursuant to Article L. 22-10-34, II of the French Commercial Code, the fixed, variable and exceptional components of total compensation and benefits of all kinds paid to Mrs. Estelle Brachlianoff in 2025 or awarded in respect of the same fiscal year by virtue of her duties as Chief Executive Officer, as set forth in Chapter 3, section 3.4 of the 2025 Universal Registration Document.

3.4.4.3 Vote on the Chairman of the Board of Directors' compensation policy in respect of fiscal year 2026 ("Ex ante" vote)

(Resolution 11)

Pursuant to the provisions of Article L. 22-10-8, II of the French Commercial Code, shareholders are asked in the 11th resolution to approve the Chairman of the Board of Directors' compensation policy. Note that all these components are presented in chapter 3, section 3.4 of the Company's 2025 Universal Registration Document and summarized in the table below.

The Chairman of the Board of Directors' compensation policy was approved by the Board of Directors at the recommendation of the Compensation Committee. It consists solely of fixed compensation and benefits in kind, excluding all variable or exceptional compensation, grants of share subscription options or performance shares and compensation for his duties as a director.

The fixed annual compensation was set in 2022 at €700,000 based on a panel of comparable and CAC 40 companies. At this time, consideration was particularly given to the results of a study conducted by the firm Boracay and including (i) five comparable companies (ABB, Centrica, EDP, Enel, ENI) and (ii) CAC 40 companies that have separated the duties of Chairman of the Board of Directors and Chief Executive Officer.

2025 compensation policy	Amount	Comments
Fixed compensation	€700,000	In accordance with the recommendations of the Compensation Committee, the Board of Directors' Meeting of March 10, 2026 decided that Mr. Antoine Frérot's fixed compensation for his duties as Chairman of the Board of Directors would remain unchanged during his term of office. In application of this compensation policy, the gross annual fixed compensation of the Chairman of the Board of Directors would be €700,000.
Annual or multi-year variable compensation		None
Exceptional compensation		None
Shares/subscription options		None
Severance payments		None
Non-compete compensation		None
Compensation awarded for duties as a director		None
Pension plan		Mr. Antoine Frérot benefits from a supplementary defined contribution group pension plan applicable since July 1, 2014 and presented in section 3.4.4.1 above. He is eligible for a defined benefit pension plan with a theoretical annuity of nil, presented in section 3.4.4.1 above.
Other		Mr. Antoine Frérot benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the category of employees with which he is assimilated for the setting of social benefits and other ancillary components of his compensation. Mr. Antoine Frérot enjoys the use of a company car.

Eleventh resolution - Vote on the Chairman of the Board of Directors' compensation policy for 2026

The General Meeting, acting in accordance with the quorum and majority requirements for Ordinary Shareholders' Meetings and having considered the report of the Board of Directors and the Corporate Governance report referred to in Article L. 225-37 of the French Commercial Code describing the components of the compensation policy of the corporate officers, approves pursuant to Article L. 22-10-8, II of the French Commercial Code, the Chairman of the Board of Directors' compensation policy for 2026, as set forth in chapter 3, section 3.4 of the 2025 Universal Registration Document.

3.4.4.4 Vote on the Chief Executive Officer's compensation policy in respect of fiscal year 2026 ("Ex ante" vote)

(Resolution 12)

Pursuant to Article L. 22-10-8, II of the French Commercial Code, shareholders are asked in the 12th resolution to approve the Chief Executive Officer's compensation policy for fiscal year 2026. Note that all these components are presented in Chapter 3, section 3.4 of the Company's 2025 Universal Registration Document and summarized in the table below.

In addition to fixed, variable and exceptional compensation components, the Chief Executive Officer would be entitled to a supplementary defined contribution pension plan, a supplementary defined contribution pension plan governed by Article 82 of the French General Tax Code and a collective healthcare and insurance plan. In addition, she would be entitled to a severance payment and compensation under a non-compete clause as approved by the Board of Directors' Meeting and detailed in Chapter 3.4.2.3 of the 2025 Universal Registration Document. Finally, she could receive grants of shares subject to performance conditions. She waived the right to receive compensation for her duties as a director, and does not benefit from multi-year cash compensation or have an employment contract within the Group.

The payment of the her variable compensation for fiscal year 2026 is subject to the approval of said compensation's components by an Ordinary General Meeting held after December 31, 2026, under the terms of Article L. 22-10-34, II of the French Commercial Code (Ex post vote).

In addition, the Board of Directors reserves the right to exercise its power of discretion regarding the determination of the Chief Executive Officer's compensation, in application of legal provisions and in accordance with Articles L. 22-10-8 and L. 22-10-34 of the French Commercial Code. It may do so in the event of special and unforeseeable circumstances (such as the Covid-19 pandemic and its uncertainties) that could justify an exceptional adjustment, upwards or downwards, without exceeding the ceiling set in the compensation policy (i.e. 160% of fixed annual compensation), to one or more criteria comprising the Chief Executive Officer's annual variable compensation to ensure that application of the criteria described above produces results reflecting the performance of both the Chief Executive Officer and the Group, as well the alignment of the interests of the Company and its shareholders with those of the Chief Executive Officer.

This adjustment may be made to the Chief Executive Officer's annual variable compensation by the Board of Directors at the recommendation of the Compensation Committee, after the Board of Directors has provided adequate reasoning for its decision. Any exercise of this discretion will be made public.

In connection with the renewal of the Chief Executive Officer's term of office, the Board of Directors, at its meeting on March 10, 2026, decided—at the recommendation of the Compensation Committee—to establish the Chief Executive Officer's compensation policy as follows. This compensation policy was set taking into account (i) Mrs. Estelle Brachlianoff's experience and expertise, (ii) the change in the Group's size and its strategic evolution and (iii) the compensation amount but also the positioning of these components compared with executive corporate officers in CAC 40 companies and comparable European countries, while ensuring the consistency of the Chief Executive Officer's compensation with that of Executive Committee members and compensation practices within the Company.

This decision is based on the results of an analysis of the Chief Executive Officer's compensation positioning within two groups: the companies that make up the CAC 40 index and a peer group consisting of 13 European companies, details of which are given in Section 3.4.1.1.5 of the 2025 Universal Registration Document.

In 2026, the Board of Directors decided to update the list of comparable competitor companies following a study conducted with the support of an external firm (Boracay). Compared to the peer group established in 2022, and in order to strengthen the peer group's sectoral consistency, ACS and

ENI were replaced by Saint-Gobain and Siemens Energy, whose industrial and infrastructure activities are more comparable to those of Veolia.

The selected peer group consists of 13 listed companies engaged in activities similar to those of Veolia, particularly in the infrastructure, energy, and utilities sectors, and facing significant environmental issues.

This peer group is structured around three categories:

- 6 direct peers, of similar size and with similar business models and similar interactions with public entities: Centrica, E.ON, EDP, Enel, Engie and Iberdrola.

- 4 companies operating in related sectors with comparable economic and industrial characteristics: Air Liquide, Bouygues, Siemens Energy and Vinci.

- 3 benchmark companies, large in size and with comparable organizational complexity: Saint-Gobain, Schneider Electric and ABB.

The selection process identified four strategic priorities shared by all 13 companies:

- strengthening high-added-value expertise;
- expanding service activities;
- accelerating the energy transition and renewable energy;
- evolving business models in response to regulations and ESG challenges.

After reviewing these various factors and in order to maintain the attractiveness of the compensation policy, the Board of Directors, upon the recommendation of the Compensation Committee, has decided:

- to set the gross fixed annual compensation at €1,133,000, up from €1,030,000, noting that the latter had remained unchanged since 2022. This increase is in line with the evolution of salaries for the Group's executive staff over the same period;
- to maintain the target and maximum annual variable compensation unchanged;
- to take into account the comments from investors who spoke during the governance roadshows in favor of increasing the weight of long-term variable and share-based compensation, with the Chief Executive Officer receiving a performance share grant capped at 150% (previously 133%) of her fixed annual compensation.

The breakdown of compensation would be as follows:

- fixed compensation (€1,133,000 annually) accounting for 28.6%;
- target annual variable compensation (€1,133,000 upon achievement of objectives) accounting for 28.6%;
- long-term variable compensation (€1,699,500 or 150% of fixed annual compensation if objectives are attained) for 42.8%.

In the event of outperformance leading to payment of the maximum amount of variable compensation (equal to the cap of 160% of fixed annual compensation), the breakdown is as follows:

- annual fixed compensation (€1,133,000) for 24.4%;
- maximum annual variable compensation (€1,812,800 if targets are exceeded) for 39%;
- long-term variable compensation (€1,699,500 if objectives are exceeded) for 36.6%.

Following the revision of the compensation policy, the target total compensation would remain below the lowest quartile of the two comparable groups presented above.

2026 compensation policy	Amount	Comments
Fixed compensation	€1,133,000	In accordance with this compensation policy, and noting that the Chief Executive Officer's fixed compensation has not been reviewed since she assumed office on July 1, 2022, the CEO's gross fixed annual compensation has been set at €1,133,000.
Variable compensation		The proposed 2026 quantitative objectives are in keeping with the 2026 financial outlook announced to the market on February 26, 2026 and the GreenUp 2024-2027 strategic program. On March 10, 2026, the Board of Directors, at the recommendation of the Compensation Committee, decided to set as follows the components of the Chief Executive Officer's compensation policy: • weight of the quantitative portion set at 80% and weight of the qualitative portion set at 20%; • weight of the auditable quantitative portion (80%) consisting 50% of financial quantitative objectives and 30% of non-financial quantitative objectives; • 2026 target variable compensation (in the event of attainment of the objectives set by the Board of Directors) set at 100% of the annual fixed compensation ("target bonus base"); • variable compensation capped (in the event objectives are exceeded) at 160% of fixed annual compensation for 2026, or €1,812,800. 1. with respect to the quantitative criteria: in line with the outlook and objectives published on February 26, 2026, the criteria for the quantitative portion of variable compensation break down as follows. The quantitative portion is equal to the total of the components resulting from application of each of these criteria separately: For the 50% financial quantitative portion: • 20% based on the Profitability indicator (CNIGS): net income (loss) before non-recurring items – Group share; • 15% based on the Investment Capacity indicator (free cash flow)⁽¹⁾: before financial acquisitions/divestitures and dividends but after financial expenses and taxes; • 15% based on the Capital Return indicator (ROCE): Group ROCE after tax and including the return on capital employed of joint ventures and companies, after IFRS 16 lease adjustments. These financial indicators are defined in Chapter 5, Section 5.5 of the 2025 Universal Registration Document. The financial quantitative variable compensation portion will be determined based on the attainment of the 2026 budget objectives which are consistent with the outlook announced to the market on February 26, 2026. For the 30% non-financial quantitative portion: • 5% based on the Health, Safety and Well-Being indicator: improvement and reduction in the injury frequency rate; • 5% based on the Ethics and Integrity indicator: % of positive answers to the engagement survey question "Are Veolia's values applied in my entity" across all respondents; • 5% based on the Decarbonization of our Assets indicator: decarbonization investments, including the coal phase-out and methane capture; • 5% based on the Growth and Innovation Drivers indicator: revenue growth in priority business segments (Energy, Water Technologies, Hazardous Waste); • 5% based on the Employee Commitment indicator: commitment rate of employees measured by an engagement survey conducted by an external body (clear objectives, meaning and usefulness, work atmosphere, pride in the Group, willingness to recommend Veolia); • 5% based on the Biodiversity indicator: progress rate of action plans improving the environmental footprint and biodiversity at sensitive sites. The non-financial quantitative variable compensation portion will be determined based on the attainment of the 2026 objectives for the indicators concerned as detailed in Chapter 3, Section 3.4 of the 2025 Universal Registration Document and recalled in the Notice and information brochure for the General Meeting of April 23, 2026: 2. with respect to the qualitative criteria: the qualitative portion (20% of the target bonus) will be based on an overall assessment by the Board of Directors, at the recommendation of the Compensation Committee, based notably on the following individual objectives: • strategic aspects; • managerial performance; • equity story.

(1) The target free cash flow used to determine the bonus excludes discretionary and growth investments.

2026 compensation policy	Amount	Comments
Planned grant of performance shares to a group of around 580 Group executives, high potential managers and key contributors, including the chief executive officer		At the recommendation of the Compensation Committee, the Board of Directors asks shareholders in the 24th resolution presented to the General Meeting of April 23, 2026, to approve an authorization, for a period of 26 months, to grant performance shares to a group of around 580 beneficiaries and comprising top executives, high potential employees and key contributors of the Group, including the Chief Executive Officer. This plan, which is intended to be launched in 2026 with an expiration date in 2029 following the publication of the 2028 financial statements, succeeds the plan granted in 2025. It would be subject to the following caps: an overall cap of 0.35% of the share capital, assessed at the date of this General Meeting, including a maximum sub-cap of 0.02% of the share capital for the grant of performance shares to the Chief Executive Officer. These performance shares would vest subject to the following conditions: beneficiaries must remain with the Group until the end of the three-year vesting period, i.e. until expiration of the plan scheduled for 2029; and a performance condition tied to the attainment of the following internal and external criteria assessed over fiscal years 2026, 2027 and 2028 (the "Reference Period"): financial criteria in the amount of 50%, non-financial quantitative criteria in the amount of 50% linked to the Company's Purpose. The number of performance shares that vest under this plan will depend on the attainment of criteria as detailed in section 3.4.3.1 of the 2025 Universal Registration Documentation.
Obligation to hold performance shares granted and vested		At the recommendation of the Compensation Committee, the Board of Directors' Meeting of March 10, 2026 decided, in the context of the implementation of this performance share plan (subject to the approval by today's General Meeting of the 24th resolution), to maintain the holding obligations applicable to the previous performance share plans: for the executive corporate officer, obligation to hold, until the end of her duties, 40% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until a total shareholding corresponding to 200% of her gross fixed annual compensation is ultimately reached; for the Company's Executive Committee members, obligation to hold, until the end of their duties on the Executive Committee, 25% of total performance shares granted under this plan, net of applicable taxes and social security contributions, until a total shareholding corresponding to 100% of their gross fixed annual compensation is ultimately reached. In accordance with the provisions of the AFEP-MEDEF Code, the Board of Directors, when implementing this performance share plan expected in 2026, will set the percentage of compensation corresponding to the performance shares that would be granted, in particular, to the executive corporate officer. At the recommendation of the Compensation Committee, taking into account the expectations expressed by certain investors and proxy agencies, the Board of Directors stipulated that the executive corporate officer would receive a performance share grant capped at 150% of her fixed annual compensation (if all performance conditions are met).
Termination benefits on forced departure		Mrs. Estelle Brachlianoff is entitled to a severance payment in the event of termination of her duties as Chief Executive Officer, applicable solely in the event of "forced departure". In accordance with the AFEP-MEDEF Corporate Governance Code, the maximum amount of this severance payment is capped at twice the total gross annual compensation (excluding compensation awarded for duties as a director (it being stipulated that she has waived all compensation of this nature) and benefits in kind), including the sum of the fixed portion of her compensation for the previous fiscal year ("Fixed Portion") and the average of the variable portions ("Variable Portion") paid or payable in respect of the last two fiscal years ending before the termination of her duties as Chief Executive Officer ("Reference Compensation"). The amount of this severance payment and its fixed and variable portions depends in both cases on the extent to which performance conditions were attained. The reference compensation is equal to the fixed compensation paid in respect of the last fiscal year plus the average of the variable compensation paid or payable in respect of the last two fiscal years; no payment will be made if the performance rate is below 75%. The severance payment is equal to the maximum amount multiplied by the performance rate, the performance rate being equal to 60% of the objective attainment rate for the last variable portion, plus 40% of the objective attainment rate for the previous variable portion. Mrs. Estelle Brachlianoff resigned from her employment contract on her appointment as Chief Executive Officer on July 1, 2022.
Non-compete compensation		The Board of Directors' Meeting of April 5, 2022, in consideration for Mrs. Estelle Brachlianoff undertaking, during a period of two years from the end of her duties as Chief Executive Officer, not to exercise, directly or indirectly, a competing activity to that of the Company and Veolia group companies, decided to grant her compensation equal to one year's compensation (fixed and variable components, the variable portion to be taken into account in calculating this compensation being the average annual variable compensation paid for the last two years), paid in 24 equal and successive monthly instalments. In accordance with the AFEP-MEDEF Code, the total of severance payments plus non-compete compensation cannot exceed two year's compensation (fixed and variable, with variable compensation for the purpose of calculating these payments equal to the average annual variable compensation paid for the last two years). Accordingly, in the event the Board should decide to implement the non-compete clause, severance payments would be capped at one year's compensation. The Board of Directors may, on the departure of the Chief Executive Officer, waive application of this clause, in which case no compensation would be due.

2026 compensation policy	Amount	Comments
Pension plan		Mrs. Estelle Brachlianoff is eligible to participate in the supplementary defined contribution group pension plan applicable since July 1, 2014, presented in section 3.4.2 of this Universal Registration Document. She is also eligible under the defined benefit pension plan described in section 3.4.2 of this Universal Registration Document, with a theoretical annuity of nil. In addition, the Chief Executive Officer benefits from an "Article 82" supplementary pension plan financed by payments by the Company into an individual account at a net contribution rate of 7.5%, or a gross rate of 15%, with the difference paid to the Chief Executive Officer due to the taxation on entry of contributions to this type of pension plan.
Other		Mrs. Estelle Brachlianoff, benefits from the collective healthcare and insurance plan in force within the Company under the same conditions as those applicable for the employee category with which she is assimilated for the setting of employee benefits and other ancillary components of her compensation.

Twelfth resolution – Vote on the Chief Executive Officer's compensation policy for 2026

The General Meeting, acting in accordance with the quorum and majority requirements for Ordinary Shareholders' Meetings and having considered the report of the Board of Directors and the Corporate Governance report referred to in Article L. 225-37 of the French Commercial Code describing the components of the compensation policy of the corporate officers, approves pursuant to Article L. 22-10-8, II of the French Commercial Code, the Chief Executive Officer's compensation policy for 2026, as set forth in Chapter 3, section 3.4 of the 2025 Universal Registration Document.

3.5 Corporate officer and executive share ownership

Pursuant to Article L. 621-18-2 of the French Monetary and Financial Code and Article 223-22 of the AMF's general regulations, members of the Board of Directors and Company executives and key senior management, or any person with close ties to them, are required to notify the AMF of any acquisitions, sales, subscriptions or exchanges of Company securities or financial instruments, within three business days of completing the transaction.

In addition, directors and executives are also subject to French regulations on breach of duty and insider trading, which penalize the use or disclosure of inside information.

Finally, directors and executives are required to comply with the Company's Code of conduct governing trading in its securities (see

chapter 3, section 3.2.1.8 above). This Code was updated for the provisions of Regulation (EU) no. 596/2014 of April 16, 2014 on market abuse and the positions-recommendations issued by the AMF and set out in its guidance on permanent reporting and the management of inside information and its guidance on periodic reporting. In this context, the Inside Information Committee created in November 2016, classified the Company's Executive Committee members as permanent insiders. They can therefore only purchase or sell Company securities, directly or through an intermediary, under certain conditions (notably after consulting the Inside Information Committee) and during specific, time-limited periods, in particular after the publication of the Company's annual, half-yearly and quarterly results.

3.5.1 DIRECTOR SHARE OWNERSHIP AND TRANSACTIONS IN VEOLIA ENVIRONNEMENT SHARES

To the Company's knowledge, on December 31, 2025, members of the Board of Directors held a total of 311,063 Veolia Environnement shares, representing 0.036% of the Company's share capital as of that date.

The table below details transactions in Veolia Environnement securities during fiscal year 2025 carried out by directors of the Company. To the best of the Company's knowledge, no other transactions involving the purchase or sale of Veolia Environnement securities by directors of the Company or any person with close personal links to them were reported during fiscal year 2025.

Director	Financial instrument	Type of transaction	Transaction date	Transaction location	Unit price (in euros)	Volume of securities	Total transaction amount (in euros)
Philippe Brassac	Shares	Acquisition	06/19/2025	Euronext Paris	29.6400	750	22,230.00
Arnaud Caudoux	Shares	Loan ⁽¹⁾	06/30/2025	Outside a trading platform	-	750	-
	Shares	Acquisition ⁽²⁾	08/03/2025	Outside a trading platform	-	1,440.00	-
Agata Mazurek-Bąk	Shares	Subscription ⁽³⁾	09/12/2025	Outside a trading platform	25.9700	400	10,388.00

(1) A loan agreement for 750 Veolia Environnement shares was concluded between Bpifrance Participations and Mr. Arnaud Caudoux on June 30, 2025. Executive statements were filed by Mr. Arnaud Caudoux and by Bpifrance Participations as a closely related person on the AMF ONDE platform.

(2) Vesting of rights to performance shares granted on August 2, 2022 (vesting price: €29.31).

(3) Subscription (units in company investment funds) as part of the Veolia Group's employee shareholding scheme for 2025.

3.5.2 TRANSACTIONS IN VEOLIA ENVIRONNEMENT SECURITIES BY DIRECTORS

The table below details transactions in Veolia Environnement securities during fiscal year 2025 performed by the Company's Executive Committee members (see section 3.3.3 above). To the best of the Company's knowledge, no other transactions involving the purchase or sale of Veolia Environnement securities by Executive Committee members or any person with close personal links to them were reported during fiscal year 2025:

3.6 Statutory Auditors' special report on regulated agreements

This is a translation into English of the statutory auditors' report on regulated agreements issued in French and it is provided solely for the convenience of English speaking users. This report should be read in conjunction with, and construed in accordance with French law and professional auditing standards applicable in France. It should be understood that the agreements reported on are only those provided for by the French Commercial Code and that the report does not apply to those related-party transactions described in IAS 24 or other equivalent accounting standards.

General Meeting held to approve the annual financial statements for the year ended December 31, 2025

To the General Meeting of Veolia Environnement S.A.,

In our capacity as Statutory Auditors of Veolia Environnement (hereinafter the "Company"), we hereby report to you on regulated agreements.

The terms of our engagement require us to communicate to you, based on information provided to us, the principal terms and conditions of those agreements brought to our attention or which we may have discovered during the course of our audit, as well as the reasons justifying that such agreements are in the Company's interest, without expressing an opinion on their usefulness and appropriateness or identifying other such agreements, if any. It is your responsibility, pursuant to Article R. 225-31 of the French Commercial Code (Code de commerce), to assess the interest involved in respect of the conclusion of these agreements for the purpose of approving them.

Our role is also to provide you with the information stipulated in Article R. 225-31 of the French Commercial Code relating to the implementation during the past year of agreements previously approved by the Annual General Meeting, if any.

We conducted the procedures we deemed necessary in accordance with the professional guidelines of the French National Institute of Statutory Auditors (Compagnie nationale des commissaires aux comptes) relating to this engagement.

These procedures consisted in agreeing the information provided to us with the relevant source documents.

1. AGREEMENTS SUBMITTED TO THE APPROVAL OF THE ANNUAL GENERAL MEETING

Agreements authorized and entered into during the year

We hereby inform you that we have not been advised of any agreement authorized and entered into during the year to be submitted to the approval of the Annual General Meeting pursuant to Article L. 225-38 of the French Commercial Code.

2. AGREEMENTS PREVIOUSLY APPROVED BY THE ANNUAL GENERAL MEETING

Previously approved agreements that remained in force during the year

Pursuant to Article R. 225-30 of the French Commercial Code, we have been informed that the following agreement, previously approved by Annual General Meetings of prior years, has remained in force during the year.

With Veolia Eau – Compagnie Générale des Eaux (99.99% - owned subsidiary)

Person concerned: Mrs. Estelle Brachlianoff, Director and Chief Executive Officer of Veolia Environnement and Joint Managing Director of Veolia Eau – Compagnie Générale des Eaux.

1. Brand license

Authorization of the Board of Directors' meetings of November 5, 2014, February 24, 2016, August 2, 2023, and February 28, 2024

Your Group launched a transformation plan to simplify, structure and integrate its organizational set-up by country. This integration is reflected in particular by the use of a single "Veolia" brand (and a single logo) for the whole Group to ensure better convergence and readability of the customer offers.

To take account of this new organizational set-up and the roll-out of the single "Veolia" brand, on November 5, 2014 your Board of Directors authorized the signature, with the "head" entities designated by country or by geographic zone and with Veolia Eau – Compagnie Générale des Eaux in particular (it is their responsibility to break down these contracts locally), of a new usage license for the "Veolia" brands in accordance with the following key conditions:

- one-year term automatically renewable for one or several annual periods with retroactive effect as of January 1, 2014,
- royalty fee set at 0.30 % of the revenue of each of the license holders (or sub-license holders).

The Board of Directors' Meeting of February 24, 2016, duly noted and authorized as necessary, in accordance with the terms of an initial addendum to the agreement, the tacit renewal of this agreement for the period January 1 to December 31, 2015, as well as the amendment of the term of this agreement from one year to indefinite with effect from January 1, 2016.

On August 2, 2023, the Board of Directors duly noted and authorized a second addendum to the agreement, which establishes that the license fee granted to Veolia Eau – Compagnie Générale des Eaux would now be invoiced by your Company to the EIG Veolia Eau France, which will then rebill the corresponding amounts to Veolia Eau – Compagnie Générale des Eaux (in its capacity as licensee) and to the other Veolia Eau France companies that are members of the EIG (in their capacity as sub-licensees).

On February 28, 2024, the Board of Directors took note of and authorized a third amendment to the agreement, which aims to modify the trademark license fee and set it at 0.4% of the turnover achieved by Veolia Eau – Compagnie Générale des Eaux and its sub-licensees as of January 1, 2024, to reflect the strengthening of the Veolia brand's position towards its customers and end consumers with the acquisition of Suez's activities.

For the 2025 financial year, the Company recorded royalty income from Veolia Eau-Compagnie Générale des Eaux for an amount of €12,440,017.

2. Agreements concerning the remuneration of guarantees issued by your Company on behalf of its subsidiaries

Authorization of the Board of Directors' Meeting of May 17, 2011

The parties agreed on the need to ensure your Company is fairly remunerated for services rendered to Veolia Eau – Compagnie Générale des Eaux subsidiaries through the issue of endorsements and guarantees of any nature, granted to any third party.

The remuneration payable depends on the country in which the guarantee operates, the nature and the term of the guarantee issued as well as the amount of the commitment given. These contracts were entered into for an indefinite term.

For the 2025 financial year, the Company recorded income of €1,392,771 in respect of commitments issued on behalf of Veolia Eau – Compagnie Générale des Eaux subsidiaries.

With the Terra Academia non-profit organization

Persons concerned: Mrs. Estelle Brachlianoff, Director and Chief Executive Officer of Veolia Environnement, founder and member of the Board of Directors of Terra Academia and Mr. Antoine Frérot, Chairman of the Board of Directors of Veolia Environnement, founder and member of the Board of Directors of Terra Academia.

Authorization of the Board of Directors' Meeting of November 8, 2023

In addition to its membership of the Terra Academia association for an amount of €100,000 excluding VAT paid in 2023, Veolia wanted to contribute to the start of its activities by giving it the means to operate and develop during its first years of existence. To this end, the Board of Directors on 8 November 2023 authorized the conclusion of two agreements:

1. Sponsorship agreement

A sponsorship agreement, motivated by the common objectives of your Company and Terra Academia with regard to ecological transformation, ecology and sustainable development. This agreement is in your Company's interest: (1) in terms of image, which as a champion of ecological transformation, realizes its ambition by accompanying and encouraging Terra Academia's program to mobilize a coalition of parties who share the conviction that ecological transformation requires a profound change in collaboration and training methods, and (2) in terms of action, as your Company will be able to benefit from certain training courses provided by Terra Academia for identified employees and access the organization's premises.

Amount: a maximum of €18,500,000, subject to an annual limit of €2,500,000, excluding VAT, in 2023, €5,000,000, excluding VAT, in 2024 and 2025 and €3,000,000, excluding VAT, in 2026 and 2027.

For the 2025 financial year, the Company recorded sponsorship expenses towards Terra Academia for an amount of €4,400,000 excluding VAT.

2. Assistance agreement

An assistance agreement, also motivated by the common objectives of your Company and Terra Academia with regard to ecological transformation, ecology and sustainable development. Your Company assists Terra Academia by performing on its behalf certain support services necessary to its operation, such as human resources services (including provision of one or more Veolia employees), real estate, IT and cybersecurity, communication, legal and tax services.

Amount: services other than IT and cybersecurity services (estimated to total approximately €112,000, excluding VAT, for hardware and equipment purchases in 2023 and approximately €46,000, excluding VAT, for annual recurring costs) are billed on a man/day basis at a rate of €200 to €600, excluding VAT, depending on the qualifications and seniority of the individuals. Your Company and Terra Academia may however agree a total fixed amount for certain services at the beginning of the year or per assignment.

For the 2025 financial year, the Company recorded expenses assistance re-invoiced to Terra Academia for an amount of €530,000 excluding VAT.

4.1 Sustainability statement

An Undertaking Oriented Toward Sustainability

"A company is successful because it is useful, not the other way around". With these few words, Antoine Frérot sketches the portrait of Veolia which in 2019 was one of the first French groups to define its Purpose. It sets out the Group's mission:

- **ecological transformation**, meaning acting to reconcile human progress and environmental protection;
- the development and implementation of **regional** solutions to decontaminate vital resources and preserve them from depletion, solutions to decarbonize our ways of living and producing so as to adapt them to the consequences of climate change;
- all over the world, attuned to local cultures, efforts to improve the health and quality of life of **communities**;
- tackling economic, social and environmental issues as an inseparable whole for the **benefit of the largest number of people**.

From vision to action

Since 2020, this purpose has been embodied in multifaceted performance, a management model that places our economic, commercial, social, societal, and environmental performance on the same level of importance. As a real tool for transformation, the multifaceted performance proves that operational excellence and positive impact are inseparable. Today, it guides all of Veolia's activities and steers its strategic decisions.

« Veolia's purpose, according to which "the Group's prosperity is based on its usefulness to all its stakeholders in the various regions in which it operates," is reflected operationally in its multifaceted performance, as well as in the new CSRD sustainability statement. »

Estelle Brachlianoff

- With GreenUp, its strategic program for 2024-2027, Veolia is accelerating this momentum. The Group's ambition is clear: to become the world's most decarbonizing, most regenerative, and most depolluting company. GreenUp turns Veolia's purpose into concrete, affordable, and replicable actions to reconcile the economy and ecology.

Transparency as a requirement

This sustainability statement bears witness to Veolia's convictions and actions. It is much more than a CSRD compliance exercise: it is a reflection of Veolia's DNA, consistent with the company's commitment to environmental, social, and governance issues through its activities in Water, Waste, and Energy. The CSRD framework provides the opportunity to present a 360° view of Veolia's dual position:

- on one hand, regarding its own footprint in environmental matters or social issues;
- on the other hand, regarding the solutions provided to its customers that enable them to reduce their own environmental footprint, such as our decarbonization, depollution, or resource management offerings.

In accordance with the CSRD's principle of double materiality, this report thus illustrates our material impacts on ESG issues (positive or negative), as well as the material external financial risks or opportunities affecting Veolia.

4.1.1 GENERAL DISCLOSURES (ESRS 2)

Veolia wishes to caution the reader about the limitations inherent in forward-looking statements as well as the correct understanding of the concepts of materiality or significance in the specific context of this sustainability statement (see "Disclaimer" below in the section 4.1.5 of this document).

This disclosure of the sustainability statement seeks to address, as comprehensively as possible, the information requirements of the CSRD: any remaining uncertainties, limitations, or imperfections that may subsequently be identified will be incorporated into a process of continuous improvement for future publications.

4.1.1.1 Legal framework

The content of the general disclosures has been established in accordance with ESRS 2 "General disclosures" of Commission Delegated Regulation EU 2023/2772 of July 31, 2023.

Directive (EU) 2022/2464 of December 14, 2022 on corporate sustainability reporting, known as CSRD (the Corporate Sustainability Reporting Directive; hereinafter the CSRD or "CSRD Directive") defines the sustainability reporting requirements. The provisions of the CSRD Directive were transposed into French law by Order No. 2023-1142 of December 6, 2023 and Decree No. 2023-1394 of December 30, 2023.

The CSRD Directive is completed by detailed European Sustainability Reporting Standards (ESRS), which provide a framework for harmonizing corporate disclosures: twelve "cross sectors" ESRS standards were published in the Official Journal of the European Union on December 22, 2023 via Delegated Act (EU) 2023/2772 and are directly applicable:

- two cross-cutting standards: ESRS 1 (General Principles) and ESRS 2 (General Disclosures); and
- ten topical standards classified into three categories: environment (E), social (S) and governance (G).

Environmental sustainability indicators based on the European taxonomy measure the alignment of economic activities with the sustainability criteria defined by Regulation (EU) 2020/852 and its delegated acts, notably Delegated Regulation (EU) 2021/2178 (Article 8), which establishes reporting obligations. Since 2025, Veolia has applied the revised taxonomy rules in accordance with Delegated Act No. 2026/73, adopted on 4 July 2025. These indicators enable the assessment of the proportion of economic activities considered environmentally sustainable according to this European framework.

The limited assurance report concerning sustainability statement, prepared by the statutory auditors, is published in section 4.2 below.

4.1.1.2 General basis for preparation of sustainability statements

This section meets Disclosure Requirement BP-1 of ESRS 2:

- The scope taken into account when preparing the sustainability statement covers the entire consolidated scope of Veolia's financial statements. The application of this rule requires the following clarifications:
 - Entities proportionally integrated (namely "joint operations" as defined by IFRS11) are included within the scope of the CSRD;
 - Entities controlled by Veolia but not financially consolidated are not included in the sustainability report, following verification of their non-materiality;
 - the contribution made to environmental indicators by entities such as headquarters, which are financially consolidated but do not directly carry operational activities, is not material. On the other hand, these entities have been taken into account in social and societal reporting;

- regarding the consideration of the divestments or acquisitions of companies that occurred during the financial year, the environmental and social information concerning them is difficult to establish precisely: the reporting of this information is usually annual. A methodology was deployed to estimate the potential impact of the disposals and acquisitions of the financial year. This made it possible to verify that all those likely to have a material effect were taken into account in the double materiality analysis and the calculation of the indicators presented in the sustainability statement;

- the scope of the Green Taxonomy metrics was established in line with the financial statements.

- Regarding the specific subject of the greenhouse gas emissions, in accordance with ESRS E1-6, Veolia has made in 2024 an analysis of the level of operational control on greenhouse gas emissions at emitting sites, to determine to which scope (1, 2 or 3) allocate the emissions. This resulted in an allocation methodology based on the Group's contractual models, described in section 4.1.2.1.3 below.

- This analysis and its resulting impacts on the various emission scopes led to a new submission of the decarbonization trajectory to the SBTi in 2025. The latter validated the trajectory presented in July 2025 (for more details, see section 4.1.2.1.3),

- In 2025, Veolia refined the granularity of its analysis. This led to an adjustment of the amounts published for previous years (see section 4.1.2.1.6 below).

- Regarding the specific indicator of fresh water saved (see section 4.1.2.3 below), it appeared necessary to also present the information for a scope extended to five Chinese joint ventures⁽¹⁾ in the Municipal Water sector, due to Veolia's particularly decisive involvement in managing the corresponding IRO.

- Veolia's environmental services are closely linked to its value chain. Regarding the downstream value chain, the decarbonization or depollution activities of its clients are a clear example of the close loop between Veolia's impacts and their contribution to those of the value chain. Upstream, suppliers and subcontractors are both a source of environmentally efficient solutions and ESG risks (human rights, corruption, etc.). Consequently, the material risk and opportunity impacts (IRO) outlined in section 4.1.1.7 below concern both Veolia and the upstream and downstream value chains.

- Veolia confirms that it did not use the option for the 2025 financial year of exemption from disclosure of impending developments or matters in the course of negotiation provided for in paragraph 5(e) of ESRS 2 disclosure requirement BP1.

- Pursuant to point 69 of ESRS 2, Veolia sets a threshold of 1% compared to the Group's consolidated financial data for the year in question, beyond which Capex and Opex linked to action plans are considered material, leading to financially quantified information on the means implemented.

⁽¹⁾ Pudong Water, Changzhou, Kunming, Tianjin TEDA, Tianjin Jinbin.

4.1.1.3 Disclosures in relation to specific circumstances

This section meets Disclosure Requirement BP-2 of ESRS 2.

- Regarding the time-frames taken into account for the materiality analysis, Veolia complied with the time-frames defined by point 6.4 of ESRS 1. Note that:
 - the GreenUp strategic program sets objectives for the medium-term, up to 2027;
 - some commitments are made over a long-term time-frame, such as climate change initiatives with a carbon neutrality target by 2050.
- Regarding sources of uncertainty with regard to estimates and results:
 - the majority of metrics stem from a direct count resulting from a collection process within the Group, with a limited amount of uncertainty with no significant estimates;
 - methodological clarifications are provided in the relevant data sections. The Group's main estimates concern:
 - scope 3: The calculation of Scope 3 requires emissions of the value chain to be taken into account and is based on estimates detailed in Appendix 4.1.5.3 below,
 - scope 4*: In the absence of a standard market definition, a methodology was developed by Veolia to calculate erased emissions. It is also detailed in Appendix 4.1.5.4 below,
 - mercury: in the energy business, data are estimated for almost half of the sites, based on regulatory values (data not available, conservative approach). For other sites, data are estimated on the basis of monthly or annual sampling at the installations,
 - quantity of unrecovered incinerated waste: incinerated waste is classified by default as "unrecovered". Cautious approach in the absence of information on incineration method (with or without energy recovery), in particular for waste sent for incineration to third parties;
 - such estimates are developed with the best models available at the time of publication and may subsequently be revised based on newly known information.
- Incorporation of information by reference:
 - for the purposes of the GOV-1 Disclosure Requirement, the reader is invited to consult the skills of directors with regard to the ESG topics in Chapter 3 Corporate Governance of the Universal Registration Document. More generally, the reader seeking details on certain topics that go beyond the contents of the sustainability statement, may refer to other parts of the Universal Registration Document, in particular;
 - for the purposes of Disclosure Requirement GOV-5, the reader is invited to consult Chapter 2 Risk Factors and Control of this document, with regard to the risk assessment method and risk management process, as well as the main risks identified.

- Use of provisions due to enter into force progressively in accordance with Appendix C of ESRS 1 amended by the European Commission (the Commission) on 11 July 2025 in the "Quick Fix" Delegated Regulation ("the Quick Fix"):
 - In accordance with Appendix C of ESRS1 amended by the European Commission on Veolia limits its disclosures on the anticipated financial effects of risks and opportunities related to climate change (ESRS E1), pollution (ESRS E2), water and marine resources (ESRS E3), biodiversity (ESRS E4) and resource use and circular economy (ESRS E5) to qualitative information. During the transition period, Veolia will study appropriate quantitative assessment methods.
- This 2025 report is completed by some information unavailable in 2024:
 - the detailed energy mix, the calculation of which is now directly integrated into the reporting platform to allow for disclosure in the sustainability statement (in section 4.1.2.1.6 below);
 - supplier payment terms, with an action plan whose first step consisted of disclosing the metrics for 2025, including data from the most representative Business Units in various geographic areas. These cover the different activities of Veolia, namely Water, Waste, and Energy management (in section 4.1.4.1.4 below);
 - The water consumption of sites in areas at risk of water scarcity: the metric is calculated only for sites located in areas of high water risk (in section 4.1.2.3.3 below).
- Disclosures stemming from other legislation: the detailed table is available in section 4.1.5.3 below.

4.1.1.4 Governance

4.1.1.4.1 The role of the administrative, management and supervisory bodies

This section meets Disclosure Requirement GOV-1 of ESRS 2.

The Board of Directors of the Company determines the strategic directions, including the multifaceted performance objectives, after consulting its committees, and on a proposal from Executive Management.

From its creation, Veolia's Purpose has been supported and steered at the undertaking's highest level. A source of inspiration and a tool for steering the previous Impact 2023 strategic program, it served as a compass for the development of the new strategic program, GreenUp.

In its Purpose, Veolia expresses its aim to take stakeholder expectations into account when creating and sharing wealth. Accordingly, it has committed to a multifaceted performance which is equally attentive to and has the same high standards for economic and financial, commercial, human resources, corporate social and environmental performance. This rigor that is reflected in all Group processes, so that the multifaceted performance objectives drive the management of activities.

*Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

(1) Excluding Directors representing employees and the Director representing employee shareholders in accordance with the AFEF-MEDEF Code.

(2) Excluding Directors representing employees and the Director representing employee shareholders in accordance with Article L. 225-27 and L. 22-10-7 of the French Commercial Code. As of the date of filing of this document, the rate of female directors is 54%, in accordance with the legal and regulatory provisions in force.

The composition of the Board of Directors is detailed in Chapter 3, section 3.1.1 above.

For its composition and that of its committees, the Board of Directors has for several years applied a diversity policy which is regularly reviewed, notably following the annual evaluation of its functioning prepared by the Nominations Committee (detailed in Chapter 3, section 3.2.1.4 above):

- balanced representation of women and men;
- ages;
- nationalities;
- expertise;
- independence;
- international experience.

Directors' skills are described in Chapter 3, section 3.2.1.2 above, which contains a skills matrix.

As such, eight skills (see skills matrix above), including one related to CSR issues, have been identified to enable directors to perform their duties as best as possible, given the nature and scope of the Group's activities and strategy.

In preparing its proposals concerning its composition, the Board of Directors, at the recommendation of the Nominations Committee, takes into consideration the needs expressed during the assessment of its activities: internationalization of the Board of Directors, knowledge of Veolia's businesses and the global sustainable development ecosystem including climate issues.

As such, it should be noted the appointments of Mr. Philippe Brassac, Mr. Arnaud Caudoux and Mrs Elena Salgado as directors by the General Meeting on April 24, 2025.

Thus, all Directors have a CSR skill. The following criteria enable the validation of CSR competence through knowledge and experience in the following areas:

- environment: climate - biodiversity - management of water, energy and waste resources - circular economy;
- social: human resources - social issues;
- governance/societal: Business conduct, including management of third parties/suppliers - ethics and compliance.

A description of the main areas of expertise and experience in CSR is contained in the biography of each Director in section 3.1.1.3 of Chapter 3 above. Therefore, the Board of Directors as a whole represents a wide range of CSR expertise.

Thus, this diversity and the complementary nature of experiences and expertise enable the Board of Directors to quickly and thoroughly understand Veolia's strategic matters and those relating to sustainability.

Regarding the training of directors in sustainability matters, the Group has issued a publication for directors since 2023: The Sustainable Company.

The Company also organizes meetings for the Directors with economic and political leaders as well as visits to operating sites, including exchanges with the Group's operational teams. These annual visits contribute to a better knowledge of Veolia's businesses and their multiple challenges, particularly environmental and social issues in the various geographical areas (detailed in Chapter 3, section 3.2.1.2 above training and integration of directors).

Roles and responsibilities of administrative and management bodies in relation to sustainability

Governance	Board of Directors				
	Purpose Committee*	Nominations Committee*	Compensation Committee*	Accounts and Audit Committee*	Research, Innovation and Sustainable Development Committee*
	Ethics Committee				
	Executive Management				
	Executive Committee, Management Committee				
	Risk, internal control and internal audit management (see section 2.1 above)				
Functional committees	ESG Committee	Group French Work Council and Group European Work Council		Human Rights and Duty of Care Committee	
Sectors	Sustainable Development • Multifaceted Performance and Sustainable Development Department • Sustainable Development Officers (zones) • Business Support and Performance Department (Environmental & Industrial Management System)	Human Resources • Human Resources Department • HR network (Business Units) • Health and Safety Center of Excellence • Labour relations bodies		Compliance • Compliance Department • Network of Compliance Officers (zones)	
	Internal collaborations	Human Resources, Strategy, Innovation and Development, Business Support and Performance, Procurement, Insurance, Legal, Finance, Public Affairs, Information Systems, Security, Communications, Tax, Governance, Veolia Institute, Veolia Foundation			
External stakeholders	Critical Friends Committee, Terra Academia and the « +1 » collective				
	Prospects, customers, economic partners, suppliers, public institutions, non-financial rating agencies and investors, NGOs and local opinion leaders, local communities, academic experts				

EXTERNAL AUDIT
REGULATORS

* Committee of the Board of Directors.

The Company's Executive Management is provided by the Chief Executive Officer, a member of the Board of Directors, assisted by an Executive Committee, a discussion, consultation and general policy decision-making body which aims to implement the Group's strategic direction. The Executive Committee is also consulted on the major topics of the Group's life, including the sustainability information. The implementation of the Purpose is the responsibility of the Group's Executive Committee, each member of which is a sponsor of at least one multifaceted performance objective.

In addition, Management Committee meetings bring together, each quarter, all the heads of the Group's functions and geographical areas to share and commit to the Group's challenges and outlook.

The committees of the Board of Directors are required to review different sustainability informations:

1. the Purpose Committee is responsible for monitoring the progress made by the Group and guiding the choices made in this area. It was called on for the review of multifaceted performance indicators of the GreenUp strategic program;
2. the Nominations Committee is charged with making recommendations regarding the future composition of the Company's management bodies and assists the Board in its periodic assessments;
3. the Compensation Committee studies and makes proposals to the Board regarding the overall compensation of the Company's executive corporate officers and on the terms and conditions of the performance shares grant plan. As such, it relies in particular on the Group's multifaceted performance to define financial quantitative and non-financial quantitative sustainability criteria;
4. the Accounts and Audit Committee follows the accounting, financial and sustainability reporting process and makes recommendations, where appropriate, to ensure the integrity of these processes prior to their submission to the Board and periodically evaluates its own work. It monitors the effectiveness of internal control and risk management systems, which includes risk mapping, materiality matrix, sustainability statement and the Group's insurance program. It is also involved in the review of the program and the action plan concerning the Group's compliance system and the annual report of the work of the ethics committee;
5. the Research, Innovation and Sustainable Development Committee assesses Veolia's strategy and policies in this area.

The ESG Committee, co-chaired by the Group General Counsel, the Senior Executive Vice President for Strategy, Innovation and Development, and the Senior Executive Vice President for Human Resources brings together functional departments in charge of environmental, social, societal, compliance and governance matters and ensures their coordination. As such, it obtains an understanding of the strategic direction and the monitoring of the ESG policy.

Validation of IRO-related targets by management bodies

Material impacts, risks and opportunities (IRO) (see section 4.1.1.7.2 below) and associated targets (see the topical chapters by ESRS detailing the IRO), largely result from the work carried out on the definition of the GreenUp strategic plan by the Board of Directors in February 2024.

The IRO and associated targets have been reviewed by the Accounts and Audit Committee and have been validated by the Board of Directors.

4.1.1.4.2 Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies

This section meets Disclosure Requirement GOV-2 of ESRS 2.

Executive Management presents to the Audit and Accounts Committee and the Board of Directors the methods for the implementation of its sustainability strategy, with an action plan and the time-frames in which these actions will be carried out. It informs the Board of Directors annually of the results obtained. In the area of climate, the strategy is accompanied by objectives defined for different time-frames.

The way in which the governance bodies are informed about sustainability issues and how these have been addressed during the year 2025 are presented in the summary tables of the work, in chapter 3, respectively in section 3.2.2 for each relevant Committee and section 3.2.1.4 for the Board of Directors.

4.1.1.4.3 Integration of sustainability-related performance in incentive schemes

This section meets Disclosure Requirement GOV-3 of ESRS 2.

Two incentive schemes are in place:

- the annual variable compensation mechanism, which concerns nearly 25,000 managers within the Group, is aligned with the results of multifaceted performance. The operation of this system, updated each year, is described in the bonus policy applied to executives (the Executive Resources) and adapted in all geographic areas;
- the long-term incentive scheme, which takes the form of a performance share plan and which, for 2024, benefited around 540 Group managers and executives. A description of how this scheme works is provided each year in the rules establishing the plan. The performance shares awarded are subject to performance conditions that apply over three years and to the condition that the beneficiaries are employed during that same period.

Each of these two schemes incorporates sustainability criteria, selected from among the multifaceted performance objectives set in the GreenUp plan (see section 4.1.1.5.1 below). These objectives, together with the measurement metrics, are thus integrated into the remuneration policies:

- annual variable component: sustainability targets (non-financial quantitative targets) represent 30% of all criteria. Of these 30%:
 - a criterion associated with the "Health, safety and well-being" multifaceted performance objective is mandatory and may represent up to 10% of all criteria,
 - the remainder is divided between 2 and 4 criteria chosen from among the other multifaceted performance objectives (the objectives selected and their weighting are adapted to the business line and the challenges of the executive concerned);
- long-term incentive: sustainability targets (non-financial quantitative targets) represent 50% of all performance conditions. For example, the following criteria were selected for the 2025 plan: Diversity and inclusion (10% of performance shares granted), Support to local communities (5%), Saved freshwater and resource regeneration (10%), Customer and consumer satisfaction (5%), Decarbonization of our customers (10%), Reduction of GHG emissions (10%).

With regard to the Chief Executive Officer, who benefits from these schemes, it is recalled that the remuneration policy is approved by the Board of Directors and submitted to the shareholders' vote at the General Meeting.

4.1.1.4.4 Statement on due diligence

This section meets Disclosure Requirement GOV-4 of ESRS 2.

As requested by ESRS 2, Veolia gives in the table below the location of the essential elements of due diligence, for each of the ESRS standards:

a) Embedding due diligence in governance, strategy and business model	ESRS 2 GOV-2 – § 4.1.1.4.2 ESRS 2 GOV-3 – § 4.1.1.4.3 ESRS 2 SBM-3 – § 4.1.1.7 and § 4.1.1.8 For each material topic, in the corresponding paragraphs of the topical ESRS
b) Engaging with affected stakeholders in all key steps of the due diligence	ESRS 2 GOV-2 – § 4.1.1.4.2 ESRS 2 SBM-2 – § 4.1.1.6 ESRS 2 IRO-1 – § 4.1.1.7.1 For each material topic, in the corresponding paragraphs of the topical ESRS
c) Identifying and assessing adverse impacts	ESRS 2 SBM-3 – § 4.1.1.7 and § 4.1.1.8 For each material topic, in the corresponding paragraphs of the topical ESRS
d) Taking measures to address these negative impacts	In the respective sections of the topical ESRS relating to the action plans
e) Tracking the effectiveness of these efforts and communicating	In the respective sections of the topical ESRS related to the definition of targets and metrics

4.1.1.4.5 Risk management and internal controls over sustainability reporting

This section meets Disclosure Requirement GOV-5 of ESRS 2.

Risk management integrates and feeds into the materiality analysis of sustainability issues

- Veolia's Risk Department has implemented for many years, a process to review all events that could prevent the Group from meeting its commitments. As part of the CSRD rollout, this process has been identified as one of the key processes for identifying material IROs: the universe of risks managed by Veolia, which is broader than just the areas covered by the sustainability report, does indeed encompass all the topics to be addressed in this report. For more details on Veolia's risk factors, please refer to chapter 2 of this document.
- the double materiality study was conducted by integrating the results of the last annual risk assessment campaign. The same will apply to the annual updates that will be made thereafter.

An internal process dedicated to the collection of information in the Business Units

To reliably collect sustainability data from its Business Units, Veolia relies on an internal process that benefits from the experience accumulated year after year, with an information system called Global Report, deployed in all regions and activities:

- making it possible to collect social and environmental information, consolidate it and ensure the calculation of indicators;
- integrating the Group benchmarks (activities, metrics, etc.) in order to ensure overall methodological consistency;
- with consistency checks to reduce the risk of error;
- led by the Business Support and Performance Department and the Human Resources Department, and involving a network of contributors and validators in the Business Units.

Veolia continues its deployment of internal control processes in the area of sustainability

Veolia is strengthening its monitoring and reporting procedures on sustainability issues to meet the increasing level of requirement, which now calls for sustainability statements to be compatible, in their entirety, with a limited assurance level of audit, under the new guidelines issued in 2024 by the High Audit Authority (H2A). In this context, the Group began in 2024 to expand the scope of action of its internal control to the entire scope of the CSRD. Efforts continued in 2025 to ensure that internal control is more actively involved in reinforcing processes and improving data reliability. The focus is on a consistent deployment of Group policies and adherence to the fundamental principles of data quality, namely completeness, traceability, and consistency.

Validation at the highest level

Sustainability statements are reviewed by the Group's Executive Management and the Accounts and Audit Committee, and validated by the Board of Directors.

For additional detailed information, please refer to Chapter 2 above "Risk factors and control" of this URD.

4.1.1.5 Strategy, business model and value chain

This section meets Disclosure Requirement SBM-1 of ESRS 2.

The map below gives a summary view of the breakdown of Group employees by geographical area, as set out in section 4.1.3.1 Own workforce below.

Geographic breakdown of employees in the workforce as of December 31, 2025

In accordance with the financial statements, revenue for 2025 was €44.396 billion.

4.1.1.5.1 Strategy

A detailed presentation of Veolia's strategy is set out above in Chapter 1 of this document. This section summarizes the main elements regarding the sustainability statement.

Continuation of the deployment of the GreenUp 2024-2027 strategic plan

For Veolia, ecological transformation requires solutions which decarbonize, depollute and regenerate with a view to preserving health, purchasing power, the strategic autonomy and attractiveness of regions and the performance of industrial customers.

Sustainability is truly at the heart of Veolia's value proposition for all its clients, whether they are local authorities, industrial companies, or businesses in the service sector. Our corporate strategy is fully aligned with this imperative of environmental performance.

Our performance is intrinsically linked to our ability to accelerate the ecological transformation of our clients, making Veolia a key player in the transition towards a more circular and resilient economy. Veolia's success will increasingly be measured by the positive and tangible impact generated, beyond financial indicators. This impact will be realized through the reduction of our clients' environmental footprint in three key areas (reduction of water consumption, reduction of CO₂ emissions, control and reduction of pollutants).

In parallel, Veolia is also accelerating its own decarbonization trajectory, with a reduction in emissions (scopes 1 and 2) of -50% by 2032, compatible with the 1.5°C warming pathway of the Paris Agreement, and with a Net Zero target for 2050. The corresponding plan was approved by the SBTi (Science Based Targets initiative) and received the NZ2 score in Moody's Net Zero Assessment in 2024. As indicated in the 2024 sustainability report, this plan was resubmitted to the SBTi in 2025 following the application of the new methodology for allocating GHG emissions to scopes 1, 2, and 3, and was validated in July 2025.

In 2025, the Group's employees once again increased their position as the leading shareholder of Veolia, holding, through all schemes combined, more than 9.5% of the company's capital. This success once again demonstrates the Group employees' commitment to the objectives set in the GreenUp 2024-2027 strategic plan. Veolia is a benchmark employer, with an employee engagement rate of 88%, and ranks among the top positions in ESG ratings established by non-financial rating agencies.

Three impact commitments for the planet: decarbonize, regenerate resources and depollute

Thanks to the combination of its different businesses – Water, Energy and Waste – Veolia aims to help its customers decarbonize, regenerate resources and depollute: 18 million metric tons of CO₂ erased, 1.5 billion cubic meters of fresh water saved and 9 million metric tons⁽¹⁾ of hazardous waste treated by 2027.

To meet this ambition, the GreenUp program will enable Veolia to:

- strengthen its position as a world and European leader in its **"strongholds"**: municipal water, recycling and recovery of solid waste and heating networks; and
- accelerate and step up the growth of its **boosters** with the greatest impact: technologies and new solutions for water, hazardous waste treatment and bioenergy, electrical flexibility and energy efficiency.

Spearheads of Veolia's growth, the boosters are strategic activities to which the Group will devote a major share of its resources, as part of its GreenUp plan and aims to achieve revenue growth of +50% by 2030. They already account for 30% of its revenue and will generate 70% of its 2024-2027 growth. Veolia will allocate half of its growth investments to these activities, i.e. €2 billion, as much as for all the activities in the previous strategic program, in order to:

⁽¹⁾ Scope impact related to the divestment of RGS (United States).

- produce **low-carbon urban energy** for all municipal and industrial customers with the ambition to produce 8 gigawatts of bioenergy and achieve a flexible installed capacity of 3 gigawatts by 2030 (bioenergy from non-recyclable waste or wastewater, recovery of waste heat and cold, energy efficiency solutions, electricity flexibility and ancillary services, etc.);
- propose **innovative solutions to treat wastewater and drinking water**, based on its technology portfolio, with a dual objective:
 - eliminate new pollutants,
 - preserve water resources;
- **accelerate hazardous waste treatment**, including innovative and circular solutions for solvents, lithium batteries, etc.

To do this, Veolia benefits from its ability to replicate its proven solutions around the world, adapting them to the local context to benefit the 56 countries where it is present, and integrating the efficiency gains of digital technology and artificial intelligence.

Already a leading player in the research and development of environmental solutions, the Group will significantly boost its investments in innovation, doubling them with an additional €200 million.

A strategy embodied through multifaceted performance

GreenUp is fully in line with Veolia's 360° multifaceted performance system rolled out in 2020, with its Purpose as a compass. A genuine tool to monitor all aspects of performance (shareholders, customers, planet, employees, society), the multifaceted performance indicators were reviewed and simplified as part of GreenUp. All objectives have an Executive Committee member as a sponsor who ensures their achievement:

Three impact commitments for the planet: decarbonize, regenerate resources and depollute

Veolia participates in the implementation of all 17 UN Sustainable Development Goals (SDGs), with a direct impact on 14 SDGs:

15 priority objectives for multifaceted performance under GreenUp 2024-2027:

Dimension	Commitment	Objective pursued	Indicator-definition	2023 Baseline	Results 2024	Results 2025	2027 Target
Commercial performance	Guarantee results over the long-term through innovative services	1. Customer and consumer satisfaction	Customer satisfaction rate calculated using the Extended Net Promoter Score methodology (score and revenue coverage) ⁽¹⁾	Not applicable	NPS score = 55 with 81% of revenue covered	NPS score = 57 with 84% of revenue covered	NPS Score ≥ 30 with 80% of revenue covered
		2. Decarbonization of our customers – Scope 4	Erased GHG emissions (new methodology) ⁽²⁾	13.45 Mt	+13% vs 2023	+23.6% vs 2023	+30% vs 2023
		3. Growth boosters and innovation	Revenue growth in priority business segments (Energy, Water Technology, Hazardous Waste) ⁽³⁾	12.032 billion €	6.6%	+8.6%	CAGR ≥5% at constant energy prices and exchange rates, excluding divestitures planned at 01/01/24
Environmental performance	Combat pollution and accelerate ecological transformation	4. Decarbonization – scopes 1 and 2 reduction	Scopes 1 and 2 ⁽⁴⁾ GHG emissions reduction	24.3 Mt of CO ₂ eq (Baseline 2021)	-14.5% vs 2021	-18,6% vs 2021	-18% vs 2021
		5. Decarbonization – transformation of our assets	Decarbonation Capex; Phase Out of coal and methane capture (cumulative 2024-2027) ⁽⁵⁾	Not applicable	133.5 M€	141 M€	600 M€ (cumulative 2024-2027)
		6. Fresh water saved and resource regeneration	Freshwater saved (reuse, desalination, leakage reduction)	1.4 billion m ³	1.45 billion m ³	1.574 billion m ³	≥ 1.5 billion m ³
		7. Depollution – biodiversity	Biodiversity preservation on sensitive sites	59% progress on action plans (new scope)	73% progress on action plans	80% progress on action plans	≥ 85% progress on action plans
Human resources performance	Give meaning to our employees work and help them with career development and commitment	8. Health, safety and well-being	Lost time injury frequency rate (Veolia employees)	4.95	4.33	4.11	≤ 4.1
		9. Employee commitment	Employee commitment rate (Voice of Resources Survey)	89%	88%	88%	≥ 85%
		10. Diversity and inclusion	Proportion of women in the Group Management Committee	25.6%	32.4%	37.1%	≥ 30%
Social performance	Support regional development through responsible means	11. Ethics and integrity	Positive answers to the ethics and compliance question in the "Voice of Resources" survey	88%	86%	88%	≥ 83%
		12. Support to local communities	Residents benefiting from inclusive solutions to access essential services (all activities) ⁽⁶⁾	7.8 million people	8.4 million people	9.2 million people	8.4 million people (at constant scope)
Economic and financial performance	Increase prosperity and results over time	13. Profitability	Current net income, Group share ⁽⁷⁾	1,335 M€	1,530 M€	1,643 M€	CAGR ~10% (constant FX 2023)
		14. Investment capacity	Free Cash Flow (before discretionary growth Capex) ⁽⁷⁾	1,683 M€	1,819 M€	1,782 M€	Annual target
		15. Return on capital employed	Post-tax ROCE ⁽⁷⁾	8.3%	8.8%	9.4%	Annual target

(1) In 2025, the methodology was applied and validated on 359 operational units, covering a revenue of €37 billion (84% of the total revenue amounting to €44.2 billion). The remaining 16% corresponds to entities that did not send surveys (calls for tenders in progress, contractual difficulties, etc.) or that sent surveys that did not meet the validation criteria.

(2) Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

(3) The definition of Growth Booster has been aligned with the GreenUp Booster definition.

(4) % reduction compared to the 2021 baseline restated according to the new allocation method, GHG emissions in scopes 1, 2 and 3.

(5) The indicator is calculated based on the initial investment budget for new forms of energy aimed at eliminating coal in Europe by 2030, that was estimated in 2023 at €1.65 billion.

(6) The methodology includes activities related to Water, Waste and Energy; the scope of the BUs / contracts includes the former Suez contracts.

(7) See the definition of financial indicators in Section 5.5 below.

Beyond the 15 priority objectives, as part of its environmental policy, Veolia is proposing a guide consisting of a set of business themes associated with performance values to help local entities set improvement targets (see the EIMS point below):

Combating climate change - Decarbonization	2027 guide value
Methane capture rate at landfill sites	61 %
Energy performance of heat production and cogeneration plants ⁽¹⁾	75 %
Energy efficiency of drinking water production ⁽²⁾	220 Wh/m ³
Energy efficiency of wastewater treatment ⁽³⁾	790 Wh/kg DCO abattue
CO ₂ emissions relating to waste collection	< 1.2 kg CO ₂ /km

(1) Thermal plants selling more than 100 GWh/year.

(2) Drinking water production plants exceeding 60,000m³/day.

(3) WWTP with a population equivalent capacity of over 100,000.

Depollution	2027 Guide value
Wastewater treatment: COD treatment efficiency ⁽³⁾	> 92%
NOx emissions from waste incineration (mg/Nm ³)	< 110 mg/Nm ³
SOx emissions from waste incineration (mg/Nm ³)	< 20 mg/Nm ³
Dust emissions from waste incineration (mg/Nm ³)	< 3 mg/Nm ³
NOx emissions from power plants ⁽¹⁾ (g/MWh of fuel consumed)	< 190 g/MWh
SOx emissions from power plants ⁽¹⁾ (g/MWh of fuel consumed)	< 120 g/MWh
Dust emissions from power plants ⁽¹⁾ (g/MWh of fuel consumed)	< 10 g/MWh
Hg emissions from power plants ⁽¹⁾ (mg/MWh of fuel consumed)	< 5 mg/MWh

Saved freshwater and resource regeneration	2027 Guide value
Yield rate of drinking water distribution networks ⁽⁴⁾	> 75%
Percentage of end-customer smart metering solutions	30 %
Recovery rate of bottom ash, residues from waste incineration	> 90%
Recovery rate for combustion waste in the Energy business (fly ash, bottom ash) ⁽¹⁾	> 70%
Recovery rate (material, energy) of wastewater treatment sludge ⁽³⁾	75 %

Biodiversity and ecosystems	2027 Guide value
Percentage of sites with "zero" use of phytosanitary products	95 %
Implementation rate of ecological management at sites with more than one hectare of green spaces	95 %
Percentage of biomass traceability (wood) for energy production ⁽⁵⁾	100 %
Percentage of biomass (wood) certification for energy production ⁽⁵⁾	100 %

(1) Thermal plants selling more than 100 GWh/year.

(2) Drinking water production plants exceeding 60,000m³/day.

(3) WWTP with a population equivalent capacity of over 100,000.

(4) Drinking water distribution plants exceeding 50,000 inhabitants.

(5) Covering the scope of operational control on the supply of biomass.

An operational policy integrating the Group's experience around the world

The Business Support and Performance Department provides all of the Group's Business Units with a documentary corpus for each of the businesses, consisting of:

- operational standards developed and maintained by the Group's business experts;
- sharing good practices, benchmarks, tools, scientific and technological references;
- technical and commercial support on topics that present a challenge for the Group;
- business community facilitation (webinars, business forums, training materials, etc.).

A Business Unit-level Environmental & Industrial Management System

Each Business Unit (BU) adapts to its local context, the latter being highly heterogeneous. Consistency is provided by the Environmental and Industrial Management System (EIMS), led by the Group Business Support and Performance Division, which allows each BU to define priorities and action plans adapted to Veolia's multi-local context, while taking into account the standard targets and operational policies as defined by the Group above.

The Business Units review their environmental and industrial risks annually and critically analyze their business performance, particularly in light of the guide values set out above, and in connection with risk mapping. This allows each BU Director to explicitly define, for each year, progress commitments and associated action plans, adapted to their particular local context.

4.1.1.5.2 Business model

OUR BUSINESS MODEL

Veolia's business model is rooted in its multifaceted performance, driving transformations aimed at creating balanced value across the environmental, commercial, financial, human resources and social spheres. A model based on solid foundations, it is guided by the strategic directions set out in GreenUp and fully aligned with the Group's purpose.

RECONCILE HUMAN
PROGRESS AND
ENVIRONMENTAL
PROTECTION

CREATING VALUE

SHARED
GLOBAL CHALLENGES
GROWTH BOOSTERS
STRONGHOLDS TO OPTIMIZE
AND DEVELOP

4. Operational excellence:

solutions to complex problems; integrated risk management; roadmap for net zero by 2050.

5. Employee engagement:

in 2025, 88% of employees said they were proud to work for Veolia.

6. Mechanisms for regular stakeholder dialogue:

with customers, planet, employees, society, and shareholders.

STRATEGIC PLAN ALIGNS WITH OUR CHALLENGES

I. Three priorities: decarbonize, depollute, protect and regenerate resources

Issues such as climate change, resource scarcity, pollution, threats to biodiversity, health and safety... are driving demand from our stakeholders for solutions to protect their health, climate, resources, and the planet.

II. Growth boosters

1. Water technologies and innovative solutions

Regenerate strategic metals and salts;
produce ultrapure water;
reuse wastewater; treat micropollutants;
desalinate seawater.

2. Decarbonizing local energy

Develop production of bioenergy; provide solutions for flexibility in electricity grids; optimize energy efficiency.

3. Hazardous waste processing

Support rising demand for hazardous waste treatment driven by industrial production and stricter regulations.

III. Strongholds to optimize and develop

4. Municipal water

Drinking water production and distribution; wastewater collection and treatment.

5. District heating and cooling networks

Distribution of heat or cold via collective district networks.

6. Non-hazardous waste

Collection; sorting and recycling; incineration; landfill.

4.1.1.5.3 Value chain

To describe Veolia's value chain, it is necessary to differentiate between two situations:

Situation 1: Veolia as environmental services operator

- A** **Global regulatory authority** (legislator) or local (e.g. water agency): Defining the framework for processing needs of very diverse natures: drinking water to distribute, waste water to sanitize, waste to collect and treat, etc. sometimes materialized by a flow to be treated (e.g. waste water, waste).
- B** **Entity responsible for the service:** This may be a local authority for local public services (water, waste), an industrialist concerning treatments to be carried out on his factory, or Veolia itself on certain factories operated in a «merchant plant» scheme.
- C, D** **Analysis and advice:** The need is analyzed by the authority, but also by Veolia who plays a role as expert advisor.
- E** **Service features:** The authority defines the way the service is to be operated, with very various contractual and operational schemes, for example:
- Environmental service specifications
 - Technological and operational options imposed or not by the authority, which can for example delegate the operation of an infrastructure (factory, network)
 - Accountability or not for a benefit or a level of performance
- F** **Infrastructure:** Production infrastructure (factory, network, equipment,...) which can in some cases be wholly or partially owned by the client or Veolia.
- G** **Service delivered:** Operated by Veolia with a performance depending both on the leeway defined at E and the intrinsic performance of Veolia. Some examples: drinking water service, urban heating, industrial water treatment, waste collection and treatment...
- I** **External partners:** A collaboration can relate to financing, access to a market, access to a qualification or know-how...
- J** **Suppliers & subcontractors:** Mainly energy, chemicals, equipment.
- K, L** **Customer of the service:** Mainly the responsible entity B but also when there are users of the service (subscribers to the drinking water or urban heat distribution for example).
- M** **Clients from derivatives products:** For example, material enhancement or heat reuse in the case of incineration.

Situation 2: Veolia as supplier of environmental technology solutions

- A** **Regulatory authority(ies):** Defining the framework and standards for the treatment of environmental services.
- B** **Market needs:** The market needs are various, for example :
- Drinking water treatment units, desalination, sanitation, water reuse
 - Basic equipment (filtration membranes for example).
 - Chemical treatment products
 - IT monitoring and optimization solutions.
- C** **Analysis of the need:** Generic or specific (bid offer for example)
- F** **EPC Partnership:** EPC projects (engineering, procurement, construction) are a common form for large achievements. Veolia's strategy is to bring its engineering and procurement capabilities, while partnering with a builder as part of the global EPC project.
- G** **Veolia's Role:**
- Design, relying on internal R&D resources to which are added external partners depending on the subjects
 - Production: internal resources and partly outsourced
 - Sale: on catalog or in response to call for tenders
 - Primarily engineering and procurement («EP») in the context of EPC projects
- I** **External partners:** The collaboration can relate to
- Additional design means provided by a company, a university, etc.
 - Means of carrying out projects complementary to those of Veolia (civil engineering, installation,...)
 - Means of financing
- J** **Suppliers & subcontractors, which mainly bring:**
- Chemical substances, for example, in the mixtures made by Veolia in the products sold
 - Sub-assemblies and equipment included in the composition of the solutions sold
 - Installation services for the solutions sold
- K, L, M** **Various customers, directly or through EPC partnerships, mainly**
- Environmental service operators (public or private),
 - Industrials wanting to incorporate elements of environmental services into their production chain
 - Laboratories

4.1.1.6 Interests and views of stakeholders

This section meets Disclosure Requirement SBM-2 of ESRS 2.

Veolia has identified five key stakeholder categories:

- customers;
- planet;
- employees;
- society;
- shareholders.

Their point of view has been integrated into the process of defining Veolia's strategy for a long time and the need to define new strategic directions for 2024-2027 has led to strengthening the system of listening to stakeholders through different channels:

- **Critical Friends Committee:** A group made up of representatives of civil society from the associative, institutional, academic or corporate worlds, specialists in environmental, social or governance issues, and whose complementary experiences provide valuable insights from the perspective of stakeholders. Discussions are held regularly on important topics with this committee;
- **Future Generations Council:** A platform created in April 2025, bringing together 15 Veolia employees and 15 young leaders from around the world with Veolia's CEO, Estelle Brachlianoff, to challenge the Group on deploying existing solutions and innovating for tomorrow's ecological transformation. Council members were selected for their diverse backgrounds—including entrepreneurs, scientists, policy experts, and engineers—and their commitment to ecological and social transformation projects. The mission of the Council is to find pathways to a desirable and engaging ecological transformation for all;
- **Veolia employees** who contribute through:
 - annual "Voice of Resources" surveys, whose main theme is employees engagement,
 - the collaborative approach "Inspire 24-27", devoted during its upstream phase to the co-construction of the draft strategic program 2024-2027,
 - The employee representative were informed in 2024 of the approach of the directive within the France Group Committee, the Europe Group Committee, and the holding's Works Council, knowing that in 2025, as part of the information and consultation process on strategic orientations, a positive opinion was received from the Works Council of the Veolia Environnement holding regarding the 2024 sustainability report and the one being prepared for 2025.
- **+1' Collectives,** consists of voluntary partners selected based on strategic issues for the group (a contract, a project, a Business Unit), they represent the viewpoints of Veolia's five types of stakeholders, and with diverse collective experience to share different perspectives in order to better understand each other and collaborate to imagine a common path towards ecological transformation. These collectives, driven by an innovative methodology for dialogue, aim to broaden the Group's capacity for listening and exchanges with its stakeholders as close as possible to its geographical areas and the regions in which the Group operates;
- **Specific analyses,** to gather expectations for ESG publications from:
 - financial players (investors, funds, banks),
 - as well as rating agencies;

- **Analysis of the main controversies involving Veolia,** which are carefully monitored and managed.

The various dialogue channels can be deployed across all local operations.

The stakeholder dialogue channels receives oversight at the executive committee level, with Laurent Obadia, Deputy Executive Vice President for Stakeholders and Communications and Advisor to the Chairman, serving as a member of the Executive Committee responsible for this governance function.

The feedback thus collected from stakeholders, was taken into account, both in the development of GreenUp and in the CSRD's double materiality analysis process. The link of the material IRO with the main stakeholders involved is mentioned in the topical standards.

4.1.1.7 Disclosures in relation to specific circumstances

This section meets the following requirements of ESRS 2:

- IRO-1 on the process of identification and evaluation of material IRO;
- IRO-2 regarding the Disclosure Requirements covered by the sustainability statement;
- first part of SBM-3, which deals with the list of material IRO.

4.1.1.7.1 Method of identification and evaluation of IRO

General principles

The double materiality study was conducted in compliance with the principles defined by the CSRD by an internal team having a thorough knowledge of Veolia in terms of:

- diversity of activities;
- risk factors;
- environmental, social, societal and governance issues;
- financial aspects;
- views of different types of stakeholders.

The process of determining material IROs will be updated each year to incorporate external and internal developments, as well as the results of risk assessment campaigns, and to ensure consistency with the preparation of consolidated accounts.

Operating process followed in 2024

The identification and evaluation of impacts, risks, and opportunities were carried out with the support of an external consultant using:

- Internal sources:
 - existing impact assessments and risk analyses,
 - work by experts in the various businesses and CSR aspects;
- External sources:
 - contributions from stakeholders mentioned in section 4.1.1.6 above,
 - industry studies and references, international standards and benchmarks,
 - main controversies involving Veolia,
 - Various Sustainability statements issued by Peer companies.

The identification of the material IRO has been conducted as follows:

- Establishment of a list of the main issues for Veolia regarding ESG aspects by integrating both internal aspects and the perspective of stakeholders;
- Identification of corresponding IRO for each of these issues, concerning Veolia and its value chain:
 - positive or negative external impacts,
 - financial risks or financial opportunities from external sources affecting Veolia;
- Materiality assessment of each of these IRO on a scale from 1 (minimum score) to 5 (maximum score), based on the following criteria:
 - **positive impacts:** scale⁽¹⁾ and probability over the next five years, geographical extent, anticipation or otherwise of a strengthening of the scale beyond the five-year time-frame,
 - **negative impacts:** same criteria as positive impacts, plus an assessment of remediation,
 - **financial risks and opportunities:** financial impact on the Group's net income (loss) according to a five orders of magnitude scale and probability of occurrence within and beyond a five-year time-frame respectively;
- Verification of the consistency of the list of IRO with the themes and the 15 priority objectives of GreenUp multifaceted performance (see section 4.1.1.5.1 above);
- Verification of the consistency of the identification and evaluation result described above, in relation to a materiality threshold set at three:
 - review of the list of material IRO with an extended circle of internal contacts,
 - review of the IRO' labelling in terms of impacts, risks or opportunities with external CSRD experts,
 - verification that no potentially material IRO have been excluded due to an assessment just below the threshold set at three on the rating scale.

Operating process followed in 2025

Based on the work carried out in 2024, Veolia updated its IROs by:

- considering the latest available Group risk mapping;
- consulting the viewpoints of internal experts on the various Group topics;
- reviewing external publications from peers;
- revising financial materiality based on the latest available figures;
- ensuring consistency with the processes for preparing consolidated financial statements.

This resulted in rewordings to improve the clarity of the topics and a final list of 42 IROs presented below in table format.

Considered time-frames

Due to its activities and contracts, Veolia has considered a five-year horizon as foreseeable with a good level of assurance, which corresponds to the short and medium terms according to the CSRD definition.

The time-frames for each of the material IROs are specified in the corresponding thematic standards.

4.1.1.7.2 List of material IRO

In order to facilitate the understanding and reading of the Group's material IROs, it has been decided to establish a link with the Group's strategy, according to the following six themes:

- decarbonization to limit climate change;
- depollution and preservation of nature;
- economical use and regeneration of resources;
- safe and resilient essential services for regions;
- stakeholder engagement in ecological transformation;
- attractiveness, safety and equity of the undertaking.

A color and column representation helps differentiate the different types of IRO, and to make it easier to find them in the rest of the sustainability statement. Their numbering starts with the relevant topical ESRS.

Veolia-specific topics

Some IRO correspond to disclosures outside those predefined in the CSRD.

For example, the CSRD covers GHG emissions in ESRS E1, and pollution emitted in ESRS E2, but these same ESRS do not address decarbonization or decontamination as economic activities for third parties. This is due to the very nature of Veolia's activities as an environmental services undertaking and Veolia has therefore chosen to include in its sustainability statement specific publications in addition to the basic information predefined in the ESRS, as provided for in point 11 of paragraph 1.1 of ESRS 1.

For a clear reading of the list of IRO, it appeared necessary to identify those that fall under this type of situation: they are recognizable by an outline in the table below and their code includes the words "ES" (for "entity specific") between the ESRS standard reference and the IRO serial number.

The other IRO contains the letters "ST" (for "standard").

Example: IRO E4-ES-1 "Contribution by depollution to the preservation of biodiversity and ecosystems" is set out:

- in section 4.1.2.4 Biodiversity and ecosystems below, which deals with ESRS E4;
- and the letters "ES" indicate that the subject discussed is specific to Veolia.

⁽¹⁾ Rating scale of magnitude with reference to consequences for stakeholders:
1: low impact leading to no noticeable change;
2: moderate impact leading to limited and localized changes;
3: significant impact leading to substantial changes over a wide area;
4: major impact leading to profound and extensive changes;
5: maximum impact leading to critical and global repercussions.

List of IRO 1/2

VALUE CREATION FOR STAKEHOLDERS			MITIGATION OF NEGATIVE IMPACTS AND FINANCIAL RISKS		
Decarbonization to limit climate change					
Alignment of Veolia's GHG emissions trajectory with the 1.5°C target	E1-ST-3 Attractiveness for financial stakeholders due to decarbonization	E1-ST-5 Reduction of OpEx by increasing the energy efficiency of our installations	E1-ST-1 Significant GHG emissions (scopes 1, 2 and 3) requiring the implementation of a transition plan	E1-ST-4 Additional costs resulting from increased regulatory requirements for GHG emissions	E1-ST-2 Progressive exclusion from access to financial markets in the event of failing to exit coal-based energy production
	E1-ES-6 Increase the volume of erased* GHG emissions for our value chain: material recycling, decarbonization of client's activities, etc.	E1-ES-7 Development of solutions to reduce clients' GHG emissions, in particular: energy efficiency, flexibility, local decarbonizing energy			
Depollution and nature preservation					
Development and deployment of depollution solutions	E2-ES-2 Development of depollution activities for our clients in line with the new requirements (emerging pollutants in water, micropollutants, endocrine disruptors, etc.)		E2-ST-1 Pollution generated by our own activities (air, water, soil, hazardous waste, etc.)	E2-ST-4: Risk in the event of major pollution caused by an accident at a site operated by Veolia	
Increase and improvement of hazardous waste (HW) treatment	E2-ES-3 Increased capacity of hazardous waste treatment in the different treatment technologies, in order to meet the growing needs of the market	E5-ST-3 Commercialization of innovative solutions to regenerate resources from hazardous waste (e.g. battery recycling)			
Preservation of biodiversity on our sites and in our value chain	E4-ES-1 Contribution to the preservation of biodiversity and ecosystems through depollution		E4-ST-2 Impact of our sites and value chain on ecosystems and biodiversity		
Resource sparing use and regeneration					
Sustainability of the water resource	E3-ES-2 Development of activities to sustain water resources (preservation and regeneration)	E3-ES-3 Support for industrial clients in the sustainable use of water resources	E3-ES-4 Gap between customer expectations around responsible drinking water use and current volume-based remuneration models	E3-ST-1 Pressure on the resource from water withdrawals	
Recovery of secondary raw material and/or energy in waste	E5-ES-2 Development of activities for the recovery of certain materials due to pressure on resources and the need to limit the use of virgin resources	E5-ES-4 Energy recovery of non-recyclable waste (SRF-RDF), contributing to decarbonization	E5-ST-1 Adaptation to changes in the waste value chain, resulting in the need for technical and commercial innovation at Veolia		
Type of IRO:	Positive impact	Financial opportunity	Negative impact	Financial risk	

Type of IRO:

Positive impact

Financial opportunity

Negative impact

Financial risk

Boxes with entity-specific topics are branded with broad lines

*see the definition of "erased emission" in the standard ESRS E1, section 4.1.2.1

List of IRO 2/2

VALUE CREATION FOR STAKEHOLDERS			MITIGATION OF NEGATIVE IMPACTS AND FINANCIAL RISKS	
Safe and resilient essential services for territories				
Local development of territories through access to essential services and value creation	S3-ST-1 Contribution to local wealth and employment in the territories (value chain)	S3-ST-3 Inclusive measures adapted to different types of contexts, including access to essential local services such as water		
Resilience of environmental services	S4-ST-2 Continuity and quality of essential services thanks to the safety of our operations	S3-ST-4 Resilience to severe environmental crises (climate change, health crisis) in order to ensure an essential minimum service	G1-ST-2 Cost of remediating a large-scale cyberattack (operational control systems and personal data), associated with image loss	E1-ST-8 Operational risks related to climate change (direct and supply chain)
Stakeholders engagement in ecological transformation				
Dialogue with stakeholders in the service of a sustainable transformation	S3-ES-6 Veolia's role in raising stakeholder awareness by proactively explaining how each actor can contribute to ecological transformation		S3-ST-5 Risk of challenge and dispute by a stakeholder arising from their perception of our activities	
Responsible management of the supply chain	S3-ST-2 Contribution to develop the local economic fabrics through local purchasing and sourcing		S2-ST-1 Risk in the event of serious incidents in the supply chain (human rights, labour law, environmental damage, etc.)	
Satisfaction of clients and end-users	S4-ST-1 Consumer and end-user satisfaction through the pursuit of quality in the services delivered	S4-ES-3 Renewal and gain of new contracts as a trusted provider based on recognition of our operational know-how and respect of Ethics and Values		
Ethical practices and proper business conduct			G1-ST-1 Loss of contracts or defense costs due to unethical practices (non-compliance with human rights, corruption, etc.) with our clients, suppliers, partners, communities, and employees	
Attractiveness, safety, and fairness of the company				
A healthy and safe work environment for employees	S1-ST-2 Promotion of well-being at work through appropriate measures		S1-ST-1 Exposure of employees to physical or psychological risks resulting from the activities carried out	
Attraction, retention, and development of skills	S1-ST-3 Base of minimum social guarantees for all Veolia employees	S1-ST-4 Strengthening employees' engagement and attracting new talents by sharing our purpose, values and strategy with them	S1-ST-5 Risk of insufficient workforce and skills to meet our commitments in the event of departures (turnover rate, retirements, etc.)	S1-ST-6 Commercial risk which could be very costly in the event of failure to mobilize the special skills needed to implement certain large-scale complex projects
Responsible social policy, promoting inclusion and diversity	S1-ST-8 Promotion and enhancement of social dialogue worldwide to foster ownership of the collective project		S1-ST-7 Potential exposure of employees to discrimination, harassment or prejudice in the workplace, requiring the implementation of listening mechanisms and whistleblowing systems	

Type of IRO: Positive impact Financial opportunity Negative impact Financial risk

Boxes with entity-specific topics are branded with broad lines

**see the definition of "erased emission" in the standard ESRS E1, section 4.1.2.1*

4.1.1.8 Other general information to disclose

In addition to the previous information, ESRS 2 requires the publication of:

- SBM-3 on strategy and business model, the interactions of material IRO with strategy and business model;
- MDR-P, policies adopted to manage material sustainability matters, in order to prevent, mitigate and remedy the negative aspects of IRO and maximize their positive effects;
- MDR-A, the actions and resources implemented on material sustainability issues, in order to prevent, mitigate and remedy the negative aspects of IRO and maximize their positive effects;
- MDR-M, metrics related to material sustainability issues;
- MDR-T, the performance targets put in place to measure the effectiveness of policies and action plans on material sustainability matters.

This information is detailed in each section devoted to a topical ESRS standard, partially or entirely depending on the requirements of the standard in question:

- sections 4.1.2.1, 4.1.2.2, 4.1.2.3, 4.1.2.4, 4.1.2.5 for environmental standards;
- sections 4.1.3.1, 4.1.3.2, 4.1.3.3, 4.1.3.4 for social and societal standards;
- section 4.1.4.1 for business conduct.

To meet these Disclosure Requirements, the sections dedicated to topical standards are composed as follows:

1. Introduction: types of interactions between the theme of the ESRS standard and Veolia;
2. Material topics:
 - list of IRO concerned by the thematic standard,
 - detailed explanations for each IRO (nature, concrete illustration, time-frame, materiality, links with value chain and business model);
3. Management of material subjects:
 - policies adopted (MDR-P),
 - actions and resources committed (MDR-A),
 - performance targets set by Veolia (MDR-T);
4. Metrics:
 - metrics (MDR-M) to measure the situation and evolution of material topics,
 - including, if necessary, metrics in addition to those predefined in the ESRS standards, to characterize entity specific topics relating to Veolia information,
 - finally, section 4.1.5.2 below specifies the list and location of the disclosure requirements, in accordance with IRO-2.

4.1.2 ENVIRONMENTAL INFORMATION

This section deals with environmental issues:

- ESRS E1 Climate change: section 4.1.2.1;
- ESRS E2 Pollution: section 4.1.2.2;
- ESRS E3 Water and marine resources: section 4.1.2.3;
- ESRS E4 Biodiversity and ecosystems: section 4.1.2.4;
- ESRS E5 Resource use and circular economy: section 4.1.2.5;
- EU green Taxonomy: section 4.1.2.6.

4.1.2.1 Climate change (E1)

As part of its GreenUp 2024-2027 strategic program, Veolia adopted the following objectives and targets:

	Commitment	Objective	SDG	Metric – definition	2023 baseline	2024 Results	2025 Results	2027 target
GreenUp	Combat pollution and accelerate the ecological transformation	Decarbonization – scopes 1 and 2 reduction		• Scopes 1 and 2 GHG emissions reduction	24.3 Mt of CO ₂ eq (Baseline 2021)	-14.5% vs 2021	-18.6% vs 2021	-18% vs 2021
		Emmanuelle Menning		Member of the Executive Committee, Deputy CEO Finance and Purchasing				
GreenUp	Combat pollution and accelerate the ecological transformation	Decarbonization – transformation of our assets		• Decarbonization Capex: Phase-Out of coal and methane capture (2024-2027)	Not applicable	133.5 M€	141 M€	600 M€ (cumulative 2024-2027)
	Sponsor	Philippe Guitard		Member of the Executive Committee, Senior Executive Vice President, Central and Eastern Europe region				

4.1.2.1.1 Introduction

Climate change holds a significant position among Veolia's material topics, and the materiality analysis detailed in section 4.1.1.7 above has resulted in the identification of eight material IROs related to the ESRS

E1 standard. This section examines issues related to climate change from the dual perspectives of its mitigation and adaptation.

Climate change mitigation	Group GHG emissions: § 4.1.2.1.2 Aligning Veolia's trajectory with the 1.5°C target and § 4.1.2.1.3 Focus on coal phase-out and methane recovery plans
	Third Party GHG emissions: § 4.1.2.1.4 Helping customers decarbonize
Climate change adaptation	§ 4.1.2.1.5 Climate change adaptation

4.1.2.1.2 Governance of the climate commitment

Governance (mitigation and adaptation)

The policy for combating climate change is coordinated at the highest Group level (see section 4.1.1.4.1 above).

The Board of Directors approves the Group's strategy and makes decisions that commit the Group, such as the transition plan. It monitors the Company's performance through the "Combating climate change" multifaceted performance indicators. Thus the emissions reduction plan targeting Net Zero with the intermediate milestone of -50% for scopes 1&2 emissions and -30% for 67% of scope 3 by 2032 was validated by the Board of Directors in December 2023. The order of deployment of the levers and the associated CapEx are validated by the Executive Management and monitored by the Finance Department.

The results of climate commitments to reduce Group GHG emissions are presented annually to its Research, Innovation and Sustainable Development Committee. It is also regularly informed of Veolia's climate change adaptation initiatives. Regarding the management of the associated climate risks, the Group's risk map in which they are incorporated is reviewed annually by the Accounts and Audit Committee.

At the Executive Committee level, two sponsors are appointed:

- Emmanuelle Menning, Deputy Chief Executive Officer in charge of Finance and Purchasing, sponsor of the Climate Change Mitigation commitment;
- Sébastien Daziano, Director of Strategy, Innovation and Development, sponsor of the Climate Change Adaptation approach.

The Finance Department is responsible for coordinating actions linked to Group commitments to climate change mitigation. The corresponding environmental performance metrics are included in the Group's Environmental and Industrial Management System.

The Climate Change Adaptation team in the Multifaceted Performance and Sustainable Development Department coordinates, with the Risk and Insurance Department, work related to climate change adaptation and climate risk management.

Progress is presented and validated by the Prevention Committee (see section 2.2.2.2), in charge of monitoring such risks and the related action plans. It comprises two Executive Committee members, the Deputy Chief Executive Officer Finance and Procurement and the General Counsel as well as the Chief Risk and Insurance Officer, the Director of the Business Support & Performance department and the manager of Health and Safety Prevention for the Group.

At an operational level, each Business Unit Director is responsible for breaking down the Group strategy into business opportunities and risks inherent to their business lines and region.

Integration of climate change performance into incentive mechanisms, as indicated in section 4.1.1.4.3 above

The pay of the Group's executives, including that of the Chief Executive Officer, is partly indexed to climate performance:

- the pay of the Chief Executive Officer, as well as that of other senior executives – in particular geographic zone executives – is indexed to climate performance. With regard to the target compensation awarded to the Chief Executive Officer for the year 2025, the variable portion linked to climate performance represents 9.5% of the total compensation (detailed in section 3.4.1.1.3 above);
- performance shares for the Group's executives and key contributors are also awarded based on climate performance;
- the criteria used to determine "climate performance" are: the reduction of emissions from Veolia scopes 1 and 2; the achievement of erased emissions targets*; the progress rate of investments planned to reduce greenhouse gas emissions. It is therefore directly impacted by the speed of implementation of the 2030 coal exit plan (see section 3.4).

4.1.2.1.3 Align Veolia's trajectory with the 1.5°C target

In July 2024, the SBTi approved Veolia's short-term emissions reduction targets for 2032 (-50% for scopes 1 and 2 and -30% for at least 67% of scope 3 by 2032 compared to 2021) and registered the Group's commitment to reach Net Zero by 2050. This commitment⁽¹⁾ is in line with the ambition of the 2015 Paris Climate Agreement, which aims to limit global warming to 1.5°C by the end of the century (IPCC SSP1-1.9 scenario).

Veolia's transition plan had also obtained a NZ2 score according to Moody's Net Zero Assessment (NZA).

Following methodological changes in the accounting of emissions applied to 2024 footprint published in March 2025, the Group submitted to the SBTi the new methodology and the updated trajectory and targets. In July 2025, The SBTi approved the updated targets. The commitments of Veolia remain the same in % for scopes 1,2 and 3 both for 2032 and 2050 (*see Scope 3 boundaries: SBTi requirements impact).

It should be noted that certain Scope 3 emission sources monitored by Veolia are excluded from the scope defined by the SBTi (see section "Scope 3 Boundaries: Impact of SBTi Requirements" below). As a result, there is a discrepancy between the Scope 3 emissions to which the Group is committed (as defined by the SBTi) and the Scope 3 emissions voluntarily published by the Group.

⁽¹⁾ The short-term Scope 3 reduction target is aligned with the well-below 2°C scenario (-30% by 2032 compared to 2021 on 67% of Scope 3 reviewed with the SBTi).

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

Decarbonization is our business

To develop emission reduction plans, Veolia measures emissions from its own sites and those of its clients.

The Group's emissions are a result of the essential services it provides and are generated by its own facilities as well as by the facilities it operates on behalf of its clients. In both cases, the Group measures these emissions as part of its carbon footprint and implements reduction plans.

Typology of greenhouse gases taken into account in Veolia's carbon footprint

Veolia mainly emits three greenhouse gases (GHGs) which are a counterpart of the essential services provided by the Group for human activities; for reference year 2021: carbon dioxide - CO₂ (73% of the GHG balance), methane - CH₄ (26%) and nitrous oxide - N₂O (1%).

Only CO₂ of fossil origin is counted in the Group's carbon balance (e.g. incinerated non-recyclable plastics), unlike CO₂ of so-called "biogenic" organic origin (e.g. food residues), which is counted separately. Biogenic carbon emissions are derived from organic elements that initially captured CO₂ in the atmosphere, for example through photosynthesis. They are part of a short cycle (less than 100 years) considered to be carbon neutral. On the other hand, biogenic methane is counted because of its warming potential 27 times that of CO₂.

In 2024, the Group emitted 6.7 million metric tons of scope 1 biogenic CO₂ and 0.1 million metric tons of scope 2 biogenic CO₂ and 7.6 tons of scope 3 biogenic CO₂ from biomass combustion, biogas, organic waste treated in incineration, and wastewater treatment. These biogenic emissions are not included in the scopes 1, 2 and 3 Group's emissions.

Group activities emitting greenhouse gases (GHG)

Veolia decided to follow a materiality approach in terms of GHG emitting activities. Veolia only accounts for emissions related to the highest emitting activities. Thus, emissions related to office activities (for example, emissions from headquarters or those related to certain departments such as customer service) are not taken into account as they are not significant. The issuing activities taken into account are as follows:

- district heating network management: The district heating networks operated by the Group distribute heat to individual and industrial customers. They allow to decarbonize domestic and industrial heating at a large scale thanks to the concentration of energy production on a few installations;

- non-hazardous waste treatment:

- waste-to-energy recovery plays a key environmental role by reducing the volume of waste to be stored, treating certain highly toxic pollutants and also treating organic waste that would produce methane, if sent directly to landfill sites. In many countries, the most recent environmental regulations tend to favor incineration over landfill,

- storing waste in landfill sites prevents the waste from contaminating groundwater. The positive environmental, health and social impact of these installations is crucial. However, in some countries, the lack of sorting, incinerators and composting channels means that large volumes of organic waste are stored in landfills and emit large amounts of methane;

- hazardous waste treatment: Some waste demonstrates toxicity or danger to human health or the environment. Strict regulations and traceability apply to this waste. For waste that cannot be stored or undergo physicochemical or biological treatment (hazardous waste), high-temperature incineration is a reliable and effective solution for the destruction of pollutants;

- water treatment: By treating water to make it drinkable or by decontaminating it before it returns to the environment, Veolia provides an essential service to human activities while preserving biodiversity. Some of these treatments for wastewater are based on the replication of natural biological processes and can emit N₂O or CO₂.

Methodology used for the classification of emissions between scopes 1, 2 and 3

In line with the ESRS E1 standards and the development principles described in note 4.1.1.1, Veolia has developed a methodology for classifying its greenhouse gas emissions. This methodology is primarily based on the GHG Protocol as well as specialized guides, notably the directives of the Australian National Greenhouse and Energy Reporting Act (NGER Act) and the ADEME Methodological Guide for assessing emissions from waste management services.

This methodology relies on an operational control analysis grid specifically adapted to the Group's business models and takes into account Veolia's activities that may be operated in regulated environments (concession contracts, operation and maintenance contracts, etc.). It also considers the connectivity with accounting analyses carried out by the Group for the preparation of its consolidated financial statements in compliance with IFRS.

The resulting classification distinguishes:

Asset Type	Accounting treatment	GHG classification	Explanation
Merchant Plant	Property, plant, and equipment (IAS 16)	Scopes 1 and 2	Veolia has full authority to implement operating policies over the asset
Concession Assets	Service concession agreements (IFRIC 12)	Scope 3.8 "Upstream leased assets"	Ultimate decisions on operational and environmental policies belong to the grantor
Operation and Maintenance Contracts	Service contracts	Scope 3.11 "Use of sold products"	Veolia provides a service based on a set of obligations defined and monitored by the public or private client
Non-consolidated Entities	Outside consolidation scope	Scope 3.15 "Investments"	Veolia does not hold ultimate decisions on operational and environmental policies

Sources of Scope 1 emissions in 2025

Sources of Scope 2 emissions in 2025

Geographical distribution of emissions from Veolia scopes 1 and 2 in 2025

The activities making the highest contributions to the direct emissions of scopes 1 and 2 are among the activities carried out for municipal customers, district heating and waste treatment:

- Scope 1 (direct emissions) includes direct emissions from the Group's assets: methane emissions from landfill sites, and CO₂ emissions from waste-to-energy recovery units, energy production plants or truck fleets;
- Scope 2 (indirect emissions) concerns the converted energy used by the Group. It therefore depends on the energy mix of the countries in which Veolia operates. In particular, it includes emissions linked to electricity purchased for water treatment and heat losses from heating networks. When presenting its carbon footprint, Veolia uses the market-based method. Scope 2 emissions are also calculated using the so-called location-based method. For scope 2 calculations, the emission factors of the IEA (International Energy Agency) were used.

Europe, and in particular Central and Eastern Europe, where the Group's major heating networks are located, accounts for the bulk of the Group's scope 1 and 2 emissions.

Bilan carbone 2025 de Veolia en Kt CO₂ éq.

- Scope 3 can be shared into two parts:

- Scope 3 upstream encompasses mainly emissions related to Veolia's purchases (cat. 3.1 to cat. 3.4). For example, chemical products purchased for water treatment and fuels used for heat production. Upstream emissions aggregates also emissions linked to assets under concession over which the Group has no operational control are also counted in scope 3 upstream (cat. 3.8).
- Scope 3 downstream encompasses emissions related to the processing, use and end-of-life of products sold by the Group: sorted or recycled secondary materials and distributed gas. They also include emissions from operation and maintenance contracts, including those of the Hong Kong landfill sites counted in 3.11, as well as emissions related to joint ventures in 3.15.

For most scope 3^(*) elements (85%), calculations are made from business data (internal or supplier) using physical emission factors. The residual share (15%), based on expenditure data and applying monetary emission factors, should be reduced thanks to Veolia's supplier engagement program, one focus of which is to refine the calculation of their emissions (see details of scope 3 emissions by category in section 4.1.2.1.6 Metrics).

In 2025, efforts were undertaken to enhance the calculation of emissions related to procurement (categories 3.1, 3.2, 3.4, and 3.6). A comprehensive review of the monetary emission factors used was conducted in order to enable standardization, updating, and greater granularity of the values. Henceforth, all regionalized emission factors are sourced from the May 2025 release of the Open CEDA (Comprehensive Environmental Data Archive) database.

Scope 3 reporting perimeter: impact of SBTi requirements

Veolia has committed to reducing its emissions by 30% across at least 67% of its scope 3 by 2032, and by 90% by 2050.

The scope 3 reporting perimeter considered by the SBTi^(†) differs from the scope 3 emissions historically reported by Veolia. Indeed, certain emission sources are excluded from the SBTi boundary, either because they fall outside the minimum reporting boundary defined by the GHG Protocol, or because the SBTi recognizes certain sectoral exclusions for waste-related activities. These differences include, in particular:

- Emissions from category 3.10 related to the use of recycled materials sold by Veolia (3.9 Mt CO₂e in 2024 and 4.4 Mt CO₂e in 2025) are not considered by the SBTi in the context of waste treatment activities;

- The indirect emissions associated with the upstream energy consumed by Veolia's clients within the scope of its concessions (7.8 Mt CO₂e in 2024 and 7.3 Mt CO₂e in 2025) and its operation and maintenance contracts (1.2 Mt CO₂e in 2024 and 1 Mt CO₂e in 2025) fall outside the minimum reporting boundary as defined by the GHG Protocol.

Accordingly, the SBTi has required Veolia to exclude 12.9 Mt CO₂e from its scope 3 emissions in 2024. This amount is 12.6 Mt CO₂e in 2025.

In response to these requirements, Veolia now presents its scope 3 reduction trajectory **based on the SBTi's reference scope 3 boundary**, while continuing to **voluntarily** disclose the additional scope 3 emissions that it will continue to monitor. Therefore, Veolia will have an SBTi scope 3 (or, more generally referred to as "scope 3") and an expanded scope 3 (including voluntary reporting).

Transition plan: Description of the decarbonization levers of the Group to reduce direct and indirect emissions

For nearly 10 years, the Group has committed to reducing greenhouse gas (GHG) emissions both for its activities and its clients. This commitment is fully in line with its Purpose: acting to reconcile human progress and environmental protection.

The Group emission reduction plan was built after an assessment of emission reduction levers carried out thanks to the mobilization of the Group's technical experts in all its businesses and in all its regions in 2023. It had taken into account sectoral realities, the degree of mastery of decarbonization techniques and local specificities in the countries where the Group operates. This plan is intended to be managed and enhanced beyond the GreenUp strategic program in future strategic plans that will follow after 2027.

The material IRO concerned by this issue are listed below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ST-1 Significant GHG emissions (scopes 1, 2 and 3) requiring the implementation of a transition plan			

Veolia's climate change mitigation plan is described below. This plan impacts our value chain both upstream (purchases, etc.), in operations (modification of production tools, etc.), and downstream (provision of less carbon-intensive products: energy, drinking water, etc.). These impacts will be felt in the short term during the GreenUp plan (2024-2027) and in the medium and long term as the Group embarks on major transformations of its value chain until it achieves Net Zero in 2050.

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ST-3 Attractiveness for financial stakeholders due to decarbonization			

Veolia's decarbonization strategy, both at its own sites and those of its customers, is an attractive factor for investors looking for players with a positive impact on the climate.

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ST-4 Additional costs resulting from increased regulatory requirements for GHG emissions			

Increasing regulatory requirements for decarbonization means strengthening investments which may struggle to make a return on the basis of the activities concerned. Depending on the nature of the obligations, the financial risk may materialize in the medium or long term.

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ST-5 Reduction of OpEx by increasing the energy efficiency of our installations			

One of the decarbonization strategies implemented at sites belonging to Veolia and its customers aims to improve the profitability of the installations through the improvement of energy efficiency and the reduction of fuel or energy consumption. The associated cost reductions have a direct impact on OpEx.

Scopes 1 & 2: first reduction programs started

The Group is committed to achieving Net Zero by 2050 (-90% vs. 2021). To ensure the credibility of companies' commitments to carbon neutrality by 2050, the SBTi establishes an intermediate milestone within a 10-year interval from the baseline year (2021 for the Veolia Group). This 10-year milestone is used by the SBTi to verify the robustness of commitments made by companies targeting carbon neutrality by 2050. The Group has therefore developed its reduction strategy within this framework, with a milestone of -50% reduction in Scope 1 and 2 emissions by 2032

compared to 2021^(‡). The initial reduction programmes undertaken aim to achieve these targets and are aligned with this 2032 perspective.

An acceleration of the effects of decarbonisation levers is anticipated within the framework of forthcoming strategic plans, which will continue to strengthen the Group's ambition in this area. Consequently, the Scope 1 and 2 emissions reduction trajectory is planned to be non-linear, with the following milestones:

- -18% in 2027 (end of the GreenUp plan) on scopes 1 and 2 vs. 2021 - Commitment made before the validation of targets to 2032 by the SBTi;
- -33% (estimated) in 2030 on scopes 1 and 2 vs. 2021, a milestone set by the CSRD. This point is calculated on the basis of the 2021-2032 trend;

^(*) Expanded Scope 3 including voluntary reporting (see section "Scope 3 reporting boundaries: impact of SBTi requirements").

^(†) According to Version 1 of the Science Based Targets initiative (SBTi) Corporate Net-Zero Standard (CNZS).

^(‡) The 2021 baseline of the Group's emissions is calculated pro forma by combining Veolia's and Suez's integrated emissions at the time of the 2021 merger. It is representative of the Group's activities today.

- -50% in 2032 for scopes 1&2 vs. 2021, intermediate milestone toward Net Zero recorded by the SBTi.

To achieve its objectives, the Group is acting on several decarbonization levers listed below in order of importance to reach the target by 2032:

- Conversion of coal-fired power stations to supply heating networks in Europe with other lower-emissions energy sources (gas, biomass, SRF, waste heat and geothermal). Since 2018, Veolia has launched a massive program to convert coal-fired power plants for nine of its major networks in Poland, the Czech Republic, and Germany. Following Braunschweig (Germany) in 2023, and Kolín, Přešov, and Frýdek-Místek (Czech Republic) in 2024, Poznań (Poland) in turn reached a key milestone in 2025 with the launch of its gas-fired plant. Cogeneration allows us to make the most of primary energy consumption by simultaneously producing heat and electricity in an optimized way. These major transformations are made possible by the Group's expertise in the design, construction, and operation of cogeneration infrastructure. This is achieved by combining several alternative fuels to coal with increased efficiency, thanks to the Group's technologies, particularly in heat pumps. Cogeneration units have much higher yields than conventional installations, where heat and electricity are supplied by separate units. This results in significant primary energy savings: 15% to 30%, with a reduction in CO₂ emissions of 14%, 24% and 28%, respectively, compared to installations powered by gas, fuel oil or coal. Cogeneration thus guarantees better use of the fossil and non-fossil fuels used. It is a lever for energy efficiency and decarbonization. Finally, since the production of electricity from heating network plants can be controlled, it contributes to balancing the supply and demand for electricity, particularly in countries where a significant portion of production relies on intermittent renewable energy (solar and wind);
- increased methane capture rate in non-recyclable waste landfills;
- improved energy efficiency, enabling a reduction in fuel, heat and electricity consumption thanks to the transformation of installations and the improvement of production processes;
- decarbonization of the energy mix of heating networks and electricity supplying the installations that Veolia operates;
- increase in the sorting and removal of plastic before incineration for the Waste business;
- use of vehicles with lower greenhouse gas emissions thanks to electric or hybrid engines and less carbon-intensive fuels.

A large part of the financing for the Group's decarbonization plan is already outlined in the GreenUp 2024-2027 plan, and over the following years:

- €1.6 billion accumulated by 2030 for the coal phase-out plan (of which €786 million spent as of 2025);
- €85 million by 2027 for the landfill methane capture plan (of which €17,8 million spent as of 2025).

In addition to these large multi-year Group budgets dedicated to types of joint actions in several countries, there are also dedicated annual budget lines to finance the deployment of other levers, and in particular to reduce the carbon footprint linked to the energy consumption of the sites, thanks to:

- the reduction in consumption (energy savings, energy efficiency gains, optimization of operations);
- the supply of less carbon-intensive energy through the production of renewable energy on Veolia's sites, as well as the overall decarbonization of national electricity production networks.

Thus, between 2023 and 2025, numerous projects concerning energy efficiency and renewable energy production were approved for a total amount of €120 million, thus contributing to the reduction of the Group's carbon footprint. These projects came in addition to the Coal exit plan and to the Methane recovery plan and were limited in time. The Group is constantly studying new projects to sustain its trajectory.

Between 2024 and 2025, Scope 1 and 2 emissions were reduced by 0.5 Mt CO₂ eq, primarily as a result of the combined effect of the methane capture plan, the coal phase-out plan, and improvements in the energy efficiency of cogeneration plants.

To select decarbonization projects, the Group relies on an in-depth analysis involving the technical and financial services of the project-leading subsidiary and those of headquarters. In evaluating these projects, the Group requests a quantification of CO₂ emissions and an associated reduction plan. For some projects, the analysis takes into account an external cost of CO₂ (if it exists in the area of the project in question), but this criterion is not used systematically for all investment projects. The Group therefore does not use an internal CO₂ price to decide between its various projects.

To manage its trajectory, the Group relies on a sophisticated reporting system to steer its carbon pathway. In order to control the emissions reduction trajectory, an annual CO₂ emissions budget is allocated to each of the Group's Business Units, as well as medium- and long-term targets. Quarterly reporting on the Group's key assets allows for regular monitoring of the effective implementation of decarbonization action plans and the measurement of their impact.

Reduction driver to be implemented to divide the Group's scopes 1 and 2 emissions by two by 2032 (vs. 2021)

Scopes 1 and 2 pro forma 2021^(a)

(a) The 2021 pro forma emissions presented here are the sum of Veolia scope emissions published in 2021 and 2021 emissions from the Suez scope acquired and retained as of the date of publication of this document. In addition, the 2021 emissions have been updated with the new method of accounting for emissions introduced in 2024 to better reflect Veolia's operational control over GHG emissions from operated assets. The reductions in emissions by leverage are presented net of the growth of the Group's activities.

Scope 1 & 2: Long term target and decarbonization levers to be deployed between 2032 and 2050

Veolia has set itself the ambition to achieve Net Zero GHG emissions by 2050, which implies a reduction of -90% on scopes 1, 2 and 3. To achieve this objective, the Group intends to continue its investments in the energy transition of its activities after 2032:

- develop alternatives to natural gas and intensify the use of renewable energies (geothermal, biogas, biomass, solar energy, etc.) especially for heating networks;
- continue to improve methane capture on new landfills within the Group's scope;
- continue to improve the energy performance of installations operated in all businesses;

- deploy CO₂ capture and recovery on an industrial scale;
- deploy new technologies that increase the removal and recovery of new plastics.

However, a fraction of the emissions will remain impossible to reduce (notably emissions from biological and chemical processes, residual capture emissions, etc.).

The Group also invests in innovative CO₂ neutralization solutions. For example, the Group is working on the development of several CO₂ sequestration solutions: For example, the Group is working on developing solutions for CO₂ sequestration in agricultural soils using vegetable charcoal or crushed basalt rocks. These solutions aim to provide long-term storage of CO₂ in the soil, while also improving its fertility. Experiments are being conducted in France and the United Kingdom.

Focus on coal phase-out and methane recovery plans

This section refers in particular to the material IRO below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ST-2 Progressive exclusion from access to financial markets in the event of failing to exit coal-based energy production			

Veolia has made commitments to transform its coal-fired assets in Europe in order to switch to a different fuel.

The challenge of reducing GHG emissions as quickly as possible pushes governments to strengthen financial measures to encourage their sharp decrease. For about fifteen years, Veolia has been involved in the Emissions Trading Scheme (ETS) market for its heat production plants in Europe.

The Veolia assets affected by this are largely heat production plants in Europe (Germany, Poland, Czech Republic), plus Harbin's heating network in China. Rather than getting rid of them, the Group has chosen to adopt a responsible policy for transforming these assets through an investment program amounting to 1.6 billion euros.

Progress of the coal phase-out plan in Europe

In 2018, Veolia launched a coal phase-out program or "decoalisation" program, which will enable it to fully exit this fuel in Europe by 2030 and which consists of an extensive program to modify its district heating installations so as to no longer use coal as fuel. There are planned investments of €1.6 billion to exit coal in Eastern Europe between 2018 and 2030. They will reduce the Group's carbon footprint by 3.5 million metric tons of CO₂ eq. by replacing coal with a less carbon-intensive mix including gas, biomass and heat pumps.

The investment budget by 2030 is €1.6 billion - of which €786 million had already been invested at the end of 2025 - concerns nine plants, four of which have already completed coal phase-out: Braunschweig (Germany), Pířerov, Frydek-Mistek and Kolín (Czech Republic). A fifth site, Poznań (Poland) has achieved a new step in its coal-exit journey in 2025 with the commissioning of gas boilers but coal phase-out is to be achieved by 2030. The expected emissions reduction is as follows:

- 200 kt CO₂ in Germany;
- 880 kt CO₂ in the Czech Republic;
- 2,435 kt CO₂ in Poland.

"Decoalisation" (phasing out coal) in Europe is a decarbonization strategy made possible by public policy support (regulatory framework, subsidies, etc.) and the Group's unique technical expertise in transforming heat production plants and integrating several low-carbon energy sources (gas, biomass, biogas, RDF, geothermal, waste heat) into the energy mix. For example, in the transformation of the Poznań district heating network, biomass, waste heat recovery from the Volkswagen plant, and gas were successively integrated to replace coal.

Other low-carbon energy sources will be added to the mix by 2030, including new heat recovery capacity and geothermal energy.

These transformations are accompanied by increased profitability of the facilities through improved energy efficiency and reduced ETS charges related to coal.

The specific case of coal in China

For Veolia's district heating networks in China, decarbonization is a significant challenge given the country's dependence on coal. For instance, in Veolia's main district heating network in Harbin—where the average winter temperature drops to -16°C, making it an essential service for the people it serves—gas is not available as an alternative primary fuel. The city is not currently connected to a pipeline large enough to supply the heating network. Without waiting for this obstacle to be overcome, Veolia is working to activate all available decarbonization levers through optimization and performance action plans. As a result, in Harbin, the Group has already achieved significant results, with a 30% reduction in carbon intensity between 2012 and 2024. By 2032, Veolia's ambition is to achieve an additional 25% reduction in the carbon intensity of Harbin's district heating network (compared to 2021). The main lever is to reduce the share of coal in the energy mix. Veolia has therefore launched feasibility studies on several additional decarbonization levers, including introducing biomass into the mix and recovering heat from wastewater. Depending on the results of these studies, these actions would be implemented by 2032.

Progress of the GreenUp methane plan

As part of the strategic GreenUp 2024-2027 program, the entire Group is engaged in biogas capture. Each geographic region aims to achieve the highest possible capture rates, taking into account local climatic conditions (heat and humidity) and the moisture content of incoming waste.

The Group has prioritized the deployment of a specific methane capture plan in Latin America. Indeed, in this region, Veolia operates 18 highly emissive waste storage centers, representing 57% of the Group's landfill carbon footprint in 2021.

The objective is to reach a global biogas capture rate of 80% by 2032 (63.3% in 2025), which corresponds to an increase in capture of approximately 6 Mt CO₂ equivalent compared to 2021. In practical terms,

methane emissions are measured using on-site sensors, satellite measurements, and calculations based on the tonnage of waste received at the sites. Capture is achieved by installing a cover (membrane, clay, and soil) over filled cells. Areas currently in operation are progressively equipped with capture pipelines as they are filled. The captured gas is subsequently recovered for energy production (since it is the same molecule as natural gas) or flared if recovery is not feasible locally (with a significantly reduced impact compared to venting, the uncontrolled release of methane into the atmosphere, which must be strictly avoided).

In 2025, 11 million euros were invested (17.8 million euros cumulative since 2024), and the Group's average capture rate increased from 56.3% in 2021 to 63.3% in 2025. Emissions related to landfill operations decreased from 6.8 Mt in 2021 to 5.0 Mt in 2025.

	2021	2024	2025	Target 2032
• CH4: Average methane capture rate (in %) (current scope)	56.3 %	59.8 %	63.3 %	80.0 %

Scope 3: reduction actions taken

Veolia is committed to reducing its emissions by 30% across at least 67% of its SBTi scope 3 by 2032.

- The decarbonization levers specific to assets transferred to scope 3 due to the lack of operational control over these installations:
 - by supporting the development of methane capture on managed landfills, particularly in Hong Kong and Oman, the Group provides its customers with the know-how to significantly reduce their emissions,
 - on the heating networks, the Group is carrying out work to reduce heat loss and improve energy efficiency with the agreement of its customers,
 - on incinerators, the Group is promoting the development of sorting and the removal of plastics from waste flows destined for incineration and is preparing CO₂ capture solutions subject to the agreement of its customers.
- The decarbonization levers pre-existing the transfer of assets:
 - by modifying the energy mix at its own installations and those of its customers, the Group is acting directly on its scope 3 upstream. Thus, the transition from coal to biomass or CSR for its heating networks in Central Europe has the consequence of reducing scopes 1 & 2 emissions as well as scope 3 emissions related to extraction and fuel supply,

- by having suppliers commit to reducing their emissions: by 2032, the Group's most important suppliers representing 30% of the procurement emissions will need to have an SBTi commitment,
 - By sending its customers emissions reduction plans for their sites operated by Veolia. However, it is the customers who remain in control of decarbonization decision-making and its implementation schedule.
- The total scope 3 to which Veolia has committed to SBTi represent 28.8 Mt in 2025 (see explanations above). The 8% decrease compared to 2024 is mainly due to progress made on the Tashkent district heating network and Lydec's exit from the scope at the end of 2024.

Veolia is committed to reducing its emissions by 30% across at least 67% of its scope 3 by 2032

Veolia scope 3 SBTi reduction levers

(1) The 2021 pro forma issues presented here are the sum of Veolia scope issues published in 2021 and 2021 issues from the Suez scope acquired and retained as of the date of publication of this document. In addition, the 2021 emissions have been updated with the new method of accounting for emissions introduced in 2024 to better reflect Veolia's operational control over GHG emissions from operated assets. The reductions in emissions by leverage are presented net of the growth of the Group's activities. The baseline and the target at 2032 displayed here do not take into account future rebaselining linked to the variations in scope inherent in the Group's development.

(2) Veolia's decarbonization trajectory is based on our inventory of scope 3 emissions, aligned with the SBTi. We are committed to reducing these emissions by 30% by 2030. Additional emissions that Veolia continues to monitor fall outside the SBTi boundary due to the minimum reporting scope required by the GHG Protocol and sectoral exclusions considered by the SBTi (see paragraph above).

Locked-in emissions

The trajectories of scopes 1, 2 and 3 presented above are intended to be realistic and include a portion of "locked-in" emissions in the short and medium term. For Veolia, these locked-in emissions correspond for instance to emissions from newly commissioned gas-fired CHPs replacing coal or emissions from incinerators. In the short term, technical

solutions to decarbonize these activities are still not mature or not financially sustainable, hence this locked-in effect. In order to tackle those emissions, Veolia is testing technologies and solutions. For instance, the Group is to invest €12 millions by 2028 on carbon capture pilots within two incinerators at Le Mans (France) and Port Arthur (United States).

4.1.2.1.4 Helping customers decarbonize

Commitment	Objective	SDG	Metric – definition	2023 baseline	2024 Results	2025 Results	2027 target
GreenUp Guarantee results over the long-term through innovative services	Decarbonization of our customers – Scope 4*		• Erased GHG emissions (new methodology)	13.45 Mt	+13% vs 2023	+23.6% vs 2023	+30% vs 2023
Sponsor	Christophe Maquet	Member of the Executive Committee and Senior Executive Vice President for the Asia-Pacific region					

List of IRO covered in this section:

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ES-6 Increase the volume of erased* GHG emissions for our value chain: material recycling, decarbonization of client's activities, etc.			

By developing decarbonization solutions for its customers and recycling, the Group allows them to eliminate part of their emissions. This contribution remains valid as long as our solution is more efficient than the reference scenario. The convergence between the solution and the

baseline scenario depends on the speed at which more efficient technologies and solutions for GHG reduction emerge and are implemented.

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ES-7 Development of solutions to reduce clients' GHG emissions, in particular: energy efficiency, flexibility, local decarbonizing energy			

Among the solutions developed by the Group to decarbonize its customers, some involve improving the energy efficiency of their assets or using energy from their industrial processes to reuse it in heat or power production. These solutions are deployable in the short, medium and long term.

Veolia's contribution to mitigating climate change extends beyond addressing its own greenhouse gas emissions; it also involves providing services to its clients aimed at helping them reduce their own emissions, referred to as erased emissions. This issue is highly material: in 2025, Veolia helped eliminate 16.6 million tonnes of CO₂. This represents an increase of 23.6% compared to the 2023 baseline, in line with the GreenUp target of +30% by the end of 2027. The year-on-year growth compared to 2024 is mainly attributable to the integration of the Tashkent district heating network, as well as efforts related to methane capture and the implementation of energy efficiency contracts for tertiary and industrial clients.

Erased emissions*, falling under scope 4*, are the emissions reductions achieved by an organization's activities, products or services when these reductions occur outside its scope of activity. For example, Veolia supplies heat or electricity from renewable or low-carbon energy. In particular, the Group offers biogas and waste energy recovery solutions in countries with a carbon-intensive energy mix. Thus, thanks to Veolia the emissions that would have been generated by fossil fuels to produce the same amount of electricity or heat are avoided. By 2030, Veolia wants to increase its erased emissions by 50% through its activities.

An example of the deployment of decarbonization solutions for Veolia customers: in Lille and Roubaix, Veolia operates a "heat highway". The heating network has been extended by 20km, up to the energy recovery unit. Waste is now recovered in heat and electricity.

Scope 4

Scope 4*: An imperative to demonstrate the contribution made by customers and end users to decarbonization

Scope 4* is a concept in measuring the emissions reductions achieved by an undertaking's activities, products or services when these reductions occur outside its scope of activity. The more customers the Group has, the more its emissions increase. Indeed, when Veolia operates in factories belonging to its customers, the carbon they emit is integrated into Veolia's carbon footprint (scope 1,2 & 3). Therefore, for the Group's carbon trajectory, long-term decarbonization efforts are masked by this correlation between the increase in the Group's revenue and the increase in its emissions.

Companies that decarbonize polluting activities, such as Veolia, are facing the challenge of the decarbonization of their clients while reducing their own GHG emissions. Their emissions reduction trajectory is slower than that of other companies, especially those who decide to sell their highest-emitting activities.

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

The principle of erased emissions (also called scope 4*) consists of comparing the solution proposed by Veolia with a reference scenario corresponding to what would have happened in the absence of Veolia.

This principle is the same as that used in avoided emissions. Work to standardize avoided emissions is underway, and to prevent any confusion between the Group's practices and those that will ultimately correspond to the standard, in particular in defining the reference scenario, Veolia decided to use a different term. Veolia also participates in the standardization work necessary to better take into account the GHG emissions reduction occurring outside the organization boundaries, with the intention to align its practices with future standards.

It should also be pointed out that scope 4* is the subject of separate measurement from scopes 1, 2 and 3 and cannot under any circumstances be subtracted from these

Calculation method

Veolia's scope 4* quantifies the CO₂ that would have been emitted into the atmosphere in the absence of Veolia's decarbonization solutions put in place. The method used since 2023 is based on World Business Council for Sustainable Development (WBCSD) *Avoided Emissions*

Veolia scope 4* trajectory (million metric tons of CO₂)

With the help of our waste and energy businesses, we aim to increase our scope 4* from 13.45 Mt CO₂ eq. to 17.6 Mt CO₂ eq. in 2027 (+30%)

2050 target: neutralize Veolia's residual emissions with effective solutions

Veolia's activities will still generate residual emissions in 2050 that will be physically impossible to reduce (such as certain diffuse process emissions, residual emissions from capture processes, etc.). Neutralizing these residual emissions will be necessary to meet the Net Zero commitment by 2050. To this end, Veolia plans to develop solutions for capturing biogenic CO₂ at its own facilities and/or to purchase high-quality carbon dioxide removal (CDR) credits on the market. This approach complements the actions undertaken to reduce the Group's emissions as well as those of its clients.

Veolia is already developing carbon capture pilot projects at some of its incineration sites. The Group is also investing in innovative sequestration solutions aimed at permanently storing CO₂ in soils while improving their fertility, such as through Biochar or Enhanced Rock Weathering (ERW) applications.

These solutions are being developed within programs managed by central teams (innovation, R&D, technical management) in collaboration

Guidance. A new sector-specific approach has been developed for waste management. This approach is currently being discussed within the industry with the aim of creating the conditions for alignment and a coordinated update of practices in preparation for the next strategic plan. Furthermore, the Group is monitoring potential new use cases and may call upon external expertise to validate the compliance of the methodology used when deemed necessary. To calculate them, a physical data point (tonnage, megawatt-hour, etc.) is multiplied by an avoidance factor. This factor is calculated using a reference scenario specific to each country with regard to energy. Detail of the methodology for calculating erased emissions are available in section 4.1.5.5.

Levers for progress

The Group aims to achieve strong growth in its scope 4* by 2027, in line with the "decarbonization" pillar of the strategic program, which concerns over and above its own trajectory, that of its customers and end users. The key actions of this program are: biogas capture and recovery, waste recycling, the production of renewable and low-carbon energies, energy efficiency and waste-to-energy recovery. However, the Group remains dependent on contractual agreements negotiated with clients who may or may not finance the projects.

with country teams, in order to identify industrial and financial partners, pilot industrial sites, and to implement testing and solution adaptation campaigns as new technological innovations emerge.

These programs extend over long cycles before reaching industrial maturity.

With an estimated volume of 8 million metric tons equivalent of biogenic CO₂ treated⁽¹⁾, Veolia has the potential to become a major player in the sequestration market, which is expected to grow significantly due to numerous Net Zero commitments and the possible inclusion of Bioenergy with Carbon Capture and Storage (BECCS) credits in the European Union Emissions Trading System (EU ETS).

Moreover, purchases of carbon credits are not material. Indeed, beyond its approach to anticipating the neutralization of its residual emissions, the Group does not make voluntary carbon contribution a priority since it is, by definition, optional in the transition to Net Zero.

⁽¹⁾ This estimate is based on the number of installations, their production capacities, and the land constraints of the sites on which they are located. Naturally, it is subject to change depending on market structure, infrastructure development, and other factors.

*Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

4.1.2.1.5 Climate change adaptation

The essential climate change adaptation is reflected in the material IRO below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E1-ST-8 Operational risks related to climate change (direct and supply chain)			

Climate change creates different types of risks and opportunities on several levels. It leads to physical risks to which Veolia and its customers must adapt. While the necessary transition to a low-carbon economy generates transition risks, it also creates opportunities for the Group given its expertise in water, waste and energy (See Transition Risk Management section below).

Reducing physical risks and vulnerabilities

The services and assets operated by the Group are exposed to both acute physical climate risks (floods, droughts, heat waves, storms, etc.) and chronic physical climate risks (sea level rise, rising average temperatures, changes in seasonal precipitation patterns, chronic water stress, etc.). These risks can have operational consequences across all Veolia businesses, including service disruptions, physical damage to infrastructure and equipment, deterioration of service and treatment quality, increased operating costs, and adverse changes to working conditions.

Some of the Group's activities are particularly sensitive to physical risks:

- In the water business, specifically, droughts, chronic water stress or turbidity episodes can affect the availability and quality of the water resources;
- Similarly, the Energy business is highly dependent on temperatures, and an increase in average temperatures could reduce heating demand, leading to revenue losses.

Climate risks are integrated into the Group's risk management processes (see Chapter 2).

By anticipating the materialization of physical climate impacts on its operations through adaptation actions, Veolia contributes to enhancing the resilience of its customers and the territories in which the Group is present.

Several tools and levers already reduce the risks related to climate change and natural disasters, which are set to intensify in the coming years:

- The choice of site location in order to limit its exposure or the integration of extreme events in the design of the plants;
- Crisis management and business continuity plans for essential services (water, energy, waste management, etc.) addressing climate hazards;
- Sharing recommendations and best practices, particularly on working conditions in the context of climate change (see section 4.1.3.1.3 below);
- Strengthening the adaptation culture at different organizational levels through awareness webinars and training;
- The deployment of local adaptation plans.

For example, local subsidiaries, Veolia Spain and Aguas Andinas in Chile, have been engaged for several years in a climate change adaptation approach:

- In Chile, Aguas Andinas has deployed a climate change adaptation investment plan (US\$300 million) to address drought, turbidity events, and the aging and degradation of infrastructure. Actions undertaken include, for example, the construction of surface water storage solutions that enable the city of Santiago to increase its water autonomy. Several citizen communication and awareness campaigns supplement this initiative;
- In Spain, Veolia offers, through Aquatec, a multi-risk assessment and alert system (wind, fire, snow, flooding, etc.) and support in defining emergency measures and protocols to help local authorities develop their action plans.

In addition to these initiatives and in a more systemic approach, the work to assess operational risks (direct and across the entire value chain) related to climate change is structured, at all levels of the organization, around:

- analysis of operating asset exposure;
- understanding activity vulnerabilities;
- identification and deployment of adaptation actions.

In 2022 and 2023, the Group carried out an analysis of exposure to physical climate risks at more than 2,000 operational sites⁽¹⁾. This analysis, based on the RCP 8.5⁽²⁾ scenario by 2030 and 2050, covered seven types of potentially impactful climate hazards⁽³⁾: heatwaves and cold spells, drought, heavy rains, changes in the water cycle, rising average temperatures and rising sea level. The criteria of data availability and reliability were also considered in the choice of metrics studied. This work, carried out jointly by the internal audit, risk and insurance, and sustainable development departments, has made it possible to identify the geographical areas of priority operations for adaptation efforts: Australia/New Zealand, the United States, Colombia/Panama, Chile/Peru, France, the Czech Republic, Spain, Morocco, and countries in the Near and Middle East. Work sessions were organized in 2024 and 2025 with these Business Units to assess climate risk management maturity and identify critical sites for in-depth studies.

Since 2022, more than 30 on-site studies have been conducted (including 10 in 2024 and 13 in 2025), mainly in the priority geographies for adaptation (Australia, Taiwan, the United States, Colombia, France, the Czech Republic, Spain, Morocco, Oman and Hong Kong) and across the three business lines (water, waste and energy).

These studies enhance the understanding of operational risks related to climate change (direct and across the entire value chain). Based on the Operational Climate Adaptation and Resilience Assessment (OCARA) framework developed by Carbone 4, these studies contribute to the identification and deployment of adaptation actions. They include local climate projection data (e.g. data from DRIAS and Météo France, in France). The hazards, time horizons and projection scenarios (at least

⁽¹⁾ Operating sites and contracts referenced in the Global Report reporting tool in 2022.

⁽²⁾ Warming trajectory to +4°C by 2100.

⁽³⁾ Aligned with the European Taxonomy.

the RCP-8.5 scenario) studied are adapted to the challenges of the site (e.g. taking into account specific hazards such as strong winds, clay shrinkage/swelling, wildfires, etc. or time horizons defined in line with contract duration or facility lifespan). A study lasts on average between four and six months.

The capitalization of work conducted since 2022 and the expertise of Veolia teams contribute to the development of tools such as vulnerability profile standards and adaptation solution catalogs, by activity.

In 2024, these benchmarks already covered:

- drinking water production and distribution;
- wastewater collection and treatment;
- as well as the management of non-hazardous waste (sorting, incineration and landfill).

In 2025, the scope of these benchmarks was expanded to include energy production and distribution, waste collection and hazardous waste treatment. Today, these tools cover the Group's main activities.

Demonstrating the concrete benefits of adaptation in terms of financial performance, employee health and industrial safety remains key to facilitating decision-making and engaging all stakeholders.

The table below provides a frame of reference for translating the impacts of climate change into operational impacts for the Drinking Water business.

Climate Risk	Examples of operational vulnerabilities identified	Examples of adaptation measures for the water business
Heatwaves	• Maintaining indoor and outdoor working conditions (productivity, health, and safety risks) • Damage to sensitive equipment (electronic and electrical) • Delays to work schedules • Degradation of water quality due to proliferation of algae • Water demand pressures and worsening conflicts over use • Rising costs of energy to maintain operating temperatures • Increased risk of fires and explosions	• Reorganize work schedules • Improve insulation against cold/heat in buildings • Systematically build redundancy into cooling equipment for critical applications • Provide personal protective equipment (PPE) suitable for high temperatures • Improve hydrogen sulfide monitoring
Heavy rains	• Damage to sensitive equipment (electronic and electrical) • Pollution thresholds exceeded • Disruption to supply chains and transportation services (preventing response to callouts) • Turbidity degrading water quality • Facilities for treating wastewater and rainwater overwhelmed	• Raise the height of equipment based on extremes • Prioritize emergency warning systems • Build redundancy into electrical supply equipment • Improved waterproofing of critical equipment • Work with sanitation services before heavy rains occur to clear traffic lanes
Drought	• Scarcity of water resources impacting the production and distribution of drinking water, and cooling requirements • Degradation of water quality creating the need for additional treatment and/or larger facilities • Clay shrinkage and swelling causing infrastructure damage in clay soil areas	• Ensure adequate reagent storage • Install water reuse solutions • Resize facilities to accommodate the additional treatments • Prioritize redundancy in local resources and networking in collaboration with local stakeholders

To complete this toolbox and facilitate exposure studies and analyses (at different organizational levels), the Group worked in 2025 on the development of a dynamic climate hazard exposure tool. The operational deployment of the tool is planned for 2026 and will enable an update of the exposure study conducted in 2023.

These tools provide resources for local entities (Business Units and operating sites) to identify adaptation measures and initiate action plans to strengthen their resilience and that of their customers. They will also serve as an initial basis for developing a financial risk and opportunity quantification methodology, integrating analysis of past events, consideration of vulnerabilities, and short-, medium- and long-term climate projections.

The effective deployment of the Group's action plans faces two main challenges:

- The availability of the necessary resources and means from its clients for their implementation;
- The time lag between long-term climate scenarios (2050, 2100) and shorter-term investment cycles.

Management of transition risks

Combating climate change requires the transition to a low-carbon economy. This transition creates significant business opportunities for the Group, whose solutions preserve, recycle and regenerate resources. It may also give rise to transition-related risks. These transition risks can be of various types: regulatory, technological, market, and reputational.

In 2020, the Group conducted a study on the resilience of its business model and its associated strategy, including two low-carbon transition scenarios (<2°C) by 2030. This has made it possible to target the risks associated with the transition to a low-carbon economy (e.g. carbon markets, withdrawal from thermal coal, reduction in landfill, heat production, electrification, reduction in certain activities).

The Group is particularly exposed to the Emissions Trading Scheme (EU ETS) introduced by the European Union in 2005, due to the quantity of free allowances granted and the cost of carbon on this market (see section 6.2, note 8.3.1.4). This market also represents an opportunity for Veolia to offer decarbonization solutions to companies subject to the EU Emissions Trading System (ETS), thereby assisting them in meeting their emission quota obligations.

Veolia therefore adopted an active strategy to manage its GHG emissions and allowances, by implementing an appropriate structure and creating a special-purpose legal entity to purchase, sell and price different types of greenhouse gas allowances.

4.1.2.1.6 Metrics

Energy consumption

Following integration work in the reporting tool for detailed calculations of energy mixes, Veolia will, in 2025, be able to provide details of its energy mix consumption and its breakdown between renewable and non-renewable energies.

In order to accurately reflect the diversity of its contractual models and its true footprint, the Group has chosen to present these indicators according to two complementary approaches:

- A perspective limited to **assets classified under scopes 1 and 2**: in accordance with the disclosure requirements of the CSRD. However, this delineation effectively excludes a significant portion of the facilities operated by the Group. Indeed, numerous contracts under which Veolia acts as an operator on behalf of third parties (municipal and industrial clients) are, from a methodological standpoint, classified under scope 3.
- A comprehensive operational overview encompassing **all assets managed by Veolia (Scopes 1, 2, and 3)**: In order to accurately reflect the full scope of the Group's activities, a second table incorporates all energy consumption, thus covering assets operated on behalf of our clients. **This global perimeter is the most representative of Veolia's operational reality and aligns with the basis of the Group's consolidated revenue.** Furthermore, this exhaustive perspective is fully consistent with the core of our ecological transformation strategy: decarbonizing our clients' activities through the optimized operation of their facilities—a process already measured and valued by the Group through the monitoring of the indicator known as "Erased Emissions¹."

It should be noted that the transition-related IROs are defined in sections 4.1.2.1.3, 4.2.1.2.4, and 4.2.1.2.5.

Positive impacts and financial opportunities

- E1-ST-3 Attractiveness for financial stakeholders due to decarbonization
- E1-ST-5 Reduction of OpEx by increasing the energy efficiency of our installations;
- E1-ES-7 Development of solutions to reduce clients' GHG emissions, in particular: energy efficiency, flexibility, local decarbonizing energy.

Negative impacts or financial risks:

- E1-ST-1 Significant GHG emissions (scopes 1, 2 and 3) requiring the implementation of a transition plan;
- E1-ST-4 Additional costs resulting from increased regulatory requirements for GHG emissions
- E1-ST-2 Progressive exclusion from access to financial markets in the event of failing to exit coal-based energy production

The Group plans to deepen its identification and analysis of transition risks and opportunities by 2027 in order to inform the preparation of its next strategic program.

In order to guide the reader's understanding of these tables, which have been prepared in strict compliance with European regulations, it is necessary to reiterate the specific characteristics of our professions and the assets under management. Indeed, the Group's activities include providing access to essential services for populations, such as district heating networks, for which, in certain countries, the sole energy source remains fossil fuels. In parallel, the Group has, for several years, implemented action plans aimed at reducing the proportion of these fossil energies (see section 4.1.2.3 "Aligning Veolia's trajectory with the 1.5°C target").

It should be emphasized that, across this entire operational scope (Scopes 1, 2, and 3), the share of renewable sources in total energy consumption will reach 33.9% in 2025. This rate notably reflects the consumption of renewable fuels (including biomass) and the biogenic fraction derived from our non-hazardous waste incinerators. These strategic activities in energy recovery and renewable energy production concretely illustrate the ambitions of the GreenUp program. Moreover, they are fully aligned with the categories of eligible projects (Energy and Waste categories) in the new Veolia Green Financing Framework, published in March 2025, which aims to mobilize green financing instruments to support and accelerate the deployment of our decarbonization solutions.

⁽¹⁾ Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

Energy consumption and energy mix from assets within scopes 1 & 2		Result 2024	Result 2025
1) Fuel consumption from coal and coal products (MWh)			17,500,906
2) Fuel consumption from crude oil and petroleum products (MWh)			788,296
3) Fuel consumption from natural gas (MWh)			21,233,089
4) Fuel consumption from other fossil sources (MWh) ⁽¹⁾			8,306,428
5) Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources (MWh)			2,930,496
6) Total fossil energy consumption (MWh) (calculated as the sum of lines 1 to 5)			50,759,215
Share of fossil sources in total energy consumption (%)			70.9 %
7) Consumption from nuclear sources (MWh)	Non disclosed in 2024 URD		551,537
Share of consumption from nuclear sources in total energy consumption (%)			0.8 %
8) Fuel consumption for renewable sources, including biomass (also comprising industrial and municipal waste of biologic origin, biogas, renewable hydrogen, etc.) (MWh)			19,531,236
9) Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources (MWh)			678,209
10) The consumption of self-generated non-fuel renewable energy (MWh)			65,742
11) Total renewable energy consumption (MWh) (calculated as the sum of lines 8 to 10)			20,275,187
Share of renewable sources in total energy consumption (%)			28.3 %
Total energy consumption (MWh) (calculated as the sum of lines 6, 7 and 11)		67,158,467	71,585,939

Energy consumption and energy mix for all operated assets		Result 2024	Result 2025
1) Fuel consumption from coal and coal products (MWh)			17,508,615
2) Fuel consumption from crude oil and petroleum products (MWh)			1,854,417
3) Fuel consumption from natural gas (MWh)			29,822,285
4) Fuel consumption from other fossil sources (MWh) ⁽¹⁾			24,636,133
5) Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources (MWh)			8,300,088
6) Total fossil energy consumption (MWh) (calculated as the sum of lines 1 to 5)			82,121,538
Share of fossil sources in total energy consumption (%)			64.5 %
7) Consumption from nuclear sources (MWh)	Non disclosed in 2024 URD		1,948,317
Share of consumption from nuclear sources in total energy consumption (%)			1.5 %
8) Fuel consumption for renewable sources, including biomass (also comprising industrial and municipal waste of biologic origin, biogas, renewable hydrogen, etc.) (MWh)			41,428,791
9) Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources (MWh)			1,578,569
10) The consumption of self-generated non-fuel renewable energy (MWh)			167,540
11) Total renewable energy consumption (MWh) (calculated as the sum of lines 8 to 10)			43,174,900
Share of renewable sources in total energy consumption (%)			34.0 %
Total energy consumption (MWh) (calculated as the sum of lines 6, 7 and 11)			127,244,755

Relationship between energy intensity on the basis of net revenue and financial information

KPIs	2024	2025
Total net revenue (financial statements) (€M)	44,692	44,396
Energy intensity per net revenue (MWh consumed/€M)	1,503	1,612

Veolia draws the reader's attention to understanding the share of fossil sources in total energy consumption (%)—namely, the 70.9% in the "scope 1 and 2" table and the 64.5% in the table covering all operated assets.

Indeed, these rates include fossil energies contained in the waste delivered to Veolia for its treatment channels (including incineration) and are therefore not representative of the percentage of fossil energies purchased by the Group for its treatment processes.

⁽¹⁾ Includes the proportion of fossil fuel energy contained in waste.

Total GHG emissions divided between scope 1, scope 2 and scope 3 significant

KPIs	Retrospective data		
	2021 pro forma	2024	2025
Scope 1 GHG emissions⁽¹⁾			
Gross scope 1 GHG emissions [ktCO ₂ eq]	22,243	18,337	18,200
Percentage of scope 1 GHG emissions from regulated emission trading schemes (%)		40.3 %	46.5 %
Scope 2 GHG emissions			
Gross scope 2 GHG emissions location-based (ktCO ₂ eq)	2,172	2,135	1,753
Gross scope 2 GHG emissions market-based (ktCO ₂ eq)	2,032	1,913	1,552
Significant scope 3 GHG emissions			
1 Goods and services purchased	5,383	5,786	5,466
2 Capital goods	1,067	1,308	885
3 Activities in the fuel and energy sectors (not included in scopes 1 and 2)	6,849	8,834	6,924
4 Upstream transportation and distribution	847	1,127	1,511
5 Waste produced during operation	717	599	625
6 Business travel	35	47	53
7 Commuting by employees	254	254	257
8 Upstream leased assets	3,771	5,216	4,886
9 Downstream transportation	NA	NA	NA
10 Processing of sold products	NA	NA	NA
11 Use of products sold	6,917	6,691	6,803
12 End-of-life treatment of products sold	76	80	77
13 Downstream leased assets	814	696	653
14 Franchises	NA	NA	NA
15 Investments	644	671	650
Total gross indirect GHG emissions (scope 3 - SBTi) (ktCO₂eq)	27,374	31,309	28,788
Scope 3 emissions from concessions and O&M contracts - voluntary reporting	6,283	9,008	8,258
Transformation of products sold - voluntary reporting	3,423	3,929	4,380
Total gross indirect GHG emissions (scope 3 - SBTi and voluntary) (ktCO₂eq)^(1, 2)	37,080	44,246	41,425
Total GHG emissions - SBTi			
Total GHG emissions (location-based) (ktCO₂eq)	51,789	51,781	48,741
Total GHG emissions (market-based) (ktCO₂eq)	51,649	51,559	48,540
Total GHG emissions - SBTi and voluntary Scope 3			
Total GHG emissions (location-based) (ktCO₂eq)	61,495	64,718	61,378
Total GHG emissions (market-based) (ktCO₂eq)	61,355	64,496	61,177

Biogenic emissions

Biogenic scope	Result 2024	Result 2025
Scope 1 (Mt eq. CO ₂)	5.8	6.7
Scope 2 (Mt eq. CO ₂)	0.2	0.1
Scope 3 (Mt eq. CO ₂)	Non disclosed in 2024 URD	7.6

Reconciliation of net revenue amounts used to calculate GHG intensity with the financial statements

KPIs	2024	2025
Total net revenue (according to financial statements)	44,692	44,396
Carbon intensity of Veolia's revenue (scopes 1&2) in tCO ₂ eq/M€	467	445

Total energy production⁽³⁾

	Result 2024	Result 2025
Non-renewable energy production (MWh)	Non disclosed in 2024 URD	41,495,712
renewable energy production (MWh)	Non disclosed in 2024 URD	13,711,428
Total (en MWh)	51,753,434⁽⁴⁾	55,207,140

Anticipated financial effects

In accordance with section 4.1.1.3 above, Veolia is limited to qualitative information on this subject.

⁽¹⁾ Adjustment of the 2021 and 2024 figures in accordance with the update of operational control decided in 2024 and refined in 2025 (see above 4.1.1.2). The impacts are:

■ in 2021, a decrease of 0.1 Mt CO₂ equivalent in scopes 1 and 2 and an increase of 0.1 Mt CO₂ equivalent in the expanded scope 3;
■ in 2024, a reduction of scopes 1 and 2 by 0.6 MtCO₂e, offset by an increase in the expanded scope 3 by 0.5 MtCO₂e.

⁽²⁾ Technical adjustments related to the SBTi revision that took place in 2025. This led to a decrease in scope 3 of 1.8 MtCO₂e in 2021 and 2.1 MtCO₂e in 2024.

⁽³⁾ For power generation plants, the renewable energy production of the site is proportional to the share of renewable fuels and energies consumed on the site.

⁽⁴⁾ A new methodology made it possible this year to publish the production mixes for disclosure. This methodology was applied retrospectively, explaining the change in the published value for the year 2024 (previous value: 54,789,752 MWh).

4.1.2.2 Pollution (E2)

4.1.2.2.1 Introduction

Veolia's areas of activity inherently involve combating pollution, a crucial issue for the planet and the existence of all living beings.

It takes various forms, such as air, water, or soil pollution. Beyond the conventional pollutants, the development of human activities and the increasing vigilance with regard to pollution have raised awareness of the existence of new pollutants, which have only started to be analyzed and measured recently, such as microplastics, endocrine disruptors or PFAs (per- and polyfluoroalkyl substances). The topic of pollution is therefore diverse and concerns a high number of substances, the list of which continues to grow as studies are conducted.

Hazardous waste occupies a special place among the potential sources of pollution, and the Veolia group is particularly involved in its treatment. This type of waste is subject to numerous regulations, in an increasingly strict framework to regulate its handling and treatment:

- in all areas of the world where Veolia operates, a local regulatory framework defines the qualification of hazardous waste as well as the methods of traceability, transportation, treatment and disposal;
- these national regulations are supplemented in particular by the international conventions of Montreal (1987), Basel (1989), Rotterdam (1998), Stockholm (2001) and Minamata (2013);
- at European level, there are numerous texts governing hazardous waste: Commission Decision of May 3, 2000 establishing a list of hazardous and non-hazardous waste, Directive 2008/98/EU on hazardous waste treatment, Regulation n°2024/1157/EC for shipment, directives on electrical and electronic waste 2012/19/EU and batteries and accumulators 2006/66/EC, Directive 2012/18/EU, known as "Seveso", for the control of major-incident hazards, etc.

More than 90% of the hazardous waste generated worldwide comes from industrial activities and Veolia contributes to treating a significant part of this volume, in particular:

- chemical industries including pharmaceutical and agrochemical: acidic or basic cleaning products, halogenated solvents, contaminated sludge, contaminated packaging; etc.
- mechanical manufacturing, automotive industry, metal industry: waste contaminated with heavy metals, solvents, paint residues; etc.
- oil industry: tank sludge, used catalysts, etc.

In this context, Veolia has a dual role:

1. A significant part of Veolia's activities consists of depolluting, that is, reducing the impact of pollution caused by third parties, for example:

- Wastewater treatment, which avoids discharging pollutants released into soil, groundwater, or rivers. Veolia contributes to this activity both as a treatment plant operator and as a designer and marketer of treatment solutions,

- or hazardous waste treatment, mainly through its role in the collection of such waste as well as its treatment in specialized installations.

2. At the same time, the industrial assets operated by Veolia are by nature generating some pollution of air (e.g. energy production plants, incinerators, etc.), water and soil (e.g. discharge of industrial effluents, etc.);

Point 1, above, is particularly material at Veolia and since it is not a predetermined subject in ESRS E2, it is an entity-specific subject of additional disclosure. Two IROs illustrate this point: E2-ES-2 and E2-ES-3. They are detailed in sections 4.1.2.2.3.2 and 4.1.2.2.3.3 below, respectively.

Point 2, above, is a central element of the ESRS E2 standard on the subject of pollution. It is addressed by IROs E2-ST-1 which is detailed in section 4.1.2.2.2 below.

Note that point 2 covers all Veolia's operating activities, including those that contribute to depollution, such as the wastewater treatment plants or hazardous waste treatment installations mentioned above. Such installations are therefore analyzed from two complementary points of view.

The interactions of pollution-related topics with other sections of the sustainability statement are listed hereafter:

- emissions of pollutants in the form of GHG (carbon dioxide CO₂, methane CH₄, nitrous oxide N₂O) are dealt with in § 4.1.2.1 Climate change, above;
- the depollution aspects of the Water & Marine Resources standard § 4.1.2.3, below, are exposed in the present section;
- IRO E4-ES-1 and E4-ST-2 concern the interactions of pollution and depollution with biodiversity and ecosystems and are therefore detailed in section 4.1.2.4 below;
- IRO E5-ST-3 in section 4.1.2.5 below, addresses the contribution of hazardous waste treatment in the circular economy, thus contributing to reduce the volume of pollution;
- the impacts of controlling the pollutants emitted and accelerating depollution actions contribute to the protection of local communities (see § 4.1.3.3, below).

4.1.2.2.2 Pollution emitted by Veolia

4.1.2.2.2.1 Main stakes and related IROs

Veolia operates technical facilities of many kinds: treatment plants, networks, energy plants... These kind of activities are by nature sources of pollutants and the corresponding risks are identified in Veolia's risk mapping, which is exposed in detail in §2.2 Risk factors of Veolia Universal Registration Document.

To start with, the table below exposes the list of the Veolia's main activities concerned by emitting pollutants:

Activity	Vector	Possible types of pollution
WATER Wastewater treatment plant	Wastewater discharged after treatment into the aquatic environment and soil	For pollutants the treatment of which is provided by the facility: • in normal operation: residual substances discharged after treatment and elimination of the majority of them; • exceptionally: untreated substances discharged as a result of saturation or installation failure. For pollutants present in the incoming water and for which treatment is not provided by the installation, discharge without treatment into the environment.
	Sludge from the treatment plant	The sludge produced by sewage treatment plants varies in composition depending on the case: • sludge whose composition complies with the standards can be used for agricultural spreading; • The remaining sludge is incinerated or placed in landfill to prevent any risk of downstream pollution.
	Odors emitted	The sludge produced is odorous and these odors are treated so as not to affect the immediate vicinity of the treatment plants. Odor treatments are installed according to the regulations, but also the proximity of the populations concerned and the sensitivity of the subject.
WASTE Landfill sites for hazardous and non-hazardous waste	Liquid discharges	The infiltration of rainwater into the waste stored in landfills generates, after maceration, polluting liquids called leachates, which are retained and treated to avoid infiltration into the soil and groundwater. The retention systems are: • geomembranes to contain these liquids; • leachate treatment installations.
	Odors emitted	Odors can affect the immediate vicinity of landfill sites. These odors are progressively contained by the cells covers, as the landfill site is filled.
WASTE Waste incineration	Gaseous discharge from combustion gases	Combustion gases contain SOx, NOx, dust, mercury, etc. and are treated before their discharge into the atmosphere to remove hazardous substances in accordance with regulatory thresholds.
ENERGY Fossil fuel-based production plants	Solid residues after combustion (incineration ash and bottom ash)	Solid residues after combustion are either recovered as part of the circular economy (e.g. metals) or placed in landfill to avoid any risk of downstream pollution.
WASTE Physicochemical treatment of hazardous waste	Solid and liquid residues from treatment processes	Part of the product of physico-chemical treatments is recovered as part of the circular economy (recycling of oils, for example). The remaining solid and liquid fractions are incinerated or placed in landfill to prevent any risk of downstream pollution.

The disclosure that follows analyses these risks according to two complementary approaches, each of them involving specific action plans:

- IRO E2-ST-1, addresses the recurrent pollution generated by the routine functioning of the facilities;
- IRO E2-ST-4, addresses the prevention of significant pollutions generated by accident.

IRO E2-ST-1 is a negative impact, in assessing the permanent gross risk represented by the installations operated by Veolia, and before taking into consideration the operational measures intended to ensure its control. A follow-Up of the main pollutants emitted by Veolia is displayed in section 4.1.2.2.2.6 below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E2-ST-1 Pollution generated by our own activities (air, water, soil, hazardous waste, etc.)			

A complementary aspect is the risk in case an accidental major pollution would occur due to our operated facilities. Its mitigation requires in-depth industrial risks analysis and prevention measures, upstream of the duty of care brought in daily operations. This IRO aims at underlining the importance of the risk management framework and no quantified KPI is associated with it. This topic is taken into account in the following financial risk IRO E2-ST-4:

Positive impact	Negative impact	Financial opportunity	Financial risk
E2-ST-4 Risk in the event of major pollution caused by an accident at a site operated by Veolia			

Veolia's value chain is involved at various levels:

	Key stakeholders involved
Value chain	Upstream value chain: • Regulatory authorities: Definition of the general framework of conditions to be respected; • Administrative authorities: Limits imposed on each Installation regarding the pollution emitted; • Where applicable, the third party (e.g. municipality) responsible for the installation at which Veolia is an operating service provider: definition of the type of treatment performed and performance objectives. Downstream value chain: • The planet; • Affected communities.
Business Model	This IRO contributes essentially to Veolia's business model through its environmental performance.

The timeframe of these IROs is multiple:

- local regulations are to be strictly enforced at all times: pollution emitted by industrial installations is subject to strict local regulations by the authorities. Veolia complies with these regulations, which concern both the maximum pollution emission thresholds and the methods of control and information. For each operating permit, these subjects require daily mobilization of all operational teams to ensure operational control;
- on top of that, the prevention of accidental major pollution requires operational risks assessments and related action plans to be regularly performed;
- new regulations are regularly issued with upgraded requirements: it is necessary to adapt to new and ever more stringent requirements worldwide, typically annually (regulatory changes and new customer demands).

These aspects play an even more significant role since very many sites operated by the Group are regulatory classified facilities, including at "Seveso" level in Europe or at equivalent level outside Europe, regarding the prevention of industrial risks.

4.1.2.2.2 Main pollutants managed by Veolia through its treatment channels

Each facility is particular and is operated by Veolia in the respect of the specific conditions defined by the operating permit delivered by the local authorities, particularly concerning the nature and the amount of pollutants emitted.

In order to get a global overview, an analysis based on the official monitoring by the EU of the pollutants emitted by industrial actors has been performed: the European Industrial Emissions Portal reports the yearly emissions of a list of 91 polluting substances, sector by sector. It is to be noted that Veolia's activities in the EU are representative of its worldwide footprint. The latest available data on the portal (i.e. 2023 at the moment when this report is written), show that the potentially concerned sectors of activities in Veolia are mainly:

1. Installations for the disposal or recovery of hazardous waste;
2. Urban waste water treatment plants;
3. Thermal power stations & other combustion installations.

The main pollutants identified by this EU authorities report and related to each of these 3 sectors of activities are displayed hereafter.

Hazardous waste treatment plants

The EU reporting platform highlights the following air pollutants from incineration:

- pentachlorobenzène, Cyanides;

- Veolia operates its hazardous waste incinerators at high temperatures around ranging from 950°C to 1100°C, with the aim of eliminating all this kind of dangerous substances by making sure that the combustion temperature exceeds the level ensuring that the corresponding molecules are broken. This applies to the two mentioned substances as well as to other possible pollutants like hydrochlorofluorocarbons, with elimination ratios of over 99,99%. Therefore, the temperature of combustion is a key parameter which is under permanent monitoring;
- moreover, the local regulation and the operating permits define in any case the specific thresholds which constitute the references for monitoring the emissions.

Urban waste water treatment plants

It is to be reminded that the pollutants emitted by waste water treatment plants derive mostly from those incoming the plant and generated by human activities upstream. Therefore, they are not generated by Veolia, the mission of which is to lower them to the level required by the local regulation, the operating permit and specific additional requirements defined by contract, when relevant. The EU reporting platform highlights the following water pollutants regarding waste water treatment plants:

- organic carbon, Nitrogen and Phosphorus, for which the waste water treatment plants operated by Veolia have the mission of abating the level at the inlet down below the thresholds defined by the regulation. The abating of Organic carbon is particularly monitored through the measurement of COD at the inlet and at the outlet of the plant. Details are given in the following sections below;
- Various other polluting substances are identified by the European portal as being frequently present in wastewater:
 - Veolia ensures that the water discharged downstream from the treatment plants it operates complies with operating permits. Additionally,
 - Veolia offers its clients the option to go further by providing supplementary treatment solutions specifically designed to eliminate these substances (see section 4.1.2.2.3 below).

Thermal power stations

The EU reporting platform highlights for thermal power stations the following air pollutants:

- Sulfur dioxide (SO₂); Nitrogen oxides (NO_x); Mercury compounds; Particulate matter (dust, all of which are monitored and reported at the Group level in section 4.1.2.2.6 below);
- Various other polluting substances are also mentioned and depend on the specific production conditions. They are monitored locally, in accordance with regulations and operating permits, which define specific thresholds and serve as reference points for the monitoring of emissions from each facility.

4.1.2.2.3 Microplastics and substances of concern

The following two points relate to the subject of microplastics as well as to the subject of substances of concern and very high concern.

Microplastics

If microplastics are present in various environmental media, including water, their quantity depends entirely on the inputs into Veolia's facilities. Furthermore, current regulations do not provide for standardized quantification methods. However, as described in section 4.1.2.2.3.2, the Group already has technologies to reduce their concentration and has reaffirmed in its GreenUp strategic program its priority to develop solutions for treating complex pollution.

Substances of concern and very high concern

The Group has, for several years, integrated the chemical transition as an element of its strategy for managing its environmental performance (see section 2 Environmental and Industrial Risks (OPE-02)).

For example, regarding hazardous waste, internal procedures govern the process of characterizing incoming waste for treatment, in order to best define appropriate treatment solutions to limit subsequent pollution, always in compliance with regulatory thresholds.

However, in certain activities, it is materially impossible for operators to systematically characterize inputs due to the nature of the activity (notably municipal waste treatment centers, municipal wastewater treatment plants, or landfill sites). As a result, even though the sites operate in accordance with existing legislation, the outgoing flows may contain pollutants that were present in the received flows.

As part of its policy on the prevention of environmental and industrial risks, Veolia ensures compliance with the various applicable legislations (see section 1.6 Environmental Regulation). Nonetheless, the Group notes that there are many situations where issues related to pollutants are not yet regulated, and as a result, it participates in discussions with public authorities and other stakeholders as part of the process of developing proposals for changes to these regulations.

In practice, convinced that a chemical transition can only succeed through collective mobilization, Veolia has brought together a group of contributors since 2019 to work on the best way to implement the chemical transition through its "Chemical transition pathway" program. In 2024, the Group joined the independent non-profit organization ChemSec, which advocates for the substitution of toxic chemical substances with safer alternatives, supporting companies in transitioning to new alternatives and acting as a bridge between regulators, industry, scientific communities, and civil society.

With regard to substances of concern or high concern, the Group conducted a cross-functional analysis involving the main relevant departments (business support and performance—including the scientific and technological expertise department, health and safety risks, procurement) which identified, at one site, the use of a substance that could potentially be restricted by the European Union. Based on current scientific knowledge, the use of this substance in a manufactured product by Veolia (whose revenue is not material at the Group level) complies with water standards worldwide (NSF 61, ACS France, KTW Germany) and has shown excellent performance in terms of treatment efficiency and durability.

As a precaution, Veolia is continuing its efforts to find an alternative with similar characteristics and will take appropriate measures to replace this substance in the event of regulatory changes.

4.1.2.2.4 A Group operational policy supporting action in the Business Units

Veolia's local teams assess the pollution risks associated with its activities and applies a strict policy to ensure its prevention. As explained in section 4.1.1.5.1 above, Veolia makes available to its local teams all the experience gathered in the Group's many operations, through its global network of experts, business communities and its Business Support and Performance Department. It also makes the European BAT (best available techniques) available to all BUs worldwide.

This ensures both:

- the control of pollutants discharged by the installations operated (IRO E2-ST-1);
- the prevention of industrial risks, particularly critical for IRO E2-ST-4.

This operational policy is translated locally into appropriate action plans. Given the decentralized organization of Veolia's operations, the local regulatory specificities and the terms and conditions specific to each contract, the action plans for pollution emitted by the installations can only be managed locally:

- verification by the Business Unit that the installation's technical capabilities comply with the local standards and regulations to be applied;
- assessment of industrial risks and implementation of suitable risk-mitigation measures, based in particular on 2 widely acknowledged methodologies:
 - HAZOP (Hazard and Operability) studies,
 - FMECA (Failure Mode and Effect Critical Analysis).
- analysis of exceptional situations that may result in threshold overruns, and where applicable, Veolia advising its client on measures that would limit both the risks of occurrence and the negative consequences;
- implementation by Veolia's local teams of operational monitoring of chemical and biological parameters, and detection of any deviations in order to address them if possible before exceeding the authorized thresholds;
- implementation of an operating strategy allowing a return to normal, in the event of a threshold overrun;
- informing the competent authorities of any overruns and analysis of situations.

The most significant of these action plans are formalized by the Business Units in their annual commitments to the Environmental and Industrial Management System (see section 4.1.1.5.1 above).

In the event of a major pollution incident, the Group's alert process is activated in order to inform and involve all concerned actors from the local level up to the headquarters if needed, with the aim of taking action as quickly as possible and properly informing all types of stakeholders.

4.1.2.2.5 Guide values defined for the level of pollution emitted

In addition to local regulations, Veolia has voluntarily identified 2027 guide values for the main pollution emitted by the Group's plants, as indicated in the Strategy paragraph 4.1.1.5.1 above. These values are listed below:

	Type of pollution	Unit of measurement	2027 guide value
Air pollution	Waste incineration:		
	• NO _x	mg/Nm ³	< 110
	• SO _x	mg/Nm ³	< 20
	• Dust	mg/Nm ³	< 3
	Energy production plants with more than 100 GWh/year of energy sold:		
	• NO _x	g/MWh of fuel consumed	< 190
	• SO _x	g/MWh of fuel consumed	< 120
	• Dust	g/MWh of fuel consumed	< 10
	• Mercury	mg/MWh of fuel consumed	< 5
Pollution of water	Wastewater treatment plants with a population equivalent capacity of more than 100,000		
	• COD treatment efficiency	%	92 %

These issues are therefore considered to be priorities and are subject to annual review by the business units, within the framework of the Environmental and Industrial Management System (EIMS):

- assessment by BUs of issues requiring special attention;
- local action plans and associated progress targets, under the responsibility of the business unit.

4.1.2.2.6 Follow-up of the main pollutants emitted

As explained above in §4.1.2.2.2, the 91 substances concerned by the E-PRTR regulation on air, water and soil pollution, have been taken into account through the European Industrial Emissions Portal, in order to determine which ones are material regarding Veolia activities.

The main parameters for pollution emitted are the subject of consolidated reporting at Group level, voluntarily published below.

This disclosure covers thus a broader scope than the sole sites exceeding the emission thresholds set by the E-PRTR regulation.

Metrics (definition and unit)	2024	2025
COD (chemical oxygen demand) for discharges from wastewater treatment plants (millions of t)	2.7	2.6
NO _x emitted by waste incinerators (t)	9 731	9,423
SO _x emitted by waste incinerators (t)	934	938
Dust emitted by waste incinerators (t)	143	147
Mercury emitted by waste incinerators (kg)	210	160
NO _x emitted by power plants with more than 100 GWh/year of energy sold: (t)	7,720	8,184
SO _x emitted by power plants with more than 100 GWh/year of energy sold (t)	4,074	3,037
Dust emitted by power plants with more than 100 GWh/year of energy sold (t)	415	268
Mercury emitted by power plants with more than 100 GWh/year of energy sold (kg)	187	145

For mercury emitted from power plants, data are estimated by excess for almost half of the sites, based on regulatory maximum values, in a conservative approach. For all other mercury emitting sites, data are estimated on the basis of monthly or annual sampling.

Financial assessment of pollution-related risks

Financial assessment of pollution risk: Veolia intends to take advantage of the possibility offered by the CSRD to postpone the quantitative disclosure obligation in the first years, in order to take the time to refine the method that will be implemented to carry out this evaluation in a homogeneous way with other international groups with a similar profile, and by doing so, provide the financial market with usable information.

From a qualitative point of view, reference can be made to the annual risk assessment campaign. Among the environmental risks, accidental pollution of the environment by a site operated by Veolia appears to be the primary concern of the Business Units. These risks are identified and characterized, and, if necessary, they are the subject of an action plan identified within the annual framework of the EIMS (Environmental and Industrial Management System), at the initiative of the Business Units concerned.

4.1.2.2.3 Depollution activities

4.1.2.2.3.1 General aspects

Veolia has gained extensive experience in identifying and treating pollutants, which is one of the three main operational priorities of its new GreenUp strategic program.

Before detailing the specific aspects related to IRO E2-ES-2 and E2-ES-3 below, it is worth recalling the major role played by Veolia in the service of depollution through the operation of thousands of wastewater treatment plants of all sizes worldwide.

The metric that best reflects the efficiency of this depollution is the treatment efficiency of the wastewater treatment plants: percentage ratio between the load eliminated by the wastewater treatment plant and the incoming load, expressed in COD.

For wastewater treatment plants with a population equivalent capacity of more than 150,000, which represent nearly 60% of the Group's wastewater treatment capacity, the Group has set among the 2027 guide values referred to in section 4.1.1.5.1 above over 92% for COD treatment efficiency.

The performance recorded in 2025 on this metric is as follows:

Metrics (definition and unit)	2024	2025
Treatment efficiency in COD (%): Ratio between the load eliminated by the wastewater treatment plant and the incoming load, both expressed as COD	91.1	91.8

4.1.2.2.3.2 Treatment of emerging water pollutants

Beyond conventional wastewater treatment, as mentioned above, Veolia has gained extensive experience in the identification and treatment of water pollutants, whether they are the usual ones (carbon, nitrogen and phosphorus), or emerging ones such as endocrine disruptors, PFAs, microplastics, etc. Their treatment is a clearly stated priority in the new GreenUp strategic program.

The corresponding IRO E2-ES-2, which is mentioned below, is classified as a "financial opportunity" in so far as it drives developments in the business portfolio, and contributes to the development of the boosters mentioned in section 4.1.1.5.2 above and to the objective of revenue growth in priority multifaceted performance business segments detailed in section 4.1.1.5.1 above.

Positive impact	Negative impact	Financial opportunity	Financial risk
E2-ES-2 Development of depollution activities for our clients in line with the new requirements (emerging pollutants in water, micropollutants, endocrine disruptors, etc.)			
This IRO is fully topical, as shown for example by the actions undertaken in the United States and in Europe to treat PFAs in drinking water, and we can predict that its scope will only increase over the next decade, as a result of growing awareness among the population and the progressive financing of projects.		The mobilization of investments will keep pace with the advancement of scientific knowledge, particularly epidemiological, regarding the impact of emerging pollutants on human health and environment.	
The main interactions of this IRO with Veolia’s value chain and business model are as follows:			
Value chain	Upstream value chain: • regulatory authorities: Definition of the general framework of conditions to be respected; • administrative authorities: Limits imposed at each Installation on the pollution emitted; • where applicable, the third party (e.g. municipality) responsible for the installation at which Veolia is an operating service provider: definition of the type of treatment performed and performance objectives. Downstream value chain: • shareholders through the development of sustainable activities; • the planet and affected communities, through positive environmental impacts.		
Business model	This IRO contributes to Veolia’s business model mainly through its commercial performance, as well as its environmental performance.		

Strong increase in the level of requirement for the treatment of water pollution

Regarding wastewater, we can see:

- the strengthening of the treatment requirements for the usual parameters already regulated, i.e. nitrogen and phosphorus. For example, the new EU Urban Wastewater Treatment Directive (UWWTD), in force since the beginning of 2025, will require a gradual shift from 1 to 0.6 mg/l for total phosphorus and from 10 to 8 mg/l for total nitrogen, in order to better protect the receiving environment from the risk of eutrophication; Veolia follows-up closely the latest developments:
 - the way the required performance are to be controlled,
 - the calendar and particular conditions of UWWTP implementation (e.g. identification of local sensitive zones) defined by European countries authorities.
- the introduction of new requirements for emerging pollutants in a growing number of geographies outside of Europe;
- the growing obligation for industrials to recycle their process water and to very strongly limit pollution discharges into the environment.

Constantly evolving technologies to answer the needs

In its business model, Veolia is an operator of environmental services through its local entities, and a supplier of solutions enabling the treatment of complex pollution through its technological branch WaterTech. These solutions represent around 1 billion Euros of annual revenue.

Here are some examples of its corresponding products and services:

- 70% reduction in the energy consumed by nitrogen treatment systems in wastewater treatment plants, thanks to carefully selected bacteria;
- for instance, for the treatment of PFAS, micropollutants or microplastics in the water stream, Veolia offers integrated custom solutions (fixed or mobile), based on its proprietary technologies (Ultrafiltration membranes, Membranes Bioreactors, Reverse Osmosis, LeapFAS patented active carbon reactor, Ozone generators);
- assistance to industrials wishing to design and operate their sites in ZLD (Zero Liquid Discharge) mode, thanks to the combination of membrane technologies and evapo-concentration and salt recycling;

- provision of phosphate-free formulations for the protection of circuits in industrial cooling units and thermal power plants, thus stopping the eutrophication of the receiving environments.

Regarding PFAS treatment, Veolia has implemented the following actions since 2024:

Establishing a strategic investment plan in the United States to bring all of Veolia's Regulated Water drinking water production plants into compliance with the PFAS treatment targets set by local authorities. By the end of 2025, the deployment of this plan had enabled Veolia to equip more than 30% of its sites subject to compliance obligations, representing significant progress in the treatment of targeted PFAS. For example, in June 2025, Veolia inaugurated one of the largest treatment plants in the northeastern United States in Stanton (Delaware), with a treatment capacity of 120 million liters of water per day.

Assessing the presence of regulated PFAS in drinking water at all plants operated by Veolia in France. In cases where water quality limits are

exceeded, action plans have been proposed to our clients to restore compliance with regulations and ensure a supply of quality drinking water to users, including:

- the identification and development of alternative water sources,
- interconnections of water networks,
- the deployment of advanced treatment solutions.

For example, mobile PFAS treatment units were installed in 2025 at the water supply sources for the Saint-Louis urban area (Alsace) while awaiting the construction and commissioning of permanent facilities. This flexible solution illustrates Veolia's ability to quickly mobilize its expertise and equipment to serve local communities.

These solutions and services contribute to the preservation of water resources as described in ESRS E3 (section 4.1.2.3 below).

4.1.2.2.3.3 Hazardous waste treatment capacity

Veolia is the world leader in hazardous waste treatment, with extensive experience of all available techniques and the ability to operate them in a fully controlled manner. As part of its GreenUp strategic program, the treatment of hazardous waste is one of the three boosters to accelerate the Group's development, thanks to the increase in industrial production and the increasingly stringent environmental regulation.

A review of the global hazardous waste treatment infrastructure shows that the existing treatment capacity does not meet the needs, including in

Europe. It is therefore necessary to develop this capacity in order to address the needs of the market.

The corresponding IRO E2-ES-3, which is mentioned below, is classified as a financial opportunity in so far as it corresponds to a growth objective, and contributes to the development of the boosters mentioned in section 4.1.1.5.2 above and to the multi-faceted performance objective of revenue growth in the priority business segments detailed in section 4.1.1.5.1 above.

Positive impact	Negative impact	Financial opportunity	Financial risk
E2-ES-3 Increased capacity of hazardous waste treatment in the different treatment technologies, in order to meet the growing needs of the market			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Upstream value chain: • regulatory authorities: definition of the general framework of conditions to be respected; • administrative authorities: limits imposed at each Installation on the pollution emitted; • hazardous waste producers: quantity and nature of waste to be treated. Downstream value chain: • shareholders through the development of sustainable activities; • the planet and affected communities, through the positive environmental impact of avoiding very problematic pollution.
Business model	This IRO mainly contributes to Veolia's commercial and environmental performance.

Veolia continued the development of various hazardous waste treatment sectors and notably committed a Capex amount of 206 million euros in 2025 for hazardous waste treatment projects (see section 3.1).

Moreover, 2025 stands out for Veolia due to its marked acceleration in hazardous waste treatment through significant investments in new capacities and targeted acquisitions (for more details, see chapter 6, paragraph 5.1.2.2).

■ In the United States:

- Massachusetts: Acquisition of New England Disposal Technologies (hazardous waste treatment and emergency response) and Bio-Med Innovations (medical waste treatment and storage), strengthening its position in the Northeast with high regulatory standards,
- California: Acquisition of Ingenium, adding packaging, logistics, and multi-stream hazardous waste treatment capabilities, expanding its industrial and institutional client base,

- Texas (semiconductors): Acquisition of Chameleon Industries Group (specialty chemicals). Its circular economy technology recovers manufacturing by-products from semiconductors, reducing waste and reinforcing Veolia's leadership in innovative environmental solutions in North America.

- In Japan, acquisition of Zeeklite (storage and treatment center), a company specialized in hazardous waste disposal and contaminated soil treatment.

Beyond these investments, the Group announced in November 2025 an agreement to acquire Clean Earth, a major American player in hazardous waste. This operation will provide Veolia with an operational platform of 82 sites, including 19 EPA-authorized facilities, allowing it to double its size in the United States. The transaction is expected to be finalized in mid-2026⁽¹⁾.

Regarding the objective of 9 million tons of hazardous waste treated⁽²⁾ by 2027 (see § 4.1.1.5.1 Strategy supra):

Metrics (definition and unit)	2024	2025
Quantity of hazardous waste processed (kt)	9 196	9,181

⁽¹⁾ Subject to closing.

⁽²⁾ Scope impact of the sale of RGS (United States).

4.1.2.3 Water and marine resources (E3)

4.1.2.3.1 Introduction

Veolia's mission, expressed through its tagline "Resourcing the world", aims to conserve natural resources. The majority of Veolia's water management activities (section 1.3.1.1 above) contribute, in various ways, to the conservation, protection, recovery and sustainable management of aquatic and marine resources. This ambition is reflected in the multifaceted performance objective, which includes the regeneration of water resources, measured by the volume of freshwater saved through Veolia's operations.

Veolia's policy and levers of action for responsible management of water and marine resources, applicable to all the IRO of this standard, are detailed in section 4.1.2.3.2 below.

Section 4.1.2.3.3 below presents an analysis of the impacts, around the IRO E3-ST-1 "Pressure on the resource from water withdrawals" (negative impact). Water businesses interact with water and marine resources in the following activities:

- water production and distribution for domestic and industrial use;
- wastewater collection and treatment before discharge or reuse;
- desalination of seawater.

Once considered abundant, water is becoming increasingly rare and precious due to the combined pressures of climate change, population growth, urbanization, agricultural and industrial demands, groundwater depletion, pollution, and ecosystem degradation, which together are causing demand to outstrip the limited supply of accessible freshwater and generate conflict of use in many regions worldwide. This situation requires:

- innovative technology solutions;
- optimized technical management;
- contractual models adapted to local contexts and oriented toward responsible consumption.

This context offers Veolia the opportunity to showcase its experience and know-how, particularly in regions where water resources are scarce or of degraded quality. These issues are detailed in sections 4.1.2.3.4 and 4.1.2.3.5 below, around the IRO (financial opportunities):

- E3-ES-2 Development of activities to sustain water resources (regeneration and preservation);
- E3-ES-3 Support for industrial clients in the sustainable use of water resources.

The water sector is at the heart of Veolia's historical activities. The continuous innovation process aims to develop and exploit technologies that meet current challenges, including:

- reducing the pressure on freshwater resources;
- protecting human health.

The actions mainly consist of:

- the design, manufacture and sale of technological solutions;
- the operation of water treatment and distribution infrastructure.

Veolia may act at different levels depending on the responsibilities entrusted to it:

- directly, as an independent operator;
- indirectly, in an advisory role to the decision-makers involved.

The trend toward responsible water management requires Veolia to rethink its historical contractual model. This concept is discussed in section 4.1.2.3.6, around the IRO "E3-ES-4 Gap between customer expectations around responsible drinking water use and current volume-based remuneration models" (financial risk).

Other topics related to water resources

Wastewater treatment activities are covered by this chapter as a source of water contributing to the regeneration of water resources by removing pollutants and providing treated water that can be safely returned to the environment or reused for various purposes, thereby reducing pressure on freshwater sources and supporting aquatic ecosystem health. Advanced treatment solutions allowing water reuse also contribute to better use of water resources and to the circular economy (ESRS E5). The pollution prevention function is discussed in section 4.1.2.2 above relating to the standard ESRS E2 Pollution.

In addition, topics related to the quality of water distributed to users are covered in section 4.1.3.4 below relating to the standard ESRS S4 Consumers and end-users.

This information structure is designed to offer a comprehensive and coherent vision of our water-related activities, while complying with the different standards and their specific requirements.

4.1.2.3.2 Optimizing water resource management

The aim of this section is to outline Veolia's policy and levers of action for proper management of water resources, as a common factor of the IRO described later on.

A policy for good resource management

Water is essential for maintaining life, economic activity and the health of ecosystems on the planet. This resource is often limited at the local level and increasingly subject to climate change hazards. Water challenges are inherently local, driven by specific climatic and geographical conditions as well as unique socio-economic contexts. In addition, the decision-makers in the water sector are the public authorities (communities, states, health and environmental authorities).

As part of the multifaceted performance approach, Gustavo Migueis, Chief Executing Officer of the Iberia & Latin America and Executive Committee member, has been given responsibility for oversight of our water resource management policy. This policy applies to all Business Units and entities of the Group including those in areas at water risk and areas of high-water stress, and translates as a quantifiable target for freshwater savings (see section 4.1.2.3.3 below). Its implementation, which is based on *The Essentials* mentioned in section 4.1.4.1.2 below and its management within the various operational units, is carried out through the Environmental & Industrial Management System (EIMS) described in the same section. This system provides a structured framework to define environmental objectives adapted to the specific challenges and risks of each local context and to drive environmental performance, with a focus on water conservation and water resource regeneration.

Veolia's policy for the sustainable management of freshwater, seawater and ocean water resources combines three elements:

- **Key principles** guiding choices and priorities for municipal and industrial customers, as well as for Veolia's own installations:
 - **compliance with regulatory requirements** defined by local, national and supranational authorities for water resource management, particularly with regard to water withdrawals and discharges into aquatic environments,
 - **contractual compliance**, by the delivery or discharge of water that meets the expected service level (quantity, quality, pressure, treatment efficiency, etc.), combined with regular monitoring and transparent customer information,
 - **promoting efficient and reasonable water use**, through solutions and services aimed at improving the hydraulic efficiency of networks and plants and encouraging users to moderate their consumption,
 - **conserving water resources and aquatic or marine environments**, by developing and proposing solutions to decontaminate wastewater before discharge to the natural

environment and to develop alternative resources (reuse of treated water, desalination, aquifer recharge),

- **reducing the water footprint of solutions** over their entire life cycle and offering customers solutions to reduce their water footprint;
- **The principle of subsidiarity**, which empowers the local management of the Business Unit to adapt these principles to the situations encountered;
- **Duty of advice** with the goal of applying expertise to analyze situations and proactively inform decision-makers (municipal and industrial clients) dealing with potential issues about the various possible options and their feasibility, cost and consequences for the planet.

Actions for water and marine resources

Conserving water resources is one of Veolia's key areas of expertise. Committed to optimizing water cycle management and sustainably managing this resource, Veolia offers solutions to its municipal and industrial clients to:

- protect water resources (IRO E3-ST-1 and E3-ES-2);
- optimize the resources used (IRO E3-ST-1, E3-ES-2 and E3-ES-3);
- promote responsible water consumption (IRO E3-ST-1 and E3-ES-4);
- develop alternative water resources (IRO E3-ST-1, E3-ES-2 and E3-ES-3);
- improve water footprint and contribute to water stewardship (IRO E3-ST-1, E3-ES-2 and E3-ES-3).

Clients select the solutions adapted to their needs and contractually define the operating framework within which Veolia operates (deadlines, means, performance objectives, monitoring methods).

Protect water resources (IRO E3-ST-1)

The protection of water resources intended for drinking water production involves several key actions:

- Establishing protection zones around water sources and introducing measures to prevent pollution;
- Setting up a resource monitoring and surveillance system and implementing protection measures;
- Wastewater treatment before the water is discharged into the environment, allowing it to be reused for other purposes;
- Working with local actors to identify sources of degradation and improve water quality.

Veolia, as an operator, is responsible for protecting most of the withdrawal points it operates. This responsibility involves:

- constant surveillance of the effectiveness of the protective measures;
- close monitoring of the quality of abstracted water.

This surveillance is carried out by:

- regular water quality analysis, including continuous monitoring with online sensors and grab samples analysis on a daily to annual basis depending on parameters and regulatory requirements;
- inspection of installations;
- monitoring of risk activities in protected zones;
- the implementation of water quality monitoring stations to detect pollution early and to activate emergency procedures.

In Ecuador for example, Veolia manages seven water quality monitoring stations along the Daule River upstream of Guayaquil's main water source as well as a control center for this monitoring network. This system, operational since 2022, makes it possible to anticipate risks to the quality of drinking water, to study the evolution of water quality in the catchment area, and to evaluate the effectiveness of the conservation measures put in place to improve the quality of the Daule River. This system thus improves the management and protection of water resources in the region.

To protect water resources from discharges of municipal and industrial wastewater effluents, Veolia offers a comprehensive range of treatment solutions, including:

- primary treatment technologies (flocculation, coagulation, decantation, flotation);
- secondary treatment processes (biological removal of carbon, nitrogen and phosphorus);
- advanced treatment technologies (ozonation, activated carbon adsorption, ion exchange, membrane separation, chemical or UV disinfection).

At the catchment level, Veolia implements comprehensive action plans to protect source water quality and ensure drinking water safety. In 2025, Veolia's Lake DeForest Reservoir was recognized as a National Landmark by the American Water Works Association for its critical role as a drinking water source for Rockland County, New York since 1956. Veolia actively supports New York State's source water protection program through rigorous water quality monitoring, permit compliance, security patrols, and infrastructure protection. Through Veolia's Watershed Recreation Program, Lake DeForest also serves the community, with over 800 people annually enjoying fishing, hiking, and bird watching.

Veolia also enters into partnerships with local authorities, non-governmental organizations, industry and farmers to protect water quality and support water stewardship in entire watersheds. Examples include the participation of Aguas Andinas to the Santiago-Maipo Water Fund in Santiago de Chile and of Interragua to the Water Fund for the conservation of the river Daule in Guayaquil, Ecuador.

This global, multi-stakeholder approach allows Veolia to contribute effectively to the conservation and improvement of water resources, while meeting the specific needs of each region.

Optimize the resources used (IRO E3-ST-1, E3-ES-2 and E3-ES-3)

Three key pillars underpin the optimization of the water resources used:

- Sustainably managing water abstraction in accordance with the permits;
- Optimizing water treatment systems and promoting process water recycling;
- Reducing water loss through improvements to distribution network efficiency.

These actions are essential to reduce the volumes of water abstracted, treated and transported, because every drop saved:

- enables to conserve the natural resource for other uses;
- reduces energy consumption and the quantity of chemical products used for treatment;
- limits greenhouse gas emissions and combats climate change;
- reduces operational and investment costs.

Veolia has made improving the efficiency of drinking water networks a major priority. Key actions include:

- repairing leaks;
- optimizing pressure management;
- replacing pipes.

The efficiency of a drinking water distribution network is a metric representing the ratio of volume of water consumed by end users to the volume of water pumped into the distribution network. This ratio measures the efficiency of the network in terms of water loss management and is a key indicator of the performance of water distribution systems. It is important to note that a water network efficiency of 100% is not realistic, either technically, environmentally and economically. The goal is to achieve an optimal and sustainable yield, which balances loss reduction with the promotion of responsible water use. This optimal level varies depending on the local context and network characteristics. It is also important to note that Veolia, which generally operates the networks rather than owning them, acts within the framework of its contractual commitments. Major decisions concerning

resource conservation, including those involving significant investments, remain the responsibility of the customers who own the infrastructure.

In 2024, Veolia renewed its commitment to the Syndicat des Eaux d'Île-de-France (SEDIF) for a period of 12 years, thereby consolidating its management of the largest public water service in Europe. One of the key commitments of this contract is to achieve a network efficiency of more than 93% in 2026, thus limiting water losses to less than 7% on an underground network approximately 8,000 km in length. This performance target represents an unprecedented technical and operational challenge in the water management sector and Veolia will implement a range of actions and equipment to achieve it, including for example: network sectorization, nightflow monitoring, pressure modulation and the deployment of acoustic sensors and smart meters. To monitor achievement of this target, Veolia monitors inflows to the network and water consumption continuously and carries out water balance calculations on a regular basis (daily, monthly & annually).

In 2025, the Grand Narbonne metropolitan area renewed its contract with Veolia for water supply and sanitation services serving over 68,000 residents for 12 years. Facing climate change challenges and water scarcity, Veolia will implement solutions to secure water resources and support the region's wine industry. Key initiatives include achieving 86% network efficiency (saving water equivalent to 5,000 residents' annual consumption), optimized water treatment including PFAS removal, AI-powered water resource management developed with BRGM, water reuse (REUSE) for vineyards, and customer services including smart meters and water-saving kits for vulnerable households.

Veolia was also chosen in 2025 by the Béziers Méditerranée Agglomération to manage its public drinking water service serving 130,000 residents for 12 years starting 2027. The objective of this contract is to achieve a network efficiency of over 88.6%, representing 280,000 cubic meters of freshwater saved each year. Advanced technological solutions will be deployed to achieve this target, including ultrasonic smart meters, real-time digital monitoring and alerting tools, and a new-generation mobile application enabling personalized water consumption tracking for users.

Veolia uses state-of-the-art technology to meet its network efficiency commitments, including:

- leak pre-location by mobile acoustic correlation;
- leak location by direct ground-based acoustic monitoring;
- leak location using tracer gas;
- potential leak detection using satellite coupled with artificial intelligence;
- detecting leaks on service connections using next-generation water meters;
- searching for leaks using dogs.

In New Jersey (USA), for example, Veolia has deployed roughly 2,300 acoustic sensors that actively listen for leaks and pinpoint their locations since 2018 and has been using thermal imagery taken by drones to detect underground water leaks since 2024. Since they were introduced these technologies have contributed to the detection of over 1000 leaks and the saving of over 11 millions of cubic meters.

In France, Veolia and Alcom have created a startup dedicated to AI-based solutions for water management. This joint venture develops and commercialises Leak Tracker, an AI application developed in 2023 and already used by around 100 French municipalities for early and targeted leak detection. Leak Tracker is a smartphone-based solution that uses a microphone and AI-powered algorithms to detect and qualify leaks in water networks by analyzing sounds from valves or hydrants, achieving over 90% reliability through continuous learning from collected data. The goal is to offer public water utilities predictive management solutions based on AI to improve network efficiency and sustainability, helping address water scarcity challenges.

These initiatives demonstrate Veolia's expertise in the sustainable management of water resources, adapted to the specific challenges of each territory.

Encourage responsible consumption by users (IRO E3-ST-1 and E3-ES-4)

The conservation of water resources requires a holistic approach, including by actively encouraging users to moderate their consumption. Veolia deploys a range of innovative solutions to achieve this goal:

- targeted awareness-raising initiatives;
- incentive-based pricing policies;
- installation of individual water meters and remote meter-reading systems;
- alert notifications in the event of excessive consumption.

These initiatives aim to empower consumers and involve them directly in sustainable water management. Veolia also offers its municipal customers educational tools to raise awareness and support end consumers in managing their consumption.

Since 2023, Veolia Eau France has rolled out the "Eco d'Eau" initiative to support regions and industries in dealing with water resource scarcity using educational tools, a voluntary commitment charter and customized advice. A wide range of stakeholders have already adopted the approach: municipalities, undertakings, NGOs, schools and even the media. As of March 2025, more than 600 partners have made commitments for more sustainable water management, and more than 10,000 citizens have signed the manifesto. Examples of solutions that can be implemented to materialise Eco d'Eau's commitments include implementation of water saving devices and practices, metering, leak detection and water recycling or reuse.

In 2024, Veolia was awarded a WaterSense Excellence Award by the US Environmental Protection Agency for promoting water efficiency in its New York utility operations. Veolia was among 50 organizations recognized for helping consumers and businesses save billions of gallons of water annually. Veolia was honored for its program encouraging customers to replace outdated fixtures with WaterSense-labeled models. Since 2017, customers have redeemed over 14,000 rebates through the program. This is Veolia's second WaterSense award, following a previous recognition in 2020.

These examples demonstrate Veolia's determination to achieve tangible and measurable results in water resource conservation.

Develop alternative resources (IRO E3-ST-1, E3-ES-2 and E3-ES-3)

Conserving aquatic resources in a context of climate change also requires diversifying sources of supply and developing alternative resources such as:

- treated wastewater reuse;
- rainwater harvesting;
- groundwater recharge; or
- desalination of seawater.

Treated wastewater reuse regenerates water resources. When it replaces extraction from natural freshwater resources, it reduces the pressure on these local resources. It also reduces wastewater discharges to rivers and oceans, protecting aquatic and marine ecosystems. However, in some regions where such discharges are essential for the proper functioning of aquatic ecosystems, particularly during periods of low flow, treated wastewater reuse can be problematic from an environmental point of view. It is important therefore to carefully assess the environmental impact of this practice according to the local context.

In 2025, Veolia started to build France's largest treated wastewater reuse facility in Argelès-sur-Mer for the Albères-Côte Vermeille-Illibérès Community of Municipalities. The project, which is due to be commissioned in April 2026 will reuse 1.3 million cubic meters of treated wastewater annually to irrigate nearly 700 hectares of farmland. Using innovative membrane ultrafiltration technology to guarantee reaching the most stringent reuse water quality class under current French regulation, the facility will help preserve freshwater resources and reduce water use conflicts in this popular coastal destination.

In 2025 Veolia was also selected to design and deliver Brazil's most advanced municipal wastewater reuse system in Vitória. With a capacity of 38,880 cubic meters, the Águas de Reúso de Vitória station, which is due to start operation in 2027, will recycle 85% of municipal wastewater for industrial use, freeing up freshwater equivalent to the needs of 200,000 people while helping industries build resilience through alternative water sources. The facility will integrate Veolia's high-performance technologies for biological wastewater treatment intensification, including:

- memDENSE™ membrane bioreactor for ultra-compact biological treatment;
- ZeeWeed™ 500-EV ultrafiltration membranes for high-efficiency solids separation;
- PROflex™ high-recovery reverse osmosis for advanced contaminant removal.

Groundwater recharge, also commonly referred to as Managed Aquifer Recharge (MAR), is a strategic approach to water resource management where excess water is intentionally directed into groundwater aquifers for later use. It serves multiple purposes: storing water during wet periods for use during droughts, preventing saltwater intrusion in coastal areas, improving water quality through natural filtration, and maintaining groundwater-dependent ecosystems. This technique helps combat water scarcity, climate change impacts, and provides a natural buffer against seasonal variations in water availability, while being more cost-effective and environmentally friendly than surface reservoirs. Veolia has a long experience with MAR, having developed and operated MAR systems since the 1970s, including in France, Germany, Australia, the USA. Today Veolia continues to be at the forefront of innovation in this field through demonstration projects, notably in Spain.

In 2025, Aguas Andinas, Veolia's subsidiary, has launched a groundbreaking groundwater recharge project in Santiago's Mapocho Alto aquifer, capable of storing 950 million liters annually or the equivalent of the monthly drinking water consumption for 47,000 households. The project, part of the company's Biocuidad strategy, aims to strengthen water security for over 8 million people in the Metropolitan Region by storing excess surface water into the aquifer during periods of high availability.

In Mérignac near Bordeaux, Veolia also inaugurated an experimental system for infiltrating and storing rainwater in the groundwater. Started in 2024, this project aims to infiltrate 40,000 cubic meters of rainwater annually in the shallow aquifer. Rainwater is previously treated to remove pollutants through reed bed filters and an activated carbon filter before being reinjected. A quarter of this non-potable water will be used for cleaning roads or watering green spaces while the remaining three-quarters will be stored for later use.

Seawater desalination – with significantly improved performance over the last 10 years in terms of energy consumption – offers a crucial solution for producing drinking water in arid or coastal regions facing freshwater shortages. This technology meets the water needs for human consumption, agriculture and industry, while providing an alternative to the scarcity of freshwater resources due to climate change, population growth and pollution. By providing an alternative source of water, desalination reduces the pressure on existing freshwater resources, often overexploited through excessive withdrawals to meet growing water demand for domestic, industrial and agricultural uses. This helps both to strengthen the water security of the regions concerned and to preserve aquatic environments and the associated freshwater ecosystems. To minimize the environmental impact, impact studies are systematically carried out. These aim to establish surveillance protocols and mitigation measures adapted to the sensitivity of the local marine environment, including for seawater intakes and brine discharges. These measurements include, for example, the use of suction strainers and dispersion devices (see §4.1.2.4.4 below for more details).

In 2024, Veolia won the contract for the Hassyan seawater desalination plant in Dubai. With a capacity of 818,000 cubic meters per day, this reverse osmosis desalination plant will provide drinking water to 2 million people and thus strengthen water security in the United Arab Emirates. The plant is due to start operation in 2026, with a gradual ramp-up to full capacity in 2027. Thanks to advanced reverse osmosis technologies combined with Veolia's expertise, reducing the energy consumption of large-scale desalination to 2.9 kWh/m³, this desalination plant will be one of the most energy-efficient in the world. Furthermore, this plant will be the largest desalination plant powered by solar energy in the world.

In 2025, Veolia was awarded the Operation and Maintenance (O&M) contract for the first municipal and industrial desalination plant of Chile in Valparaíso. The contract involves producing and transporting 1,000 l/s of desalinated water to customers in the Valparaíso and Metropolitan Regions. Awarded for an initial period of up to 4 years with potential extensions until 2040, it begins with a commissioning and start-up phase for the Reverse Osmosis desalination plant and associated aqueduct. Once operational capacity is reached, the O&M phase will cover the plant, the aqueduct, and the storage facilities. The plant uses renewable energy and employs energy recovery technology, while protecting marine life through deep-water intake systems with jellyfish barriers and a submarine diffuser system that discharges brine outside the Coastal Protection Zone.

Alternative water resources, such as treated wastewater reuse, groundwater recharge and desalination, provide a sustainable solution to increase water availability, reduce pressure on natural resources and improve resilience to water stress, while supporting economic development in regions facing water shortages.

Improve the water footprint (IRO E3-ST-1, E3-ES-2 and E3-ES-3)

Improving the water footprint means reducing the negative impacts of human activities on the availability and quality of local water resources, while maximizing their positive effects. These include:

- complying with regulatory requirements for abstraction and discharges;
- prioritizing available, low-stress water resources;
- minimizing water consumption and increasing water circularity within installations;
- discharging treated effluents capable of regenerating the receiving environment.

Water stewardship involves implementing efficient water use technologies (e.g. leak detection systems, drip irrigation systems, water efficient devices, reuse technologies), reducing pollution from effluent discharges, protecting water sources from contamination, and collaborating with stakeholders to address water challenges at local and global levels.

Veolia conducts R&D work to develop and offer a wide range of innovative solutions to improve the water footprint of human activities and contribute to water stewardship and sustainable water resource management:

- Water production from unconventional resources:
 - rainwater harvesting,
 - use of drainage water,
 - wastewater treatment and reuse;
- Optimization of water efficiency:
 - improved installation's efficiency,
 - reduced water consumption;
- Reuse and recycling:
 - recycling of process water,
 - treatment and reuse of wastewater and cooling water;
- Advanced technologies:
 - zero liquid discharge (ZLD) installations,
 - near-total purification and recycling of wastewater.

This approach to optimizing the water footprint has numerous benefits:

- conservation of water resources;
- environmental protection;
- financial savings;
- improvement of the social acceptability of activities.

By adopting these solutions, companies and local authorities can not only reduce their environmental impact, but also build resilience to water-related challenges and improve their overall performance. Veolia is thus positioned as a key partner in the transition to more sustainable and responsible water management.

The following achievements are worth noting in 2025:

- Veolia signed a memorandum of understanding with Abu Dhabi National Oil Company (ADNOC) to explore opportunities to reduce and optimize ADNOC's water consumption and carbon footprints. The collaboration will focus on the study and implementation of water management strategies, the complete assessment of the water cycle and the optimization of flow monitoring systems. The program includes drawing up action plans to reduce water losses in the short, medium and long term.
- Veolia has also signed an agreement with a consortium including Marafiq and Lamar, partnering with SATORP (a Saudi Aramco-TotalEnergies joint venture) to build the Middle East's largest water recycling facility in Jubail Industrial City. The 8.8 million cubic meter capacity project will treat complex industrial effluents using Veolia's advanced technologies, with Veolia also managing a 30-year operation and maintenance contract starting in 2028. The facility will integrate Veolia's latest technologies, AnoxKaldnes® MBBR, ZeeWeed® membranes and Actiflo® Carb, including pioneering spent caustic treatment, maximizing resource recovery and significantly reducing environmental impact.
- Water Tech was chosen by the Omer Vander Ghinste Brewery for the expansion of the wastewater treatment plant (WWTP) at its historic brewery close to Kortrijk in Belgium. Veolia's extension of the WWTP is designed to support the brewery's growing operational needs while significantly reducing its environmental footprint. The comprehensive upgrade incorporates advanced technologies, to ensure that 70% of the water used in the brewing process is efficiently and securely recycled and reused for cooling water, bottle washing and cleaning of vessels, saving a volume of freshwater equivalent to the annual consumption of close to 3,000 Belgian residents. The project incorporates advanced technologies, including:
 - a ZeeWeed™ 500 membrane bioreactor system,
 - Biobed® Advanced (EGSB), a cutting-edge anaerobic wastewater treatment technology using granular biomass, and
 - CaptuRO™, a high-recovery reverse osmosis system.
- In Mexico, Water Tech has also implemented cutting-edge wastewater reuse technologies for PetStar, a wholly Mexican company recognized globally for its leadership in food-grade PET collection and recycling. The advanced water reuse project commissioned by Veolia in 2025 enables PetStar to treat and reuse up to 550 cubic meters of wastewater per day from its recycling process, meeting local water quality standards and significantly reducing underground water usage. This strategic partnership demonstrates how industry leaders can drive both business growth and environmental protection through water resource conservation.

At the international level, the Veolia Group is a member of the OECD's Water Governance Initiative and participates in key international water-related events (the World Water Forum held in Indonesia in May 2024, World Water Week in Stockholm every year since 2014, and COP28 held in Dubai in 2025). Veolia is also a member of the CEO Water Mandate and the Water Resilience Coalition, and a member of the World Water Council.

4.1.2.3.3 Measuring our impact on water resources

The majority of Veolia's activities contribute to the protection, recovery and sustainable management of aquatic and marine resources. Our actions to preserve the resource, detailed in section 4.1.2.3.2, enable both to regenerate wastewater and avoid freshwater withdrawals.

Veolia's Municipal Water activities account for the majority of the Group's water withdrawals, primarily for drinking water production. While domestic

water use represents only approximately 11% of global water withdrawals – significantly less than manufacturing, agriculture, and energy sectors – and despite most withdrawn water being returned to the environment after treatment, the localized impact of these operations remain substantial and require careful management.

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E3-ST-1 Pressure on the resource from water withdrawals			

Although a priority when intended for human consumption and generally carried out under strict regulatory frameworks, withdrawals can create significant challenges, particularly in areas with high water stress:

- Risk of degradation of local water resources;
- Potential conflicts of use with other sectors or communities.

Climate change will inevitably exacerbate these issues, which are likely to emerge in most regions of the world sooner or later.

The IRO's interactions with Veolia's value chain and business model are as follows:

	Key stakeholders involved
Value chain	Upstream chain: withdrawals are managed responsibly and sustainably in accordance with the permits issued by the authorities in charge of managing water resources. It is vital therefore that we comply with them. In addition, in most of the regions where Veolia provides water distribution, the wastewater is collected and then treated before discharge to the environment, again in accordance with the discharge permit. Downstream chain: the main impact is on the planet, but the beneficiaries of these withdrawals are the affected communities who benefit from an essential and vital service (access to drinking water) by making the best use of resources and encouraging rational use.
Business model	This IRO contributes in particular to environmental and societal performance.

To minimize the impact on local water resources, Veolia is committed to responsible and sustainable management of both its water withdrawals and wastewater effluents, taking into account the specific requirements and constraints of each region. The company implements innovative strategies to optimize water use, minimize its impact on local ecosystems and promote a collaborative approach with other river basin stakeholders (see section 4.1.2.3.2 above). This approach is part of a broader vision of integrated management of water resources, aimed at reconciling essential human needs with environmental protection and a local ecological balance.

Under GreenUp, Veolia strategically focuses its quantitative targets on areas having the greatest environmental impact. For the Water activities, Veolia prioritizes operational efficiency improvements and sustainable water solutions rather than setting absolute reduction targets for water withdrawal and effluent discharges, as these volumes naturally scale with the expansion of services to more communities and customers. Nevertheless, both the volumes of water withdrawn and wastewater effluents treated are closely monitored via *Global Report*.

In 2025, Veolia withdrew 9050 million cubic meters of water, 93% of which was for municipal drinking water production and distribution, ensuring access to clean water for about 100 million people. These withdrawals are governed by strict permits, setting the maximum volumes and the environmental conditions that must be met, in order to limit the impact on ecosystems. Veolia is particularly sought after in areas of significant water stress, where its expertise and innovative technologies are crucial. This demand in vulnerable regions underscores the Group's ability to provide sustainable solutions to complex water management challenges, combining technical performance and resource preservation.

In 2025, Veolia treated 7636 billion cubic meters of wastewater, primarily through its municipal wastewater treatment activity (98% of the volume treated). The Group operates numerous treatment facilities worldwide that remove over 90% of organic pollutants from municipal wastewater, transforming contaminated water into clean effluent suitable for safe environmental discharge or beneficial reuse applications (see §4.1.2.2.3.1 of Standard E2). Beyond organic matter removal, these facilities can also treat nutrients, pathogens, and emerging micropollutants depending on local regulatory requirements and ecosystem sensitivity. All discharge operations comply with stringent permit conditions that establish treatment standards and water quality criteria designed to minimize impacts on receiving water bodies, with Veolia's cutting-edge technologies proving especially critical in ecologically sensitive areas where maintaining pristine water quality is essential for environmental preservation.

Preserving the resource and reducing withdrawals through leak reduction, water recycling and desalination solutions are an integral part of our business. That is the reason why Veolia favors metrics and targets that reflect the positive impact of its activities on aquatic and marine resources, in particular those that conserve and regenerate freshwater resources in the face of climate change. As part of GreenUp and its commitment to regenerate resources, Veolia has set a target for freshwater conservation in consultation with its stakeholders. This target – one of the Group's 15 multifaceted performance targets – is managed by Mr. Gustavo Migueis, sponsor and Executive Committee member and Senior Executive Vice President, Iberia and Latin America.

As part of its GreenUp 2024-2027 strategic program, Veolia adopted the following objective and target:

Commitment	Objective	SDG	Metric - definition	2023 baseline	2024 Results	Résultat 2025	2027 target
 Combat pollution and accelerate the ecological transformation	Fresh water saved and resource regeneration	  	• Saved freshwater (reuse, desalination, leakage reduction)	1.4 billion m ³	1.45 billion m ³	1.574 billion m ³	≥ 1.5 billion m ³
Sponsor	Gustavo Migues	Member of the Executive Committee, and Senior Executive Vice President for the Iberia and Latin America region					

The selected metric measures the volumes of freshwater saved through the reuse of treated wastewater, the production of desalinated water and the reduction of leaks in drinking water networks. This approach underlines Veolia's commitment to sustainable and innovative water resource management. The metric for saved freshwater is calculated as the sum of the following three components:

- volumes of treated wastewater that are recycled for internal use (process water, equipment cleaning, watering of green spaces, cooling) or external use (irrigation, industrial water, environmental use);
- volumes of desalinated water produced;
- reduction in the volume of leaks in drinking water networks relative to their 2023 level.

The data for the freshwater saved indicator⁽¹⁾ comes exclusively from *Global Report*, which follows a detailed reporting protocol. As a reminder, this plan sets a 2027 target of 1.5 billion cubic meters, compared to 1.4 billion cubic meters in the 2023 baseline year.

In 2025, the value of this metric stood at 1.574 billion cubic meters of saved fresh water, of which 1.514 billion cubic meters on the integrated scope overall or proportionally and 0.060 billion cubic meters over the additional scope of the 5 Chinese joint ventures listed in section 4.1.1.2 above.

Water consumption

Total water consumption in cubic meters

Veolia's activities that consume water include:

- Energy activities mainly through the evaporation of water in the cooling systems of energy production plants;
- Waste activities mainly through the evaporation of water for extinguishing bottom ash, incinerator flue gas treatment systems, and surface cleaning activities; and
- Water Tech activities mainly through the incorporation of water in the production of chemical products and the cleaning of reagent storage installations.

Veolia's Municipal Water activities, despite the large volumes of water withdrawn and discharged, are not regarded as water-consuming according to the Delegated Regulation (EU) 2023/2772, since almost all the volumes transiting through drinking water supply and sanitation systems are either delivered to a third party, or discharged locally into the aquatic environment after treatment.

Similarly, Veolia's Industrial Water activities are not water-consuming according to the Delegated Regulation (EU) 2023/2772. These activities focus on the production and supply of industrial process water, using various water sources (natural water or wastewater), and on wastewater treatment for discharge into the environment or to third-party networks. The same applies to certain liquid waste treatment activities. Some innovative projects even aim for the total elimination of liquid waste by recycling all wastewater in "Zero Liquid Discharge" installations. These types of facilities are mostly developed in areas of high-water stress or in areas where discharges may significantly impact sensitive environments.

For the water consuming activities, water consumption is calculated in accordance with the definition in the Delegated Regulation (EU) 2023/2772. The calculation method consists in determining the difference between total withdrawals (from the environment, water networks or third parties) and total discharges (to the receiving environment or third parties).

The data used for these calculations are taken exclusively from Veolia's *Global Report* system. The reporting protocol details the primary metrics used to calculate the water consumption of these activities. This reporting system was set up in 2023, anticipating the entry into force of Directive 2013/34/EU.

In 2025, the total volume of water consumed by Veolia's activities was 24.2 million cubic meters. This is very low compared with the volumes of freshwater saved thanks to the Group's Municipal and Industrial Water activities, namely 1.574 billion cubic meters. This illustrates Veolia's overall positive impact on water resources and the relevance of its commitment to resource regeneration under GreenUp. Therefore, Veolia has not set a target for water consumption, as increasing volumes of fresh water saved is the priority.

In accordance with its responsible water and marine resource management policy (see section 4.1.2.3.2 above), Veolia uses innovative means and solutions to measure and reduce water consumption across all its installations. A concrete example of this policy is the Water Tech's Environment, Health and Safety management system. This system requires all manufacturing sites to have rigorous procedures in place to:

- ensure regulatory compliance of wastewater discharges;
- minimize the impact of wastewater and stormwater discharges on the receiving environment;
- systematically measure water consumption;
- identify and implement actions to improve water efficiency.

Compliance with this procedure is assessed by individual sites. WaterTech's Compliance Assurance Manual classifies non-compliance issues as either 'Regulatory Findings' (requiring 95% closure within 30 days) or 'Non-Regulatory' (requiring 90% closure within 90 days), with all issues tracked in the Action Tracking System and closure rates monitored monthly by management.

⁽¹⁾ This indicator includes, over the GreenUp plan period, all incoming and outgoing contracts (with the same performance as at the time of termination) in order to reflect all water conservation actions undertaken by Veolia during the plan period.

The effectiveness of this approach is illustrated by the rollout of Water Tech's innovative digital solution, Hubgrade Water Footprint (HWF). HWF is a cloud-based digital solution developed in 2024 that helps industrial sites optimize water and energy consumption through comprehensive site audits, real-time monitoring, risk assessment, and actionable improvement plans to achieve sustainability goals while enhancing operational transparency, regulatory compliance, and resilience. HWF was implemented at Water Tech's chemical products and membrane manufacturing site in Hoskote, India. This initiative started in 2023 and has yielded significant results:

- saving around 3,000 cubic meters of water through rainwater recovery;
- reducing energy consumption by 72,000 kWh through the use of solar power.

These results demonstrate the effectiveness of Veolia's integrated approach, which combines responsible water management, energy efficiency and greenhouse gas emissions reduction. This strategy illustrates the Group's commitment to developing sustainable and innovative solutions, responding to environmental challenges while optimizing the operational performance of its installations.

Water consumption in areas of water risk

In order to quantify the water consumption of activities in areas of water risks, Veolia used data from the World Resources Institute (WRI), which produces and publishes a map of such areas (the Water Risk Atlas) on its Aqueduct platform. According to the WRI's methodology the Overall water risk measures all water-related risks, by aggregating 13 individual water risk indicators from the Physical Quantity, Quality and Regulatory & Reputational Risk categories. All sites with "Overall Water Risks" classified as "high" and "extremely-high" by the WRI were taken into account, as follows: longitudes and latitudes coordinates of all individual sites concerned with water consumption were added to the Aqueduct platform (version 4.0), which uses a geographical intersection to determine the current water risk classification of the river basin in which each site is located. Water consumption was then consolidated for sites for which the WRI determines the "Overall Water Risks" class to be "high" and "extremely high".

According to this method, the water consumption of Veolia's activities in water risks areas is shown in the table below. Action plans to manage these water risks are defined and managed at a local level.

Water consumption in areas of high-water stress

In order to quantify the water consumption of activities in areas of water stress, Veolia also used data from the WRI Aqueduct platform. The indicator used is the Baseline water stress indicator, one of the 13 water risk indicators compiled by WRI, which measures the ratio of total water demand to available renewable surface and groundwater supplies. The approach has been harmonized for all the activities concerned, particularly for Water Tech activities which were assessed at site level rather than state level in 2024. All sites with "Water Stress" classified as "high" and "extremely-high" by the WRI were taken into account as follows: longitudes and latitudes of all the individual sites concerned with water consumption were added to the Aqueduct platform (version 4.0), which uses a geographical intersection to determine the current water stress classification (baseline water stress) of the river basin in which each site is located. Water consumption was then consolidated for sites for which the WRI determines the "Water Stress" class to be "high" and "extremely high".

According to this method, the water consumption of Veolia's activities in water stress areas is shown in the table below. Action plans to manage the risks associated with water stress are defined and managed at a local level.

Total amount of water recycled and reused, in cubic meters

New solutions and technologies for the reuse and recycling of treated wastewater are a growth booster under the GreenUp strategic program and the volumes of reused water are an important component of the saved water target in line with the commitment to regenerate resources.

Thus, the quantities of water recycled and reused have been measured for several years for our Municipal Water, Industrial Water and Waste activities.

The table below shows the total amount of water recycled and reused by Veolia in 2025 mainly from its Municipal Water activities. The data used are taken exclusively from *Global Report*. Details of the primary metrics used to calculate the quantities of water recycled and reused are included in the reporting protocol. The total amount of water recycled and reused is a major component of our "volume of freshwater saved" metric. A target for 2027 has been set for this in GreenUp.

This performance illustrates the effectiveness of Veolia's sustainable water management strategy. It also demonstrates the Group's ability to turn environmental challenges into growth opportunities, while making a significant contribution to the conservation of water resources. This approach is perfectly in line with Veolia's long-term vision, combining economic performance and environmental responsibility.

Total amount of water stored and changes in storage, in cubic meters

The reporting of quantities of stored water and storage variations is neither material nor relevant for Veolia for several reasons. First of all, Veolia does not generally own the raw water storage facilities and has limited control over the quantities stored. In addition, the volumes stored are mainly influenced by weather conditions and the needs related to the different uses of water. Raw water storage is typically managed by local authorities, which set the rules for management and distribution among uses.

Nevertheless, raw water storage plays a crucial role in water supply management. It provides a buffer for seasonal variations in availability and ensures the supply of drinking water, especially during periods of drought. Drinking water supply systems generally have natural (lakes, aquifers) or artificial (dams, reservoirs) means of raw water storage, as well as drinking water storage capacities within distribution networks.

With regard to treated water, the storage infrastructure makes it possible to maintain network pressure and to balance water supply and demand, as well as accommodating daily fluctuations in demand, especially during peak periods. As part of its operations, Veolia uses storage level monitoring to manage withdrawals and switch between the different resources available.

This is why the reporting of quantities of water stored in distribution networks is not considered relevant for Veolia, because these storage facilities are essential for continuity of service and represent relatively small volumes compared with the volumes of water transiting through drinking water systems over a reporting period.

This approach reflects the complexity of water management and Veolia's specific role as an operator, demonstrating the limits of its direct control over certain aspects of the water cycle while highlighting its expertise in optimizing available resources.

Water intensity

In 2025, the water intensity of Veolia, as required by ESRS E3-4 paragraph 29, amounts to 0.0005 m³/M€ of revenue.

The water intensity metric is not considered relevant for our activities, since Veolia is primarily a manager and operator of water services, rather than a direct consumer of water on a large scale. Most of the water treated is either distributed to consumers, or discharged to the environment after treatment, without being consumed by Veolia. The volumes of water treated depend largely on contracts and customer needs, rather than on own consumption.

In addition, water intensity aims to measure the efficiency of water use in relation to production or revenue, which is not representative of Veolia's business model. For the Group, the performance of water management is better reflected by other metrics, such as treatment efficiency, leak reduction, or the amount of water reused. Using this metric could lead to a misinterpretation of Veolia's actual impact on water resources.

In summary, the water intensity metric does not capture the complexity and specific nature of Veolia's water activities.

Metrics (definition and units)	2024	2025
Total volume of water withdrawn (in millions of m ³)	9061	9050
Total volume of wastewater treated (in millions of m ³)*	7521	7636
Total volume of saved freshwater (in millions of m ³)	1454	1574
Total volume of wastewater reused from collected and treated wastewater (in millions of m ³)	1039	1089
Total volume of water consumed by Veolia's activities (in millions of m ³)	23.5	24.2
Total volume (in millions of m ³) and percentage (%) of water consumed by Veolia's activities in areas at water risks ^a	Non publié	3.2
	Non publié	13%
Total volume (in millions of m ³) and percentage (%) of water consumed by Veolia's activities in areas of high-water stress ^b	5.5	7.1
	25 %	29%

* Includes municipal and industrial wastewater activities.

(a) Mainly in Europe, Middle-East and Asia.

(b) Mainly in Europe and Asia.

4.1.2.3.4 Supporting the efforts of municipal customers

Climate change is putting increasing pressure on global water resources, making their availability increasingly variable and unpredictable. This situation is exacerbating water stress in many regions, posing major

challenges for local authorities. In the face of these challenges, Veolia positions itself as a strategic partner, offering innovative and sustainable solutions to improve the water resilience of its customers.

The corresponding IRO is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E3-ES-2 Development of activities to sustain water resources (preservation and regeneration)			

Climate change is now affecting almost every region of the world, extending water stress to areas previously considered abundant in water, including countries like France. This general trend, combined with increasing societal and regulatory pressure to ensure universal access to essential water and sanitation services, creates an environment conducive to the development of Veolia's activities. As a result, water stress, resource degradation and changes in the regulatory framework, although challenging, are becoming real growth catalysts for Veolia. The

Group is ideally positioned to capitalize on these trends, offering innovative solutions adapted to the new paradigms in global water management. This situation reinforces the relevance of Veolia's business model and underlines its crucial role in the transition to more sustainable and resilient management of water resources.

The interactions of this IRO with Veolia's value chain and business model are as follows:

	Key stakeholders involved
Value chain	The beneficiaries of our solutions are: - customers, by using the services and solutions to help them fulfill their responsibilities, taking into account the new constraints on water resources; - communities, by minimizing the impact of climate change on the essential services provided to them; - the planet, by providing solutions to conserve freshwater resources and protect them from pollution.
Business model	This IRO contributes both to Veolia's business performance and to its environmental and societal performance.

Veolia's approach to developing its activities to sustain water resources is based on three key pillars:

- Regenerating wastewater effluents
 - removing pollutants and producing clean water that can be safely returned to the environment or reused for various purposes;
- Increasing the available water resources:
 - developing technologies for treated wastewater reuse,
 - implementing seawater desalination solutions,
 - developing managed aquifer recharge projects,
 - exploring new sources of water supply;

- Reducing the demand for water:

- optimizing distribution networks by detecting and repairing leaks,
- implementing water recycling systems,
- promoting more efficient water consumption practices.

This comprehensive approach allows Veolia to offer customized solutions tailored to the specific requirements of each region and the specific needs of each customer. In areas with high water stress or recurrent droughts, these combined solutions play a crucial role in securing access to water.

Veolia's expertise in the integrated management of water resources not only helps to mitigate the immediate impacts of water stress, but also strengthens the long-term resilience of communities faced with the challenges of climate change. By offering a range of advanced technologies and innovative management practices, Veolia is actively contributing to the transition to more sustainable and efficient use of water resources, essential for adapting to changing climate conditions.

Under its GreenUp program, Veolia seeks to maintain its leadership in the water sector. Veolia intends on the one hand, to consolidate its growth in the management of municipal water and sanitation services through

technological and contractual innovations in order to maintain its operational excellence and competitiveness, and on the other hand, to stimulate its growth in new water-related solutions and technologies, including wastewater reuse, desalination, treatment of emerging water pollutants (see §4.1.2.2.3.2), ultra-pure water production and ZLD (zero liquid discharge) projects. Veolia thus intends to strengthen its offering to municipal customers to meet their water needs. The objective is to increase the revenue from new solutions and technologies by 50% by 2030.

4.1.2.3.5 Supporting the efforts of industrial customers

The growing pressure on global resources, especially water, is forcing industrial companies to fundamentally rethink their approach to water management and to pay greater attention to water stewardship. This involves implementing responsible water management practices throughout their operations, including reducing water consumption, treating and reusing wastewater, protecting local water sources from

contamination, and collaborating with communities and stakeholders to ensure sustainable water use that supports both business continuity and environmental protection. This trend is creating an environment conducive to the development of Veolia's innovative solutions, positioning the Group as a strategic partner in the transition to a more sustainable industry.

The corresponding IRO is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E3-ES-3 Support for industrial clients in the sustainable use of water resources			

The scarcity of water resources, exacerbated by climate change and extreme weather events, is intensifying competition for access to water in most parts of the world. In this context, the ability to operate without significant impacts on local water resources has become not only an environmental imperative, but a prerequisite for the longevity of industrial

activities and the sustainable economic development of territories. This new reality, which affects most industrial sectors, transforms water-related challenges into a powerful driver of business opportunities for Veolia, on a global scale, and particularly in water-stressed areas.

The interactions of this IRO with Veolia's value chain and business model are as follows:

Key stakeholders involved	
Value chain	The primary beneficiaries are industrial customers, who can continue to operate (<i>license to operate</i>), and the territories, which can continue to host these activities and remain economically attractive. The planet is also a beneficiary, because the solutions proposed help to conserve freshwater resources and protect them from industrial pollution.
Business model	This IRO contributes both to Veolia's business performance and to its environmental and societal performance.

Industrial clients are looking for advanced technological solutions to:

- reduce their water consumption;
- optimize wastewater recycling and reuse;
- improve the treatment of their discharges to meet increasingly stringent quality standards;
- progress toward water neutrality;
- contribute to addressing common water-related challenges in the watersheds where they operate.

Veolia, with its expertise and diversified technology portfolio, is positioning itself as a key strategic partner in this transition to a more sustainable industry. The Group's solutions and technologies meet the specific needs of most industrial sectors, allowing individual support in the shift toward sustainable use of water resources.

As part of GreenUp, Veolia intends to strengthen its activities with industrial clients by actively contributing to the transformation of industrial models, making them more resilient to environmental and regulatory challenges, while contributing to the overall preservation of water resources. Veolia is thus positioned at the forefront of a fundamental transformation of industrial practices, where sustainable water management is becoming a competitive advantage and a key factor in sustainable economic development.

4.1.2.3.6 A Historical contractual model that needs to evolve

More and more municipal clients, faced with water scarcity, are asking to take action to reduce consumers' drinking water consumption. Veolia views this trend as a potential risk for the economic balance of water services and the contractual model, which involves a majority share of fixed costs and variable billing based on the volumes of water distributed. The IRO on this subject is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E3-ES-4 Gap between customer expectations around responsible drinking water use and current volume-based remuneration models			

The trend described is mainly observed in France and Spain, two strongholds for Veolia in municipal water, which confirms its materiality. It affects all water services, regardless of how they are managed, and proves to be all the more risky in a context of climate change, which requires the adaptation of aging infrastructure and thus increased investment. In Veolia's other strongholds, such as the United States, Central and Eastern Europe, and Latin America, this trend is not yet

noticeable, but, Veolia considers that with water resources becoming increasingly scarce because of climate change, the downward trend in volumes consumed is likely to become widespread. This topic, identified with stakeholders and discussed with the *Critical Friends Committee* in 2024, is an opportunity to stand out through the development of innovative new business models.

The IRO's interactions with Veolia's value chain and business model are as follows:

Key stakeholders involved	
Value chain	Veolia and its customers are the primary beneficiaries, since it maintains the economic balance of the service and continues to invest in order to maintain continuity of service, while conserving water resources and thus the planet.
Business model	This IRO contributes mainly to Veolia's financial (margins) and commercial (differentiation) performance.

To mitigate the risk associated with the decrease in volumes, Veolia is developing innovative contracts to promote actions to reduce water consumption. These new contractual models, which are tailored to specific local characteristics in terms of pressure on resources and consumer profiles, are based on innovative pricing:

- a seasonal tariff encourages responsible use during periods of shortage;
- a tiered tariff ensures that large consumers contribute more to service revenues;
- a social tariff protects low-income users;
- the increase in the fixed share finances the adaptation of infrastructure.

These contracts also include conditions for updating and revising water prices to protect the remuneration structure from the financial risk associated with a significant decrease in volumes. This contractual and price engineering encourages more moderate consumption, while maintaining the economic balance of the service and protecting the purchasing power of consumers, thus providing a means of differentiation for Veolia.

Some real-life examples:

- Syndicat Mixte Garrigues Campagne (France, 2024): social, tiered and seasonal pricing models, with the first cubic meters free for households, a tiered tariff depending on consumption, and an increased summer tariff;
- Métropole de Toulouse (France, 2024): seasonal pricing model with an increase in summer offset by a decrease in winter.

These performance or water conservation contracts allow to reduce water consumption while maintaining the economic balance in the short and medium term. However, the long-term challenges of the sector, including climate change adaptation and the modernization of aging infrastructure, require a new financing model to support the massive investments needed. To that end, Veolia, in association with partner companies and authorities,

conducted a study in 2024 on a new way of financing water and sanitation services in France. The study sets out the general principles for a new business model for the water industry and makes 25 concrete proposals to ensure the economic sustainability of services, while reconciling environmental efficiency, economic balance and social equity.

These include:

- Providing communities and users with data on water withdrawals and consumption to enable informed action;
- Sharing best pricing practices including harmonizing subscription caps at minimum 40%, implementing seasonal tariffs during resource stress, establishing differentiated rates for secondary residences and large industrial users, and supporting low-income households;
- Strengthening local government roles in promoting conservation performance;
- Directing state financial support toward communities committed to conservation and infrastructure investments; and
- Engaging users as active participants through transparent communication about service costs, displaying average amounts rather than unit costs on bills, and fostering quality dialogue to achieve fairer resource sharing.

Veolia actively promotes the consideration of these proposals among its clients and stakeholders.

This proactive approach demonstrates Veolia's commitment to anticipating future challenges in the water sector and to developing innovative and sustainable solutions, strengthening its position as a major player in the responsible management of water resources.

4.1.2.4 Biodiversity and ecosystems (E4)

4.1.2.4.1 Introduction

The scientific assessment

According to IPBES (Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services), global biodiversity is experiencing an unprecedented decline, mainly due to five major pressure factors:

- changes in land and sea use;
- overexploitation of natural resources;
- climate change;
- pollution;
- invasive alien species.

Nature conservation has become a critical imperative for the future of the planet and humanity. Biodiversity, which encompasses the diversity of living species, ecosystems and genes, as well as the ecosystem services they provide, is a fundamental pillar of planetary health and, consequently, of the sustainability of economic activities and collective well-being.

While the business sector bears partial responsibility for pressures on ecosystems, corporate action is equally crucial in developing solutions to preserve, protect and regenerate them.

Veolia's impact on biodiversity

Through depollution, decarbonization, and resource regeneration, Veolia's operations contribute to the preservation of natural environments including water, air, and soil. They also mitigate three of the five aforementioned drivers of biodiversity loss resulting from the activities of Veolia's municipal and industrial customers: overexploitation of natural resources such as water, climate change and pollution. Specifically:

- waste collection and treatment reduce the pollution of soil, air, and water bodies caused by urban and industrial sources;
- wastewater treatment activities enable the discharge of quality water into the natural environment, thereby supporting the replenishment of watercourses, the achievement of good ecological status, and the protection of water resources from pollution;
- the development of centralized and strictly regulated district heating networks, which are continuously monitored and supplied with certified biomass, reduces environmental impact compared to more polluting systems;
- the production and commercialization of recycled organic fertilizers support sustainable agriculture, which plays a key role in maintaining ecosystem balance.

→ Veolia's contribution to nature conservation and ecosystem preservation through its depollution activities is addressed in IRO E4-ES-1 as a positive impact, as detailed in section 4.1.2.4.3 below.

At the same time, Veolia recognizes that activities on its own operated sites can create direct or indirect negative impacts on nature. While these impacts are substantially smaller than the significant reduction in customers' environmental footprint that Veolia enables (cf. ESRS E1 section 4.1.2.1.4, ESRS E2 section 4.1.2.2.3 and ESRS E5 section 4.1.2.5.2), the company remains fully aware of its responsibility and addresses them through appropriate mitigation measures within its environmental management system (cf. section 4.1.2.4.4 below):

- To precisely identify where our impacts on biodiversity are located, Veolia has identified sites with significant environmental issues. The biodiversity footprint of these "sensitive" sites is then assessed to analyse the negative and positive, direct and indirect impacts generated at the local level, taking into account their proximity to protected areas;
- Across all sites, Veolia is committed to eliminating the use of phytosanitary products across all operational sites under its management and applies ecological management practices to promote biodiversity and implement nature protection initiatives.

If the Group's activities help reduce pressure factors on biodiversity, at the same time, our activities depend on the proper functioning of ecosystem services: the water cycle for drinking water production, microbial activity for wastewater treatment, sustainable biomass supply for low-carbon energy, and soil biological activity for composting and remediation.

In 2023, the analysis of direct operations and the value chain, conducted using the LEAP approach recommended by the TNFD, identified issues at Veolia's sites and for certain raw materials (biomass, chemical products and fossil fuels), requiring greater consideration of nature throughout the value chain. And, among dependencies, the one related to biomass has been considered material. Consequently, Veolia has established traceability and certification objectives for the wood biomass used in its energy activities, supported by 2027 targets (cf. section 4.1.2.4.4).

→ These negative impacts are addressed in IRO E4-ST-2, as detailed in section 4.1.2.4.4 below.

4.1.2.4.2 Veolia's commitment to nature

The Group addresses the challenges of protecting and restoring nature not only through its core activities and the operational practices implemented at its sites, but also more broadly by integrating nature into its overall policy and processes. This policy is reflected in the integration of a biodiversity protection objective within our multifaceted performance, the adoption of standard objectives across all our sites, and our Act4nature international commitments.

Nature is integral to Veolia's strategy

In 2019, Veolia published its purpose with the particular aim of improving the environmental performance of both the Group and its customers, based on four priorities: fighting climate change; promoting the circular economy; preserving water resources; and protecting habitats and biodiversity.

Since 2024, as part of its new GreenUp strategic program, Veolia has been committed to mitigating the erosion factors associated with human activities through its three pillars: decarbonizing, depolluting, and regenerating natural resources. GreenUp sets out the Group's strategic ambition to make Veolia a sustainable and prosperous business in a livable world by continuing the pioneering multifaceted performance approach launched in 2020.

The launch of GreenUp was an opportunity to reaffirm the importance of biodiversity within the Group's multifaceted performance commitments. The depollution-biodiversity objective "Preservation of biodiversity on sensitive sites", which featured in the previous program, has been retained in the new multifaceted performance objectives for the period 2024-2027, which are integrated into the remuneration of the Group's Executive Resources. This objective reflects Veolia's awareness of its local impacts and is addressed within the framework of IRO E4-ST-2 "Impact of our sites and our value chain on ecosystems and biodiversity" (cf. section 4.1.2.4.4 above).

In practical terms, Veolia manages action plans across 154 sites identified as sensitive for biodiversity in 2024, achieving a progress rate of 80% in 2025 with a target of 85% by 2027. This objective is measured through a metric that tracks the deployment of action plans designed to reduce impacts on natural environments and biodiversity at sensitive sites, building on the achievements of the previous program (cf. section 4.1.2.4.4).

Beyond this multifaceted performance objective, Veolia implements across all other sites managed by the Group, in line with its environmental policy (cf. section 4.1.1.5.1), more sustainable practices (ecological management, phasing out of phytosanitary products) detailed in section 4.1.2.4.4. The company aims to apply these measures to 95% of its facilities by 2027, in accordance with its standard targets.

In addition, the Group's standard targets have established energy-related objectives: by 2027, these measures aim to achieve 100% traceability and certification of wood biomass used for energy within the Group's scope of operational control. Through this certification objective, the Group aims to guarantee the non-deforestation and non-conversion of wood supply chains, as well as the exclusion of sourcing from areas of high environmental value. The certification must be compatible with EU RED II Directive (SURE, SBP, KZR INiG or PEFC).

Moreover, in alignment with Target 2 of the Global Biodiversity Framework (GBF), an international agreement adopted in December 2022 at COP15 in Montreal, Veolia has set a target to renature 745 hectares by 2027 across all landfills (cf. section 4.1.2.4.4).

A biodiversity strategy reinforced by public commitments

To strengthen these biodiversity initiatives, in March 2024, the Group renewed its commitment to the Act4nature international initiative, of which Veolia has been a partner since 2018. This initiative brings together more than 70 leading French companies and their non-profit and academic partners. In addition to the aforementioned actions (deployment of action plans, ecological management and elimination of phytosanitary products, traceability and certification of the wood energy supply chain), these new commitments for 2027 include additional actions aimed at providing the Group's customers with conservation and restoration solutions derived from its performance and innovation policy, such as nature-based solutions, and at reinforcing the integration of nature within the Group's governance. These commitments, signed by Veolia's Chief Executive Officer, are structured according to the pillars of the Taskforce on Nature-related Financial Disclosures (TNFD). Beyond the multi-faceted performance indicator and standard targets, progress in 2025 includes the integration of biodiversity into the sustainable procurement supplier charter which will be completed in 2026 and the sharing of internal best practices as part of integrating biodiversity as an enhancer of our commercial offerings (Progress as of year-end 2025 is presented in Appendix 8.10.1).

These new act4nature international commitments are aligned with the targets of the Global Biodiversity Framework (GBF) adopted at COP15 and which sets international nature protection targets for 2030. They were reviewed and validated by act4nature international partners during a steering committee meeting. The steering committee comprises representatives from business networks, NGOs, a public body (the Office Français de la Biodiversité), and scientific partners.

In 2024, the Group also joined the twin initiative It's Now for Nature, led by the organization Business for Nature, which encompasses more than 100 business networks worldwide.

In order to better report and measure its impacts, risks and dependencies on nature, Veolia was one of the first companies to adopt the nature-related impact reporting framework developed by the TNFD in its 2023 Universal Registration Document. This framework serves as a common benchmark for issuers and investors when evaluating corporate nature policies. Veolia was therefore recognized at the Davos Forum in January 2024 as one of the TNFD's 19 French early adopters.

Information on the Group's nature and biodiversity protection policy corresponding to the four pillars of the TNFD disclosure framework (governance, strategy, risks and opportunities, metrics and targets) will be the subject of a dedicated TNFD report in 2026. Furthermore, for more detailed information, a cross-reference table in Appendix 8.10.2 maps the 14 disclosure recommendations of the framework to the relevant chapters of the Universal Registration Document.

A structured governance framework for nature

To review the risks and opportunities relating to the nature-related impacts and dependencies of Veolia's activities, the Board of Directors primarily relies on two of its Committees (see section 4.1.1.4.1 above):

- the Purpose Committee, which conducts an annual review of the multifaceted performance objectives, including the protection of natural environments and biodiversity, and related metrics;
- the Accounts and Audit Committee, which is responsible for reviewing the financial and non-financial risk mapping, including nature-related challenges, and understanding the management initiatives and corrective measures.

In addition, like all multifaceted performance objectives, the objective of protecting natural environments and biodiversity is supported by a sponsor, an Executive Committee member and Senior Executive Vice President for Strategy, Innovation and Development. Its progress, evaluated by an independent third-party organization, is taken into account in the calculation of Veolia senior executive variable compensation.

The sharing of objectives and the rollout of Veolia's biodiversity strategy across the Business Units takes place through a network of more than 50 biodiversity correspondents throughout the Group. Quarterly meetings are held to facilitate this information exchange. The biodiversity correspondents are specifically responsible for implementing action plans for biodiversity preservation at sites operated by Veolia and, more broadly, for biodiversity policy implementation.

A stakeholder engagement policy for biodiversity

The Group raises awareness among internal (on-site personnel, support functions) and external (subcontractors, customers, general public, etc.) stakeholders on the protection of environments and biodiversity. Internally, the ultimate aim is to firmly establish the cultural change needed to transform operational practices at all of the Group's decision-making levels (ecological management, green infrastructure, etc.). Since 2022, Veolia has offered an internal e-learning module on biodiversity available in 11 languages, designed around specific issues related to its activities. This module helps understand the challenges of environmental and biodiversity protection, grasp the Group's strategy, and identify action levers according to each person's motivations. Within the Sustainability Academy, which already includes the GreenUp e-learning, the Climate School offering was deployed in 2025 to enable mastery of the fundamentals of environmental issues (including biodiversity collapse) and to take action.

The Group has been a partner of the French IUCN Committee since 2008. This committee shares its expertise with the Group for implementing the Group's biodiversity strategy (formulating its commitment to act4nature international, designing operational tools, etc.). As part of this partnership, Veolia participated in the IUCN Congress in 2025 on October 11th in a session on Nature-based Solutions (NbS) for water - "Practical Strategies and Lessons From The Private Sector" organized by the French IUCN Committee. Veolia is also an active participant in the think tanks of leading French non-profit organizations whose companies are members, such as Entreprises pour l'Environnement (EpE) and Orée, as well as Business for Nature, an international network. Demonstrating its strong commitment to these organizations, Veolia's Chief Executive Officer, Estelle Brachlianoff, was appointed President of Entreprises pour l'Environnement (EpE) in 2025 for a three-year term.

In November 2024, the Group attended COP16 in Cali and was invited to participate in the Business and Biodiversity Summit, part of the official COP program. On this occasion, Veolia published its first biodiversity report, entitled "Conserving and regenerating nature: from commitment to action." The report demonstrates the contribution of Veolia's businesses and solutions to protecting biodiversity, as well as its commitment to exemplarity, reinforced under GreenUp.

Biodiversity Report URL: <https://www.veolia.com/sites/g/files/dvc4206/files/document/2025/08/biodiversity-report-veolia-081925.pdf>

In 2025, Veolia participated in COP30 in Belém, where numerous sessions were dedicated to the biodiversity-climate nexus, including a dedicated Nature Day. This participation underscored the Group's commitment to addressing the interconnected challenges of biodiversity loss and climate change,

4.1.2.4.3 Nature conservation through depollution activities

As shown by the breakdown of Veolia's revenue across its different activities (see section 1.3.1), a very significant proportion of Veolia's activities (wastewater treatment plants, waste treatment including hazardous waste) contributes directly to this positive impact. Moreover, the new GreenUp strategic program is accelerating the development of high-impact depollution activities, such as hazardous waste treatment and new water technologies (2 of the 3 "boosters" described in section 4.1.1.5.1).

Regarding the positive impact of Veolia's depollution activities on ecosystems, which address the drivers of biodiversity loss, the corresponding IRO is classified as a positive impact and summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E4-ES-1 Contribution to the preservation of biodiversity and ecosystems through depollution			

For example, as mentioned in section 4.1.2.2.3.1, the effectiveness of pollution control is measured by the treatment efficiency of wastewater treatment plants, which compares the pollutant load removed to the incoming load (in COD). For large plants (over 150,000 population equivalents), the Group aims to achieve by 2027 a treatment efficiency of over 92% for COD. In 2025, the result achieved was 91.8%. In concrete

terms, this means that thanks to wastewater treatment plants, 91.8% of chemical oxygen demand is removed before discharge into the environment. Without this pollution control, these pollutants would be directly released into aquatic environments, causing major degradation of water quality and ecosystems.

Veolia's value chain is involved at various levels:

Upstream value chain	Upstream, the market in general and clients of environmental services are increasingly concerned about the state of nature and the commitment to preserve it. The implementation of this IRO covers Veolia's depollution activities, both in terms of the operational management of depollution installations and the provision of depollution solutions.		
Downstream value chain	Downstream, the main direct beneficiaries of this IRO are the planet and local communities. Investors also benefit through the recognition of the positive impact of their investment on nature.		

This IRO aligns with the Group's business model by contributing to multifaceted performance, particularly environmental performance.

It is presented in more detail in the description of the IRO defined in section 4.1.2.2.3 Depollution activities above:

- E2-ES-2 Development of depollution activities for customers in line with new regulatory requirements (emerging pollutants in water, micropollutants, endocrine disruptors, etc.);
- E2-ES-3 Increase in hazardous waste treatment capacity across different technology sectors to meet the growing needs of customers.

Example of a nature-based solution in Spain: restoring wetlands in the Ebro Delta

Located in Catalonia's largest wetland area of high environmental value, this river basin ecological management project preserves biodiversity and improves water quality from rice fields before it flows into the lagoons and bays of the Ebro Delta. These treatment wetlands were constructed by ACUAMED (Ministry for Ecological Transition) and have been managed by Veolia since 2015. Since their creation, they have become privileged spaces for the refuge, feeding, and nesting of a large number of aquatic birds. The 140-hectare restored wetland now supports 48 different species of waterfowl, 33 of which are listed as endangered. This recently formed space actively participates in preserving the biodiversity of the entire Ebro Delta. The site was designated a nature reserve for wildlife in 2020.

4.1.2.4.4 Protection and restoration of nature in Veolia's direct operations and the value chain

The corresponding IRO, classed as a negative impact, is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E4-ST-2 Impacts of our sites and value chain on ecosystems and biodiversity			

Veolia's value chain is involved at various levels:

Upstream value chain	Upstream, the market in general and clients of environmental services are increasingly concerned about the state of nature and the commitment to preserve it. The implementation of this IRO covers Veolia's activities at an industrial site.		
Downstream value chain	Downstream, the main entities directly benefiting from this IRO are the planet and local communities. Investors also benefit through the recognition of the positive impact of their investment on nature.		

Veolia conducts industrial operations at approximately 2,000 sites⁽¹⁾. These may have direct negative environmental impacts locally, or indirect negative environmental impacts through their upstream value chain.

Mindful of its potential impacts, the Group applies the mitigation hierarchy by prioritizing actions aimed first at avoiding these impacts, then at reducing them, and finally, as a last resort, at offsetting them where necessary (the "avoid, reduce, offset" approach).

⁽¹⁾ Operating sites and contracts referenced in the Global Report reporting tool.

Site-level actions addressing our impacts

The multifaceted performance approach for 2024-2027, associated with the new GreenUp strategic program, includes monitoring action plans to mitigate impacts at biodiversity-sensitive sites and, in parallel and more broadly, new standard targets for biodiversity and ecosystems. This strengthens the Group's commitment to the nature conservation practices established in the previous plan, expanding their scope following the Suez acquisition while integrating more ambitious targets.

■ Our multifaceted performance objective focuses on preserving biodiversity at sensitive sites, which are identified based on two major categories of criteria due to their significant biodiversity challenges.

- **issues related to the sensitivity and potential of the site:** the type of environment in which the site is located, the presence of protected natural areas or areas of high importance for biodiversity near the site, the potential presence of threatened, endangered or protected species, land and water surface areas, and level of water stress. To this end, Veolia cross-references information extracted from the IBAT database (Integrated Biodiversity Assessment Tool) – developed by BirdLife International, Conservation International, the IUCN and the United Nations Environment Programme – with site geolocation data. The natural areas defined by IUCN (categories I to VI), UNESCO (natural world heritage sites), the Ramsar Convention, MAB (Man and the Biosphere Programme), the Alliance for Zero Extinction, and Important Bird and Biodiversity Areas (IBAs) are considered;

- **issues relating to the site's activity:** air and water discharges, treatment efficiency, abstraction of resources, potential past non-compliance (discharges to the environment), and soil sealing.

These criteria were defined with the support of the French Committee of the IUCN. For each criterion, points are assigned based on specific thresholds or responses, and the sum of these points determines an overall score used to identify sensitive sites.

Under the previous program (2019-2023), Veolia identified 123 sensitive sites among the 1,453 main sites managed by the Group⁽¹⁾. In 2024, this figure increased to 158 out of 1,913 sites (covering a cumulative area of 34,447 ha) due to scope expansion following the acquisition of Suez. In 2025, the number of sensitive sites was adjusted to 154 following contract terminations and transfers of green space responsibilities.

These 154 sites cover a total area of 20,898 hectares. Among them, 102 sites are located less than five kilometers from a sensitive or protected natural area (source: IBAT). In 2025, 144 of these 154 sensitive sites (compared to 135 in 2024) have implemented actions in favor of biodiversity, covering a total area of 18,952 hectares.

Table: Number of sensitive sites and surface area near sensitive/protected areas (102 out of 154 sensitive sites)

Area	Number of sensitive sites within 5 km of a protected area (source: IBAT)		Aggregate area (in ha)	
	2024	2025	2024	2025
Italy, Africa, Middle East	1	1	290	290
Asia Pacific	12	12	986	986
Central and Eastern Europe	12	12	659	661
France and Special Waste Europe	29	28	1,310	1,321
Iberia and Latin America	25	25	1,181	1,179
North America	10	10	2,063	2,067
Northern Europe	14	14	946	946
Grand total	103	102	7,435	7,450

Among these sensitive sites—according to Veolia's criteria specified above—some are located within five kilometers of a protected area or key biodiversity area and may have negative impacts on it. An indicator has

been developed to disclose the number and area (in hectares) of these sites owned, leased or managed within five kilometers of protected areas or key biodiversity areas on which the site may have negative impacts.

Metric	2024	2025	Comments
Number of sites owned, leased or managed within or near protected areas or key biodiversity areas that the undertaking negatively affects	103 sites 7,435 ha	102 sites 7,450 ha	Number and surface area of sensitive sites within 5 km of a protected area (source: IBAT)

The biodiversity footprint of the sensitive sites thus defined is measured to assess direct or indirect negative and positive impacts generated by site activities at the local level.

This tool is the result of a collaboration between ecologists and life cycle assessment experts from the French consulting firm Écosphère, the French Committee of the IUCN, and Veolia. Like a carbon footprint, the biodiversity footprint qualitatively and quantitatively measures the major issues on a site to facilitate the creation of a semi-automated action plan. It includes an analysis of indicators and data related to:

- **site processes:** consumption of energy, reagents, water and raw materials; discharges; waste production; and energy and material recovery;
- **site location and space management:** presence of protected natural areas or areas of high importance for biodiversity (on or near the site), management of green spaces, management of invasive species, lighting, etc.

These impacts encompass the consumption of natural resources during site operations (water, chemical products, biomass and energy), residual pollution from operating emissions, greenhouse gas emissions, and the effects of site land use on habitats.

The involvement of an expert ecologist in local biodiversity is required to help the Business Units measure their on-site footprint.

The ecologist also supports the site in defining its action plan, which is based on the major issues revealed by the biodiversity footprint assessment. The action plan draws from a list of predefined actions whose objectives are to reduce the impacts identified and to conserve or restore nature. These actions (15 generic actions and other specific actions) focus on reducing the impact on habitat fragmentation and artificialization, preserving rare or threatened species, managing green spaces ecologically, protecting water resources, controlling invasive alien species, reducing light pollution, preventing pollution, combating climate change, and raising awareness among stakeholders.

Each action may be implemented in partnership with a local organization, particularly for awareness-raising initiatives.

⁽¹⁾ Operating sites and contracts referenced in the Global Report reporting tool.

Antanas Smart Ecological Management Center, Colombia

Located in the city of Pasto, this 100-hectare park on a landfill site has maintained three conservation areas totaling 73 hectares since 2021. The creation of a certified nursery (ICA registration) ensures the availability of endemic species for revegetation and reforestation, while functional gardens promote sustainable practices using native plants. Three wildlife observation routes enable participatory scientific monitoring, and biological corridors connect fragmented forests to enhance ecological connectivity. Specialized sensors have been installed for species identification, enabling the development of occupancy models using advanced techniques that include direct counts, automated acoustic recordings, and machine learning algorithms. In 2025, the site continues to raise awareness among employees and local communities through visits, conferences, and active participation in biodiversity conservation initiatives.

The metric tracked under this IRO is the multifaceted performance indicator 'Biodiversity preservation on sensitive sites,' which corresponds to the deployment rate of a site's action plan. This rate measures the progress of planned actions and is calculated by dividing the number of actions actually carried out by the total number of actions required. These actions include:

- 15 generic actions to be deployed at each site;
- plus additional actions recommended by the ecologist based on the results of the biodiversity footprint analysis and targeting specific impacts in the above-mentioned list.

The biodiversity footprint is conducted once, and the resulting actions are then deployed throughout the duration of the strategic plan.

An overall average target rate of 85% has been set for 2027 across all sites, representing the average of all individual site deployment rates.

GreenUp

Commitment	Objective	SDG	Metric - definition	2023 baseline	2024 Result	2025 Results	2027 target
Combat pollution and accelerate the ecological transformation	Depollution - biodiversity	 	Biodiversity preservation on sensitive sites ⁽¹⁾	59% progress on action plans (new scope)	73% progress on action plans	80% progress on action plans	≥ 85% progress on action plans
Sponsor	Sébastien Daziano		Executive Committee member, Senior Executive Vice President, Strategy, Innovation and Development				

(1) Rate of progress with action plans aimed at improving the impact on environments and biodiversity at sensitive sites (new 2023 scope, pro forma 2023-2027).

- **The new standard targets** aim to achieve ecological management and the elimination of phytosanitary products at 95% of sites by 2027. They also establish objectives of 100% traceability and certification for wood biomass used in the energy sector. As part of the new standard targets for biodiversity that apply to all operational entities, various tools are made available to support them, regardless of the issues at stake. These resources are accessible to the network of biodiversity correspondents (more than 50 distributed across the different BUs) through a shared online folder.
- **The ecological management guide**, developed in partnership with the IUCN French Committee in 2016, includes fact sheets on maintaining green spaces, ponds and watercourses; ecological development of roadways and buildings; and prevention and management of invasive alien species. A sector-specific version of the guide for landfill sites was produced in 2022.
- **The "Green Spaces" charter** is intended to support the transition of operational entities toward more ecological practices since 2020. It formalizes the commitments made by Veolia's sites and service providers in the ecological management of green spaces, and includes mandatory measures to ensure that this management complies with the charter's requirements.
- The "Zero Phytosanitary Products" charter (covering herbicides, fungicides, insecticides and biocides) lists the practices to be adopted for a site to be considered exemplary with regard to the management of its green spaces. Like the "Green Spaces" charter, it applies to sites and their service providers, also available since 2020.
- Moreover, in alignment with Target 2 of the Global Biodiversity Framework (GBF) which aims to ensure that by 2030 at least 30 per cent of areas of degraded terrestrial, inland water, and marine and coastal ecosystems are under effective restoration, in order to enhance biodiversity and ecosystem functions and services, ecological integrity and connectivity, Veolia has set a target to re-nature 745 hectares by 2027 across all landfills. This target is based on four-year projections provided by operational sites.
- Desalination can locally affect marine ecosystems due to the discharge of brine inherent to the activity (salt concentration, higher temperature, potential traces of chemicals). This is why, for years, Veolia has implemented measures that increasingly limit this impact:
 - Veolia builds and operates plants for clients who have obtained permits that comply with environmental concerns, including the impact on biodiversity from brine discharged into the sea;
 - Veolia implements the solutions evaluated as most effective, taking into account the geographical, maritime, meteorological, economic, and ecological constraints defined during project development;
 - Veolia monitors the characteristics of the discharged brine (composition, temperature, quantity) as well as the potential environmental impact throughout the operation of the facility;
 - Veolia reduces the use of chemicals (process optimization and, when possible, the use of beach wells to pre-filter seawater) and treats sludge;
 - Veolia improves brine discharge diffusion techniques, as demonstrated by the Umm Al Quwain project in the United Arab Emirates, where specially designed diffusers allow optimal dilution and dispersion of brine in the marine current, thus minimizing the impact on the local aquatic ecosystem;
 - Sludge treatment allows for the recovery of chemicals injected during pre-treatment, thereby avoiding their discharge with the brine.

This leads to strict compliance with local regulations, which are becoming increasingly demanding. However, given the great variability of the marine environments where installations are located (Spain, Morocco, Spain, the Middle East...) and the absence of common metrics, it is not possible to publish aggregated information about the impact of the facilities. Each site is monitored in accordance with the operating rules set by local authorities.

Integrating biodiversity into the Group's risk management policy

The main risks that Veolia faces are subject to an annual mapping process. Risks are classified according to their potential impact and probability of occurrence, and ranked by order of importance. Among these risks are environmental and industrial risks.

In 2023, the analysis of direct operations and the value chain, conducted using the LEAP approach recommended by the TNFD, identified issues at Veolia's sites and for certain raw materials (biomass, chemical products & fossil fuels), requiring greater consideration of nature throughout the value chain. Consequently, this has resulted in more extensive dialogue with suppliers to integrate environmental protection criteria, including biodiversity considerations, into supplier selection and assessment processes. In line with its commitment to social and environmental responsibility, Veolia has established a Responsible Procurement policy aimed at incorporating sustainable development issues throughout its supply chain, requiring suppliers to make every

effort to fully understand the origin of the products and services they provide in order to identify and reduce their impacts. (cf. section 4.1.3.2.2 above). Furthermore, the integration of biodiversity into the sustainable procurement supplier charter is an ongoing project which will be completed in 2026.

The results of this analysis also enhanced the Group's risk nomenclature (Veolia Risk Universe), which seeks to develop a common language for risks and their descriptions by integrating the risk of biodiversity loss. The analysis conducted covers physical and transition risks, but Veolia has not yet assessed systemic risks as the Group is in the learning phase of the TNFD framework and is awaiting proven methodologies. The methodology relating to due diligence risk mapping was overhauled in 2024. The risk "Harm to biodiversity and water and marine resources" has been identified and assigned a high action priority for the Group's activities, as well as for its suppliers and subcontractors.

4.1.2.5 Resource use and circular economy (E5)

4.1.2.5.1 Introduction

Green Up is the corporate strategic programme based on zones and BUS own plans and in conjunction with them.

The global economy is linear: it is based on a pattern of extraction, production, use and disposal. This leads to resource depletion, biodiversity loss and the generation of waste, including hazardous waste, which harms the planet's ability to continue to meet the needs of future generations. Of the nine planetary boundaries, seven had already been reached or were exceeded in 2025.

The transition to an economy based on circular and responsible use of resources will essentially help to preserve virgin resources and reinforce the decarbonization of human activities. To do this, the development of activities such as material recovery from waste must be encouraged, then followed by energy from waste.

According to Veolia's purpose statement, the purpose of the Group is to "develop and implement locally solutions to depollute vital resources and preserve them from depletion, solutions to decarbonize ways of living and producing and adapt them to the consequences of climate change".

Veolia is mainly positioned on the "Closing the loop" part of the value chain proposed by the circular economy:

The GreenUp strategic program 2024-2027 centers its impact strategy around resource regeneration, along with decarbonization and depollution. Resource regeneration is also the subject of a multifaceted

performance objective specifically for water, measured by the volume of freshwater preserved through the Group's activities (see Chapter 4.1.2.3 Water and marine resources above).

4.1.2.5.2 Develop material and energy recovery

Promote material recycling and resource regeneration

Veolia positions its circular economy strategy around resource regeneration. Indeed, the Group proposes specific offerings to its customers to protect natural resources: treating waste and complex pollution, waste and wastewater energy and material recovery and industrial and regional ecology services.

This strategy has been implemented with its partners every day for the past 170 years, serving regions by offering solutions that range from eco-design and the production of secondary materials (recycled glass, cardboard and plastics, rare metals from electronic waste, recovered

The corresponding IRO is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E5-ES-2 Development of activities for the recovery of certain materials due to pressure on resources and the need to limit the use of virgin resources			

The pressure on resources may lead to new regulations aimed at including more recycled materials in production processes, for example in the plastics sector. Supported by more than 30 years of experience in recycling plastic, in 2023 Veolia created PlastiLoop, which enables its customers to source recycled plastic resins from anywhere in the world, through a range of polymers sorted by application to meet each specific need. PlastiLoop therefore offers a concrete solution for industrial customers who wish to commit to a plastic recycling process in order to reduce their carbon footprint and help save resources. Veolia, through its infrastructure, helps to combat this pollution.

solvents, compost, etc.), to treated wastewater reuse and renewable energy production. At the Executive Committee level, the strategy is managed by Gustavo Migueis, Senior Executive Vice President Latin America.

As part of the Green Up strategic program 2024 - 2027, the ambition to grow in terms of material recovery has been reaffirmed. As an example, this is the case for the RVD BU in France, which is targeting growth in its sorting-related markets and its capacity for WEEE recovery (Waste electrical and electronic equipment).

The example of plastic illustrates the global scale of the problem, and the United Nations Environment Assembly is currently working on a global treaty to combat this pollution in collaboration with civil society. Veolia's infrastructure helps to combat this pollution. Veolia contributes to recycling many other resources, particularly through its sorting centers, which prepare materials for subsequent recovery: these include paper, cardboard, scrap metal, non-ferrous metals, and wood. Numerous actions are presented in the table provided in 4.1.2.5.3.

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Upstream, Veolia's actions meet market expectations for increased sourcing of secondary raw materials and comply with the growing number of regulations that require the recycling of rare materials. They are based on increasingly advanced selective waste collection schemes. Downstream, Veolia provides its customers with secondary raw materials that contribute to their supply chain circularity policy.
Business model	This material recycling contributes both - to Veolia's commercial performance, in line with its purpose; and - to its environmental performance, helping to reduce the consumption of primary raw materials and the emission of greenhouse gases.

Energy recovery from non-recyclable waste

In addition to material recovery, for non-recyclable waste, energy recovery ensures a virtuous circle of decarbonization.

For example, solid recovered fuel (see the IRO below) is dry, non-hazardous waste that can be converted into energy by incineration at municipal sites (household waste incinerators) or high-capacity industrial sites (cement factories). It is made from waste that cannot be sorted or composted. Growth of solid recovered fuel preparation to feed customers assets is part of Green Up.

This type of energy recovery has the dual advantage of being a treatment solution for non-recyclable waste while extracting the energy it contains. It thus offers industry an alternative local energy source which is twice as low in carbon as coal and on a par with natural gas (fossil fuels), without being subject to the geopolitical uncertainties of natural gas.

Positive impact	Negative impact	Financial opportunity	Financial risk
E5-ES-4 Energy recovery of non-recyclable waste (SRF-RDF), contributing to decarbonization			

Given the pressure on energy markets and the general need for decarbonization, solid recovered fuel has become a solution. These trends will only strengthen in the years to come.

For example, Solvay and Veolia have embarked on the construction of a low-carbon energy production plant based on cogeneration, replacing coal with SRF, an industrial ecology project called Dombasle Énergie, located in France. This contract was signed in 2022. The project consists

of replacing three coal-fired boilers with a boiler room equipped with two furnaces running on RDF, produced from waste that cannot be recycled, allowing to halve the carbon footprint of the industrial activity and stop importing 200,000 tons of coal annually. The new facility, to be built by Solvay and operated by Veolia, will have a capacity of 181 megawatts (MW) thermal power and 17.5 MW electrical power, which will be reused for the industrial process.

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	This IRO meets manufacturers' needs for local decarbonizing solutions with guaranteed sourcing.
Business model	This IRO contributes mainly to Veolia's environmental performance: • non-recyclable waste disposal; • local decarbonizing energy production. It also contributes to commercial performance with industrial customers.

Solid recovered fuels (SRF) are produced from non-hazardous household and industrial waste recovery. Also known as refuse-derived fuels (RDF), they are a high-yield energy source for electricity and heat production, and a credible alternative to landfill. SRF preparation lines process the material in different stages: crushing, sorting mechanically, by air-flow or by size (trommel screen), separation of ferrous metals, fine grinding depending on the end-user's requirements (cement industry for example), etc.

Using solid recovered fuels is one response to many governments' drive to shrink fossil fuels' share of the energy mix.

Currently, 30% of non mineral and non hazardous waste is buried, representing a potential source for RDF production of nearly 70 million metric tons per year in Europe.

RDF consumption is important in a number of European countries, including England, the Netherlands and Germany. Industry demand is growing.

4.1.2.5.3 Researching innovative solutions

Pioneering circular solutions for hazardous waste

In line with its strategy, Veolia will step up its hazardous waste treatment activities with a view to processing 9 million metric tons⁽¹⁾ of polluting waste by 2027 (see 4.1.2.2). This target (not part of Green Up) was set based on our current capacity data and commercial targets across different geographies.

As such, Veolia has been contributing for years to the treatment and recovery of used solvents, which are hazardous waste generated by the pharmaceutical, automotive, cosmetic, surface treatment and cleaning industries. Veolia is also a pioneer in the vehicle battery recycling market: as early as 1989, it developed considerable know-how in the management of batteries for recycling.

The challenge of recovering and recycling rare materials is vital for activities subject to major long-term global trends, such as electric vehicles. This creates a wealth of new business opportunities for Veolia. In addition, this type of waste can pose a major hazard for the public and the environment: Veolia's actions help to reduce these risks.

The corresponding IRO is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
E5-ST-3 Commercialization of innovative solutions to regenerate resources from hazardous waste (e.g. battery recycling)			

Veolia is currently expanding into the recycling of electric vehicle batteries (Li-Ion), an emerging market. This requires specific dismantling and extraction techniques, via a hydrometallurgical process and innovative patents.

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Upstream, Veolia's actions comply with the growing number of regulations that require the recycling of rare materials. Downstream, Veolia supplies its customers with secondary raw materials such as the rare materials essential for electric battery production, thereby contributing to their policy on supply chain circularity.
Business model	This material recycling contributes both: • to Veolia's commercial performance, in line with the GreenUp approach; and • to its environmental performance, helping to reduce the consumption of primary raw materials and the emission of greenhouse gases.

With four sites already operational in France, Switzerland and China, Veolia is expanding its capacity by acquiring two other sites in the UK and Slovenia and other projects are under consideration. These sites mainly carry out the dismantling and refining of metals by hydrometallurgy.

Using innovation to boost the value chain

The circular economy strategy also involves the rollout of new business models, such as water management contracts to optimize consumption and adapt to new types of use, or the reuse of equipment to extend its lifespan and delay the generation of waste. The rollout of new business models may be hampered by the complexity of their implementation or the acceptability of new remuneration models with customers, who may own certain assets.

In a world with limited resources, remuneration models based on the volume of treated waste at the end of the chain will evolve. Since a significant share of Veolia's revenue is derived from waste, it must be involved in the reduction of the total amount of waste generated and in value creation, allowing new services to be developed that are focused on circularity. Veolia works with its partners in the public and private sectors, throughout the value chain, to support the circular economy and limit the volume of unrecovered waste.

⁽¹⁾ Scope impact related to the disposal of RGS (United States).

The IRO concerned is as follows:

Positive impact	Negative impact	Financial opportunity	Financial risk
E5-ST-1 Adaptation to changes in the waste value chain, resulting in the need for technical and commercial innovation at Veolia			
The circular economy and related texts (e.g. CSRD, ISO standards, etc.) place the emphasis on a hierarchy of resource management strategies: refuse, rethink, reduce, reuse, repair, refurbish, remanufacture, repurpose, recycle, recover, remine. These strategies have consequences for Veolia's businesses, hence the need for technical and commercial innovation to anticipate future developments. First, consideration should be given to adapting the business models of contracts involving waste management on behalf of third parties. These have evolved from a volume metric to a performance metric, focused on		reducing the volumes collected and possible alternative outlets. For example, incentive fees have been introduced in recent years, with promising results. With its CircPack offering in Europe, Veolia has developed in recent years an eco-design service to support its industrial partners in their efforts to increase circularity. The twofold objective is to reduce the environmental footprint of products placed on the market and to ensure their end-of-life recyclability. As some examples, CircPack, part of PlastiLoop, supports its customers to design their packaging so that they will be recycled by avoiding carbon black, overly rigid packaging, metalized film, etc.	

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia's actions meet the needs of local authorities and manufacturers keen to reduce the volume of final waste, promoting alternative recovery pathways from initial product design to recycling or energy recovery. The partners in the downstream value chain are varied, although many of them are consumer goods manufacturers, for example.
Business model	The performance related to this IRO is mainly commercial, economic and financial in nature.

Although Veolia's core business remains recycling, initiatives linked to the prioritization of resources⁽¹⁾, as proposed by the various regulations and standards, are described here:

RETHINK	Eco-design to optimize the recovery chain	As part of its CircPack offering, Veolia enters into partnerships with industrial companies to act from the design phase and improve the ability to recycle products and the use of so-called secondary raw materials (IRO E5-ST-1). Faurecia, a FORVIA Group company, and Veolia signed a cooperation and research agreement to jointly develop innovative compounds for automotive interior modules, aiming to achieve an average of 30% recycled content by 2025. Through this partnership, the two companies will accelerate the deployment in Europe of innovative sustainable interior solutions implemented in dashboards, door panels and center consoles. Veolia will start producing these secondary raw materials at its existing recycling sites in France in 2023.
REDUCE	Promote less water consumption and waste production	In 2023, Veolia launched the Eco d'Eau initiative in France (see section 4.1.2.3 above). In waste management, Veolia manages public service delegation contracts where the objective is to reduce waste generation sources. This entails the use of various levers, such as incentive pricing and the conversion of waste collection sites to recycling centers, as well as preventive actions.
REUSE	Reuse treated wastewater (covered by a GreenUp metric for freshwater conserved)	See section 4.1.2.3 above.
	Life2Life, giving machinery and equipment a second life	In late 2022, the Group Purchasing Department, in partnership with the French business units, launched an internal second-hand resale and rental platform for equipment, machinery, supplies, rolling stock, office furniture and computer hardware, which can all be advertised and reserved on the platform. Three indicators are calculated: metric tons of CO₂ eq. erased*, waste tonnage avoided and savings achieved compared to the purchase of new equipment (IRO E5-ST-1)
	Conserve water in the lithium value chain	Lithium extraction requires large amounts of water: more than 1.5 million liters of water per metric ton of lithium extracted. Lithium residues are valuable in the extraction from the effluents from lithium processing facilities, geothermal brine or used batteries. Veolia uses clarification, evaporation and crystallization, and membrane technologies applied to various brines to recover metals and recycle the water.

⁽¹⁾ Prioritization of resources (adapted from ISO 59004:2024 and from Potting and al. 2017): refuse, rethink, reduce, reuse, repair, refurbish, remanufacture, repurpose, recycle, recover, remine.

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

REGENERATE	Recover solvents	By regenerating solvents, Veolia provides its customers with qualitative secondary raw materials. Veolia guarantees the quality and security of its expertise in solvent recovery and regeneration (IRO E5-ES-2)
	Developing phosphorus as an agricultural fertilizer	Veolia Agriculture supports farmers throughout France in their transition to sound and sustainable agriculture. A wide range of solutions dedicated to soil and plant fertility is available. The majority of products can be used in organic farming. Although phosphorus recovery has yet become an economic reality, it is nevertheless being increasingly discussed and new legislation in various countries, and even across Europe, is being studied to promote it. To help reduce environmental impacts and meet future directives on phosphorus recycling from wastewater, Veolia first developed the Struvia TM solution for phosphorus recovery from concentrated aqueous effluents, such as digester centrates, which paves the way for phosphorus recycling in Europe. New developments in the works also involve the recovery of phosphorous from sludge and ash from incinerated sewage sludge to achieve recovery rates of over 80% in order to meet regulations currently implemented in Germany in particular.
RECYCLE	Organic waste recovery to regenerate soils or produce energy	Wastewater treatment plant sludge and green waste as well as organic waste produced by households, restaurants, the food and beverage sector and agriculture, can be recovered for use in specific biological sectors. Processing involves either controlled composting or anaerobic digestion at anaerobic digestion installations. The compost produced can be used as an agricultural fertilizer (IRO E5-ST-1, E5-ES-2) .
	Producing biogas from waste storage sites	The use of landfill leads to significant production of methane, a greenhouse gas with a warming potential 27 times greater than CO ₂ . To limit the impact of this gas on climate change, Veolia captures and recovers it in the form of electricity, heat for district heating networks or biofuels.
	Producing recycled materials	Veolia helps recycle many resources, particularly through its sorting centres, which prepare materials for subsequent recovery: these include paper, cardboard, scrap metal, non-ferrous metals and wood. For example, Veolia has just won a contract from the Australian Capital Territory to build and operate a recycling facility for materials including glass, with 1.3 million tonnes of materials to be recycled over 20 years (IRO E5-ES-2) .
	Produce recycled plastics	Thanks to the combination of a wide network of experts and years of experience, PlastiLoop offers a unique and structured range of grades, meeting the needs of industrial customers for many of their applications. even for the strictest standards applicable in their markets. This solution offers a customized approach for each industry (IRO E5-ES-2) .
	Producing solid recovered fuels	In Ludres, France, the materials contained in used upholstered furniture (steel, aluminum, wood) are recovered. Together with foam, plastic, fabrics and complex materials that cannot be recovered, SRFs are produced for a cement factory located 10 km from the site (IRO E5-ES-4) .
	Recycle batteries (covered by a GreenUp metric: hazardous waste treated)	Veolia is a pioneer in the emerging market for the recycling of electric vehicle batteries. As early as 1989, Veolia had developed know-how in battery management. Veolia has plants capable of extracting copper, nickel, cobalt and lithium from batteries, via the hydrometallurgical process and innovative patents (IRO E5-ES-2, E5-ST-3) .

4.1.2.5.4 Manage circular solutions using resource-related metrics

Producing drinking water from raw water, decontaminating wastewater for reuse, producing secondary materials and energy from waste, and optimizing input and energy consumption are all activities that use Veolia's circular solutions.

Apart from raw water, the inflows into Veolia's processes come from its customers. Outflows are alternative secondary materials, energy and water that reduce pressure on virgin resources:

The quantitative target relating to the circularization of the economy concerns the objective of freshwater conservation: 1.5 billion m³ by 2027.

In addition to this overarching objective, Veolia manages the metrics summarized in the tables below, taking into account the different situations and markets. These do not require quantitative targets to be set for Veolia as a whole: their primary aim is to provide details of operational situations to ensure the proper application of its circular economy strategy and operational monitoring of the solutions implemented.

In terms of resource inflows, these are divided into three main categories that reflect Veolia's three core businesses:

- municipal and industrial waste sent to treatment centers for recovery by applying the hierarchical principle of waste management: prevent its production, identify opportunities for reuse, recycling and recovery and, if recovery is not possible, ensure its treatment in accordance with applicable regulations; It should be noted that some of this waste is classified as hazardous which implies dedicated treatment according to regulations: incineration or landfilling when no way exists to recover them;
- fuel used to produce energy (gas, coal, biomass): saving and conserving energy resources is a major lever in Veolia's contribution to combating climate change, notably by increasing energy efficiency at the installations operated, prioritizing the use of renewable energy and energy from waste, and exploiting the energy potential of waste and wastewater;
- water taken from natural environments to produce drinking water for communities, as well as domestic and industrial wastewater, which is collected and then treated before being either reused or returned to the natural environment.

In terms of resource outflows, Veolia helps to reduce the consumption of raw materials by third parties by providing secondary materials such as recycled plastic pellets or outflows from sorting centers (paper, cardboard, glass, etc.). The Group also seeks to reduce the raw material consumption of the installations it operates.

For its waste and wastewater treatment, Veolia's objective is to decontaminate flows that are extremely variable in nature and quantity. It also seeks to ensure – through infrastructure that the Group does not necessarily own – the most efficient management possible in the light of the applicable regulations and technologies.

The material and energy recovery rates of treated waste, the bottom ash recovery rate (waste incineration residue), the combustion residue recovery rate in the Energy business, and the recovery rate for wastewater treatment sludge are specified in 8.10.5. For the latter 3, 2027 targets are proposed in 4.1.1.5.1.

The following diagram illustrates the flows that pass through waste treatment units:

As such, Veolia monitors the following metrics, presented by activities:

Waste business	2024	2025
Resource inflows		
Quantity of waste inflows (kT)	63,660	64,304
Resource outflows		
Quantity of waste recovered (energy) (kT)	29,458	30,055
Quantity of waste recovered (material) (kT) (A)	9,797	9,184
Quantity of recovered waste (material+energy) (kT)	39,255	39,239
of which recovered bottom ash (kT)	1,058	1,039
Quantity of waste produced from waste business (kT)	5,416.0	5,217.0
Water business	2024	2025
Resource inflows		
Abstraction for drinking water business (in billion of m ³)	7.3	7.4
Wastewater inflow for wastewater business (in billion of m ³)	7.4	7.6
Resource outflows		
Quantity of water produced (in billion of m ³)	6.4	6.7
Quantity of treated water (in billion of m ³)	7.4	7.6
Quantity of recovered sludge from wastewater treatment (kT) (B)	835	867
Quantity of non recovered sludge from wastewater treatment (kT)	343	301.0
Energy business	2024	2025
Resource inflows		
Fuel (MWh)	62.2	66.0
Resource outflows		
Recovered bottom ash (kT) (C)	822	795
Quantity of waste produced from energy business: bottom ash (kT)	189	196
Resource outflows from our 3 activities		
Quantity of unrecovered waste going to incineration (kT)	2,209	2,073
of which hazardous waste (kT)	725	678
of which non hazardous waste (kT)	1,483	1,395
Quantity of unrecovered waste going to landfill (kT) (D)	3,739	3,641
of which non hazardous waste (kT)	2,759	2,724
of which bottom ash (kT)	307	353
of which hazardous waste (kT)	980	918
Energy produced (MWh)	51.8 ¹	55.2
Total recycled waste (A+B+C)	11454	10846.9
Total non-recycled waste (D)	3739	3641.38
% non-recycled waste D / (A + B + C + D)	24.6 %	25.1 %

NB: The above data are taken from the reporting of the Group entities for the CSRD scope and are consolidated real data. As for the destination of non-recovered waste (sanitary landfill vs. energy recovery unit), incinerated waste is classified by default in the non-recovered category when Veolia does not have information on its energy recovery. This is part of a prudent approach, in particular for waste sent to third parties for incineration.

The material and energy recovery rates of treated waste, the recovery rate of bottom ash (residues from waste incineration), the recovery rate of combustion residues from the Energy business, and the recovery rate of sludge from wastewater treatment are specified in section 8.10.5. For the last three, the 2027 guideline values are explained in section 4.1.1.5.1.

In addition, since 2016 Veolia has monitored changes in its circular economy revenue (2019 baseline of €5.2 billion), according to a Group-specific definition², which includes actions across the entire waste hierarchy and concerns its three business lines: Water, Waste, Energy.

	2024	2025
The Group's circular economy revenue (in billions of euros)	9.5	9.5

⁽¹⁾ A new methodology made it possible this year to publish the production mixes for disclosure. This methodology was applied retrospectively, explaining the change in the published value for the year 2024 (previous value: 54,789,752 MWh).

⁽²⁾ Circular economy revenue is the revenue of Group entities that generate revenue from the following activities: the selective collection and recovery of hazardous solid and liquid waste, by-products and sludge, water reuse, energy performance contracts, heating, steam and cooling network operations using over 50% non- fossil energy, cogeneration, energy recovery from waste, and energy efficiency contracts.

4.1.2.6 European Union green taxonomy

This section presents the information required by Article 8 of the EU Green Taxonomy Regulation, including the results and methodology for 2025. The data are organised by activity for turnover, Capex and Opex, in accordance with the delegated act published in the Official Journal of the EU on 8 January 2026. The detailed tables pursuant to revised Article 8 are available in section 4.1.2.6.4 below.

The simplification of the mandatory taxonomy reporting tables has been taken into account in this new disclosure, in accordance with the revised regulatory requirements.

4.1.2.6.1 Proportion of eligible and aligned activities

For the calculation of overall eligibility and alignment ratios, double counting is strictly avoided. An economic activity, even if it potentially corresponds to several taxonomy activities, is allocated to only one of them.

The table below groups the main eligible activities by major sectors and sets out:

- the eligibility and alignment ratios for turnover and Capex in 2025, together with those for 2024 which are shown in brackets;
- the contributions expressed in billions of euros of each sector of eligible activities to the 'eligible' and 'eligible and aligned' totals in terms of turnover and Capex.

	Turnover			CapEx		
	Total Veolia	of which eligible	of which eligible & aligned	Total Veolia	of which eligible	of which eligible & aligned
Consolidated total (in billions of euros)	2025	44.4	27.8	20.3	4.5	3.0
	(2024)	(44.7)	(27.6)	(19.7)	(4.1)	(2.6)
% of the consolidated total	100%	62.6%	45.7%	100%	65.7%	47.2%
	(100)%	(61.6)%	(44.0)%	(100)%	(65.4)%	(44.9)%
<i>Grouping of the main contributory eligible activities by major sector (in billions of euros)¹</i>						
Water and wastewater		11.4	6.9		1.4	0.8
CCM 5.1; CCM 5.2; CCM 5.3; CCM 5.4 ;CCA5.13; WTR 2.1; WTR 2.2; CE 2.2		(10.9)	(6.9)		(1.2)	(0.6)
Waste collection and treatment (incl. hazardous waste) for the circular economy		4.2	3.6		0.4	0.4
CCM 5.5; CCM 5.7; CCM 5.8; CCM 5.9; CE 2.3; CE 2.4; CE 2.5; CE 2.7		(4.3)	(3.6)		(0.5)	(0.4)
Hazardous waste collection and treatment for pollution prevention and control		2.3	1.5		0.4	0.3
PPC2.1; PPC 2.2		(2.4)	(1.4)		(0.3)	(0.2)
Energy produced and distributed		6.1	5.1		0.6	0.5
CCM 4.1; CCM 4.8; CCM 4.9; CCM 4.15; CCM 4.20; CCM 4.24; CCM 4.25; CCM 4.30; CCM 4.31		(6.3)	(4.8)		(0.5)	(0.5)
Energy services to infrastructure		3.5	2.8		0.2	0.1
CCM 7.2; CCM 7.3; CCM 7.4; CCM 7.5; CCM 7.6; CCM 7.7; CCM 8.2; CCM 9.3		(3.2)	(2.6)		(0.1)	(0.1)
Other eligible activities		0.4	0.3		0.1	0.0
		(0.4)	(0.3)		(0.0)	(0.0)

These data show a positive trend between 2024 and 2025:

- the eligible turnover rate reaches 62.6%, thanks to Water and Energy (vs 61.6% in 2024);
- The revenue alignment rate increases from 44.0% in 2024 to 45.7%, mainly due to Energy and Waste;
- 47.2% of Capex is eligible and aligned (vs 44.9% in 2024), which demonstrates the Group's commitment to prioritizing investments in sustainable activities;
- the average alignment ratio within the eligible scope increases from 71% in 2024 to 73% in 2025, which reflects the good environmental

practices of Veolia's operations, with reference to the multiple taxonomy alignment criteria, across highly varied activities and geographies.

The analysis of turnover and capital expenditure (Capex) was carried out in alignment with the European taxonomy criteria:

- the turnover taken into account is the same as that in the financial statements (see section 6.1.2 below);
- the table below enables reconciliation between the Capex taken into account by the taxonomy and that in the financial statements.

	Fiscal year 2024	Fiscal year 2025
A- Industrial investments (see section 5.3.2.1)	4,040	4,056
B- New operating financial assets (OFA, see section 6.1.4)	-225	-156
C - Change in asset base related to mergers and acquisitions (excl. goodwill)	237	644
Taxonomy CapEx (A-B+C)	4,052	4,544

Proportion of eligible and aligned activities by environmental objective

For the calculations of eligibility and alignment by environmental objective, an economic activity potentially contributing to several environmental objectives must be taken into account in the ratios for each of these objectives. Consequently, for such activities, it was necessary to carry out the eligibility and alignment assessments several times, according to the respective criteria of each of the corresponding taxonomy-eligible activities.

In the 2024 Universal Registration Document, the appended tables are in the pre-revision format. Henceforth, the tables compliant with Annex II of Commission Delegated Regulation (EU) 2026/73 of 4 July 2025 are available in section 4.1.2.6.4 and show the results by activity and alignment by objective.

⁽¹⁾ The detailed descriptions of the taxonomic activities mentioned above are provided in the tables available in section 4.1.2.6.4. below.

4.1.2.6.2 Analysis of activities not eligible for the EU Green Taxonomy

In order to provide a comprehensive overview of its activities, Veolia voluntarily publishes a breakdown of its non-eligible turnover according to four categories:

- **Additional activities** proposed by Veolia for a future extension of the lists of eligible activities, in particular: pre-discharge treatment of industrial wastewater; storage of certain hazardous waste; energy recovery from non-recyclable waste;
- **Environmentally-neutral activities:** activities with no negative environmental impact and not covered at this stage by the taxonomy, comprising a large proportion of basic services provided by Veolia to third-party operators (municipal or industrial customers);
- **Activities excluded from the green taxonomy** by the European Commission; as not forming part of priority funding for the ecological transformation:
 - either for reasons of selectivity around best practices, thereby excluding activities that are nevertheless useful for the proper functioning of environmental services:
 - non-selective waste collection and associated downstream activities,
 - incineration of mixed non-hazardous waste,
 - non-hazardous waste landfills,
 - energy services for buildings with no optimization;
 - or for reasons of exclusion of certain “brown” activities:
 - energy production using coal;
- **non-analyzed activities:** The non-analyzed scope was reduced as much as possible below the materiality threshold. It includes:
 - Ukraine and Russia;
 - a number of sites whose study was not possible given their limited size.

The 37.4% of ineligible turnover is broken down as follows:

Detailed analysis of revenue

4.1.2.6.3 Methodology

Summary of the general principles

The European Taxonomy Regulation (EU) 2020/852 of 18 June 2020, setting out a green Taxonomy, forms part of the sustainable finance policy rolled out by the European Union (EU). It defines a framework to facilitate sustainable investment by providing better information to financial market participants and is supplemented by various texts clarifying its application:

- Commission Delegated Regulation (EU) 2021/2139 of June 04, 2021;
- Commission Delegated Regulation (EU) 2021/2178 of July 06, 2021;
- Commission Delegated Regulation (EU) 2022/1214 of March 09, 2022;
- Commission Delegated Regulation (EU) 2023/2485 of June 27, 2023;
- Commission Delegated Regulation (EU) 2023/2486 of June 27, 2023;
- interpretation documents published by the European Commission in December 2021, February 2022, December 2022, June 2023 and March 2025;
- Commission Delegated Regulation (UE) 2026/73 of July 4, 2025.

The EU Taxonomy sets out a framework for determining whether an economic activity is considered sustainable on the basis of six environmental objectives:

1. Climate change mitigation (CCM);
2. Climate change adaptation (CCA);
3. Sustainable use and protection of water and marine resources (WTR);
4. Transition to a circular economy (EC);
5. Pollution prevention and control (PPC);
6. Protection and restoration of biodiversity and ecosystems (BIO).

To qualify as sustainable, an activity must be:

- eligible, i.e. listed as capable of contributing to at least one of the six objectives; and
- aligned, i.e. contributing substantially to one of the six objectives, doing no significant harm to the other five⁽¹⁾ and complying with the minimum safeguards associated with the Taxonomy (human rights, etc.).

Organization and principles applied

Veolia has mobilized technical and financial teams at Group and business unit level to define a **methodology for applying** delegated regulations to the operational context of its activities. This methodology notably includes:

- Practical arrangements for the evaluation of substantial contribution and DNSH criteria, for each activity, for example:
 - for drinking water, the energy efficiency of its production and the efficiency of distribution networks,
 - for waste collection and downstream treatment, the selective nature of the collection,
 - for heating networks, the qualification of “efficient network” in accordance with the criteria set by the European Commission;
- Cross-cutting methodologies for generic DNSH criteria:
 - **Generic DNSH criteria for climate change adaptation:** identification of seven types of potential climate change impacts, associated with the vulnerabilities of activities and applied to IPCC projections on a global network of more than 2,000 sites for the extreme RCP 8.5 scenario; projection of these physical risks on the sites concerned and in the event of potential short-term and/or medium-term risks, verification that an appropriate action plan is planned. To find out more about the climate change adaptation policy, the reader may refer to section 4.1.2.1.5 above,

⁽¹⁾ i.e. complying with the DNSH (Do No Significant Harm) criteria associated with the activity.

- **Generic DNSH criteria for water resources:** evaluation of whether an activity has a material qualitative or quantitative impact on water resources; if so, it is ascertained whether the authority in charge of operating permits (general case) has taken the appropriate action, and if not, whether it has acted in accordance with ISO 14001 certification when there are no regulatory requirements,
- **Generic DNSH criteria for pollution prevention:** this DNSH, which requires that the activity does not lead to the manufacture, placing on the market or use of substances specified in Annex C of the taxonomy delegated acts, concerns only a very limited number of activities at Veolia (five in total). Veolia has for several years mobilised a chemical risk prevention group, the conclusions of which are set out in section 4.1.2.2.2 above: after examination, Veolia does not use these substances in the products it assembles, nor in the processes it operates (except of course where these products are themselves input materials in the context of hazardous waste treatment activity). However, uncertainties remain regarding the interpretation of the texts both on criteria (a) to (f), the additional paragraph of this DNSH, and on the scope of substances to be analysed, as well as limitations in our ability to collect all the required

data. For the 2025 financial year, Veolia has deployed its best efforts to conduct the analysis with the information available to it at the date of preparation of the taxonomy closing and which leads to the conclusion that this DNSH is aligned for the activities concerned. Building on its chemical risk prevention group, Veolia continues its efforts to refine its analysis and improve its processes for the years ahead, in particular to improve as soon as possible the coverage of all substances potentially concerned by criteria (a) to (f) as well as the additional paragraph of this DNSH,

- **Generic DNSH criteria for the preservation of biodiversity and ecosystems:** when the activity is one of the potentially impactful activities listed by Directive EU/2011/92 (appendices I and II), the assessment focuses on whether or not an environmental impact including biodiversity has been assessed, and the resulting necessary actions have been undertaken. Note that in the European Union, operating permits take into account this issue;
- An analysis⁽¹⁾ of the “minimum safeguards” of the Taxonomy carried out as follows, which concluded that Veolia meets the minimum safeguards in 2025.

Human rights and workers' rights in accordance with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights

Fair competition, bribery and corruption

Taxation

Violation of the United Nations Global Compact principles and the OECD Guidelines for Multinational Enterprises

Lack of processes and mechanisms to monitor compliance with the United Nations Global Compact principles and the OECD guidelines for multinational enterprises

Unadjusted gender pay gap

Lack of gender diversity of the Board of Directors

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical and biological weapons)

Veolia meets these conditions on account of its existing compliance, human resources and risk management systems, as outlined in sections 4.1.3.5 Human rights and 4.1.4 Governance below and in view of the absence of material deficiencies.

This issue is closely monitored at head office level by the Veolia Finance Department to ensure compliance with regulations and the absence of any major tax conflicts.

Veolia has implemented appropriate due diligence and mitigation plans for these subjects of interest.

Veolia has implemented action plans for these subjects of interest.

Veolia is not exposed to these risks

The methodology described above has been integrated into the GreenGrideo application, developed specifically to support taxonomy closings and enabling:

- identification for each economic entity of the corresponding activities, whether or not eligible for the taxonomy, whilst avoiding any double counting;
- allocation to these activities of the corresponding amounts of turnover, Capex and Opex, consistent with the data in the financial accounts;
- assessment of the eligibility and alignment of each of the listed activities according to the taxonomy rules.

The large number of Veolia's basic economic entities and their highly decentralised nature have led to the creation of a network of financial and operational correspondents for the taxonomy in each of the Group's Business Units, in order to guarantee the quality and consistency of the information collected and consolidated through GreenGrideo.

⁽¹⁾ They will be extended to the value chain in line with the deployment of the CSRD, with two years to adapt the new reporting requirements (i.e. FY-2026 year end at the latest).

Methods applied to calculate the Key Performance Indicators

General aspects	Accounting standard	The analysis was carried out according to IFRS, in accordance with the financial reporting.
	Currency	Figures are expressed in millions of euro, by applying the same exchange rate to local currencies as for the financial year end.
	Scope covered	- The scope covered is that of Veolia's consolidated entities as of December 31, 2024. - Entities were assessed and KPIs calculated without taking into account Ukraine and Russia, which were not therefore included in the KPI numerators due to their geopolitical situation over the entire period under review. - Certain activities representing less than 1% of revenue were also not assessed as they were considered to be immaterial.
Revenue KPI	Denominator	- The total revenue recognized for the denominator is the consolidated revenue in the financial report. - Revenue collected on behalf of third parties is not taken into account
	Numerator	- Break down contracts into basic activities The analysis was conducted at basic level, i.e. contracts and contract sub-components for multi-activity contracts. This enabled the identification of the basic lines of activity, corresponding, where applicable, for the same contract to different activities which may or may not be Taxonomy-eligible. - Allocate revenue to the basic lines of activity Group revenue is allocated at basic level to the various aforementioned contracts, after neutralization of internal sales to determine a contributory revenue consistent with the Group's consolidated revenue. In certain cases, the allocation of total revenue to basic activities required the use of a physical allocation, or, exceptionally in the absence of relevant criteria, a financial key, key selected for its availability and relevance. For example, in the case of collection, tonnages were used to separate Taxonomy-eligible selective collection and mixed collection. For water concessions that do not distinguish between drinking water and wastewater in their revenue, OpEx was used to allocate revenue to basic Taxonomy-related activities. Accordingly, all Group consolidated revenue is allocated with no double counting in eligible or non-eligible, aligned or non-aligned basic activities.
CapEx KPIs	Denominator	The CapEx used for the denominator are: - gross industrial investments as described in section 5.3.2.1 below, defined in the financial section of this document; - changes in the asset base due to mergers/acquisitions carried out in 2025, adjusted for changes in goodwill.
	Numerator	The CapEx used for the numerator are: - Among the gross industrial investments, those that correspond: - to eligible (respectively aligned) activities, - the creation of new aligned activities, - the implementation, excluding eligible operating activities, of Taxonomy-aligned schemes, particularly related to light vehicles (CCM activity 6.05) and property (CCM activity 7.07); - Among the changes in the asset base due to mergers and acquisitions, the share of those corresponding to eligible (respectively aligned) activities in the acquired or merged companies less goodwill.
OpEx KPIs	General aspects	- The OpEx to be taken into account in the taxonomy is only a limited portion of OpEx: mainly maintenance and excluding current operations costs. This limited definition creates serious problems for Veolia due to the strong interconnection between the maintenance and operating processes with regard to activities performed which makes it difficult to mark out a clear boundary between the corresponding OpEx. - Veolia took advantage of the deployment in 2025 of a new analytical tool to study OpEx more precisely for each of its 6 segments (Water operations, Water technologies, Solid Waste Recycling & Recovery, Liquid and Hazardous Waste Treatment & Recovery, Local Energy Production & Distribution, Energy Efficiency for Buildings) in order to refine the estimates for each of the 6 segments. - Following this refined analysis, Veolia demonstrated that Taxonomy Opex were not material with regard to the Group's business models and made use of the disclosure exemption as defined in Commission Delegated Regulation (EU) 2021/2178 of 6 July 2021 and confirmed in Commission Delegated Regulation (EU) 2026/73 of 4 July 2025.

4.1.3 SOCIAL INFORMATION

This section deals with disclosures on social and societal topics:

- ESRS S1 Own workforce: section 4.1.3.1;
- ESRS S2 Workers in the value chain: section 4.1.3.2;
- ESRS S3 Affected communities: section 4.1.3.3;
- ESRS S4 Consumers and end-users: section 4.1.3.4;
- Human rights: section 4.1.3.5.

4.1.3.1 Own workforce (S1)

4.1.3.1.1 Introduction

Employees are Veolia's most valuable resource and primary asset. Maintaining their health and safety in the long term, promoting their well-being and improving their working conditions is a priority for the Group.

Veolia deploys its activities in very diverse environments, across multiple sectors and geographic zones. This complex reality requires constant vigilance to ensure the physical and mental integrity of the teams.

To meet the ever more pressing environmental challenges and satisfy the expectations of public and private customers, the Group must constantly renew and enhance the skills of its teams.

Supporting developments and positioning itself in new growth markets are challenges that require Veolia to develop talent, promote internal mobility and attract the best profiles.

In this context, Veolia pays particular attention to social cohesion, respect for diversity, equal opportunities and the fight against discrimination, which are perceived as a valuable resource to stimulate collective performance and attractiveness. Non-compliance with human and social rights has a direct impact, leading to labor disputes, disengagement and damage to the employer brand. Consequently, Veolia aims for innovative and respectful social dialogue with its internal stakeholders, which allows it to provide collective solutions.

Under its GreenUp program and its commitment to multifaceted performance, Veolia reiterated its human resources performance policy around three objectives for 2027:

- health and safety at work;
- employee commitment;
- diversity and inclusion.

The implementation of GreenUp in terms of human resources makes it possible to focus the actions on priority and complementary topics:

- skills and training to make Veolia the employer of choice for the ecological transformation business lines;

- employee retention;
- the "Veolia Cares" program for all employees;
- promotion of a "Green HR" policy.

In this document, the term employee refers to Veolia employees.

4.1.3.1.2 Characteristics of own workforce

Characteristics of the undertaking's employees

Workforce as of December 31, 2025

The workforce and all social data that the Group uses come from a group reporting tool.

Social reporting covers legal entities consolidated through global consolidation in the financial scope. Entities provide data based on their local human resources tools, in particular payroll, time management, or training tools.

The acquisitions completed in 2025 were analyzed taking into account their headcount and revenue. Considering their immaterial nature (1,485 employees, particularly in Brazil), the entities acquired in 2025 will be included in the social reporting scope as of January 1, 2026. This approach promotes the progressive adoption of Veolia's human resources management processes, the implementation of safety standards and alignment with the Group's commitments.

The disposals carried out during 2025 are not reported given their exit from the scope before the start of the annual social data collection. Based on 2024 data, the values of these disposals are considered immaterial with respect to the Group's consolidated data.

This annual social reporting covers the company's employees and, for certain indicators specified in the text, temporary workers, independent contractors, or subcontracted personnel (corresponding to non-employees).

Geographic breakdown of the workforce registered as of December 31

	2024 (en nombre)	2024 (en %)	2025 (number)	2025 (%)
Europe excluding France	84,483	39.3 %	86,645	40.1 %
France	44,308	20.6 %	43,584	20.2 %
Asia – Oceania	32,554	15.1 %	32,612	15.1 %
Latin America	25,608	11.9 %	25,196	11.7 %
Africa - Middle East	14,149	6.6 %	13,992	6.5 %
North America	13,939	6.5 %	13,936	6.4 %
Total World	215,041		215,965	

As of December 31, 2025, the Veolia Group had 215,965 employees, including 43,584 employees in France.

Among the countries where Veolia operates, only France represents more than 10% of the total number of Group employees.

Breakdown of total registered workforce as of December 31 by type of contract and by gender

	World				France			
	Men		Women		Men		Women	
	2024	2025	2024	2025	2024	2025	2024	2025
Workforce on permanent contracts	157,187	157,393	45,145	45,707	31,782	31,101	9,848	9,778
Workforce on fixed-term contracts	8,731	8,682	3,978	4,183	1,719	1,710	959	995
Total	165,918	166,075	49,123	49,890	33,501	32,811	10,807	10,773

Fixed-term contracts (FTC) are contracts for which the duration is, with exceptions, determined in advance and generally does not exceed two years. Work-study contracts are included in this category.

In most cases, Veolia entities' payroll systems do not allow tracking the number of employees declared as "other" or "undeclared" when this is permitted in the country of employment. These employees are then identified in a "male" or "female" category. It should be noted that in countries that have the ability to track this new category, less than 1% of the total workforce is concerned at the end of 2025.

In 2025, the proportion of employees with zero-hour or non-guaranteed hours contracts is minimal (less than 1% of the workforce). Consequently, this category is not tracked and is considered as permanent contracts with a full-time equivalent workforce corresponding to the actual working time.

At the end of 2025, the Group had 13,722 part-time employees compared to 13 715 employees in 2024.

The number of temporary and self-employed full-time equivalent employees is 12,790 compared to 13,759 in 2024.

Employee movements

	2024	2025
Departures from fixed-term contracts	8,966	8,751
Departures from permanent contracts	26,346	26,015
Turnover rate (permanent contracts)	13.7 %	13.4 %
Resignation rate (permanent contracts)	7.4 %	7.1 %

The employee departures mentioned above include, for permanent contracts, resignations, job abandonment, mutual terminations, individual redundancies, retirements and departures for other reasons, while for fixed-term contracts (FTC), all reasons for termination of contract are taken into account without distinction.

The turnover rate for permanent contract employees takes into account the departures mentioned above. The resignation rate for permanent contract employees is 7.1%. This is notably explained by a tight labor market. However, the general trend is downward in 2025. These two rates are calculated based on the full-time equivalent workforce of permanent contract employees.

Workforce by gender and age in 2025

In 2025, the Group has 215,965 employees (compared to 215,041 in 2024), including 166,075 men (165,918 in 2024) and 49,890 women (49,123 in 2024). Employees under 30 years old account for 28,613 employees, or 13.3% of the total workforce at year-end (compared to 28,444 employees, or 13.2% in 2024). Employees aged 30 to 49 represent 109,133 employees, or 50.5% of the Group's total workforce (compared to 109,499 employees, or 50.9% in 2024). Employees aged 50 and over account for 78,219 employees, or 36.2% of the total workforce at year-end (compared to 77,098 employees, or 35.9% in 2024).

Crossing of workforce and financial statements

In the financial statements, Veolia discloses the weighted average workforce, which represents the annual average of the employees present at each month-end. The sustainability report shares the number of employees registered on December 31 of that year as well as the number of full-time equivalent employees. This includes the amount of work performed on the basis of contractual working time, taking into account arrivals and departures.

4.1.3.1.3 Guarantee a safe and healthy working environment and well-being at work

4.1.3.1.3.1 Health and safety at work

Veolia's businesses implement many operational positions involving risks such as working at height, working in confined spaces, electrical risks, etc. In addition, Veolia operates industrial installations that generate

environmental and industrial risks. The risk exposure of Veolia employees through the high number of activities and the potential severity that may occur, justify the materiality of this subject.

Positive impact	Negative impact	Financial opportunity	Financial risk
S1-ST-1 Exposure of employees to physical or psychological risks resulting from the activities carried out			
Value chain	Veolia: the stakeholders involved are Group employees and temporary staff; Upstream value chain: subcontractors and other external partners; Downstream value chain: users and end customers.		
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its environmental and social performance.		

A policy oriented toward "zero accidents"

The Health and Safety and Industrial Risk Prevention Policy aims to ensure the physical and mental integrity of people working for or under the control of Veolia. It is "non-negotiable" and is based on a demanding, caring and fair behavioral approach, in accordance with The Essentials, Management Behaviors@Veolia and Veolia Cares. This policy is part of a process for continuous improvement in avoidance performance. Health and safety are an integral part of Veolia's purpose and the GreenUp 2024-2027 strategic program. Veolia's policy was updated in September 2024 to reflect new areas of work.

The strategic reflections carried out in 2023 regarding GreenUp's health and safety component remain relevant in 2025. These reflections include three major areas:

- strengthening sharing and dynamics in health and more broadly in well-being, taking into account stakeholders with increased attention to temporary workers and subcontractors, and anticipating risks such as those related to chemical transition, climate change, as well as those related to Veolia's new business lines (for example, battery recycling, etc.);
- a metric of Veolia's multifaceted performance: the lost time injury frequency rate for employees (2023 target 4.3; 2027 target: 4.1).

Veolia's health and safety prevention and industrial risk policy applies. It is communicated and broken down as follows:

- for all levels of the organization: employees, temporary workers, freelancers and partners of the Group's joint ventures;
- for the Group's subcontractors;
- for all regions where the Group is present;
- for all activities carried out.

The health and safety prevention and industrial risk policy is carried at the highest level of the undertaking by the Chief Executive Officer, Mrs. Estelle Brachlianoff. It was formalized in a letter committing her and all Executive Committee members. This policy, addressed to all BU heads, must be communicated, implemented and applied to the staff categories and regions specified above.

Established in line with the International Labor Organization (ILO) Guidelines - (the parent company, Veolia Environnement, is a signatory, in the name of the Group, to the Seoul Declaration, which recognizes the fundamental human right to a safe and healthy working environment) and in accordance with national regulations and standards, the health and safety prevention policy incorporates additional requirements from the Group's best practices and feedback on accidents. In addition, Veolia promotes social dialogue by involving staff representative bodies on these subjects.

The policy is established by the Group's OHS Department and the Business Support and Performance Department. These two departments are also supported by the Health and Safety Center of Excellence, a body that brings together some 30 international experts from all the Group's regions and businesses. Its members are chosen jointly by the Group prevention, health and safety department and the heads of each zone.

The role of the Health and Safety Center of Excellence is to:

- facilitate the deployment of the health, safety and industrial risk prevention policy;
- influence and accelerate the deployment of best practice at all levels of the organization;
- build and develop managerial and technical skills.

The health and safety prevention and industrial risk networks are present at the level of each zone, BU, country and entity. The mission of these experts is to ensure the coherence, monitoring and coordination of approaches in their geography/business. This organization ensures a structured and flexible continuous improvement system which incorporates the cultural and regulatory dimensions specific to each country.

The application of the prevention policy can vary significantly depending on the regulations of the countries, businesses or specific agreements.

Veolia's health and safety and industrial risk policy guidelines are illustrated through five cross-cutting pillars that are reflected in all Group approaches:

- involve the entire managerial line;
- mitigate health and safety risks and industrial risks;
- communicate and discuss;
- train and involve all employees;
- monitor and control health and safety performance and industrial risks.

They are gathered in the "Management guidelines for health and safety at work" which structure and define clear requirements to enable the managerial line to create and implement the continuous improvement plan for each BU.

In addition, certain Group regions have taken the voluntary step to set up safety management systems (SMS) based on standards such as ISO 45001, ILO OSH 2001 and/ or OHSAS 18001. Every year, entities throughout the world are certified, labeled or recognized for their procedures in prevention, health and safety.

For the period 2024-2027, the Group prevention, health and safety department is deploying the new prevention, health and safety policy in line with its guidelines by putting in place a roadmap that has been previously presented and validated by Veolia's Executive Committee.

A set of actions and measures serving the health and safety policy

Involve the entire managerial line

Veolia has implemented three key actions to involve the entire management line in health and safety: health and safety performance contracts, bonus calculation rules for managers, and safety management visits. These measures, implemented since 2023, cover all of the Group's Business Units (BUs) worldwide, involving top management and all other managers and support staff. They aim to significantly improve health and safety performance by 2027, with specific targets such as 80% of BUs achieving more than 100% progress in their performance contracts. Expected results include a reduction in the frequency rate of accidents at work and fatal accidents, as well as better management of psychosocial risks. These actions contribute directly to Veolia's overall objective of improving the safety and risk prevention culture. These measures are monitored throughout the year, with regular reports to the Comex of the BUs.

→ Health and safety performance contracts

Since 2023, performance contracts have been established to engage BU top management and health and safety channels in order to effectively deploy key transformation projects. These contracts bring together the concrete actions to be carried out by the BUs under six themes, four of which are mandatory (strengthening presence and managerial visibility at the sites, managing the 10 management standards for high-risk activities, deploying the 12 life-saving rules, managing best practices, near misses and HiPos (incidents of minor or significant severity which, realistically, under slightly different circumstances, could have reached a serious or very serious level of severity) and two of which are optional: action plan on mental health and psychosocial risks, training for managers and the PSS network). In 2025, 46 contracts were signed.

The progress of the performance contracts is monitored throughout the year by Group Prevention, Health and Safety Department contacts. The target is to achieve a progress rate of more than 100% for more than 80% of the BUs. In 2025, this target was exceeded, with 83% of BUs achieving progress of more than 100%.

→ Bonus calculation rules defined for all executives

Veolia's executive pay includes health and safety elements, including a variable portion based on:

- the BU's performance indicator;
- the workplace injury frequency rate;
- fatal accidents in the year.

In some geographic zones, these criteria are also taken into account in the variable portion for all executives in the company.

→ Managerial safety field visits

To communicate their involvement and commitment, the managers regularly conduct managerial safety field visits. These visits offer an opportunity to observe working situations in situ and promote discussions on best practices and areas for improvement with employees, and thus take action on certain behaviors.

The number of managerial safety field visits for the members of executive and management committees of the BUs is defined for each BU in the health and safety performance contract and is the subject of a report presented to the BU's Executive Committees.

Mitigate health and safety risks

Veolia has implemented four key actions to control health and safety risks: the deployment of the 10 management standards for high-risk activities, the implementation of the 12 life saving rules, the systematic evaluation of risks, and the analysis of accidents and risky situations. These measures, initiated between 2016 and 2022, cover all of the Group's activities worldwide, including subcontractors and site visitors. They aim to significantly reduce serious and fatal accidents by 2027. Specific targets include 85% compliance with priority standards requirements by the end of 2027, full roll-out of the life-saving rules by the end of 2025, and analysis of more than 90% of HiPos and fatal accidents.

→ Implement the 10 management standards for high-risk activities in all of the Group's regions and businesses

To improve control of major risks, 10 management standards for high-risk activities have been defined (e.g. working in confined spaces, safeguarding of installations; excavation and trenching, hotwork, working at height, hazardous substances, electricity, traffic management, lifting operations, high pressure etc.) They were drawn up over a period of time by the Health and Safety Center of Excellence starting from 2016, after analyzing past events at Veolia. E-learning (see below) has been introduced to deliver basic training on the standards.

Reviewed each year according to a defined program, a cycle of Group webinars was launched in 2023 with an explication of the requirements and new components of each standard, as well as highlighting related accidents and best practices. The webinars are reviewed each year according to a program in place.

Annual monitoring of the roll-out of standards and compliance with requirements is carried out within each BU. This is consolidated at Group level and discussed during reviews of performance contracts or specific focus areas, where appropriate.

The objectives are to:

- analyze the compliance of the revised standards in all BUs, including the new ones;
- achieve 85% compliance for priority requirements by the end of 2027.

By the end of 2025, for the first eight revised standards, the level of compliance is 82.4% for priority requirements.

→ Apply the 12 life-saving rules in all of the Group's regions and businesses

Since 2022, each standard has been associated with one or more "life-saving rules" (LSR). They are the last line of defense in preventing serious or fatal accidents. The 12 rules apply to everyone on the Group's sites. By the end of 2025, they were deployed by all BUs through engagement meetings.

During 2025, in order to strengthen understanding of each LSR (Life Saving Rule), the Group's OHS department decided to define operational measures made accessible through simple and intuitive visuals and videos. By the end of 2025, they have been defined for six LSRs. These will be deployed across all BUs in 2026, and the remaining measures will also be defined.

→ Risk assessment

A risk assessment of installations is carried out locally before operations commence to detect any risk situations and propose corrective measures. The risk assessment covers all activities, including emergency activities and subcontracted activities. It is repeated annually or in the event of a significant change (development impacting health and safety conditions). The Group's installation design and building activities incorporate risk prevention mechanisms as far upstream as possible, in order to eliminate risk situations and guarantee the health and safety of future operators.

→ Machine Safety

Following accidents in 2023-2024 involving dangerous machines, Veolia created a new safety standard in 2025 with three assessment grids for existing, recently acquired and new machines. After pilot site tests in 2025, Veolia will roll out an audit program in 2026 at high-risk sites to measure compliance and define corrective actions. The company will also develop technical standards for each type of equipment.

→ Acquisition integration

Veolia is facing significant health and safety challenges in entities from acquisition operations. In 2024, the Group recorded several fatalities in recently acquired entities, and in 2023, 131 lost-time accidents occurred in that year's acquisitions alone. Acquisitions represent particular vulnerabilities as they often involve entities with a lower level of health and safety prevention maturity compared to Veolia's standards, less experienced personnel (30% of fatal accidents involve employees with less than one year of service), and significant gaps in relation to Group requirements for fire prevention and protection.

Veolia has implemented a structured "Acquisition Integration" procedure with specific milestones for health and safety prevention and industrial risks.

It is structured around three main phases: the Occupational Health and Safety (OHS) due diligence ideally upstream, site audits during the first months following the acquisition to assess working conditions and safety compliance, then accelerated deployment of Veolia standards including the Life Saving Rules (LSR) and training on high-risk activity standards, and, more broadly, adoption of the health and safety culture.

The updated procedure was distributed to Zone and BU Directors in April 2025, followed by a webinar for functions impacted by the change. Priority actions to be carried out in the first months of operating a new contract include site audits, deployment of "Life Saving Rules", implementation of communication and training plans, self-assessment of compliance with standards, rollout of OHS Leadership training, with a view to adjusting investment plans where necessary.

→ Analyze accidents and risk situations

At Veolia, all workplace and industrial accidents are analyzed. They trigger a specific process to:

- prevent the repetition of these events;
- understand and clarify what actually happened;
- effectively identify the causes that led to the events;
- determine and implement action plans;
- continuously improve and monitor the working environment;
- avoid the costs (direct and indirect) associated with an accident, particularly in human and social terms;
- ensure compliance with applicable regulations.

For serious or fatal accidents related to the business (processes and traffic), in addition to the analysis carried out by the BU, a feedback session (RETEX) is organized to present the progress of corrective and preventive actions by the BU director to the RETEX Committee (feedback).

The committee decides whether additional actions need to be implemented locally or at Group level (review of standards, training, specific communication, etc.), in order to prevent the accident reoccurring elsewhere and to share the lessons learned with the entire Group.

The Group uses Bird's pyramid to analyze risk situations and near misses. Particular attention is paid to HiPos. The treatment of HiPos is key to reducing situations that lead to serious accidents.

The Group's objective is to analyze more than 90% of HiPos. By the end of 2025, the analysis rate of HiPos reported during the year is 89.92% for priority requirements.

→ Medical check-ups and prevention of occupational diseases

All employees attend a regular medical check-up to detect and help prevent occupational diseases. In 2024, 97 occupational diseases were reported by Group employees (compared to 100 in 2023), which represents a reduction of 3%. However, the information on occupational diseases can vary due to differences in local practices and regulations.

The Group monitors occupational diseases by type. Musculoskeletal disorders represent over 84.5% of the occupational diseases recognized in the Group. The Health & Safety Center of Excellence also launched a project in 2024, due to be delivered by 2027, to produce job information sheets with best practices to prevent musculoskeletal disorders (MSDS), capitalizing on what already exists in the BUs. This project takes into account any shortcomings in terms of ergonomics (physical, cognitive, organizational) that might give rise to MSDS-related risks. In 2025, the collection of best practices for the most exposed positions was carried out with the objective of presenting the first prevention sheets by position by the end of 2026.

→ Prevention of psychosocial risks (PSR)

Veolia incorporates psychosocial risk management into its occupational risk management approach. The objective is to gradually structure a Group management system, training courses and tools as well as a coordination system to bolster existing local actions and strengthen "Copy and Adapt" within the entities.

Counseling hotlines with external specialists help support employees and identify stressors, thus supplementing the risk analysis. By the end of 2027, all Group employees must have access to a counseling hotline.

"Leading with Care", a training program for all Group managers, was set up and rolled out in 2024. The Group aims to train 4,000 managers by the end of 2027. 500 managers were trained in 2025.

"Mission Serenity: become a workplace well-being advocate", a new e-learning program for all employees, was rolled out in 2025. It allows employees to actively engage and become experts by mastering various mental health notions (well-being, stress) and their associated issues. This training allows participants to recognize warning signs of psychosocial risks, adapt their behaviors and communication when dealing with a person at risk, and apply stress prevention and reduction techniques. In 2025, 11,507 Group employees had already completed this training, with the goal of doubling this figure in 2026.

→ Climate change and working conditions

Faced with the reality of climate change, and particularly the rise in episodes of extreme heat, Veolia has launched an approach aimed at preparing the Group and its employees for these new challenges. The first phase of this ambitious, holistic health and safety initiative was completed in mid-2024.

In 2024, a representative sample of 13 sites worldwide, covering Veolia's different businesses, was selected for this study. Exposed workers and their management were consulted to gather information on the risk factors they are exposed to and the protective measures already in place. For each site, a factsheet was produced that included specific climate projections, a list of the protective measures in place, and recommendations on how they could be improved.

In addition to identifying best practices, this approach has enabled the establishment of ten major recommendations, which will be implemented through short, medium, and long-term action plans, based on each site's level of exposure to extreme heat.

Based on the recommendations, the following actions were taken in 2025:

- Concerning the "basic kit" implementation, a current state assessment was performed to define minimum measures by geographical area to be put in place for hydration, recovery and protection. These measures will be deployed from 2026 to 2030 according to the criticality of the zones;

- Implementation of evolved monitoring for 2 event types (heat-related malaise with consciousness maintained or with impairment and loss of consciousness). This monitoring will enable better categorization and tracking of heat exposure events;
- Following an audit conducted in 2024 on the 24 collective employee accommodations in the Middle East, including a climate component and assessing access to fresh water, air conditioning in housing and transportation, enabled their upgrade and the definition of priority actions. Thus, in 2025, an inventory of collective accommodations was established in the other BUs. Similar approaches will be deployed in 2026 to categorize accommodations (compliant, to be renovated, or to be abandoned). Climate compliance according to Veolia standards will be finalized by the end of 2027.

This pioneering work has been showcased at various conferences.

Communicate and discuss

Veolia has set up five key actions to strengthen communication and dialogue on health and safety: sharing best practices, dialogue with labor representatives, international health and safety week, safety alerts, and safety discussions. These initiatives, which have been implemented gradually since 2015, cover all of the Group's activities worldwide, involving all employees, temporary workers and self-employed people. These measures are part of a continuous improvement approach, with varied time horizons ranging from immediate (safety alerts) to medium-term objectives (strengthening social dialogue). The effectiveness of these actions is regularly assessed, allowing continuous adjustments and improvements to meet the Group's health and safety challenges.

The intranet site of the Group Health and Safety Prevention Department contains all the documents, best practices, procedures, safety alerts, standards and communication materials necessary for the Group's health and safety prevention network. This intranet is available to all Group employees. In 2024, the entire site migrated to a new technology that incorporates artificial intelligence (AppSheet), which facilitates multilingual translation and optimized document research through connection to Veolia Secure GPT.

→ Sharing best practices

Each employee, temporary worker and self-employed person of the Group is invited to suggest best practices, which, once approved by the Group Health and Safety Prevention Department, are shared within the Group via a dedicated platform. At the end of 2025, it featured 1,298 initiatives, including more than 999 best practices published in 2025. This initiative aims to promote the Copy & Adapt initiative, which encourages BUs to adopt and replicate best practices implemented within the Group.

Each year, the best initiatives are recognized by the Always Safe Awards, with trophies presented by the Group Executive Committee. In 2025, the theme of the competition focused on "Stop, Think, Act: you have the power". This theme is based on a proactive workplace safety approach, allowing each employee to intervene when confronted with a dangerous situation.

→ Dialogue with labor and management representatives

For the Group as a whole, signed labor agreements relating to prevention, health and safety, which have steadily improved, represented 12% of agreements in 2025.

To strengthen collaboration with labor and management representatives, a working group on health and safety prevention was set up within the Group European Works Council in late 2022. After sharing the current situation, the reality of European disparities and priorities, the signing of joint resolutions was concluded on April 3, 2024. In 2024 and 2025, the various signatory countries each identified their priorities within all the resolutions, as well as a national health and safety representative in each body to promote cross-functional sharing. Progress on the resolutions, highlighting best practices, was shared with HR Directors, and a monitoring committee with social partners in October.

The year 2025 was marked by the signing with the France Group Committee of a new framework agreement on prevention, health, safety and well-being at work, after 8 working and negotiation meetings.

→ International Health and Safety Week

In order to durably embed the occupational health and safety culture, Veolia has been organizing the International Health and Safety Week since 2015. This global event is one of the Group's main levers for achieving "zero accidents." The 2025 edition, under the slogan "Act safely, act now," aims to strengthen the ability of employees and stakeholders to identify and stop any dangerous situation. This initiative aims to reinforce the risk prevention culture through the "Stop, Analyze, Act" method.

→ Safety alerts (RETEX)

Depending on the severity of the event, a specific communication (circumstances, consequences and corrective measures put in place - human, organizational and technical) is then developed and shared with the health and safety prevention network and on the Group's intranet more widely. In 2025, 306 RETEX alerts were issued and published on the Group's intranet, including serious and fatal accidents and HiPos.

→ Safety discussions at grassroots level

Workshops or discussions between local managers and their teams are held regularly to remind people of the basics of health and safety at work. These short (15-30 minutes) but frequent sessions, often called "safety discussions", play a crucial role in fostering a safety culture within the company. The interactive format encourages active participation and provides a framework for open communication and mutual learning through the sharing of experience and knowledge while developing collective responsibility.

Train and involve all employees

Veolia has implemented two key actions to train and involve all employees in health and safety: The OHS Leadership program and an e-learning program on the management standards for high-risk activities. These initiatives, which have been implemented gradually since 2021, cover all of the Group's activities worldwide, involving all employees. The results are measurable and show continuous progress in training and employee involvement. These measures are part of an overall strategy to reduce accidents and improve hazard awareness, which contributes directly to the Group's health and safety objectives.

In 2025, 172,811 Veolia employees received health and safety training, or 79.7% of the total FTE workforce. 2,563,343 hours of training were spent on health and safety, or 40.5% of the total training hours. Each year, Veolia aims to spend more than ten hours of health and safety training per employee per year. In 2025, this figure was 12.6 hours per employee in FTE.

→ Development of the health and safety culture: the OHS Leadership program

Since 2023, Veolia has been implementing OHS Leadership training in parallel with the change in safety culture to improve the mainstreaming of health and safety at all levels of the organization. This program is intended for all managers, health and safety prevention functions to become a coach and for internal trainers to facilitate the program's roll-out.

After the training, managers receive individual safety coaching to boost the impact of their managerial safety visits and their leadership in these topics. The health and safety performance contracts clearly define the roll-out objectives and priorities for this program each year.

The objective for 2025 is to have trained all the Management Committees of the Group's BUs and around 50% of managers of entities with the highest accident frequency rate (having a lost time injury frequency rate of 8.5 or more) and 20% of managers. At the end of 2025, 15,718 managers have been trained (including 96% of all executive committees), or 73% compared to the 20% target. More specifically, for the entities with the highest accident rates, 79% of managers have been trained.

→ **E-learning program on the management standards for high-risk activities**

To help assimilate the 10 management standards for high-risk activities and the 12 life-saving rules, a training program on each of these activities was launched in 2021. This course aims to strengthen safety at all levels of the organization, increase the perception of hazards for such activities, and ensure that the fundamental components of these standards are known and understood by all employees, including temporary staff and self-employed people.

Eight available courses are being rolled out in all BUs. Course no. 1 "Introduction: health and safety culture at Veolia" and course no. 2 "Work traffic" concern all Veolia employees. They were deployed until 2025 and will be maintained for new joiners in 2026.

Monitor and control health and safety performance

Veolia has implemented several key actions to monitor and control health and safety performance: the PaTHS program, audits and internal control campaigns, the quarterly internal benchmark, and the monitoring of subcontractors and temporary workers. These initiatives, which have been implemented progressively since 2018, cover all of the Group's activities worldwide, involving employees, subcontractors and temporary workers. The results are measurable and show continuous progress in monitoring and controlling health and safety performance. These measures are part of an overall strategy to reduce accidents and improve compliance with the Group's safety standards, which directly contribute to Veolia's health and safety objectives.

→ **A global accident and non-accident management solution: the "PaTHS" program**

Veolia's Prevention & Training on Health and Safety (PaTHS) program uses a collaborative tool and a mobile app to improve the management of health and safety incidents. It harmonizes practices, strengthens benchmarking between regions, and creates a reliable database for a predictive risk approach. PaTHS anticipates and manages employee health and safety training, permits and authorizations, with automatic alerts to prevent them from expiring. By standardizing processes and anticipating needs, PaTHS contributes to a safer and more compliant working environment.

Launched in 2021, the program aimed to achieve a BU coverage rate of 90% of the workforce by the end of 2027. The coverage rate was 79.7% of the workforce at the end of 2025.

→ **Health and Safety Dashboard**

In response to health and safety data analysis needs, Veolia launched the development of a dedicated dashboard in 2024. This initiative aims to modernize information utilization, facilitate cross-functional analyses and harmonize approaches across geographies to optimize the sharing of best practices. In 2025, a first dashboard was deployed with two modules: monitoring of accidental/non-accidental events facilitating the identification of recurring incident types and vulnerable activities, and monitoring of standards compliance. In 2026, Veolia will integrate AI for advanced analyses and better definition of continuous improvement strategies.

→ **Audits and the internal control campaign**

The BUs implement audit programs to develop their health and safety culture and/or to ensure that the minimum health and safety requirements defined by the country's regulations, Veolia's rules, the BUs or customers are applied. Corrective and preventive actions must be put in place once the findings of the audits have been analyzed. In addition, the members of the Group Prevention, Health and Safety Department carry out audits every year to assess the health and safety culture maturity level, audits following serious or fatal accidents and verify the level of standards implementation via the BU self-assessment.

In 2025, the Group's OHS Department conducted more than 120 site visits and 26 comprehensive audits covering, as every year, a broad scope of the Group.

Since 2022, a specific mechanism has targeted the BUs with the highest accident rates (>400 FTE, injury frequency rate initially >10, lowered to 8.5 in 2025). This mechanism includes: a situation assessment and action plan shared with the Group Prevention, Health and Safety Department, and a reinforced performance contract for differentiated

monitoring. Some BUs also benefit from audits by the Group Prevention, Health and Safety Department experts to adjust action plans.

The Internal Control Department assesses the maturity of each Business unit in terms of health and safety prevention through a questionnaire sent every two years to the BU's health and safety network. Each self-assessment is followed by one or more action plans to improve risk management.

The objective is 100% coverage of Business units assessed by cross-functional internal control and to achieve maturity above 80% (responses ranging between satisfactory and strong). By end-2023, the participation rate was 100%. The results demonstrate very good maturity across the different pillars of the policy with 88% maturity. The analysis of the 2025 questionnaire results is expected in early 2026.

→ **Quarterly internal benchmarking of health and safety outcomes**

Each quarter, a report is extracted from the database, presented first to the Executive Committee and then made available to all employees via the Group intranet. The report is used to monitor improvements in the accident statistics and the fulfillment of performance contracts, as well as the implementation of action plans.

→ **Monitoring of subcontractors and temporary staff**

In accordance with the supplier charter, suppliers must guarantee the health and safety of their employees. A preliminary risk analysis contractually establishes preventive measures, which are monitored through regular audits.

Since 2018, the Group has been tracking accidents involving temporary workers, subcontractors and employees. An evaluation system conditions supplier approval, with the possibility of exclusion in case of serious breach.

All these populations benefit from a dedicated safety induction presenting the job risks and associated prevention measures.

Veolia works with temporary employment agencies (TEAs) and several initiatives have been deployed:

- Development of a temporary employment charter specifying the responsibilities of temp agencies and Veolia sites to better integrate temporary employees. This charter must be signed by the end of 2026 by the 19 BUs worldwide that make more significant use of temporary work. By the end of 2025, 7 BUs had already signed this charter, or 37% of the BUs concerned;
- In this context, Veolia and the temporary employment agencies signing the charter commit to implementing the necessary means to carry out actions aimed at reducing serious or fatal accidents involving temporary workers to zero by 2027. In 2025, Veolia recorded 0 fatal accidents involving temporary workers;
- Regular completion (every 2 years) of a satisfaction survey for temporary workers who have worked at Veolia within BUs that have deployed the charter. The survey conducted in 2023 (results processed in 2024) demonstrates strong satisfaction among respondents at 92% (target set at 75%). This survey also enabled the identification of areas for improvement for both Veolia entities and the various temp agencies. The level of well-being expressed by Veolia's temporary workers stands at 7.9/10. A new international survey was conducted at the end of 2025 and the results will be processed in 2026;
- Organization in 2025 of a webinar presenting the progress report on the temporary employment charter, best practices from associated entities, and the results of the questionnaire mentioned above.

In 2025, Veolia revised its responsible purchasing roadmap by:

- Revising the Supplier Charter to align Veolia's 2 non-negotiables, namely compliance and health & safety. It incorporates 12 key Health and Safety Prevention requirements, including compliance with the 12 life saving rules;
- Defining a structured methodology for the pre-selection of subcontractors for construction projects;
- Establishing a supplier risk management policy, which includes a health and safety criterion in the identification of critical suppliers and the requirement to develop action plans adapted to their level of criticality.

Health and safety targets and outcomes

Consistent with the policy described above, and the detailed actions for each of the five pillars, Veolia is committed to continuous improvement in its performance in terms of health, safety and industrial risks through monitoring concrete and measurable objectives at all levels of the organization.

Health and safety outcomes are monitored closely by different governance bodies, i.e. the Board of Directors, the Executive Committee, the Management Committee, and the Ethics Committee. They are also shared with employee representative bodies at local and Group levels (Group French and European Works Councils) and are made available to all Group employees via the Veolia intranet.

As part of its GreenUp 2024-2027 strategic program, Veolia adopted the following objective and target:

Commitment	Objective	SDG	Metric – definition	2023 Baseline	2024 Results	2025 Results	2027 target
 Give meaning to our employees work and help them with career development and commitment	Health, safety and well-being at work	 	• Lost time injury frequency rate (Veolia employees)	4.95	4.33	4.11	≤ 4.1
Sponsor	Estelle Brachlianoff		Chief Executive Officer				

The “Lost time injury frequency rate for Veolia employees” metric is managed at the Executive Committee level by the Chief Executive Officer, with a target of ≤ 4.1 by 2027. This target was proposed jointly by the Group Prevention, Health and Safety Department, members of the Health and Safety Center of Excellence and the Multifaceted Performance Department. It was approved by the Executive Committee and the Board of Directors based on the trend curve for the last ten years, the growth investments presented in GreenUp (such as acquisitions or business developments) and the Group programs put in place to reduce accidents.

Veolia closely monitors a comprehensive set of health and safety metrics to assess its performance and identify areas for improvement. These metrics cover not only employees, but also temporary workers, self-employed people and subcontractors, reflecting our commitment to the safety of all who work for or with Veolia.

The main metrics monitored are:

- workplace accidents:
 - number of lost time injury incidents (for employees, temporary workers, self-employed people and subcontractors),
 - lost time injury frequency rate (for the different categories of workers);

- severity of accidents:
 - calendar work days lost due to workplace accidents,
 - the severity rate of workplace accidents (including fatal accidents);
- work-related deaths:
 - number of process and traffic-related deaths (for different categories of workers),
- occupational diseases:
 - number of declared occupational diseases recognized (employees);
- coverage of the health and safety management system:
 - employees covered by a health and safety management system (including temporary workers and self-employed people).

These metrics are analyzed quarterly. They make it possible to assess the effectiveness of health and safety policies and actions and to identify priority areas for improvement.

Metrics	2024	2025
Lost time injuries for employees (excluding commuting)	1,612	1,537
Lost time injuries for employees, temporary staff and self-employed people (excluding commuting)	1,989	1,936
Calendar work days lost due to workplace accidents, including fatal accidents (excluding commuting) (permanent and fixed-term contracts) (employees)	116,973	119,182
Lost time injury frequency rate for employees (number of lost time injuries per million of hours worked)	4.33	4.11
Lost time injury frequency rate for employees, temporary staff and self-employed people	5.00	4.87
Injury severity rate including fatal accidents for employees including fatal accidents (number of days lost per 1,000 hours worked)	0.32	0.32
Number of deaths among employees	6	6
Number of deaths among employees, temporary staff and self-employed people	6	6
Number of deaths among employees, temporary staff, self-employed people and subcontractors	13	9
Number of occupational diseases (employees)	100	97
Percentage of headcount in FTE covered by H&S management system (employees, temporary staff, self-employed people)	95 %	93 %

In 2025, the Group suffered a total of 9 fatal accidents:

Among employees (6 fatal accidents):

- 5 accidents related to business processes;
- 1 traffic accident.

Among sub-contractors (3 fatal accidents):

- 2 accidents related to business processes;
- 1 traffic accident.

For the calculation of the workplace accident severity rate, including fatal accidents, the number of days lost due to a fatal accident was estimated at 365, or an entire working year. Veolia estimates that this is the time needed, taking into account the period of adaptation of the organization following the death, the new employee recruitment stage, training and familiarization with the role.

In 2025, 39 countries where the Group is active did not record any lost time injuries.

For entities reporting that they have an occupational health and safety management system, the full-time equivalent (FTE) workforce is consolidated and then compared to the Group's total FTE workforce, including temporary workers and independent workers.

4.1.3.1.3.2 Well-being at work

To improve employee well-being with a coordinated and cross-cutting Group approach, Veolia created the So'Well program in 2021. This was accompanied by a network of So'Well well-being officers for the business units, designed to enhance employees' physical, social and mental health. A pilot program began in 2021. This gradually became more structured in 2022 and 2023, ahead of its roll-out during the period 2024-2027.

In addition, the Group encourages actions to improve the quality of life at work (for example, the prevention of work-related stress, remote working where feasible, the promotion of sports activities, workstation ergonomics, etc.).

The sense of well-being at work is measured each year in the Voice of Resources internal engagement survey.

Quality of life at work is an important factor in continued employee retention, contributing both to their productivity and the Group's good reputation. However, the absence or inadequacy of actions to promote well-being at work can lead to significant negative consequences. These include:

- a deterioration of the employer brand, making it more difficult to attract new talent;
- disengagement of employees, which may lead to a decrease in productivity and quality of work;
- a higher turnover and loss of talent result in additional recruitment and training costs;
- an increase in absenteeism and sick leave, which impacts business continuity;
- an increase in psychosocial risks, which may affect the mental health of employees;
- a decrease in the capacity for innovation and creativity within the company;
- a negative impact on corporate culture and interpersonal relationships.

These risks, if not addressed, can have a significant impact on the overall performance of the company and its ability to achieve its strategic objectives.

This is why Veolia is actively engaged in promoting well-being at work, as shown by the IRO below:

Positive impact	X	Negative impact	Financial opportunity	Financial risk
S1-ST-2 Promotion of well-being at work through appropriate measures				

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia: the stakeholders involved are Group employees.
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its social performance.

Veolia's policy to promote employee well-being: a strategic priority

Veolia has developed a comprehensive and structured policy for well-being at work, rooted in its Purpose and rolled out through the So'Well program. This policy, initiated in 2021, is based on a holistic approach combining the physical, social and mental aspects of employee well-being.

The So'Well program is the core pillar of this policy. Its implementation is based on robust governance structured around a Group Health and Wellness Director and a network of 60 wellness officers across all regions. This structure ensures a coherent roll-out while adapting to specific local conditions through a "Copy & Adapt" approach.

The policy is rolled out through several priority areas of intervention: Work organization has been redesigned to offer more flexibility, including working from home where the activity permits. Particular attention is paid to the prevention of psychosocial risks and, more broadly, to the promotion of mental health, the prevention of musculoskeletal disorders as well as the prevention of addictions and cardiovascular diseases. The promotion of sports also occupies an important place, as illustrated by initiatives such as sports gatherings and the "Talents & Champions" program. These actions are complemented by a training and awareness-raising component, including thematic webinars on various topics around well-being at work.

This policy addresses major strategic challenges. It seizes significant opportunities to strengthen the employer brand, improve productivity and drive innovation. It also aims to prevent significant risks such as employee disengagement, increased absenteeism or loss of talents.

Targets related to the well-being policy

The policy aims to create a fulfilling and sustainable working environment. It focuses on improving the quality of life at work while increasing employee commitment and retention. Emphasis is placed on maintaining a positive corporate culture and preventing psychosocial risks, with particular attention paid to work-life balance.

Veolia has set itself the following specific targets by 2027:

- Achieve and maintain a well-being at work metric of at least 80/100 in the Voice of Resources survey;
- Achieve and maintain a work-life balance satisfaction rate above 80% (percentage of employees with a score above 6/10) in the Voice of Resources survey;
- Ensure the participation of at least 85,000 employees in well-being at work programs;
- Maintain the European Workplace Active Certification (WAC).

These targets are part of the So'Well program and will be monitored annually to measure progress achieved.

Concrete actions for employee well-being

The actions that illustrate the policy are:

- The launch of the So'Well program in 2021 to improve quality of life at work;
- The organization of four thematic webinars (emotion management, sleep, eco-anxiety, mental ecology) to train coordinators as well as HR and health and safety departments;
- The promotion of sport and physical activity as vectors of well-being through annual sports gatherings and the Talents & Champions program;
- The implementation of the International E-Run for Diversity digital race.

In 2025, the results obtained were:

- 89,928 employees participated in at least one well-being at work program;
- The well-being at work score was 74 out of 100;
- 1,250 employees registered for diversity races held in several European countries;
- The E-Run for Diversity, a global virtual race, mobilized 4,300 employees from 70 countries;
- 7,600 employees from more than 50 countries participated in national, European and global sports events.

The Group's So'Well well-being approach in 2025 is structured around three tools deployed to employees through the So'Well ambassadors network: a series of webinars on various workplace well-being topics, practical So'Well booklets (on concentration, eye health and prevention of musculoskeletal disorders (MSDs)), and the interactive game 'My Wellbeing with Veolia' which allows employees to explore workplace well-being topics in a fun way. This approach was complemented by the So'Well International Well-being Week last June, which was highly successful thanks to the Group's exceptional mobilization, demonstrating Veolia's collective commitment to employee well-being worldwide.

In 2025, the So'Sport initiative experienced a highlight with Veolia's renewal of its European champion title at the 25th European Inter-company Games held in Calvia (Majorca). This major competition brought together over 5,500 athletes who competed in 33 sports disciplines. Veolia's delegation, composed of 140 employees including 50 women from 16 European countries, excelled in 18 different disciplines, winning a total of 54 gold medals, 36 silver and 20 bronze. This historic success perfectly illustrates the team spirit and sporting commitment of Veolia employees, while strengthening team cohesion and promoting physical activity as an essential driver of workplace well-being.

This structured approach demonstrates Veolia's concrete commitment to the well-being of its employees, with clear policies, specific actions, measurable objectives and tangible results.

The organization of work is a key factor in well-being

As part of its wellness policy, the Group is particularly focused on flexibility of the work pace and working conditions. The terms and conditions governing the organization of working time depend on the companies concerned, the nature of their business and where they are located.

31.3% of collective agreements signed in 2025 relate to the organization and working time.

In an attempt to increase agile working, the Group has introduced working from home in several BUs for jobs where this is possible. In France, in 2021, the Group negotiated with all the representative trade union organizations a framework agreement defining the terms and conditions for working from home for those who are able to do so and also defining the balance between working from home and working in the office to ensure team cohesion.

The number of part-time employees in 2025 was 6.4% (same in 2024).

According to the Voice of Resources 2025 survey, 82% of employees are satisfied with their work/life balance.

4.1.3.1.4 Attract, develop and retain employees

Veolia, a player in ecological transformation, acts daily to recruit in the ecological transformation professions in order to hold the necessary skills to guarantee the sustainability of its activities and the realization of its 2024-2027 GreenUp strategic program.

- In response to the increase in resignations observed by most companies between 2021 and 2023, Veolia has strengthened its training actions to mitigate the risk of high staff turnover, which could lead to difficulties in upholding its customer commitments;
- To adapt to new business trends, and in line with the boosters defined by the strategy, Veolia's ambition is to develop its employees' skills to guarantee its position as a leader in the ecological transformation and to address staff shortages in certain business lines;

This results in the following IRO:

Positive impact	Negative impact	Financial opportunity	Financial risk
S1-ST-5 Risk of insufficient workforce and skills to meet our commitments in the event of departures (turnover rate, retirements, etc.)			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia: the stakeholders involved are Group employees and potential candidates.
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its societal performance, which are part of our business model.

Veolia follows the recommendations of the International Labour Organization with an average working week of 40 hours.

The total number of overtime hours worked was 19,546,537, i.e. an average per employee of 95.7 hours of overtime per year. The definition of overtime, however, varies from country to country, which can make it difficult to evaluate this indicator. Moreover, in a service business, a large number of overtime hours are due to emergency work performed by on-call or on-site personnel, to restore water supplies or heating within a reasonable time frame, for example. Depending on local legislation, the maximum working time recorded is 48 hours per week.

Veolia ensures that every employee is treated fairly and with dignity and that the labor laws and regulations applicable in each of the countries where the Group operates are respected: health and safety standards to ensure a safe and healthy working environment and conditions.

In France, the Group ensures that it facilitates, beyond legal obligations, the balance between holding a local elected mandate and professional activity, in accordance with Law No. 2025-1249 of December 22, 2025 (art. L.1621-6 of the CGCT). In this regard, internal provisions may relate in particular to the organization of the working arrangements for these employees, while ensuring a work-life balance as well as compliance with the anti-corruption code of conduct and the prevention of conflicts of interest.

Moreover, Veolia promotes the Nation-Army link. As such, the Group pays particular attention to its reservist employees, supporting their commitment through a partnership agreement with the French National Guard. Signed in 2019, the purpose of this agreement is to facilitate the operational employment of salaried reservists in the Group, by giving them the opportunity to spend an extended reserve period (15 days) compared to the legal period (10 days) and maintain their salary over this period. It's also allows for shortening notice periods, particularly for the shortest assignments, enabling Veolia's reservists to be more responsive and committed to their operational missions.

The agreement was renewed in March 2024 as part of a new tripartite agreement model between Veolia, French Ministry of the Armed Forces, and French Ministry of the Interior and Overseas Territories, allowing the existing provisions to continue and be extended to reservists in the French national police force.

- In order to be competitive, improve employability and maintain the high level of technicality in the services it provides to industrial and municipal customers, the Group strives to develop its attractiveness and strengthen its employer brand. A new job portal was launched in December 2024, offering better technical performance and providing richer and more comprehensive content. Veolia, a key player in ecological transformation, works daily to recruit in the water, waste management and energy trades. Indeed, nearly 24,000 employees on permanent contracts were recruited in 2025.

Some key functions are essential for complex projects: aside from the general aspects of employee skills development, Veolia has identified several key competencies that are necessary for its GreenUp strategic program, relating to complex and large-scale projects. Acquiring these new competencies requires the company to strengthen its efforts to attract and retain employees and develop their skills. The corresponding IRO is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S1-ST-6 Commercial risk which could be very costly in the event of failure to mobilize the special skills needed to implement certain large-scale complex projects			

The Group endeavors to promote its employer brand by showcasing employees who work in business lines delivering the ecological transformation. Its aim is to attract the talent it needs in order to thrive. In addition, in order to retain its employees, the Group offers employee

share ownership plans and incentive schemes (variable compensation, profit-sharing, long-term plan, etc.). Lastly, the social ladder is a strong driver of employee retention, since the Group encourages promotion and internal mobility.

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia: the stakeholders involved are Group employees and potential candidates.
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its social performance.

The policies presented in 4.1.3.1.4.1 to 4.1.3.1.4.5 make it possible to address the two IRO mentioned above.

4.1.3.1.4.1 Training for personal development

A training policy which is integral to the strategy

The aim of the Group's training is to disseminate the Veolia culture among all its employees, develop the strategic skills necessary to achieve the strategic program and ensure access to training for all employees.

The training policy is delivered at the Group level by the Veolia Academy and at the local level by Learning & Development teams, attached to the regional and BU HR departments.

The Group's strategic training directions are defined by the Veolia Academy on the basis of the skills development needs identified by the Corporate departments and their business lines, as well as the needs of local HR departments. These directions and the annual training roadmap are approved by the Group Executive Committee.

In its Human Resources roadmap, the Group proposes to implement new offers and services. The Veolia Academy is key to supporting the development of employees' technical and digital skills. Launched in 2023, the Veolia Academy supports the Group's cross-functional training offer.

The Group training programs are organized within business academies (Leadership Academy, Digital Academy, Finance Academy, Waste Academy, etc.). Digital learning is based on the Group's training platform Learning@Veolia, which offers employees access to the Group's e-learning catalog. The catalog contains e-learning content which is specific to Veolia, but also provides access to the LinkedIn Learning course library (more than 24,000 courses in over 20 languages, covering various topics such as management, personal development, digital technology, innovation, etc.).

A wide range of training actions for skills development

→ Developing employability through skills acquisition

Developing employability means access to training for all employees. The increase in training hours (excluding health and safety training) reflects the development of new technical competencies, expertise and know-how on top of the skills required to do the job.

The Group action plan to help continually develop employability involves management and leadership programs and an off-the-shelf Group e-learning catalog.

Group Management and Leadership programs enable the Group's talent to be supported at various key points in their career, with particular attention to the representation of women on these programs (see section 4.1.3.1.4.2 below). In 2025, more than 15,000 managers and executives attended a Group management or leadership training program.

Manager programs:

■ **Veolia Induction Program (VIP):** the Veolia Integration Program for new managers is aimed at both newly hired managers and internal promotions to a managerial role. It seeks to build knowledge of the Group, in particular through the presentation of the GreenUp strategic program and Veolia's business lines, and to instill the Group's management culture by working on the behavior expected of managers at Veolia. In 2025, the VIP program welcomed 412 managers. At the same time, several areas (France, APAC) offer induction programs inspired by the VIP so more managers can benefit from them.

■ **OHS Leadership:** this program aims to strengthen the safety culture within the Group by equipping all managers with the tools to create a caring and safe environment. The aim is to train all Group managers by 2027. In 2025 more than 15,000 managers received training.

Talent programs: Disrupt, Accelerate, Women In Leadership, Excellence.

These programs are aimed at Group employees chosen by local HR for their potential for development within the Group. The employees all have different levels of experience and responsibility and are at different stages of their career. The programs are designed to develop self-awareness, leadership, teamwork, knowledge of the Group and networking skills.

Each program has its own specific features:

- Disrupt is a hackathon focused on innovation methods;
- Accelerate concentrates on digital transformation;
- Excellence strengthens finance fundamentals and business orientation for future leaders;
- The WIL programme, initially Women in Leadership and exclusively female, has been renamed Worldwide Inspiring Leaders and now welcomes male participants, with five taking part in the 2025 international session, with a goal of gender parity by 2026. Worldwide Inspiring Leaders is dedicated to future leaders and aims to accelerate their careers, develop their leadership skills and enhance their profile within the company, with a particular focus on equal opportunities.

In total, 335 talents took part in one of these programs in 2025. The regions also offer their employees local talent programs.

Executive programs: Executive Seminar, Explore Tomorrow, Leading Teams in Crisis Times.

Intended exclusively for Executive Resourcers, these programs continue to expand their knowledge of the Group and develop collaboration between management teams, provide a better understanding of markets and external trends, and strengthen individual and collective resilience. Executive Resourcers correspond to senior management. Within Veolia, these are executive employees holding a position graded 16 and above according to the Willis Towers Watson Global Grading System methodology.

In 2025, 103 Executive Resourcers took part in one of these programs.

The goal is to maintain equivalent volumes in 2026 compared with 2025 and 2024 for all these programs.

Digital learning offering

Access for a growing number of employees to an extensive catalog of off-the-shelf e-learning courses allows everyone the freedom to develop their skills in areas that interest them, according to their own preferences, at a time that suits them.

This means increasing the number of employees with access to the Group's training platform: in 2025, around 131,000 employees had access to the platform; representing a +13% increase compared to 2024. The aim is to reach 150,000 in 2027.

This also involves enriching the Group training catalog with content to accelerate AI acculturation (Introduction to AI for GreenUp, expertise pathways on AI, but also cybersecurity), content related to Veolia culture (new modules on safety standards, psychosocial risk management with "Mission Serenity: become an agent of well-being @work"), and content related to Veolia's technical expertise (new modules on hazardous waste, Capex delivery, Cirpack).

In addition to platform access, Veolia Academy and local training teams implement communication actions to raise awareness of the digital training offering and encourage everyone to train on topics of interest to them. A new catalog was published at the beginning of 2025 to provide a better overview of the Group's digital offering, and frequent communications have been established to promote digital course content, in line with Veolia's current events and strategic skills needs.

Examples of communication actions in 2025:

- Newsletters for the HR community and information on the HR intranet;
- Actions promoted by Group communication;
- Entity-level actions: newsletters to all employees to promote e-learning on specific subjects (well-being at work, AI, etc.).

These actions have resulted in more than 102,000 active users (users who have logged in to Learning@Veolia at least once a year) and around 31,000 employees having taken at least one course on LinkedIn Learning, a Group partner. The aim is to continue engagement actions in 2026 with enhanced support for entities with the lowest uptake.

→ Business risk in the event that the skills needed to develop our business cannot be mobilized

The role of the Veolia Academy is to develop the technical and digital skills necessary for the Group's strategy.

In 2025, priority was given to:

- acculturation to generative AI for digital skills;
- technical skills for two strategic program boosters: Hazardous Waste and Energy (training related to the third booster, Water Technologies).

Digital skills: acculturation to generative AI

The acculturation to generative artificial intelligence (GenAI) remains a priority for the Digital Academy. In 2025, the massive GenAI acculturation plan started in 2024 was continued and expanded.

This plan is based on training "GenAI champions" across all Group entities (over 1,600 champions trained), and on these champions leading in-person workshops introducing generative AI, aimed at creating a common understanding of what generative AI is, the Group's AI policy, and a first level of use of these new tools.

In 2025, this initiative was strengthened by making e-learning content available: an "Introduction to AI for Green Up" e-learning course, available in 12 languages, enabling compliance with the European AI Act requirements for training all employees in Europe on AI usage and risks, a "Data Passport" e-learning course, as well as a selection of "off-the-shelf" content on generative AI specific to different functions (Sales, Procurement, HR, etc.).

The "AI Champions" program, comprising seven modules over three months, was strengthened to incorporate more hands-on practice and greater knowledge on key AI related topics, such as Veolia's AI for GreenUp strategy, data, Group tools, regulatory and environmental aspects, risks and opportunities, etc. This program notably includes a 2 hour workshop to teach employees how to prompt effectively. This workshop, like all the AI Champions training content, is accessible and ready-to-use for local deployment.

37,488 Group employees were introduced to or trained in 2025.

In parallel, specific training programs will be implemented for teams and functions most significantly impacted.

Awareness and application sessions on generative AI based on use cases related to leadership and innovation have been integrated into the various Leadership programs.

Technical skills for strategic GreenUp boosters

Hazardous waste

- A set of Group programs was designed in 2024 in partnership with the Business Support and Performance department, Hazardous Waste Europe and the France campus continues to be rolled out in 2025:
 - Incineration course for technicians and operators of household waste and hazardous waste incinerators: around 20 hours of technical training based on e-learning in French and English,
 - Hazardous Waste training for Business Developers,
 - Learning Expedition for managers of sites/hazardous waste activities;
- The objective for 2025-2027 is to translate this training into the languages used by the BUs that need to develop expertise in hazardous waste (e.g. Spanish, Chinese, etc.) and to support entities in the roll-out of this training.

Energy and decarbonization

- Following pilots in 2024, Group programs were designed and deployed in 2025:
 - Energy shift this program is designed for site managers to learn how to conduct energy audits and define energy optimization plans, for both Veolia sites and those of our clients,
 - GreenPath Zero Carbon: training in selling decarbonizing solutions for sales representatives,
 - Hubgrade Building Energy Services: program designed for Hubgrade analysts in support of energy performance contracts.
- The objective for 2025-2027 is to accelerate the deployment of these programs by relying on the new partnerships established in 2024 in France with training organizations and vocational high schools, as well as training centers in regions that have trainers and the necessary technical equipment.

Skills for support functions

In 2025, a new academy was launched: the Procurement Academy, the result of increased collaboration with the Group Procurement Department. The Procurement Academy aims to train and support all employees in the Procurement function with a common standard, through the deployment of 5 comprehensive programs centralized by Veolia Academy:

- Procurement Leaders: Driving transformative change, a 6-day program over 6 months dedicated to Procurement Directors to lead transformation in their BU;
- Procurement Performance and Risk Management, 2 half-days on the shared fundamentals of the procurement function;
- Category management at Veolia, comprehensive program of 6 half-days;
- Category management at Veolia Awareness, 2 hour session;
- Welcome to Veolia Procurement, an onboarding program for procurement staff over half a day.

Furthermore, to support the skills development and training of Legal functions, a new "Contract Management" program was designed in the form of an educational game (Serious Game). This initiative aims to raise awareness of contract management and best practices, with potential for broader application within Veolia in France and in international markets.

→ Strengthening employee engagement and attracting new talent by sharing our purpose, values and strategy.

Sharing Veolia's Purpose, values and strategy with employees makes it possible to unite them and build loyalty around a common project. This also allows better ownership of the Group's strategy.

The key components of the Group's training action plan are as follows:

Dissemination of Veolia's management culture and adoption of the GreenUp strategic program

- Group executive, talent and manager programs: these programs, described above, help reinforce the sense of belonging to the Group and disseminate its management culture. All programs were aligned in 2024 with GreenUp's priorities through sessions dedicated to GreenUp boosters, digital technology and innovation.
- E-learning courses are available for all managers on Veolia's fundamentals (Essentials, Health and Safety Standards). In 2024, a new e-learning course on GreenUp's key messages was made available on the Learning@Veolia platform and incorporated into the onboarding courses for newcomers. It was completed by around 10,000 employees in 2025. It was supplemented in 2025 by the "AI for Green Up" program on AI acculturation.

Dissemination of the Company Purpose and engagement of all employees as ambassadors of the ecological transformation

Apart from the Leadership and Group e-learning programs, the dissemination of the purpose and engagement actions for the ecological transformation are defined and implemented locally by the BUs.

The Veolia Academy provides a toolkit with different workshops and e-learning content that BUs can choose for their local events.

The ambition is to enable each BU to define and implement its own strategy, so, there are no volume targets for the deployment of these resources made available by the Group.

This toolkit includes:

- **Ecological Transformation Fresk** (more than 10,000 participants and 400 internal trainers since its implementation): this educational workshop, based on the Climate Fresco, explains environmental challenges and the role and impacts of Veolia's activities in relation to these issues. This tool is designed to raise awareness and engage all employees as ambassadors of ecological transformation;

- **2 Ton workshop** (1,800 participants since 2023): measuring each person's carbon footprint and discovering the levers for individual and collective action to achieve the goal of carbon neutrality by 2050;
- **Unlock Local Energies** (1,500 participants since 2024): a workshop to learn more about the different decarbonized energy solutions available in a region.

"Climate School" e-learning content available on the Learning@Veolia platform: understanding environmental issues and levers for climate action.

The two items above contribute to the employee engagement referred to in section 4.1.3.1.6.1 below.

Development of an inclusive culture

- In 2025, the roll-out of the e-learning course on raising awareness of and combating sexism and sexual harassment continued. This Veolia e-learning course, including employee testimonials, was deployed to all Group executives. The roll-out continued across different regions. To ensure it reached all employees, the e-learning course was translated into 18 languages. Since its launch in 2024, around 35,000 employees have completed this e-learning course;
- This point above contributes to the culture of inclusion and diversity targeted (section 4.1.3.1.4 below).

Quantitative training targets and outcomes

As part of Veolia's Human Resources strategy, the targets are discussed each year with French and European employee representatives. The Group's outcomes are also presented each year, with a breakdown by zone and BU.

The Group has set itself a target for 2027: to deliver 30 hours of training per employee.

Training metrics

In 2025, the Group delivered 31 training hours per employee, compared with 30.5 hours in 2024, i.e. a 0.5 hour increase per employee. This result exceeds the objective set by Veolia at the end of 2027, which is 30 hours. This consists of business, health and safety and soft skills training.

These good results were attributable to:

- Improved tracking of learning situations (induction days, webinars, workshops, etc.) which, based on an educational objective, enables employees to develop their skills in the context of their activity;
- Continuation of Group programs launched in 2022 to support the integration of management teams;
- Accelerating Digital Learning with an on-shelf catalog available to all 131,000 users of the Group Learning@Veolia platform, offering a wide range of e-learning courses in many languages through new partnerships with LinkedIn Learning and Climate School.

The aim in 2026-2027 is to consolidate this excellent result and improve it further by refining the learning ambition of the strategic program, which is based on the following pillars:

- Development of the strategic competencies identified in GreenUp 2024-2027;
- Strengthening of the Veolia leadership and culture;
- Further improvement in learning effectiveness through digital technology. This metric was not used as a main multifaceted performance metric at Group level for the new strategic program. However, it will continue to be steered and monitored to assess the Group's human resources performance.

In addition, this progress is reflected in the results of the 2025 Voice of Resources Engagement Survey, which highlights a high level of employee satisfaction regarding the development of their skills: 84% of respondents.

Change in training metrics

Metrics	2024	2025
Number of training hours per employee	30.5	31.0
Number of training hours per female employee	33	33.8
Number of training hours per male employee	30.0	30.2

4.1.3.1.4.2 Career management for professional development

The dual aim of the Group Talents Department is to meet the skills requirements of Group activities and provide career opportunities for employees. Employee career development is a major focus of the human resources management policy. Talent management, driven by the Group Human Resources Director, is carried out by sector and focusses on supporting mobility, identifying and developing experts, managers and the leaders of tomorrow. Its implementation relies on various measures described below.

A common job appraisal tool for all the Group's activities

A single classification tool is deployed and sustained for all executive positions (Global Grading System, developed by Willis Towers Watson) and even all employees in some Business Units. It is used to apply HR processes in a transparent and fair manner.

Grading is deployed across all Group regions and is used to apply HR processes in a transparent and fair manner.

Talent App: a new skills management digital app for executives

A pilot test of the Talent App was launched in January 2021 with 2,000 employees. Backed by artificial intelligence, this app is designed to accelerate the development of internal mobility and cooperation by mobilizing employees for short assignments. It is gradually being deployed, with over 17,700 employees registered in 2025. It can also be used to actively implement a skills and career path mapping at all levels of the organization. The Group aims to have a view of the skills and development aspirations of all its managers by 2027.

A simplified and scalable Group job library

In 2024 Veolia updated a simplified job map shared by all the Group's entities. The aim is to share a common language, to adapt to and anticipate changes in jobs and skills (notably through the organization of job committees), to improve clarity and promote mobility. This library is also shared to help employees envision the jobs that interest them. Job descriptions are displayed in "Talent App" so that a manager's skills can be compared to those required for a job. This library also enables the Human Resources network to visualize career paths by presenting grade bands for generic jobs. It consists of approximately 130 jobs divided into two areas: business lines and support functions.

SmartRecruiters: the recruitment tool

The SmartRecruiters tool allows a better sharing of job offers across the Group; it therefore promotes internal mobility and contributes to employee development and retention. It also supports the business by sharing expertise and strengthening competitiveness.

The tool was deployed from the last quarter of 2021 and gradually integrated entities in France, the United States, Northern Europe, and certain entities in Asia, Latin America, Spain and Italy. The roll-out continued in the Water Tech zone with the integration of WTS into the covered scope. To date, more than 800 recruiters share a platform ensuring enhanced tool usage, with the creation of talent pools and an improved applicant experience.

The current coverage rate is 65.5%.

Thanks to SmartRecruiters, the Group publishes "Veolia Joblink" internally every two weeks, a newsletter that lists the latest job openings for managers, including both positions published on the Group's career portal and managerial positions advertised at the local level.

The Group's career portal was also completely redesigned to provide a better candidate experience with new search features, enrichment with job-related content and better visibility.

Talent Hub: the shared HR process management tool

A comprehensive and integrated human resources solution, Talent Hub is the Group tool for employees managing annual reviews (OneForm), salary reviews, people reviews and succession plans. This tool supports users in their HR and/or managerial activities, facilitates access to information through a single entry point, and assists managers in managing teams. It constitutes a reliable database and makes HR reporting more secure. At the end of 2025, more than 50 Business Units deployed the tool, covering all (36,000 managers and 57,000 non-managers. Deployment continues BU by BU as opportunities arise for the non-mandatory scope (non-managerial staff). The aim is to cover all employees connected to the Veolia IT environment in 2027.

A robust talent management process

Since 2017, staff reviews common to all entities have been organized for the Group's Executive Resources, key contributors and high-potential employees. They are used to systematically develop succession plans and implement development plans to retain current and future managers. They aim to consolidate organizations' sustainability and agility, and to help with the individual development of the most talented employees.

This annual process is carried out, zone by zone, and then by sector, ensuring thorough knowledge and management of the Group's talent. It also helps to address the challenges of diversity and internationalization within teams and in management positions, to enable Veolia to achieve its multifaceted performance targets in this regard.

In 2025, 1,411 employees were reviewed at Group level.

The Group therefore has succession plans for 78% of Executive Resourcer positions and where this is not the case, action plans have been implemented.

In 2025, the number of women in the Veolia staff reviews has increased: 37.7% women in total (they were 36% in 2024) and 53% among high-potential executives (steady in comparison with 2024).

These reviews are also rolled out in zones and Business Units for other Group employee categories.

A common model for performance appraisal

In order to ensure managers' objectives are aligned with the Group's strategy and values, a single annual interview process, One Form, is used for all managers at our sites worldwide. The Group encourages the extension of this practice to non-managerial employees, for whom the Business Units adapt the form.

In 2023, the annual executive interview form was modernized. Each year, this form is used as part of the performance and career development interview process.

Following the optimized ergonomics proposed in 2022, the basic structure and reasoning behind the annual interview were questioned to provide a more tailored response to the expectations of the operational entities.

In a collective intelligence approach involving BU executives, the HR network and managers, the current version promotes dialogue between employees and management, while limiting data entry requirements.

While offering a simplified interface, this version defines individual objectives more clearly in line with the Group's multifaceted performance and strategy and addresses Veolia's values by enabling discussions on the behaviors expected to meet challenges (Management Behaviors@Veolia).

The "development" section leaves considerable scope for discussions on career aspirations and the support options offered by the Group.

Finally, this form is structured to promote discussions on well-being at work and support the assimilation of a feedback culture within the Group.

Development tool

Talent development programs

Talent development programs Veolia Excellence is the training program for Veolia talents. Sessions are organized in three primary areas: business models, value creation, and team management in a context of transformation. The program uses innovative training methods, with e-learning sequences, inter-session work, collaborative workshops and a post-seminar follow-up. It also includes a 360° evaluation that is debriefed by internally trained individuals.

In 2025, 125 participants were trained in the program.

The Group has three other collective individual development programs, open to its internal employees in all its regions:

- Disrupt: aimed at young managers to accelerate their integration within the Group (61 participants in 2025);
- Accelerate: aimed at middle management as part of the digital transformation. This program allows participants to better understand the potential of this transformation and to develop the required interactions with Group businesses. It must facilitate their change in posture by allowing managers to become the business partner of other Veolia players and to see the bigger picture in order to better anticipate future challenges (74 participants in 2025);
- WIL (Women in Leadership) is designed to develop female leadership in relation to the Group's ambitious gender diversity targets (see section 4.1.3.5 below) (75 participants in 2025).

In 2025, 335 employees participated in the Group's talent programs, in line with the number of people defined per program per year.

The Group fully integrates personal development tools into these programs (MBTI, 360°, Self Management Leadership) so that its talents share a common strategic vision, in line with their own personal development.

Equivalent programs are offered in different zones, such as Impulsa in Latin America, Boost in Africa and the Middle East, "The Leadership Cadre" or "Step Up" in the UK, Omega in Benelux, Stream in Asia, or Relief in France.

In addition to programs for high-potential employees, job-specific development programs are being implemented for the Group's strategic activities, in support of the ambition of the Green Up 24-27 plan.

In the hazardous waste management sector, two new initiatives have been launched since 2024:

- Learning Expedition: Each year, a cohort of 20 operational managers from this sector meets to consolidate the community and share best practices across different zones;
- "Haz waste team up" mentoring program launched in 2025: 45 employees (mentees) are supported for one year by experienced mentors in their field. This program promotes both knowledge transfer and personal development.

The establishment of the Procurement Academy

The Group Procurement Department is launching its Procurement Academy, designed to welcome and integrate new employees from all Business Units into its community. This initiative primarily aims to support the development of technical and behavioral skills of procurement professionals, in order to prepare them for constant changes and the increasing complexity of the profession. The Academy is an essential lever for successfully achieving the organizational transformation underway within this function, while strengthening the expertise and agility of teams in the face of market challenges.

Several programs have been created and are as follows:

- Onboarding: for all new entrants to the Group's procurement community;
- dedicated programs by role with modules on "essentials" and "advanced" skills for:
 - Chief Procurement Officers,
 - Procurement Managers,
 - Category Managers,
 - Buyers / Project Buyers,
 - Personnel working in the Procurement Excellence branch;
- Specialized programs for employees outside the procurement community, designed to raise their awareness of the issues and specificities of procurement roles, and optimize their interactions and collaborations with this function.

Increased mentoring

The Group mentoring program, launched in 2021, continued in 2025 with around fifty employee pairings. With the involvement of mentors, members of the Group Executive Committee and Management Committee, as well as country/BU directors, mentoring helps develop competencies, accelerate career opportunities and expand the professional network of mentees, who are high-potential executives.

Since 2023, booster workshops have been created. They were specifically designed to provide practical tools, anchor learning and make the most of the mentoring relationship, thereby strengthening the leadership and operational efficiency of mentees. Finally, it should be noted that the mentoring program, exclusively reserved for women at its inception, was also opened to men in 2023.

The program is planned to be renewed in 2026, with a launch in April, which will welcome around fifty new pairings. Finally, the launch of a reverse mentoring program is being considered for 2026, in order to strengthen intergenerational exchanges within the Group and retain Group employees under 35 years of age.

Individual and collective development programs

Individual and collective support programs, launched in 2017, continued in 2025 with 30 individual coaching sessions and collective coaching, team MBTI (30 teams supported, representing approximately 500 people), deployment of the 360° tool as part of the Excellence program involving 120 people, and around twenty individual 360° assessments. The 360-degree assessment is an evaluation method that involves collecting feedback on an employee from multiple sources: their manager, colleagues, and subordinates. This approach helps identify strengths, areas for improvement and promote professional development in a constructive framework.

These programs are supported by a community of 12 internal coaches and a community of 22 internal 360° debriefers.

These programs are designed to develop individual and collective potential, identify and retain talent, promote well-being at work, develop collaboration within teams and initiate cross-functionality.

Executive development programs

To ensure retention and develop the skills of leaders on their missions, flagship programs are offered each year. These include:

- The Executive Seminar prepares individuals for corporate management by working on a changing world and its impact on our current and future activities, and the ability to carry the Group's values. It is based on four study trips spread over one year and offers training conferences, the discovery of Veolia's activities and numerous visits to external undertakings. Trainees complete the program with a project related to the Group's strategy, which they present to the Executive Committee. Veolia is particularly focused on including a significant portion of women in training schemes aimed at talents and executives. (30 participants in 2025);
- Explore Tomorrow: a learning expedition focused on innovation and digital transformation (43 participants in 2025);
- Leading Teams in Crisis Times: team management training focused on crisis and uncertainty management (30 participants in 2025).

In 2025, 103 Executive Resourcers participated in the Group's talent programs.

4.1.3.1.4.3 Compensation policy, employee savings and adequate wages

Veolia applies a comprehensive compensation policy that takes account of the following: wages, social protection, employee savings and retirement. This policy is based on the following general principles:

- Offering competitive compensation in accordance with local markets;
- Guaranteeing competitive fixed and variable compensation which reflects the undertaking's results;
- Harmonizing the calculation bases and methods for the variable components of executive compensation across the Group, particularly by integrating Veolia's multifaceted performance indicator in the bonus calculation of all executives. This variable compensation policy is extended to Group managers across all geographical areas;
- Optimizing coverage of healthcare and insurance costs in the main countries where the Group operates;
- Harmonizing existing employee savings plans;
- Securing existing pension plans in the various countries where the Group operates by privileging defined contribution plans.

Veolia's policy, implemented by the Group Senior Executive Vice President for Human Resources, is to respect wage equality between men and women who have the same employment conditions and qualifications. For this purpose, the Group is particularly vigilant regarding the application of a fair wage policy.

Total pay consists of a base salary and individual or collective performance-based variable compensation (depending on the professional category, countries and applicable regulations).

Gender pay gap

The average annual gross remuneration of all Group employees on a full-time equivalent basis is €42,466 in 2025 compared to €41,651 in 2024. The average gross remuneration for men reached €42,936 in 2025 (compared to €42,147 in 2024) and for women €40,787 (compared to €39,843 in 2024), representing a gap of €2,149 (-5%). This remuneration includes in particular the base salary, paid leave allowances, any 13th month payment, bonuses, overtime, and any benefits in kind.

This difference is mainly due to the distribution of men and women between different jobs. These averages are only indicative, however, and should be interpreted with an element of caution. They correspond to a wide diversity of situations due to the nature of the professions and jobs carried out and their geographic location. These values, converted into euros, are also impacted by fluctuations in exchange rates.

Veolia ensures that the compensation paid to employees complies with the legislation in force in the country (minimum wage, overtime etc.). Veolia ensures that the Group's base salaries, particularly blue collar workers (49,3% of the workforce), are systematically above national minimums or minimum wages paid on the labor market for a given job.

Compensation and living wage

Veolia used as an adequate reference wage (or living wage according to standard S1-10) legal minimum wages or local minimum wages established by the most relevant collective agreements where possible. Veolia complies with minimum wage laws in all countries where it operates. This ensures that all employees receive at least the legal minimum wage where one exists. Countries in which it was possible to determine a reference wage have no employees earning below the reference wage.

For three countries, these reference wages do not exist or are not applicable to Veolia's workforce (for reasons of nationality, for example). For these countries, representing less than 1% of the Group's employees, it was therefore not possible to demonstrate that all employees were remunerated above an adequate wage.

In addition, Veolia conducted and extended its analysis relating to the living wage, implemented in 2023, to 13 countries representing nearly 60% of the Group's workforce and covering all of its major operating regions: France, United States, United Kingdom, Japan, Colombia, Poland, Morocco, Spain, Chile, Germany, United Arab Emirates, Australia and Czech Republic.

The study, of which employee representative bodies were informed, was conducted on the basis of employees on permanent and fixed-term contracts present at the end of 2025, with work-study students and interns excluded from the scope. The comparison is made on the basis of the annual fixed remuneration recorded by the countries against the country's living wage provided by Fair Wage Network.

The results show that more than 98% of the workforce covered by the study are at least at the level of the country's reference living wage.

An in-depth analysis of the results by the human resources departments of the countries concerned will be conducted in 2026 in order to implement action plans.

Fairness of the executive pay ratio

The fairness ratio measuring the gap between the total compensation paid to the Chief Executive Officer and the average compensation of Veolia employees in full-time equivalents is 59 (compared to 60 in 2024).

The annual compensation of employees includes in particular the base salary, paid leave allowances, the possible 13th month, bonuses, overtime, and any benefits in kind. Performance shares awarded are not taken into account.

Sequoia: Employee share ownership

The annual capital increase offer reserved for Veolia employees aims to achieve, in the coming years, employee-shareholder ownership of 10% of the Group's share capital, aiming to:

- Build a stable core group of shareholders;
- Make it one of the instruments for sharing the gains of the Group's growth with its employees.

Hence, every year since 2018, Veolia has set up share ownership plans for the benefit of its employees. The geographical coverage has steadily increased, from 31 countries in 2018 to 56 countries in 2025. The change in geographical scope takes into account the Group's organization, the expectations expressed by management of the regions/countries, and the legal complexity of deployment in certain geographies.

The latest operation took place in 2025. Veolia wanted to offer more than 190,000 employees in 56 countries a "leveraged" offer, in addition to a standard "classic" offer. With these two offers, employees were able to benefit from:

- on the one hand, a secure offer guaranteeing a minimum return of 4% per year on the capital invested (including the employer's contribution as part of the offering), as well as a multiple of 4.8 in the event of an increase in the Veolia share price;
- on the other hand, a standard offer with a discounted subscription price.

85,436 subscriptions were recorded, representing a subscription rate of 44.9% at Group level, slightly up from 2024 (44.7%). This is also the highest rate ever achieved at Veolia since the launch of the first employee share ownership plan.

The average personal contribution invested per employee has increased significantly: it amounts to 912 euros in 2025 (compared to 630 euros in 2024, after reduction, or 795 euros before reduction).

The total amount subscribed under Sequoia 2025 therefore amounts to 339 million euros, including leverage and employer matching contribution, compared to 356 million in 2024. This is explained by the fact that the bank complement (or leverage) offered in 2025 (leverage of 1 + 3) was lower than the one offered in 2024 (1 + 5).

In parallel, 2025 was the year of the unwinding of the first five-year leveraged plan launched in 2020. In particular, 55% of the assets in the + 2020 compartment were reinvested in our share ownership, including 9.5 million euros in the 2025 capital increase operation.

Nearly 165,000 current and former employees of the Group are, as of December 31, 2025, shareholders of Veolia Environnement, thus holding 9.35% of its capital (compared to 8.9% at the end of 2024). Veolia employees thus remain the Group's largest shareholder.

All employee shareholders of the Group elected, in 2022, a director who represents them on Veolia's board of directors, for a four-year term. As this term expires at the end of the next general meeting of Veolia shareholders, the Group had to proceed with a new election at the beginning of 2026.

Employee savings and retirement savings

Employees of the Group in France have had the opportunity since 2002 to save in the medium term with the help of their company through the employee savings scheme provided for this purpose: the Group Savings Plan (PEG).

In addition, Veolia Environnement offers, for its employees and the employees of its French subsidiaries under an agreement signed with the social partners (December 2012), a Group collective retirement savings plan (PERCOL) to enable all employees who wish to prepare for their retirement under advantageous social and tax conditions. In 2020, a new amendment was signed and modified the PERCO into a collective retirement savings plan (PERCOL), thus allowing Group employees to benefit from the advantages offered by the Pacte law.

At the end of 2025, the total amount saved by employees in France in the two Group employee savings schemes amounts, in net value, to nearly 902 million euros distributed as follows:

- €772 million in employee savings (PEG) held by 70,740 current and former employees;
- €123 million in retirement savings (PERCOL G) held by 44,321 current and former employees;

4.1.3.1.4.4 Social protection

4.1.3.1.4.4.1 Veolia Cares: minimum social protection floor

Since social protection systems vary according to the geographical areas in which Veolia operates, the Veolia Group, at the initiative of its Chief Executive Officer, has set itself the goal of offering all its employees long-term social guarantees to protect them against life's risks through a specific voluntary program called Veolia Cares:

The corresponding IRO is summarized below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S1-ST-3 Base of minimum social guarantees for all Veolia employees			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia: the stakeholders involved are Group employees and their families.
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its social performance.

- €6 million in blocked current accounts (CCB) held by 4,580 current and former employees.

The company mutual funds (FCPE) invested in Veolia Environnement shares (employee share ownership) which represent nearly 496 million euros in 2025 are held in the PEG.

The range of dedicated diversified FCPEs (money market, equities, bonds and diversified) which represents nearly 397 million euros is held in the PEG and PERCOL.

Profit-sharing and incentive schemes

In France, Group entities are covered by profit-sharing agreements, provided they meet the necessary workforce and financial conditions.

Regarding incentive schemes, Veolia favors in France a policy of developing agreements that associate employees with the global performance of the scope they belong to, on the basis on criteria specifically adapted to the activity concerned. At the end of 2025, more than 98% of employees in French entities were covered by a profit-sharing and/or incentive agreement.

In 2025, the amounts recorded, in gross value, for profit-sharing and incentive schemes for the year 2024, within all French entities including Veolia Environnement, amounted to 95.6 million euros. The amount invested in 2025 by employees of French entities for profit-sharing and incentive schemes for the year 2024 amounts in gross value to 54.5 million euros, which represents 57% of the sums distributed.

To this amount is added an employer matching contribution (excluding employee share ownership plan) provided by the Group's French entities, which amounts in net value to 3.43 million euros.

Performance share plan

In 2025, Veolia deployed a performance share plan aimed at 542 beneficiaries, including Group Executive Resources, high potential staff and key contributors, including corporate officers. It is subject to the following conditions:

- A presence condition: beneficiaries must remain with the Group until the end of the three-year vesting period;
- A performance condition tied to the attainment of the following internal and external criteria:
 - an economic criterion,
 - a stock market criterion,
 - criteria relating to the Company's Purpose.

- a comprehensive employee benefits program launched in 2022, fully deployed in all regions as of September 1, 2023;
- which seeks to improve the safety and well-being of employees;
- It makes the company more attractive and is a source of pride for employees and future employees.

The Veolia Cares program is based on five pillars:

- Parental leave: base salary maintained over ten weeks for the first parent, and over one week for the second parent. This measure can also be used in the event of adoption;
- Health cover: guaranteed access to medical care for all employees, whatever the local organizational methods (legal life insurance and corporate schemes);
- A life insurance plan: capital equivalent to at least six months of salary is paid to beneficiaries, whatever the cause of death;
- Support for our employee carers: all employees carers are given the necessary flexibility in the organization of working time;
- Association volunteering: possibility for any employee who wishes, to dedicate one paid day per year to a charitable association or an organization focused on environmental protection, in line with the values upheld by the Group.

Veolia Cares applies to all Group employees, without gender discrimination, and whatever their status from the first day of recruitment.

This program seeks to improve the safety and well-being of employees.

The impact of the implementation of Veolia Cares was measured over the first two years of deployment, i.e. over the period between September 1, 2023 and August 31, 2025 in the form of a questionnaire completed by all BUs. The main results were as follows:

- Of 3,457 employees who went on maternity (or first parent) leave, 601, or 17%, saw an improvement in the benefit guaranteed by Veolia (ten weeks on the full base salary);
- Of 8,142 employees who went on paternity (or second parent) leave, 1,984, or 24%, saw an improvement in the benefit guaranteed by Veolia (one week on full base salary);
- Of the 628 deaths recorded over the same period, 227, or 36%, received better compensation than previously, in line with Veolia's commitment to provide beneficiaries with six months' base salary;
- Lastly, more than 11,400 employees signed up for the solidarity day.

4.1.3.1.4.4.2 Additional social protection measures

In addition to these five Veolia Cares program pillars, and specifically for France, new measures have also been implemented between 2024 and 2025:

- The extension of death coverage in the event of an occupational accident as of January 1, 2024. Previously, this coverage was only offered to executives, via Veolia's insurance captive. Non-executives now also benefit from this coverage with the payment of 2.5 years of wages to the beneficiaries;
- A return-to-work assistance program, for eligible employees who wish to participate, provided by a dedicated service provider. With this program, employees who have been on long-term sick leave are supported to help them return to work smoothly, minimizing the risk of relapse and social isolation. Since January 1, 2025, this program covers all Veolia employees in France, except for the Water UES and the UES of Société des Eaux de Marseille;
- A new program for conducting medical check-ups for employees over the age of 55 at operational sites has been launched. The first area is the Auvergne Rhône-Alpes region, where over 200 check-ups have been carried out across more than 20 sites. These health assessments have enabled, for some employees—sometimes located in medical deserts—to identify conditions that need to be monitored more closely in the coming weeks;

- A second prevention program concerning cardiovascular risks was also launched in 2025. It targeted employees over 40, and on a voluntary basis, 1,236 employees took the test. Among them, 14% were identified as being at risk and were invited to consult cardiologists for further examinations.

The objective was to implement measures, also in France, to strengthen our common social protection base, in line with Veolia Cares.

Work-life balance

	2024	2025
Percentage of employees entitled to family-related leave	100 %	100 %
Percentage of employees covered who took family-related leave	4.7 %	5.1 %

4.1.3.1.4.5 Attract talent

Recruitment campaign

Faced with a continuously tight job market, the Group is continuing its efforts to retain its employees by offering them career support and professional development opportunities.

At the same time, the Group initiated a process to optimize its employer brand: creation of a recruitment campaign launched in 2023, optimization and enhancement of career pages, improved applicant experience, support for recruiters to help them hire and attract talent.

In December 2024, new internal and external job portals were launched to improve their attractiveness and performance.

Thus, for all entities using the recruitment tool recommended by the Group, SmartRecruiters, candidates will be able to benefit from a rich content offering, improved design, and better accessibility in the mobile version.

These two portals have been modified to improve accessibility to offers for everyone as well as for people with disabilities, to improve the ergonomics of the search process and to improve the mobile version, performance and attractiveness.

The new portals now offer optimized, more efficient search features, customized job offer suggestions, a location map to calculate work-home travel times and more content to better understand the Group.

At the same time, for Veolia employees, the in-house job offer portal provides all the tools for successful internal mobility: Talent App, JobLink, mobility policy, descriptive access to generic jobs, international mobility policy etc.

Relations with schools at Group level

A proactive approach reaches out to the public and local employment and training partners to raise awareness of environmental activities and services. It facilitates the recruitment of candidates for local jobs, including people without prior qualification.

Mobilizing and attracting the resources required by the company is a key priority: Veolia affirms its presence through events focused on environmental businesses, job and work-study fairs, and forums in schools and universities. The partnerships established with schools and universities also contribute to Veolia's reputation and its professions among students from fields of study that are strategic for the Group. Programs such as the Ecological Transformation Trophies or the Student Solidarity Prize are special opportunities that allow international students to discover Veolia's professions and to put their academic backgrounds into perspective in relation to the Group's challenges. These initiatives are intended to strengthen Veolia's visibility among recent graduates, enhance its attractiveness by positioning it as a responsible, innovative, and meaningful company.

The Pangeo program

The program offers young talent under the age of 29 international experience for 12 to 24 months. It enables Veolia to create a multicultural pool of employees trained in its business lines. The program relies in large part on the International Business Volunteers (VIE) contract.

Throughout their assignment, the young professionals are supported by a dedicated team within the Talent Acquisition department: regular check-ins, the Pangeo Live program combining quarterly webinars and training sessions, meetings with Group experts... the Pangeo team supports them throughout the duration of their assignment, from recruitment to potential final hiring.

Since January 2025, over 100 young professionals - 45% of whom are women - have completed their assignment within the Group, either in operations (55%) or in support functions (45%). Of the 28 who completed their assignment during this period, 60% were permanently recruited within the Group.

First edition of RISE, the Group Graduate Program

The first cohort of Veolia's Graduate Program, RISE, was officially launched in January 2024. The seven young engineers (including 5 women) of this first edition joined the Group for a 24-month program designed to accelerate the development of their skills.

Hired on permanent contracts, they began their first year with two months at the headquarters of their original entity, before a ten-month assignment at an operational site in their BU. Since January 2025, they have been discovering about the Group thanks to a 3-month innovation assignment, followed by a six-month international assignment at an operational site, before returning to their original entity where they will take up their permanent positions at the end of the year, upon completion of the program.

At the same time as their field experiences, the graduates complete an ad hoc training program, combining Group talent e-learning and programs (VIP and Disrupt). The purpose of this program is to train young high-potential engineers and retain operational managers who are expected to advance quickly within Veolia.

Work-study contracts

Work-study contracts are a key recruiting tool for helping young workers into stable employment, particularly in France, Colombia, Germany, and the UK. Work-study encourages the transfer of knowledge and key skills thanks to intergenerational exchanges between the tutor and their

trainee, and develops corporate culture through professional promotion. By placing Group employees in a tutor role, it reinforces the feeling of belonging to the Group, while making the value of expertise more tangible.

The work-study policy is specifically implemented within regions and contracts through a significant number of partnerships with local employment and training players. To this end, Veolia is one of the partner companies in the FIPA network (Innovation Foundation for Apprenticeships) with which it has developed several innovative and inclusive programs.

- the Ingénieuses project enabling young women aged 17-29 to complete technical work-study training and be qualified for acceptance to an engineering school;
- the Altern'Up project, which aims to showcase the entrepreneurial mindset of work-study students who wish to develop a business creation project.

A Talent Acquisition department at the Group level, serving the BUs

As part of its talent acquisition strategy, the Group HR department has set up a Talent Acquisition team within Talents and Executive development department.

The objective: to improve the recruiter and candidate experience, in particular through the optimization of existing tools and processes, as well as by promoting inter-BU dialogue (copy & adapt), and by identifying actions/tools to be developed and made available to Veolia recruiters.

Since 2025, the Talent Acquisition team has been leading an internal Veolia network, composed of 130 HR managers who are Talent Acquisition experts. The objective: to develop a common culture around recruitment-related topics, themes such as onboarding, HR tools or trends, and employer brand strategy, to share best practices within the Group, and to create a dynamic of peer exchanges across BUs.

In this spirit of sharing, a dedicated portal on the Group HR Department's intranet is under construction, with the ambition of making it the reference resource for recruiters and HR managers regarding Talent Acquisition topics in general and recruitment in particular: centralization of tools and guidelines, reminder of Group processes, news from the Group's Talent Acquisition network, etc.

4.1.3.1.5. Ensure respect for diversity and inclusion

A proactive approach to protect employees from discrimination

Failure to respect diversity would have a direct impact, leading to disengagement and damage to the employer brand. This fully justifies the materiality of the corresponding IRO, summarized below:

Positive impact	Negative impact X	Financial opportunity	Financial risk
S1-ST-7 Potential exposure of employees to discrimination, harassment or prejudice in the workplace, requiring the implementation of listening mechanisms and whistleblowing systems			

Veolia views diversity and inclusion as a priority, as it ensures internal cooperation, commitment and employee loyalty. The diversity and inclusion action plan is based on four priorities: diversity; gender diversity in regions where this issue can be raised; disability; social and cultural diversity.

Each year, the Group measures the progress of its diversity actions through a diversity index measured in the Voice of Resources engagement survey.

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia: the stakeholders involved are Group employees.
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its social performance.

A diversity and inclusion policy that supports the GreenUp strategy

Diversity and inclusion are an integral part of Veolia's Purpose and its GreenUp 2024-2027 strategic program. The increase in the number of women on the Executive Committee is one of Veolia's multifaceted performance metrics under its GreenUp 2024-2027 strategic program.

The commitment to ensuring equal opportunities is based on the Group's values of respect and solidarity, which require that employees be treated without discrimination, with respect and fairness. This means that they feel both recognized in their uniqueness, valued and respected for who they are. It is under this condition that everyone can act fully within the work collective and better contribute to the Group's ambition to become the champion of ecological transformation.

Thus, the Group renews its commitment to being an increasingly inclusive company, guaranteeing non-discrimination, equal opportunities and individual social advancement for all.

The Group's commitments to equal opportunities are based on three fundamental pillars:

- Guarantee fair and non-discriminatory HR and managerial practices, from integration until the end of careers, for all employee categories;
- Guarantee non-discriminatory access to employment in Veolia based exclusively on skills;
- Guarantee the advancement of social dialogue and employee freedom of speech.

In this context, the Group wishes all its entities to pay particular attention to issues of equal opportunities, respect and fairness (regardless of age, origin, disability, gender, sexual orientation, religion, etc.), particularly in the following 4 areas:

- Recruitment: ensure neutral and objective recruitment processes/ diversify sourcing channels/ train recruiters on unconscious bias/ ensure plurality of applications;
- Compensation and careers: ensure equal pay for equivalent positions/ guarantee equitable access to promotions and career opportunities;
- Training and development: guarantee equal access to training/ promote internal mobility for all;
- Work environment: facilitate work-life balance/ adapt positions for people with disabilities/ combat all forms of harassment or discrimination/ Foster a work environment where each employee feels valued, heard and respected.

The diversity of profiles and experiences of the Group's employees and the recognition of all talents and skills are a major asset in meeting the challenges of ecological transformation. Veolia is committed to a corporate culture that leaves no one behind and relies on HR and managerial processes that match the Group's ambition.

In accordance with applicable local laws and regulations, Veolia will not permit or support any type of discrimination based on age, medical condition, sex, gender identity, sexual orientation, pregnancy, disability, ethnic origin, religion, political opinions, philosophical opinions, family status, morals, family name, trade union activities, place of residence, vulnerability resulting from one's economic situation, migrant status, belonging or not belonging, in reality or presumed, to an ethnic group, a nation or so-called race. This list of examples of discrimination was drawn up for the sake of clarity and is not exhaustive.

A diversity and inclusion policy led by the HR department

The Diversity and Inclusion Policy is led by the Group's Human Resources Director and a member of the ExCom. It is deployed by the Group's Diversity, Inclusion and Engagement department, which relies on a global network of local diversity and inclusion coordinators. At the end of 2025, the Group had nearly sixty correspondents and forty local diversity and inclusion networks in the geographical areas where Veolia operates.

Their missions are to:

- implement commitments with regards to local issues;
- establish diagnoses and action plans adapted to contexts;
- measure results;
- promote innovative actions which support Veolia values.

The Group's Diversity and Inclusion department holds working meetings with the Group's Diversity and Inclusion (D&I) coordinators where they share best practices on a bi-weekly basis. In 2025, the D&I department held eight meetings with the network of correspondents, including one specifically on the results of the D&I index of the Voice of Resources internal survey. An international seminar was also organized in 2025, bringing together around thirty D&I managers.

To measure the impact of its diversity and inclusion actions, Veolia monitors several metrics:

- Professional equality: the employment rate for women, the percentage of women managers, the percentage of women in management recruitment, the percentage of women departures, the percentage of women Executive Resources, and the percentage of women on Group company Boards of Directors, including the Veolia Environnement parent company's Board;
- Disability: the employment rate for employees with disabilities;
- The employment rate for employees over the age of 55;
- The employment rate for employees under the age of 30;
- Training rate by age and gender.

An annual Diversity and Inclusion index produced in the framework of the Group engagement survey is used to measure employee perception of this topic. In 2025, the index rose to 79 points out of 100.

Ongoing partnerships

The Group is a partner and/or a member of various organizations that promote diversity and equal opportunities, notably the UN Global Compact and the International Labor Organization. In France, in 2025 Veolia has also partnered with several associations such as the French Association of Diversity Managers (AFMD), the À Compétences égales association and ANVIE.

Concrete actions to develop diversity and inclusion

Signing of an unprecedented D&I Agreement at European level

In March 2025, a European D&I agreement was signed at the European Works Council level. A special negotiating body composed of employee representatives from the Group's European countries and the European trade union EPSU participated in these negotiations (section 4.1.3.1.6.2 infra).

A D&I roadmap, foundation of the global policy

The Group's D&I roadmap is structured around a cross-cutting approach and four priority areas:

- Diversity;
- LGBT+ people (in regions where there is no anti-LGBT+ legislation);
- Disability;
- Social and cultural diversity.

Veolia's Diversity and Inclusion roadmap was set up to promote a culture of inclusion that guarantees each employee is treated without discrimination, recognized as an individual and is a full member of the company's collective system.

Work to identify D&I practices in the Group began in 2024. Its structure is based on the D&I roadmap (the four priority areas and the cross-functional approach), making it possible to bring the actions carried out by the Group's entities and countries into line with the Group's overall D&I policy. This digital and interactive notebook currently lists some 40 actions and aims to strengthen the Group's "Copy and Adapt" culture so that each entity can draw inspiration from existing actions. This booklet will notably serve as a support for the exchange of best practices included in the European D&I Agreement.

The actions presented below, implemented as part of the Group's "diversity and inclusion" roadmap, aim for the long-term objective of developing and consolidating the Group's inclusive culture, which is based in particular on respect for people in their uniqueness. Respect is one of the Group's five values, translated into expected behaviors in the "management behaviors@veolia" guide.

The actions are sustainable and scalable over time and can be adjusted according to social, societal and/or regulatory developments in geographical areas.

The diversity index of the annual Voice of Resources survey makes it possible to evaluate the impact of the actions implemented, and their evolution, both at the Group level and at the local level.

Diversity and inclusion training and awareness-raising

Since 2023, a comprehensive range of online training modules (LinkedIn Learning) has been made available to employees who have access to the Group's Learning@Veolia platform. This offer is part of the Diversity and Inclusion Academy of the Group's Learning program. Registered employees can therefore access around twenty online training courses covering gender diversity, disability, inclusive management, unconscious biases, cultural and social diversity and LGBT+ issues (in geographies where the subject is not criminalized). At the end of 2025,

Regarding the "No to Sexism and Sexual Harassment" training, designed in-house (which is not a LinkedIn Learning course), 35,000 employees have completed the e-learning.

In 2025, 1,789 employees enrolled in the "Disability: Together, Let's Build an Inclusive Environment" training.

In addition, an in-person workshop on unconscious bias (in French, English, and Spanish) is available to entities to help raise employee awareness about stereotypes and prejudices. Since its launch in 2022, more than 1,600 employees have participated in this specific workshop.

The Stereogame was developed by the Group's Diversity and Inclusion department to raise employee awareness about stereotypes and microaggressions. The game is available in French, English, and Spanish, in both digital and paper versions. Its content complements the workshop on unconscious bias and stereotypes and can serve as a foundation for facilitating this workshop.

The Group's Diversity and Inclusion department organized a conference on microaggressions in the workplace on the occasion of International Day for Cultural Diversity on May 21st. This conference aimed to raise awareness among employees about the impact of certain remarks or attitudes, even unintentional ones, and their connection to discrimination situations. Best practices were presented based on real-life business situations.

The fight against sexism, sexual harassment and violence

An international mechanism to combat sexism and sexual harassment, led by the Group's Executive Management, was set up within the Group in 2024. This system, which references International Labour Organization (ILO) Convention No. 190, includes four HR tools and an internal communication campaign:

- E-learning available in 18 languages;
- A whistleblowing procedure for victims/witnesses and managers, translated into 18 languages and integrated into e-learning;
- A digital brochure integrated into e-learning;
- A set of cards in English, French and Spanish accompanied by a presentation pack in French and English. More than 1,000 games in French, English and Spanish were distributed to the countries and entities.

The e-learning module was made mandatory in July 2024 for the Group's 600 leaders. Since September 2024, this e-learning module has been rolled out to employees with access to Veolia's e-learning platform, representing 131,000 employees. By the end of 2025, 35,000 of them had completed it. The communication campaign was rolled out in around 40 Group countries and entities. The brochure and the whistleblowing procedure can also be distributed in printed formats and the posters help reach employees who do not have access to a digital tool. Thus, this action is part of the policy to combat sexism and harassment.

Veolia is also taking action against sexism through its commitment since 2023 to the StOpE Sexisme initiative, which aims to promote and share best practices within a collective of companies to combat everyday sexism in the workplace. This commitment is part of Veolia's membership in AFMD (French Association of Diversity Managers).

In 2025, Veolia participated in best practice sharing meetings organized by the initiative, with one of the meetings being hosted at Veolia in 2025, and fully achieved the objectives required by the membership, which is to launch at least one specific action during the year against sexism and sexual harassment. The rollout of the "No to Sexism and Sexual Harassment" campaign perfectly met this requirement.

On November 25, 2025, on the occasion of the International Day for the Elimination of Violence against Women, the Group's Diversity and Inclusion department organized a conference led by Margaux Collet, an expert on gender equality issues and the prevention of sexist and sexual violence in the workplace. This conference highlighted the crucial role that companies can play in supporting employees who are victims of domestic and family violence. Violence experienced in the private sphere has direct repercussions on victims' professional lives (tardiness, absences, loss of concentration) and can even spill over into the workplace. The objective was to raise participants' awareness of this reality, which is still poorly understood and rarely addressed in companies, and to provide them with tools to better support those affected.

On this occasion, Veolia also joined the One In Three Women network by signing its commitment charter against domestic violence. This European network, co-founded in 2018 by the FACE Foundation and the Kering Foundation, now has 68 signatories representing 225 organizations. By signing this charter, Veolia commits to raising awareness among its employees, implementing HR tools to support victims, and facilitating their access to specialized associations. A pilot action plan is currently being developed for the headquarters scope (VESA and other headquarters entities).

Actions promoting LGBT+ employees

- In accordance with its CSR commitments, its human rights policy and its adherence to the Global Compact, Veolia supports the United Nations standards of conduct for business regarding the fight against discrimination against the lesbian, gay, bisexual, transgender and intersex community. These five standards were developed by the United Nations High Commissioner for Human Rights.
- Train, inform, guarantee inclusive HR and managerial processes and showcase Veolia's commitment are lines of actions to promote LGBT+ employees.
- In 2024, the Group formalized its LGBT+ policy, which is one of the four priority areas of the Group's D&I policy. The policy will be presented and disseminated on May 15th, 2025 to the Group's international network of diversity and inclusion correspondents except in regions where there are anti-LGBT laws. This policy provides access to a dozen best practice sheets that raise employee awareness of LGBT-phobias and the discrimination that those affected may face, and support HR and managers in supporting LGBT+ employees on issues such as same-sex parenting and gender transition. This kit was created by the French Agency for Diversity Managers (AFMD), of which Veolia is a partner member.
- In June 2025, a conference - featuring the testimony of a former Veolia employee - was offered to Group employees in English, French and Spanish to try to better understand the reality of LGBT+ people. Approximately 200 people participated in this online conference.

Gender equality

To attract talented people and ensure women are present at all levels of the Group and in all its businesses, the Group has implemented an action plan focusing on professional equality in the workplace so as to:

- develop gender equality in its jobs and operations;
- increase the number of women in the Group's executive bodies and management;
- promote gender equality in employee representative bodies.

The Group's actions to develop diversity in management focused on the following points:

- Recruitment: inclusive recruitment process and youth talent policy, creation of a pool of women executives;
- Identification: executive succession plan including at least one woman for each executive (Executive Resources), an annual target of 50% of women in high-potential people reviews, additional people reviews for women with a grade below Executive Resources;
- Development: development of mentoring by Executive Resources for high-potential women executives, target achieved of 50% women in the Talents and Executive programs;
- Coordination of the international diversity network called WEDO: numerous initiatives promoting professional equality in the workplace have been rolled out in the various countries where the Group operates with the support of the WEDO network. WEDO is Veolia's internal diversity network launched in 2016, bringing together Veolia's men and women who are seeking to promote diversity within the Group. At the end of 2025, this network had, in the Google Space community, nearly 3,500 employees from around 50 countries:
 - among the actions undertaken by the network, WEDO renewed the Yes WEDO Week from March 4 to 8, 2025. This week, dedicated to internal and external awareness-raising actions, was again very successful: over 50 entities participated across five continents, mobilizing nearly 30,000 employees around more than 200 actions: talks with young female pupils in schools, visits by female middle and high school students to Veolia sites to learn about Veolia's businesses, conferences and webinars with employees on gender equality issues, etc,
 - a challenge on the best gender diversity initiatives in the Group was organized, and 2 winning initiatives—one related to supporting women top managers and the other related to training women technicians—won the challenge,
 - at Group level, a roundtable conference "Women/Men: when gender diversity benefits everyone!" was offered on March 6, 2025 (ahead of March 8) to employees (in French, English and Spanish). More than 800 employees attended the roundtable conference,
 - march 6, 2025 (ahead of March 8) was also an opportunity to renew Tech My Job as part of the WEDO for Tech program, set up for Veolia women engineers, technicians or IT specialists to welcome female students for a day to learn about their profession and spend valuable time with a professional. The aim is to inform young girls about technical professions and make them want to enter these sectors where women are under-represented. At the headquarters, 12 young girls were welcomed by Veolia female employees; Tech My Job was also set up in various countries and entities;
- The WIL program, initially "Women In Leadership," renamed Worldwide Inspiring Leaders: originally exclusively for women, this program now welcomes male participants, with 5 in the 2025 international session, while aiming for gender parity in 2026. This seven-month coaching program, which aims to create development opportunities for managers in the organization, welcomed 75 participants in 2025. The program alternates between group and individual sessions, both in-person and remote. Digital coaching and remote workshops ensure flexibility and impact while maximizing interaction by organizing regular meetings between participants and their managers, who also benefit from the program. WIL's success is measured by its high satisfaction rate. In 2025, the program achieved a Net Promoter Score of 94 from participants;
- The gender equality index that companies with more than 50 employees in France are required to publish shows that the results of Veolia entities in France, published in March 2025, are predominantly above 75 points out of 100 (legal minimum), with an overall index of 88 points out of 100. This result is the outcome of Veolia's efforts over many years to create conditions of attractiveness and development

that enable women to progress at the same level of compensation and career advancement as men.

Employment and social integration of people with disabilities

As part of its policy of inclusion and diversity, Veolia is committed to transforming the perception of disability, changing societal representations and promoting the professional integration of people with disabilities. The Group aims to create an inclusive working environment where every employee, regardless of his or her abilities, can flourish and contribute fully to the success of the undertaking.

■ **Strengthening international commitment**

Veolia is pursuing its engagement with the International Labour Organization's (ILO) "Business and Disability" Network which represents strategic support for its inclusion initiatives. In 2025, the Group attended one of the conferences offered by the ILO, entitled "Business opportunities in communicating and reporting on disability inclusion", co-organized by the ILO Global Business and Disability Network (GBDN), in order to strengthen its practices in communicating and reporting on the inclusion of people with disabilities.

Through this network, Veolia benefits from contacts with experts who can speak at conferences or contribute to awareness-raising tools developed internally, thereby strengthening the quality and impact of its inclusion initiatives, particularly during strategic times of the year such as December (International Day of Persons with Disabilities).

■ **Conferences and awareness-raising**

In 2025, Veolia continues to focus on awareness-raising and dialogue around disability and inclusion.

A global conference takes place for the International Day of Persons with Disabilities (December 3)... These conferences are appreciated by employees, who can deepen their knowledge on specific topics and draw inspiration from the Group's best practices.

On the occasion of the European Week for the Employment of People with Disabilities (SEEPH), several Business Units organize local webinars and workshops, enabling concrete awareness-raising and direct dialogue on disability-related issues. In this context, some employees participate in initiatives such as DuoDay, where they welcome a person with a disability to introduce them to a typical day, share their experience and present their position. The Inspirational Online Sessions initiative virtually connects employees with influencers and athletes with disabilities. These sessions offer inspiring testimonials of success and resilience, highlighting the unique perspectives and experiences of people with disabilities. Conferences and virtual sessions represent powerful platforms to showcase the achievements of people with disabilities and encourage a culture of inclusion throughout the Group.

■ **Health and inclusion campaigns - partnerships**

In 2025, Veolia continues its awareness-raising initiatives on inclusion and health. During Breast Cancer Awareness Month in October, the Group provides Business Units with digital tools (awareness flyers) that they distribute locally to raise awareness among their employees.

Following the awareness-raising initiatives on dyslexia within the Group, Veolia is participating in a clinical study aimed at advancing research and improving the daily lives of people with dyslexia, led by Lili For Life. The study uses innovative technological solutions (lamp and computer screen) to better understand the visual mechanisms involved and measure their clinical effects.

Furthermore, Veolia is committed to the professional integration of young people with disabilities through a strategic partnership with Tremplin Handicap, providing comprehensive support, from academic assistance to internships, apprenticeships and first professional experiences, in order to guarantee equitable access to career opportunities.

Social and cultural inclusion and equal opportunities

Various programs have been implemented at Group level to promote social and cultural diversity:

- The "My Green City" (Ma Ville en Vert) program, a day of discovery of ecological transformation professions for students aged 13 to 18 from disadvantaged backgrounds. This program aims to make them aware that they have a role to play in ecological transformation and that there are different professions at Veolia to achieve this. Welcomed at Veolia by volunteer employees who accompany them throughout the day, students discover Veolia's professions and are then asked to imagine their 'green city' based on the knowledge they have acquired about Veolia. At the end of the day, they present their project to an internal jury of employees. In France, the most motivated students are offered an internship at Veolia. In 2025, the program was renewed by the Seureca teams (around twenty students) as well as by the teams in South Africa and Colombia. Since the program's launch in 2022, the number of students who have participated stands at 1,600 young people;
- The "Journey in ecological transformation" (Voyage au cœur de la transformation écologique) program set up at headquarters in partnership with the company 19M (Maisons Chanel) for eco-delegates from the French department 93 aims to raise young people's awareness of ecological transformation by presenting climate solutions and having them participate in a 'hands in the soil' workshop to explore seedlings and soil. Nearly 60 students benefited from this program in 2025;
- The "Tech my Job" program aims to raise awareness among high school girls (from schools near Veolia) about technical careers (engineering, IT, etc.) and to inspire them to pursue these fields. Each high school girl is hosted for a day by a female engineer, technician, or employee working in IT. Tech my Job! is based on a role model principle, which is known to help young girls identify with women in technical positions. The program was renewed in 2025 with the participation of 13 high school girls at Veolia headquarters. Since 2023, the number of students participating in the program stands at 360 young girls across different geographies, notably South Africa, Morocco, and Colombia;
- The "Immersion" program at headquarters welcomed 35 young people (from the Plaine Commune area) for a morning at Veolia. The program, organized in partnership with the association Les Pilotes, helped these young people in their search for internships and work-study contracts. This event was organized at the initiative of the Group's Chief Executive Officer.

In total, approximately 200 young people were welcomed as part of all these programs at the headquarters level. All these programs are part of the Group's social and societal approach, particularly in terms of diversity, inclusion, and action for equal opportunities.

Action to combat racism

The Group's Diversity and Inclusion department organized a conference on racism in the workplace on the occasion of the International Day for the Elimination of Racial Discrimination on March 21. This initiative is part of the Group's commitment to respect, equity, and non-discrimination. The presentation by an expert on this issue helped raise employee awareness and share best practices for preventing and responding to racist behaviour in the workplace. 300 employees participated in this international conference.

Recruit without discrimination

In France, the issue of non-discriminatory recruitment is supported through Veolia's partnership with the association À compétence égale, renewed for 2025. This partnership enables Veolia recruiters to benefit from best practices from other companies, legal advice, and even participate in workshops on this topic. The online guide "Recruter sans discriminer" (Recruiting without discrimination) published on the intranet is available to anyone involved in recruitment.

Supporting the most vulnerable employees

To support the most vulnerable employees, the Group in France has deployed an active outreach plan in consultation with labor and management representatives. Alongside this, an employee listening and support system has been established under the name Allô Solidarité to offer assistance during difficult periods. Today, employees in France have access to a telephone platform that allows them to discuss their social challenges with professionals. The partnership with the Vivons solidaires association, since September 2010, helps to tackle social emergencies. The association receives many requests for assistance with emergency housing, food donations, and children's aid.

Diversity and Inclusion clause in contracts with temporary employment agencies in France

As part of the renewal of its framework contracts with temp agencies in France, the Procurement Department and the D&I Department incorporated a diversity and inclusion clause in 2024. This initiative aims to integrate concrete and measurable targets for:

- non-discriminatory recruitment;
- promotion of diversity;
- increasing the employment of people with disabilities (target of 6%);
- social and cultural diversity.

The quantified targets are adapted to each temp agency depending on the starting point established in 2024 on the basis of the data provided to the procurement department by each agency.

This initiative provides training for temporary employment agency recruiters and regular monitoring as well as the development of a specific commitment charter for people with disabilities.

Diversity & Inclusion quantitative targets and outcomes

Diversity within the Group

As part of its GreenUp 2024-2027 strategic program, Veolia renewed its commitment in favor of its employees and adopted the following objective and target:

	Commitment	Objective	SDG	Metric – definition	2023 baseline	2024 Results	2025 Results	2027 target
	Give meaning to our employees work and help them with career development and commitment	Diversity and inclusion		• Proportion of women in the Group Executive Committee	25.6 %	32.4 %	37.1 %	≥ 30%
	Sponsor	Helman le Pas de Sécheval		Member of the Executive Committee, Group General Counsel				

To promote diversity and professional equality, Veolia has set new quantitative targets as part of the GreenUp 2024-2027 strategic program:

- 30% of women among the Group's senior executives (Executive Resources) in 2026 and 40% by 2029.

In addition, the GreenUp HR roadmap has set additional objectives:

- Annual external recruitment rate of women managers on permanent contracts: 40%;
- Rate of women managers by the end of 2027: 35%.

Proportion of women in the workforce at the end of 2025

Metrics	2024	2025
Number of male Executive Resourcers	368	322
Number of female Executive Resourcers	163	159
Percentage of Executive Resourcers who are women	30.7 %	33.1 %
Percentage of Executive Resourcers who are men	69.3 %	66.9 %
Proportion of women on the Executive Committee	32.4 %	37.1 %

Executive Resourcers correspond to top management. In Veolia, this encompasses executive employees with a job position graded 16 and above according to the Willis Towers Watson Global Grading System.

Employment and social integration of people with disabilities

Percentage of employees with disabilities

	2024	2025
Rate of employees with disabilities (Worldwide) ⁽ⁱ⁾	2.10 %	2,2%

(i) Number of employees with declared disabilities compared to the total workforce as of 12/31 in countries where it is possible to declare disability (excluding subcontractors and the sheltered sector).

The percentage of Veolia employees worldwide with disabilities is 2.2% in 2025 (compared to 2.1% at the end of 2024), representing 4,489 employees (compared to 4,303 employees in 2024).

4.1.3.1.6 Ensure social cohesion

4.1.3.1.6.1 Engaged employees

Because the cultural dimension is a factor in attracting and retaining employees, the Group has adopted transparent and inclusive communication around its values, Purpose and strategy.

To address the risk of disengagement among Group employees, including staff representatives, with a potentially unfavorable social climate, the Group invited them to participate in building the strategy by gathering their opinions and ideas via the Inspire 24-27 questionnaire. Since its implementation, the Group continues to share its strategy by offering various training courses, such as the GreenUp e-learning course, a 2027 strategic program, which includes a section dedicated to Veolia's Purpose.

In parallel, Veolia has set up Management Behaviors@Veolia, which is a cultural compass for all Group executives, to be rolled out to all employees: this guide translates Veolia's five values into 20 behaviors that must be adopted in employees' daily actions and decisions.

Finally, every year the Group ensures that it measures employee engagement via its Voice of Resourcers survey.

	Commitment	Objective	SDG	Metric – definition	2023 Baseline	2024 Results	2025 Results	2027 target
	Give meaning to our employees work and help them with career development and commitment	Employee commitment		• Employee commitment rate (Voice of Resources survey)	89 %	88 %	88 %	≥ 85%
	Sponsor	Laurent Obadia		Member of the Executive Committee, Senior Executive Vice President, Stakeholders and Communications; Advisor to the Chairman				

The IRO corresponding to the desire to create a corporate culture which is attractive, participatory and aligned with its values is set out below:

	Commitment	Objective	SDG	Metric – definition	2023 Baseline	2024 Results	2025 Results	2027 Target
	Support regional development through responsible means	Ethics and integrity		• Positive answers to the ethics and compliance question in the "Voice of Resourcers" survey	88 %	86 %	88 %	≥ 83%
	Sponsor	Eric Haza		Member of the Executive Committee, Chief Legal Officer				

Positive impact	Negative impact	Financial opportunity	Financial risk
S1-ST-4 Strengthening employees' engagement and attracting new talents by sharing our purpose, values and strategy with them			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia: the stakeholders involved are Group employees.
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its social performance.

In line with its Purpose, the GreenUp 2024-2027 strategic program and its human resources policy, led by the Group's Human Resources Director, Veolia is committed to giving meaning to our employees' work and helping them with career development and commitment, with the objective of maintaining the employee engagement score at more than 85% by 2027. The engagement index and the positive response rate to the ethics and compliance question are therefore included in Veolia's

multifaceted performance indicators. The Voice of Resourcers 2025 engagement survey was conducted over three weeks in November on a panel of around 160,000 employees based on a fully online questionnaire

available in 31 languages and adapted to a wide audience which breaks down as follows:

- All Group managers in 65 countries;
- All employees in 37 Business Units/entities: Germany, Argentina, South Africa, Australia/New Zealand, BeLux, Brazil, Canada, China, Ecuador, Water France, Enova, United States, Spain, Hong Kong, Hungary, Italy, Ireland, Macao, Morocco, Middle East, Nordic countries, Netherlands, Poland, Portugal, Czech Republic, Recycling and Waste Recovery, Romania, United Kingdom, VESA, Water Technologies, Sanitation & Maintenance France, Hazardous Waste Europe, Veolia Engineering & Consulting, Slovakia, Veolia Energy and Decarbonization, Veolia Energy Performance.

This panel represents 75% of the Group's workforce.

This engagement index corresponds to the simple average of the positive responses to the 5 questions that make it up and which relate to the clarity of the work objectives, the usefulness of the contribution, the working atmosphere, the pride of belonging, and the desire to recommend Veolia to friends and family as a place to work.

Positive responses to the question on ethics and compliance in the Voice of Resources survey correspond to the simple sum of 'somewhat yes' and 'definitely yes' responses to the question 'In my country, Veolia behaves ethically and in compliance with the rules in its activities'. The index is expressed as a percentage of the total number of responses.

All responses and results are collected and processed by an external body (Ipsos) to ensure the confidentiality and impartiality of the information.

The 7th edition of Voice of Resources had a historical participation rate of 84% over an extended scope, demonstrating a desire for dialogue and exchange. More than 135,000 people responded to the questionnaire. This represents an additional 3 points vs 2024 and more than 6,000 additional employees.

The survey reflects the stability of metrics at very high levels compared to the sector benchmark, starting with the 88% engagement index. It was maintained at 91% for managers and 88% for non-managers. The overall index is 14 points above the sector benchmark.

This maintenance at a high level also concerns quality of life and working conditions at 74% positive responses, diversity and inclusion at 79%, and ethics and compliance at 88% (+2 points vs 2024) positive responses.

The perception of the Group's situation (75% of respondents feel that the situation of their entity has improved or remained stable) and confidence in meeting objectives (82%) remain just as good, with comments highlighting ongoing efforts in terms of digitization and modernization, as well as commitment to ecological transformation with an impact from GreenUp (especially in managerial lines).

Awareness of the purpose is progressing significantly to reach 88% (+ 20 points vs 2024) and 89% of employees feel they contribute to it through their work.

The strengths identified since 2019 were once again confirmed: collaboration, feeling of usefulness, pride in belonging, performance and customer focus, health and safety.

Managerial practices are appreciated: 82% of respondents consider that the quality of their work is recognized verbally by their manager and 75% of them feel appreciated and valued for their work, which reflects a well-established feedback culture. 84% of respondents feel that they have developed their skills during the year (14 points higher than the sector benchmark) and 72% feel that they can succeed and evolve at Veolia. The Veolia Cares program continues its deployment and is already known to 63% of respondents (+3 points vs 2024).

This survey is conducted annually, demonstrating Veolia's interest in the employee experience and ascertaining employee expectations in the field, their perception of the business and their professional situation.

The 2025 "Voice of Resources" edition delivered an updated view of the social climate, providing key metrics and trends for employee commitment and their understanding of the Company's vision, policies and culture.

The 2025 "Voice of Resources" helped:

- supplement HR performance indicators at different levels of the organization (Group, zone, country);
- support managers by providing tools updated for interaction with and feedback from teams;
- demonstrate, once again, the importance of HR innovation and dialogue with employees at Veolia. The overall results of this survey were presented to the Group's Executive Committee and the Veolia Environnement Board of Directors. The results per zone were sent to zone directors and human resources directors, which organize feedback with the surveyed employees.

4.1.3.1.6.2 Proactive social dialogue

Non-compliance with human and social rights has a direct impact, leading to labor disputes, disengagement and damage to the employer brand. Veolia considers social cohesion as an asset and a driver of performance. The Group aims for innovative and respectful social dialogue with its internal stakeholders, which allows it to provide collective solutions.

Since 2015, management has met annually with members of the Group French and European Works Councils to discuss the Group's strategic direction and its HR-related impacts. Since 2022, members of the Group French and European Works Councils have also attended workshops – based on a collective intelligence methodology – to reflect on risks and opportunities and/or recommendations on major topics related to the strategic program (impact on employment and skills, AI and generative AI and business use cases, vigilance plan, etc.).

In 2025, an Amendment to the Agreement on the procedures for exchanging views on strategic directions within the Group social dialogue bodies consolidated and enriched the existing framework, notably by strengthening the existing exchange of views procedure for any event or project that could have a significant strategic impact and by establishing within the joint committee other working and/or additional exchange procedures in the form of workshops or working groups on topics related to the Group's strategy.

In countries where freedom of association and the right to collective bargaining are not legally recognized, Veolia proposes alternative actions, in compliance with the laws of the country in question, for listening and exchanging with management, communicating with employees or leading working groups on specific issues with a view to creating charters or resolutions.

Promoting and valuing social dialogue on a global scale is essential to ensure social cohesion, and to ensure that employees feel involved and valued in the company's collective project. This contributes to the operational efficiency of the company in a constantly changing global context. The corresponding IRO is summarized below:

Positive impact X	Negative impact	Financial opportunity	Financial risk
S1-ST-8 Promotion and enhancement of social dialogue worldwide to foster ownership of the collective project			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia: the stakeholders involved are Group employees and their representatives.
Business model	The policy and action plans resulting from this IRO mainly benefit Veolia's human resources performance, as well as its social performance.

Veolia is particularly vigilant regarding social dialogue, as it contributes to greater workforce cohesion, the implementation of human resources policies, and the Group's economic and human resources performance.

As part of its Purpose, Veolia encourages social dialogue, particularly within employee representative bodies, which help employees to adopt the collective project.

This takes place at the highest level of the organization, with the two Directors representing employees appointed by the Group French and European Works Councils, respectively, and a non-voting member, who sit on the Board of Directors.

It forms an integral part of the Group's Purpose: "Veolia also promotes, particularly on staff representative bodies, social dialogue, which encourages employees to adopt our collective project as their own."

Veolia reiterated its commitments, objectives and vision in its social dialogue policy published in 2023. The commitments have been incorporated into the "Essentials", an internal document that sets out the rules, processes and policies that apply to all managers within the Group.

Veolia has prepared a certain number of metrics to assess and steer the policy and quality of its social dialogue to define its new objectives:

- Social dialogue coverage rate (countries legally recognizing the freedom of association and collective bargaining);
- List of countries not covered and action plan;
- Collective bargaining;
- Thematic analysis of the signed agreements;
- Monitoring of conflictuality rates;
- Analysis of feedback or conclusions of mediations organized during major controversies or conflicts;
- Analysis of Whispli alerts on social dialogue matters;
- Number of employee representatives in the Group and by country.

To advance the quality and development of social dialogue, Veolia ensures that there is effective dialogue with employees at all levels of the organization:

- at company or site level, a place for negotiations on many issues that impact employees' daily lives;
- at country level, which includes the formal structures for consultation and dialogue that handle all transversal national issues;
- at Group level in the corporate offices and with the Group French and European Works Councils.

In collective bargaining negotiations, Veolia draws on both direct relationships with trade union and employee representatives, as well as the joint organizations created according to the rules of each country.

Veolia gives the same amount of attention to its various levels of local and national bargaining and, in 2023, initiated a process to build transnational agreements with the European Federation of Public Service Unions (EPSU), which resulted in 2025 in Veolia signing an unprecedented agreement presented below on Diversity and Inclusion with the representative trade union organizations from 13 European countries of the Group (France, United Kingdom, Spain, Germany, Czech Republic, Belgium, Poland, Italy, Hungary, Romania, Slovakia, Bulgaria and the Netherlands).

Social dialogue is expressed in the employee representation bodies, through information and consultation processes or exchanges of views on key issues within local, country or Group bodies (Group French and European Works Councils). Executive Management systematically participates in Group bodies.

Role of the Group's Committees

Through an agreement, Veolia has implemented a Group French Works Council and a Group European Works Council. The Group European Works Council represents about two-thirds of Veolia employees. It is made up of 17 countries: Belgium, Bulgaria, Czech Republic, Denmark, France, Germany, Hungary, Ireland, Italy, Luxembourg, Netherlands, Poland, Portugal, Romania, Slovakia, Spain, United Kingdom.

The Group Works Councils are key players in Veolia's transformation. They receive information on the activity, the financial position and the employment situation. They must be informed or consulted in the event of restructuring, acquisition or disposal plans. They are also informed and

consulted each year to exchange ideas on the Group's strategic direction and its social impacts.

The agreements signed with trade union representatives at Group France level and agreements in the form of joint commitments and common resolutions made within the Group European Works Council or more recently, through the signing of a transnational framework agreement with EPSU, demonstrate the will of Executive Management to structure unique social dialogue with employee representatives and thus contribute to the Group's actions on behalf of all its employees.

Since 2015, management meets annually with members of the Group French and European Works Councils to discuss the Group's strategic direction and its human resource impacts. These annual discussions provide a shared understanding of the strategic and commercial challenges and their impacts on the workforce, employment and skills. The employee representatives of the joint office were consulted in the discussions that led to the development of the GreenUp 2024-2027 strategic program. The aim of this integration is to consider the priorities raised by the Councils when preparing the next strategic program, particularly regarding the main human resources issues in the context of ecological transformation.

The "+1" consultation process (see section 4.1.2, above) dedicated to employee representatives was set up to create a common dynamic to address ecological transformation and devise, with the help of stakeholders, solutions for the future.

The main recommendations of Group France and European Works Council members focused on the performance of an analysis of current competencies, the capitalization of competencies already present internally or even the development of internal and geographical mobilities, and on the transmission of know-how and investing in training in connection with the ecological transformation, the set-up of specific training assessment and monitoring metrics, encouraging and showcasing the sharing of know-how between peers (mentoring, joint development) and raising the awareness of managers about monitoring and upskilling their teams.

Members of the France and Europe joint office took part in an AI workshop to identify the risks (impact on employment, digital divide, loss of critical thinking) and opportunities (improved performance, time savings, decision support) in the context of Veolia. They emphasized the importance of training all employees in AI as close as possible to the realities on the ground. The priority use cases identified relate to health and safety prevention, operational improvement, and relations with internal and external customers.

It was also decided to involve employee representatives from the France and Europe joint committee earlier in the development of the vigilance plan. Thus, in 2025, members of the joint committee as well as employee representatives on the board of directors were invited to participate in a workshop on risk assessment as part of Veolia's vigilance plan. Four risk assessment themes were analyzed: discrimination risks, psychosocial risks, working conditions, and forced and illegal labor. The discussions also covered the level of control and actions to be completed on these topics within the framework of Group social dialogue. The participation of employee representatives from the joint committee provided a more comprehensive view of the issues related to Veolia's vigilance plan.

Employee representatives have also been involved in the Group's ecological transformation issues. In this context, employee representative bodies were informed from 2024 and throughout 2025 about European sustainability regulations within the France Group Committee, the Europe Group Committee, and the holding company's CSE, with an approach emphasizing Impacts, Risks and Opportunities. Following this information period, an information-consultation on the sustainability report within the framework of strategic orientations was conducted within the CSE of the UES Veolia Environnement (holding company). A favorable opinion was received in December 2025 on the 2024 report and the one being prepared for the year 2025.

Furthermore, members of the European Works Council (EWC) receive, at the beginning of each new term, training of at least two days on the operating procedures within the European Works Council and the role of its members, as well as on the implementation procedures for agreements or commitments and/or joint resolutions of the EWC through the Country Social Dialogue Forums (EDSP). In 2025, this training was offered to all full and alternate members of the EWC from 17 different European countries. This training aimed to bring participants up to speed on the fundamentals of the EWC, particularly on a good understanding of the mandate within the EWC and the relevant regulations. This training also aimed to enable EWC members to better understand - within the

framework of their implementation in the countries represented in the EWC - the commitments made at the EWC level, which can take the form of letters of commitment, joint resolutions or transnational agreements. This training session also aimed to open up perspectives on new EWC work themes, particularly on AI and GenAI, to which half a day of work was dedicated during this training session. Areas for reflection on risks and opportunities were identified. The need to widely deploy AI training and awareness programs at the local level, using methods adapted to the target population, was highlighted.

Veolia - Member of the United Nations Global Compact

Veolia has adhered to the United Nations Global Compact since June 2003, committing the Group to promoting ten fundamental principles concerning in particular human rights, labor rights and the environment. Since 2014, Veolia has been at the "Advanced" level of the Global Compact Differentiation Program, which, based on 21 specific criteria, is the highest level of UN reporting and voluntary performance standard with respect to sustainable development.

Date of signature	Purpose of the agreement
2017-2018	New Group France agreement on the forward management of jobs and skills. Agreement, in the form of a letter of undertaking with the Group European Works Council, on changes to skills and jobs, particularly with regards to the Company's strategic direction. This agreement supplements the Group's management commitments with the Group European Works Council on prevention, health and safety.
2020	Amendment changing the PERCO to a PERCOL and enabling Group employees to benefit from the advantages offered by the Pacte Law. (see section 4.1.3.1.4.3 above). Agreement on the quality and the development of social dialogue within Veolia in France. This Group France agreement replaces the 2010 agreement on the same topic and notably includes the implementation of a comprehensive support, promotion and recognition system as part of the trade union scheme.
2021	Amendment to the 2018 agreement regarding "support for changes to skills and jobs, particularly with regards to the Company's strategic direction" and integrating the "Diversity and Inclusion Policy within the Group". This amendment follows on from the priority actions with respect to diversity and the fight against discrimination identified by the Group European Works Council's dedicated working group. Group France agreement on working from home in normal times. This framework agreement defines a company-wide working from home scheme applicable according to the same guiding principles throughout the entire Group in France.
2022	2015 three-year agreement on the Group's strategic direction renewed in 2022. It provides for an annual discussion with the Group French and European Works Councils on the Group's strategic direction and its impact on staff, employment and skills. The themes of ethics, the Sapin 2 law and the corporate duty of care were also presented and discussed. Group European Works Council meeting in Agbar/learning expedition with labor and management representatives on ecological transformation solutions: during the Group European Works Council meeting organized in Barcelona, Spain, at the headquarters of Agbar, two site visits were organized for members of the council and the council's new Spanish delegation: one to the Aigües de Barcelona center in Collblanc on the theme of water reuse and another to the Biogas plant in Zona Franca on Veolia Énergie innovative solutions.
2024	Joint resolutions of the Group European Works Council on health, safety and well-being at work.
2025	Unprecedented agreement at European level on Diversity and Inclusion signed by Veolia with the representative trade union organizations from 13 European countries of the Group (France, United Kingdom, Spain, Germany, Czech Republic, Belgium, Poland, Italy, Hungary, Romania, Slovakia, Bulgaria and the Netherlands) and EPSU, the European Federation of Public Service Unions. Amendment to the 2022 agreement on the procedures for exchanging views on strategic directions with Group bodies, which consolidates and enriches the existing framework. New France Group agreement on health and safety, whose main objectives are to develop a common and participatory prevention culture, update the prevention policy in response to new challenges (climate, digitalization, GenAI) and strengthen social dialogue resources as a lever for progress.

Social dialogue at European level

On April 3, 2024, members of the Group European Works Council signed common draft resolutions on health, safety and well-being at work, drawn up by a special working group. The resolutions are due to be implemented from June 2024. This working group on health and safety, launched at the end of 2022, comprised European Works Council members appointed from eight different countries and representing all Group activities in Europe (Water, Waste and Energy). These common draft resolutions comprise ten fundamentals which are consistent with the five Veolia Health & Safety pillars and applicable to all entities included in the scope of the Veolia European Works Council. Aligned with these ten fundamentals on health and safety at work, ten priority measures were defined to strengthen the prevention culture and performance in terms of the health, safety and well-being of all employees and external

Social dialogue actions

Overview of collective agreements

Pursuant to the employment protection law, two directors representing employees were appointed in 2014 by the Group French and European Works Councils, respectively, to sit on the Veolia Environnement parent company Board of Directors for four years. In May 2018, Mr. Pavel Páša was reappointed by the Group European Works Council. In September 2018, Mr. Franck Le Roux was elected by the Group French Works Council. Their terms were renewed in 2022 for another four years and will expire on October 15, 2026. (see section 3.1.1.2 above).

Furthermore, Mr. Enric Amiguet i Rovira, a director representing employees on the Suez Board of Directors, was appointed as a non-voting member of the Veolia Environnement Board of Directors in 2022.

On March 26, 2025, Veolia signed an unprecedented agreement on Diversity and Inclusion with the representative trade union organizations from 13 European countries of the Group (France, United Kingdom, Spain, Germany, Czech Republic, Belgium, Poland, Italy, Hungary, Romania, Slovakia, Bulgaria and the Netherlands) and EPSU, the European Federation of Public Service Unions.

This agreement, which further strengthens Veolia's ambition in this area, applies to all member countries of the European Works Council (EWC), which includes 17 countries and represents 130,000 employees in Europe.

This agreement is structured around the priorities of Veolia's D&I roadmap: gender diversity/LGBT+ people, people with disabilities, cultural and social diversity.

It is a major step forward for Veolia employees, the vast majority of whom are technicians and workers who will benefit from concrete actions aimed at creating a more inclusive, equitable and respectful environment for everyone within the collective, enabling their personal and professional fulfillment and thus contributing to collective performance.

The agreement addresses, within the framework of Veolia's values including Respect, Solidarity, Responsibility and Innovation, the development of D&I culture, the development of prevention and action against all forms of discrimination and exclusion, equal opportunities, means of action against harassment and violence, and work-life balance.

10 directions and/or priority actions have been defined based on these major themes for effective implementation of this agreement within the 17 countries represented in Veolia's EWC. This implementation will be subject to a gradual rollout over a one-year period to allow each entity to become familiar with the agreement, embrace its principles and guidelines, and implement the necessary actions by prioritizing the actions that seem most appropriate to them, in compliance with local legislation.

Veolia is one of the first companies in its sector to sign such a broad transnational framework agreement in Europe on these essential themes of social cohesion, Diversity and Inclusion, demonstrating its commitment to social responsibility. The Group thus affirms its commitment to consolidating its policy of protecting its employees, with respect and attention to individual differences for the benefit of the company's collective project.

At the France Group level, a new Framework Agreement on Prevention, Health, Safety and Well-being at Work was signed on July 11, 2025 by Veolia and three trade unions (CGT, FO, CFE CGC).

This agreement is part of a continuous improvement approach, illustrated by the significant decrease of the lost time injury frequency rate, and in continuity with the 2008 agreement on the prevention of occupational risks. This agreement has as its main objectives to develop a common and participatory prevention culture, update the prevention policy in response to new challenges (climate, digitalization, GenAI) and strengthen social dialogue resources as a lever for progress. The agreement is structured around 5 main themes: prevention principles, social dialogue as a lever for progress (particularly by strengthening resources for entities with <300 employees without CSSCT), concrete prevention measures (primary prevention, prevention of serious accidents, prevention of psychosocial risks, actions for seniors and new hires, prevention of professional disengagement and commitment to subcontractors), employee health, and well-being and work-life balance.

It also includes a glossary to ensure a common language. The rollout will take place gradually in 2025/2026, starting with information/presentation of the agreement within the head bodies of BUs in France, with prioritization by each BU/entity and programming adapted to local specificities. Monitoring will be ensured by a bi-annual committee at Group level (2026-2027) then annually, with 27 performance indicators tracked at Group, Zone and BU/entity levels.

Under the 2010 Group France agreement, reviewed in 2020, trade union seminars were set up by each organization in order to improve their structure and define the priorities of the Group's employee policy. These seminars are renewed each year and are the subject of an open dialogue session with the Group's Human Resources Department. The new agreement on the quality and development of social dialogue signed in 2020 also includes a general system for union career management and to support representatives at the end of their mandates.

Adherence to the Global Deal

Veolia participates actively in Global Deal France working groups, notably on the future of work and changes to skills.

The Global Deal, through its composition, its members and its objectives, allows for benchmarking and a high-level contribution on social dialogue policies, in a changing international context. Through the topics raised and the working groups, it enriches the Veolia Group's social dialogue practices and enables the Group, through its participation, to fulfill the commitments set out in its Purpose and strengthen its usefulness for all its stakeholders.

Veolia's skills-based international social dialogue experience was presented in 2019 in the publication "Global Deal members commit to the G7 Social" and in 2021 upon the creation of a social dialogue quality index, currently being validated by the Global Deal bodies and its ILO and the OECD partners. In 2022, Veolia participated in the working group on duty of care issues.

Change in the rate of coverage by a social dialogue body

In 2025, 88.3% (compared to 86.7% in 2024) of Group employees were covered by a social dialogue body on the basis of a company agreement, a collective agreement, a national agreement or a branch agreement.

In countries outside the European Economic Area, this rate is 79%.

In France, the coverage rate by a social dialogue body is 100%. France is the only country that accounts for more than 10% of the Group's workforce.

An entity is considered covered by a social dialogue body when it has signed at least one collective agreement during the year or has at least one employee representative.

The Company commits to maintaining a coverage rate by social dialogue bodies above 85% each year. Furthermore, it ensures that the percentage of countries not covered by a representative body (for countries with more than 100 employees) represents less than 10% of the total workforce. A specific action plan will be implemented in the event that this 10% threshold is exceeded.

At the group level, in 2025 the number of employee representatives worldwide is 8,349, and they are distributed across 51 countries. 100% of employees in France are covered by a worker representative.

Overview of collective agreements

In 2025, 1,489 new collective agreements were signed at entity or company level or with Group bodies in each country. All of these collective agreements impact the undertaking's human resources performance and therefore economic performance.

The agreements have been signed in 37 countries where Veolia operates. The five main countries are France, Japan, Spain, Germany and Brazil.

In countries where freedom of association and the right to collective bargaining are not legally recognized, Veolia proposes alternative actions, in compliance with the laws of the country in question, for listening and exchanging with management, communicating with employees or leading working groups on specific issues with a view to creating charters or resolutions.

Furthermore, each year Veolia examines whether the countries where it operates are covered by a social dialogue body. The results are presented to the Group France and European Works Councils as part of the review of strategic directives. Those countries which are not covered are discussed with council members. Veolia reiterated its commitments on the promotion of basic human and social rights including freedom of association and the importance of collective bargaining.

4.1.3.1.6.3 Ensuring the ethics and human rights of own workforce

WHISPLI whistleblowing system

See section 4.1.4.1.2 Line 4 below.

Ensure respect for human rights

Since it joined the United Nations Global Compact in 2003, Veolia has backed and promoted the principles in its sphere of influence, particularly the recognition of collective bargaining rights, and the fight against employment discrimination. Compliance with these fundamental rights and these commitments for sustainable development is naturally part of the human rights policy defined by the Group. Its formal documentation in 2016 led to the creation of the Human Rights and Duty of Care Committee, which is responsible for supervising the human rights framework within Veolia (see section 4.1.3.5 below).

The Group has been working hard for years to uphold the rights not only of its employees, subcontractors and suppliers, but also of the communities living in the regions where it operates. Veolia's dedication is reflected in its sustainable development commitments (see section 4.1.1.5 above) and its fundamental values and principles set out in its Ethics Guide (see section 4.4.1.2 below).

Veolia's human rights policy focuses on eight priority issues developed in the ESRS S2 standard (Veolia's approach to human rights).

Human rights actions

See Veolia's approach to human rights covered in section 4.1.3.5 below.

Human rights targets/outcomes

See Veolia's approach to human rights covered in section 4.1.3.5 below.

4.1.3.2 Workers in the value chain (S2)

4.1.3.2.1 Introduction

The chapter on Workers in the Veolia value chain essentially covers those in its supply chain, which is very extensive and involves a large number of actors.

Veolia's supply chain represents a volume of €27.5 billion in external expenses, of which 16.5 are addressable, and has more than 220,000

active tier 1 suppliers, spread across more than 54 countries. To date, the risk analyses carried out do not reveal any presumption of materiality for suppliers beyond tier 1. Consequently, this standard only covers tier 1 suppliers for 2025. The expense profile according to the purchase categories is broken down as follows:

Breakdown of Group 2025 expenditure⁽¹⁾

In addition to this graph, Veolia's suppliers can be segmented as follows (based on spend level):

- Commodity providers (33%), such as energy (electricity, gas...), raw material (plastic, paper...) or chemicals (organical or mineral) are mainly produced locally and delivered on Veolia premises depending on the countries standards;
- Subcontractors (33%), such as industrial maintenance or facility management are subcontractors that operate mainly directly on Veolia premises and such as public work construction (water network) who operate outside of Veolia premises. Both categories are local and mainly small companies;
- Manufacturers of goods (15%), such as mobile equipments (trucks, cars, bins...), pipes or electrical equipments are high value equipments produced on the provider manufacturing site and delivered on Veolia premises;
- Other services providers (19%), such as IT and consulting, insurance, financial and real estate services.

The footprint of Veolia's suppliers mirrors the Group's business model whose main characteristic is to be very local. As such, in order to ensure effective operations, 90% of the Group spend is done with local suppliers. Consequently, Veolia's suppliers can be found all around the world: Asia-Pacific, Europe, Middle East, Africa, Latin America and Northern America.

⁽¹⁾ N.B: In order to better represent the group's supply chain, the allocation basis used in the 2025 expenditure chart omits unclassified expenditure as well as expenditure related to taxes, fees, and royalties. Thus, the chart accounts for €25.6 billion and 92.63% of the group's total expenditure.

In 2025, the group completed the review of its supplier risk management process. As part of this project, risk scenarios which can impact the suppliers and subcontractors' employees were identified. The most relevant scenarios regarding Veolia's supply chain are safety accidents involving a subcontractor's employee and respect of labour and human rights. These scenarios were flagged up due to gaps between Veolia's standards and the ones of suppliers and subcontractors, especially in countries with poor safety and human rights records.

4.1.3.2.2 Responsible supply chain management

As part of its ecological transformation strategy, Veolia involves its stakeholders, through responsible supply chain management. Veolia's reputation as a major player in environmental services can be negatively impacted by serious supply chain incidents for several reasons:

- **Damage to the image of sustainability and responsibility:**
Veolia highlights its commitment to sustainable development. Any serious incident related to human rights violations, environmental damage or corruption among its suppliers or subcontractors would be contrary to this image of a responsible undertaking;
- **Reputational and trust risks for stakeholders:**
Veolia customers, investors, NGOs and other stakeholders expect the undertaking to exercise reasonable vigilance over its suppliers. Any major breach could erode Veolia's trust and credibility;

- **Questioning sustainable procurement practices:**

Veolia communicates its requirements regarding sustainability to its suppliers and subcontractors as part of the contractualisation process with them. If deficiencies are revealed in the management of its supply chain, this could jeopardize the effectiveness of Veolia's strategy regarding sustainable procurement;

- **Media impacts and risk of brand damage:**

serious incidents have the potential for serious media consequences and can quickly turn into a reputation crisis for an undertaking of Veolia's size, damaging its brand image;

- **Financial and operational consequences:**

beyond image, such incidents can lead to damaging financial consequences (fines, loss of contracts) and operational consequences (supply disruptions);

Thus, for a Group like Veolia, which highlights its social responsibility, any major uncontrolled incident in its supply chain represents a significant risk.

Subjects that go beyond the ESRS 2 standard alone:

- **The subject of human rights**, which is more general in scope than the S2 standard alone is developed in section 4.1.3.5 below;
- **The subject of sustainable procurement**, which goes beyond simply the aspects of interest to workers in the value chain, is developed in this section and contributes to ESRS G1, as far as supplier payment terms are concerned.

The wording of the corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S2-ST-1 Risk in the event of serious incidents in the supply chain (human rights, labour law, environmental damage, etc.)			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia implements a sustainable procurement strategy that aims, among other things, to identify and remedy serious incidents that may occur in the upstream part of its value chain.
Business model	Veolia provides economic and financial performance, through the preservation of its economic value, as well as social and environmental performance through the effects on workers in the value chain and the environment. Mainly, Veolia works with local suppliers.

The recurrence of these interactions is considered permanent.

Listening to multiple stakeholders: in managing its supply chain, Veolia attaches great importance to taking into account the expectations of its various stakeholders:

- Governments, which ensure compliance with labour, environmental and product safety regulations throughout the supply chain;
- NGOs, interested in the social and environmental impacts of supply chain activities;
- Employees of suppliers and subcontractors, who are concerned with decent working conditions and safety in factories and operating sites;
- Local communities, which are affected by the economic, social and environmental impacts of supply chain activities in their region;

- Suppliers and subcontractors, who seek to establish lasting and fair relationships with client undertakings.

The Group's ambition is to integrate the expectations of its stakeholders through processes, charters and assessments in order to make its supply chain more sustainable and accountable as outlined below.

A sustainable procurement strategy

Veolia has a sustainable procurement strategy that aims, among other things, to prevent serious incidents within its supply chain and to promote positive ethical, environmental, social and societal practices among its suppliers and subcontractors. The implementation of this strategy aims to reduce the risk of undermining the Group's reputation in connection with serious incidents occurring in its supply chain. The actions described under this standard are recurrent.

The human rights aspects are detailed in section 4.1.3.5 below.

The **Supplier Charter** embodies the Group's strategy on sustainable procurement. This document, available at veolia.com, is always sent during consultations and signed by third parties. It helps engage and make suppliers accountable regarding Veolia procurement principles and standards, including their supply chain. In particular, the Group states in this text that it complies with its commitments to respect the fundamental principles of the International Labour Organization and the United Nations Global Compact. The Supplier Charter is articulated as follows:

- Objectives:
 - define and explain the ethical, environmental and social expectations that Veolia has towards its suppliers,
 - promote sustainable procurement practices throughout the supply chain;
- Ethical principles:
 - compliance with applicable laws and regulations,
 - prevention of corruption, conflicts of interest and unfair competition,
 - confidential data protection;
- Human rights and working conditions:
 - prohibition of forced labour and child labour,
 - non-discrimination and freedom of association,
 - compliance with the conditions of pay and decent working time,
 - health and safety of workers;
- Environment:
 - compliance with environmental regulations,
 - management of environmental impacts (emissions, waste, resources),
 - eco-design of products and services,
 - environmental management systems;
- Implementation:
 - integration of the charter into supplier contracts,
 - regular supplier assessments,
 - corrective action plans in the event of non-compliance,
 - whistleblowing line for reporting violations.

By signing this charter, suppliers are committed to respecting these fundamental principles and applying them in their own supply chain. This allows Veolia to promote responsible practices with its partners, directly for tier 1 and indirectly beyond that.

The Charter also provides employees of the Group's suppliers with two points of contact, whom they can speak to if they want to inform Veolia of incidents affecting them as a result of their employer's actions.

Sustainable procurement system and governance: the implementation of the Group's sustainable procurement strategy is based on a specific framework within the procurement function, under the responsibility of Veolia's Deputy Chief Executive Officer Finance and Procurement, a member of the Executive Committee. This system is based on a central team that runs a network of about fifty "sustainable procurement ambassadors". Additional resources (tools/data/audits) may be deployed to adapt the Group's system, in particular to cope with significant regulatory developments.

Management of categories of workers

The supplier risk management process aims to identify the critical suppliers based on two criteria: the purchasing category, and the expense related amount. The threshold for this last factor is adjusted to the level of risk associated with the country of origin of a given supplier. Additional

criteria can be added at the Business Unit (BU) level to integrate local specificities.

For the risk scenarios which can impact the manufacturers and subcontractors employees, the identification of critical suppliers is mainly linked to the expense related amount and the supplier's country of origin.

This risk management framework is not currently restrictive on a typology of a supplier or a subcontractor:

- as such, the Group deploys a consistent approach to incidents that could affect workers in its supply chain;
- Veolia comprehensively maps its suppliers' CSR risks. This methodology allows different types of data to be cross-referenced:
 - procurement criteria such as the weight of the expenditure or the strategic dimension of the supply of goods and services, in order to ensure good operational continuity,
 - CSR topics, such as:
 - environment: energy consumption, greenhouse gas emissions, water, etc.
 - human rights: working conditions, social dialogue, forced labour, child labour,
 - sustainable procurement: suppliers' environmental and social practices.

Supplier evaluation and CSR performance of the supply chain

Veolia uses the EcoVadis assessment to measure the CSR performance of more than half of its TOP 500 suppliers every year. This review consists of a documentary audit and the consideration of any controversies (news, adverse media, etc.). The analysis is performed by Ecovadis experts and covers 21 criteria across environmental, social, ethical and sustainable procurement matters. These assessments are performed through annual campaigns. This system thus contributes to improving the ESG performance of Veolia's supply chain and, consequently, to reducing the risk of negative impacts for workers in the Group's supply chain by directing the Group's purchases toward undertakings that are more virtuous from an ESG perspective.

Beyond these Group-led assessments, local entities are responsible for implementing the necessary measures to comply with their local regulatory obligations. Thus, in the France area, the Group has defined a system to control the risks associated with the obligation of vigilance. This system includes a clear definition of the roles and responsibilities of the various internal stakeholders. A group of several French subsidiaries also uses a solution called Once for all to monitor the compliance of mandatory documents in order to control the risk of illegal work.

Whistleblowing and incident handling system

Veolia relies on a specific system to manage issues related to whistleblower reports and ensure that they are processed. Any incidents that may occur within the Group's supply chain fall within the scope of these systems (for more information, see section 4.1.4.1.2 below - Ethics and Compliance). Human rights incidents are quantified in section 4.1.3.5.9 below.

In fiscal year 2025, Veolia was not convicted of breaching human rights laws in connection with its tier 1 suppliers.

Continuous improvement process

The Group's procurement department updated its suppliers risk management process in 2025 to identify and assess the major impacts, risks and opportunities of its supply chain. The outcomes of this work are:

- A clearer and simpler supplier at risk definition;
- The definition of 11 risk areas including 3 dedicated to duty of care (health & safety, labour and human rights, environment);

- The alignment with the Group's risk universe allowing for the better definition of local and global roles of responsibilities in terms of supplier risk management;
- A supplier risk management process coverage target of 80% of spend by 2027, including ESG supplier assessment.

The deadline for the effective rolling out of the new supplier risk management process has been set up as of January 1st 2026.

In an awareness-raising process, in 2024, the Group developed and deployed e-learning available in 14 languages to the buyers of 38 BUs. Composed of four modules, it aims to train buyers on how to manage CSR procurement risks. In 2025, this training has been integrated into Veolia's Procurement academy project which rolling out will take place in Q1 2026.

Veolia reviewed its sustainable procurement roadmap in 2025. This new plan will be rolled out during the course of 2026.

Instruments/Tools

In order to prevent risks linked to compliance with ethical rules, employment law and the environment regulations (human rights, child labour, corruption, etc.), specific sustainable development and anti-corruption clauses are systematically included in new contracts or renewed contracts/amendments with suppliers and subcontractors, as well as Veolia's Purpose and the Group's health and safety commitments.

The Group's sustainable development clause commits the supplier on several points:

- Complying with the Universal Declaration of Human Rights and the United Nations Convention on the Rights of the Child;
- Complying with ethical, social and labour law requirements, particularly all applicable mandatory labour law regulations and International Labour Organization (ILO) conventions: concealed employment, child labour, forced labour, etc.;
- Complying with the Group's health and safety prevention policy;
- Complying with regulations concerning environmental protection and the implementation of necessary measures to reduce its impact on the environment;
- Making sure that its own suppliers and subcontractors comply with the same obligations;

4.1.3.3 Affected communities (S3)

4.1.3.3.1 Introduction

Due to the nature of its work, Veolia interacts with a wide range of affected communities. These interactions require tailored approaches that reflect local expectations and contexts.

Veolia has identified several main community groups: the work was carried out by the Social Commitments team, drawing on initiatives such as the French Network of the UN Global Compact working group on affected communities, as well as feedback from Veolia's Business Units through local contracts and social reporting. The company engages with each through structured dialogue mechanisms. These conversations are organized within contractual frameworks that define how often consultations occur and their specific purposes.

These communities include:

- Residents living near operational sites such as water and wastewater treatment plants, waste-to-energy facilities or energy facilities. Their proximity may expose them to environmental impacts such as noise, odour or landscape changes. Local residents are represented through

- Making available and communicating its commitment policy to Veolia. Also, Veolia's whistleblowing process is open to suppliers and partners and allows breaches to be reported in complete confidentiality (corruption, discrimination, conflicts of interest, human rights violations, fraud, anti-competitive practices, psychological harassment, environmental law violations, health and safety, etc.).

Veolia does not have a mechanism to assess the extent to which the employees of its first-tier suppliers are informed about the procedures available to them for submitting complaints and obtaining appropriate handling of those complaints.

Performance monitoring process

The procurement function participates in an annual self-assessment campaign with bi-annual checkpoints specifically related to sustainability. This consists of questions related to sustainable development clauses added to supplier contracts, Supplier Charter signed and returned by the suppliers, suppliers' CSR assessment completion rate, etc. In case of non-conformities, the results of this campaign are used to structure action plans with follow-up performed by the Group Internal department.

Beyond the current whistleblowing framework managed by the Group's Ethics Committee, Veolia does not have a system enabling it to assess the extent to which employees of its tier 1 suppliers are aware of how they can file complaints and have them dealt with satisfactorily.

Deployment of the updated Ethics Guide

The Ethics Guide presents the values and principles the Group abides by. The most recent version underlines Veolia's commitment to comply with major international initiatives, such as the UN Global Compact, international human rights law and the OECD guidelines for multinational enterprises.

Raising supplier awareness

Veolia's Supplier Charter, as previously mentioned in this standard, aims to engage and make Veolia suppliers accountable, particularly in terms of labour law and environmental protection.

Furthermore, as part of the assessments, we ask suppliers to consider our recommendations, to implement corrective action plans, if needed, and to involve their own suppliers and subcontractors in this approach. Based on the new supplier risk management process defined in 2025 and that will be implemented in 2026, Veolia will follow up the defined action plans, in the event of unsatisfactory results from this evaluation.

local associations and residents' groups, as well as by local and regional elected representatives;

- Local communities and institutions — including neighbourhoods, schools, universities and people working or visiting the area — who are influenced by the presence of Veolia's operations. Specifically, Veolia, through its presence within local regions, contributes to local economic development and employment. It ensures the resilience of these communities by delivering an essential minimum service in the face of environmental crises, particularly those caused by climate change or public health emergencies. Regular exchanges, are held as part of the local governance and contractual arrangements with public authorities, with frequency varying according to the requirements set out in each contract;
- Local businesses and suppliers: this includes representatives of the region's economic ecosystem, who are directly affected by the economic impact of Veolia's activities. Veolia's local entities, which buy and source locally, impact these local economic players;

- Vulnerable populations: these groups, faced with limited resources and chronic financial instability, often struggle to afford the costs of essential services. Their precarious situation exposes them to the risks of exclusion from basic services that are essential to a decent quality of life. Geographical isolation can also play a crucial role in the vulnerability of these populations. Some groups, living far from urban centers or in hard-to-reach areas, are sometimes deprived of connection to public networks. Veolia implements inclusive financial and technical solutions to improve and sustain their access to these essential services, in coordination with local public authorities;

- Indigenous populations, notably Aboriginal and Torres Strait Islanders. Veolia is present at more than 240 sites in Australia and New Zealand. These populations are historically marginalized indigenous communities, with rich cultures and deep ties to their ancestral lands. They face persistent socioeconomic challenges and are particularly vulnerable to environmental change. As significant stakeholders in the Group's Australian operating areas, these communities directly influence Veolia's social operating license. Veolia impacts these populations through job and wealth creation in the territories. The company's activities in these regions require careful attention to respect indigenous rights, preserve their cultural and natural heritage, and contribute to their sustainable development, in line with the principles of the United Nations Declaration on the Rights of Indigenous Peoples. Indigenous peoples are represented through local or national associations. Dialogue with these communities is organized within the framework of Veolia Australia's Reconciliation Action Plan, which defines the frequency and reasons for consultation.

Local communities are stakeholders directly affected by Veolia's operations and are therefore integrated into the Group's overall stakeholder engagement strategy (see section 4.1.1.6 Interests and views of stakeholders *above*), at early stages of a project. They represent both potential risks and positive impacts:

- Veolia actively contributes to local economies by creating jobs and supporting the value chain in the regions where it operates;
- Veolia develops inclusive solutions tailored to different contexts to ensure access to essential services such as access to drinking water, access to a waste collection service or energy, including in disadvantaged neighborhoods and areas far from urban centers;
- Veolia strengthens communities' resilience to environmental and health crises, particularly those related to climate change, by providing solutions that aim to maintain as much as possible the continuity of essential services;
- Veolia recognizes the risks of challenge or accusation from stakeholders, and works to minimize these risks through transparent and proactive dialogue with the relevant communities;

- Veolia improves local acceptance of its projects by setting up listening mechanisms and stakeholder engagement systems including within contract governance, and identifies opportunities for better integration within the regions;

- Veolia favors, when possible, local purchases and sourcing, thereby contributing to local economic development. This ambition is measured every two years through the socio-economic footprint, which evaluates the percentage of local spending in the countries where Veolia operates (see section 4.1.3.3.3 *below*).

This is mainly reflected in:

- Implementing adapted solutions: designing, implementing and operating projects in collaboration with local authorities to meet the specific needs of communities;
- Providing support and guidance: supporting local stakeholders in the definition and implementation of sustainable development strategies.

Organization of dialogue with affected communities

Veolia's multi-local organization puts local teams at the forefront in facilitating this dialogue with affected communities. As civil society expectations and regulatory requirements intensify, Veolia strives to go beyond mere dialogue and consultation with stakeholders. The challenge is to build a community that acts together to create value and build valuable solutions with a strong positive impact for all. Veolia is involved with the communities in a variety of ways, including through regional socio-economic analyses, the implementation of community link initiatives and methodology tools to organize stakeholder engagement at a regional level (see section 4.1.3.3.5 Engage with regions and communities *below*).

Veolia has therefore structured its stakeholder relations approach around "Resourcing together", which focuses on three areas: listening and exchanging, co-construction and seeking solutions, commitment and sincerity regarding the impacts created. An in-house methodology guide enables each Group entity to adopt this commitment to dialogue and cooperation with its stakeholders. It provides methodological tools and case studies to help analyze, identify and prioritize its stakeholders and to implement this approach and the various means of engaging with them over the long term in line with objectives and local contexts. Relations with local communities are part of Veolia's purpose, as stated in the Group's articles of association⁽¹⁾, which state in particular that "We are committed, throughout the world and with respect for each culture, to improving the health and quality of life of human communities." Finally, ensuring voicing the concerns, seeking solutions and building a positive relationship with local stakeholders, local communities can access the multilingual complaints and whistleblowing system, set up at the Group level. This system is open to third parties and enables the reporting and tracking of situations that fall under the duty of care. Whistleblowers may remain anonymous if they wish. For more information, please refer to section 4.1.4.1.2 Ethics and Compliance *below*.

⁽¹⁾ Veolia's purpose was adopted by its Board of Directors on April 18, 2019, and included in the company's articles of association on April 24, 2025.

4.1.3.3.2 Commitments and target

Commitment

Veolia's social responsibility, embedded in its Purpose and the GreenUp 2027 strategic program, includes a commitment to the responsible development of territories. To achieve this, the company has formalized a dedicated objective to support local communities. Some stakeholders were consulted upstream to develop this objective, to gain a better understanding of their expectations and align the Group's objectives. For more information please refer to section 4.1.1.6 Interests and views of stakeholders.

To track progress, Veolia measures each year the number of inhabitants benefiting from inclusive financial or technical solutions that enable access to water, energy or waste services. This objective includes a 2027 target⁽¹⁾: to reach 8.4 million people with these solutions. It is under the responsibility of a sponsor, Isabelle Quainon, Veolia Executive Committee member and Group Human Resources Director.

This objective is accompanied by a 2027 target⁽¹⁾: Veolia has set the goal to reach 8.4 million people benefiting from these solutions.

Commitment	Objective	SDG	Metric – definition	2023 baseline	2024 Results	2025 Results	2027 target
 Support regional development through responsible means	Support to local communities	 	Residents benefiting from inclusive solutions to access essential services (all activities) ⁽¹⁾	7.8 million people	8.4 million people	9.2 million people	8.4 million people (at constant scope)
Sponsor	Isabelle Quainon	Executive Committee member, Group Human Resources Director					

Veolia's commitment is part of the company's human rights policy, presented in more detail in section 4.1.3.5. Among the eight priority issues of this policy, three directly concern the rights of the populations affected by Veolia's activities:

- Right to a healthy environment and protection of resources: Veolia is committed to complying with national and international environmental legal requirements. The Group constantly improves management systems and processes to preserve the right to a clean, healthy and sustainable environment, prevent pollution and ensure that the environmental impact of its operations on natural resources is minimized;
- Right to water and sanitation: Veolia is committed to deploying its activities to provide sustainable access to essential water and sanitation services. The Group implements actions specifically targeted at the most disadvantaged populations, in agreement with its public authority clients and public stakeholders;
- Rights and lifestyles of local communities: Veolia recognizes the rights and lifestyles of the communities in which it operates. The Group promotes engagement based on the principles of respect, cultural sensitivity, integrity, responsibility, transparency, good faith and non-discrimination. The Group implements initiatives to maintain a constant dialogue with local people in these regions. Veolia is particularly attentive to the rights of indigenous peoples.

The human rights policy is a key element of Veolia's governance and applies to all Group entities. Local entities are responsible for its deployment and implement initiatives to monitor the Group's commitment to respecting communities rights in line with each entity's specific context. To achieve this, local entities develop solutions adapted to the local and regional context, while upholding business ethics, human rights, and their duty of care toward all stakeholders involved in its activities.

Governance

Issues related to local communities involve several of Veolia's functional departments, each of which has specific responsibilities in terms of social performance:

- The Multifaceted Performance and Sustainable Development Department is responsible for defining the overall strategy supporting local communities objective, organizing the monitoring and consolidation of metrics at Group level and identifying and sharing best practice implemented in the business units, to improve the achievement of this objective;
- The Compliance Department ensures that ethical and regulatory standards are met in interactions with local communities;
- The Human Resources Department ensures the strengthening of skills and the promotion of topics that impact policies to support local communities (diversity, equality, social protection, etc.);
- The Risk Department contributes to the identification and assessment of risks that may affect Veolia's commitments to local communities in certain projects. It is also responsible for proposing remedial or management actions.

These topics are discussed in the ESG Committee (co-chaired by the Director of Strategy, Innovation and Development, the Group's General Counsel and the Director of Human Resources), and in the Human Rights and Duty of Care Committee, which is under the responsibility of the General Counsel.

In fiscal year 2025, the Veolia group was not convicted of violating the human rights of communities.

Social performance is integrated into the managers' annual objectives and is regularly reported to the Executive Committee, ensuring commitment at the highest level of the organization.

Action Principles

The action principles for supporting local communities are structured around three main issues:

- Contribution to responsible economic development (IRO S3-ST-1, Contribution to local wealth and employment in the regions (value chain); and IRO S3-ST-2, Contribution to the development of local economic fabrics through local purchases and sources of supply);

⁽¹⁾ The metric records the number of people who have benefited from access to and maintenance of essential services (water, sanitation, waste and energy) under Veolia contracts. The objective is to measure Veolia's contribution to universal and equitable access to essential services by 2030, in line with the United Nations Sustainable Development Goals. Many people around the world do not have equitable access to essential services, due to financial, geographical or technical difficulties. Veolia develops and implements tailor-made solutions to promote better access for all. These solutions can be financial (adapted pricing policies, innovative financial mechanisms, social connection programs, schedules, debt remittances, service checks) or technical (alternative modes of service to overcome geographical difficulties or problems with resource availability).

Methodology: the operating units report the number of customers who have benefited from these schemes during the year. The conversion into the number of beneficiaries is carried out at the central level, applying a coefficient based on an average of the number of people per household (UNDESA data).

- Ensuring accessible and resilient essential services for the most vulnerable (IRO S3-ST-3, Inclusive measures adapted to different types of contexts, in particular for access to essential local services such as water; IRO S3-ST-4, Resilience to serious environmental crises (climate change, health crisis) in order to ensure a minimum essential service);
- Engaging with regions and communities (IRO S3-ST-5, Risk of accusation or challenge by a stakeholder based on their perception of Veolia's activities; IRO S3-ES-6, Veolia's role in raising stakeholder awareness by proactively explaining how each actor can contribute to ecological transformation). The implementation of the support to local communities objective (which is inherently local) is carried out by the operational entities present on the five continents, in cooperation with the functional departments and through the Executive Committee and zone managers.

Focus on indigenous populations

In 2022, Veolia reaffirmed its longstanding commitment to defending the rights of Aboriginal Australian and Torres Strait Islander peoples by launching the fourth Reconciliation Action Plan (see section 4.1.3.3.3, chapter Establish responsible relationships with Group suppliers).

The Reconciliation Action Plan (RAP) is a voluntary strategic framework introduced in 2006 by Reconciliation Australia, the national body promoting reconciliation in Australia. It aims to guide organizations in their commitment to reconciliation with Aboriginal and Torres Strait Islander peoples. The RAP enables organizations to define:

- concrete actions to support reconciliation;
- promote inclusion and opportunities for Indigenous communities and align their practices with national inequality reduction targets;

- although not mandatory, the RAP is widely adopted by Australian organizations as a tool to demonstrate their social commitment and contribute to the national reconciliation process.

The 2022-2025 RAP sets out Veolia's vision for a future in which all Aboriginal and Torres Strait Islander people are recognized as essential contributors to a sustainable Australia.

This plan has quantified targets:

- have 4% of Veolia employees from Indigenous populations;
- spend at least 20 million dollars with suppliers from aboriginal or island businesses as part of the 2022-2025 plan;
- raise cultural awareness among all employees and educate them about the Aboriginal and Torres Strait Islander culture;
- partner each year with at least five "First Nations" community organizations to achieve tangible results in employment, training, education and capacity building.

To ensure compliance with this plan, appropriate governance was also established, with a member of Veolia Australia's ExCom as sponsor, a dedicated project manager and a steering committee involving representatives of Veolia's various departments.

4.1.3.3.3 Contribute to responsible economic development

This issue directly covers IRO S3-ST-1 (Contribution to local wealth and employment in the regions) and S3-ST-2 (Contribution to the development of local economic fabrics through local purchases and local supply services).

Contribution to local wealth and employment in the regions

The development of Veolia's activities has a regional impact. Through its operations, the Group contributes to the economic vitality and social dynamism of the regions in which its operations, sites and teams are located. This leads to job creation, social inclusion initiatives, especially for the most vulnerable, added value for the local economic ecosystem and suppliers, through inclusive and solidarity-based purchases. Veolia's activities also operate within a long-term contractual framework (typically

around ten years). To understand and explain its impact, Veolia measures its global socioeconomic footprint every two years (see below Actions and results).

To understand and explain its impact, Veolia measures its global socioeconomic footprint each year (see below *Actions and results*).

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S3-ST-1 Contribution to local wealth and employment in the territories (value chain)			
As an environmental services supplier, Veolia operates in many geographical areas around the world. These operating locations oblige Veolia to take into account local requirements and expectations, developing solutions adapted to these specifications that are socially innovative and economically efficient, to boost and support regional development.		Its economic impact occurs through several channels (investments in local infrastructure, purchases from local suppliers, creation of direct and indirect jobs).	
		These impacts will be felt in the short term during the GreenUp 2024-2027 strategic program but also in the medium and long term as Veolia's activities are part of a long-term contractual framework (around ten years).	

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	The development of Group activities creates impacts on the environment where it operates, society and all its stakeholders, including its supply chain.
Business model	This IRO contributes to Veolia's social performance

Development of local ecosystems

To provide water, waste collection and recovery and energy services, Veolia relies on a strong local presence. Its teams are organized around sites and installations in the heart of the regions and require the support of a network of local suppliers to operate optimally. The existence of a

strong local economic fabric thus contributes to Veolia's healthy development. The Group encourages local sourcing to create a network of suppliers that can support Veolia over time for mutual benefit.

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S3-ST-2 Contribution to develop the local ecosystems through local purchasing and sourcing			
Due in part to the Group's significant purchasing expenditures, and also to a business model based on value creation in the heart of the regions, Veolia is an important player in the development of local economic fabrics. These impacts will be felt in the short term during the GreenUp 2024-2027 strategic program but also in the medium and long term as Veolia's activities are part of a long-term contractual framework (around ten years).			
The main interactions of this IRO with Veolia's value chain and business model are as follows:			
Value chain	Veolia's contribution to the development of local economic fabrics through its purchases has an impact on the upstream part of its value chain through the support given to suppliers who benefit from this expenditure. Some downstream players also benefit from this situation, in particular the Group's public customers, who benefit directly and indirectly from additional resources generated by a more dynamic economic fabric.		
Business model	Support for local economic fabrics through the Group's purchases is fully in line with the Group's business model. Thus, through its largely decentralized socio-economic footprint, Veolia is a significant player in regional development.		

Actions and results

Understand and explain the socio-economic impact of Veolia

Every two years, the Group measures its socioeconomic footprint worldwide in collaboration with the consultancy firm Utopies. Utopies' Local Footprint® model, which includes databases from dozens of national and international statistical sources, helps reproduce the actual economy in the most realistic manner possible.

The study conducted in 2024 on fiscal year 2023 helped quantify the impacts of Veolia's activities beyond their direct impacts (employment and added value generated by the Group). The indirect impacts linked to the supply chain, and impacts caused by household consumption (by Veolia's employees and suppliers) and public spending are also measured. The financial flows of 55 countries where Veolia operates, representing over 98% of the Group revenue, were analyzed.

The results of the worldwide study showed that Veolia's activities:

- supported over 1,275,349 full-time equivalent (FTE) jobs;
- generated around €84.6 billion in added value;
- have a job multiplier coefficient of 6.5: for every one direct Veolia job, 5.5 additional jobs are supported in the economy;
- have an added value multiplier coefficient of 3.6: for each euro of added value created by Veolia, an additional €2.6 of added value is generated in the economy.

3,120 M€ induced contribution

Veolia's socio-economic impact is reflected in its contribution to wealth and job creation, which is three-fold: (1) direct impact, corresponding to the added value and jobs generated by Veolia, including wages and profits; (2) indirect impact, resulting from Veolia's purchases from its suppliers, thus supporting their business activity and the related jobs; and (3) induced impact, which comprises both household consumption and public expenses through taxes and levies paid by Veolia and its ecosystem.

This study provides an overall estimate of Veolia's economic influence while presenting some limitations to bear in mind. It focuses on the direct and indirect impacts of the Group's activities without taking into account the possible repercussions on other economic players. The analysis is limited to local and national impacts, excluding possible consequences abroad. Moreover, it does not address the broader environmental or societal implications. The Local Footprint® model provides a snapshot of the economy at a specific point in time, which does not allow us to anticipate future changes.

To improve and increase the accuracy of the methodology, a significant adjustment was made to the calculation of the socio-economic footprint. In view of the high inflation observed in recent years, a correction was made to take into account price increases in various sectors and countries and to eliminate the effects of overestimation due to the simple costs increase. Consequently, the results are now expressed in constant value terms, allowing better comparability over time and between different regions. This methodological change may result in an apparent decrease in the number of jobs supported compared with previous studies. However, this decrease is purely technical and does not reflect a reduction in Veolia's activity or actual economic impact. Veolia will use this new methodology when it assesses its socio-economic footprint.

Veolia's annual socio-economic footprint studies completed since 2020 are available on a dedicated platform, accessible from the Group's website.

Reinvest locally

The majority of the Group's spending is carried out in the regions where Veolia operates. This wealth creation, including direct or indirect jobs linked to its activities, cannot be offshored and therefore contributes to regional development and economies and enhances the value of their human potential.

In 2024, as part of its commitment to support regional development through responsible means, Veolia locally reinvested more than 90% of its spending.

Encourage social and professional integration

Veolia, a local employer

The Group contributes to employment in the regions where it operates. To promote, equal opportunities, Veolia implements dedicated programs directly supporting groups of people or individuals far from employment:

- work-study programs offer young people in the community access to (see section 4.1.3.1.4.5 above);
- training support (schools, universities): hiring of student interns, Performance awards (Trophées de la Performance), summer schools;
- creating pathways between the Group and partners involved in training, guidance and employment to prepare young people and those most distanced from the workplace for the Group's businesses: "Second Chance Schools", local community support networks in France, the "Elles Bougent" and "Sport dans la ville" associations, etc.;
- integration initiatives through economic activity, carried out by the Veolia Foundation in partnership with integration organizations;

Terra Academia, a coalition of committed players

To address the lack of skills in environmental professions among industrial companies and in the public sector, Veolia created Terra Academia. The school brings together economic, academic, associative, and public stakeholders to develop tailor-made training programs that improve employability and build the economy of tomorrow at the local level, in France and internationally. Following the opening of three campuses in 2024 in Arras, Deauville, and Paris, Terra Academia trained diverse audiences in 2025: technicians in high-demand professions, local elected officials, as well as public and private sector leaders, thanks to the Institute for Advanced Studies in Ecological Transformation. Starting in September 2026, Terra Academia's EcoLab Orientation program will guide high school and university students in their career orientation towards ecological transformation professions.

Local entities implement initiatives adapted to a specific context in the different geographical areas:

- In 2025, Veolia in Spain continued implementing its social initiative strategy around three priorities: expanding educational opportunities, supporting sustainable communities and improving employability. The OLA program, active for five years to support people in vulnerable situations—particularly beneficiaries of subsidized water tariffs—was renewed in existing locations and extended to new municipalities. Corporate volunteering remained focused on strengthening the financial skills of OLA participants. Through this program, volunteers from the Finance Department and other areas provide beneficiaries with basic, practical tools to improve their personal finance management and make more informed decisions based on their resources, thus helping strengthen their autonomy and quality of life. In 2025, this initiative was awarded second prize at the FIM Awards for the project "Commitment of the Financial Community to the Training of Vulnerable Groups," acknowledging the engagement of Veolia Spain and the contribution of Finance and Transformation teams across the Group.
- To develop this strategy, the undertaking worked with strategic and local partners; In the Czech Republic, Veolia's STARTer programme supports the creation of new long-term jobs in three major regions where Veolia has a strong presence with its business services. Veolia is involved in the Moravia-Silesia, Olomouc, and Central Bohemia regions, particularly in projects related to traditional crafts that are scarce in the market and handicrafts that provide social benefits to the population. This programme is run by the Veolia Foundation in the Czech Republic, with strong involvement from Veolia employees as guarantors of the supported entrepreneurs. Communication and information are carried out in collaboration with local and regional partners, including local authorities, regional councils, employment offices, and chambers of commerce. Since 2000, 2,875 jobs have been created, including 420 for people with disabilities.

Taking account of the informal sector

The informal sector can represent a crucial challenge for Veolia's activities. This is the case with plastic collection, which in some countries involves informal collectors who recover and resell plastic waste. This activity represents a vital source of income for these populations, but it is often unstructured and may present human rights risks (child labour, health and safety issues). This is why Veolia is developing programs to integrate existing informal collection systems into its sourcing of secondary raw materials, and to make them safer and more efficient, particularly through the use of digital technologies. Several examples illustrate this approach.

- In Indonesia, plastic mostly comes from informal waste collection centers. Veolia is implementing various programs to ensure responsible and inclusive plastic collection. Veolia's PET recycling plant in Pasuruan has committed to achieving fully sustainable raw material sourcing by 2026. A joint project bringing together Veolia, Danone-AQUA, the Danone Ecosystem Fund and two local NGOs was launched in February 2019 to structure the value chain and make existing PET collection centers more efficient and sustainable. This objective gave rise to a series of activities in collection centers including skills development training sessions for informal collectors, improvements to existing infrastructure, provision of PPE, and improvements to working conditions and health and safety at the sites. Following the success of Phase I, Veolia and its partners are continuing the program with Phase II (2023 - 2026), which includes 5 collection centers outside Java with a target volume of 4,200 tons of PET bottles per year by the end of the period. This program strengthens relationships with suppliers;
- The Veolia Sustainable Collection Centers (VSCC) project targets collection centers across the Indonesian archipelago and aims to achieve 100% sustainable supply by 2025. Among the actions taken, Veolia's sustainability team documented and distributed to collection centers a booklet containing recommendations on best practices to implement covering health and safety, environmental management, child labour, discrimination and forced labour. Quarterly visits were organized, as well as training and regular discussions with employees of the collection centers. Specific targets have been set for the period 2021 to 2025.

Specific targets have been set for the period 2021 to 2025:

- Support 25 collection centers;
- Collect 2,400 tons of plastic waste per year;
- Train 200 people by the end of 2025; and
- Improve safety implementation by providing personal protective equipment to 200 people by the end of 2025.

Support for the transition to work and creating social cohesion with the Veolia Foundation

Support for the transition to employment and social cohesion is one of the Veolia Foundation's three areas of action. In particular, it supports initiatives and structures that encourage the return to work of people who are socially excluded. Beyond just financial support, the Veolia Foundation aims to create pathways between supported projects and initiatives and the Veolia Business Units to encourage integration and sustainable employment.

Through its multi-year contracts, the Veolia Foundation supports associations involved in the social and professional reintegration of the most disadvantaged populations. The major partnerships are:

- The Extramuros association develops initiatives to support employment and social innovation through the creative reuse of wood. It operates primarily in working-class neighborhoods in Paris and the Paris region. The Foundation supports the Extramuros Collective's project to bring together all of its currently scattered activities on a single site, the WikiVillage (Paris), in order to create a center of excellence in the circular economy of wood, upcycling, sustainable design, and integration;
- Life Project for Youth in India, Indonesia and the Philippines: the NGO is opening entrepreneurship training centers to enable young people in very precarious situations to consider social and professional integration through the creation of a micro-economic activity.

Beyond these historic partnerships, each year the Veolia Foundation supports various associations and undertakings working to help the most underprivileged transition to work and to improve neighborhood social cohesion. In 2025, the Foundation supported seven projects focused on employment and social cohesion, such as the Reflo environmental awareness and integration association in the United States and King's Trust Australia Limited, which promotes employment among young Aboriginal people in Australia.

Supporting innovation and entrepreneurship (IRO S3-ST-1)

Veolia's involvement in regional economic development is reflected in different open innovation systems. They encourage the emergence of

technical, social and environmental solutions with local entrepreneurs and create opportunities for joint development.

Since 2014, the Pop Up open social innovation program has strengthened the Group's local presence by supporting social entrepreneurs and by bringing forth innovative solutions with high social impact. Locally, Veolia works with social entrepreneurship incubators and other partners – local authorities, businesses and other regional social stakeholders – to identify, select and support entrepreneurs responding to regional challenges. The incubators facilitate experimental collaboration between these entrepreneurs and local Veolia entities to develop new solutions linked to the Group's activities (improved access to services for users living in poverty or informal settlements, creation of new local markets for product recovery, etc.).

Among the projects, Veolia Japan launched Hamamatsu POP UP in 2020, a program focused on social entrepreneurship and the circular economy. This initiative aims to raise local awareness of resource circularity issues while showcasing the benefits of public-private partnerships in fostering innovation. Collaborating with Hub Tokyo Co., Ltd. - a community and space for changemakers - the program supports entrepreneurs in their early stages, providing training, mentoring and networking opportunities. Since 2020, Hamamatsu Pop Up has supported 42 participants, creating a Hamamatsu-based community where alumni actively share their experiences. As participants' expertise grows, the program is adapting to include more practical aspects of entrepreneurship, such as business model development and funding strategies.

Establish responsible relationships with Group suppliers (IRO S3-ST-2)

Veolia, through its procurement policy, promotes the development of local purchasing and the development of local supply sources.

The Group's socioeconomic footprint enables a better understanding of Veolia's impact on its supply chain. Purchases in 2023 supported over 371,084 indirect jobs in the supply chain and generated GDP of €24 billion. On average, 86% of purchases are sourced locally. In France, 71% of Veolia's suppliers are SMEs (i.e. more than 33,000 businesses), 15% are mid-caps, and 2% belong to the social economy sector.

The sustainable procurement policy (see details in section 4.1.3.2.2 Responsible supply chain management) is implemented locally by the Group's various business units.

4.1.3.3.4 Ensure accessible and resilient essential services

Access to essential services is an important issue for Veolia. The Group implements inclusive measures adapted to different contexts, for access to local services essential to the health and human development of vulnerable populations (IRO S3-ST-3). Veolia also ensures service continuity and implements business continuity plans (IRO S3-ST-4), broken down by country, which aim primarily to:

- produce and distribute drinking water and ensure wastewater sanitation;
- maintain waste treatment activities, in particular waste collection and waste treatment facilities;
- maintain energy management activities, on its heating networks and for the industrial and commercial sites that continue to operate.

Strengthen access to essential services for all, including vulnerable populations

Some groups of people have difficulty accessing or maintaining essential services. This can be for financial reasons (high initial connection costs,

cost of work required for network connection or difficulties in paying the subscription), or administrative reasons, or physical reasons (remoteness, elderly persons, etc.). Veolia works with delegating authorities, partners and industrial customers to provide long-term access to essential services for the most vulnerable populations and to develop locally adapted solutions. Inclusive measures take variety of forms:

- Financial schemes related to the price of water: social tariffs, etc.;
- Bill payment assistance schemes to respond to consumers' financial difficulties: payment plans, debt forgiveness, water vouchers, etc.;
- Technical solutions to promote access to the service: social connection programs, infrastructure, etc.

Veolia's activities generally operate within a long-term contractual framework (typically around ten years), allowing the implementation of the schemes, which require constant stakeholder engagement, particularly at the community level and its services.

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S3-ST-3 Inclusive measures adapted to different types of contexts, including access to essential local services such as water			

Veolia works to provide and maintain services essential to health and human development. Its strong regional network enables the development of services adapted to specific contexts and the launch development aid or emergency assistance activities for vulnerable

populations. These impacts will be felt in the short term during the GreenUp 2024-2027 strategic program as well as in the medium and long term, as Veolia's activities are part of a long-term contractual framework (typically around ten years).

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	The provision of essential services generates impacts on society, particularly the populations who benefit from these essential services, but also in connection with local authorities, Veolia clients and subcontractors who organize the service.
Business model	This IRO contributes to Veolia's social performance

Actions and results

Developing access to services in access-deficient countries (IRO S3-ST-1)

Veolia works with public and private partners (public authorities, public bodies or delegating authorities, NGOs, local associations, industrial companies, etc.) to develop solutions providing new access to water and sanitation. Since the implementation of the SDGs in 2015, the Group has provided 9.3 million people with access to drinking water, and 10.5 million people with access to sanitation services⁽¹⁾. In 2025, more than 377,000 people gained access to sanitation, and more than 92,000 to drinking water.

Veolia has been supporting 1001fontaines in strengthening decentralized access to safe drinking water. The pilot project carried out between 2021 and 2024 - supported by the FASEP (Fonds d'études et d'aide au secteur privé - French government fund for private-sector aid and studies) - helped develop a more efficient, solar-powered and low-carbon kiosk model, and initiated the deployment of ten units.

In 2025, after two years of operation, these kiosks now provide regular access to safe water for more than 45,700 people and offer Veolia valuable insights into the role of decentralized systems in peri-urban areas.

Through its 2024-2027 partnership, the Veolia Foundation is continuing to support 1001fontaines by testing innovative treatment solutions and strengthening maintenance models for the organization's kiosks in Cambodia. Additional projects to improve decentralized access to drinking water are also under consideration.

Implement inclusive measures for access to services for the most vulnerable communities (IRO S3-ST-3)

Veolia works with delegating authorities, partners and industrial customers to provide long-term access to essential services for the most vulnerable populations and to develop locally adapted solutions. These measures are supported by communities-based outreach tools that connect directly with beneficiaries, helping to promote these solutions among vulnerable populations.

In developed countries, the Group is also developing solutions to maintain access to services for the poorest populations, people in situations of financial uncertainty and the homeless. Regional diagnoses are conducted upstream of calls for bids in France to identify the regional profile and the service needs and expectations of the population. The introduction of local solidarity officers provides a single point of contact dedicated to these issues, in contact with consumers in payment default and local authority social services. They are responsible for implementing the program with all measures, trade union and employee representatives and mediators. This structuring of the approach and the introduction of solidarity officers helped improve effectiveness and enabled a more efficient roll-out of measures. In 2025, close to 300,000 people benefited from these inclusive measures in France, for a total amount in excess of €4.1 million.

Veolia North America is offering New York State's first-ever Water Affordability Program to assist its most financially vulnerable water utility customers in New York. Under this new program, qualified residential customers will be able to access bill discounts of up to 25% with additional benefits that include boosted rebates on certain water-saving appliances. In 2025, which was the second year of the program, 1,486 customers participated and Veolia funded \$259,492.

In India, more than 3.2 million inhabitants benefit from social schemes by local water supply authorities for access to and maintenance of drinking water services. In Nagpur, through local non-governmental organizations (NGOs), specific actions for slum dwellers are carried out in favor of sanitary hygiene, education, skills development training and other awareness programs such as the preservation of natural resources. In Nangloi, the Social Welfare Team, a community liaison team, encourages the adoption of legal water connections, facilitates access to social benefits (initial cubic meters free of charge), and raises awareness about resource preservation.

In Morocco, since 1999, REDAL has been implementing a social welfare policy aimed at accelerating access to services by the population across the entire scope of the Rabat-Salé region's delegated management contract. The welfare connections are intended for households meeting specific social welfare criteria, offering a lump-sum payment and flexible payment terms over several years. They are defined and managed through agreements with the delegating authority. From 1999 to 2025, 120,360 welfare connections have been provided for drinking water and sanitation and 56,274 for electricity. Also in Morocco, with the launch of the National Human Development Initiative (INDH) in 2005, and the signing of a framework agreement with the Moroccan authorities in 2006, Amendis is developing its welfare connections programs. By the end of 2025, more than 221,431 households (150,451 for drinking water and sanitation; 70,980 for electricity) had been equipped in Tangier and Tetouan within the scope of the delegated management contract.

In Spain, Veolia maintains its firm commitment to the 'Contigo' program, designed to support and facilitate our customers' management: video calls, chatbots, multilingual customer service, accessibility of premises welcoming users with disabilities. In 2025 Veolia has optimized its annual installment payment option, an initiative that has generated a significant impact on service adoption, recording a considerable increase in subscriptions: from 3,433 customers in 2024 to 6,902 in 2025. This growth reflects not only the effectiveness of the measure implemented, but also customer confidence and satisfaction with the solutions made available to them. These results reinforce Veolia's commitment to continue developing initiatives focused on our customers' needs and on continuously improving the service experience. Veolia also participates in the A-porta project. Initiated by the Confederation of Neighborhood Associations of Catalonia, it trains residents of neighborhoods to visit the most vulnerable and provide them with advice regarding measures to avoid energy poverty, and offers support to people in social isolation. During 2025 more than 230 homes were visited.

⁽¹⁾ Distribution and new production/treatment units, without final distribution, in countries with limited access, where Veolia works to provide access to these services. For distribution, data is obtained from the number of connections by Veolia, multiplied by a coefficient based on the average number of inhabitants per household (UN DESA data). For production plants, the number of people with access to drinking water is estimated from the volumes produced, the average water network yield observed by Veolia and the average consumption ratio observed locally. For treatment plants, the number of people is estimated from plant treatment capacities and the average wastewater production ratio per person observed locally. The number of people supplied with sanitation services is calculated according to the same principle, using the capacity of depollution plants in terms of population equivalents when wastewater is collected by a third party.

In Cartagena, Colombia, Veolia continued its "Mi Isla Limpia" program, focusing on the technical, environmental and social problems specific to waste management in this isolated area. Collections on foot or by electric scooter, as well as the establishment of temporary storage zones, provide fair access to waste collection services for more than 18,000 people in the Baru peninsula and the islands of the Rosario archipelago.

Crisis-resilient essential services (IRO S3-ST-4)

The following IRO addresses the need for resilience of environmental services, including in crisis contexts. Veolia implements business continuity plans, broken down by country, which aim primarily to:

- produce and distribute drinking water and ensure wastewater sanitation;

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S3-ST-4 Resilience to severe environmental crises (climate change, health crisis) in order to ensure an essential minimum service			

The services provided by Veolia are essential water, energy and waste services. It is therefore crucial that they can continue to function. The increase in crises linked to the consequences of climate change poses a threat to the proper functioning of these activities. Veolia's ability to organize and maintain continuity of service is an asset when it comes to resilience to these health crises and providing these essential services to people, communities and industry.

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	This IRO impacts the entire value chain: upstream decision-makers from local authorities and entities responsible for water, energy or waste services; before and during crises, Veolia employees who must imagine and implement these resilience solutions; and downstream the customers, the local populations that are impacted by these phenomena.
Business model	This IRO contributes to Veolia's commercial and social performance.

Integrate resilience to environmental or health crises to ensure continuity of service for all

The aim of Veolia is to support cities and industries in making their infrastructure resilient, so that they can anticipate natural disasters, be more resilient to shocks, and secure services.

As part of the management of the Covid-19 health crisis, Veolia had to adapt its working methods and the operation of sites around the world, which made it possible to test and strengthen the implementation of these business continuity plans. This experience was applied to dysfunctions and crises linked to the consequences of climate change. For example, in the event of severe flooding, Veolia's local teams can anticipate and deploy the appropriate resources to continue to provide people with these essential services, by mobilizing surveillance systems to anticipate the arrival of these phenomena, distributing bottles to provide water to the affected people, and deploying experts to ensure the rapid rehabilitation of the impacted infrastructure.

Veolia advises regional public authorities in decision-making to anticipate crisis situations, guarantee the performance of critical equipment and accelerate the return to normal after a crisis.

- maintain waste treatment activities, particularly waste collection and waste treatment facilities;
- maintain its energy management activities, on its heating networks and for industrial and commercial sites.

As part of the management of the Covid-19 health crisis, Veolia had to adapt its working methods and the operation of sites around the world, which made it possible to test and improve the implementation of these business continuity plans. Prevention of health crisis situations remains a priority at Veolia. This experience also enables anticipation of disruptions and crises linked to the consequences of climate change. Veolia assists regional public authorities with decision-making by adopting a long-term vision to anticipate crisis situations, guarantee the performance of critical equipment and accelerate the return to normal after a crisis.

These impacts will be felt in the short term during the GreenUp 2024-2027 strategic program but also in the medium and long term as Veolia's activities are part of a long-term contractual framework (around ten years).

In 2023, Veolia conducted a physical climate exposure study, based on a 4°C global warming scenario by 2100. A new exposure tool will update this analysis in 2026. The Group is also equipping local entities (Business Units and operating sites) with a toolbox containing vulnerability profiles and adaptation solutions for the main Group activities. These tools help local entities to identify adaptation measures and launch action plans to strengthen their resilience. By adapting its operating methods, Veolia ensures continuity and quality of essential services while preserving the infrastructure under its responsibility (see section 4.1.2.1.5 Adapting to climate change).

Veolia implements local solutions to ensure a continuous supply to people who need constant access to essential services for medical reasons.

In 2025, Veolia Spain strengthened its critical infrastructure management system by defining specific codes for service points (SPs) of maximum criticality for hospitals, healthcare centers, and fire protection systems. Veolia implemented an automated system that marks service connections as critical and non-interruptible when a SP has a criticality code, integrating this information into the notification systems. Annual reviews and automated assignment of Service Point Type for new fire protection contracts. The corresponding instruction was updated in October 2025, consolidating a robust framework to ensure service continuity in facilities where supply disruption represents a direct risk to human life.

As part of the municipal and treatment activities, Veolia in the United Kingdom is responsible for an Assisted Collection Service. This service is provided for householders who are unable to take their bin to the kerbside because of disability or ill health. Special arrangements are made for the Veolia's collection teams to collect their bins from where they are stored outside the property for collection, and return them after they have been emptied. The service is logged within collections software so crews know which households need extra support. During 2025, more than 69,600 households benefited from this service.

The Veolia Foundation is committed to working with emergency responders to address essential needs in the event of a crisis or by

deploying long-term solutions in regions without suitable infrastructure. The challenge is, in a humanitarian context, to ensure the fastest possible access to essential services. This includes providing water to victims after an earthquake, hurricane, or tsunami; managing the sanitation of refugee camps after population movements; and addressing the consequences of climate change by finding access to water in areas affected by water stress. In 2025, the Veolia Foundation took part in 20 development aid or emergency humanitarian assistance projects. Around 40 Veoliaforce missions called upon some 176 volunteers for skill-based sponsorship, in addition to the 9 permanent staff members dedicated to the Foundation's support and sponsorship activities.

4.1.3.3.5 Engage with regions and communities

Ecological transformation can only succeed if all the stakeholders in the value chain work toward the same goals. The following IRO are part of this collective challenge. The opportunities for dialogue that Veolia is putting in place allow stakeholders to express their views and voice concerns, but they can also make themselves heard by taking positions against Veolia's activities.

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S3-ST-5 Risk of challenge and dispute by a stakeholder arising from their perception of our activities			
Communication about these issues can reach far beyond the local area through widely-viewed television reports, press articles, social media, and other channels.). Environmental issues, particularly those related to health, are now major concerns for citizens, and represent sensitive subjects. Moreover, such concerns are becoming more frequent, increasing		the Group's exposure. These impacts will affect both the short term GreenUp 2024-2027 strategic program and the medium to long term, as Veolia operates under long-term contracts typically lasting around ten years.	

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	The development of Group activities creates impacts on the environment where it operates, society and all its stakeholders, including its supply chain.
Business model	This IRO contributes to Veolia's financial, commercial and social performance.

Listening to and engaging in dialogue with residents, local communities and local decision-makers is an opportunity for Veolia to improve the understanding and acceptability of its projects. This approach helps identify levers for improvement enabling better integration within the regions and accelerating the ecological transformation.

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S3-ES-6 Veolia's role in raising stakeholder awareness by proactively explaining how each actor can contribute to ecological transformation			

Through listening and constructive dialogue with stakeholders, Veolia improves the acceptability of its projects locally and identifies respective levers for improvement to accelerate acceptance and integration within local communities.

These impacts will be felt in the short term during the GreenUp 2024-2027 strategic program as well as in the medium and long term, as Veolia's activities operate within a long-term contractual framework (typically around ten years).

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	This IRO engages the Group in extensive and regular exchanges in the upstream value chain, with affected communities and their representatives. In the downstream value chain, the main objective is to accelerate the implementation of effective solutions for the environment.
Business model	This IRO contributes to Veolia's environmental, social and commercial performance

Dialogue and mutual understanding are essential

The competitive landscape and rapid market developments in which Veolia operates, combined with its diverse geographic presence, require ongoing dialogue and collaboration with all stakeholders, whether local, national or international. By maintaining close relationships with public authorities, civil society, international organizations, multi-stakeholder platforms, local communities and consumers, the Group creates an opportunity to better understand their expectations, establish a long-term local presence and co-create innovative solutions with these partners. The Group's "multi-local" strategy addresses these needs at the local level with solutions tailored to each specific situation. These situations vary according to regional, social, ethnic contexts, and are managed based on a principle of subsidiarity.

Veolia implements initiatives to foster dialogue with local communities and residents through targeted information and awareness campaigns. These include neighborhood meetings, meetings with elected officials and local associations, facility tours and open days to inform the

general public, and volunteer opportunities. Each year, the Group conducts various sustainable development education programs and awareness campaigns in the regions where it operates. These initiatives help explain sustainable development challenges that are more relevant to local concerns and support dialogue with communities, empowering them to become active participants in ecological transformation.

In Spain, Veolia continues to implement its catalog of educational programs tailored to different age groups in order to impart knowledge and promote a responsible attitude toward the sustainable use of resources. Aqualogia has evolved with the integration of Aquakits, educational kits designed for 4th, 5th, and 6th grade elementary school students to discover the urban water cycle in their city in a cooperative way, using active and gamified methodologies. Another educational program, Missió H2O, implemented in Catalonia, aims to promote knowledge, awareness, and responsibility in sustainable water management. Through a game-based workshop, participants are invited to step into the shoes of different professionals involved in water

management. It also highlights the challenges posed by the climate emergency and how to address them in a sustainable way.

The dialog opportunities that Veolia is establishing allow various stakeholders to express themselves, but also create potential risks when stakeholders voice opposition to Veolia's activities. Key risk areas include: disputes related to nuisances caused by or perceived by sites operated (such as odors, dust, atmospheric emissions, and discharges), which are particularly problematic in cases of regulatory non-compliance; authorization procedures for the site extension or new openings; and challenges arising from dialogue committees. Veolia has faced such opposition with projects involving incinerators (such as Arianeo in Nice, France and facilities in Illinois, USA), as well as the waste storage facility in Woodlawn, Australia, where stakeholder resistance has posed significant challenges to operations.

Communication about these issues can reach far beyond the local area through television reports, press articles, social media, and other channels with a wide audience. This can seriously damage Veolia's reputation. Environmental issues have become major concerns for citizens, especially regarding health impact, making these particularly sensitive topics. Moreover, these issues arise more frequently, increasing the Group's exposure to risk.

To mitigate these risks, Veolia has introduced new governance models in its certain contracts that include representatives from local communities affected by its operations. For example, the Arianeo project in Nice illustrates how local residents and stakeholders can be meaningfully involved in the contract. Veolia and the Nice Côte d'Azur Metropolis developed this innovative governance model for the Arianeo energy production center, which aims to generate energy from non-recyclable waste. Stakeholder integration is central to the project at multiple levels:

- A High Environmental and Social Committee (HCES) has been established, comprising one-third project partners and two-thirds of civil society representatives. This committee participates in decisions about project management and performance;
- Neighbourhood committees participate in the HCES, ensuring direct representation of local residents;
- The Bank of the regions, as a financial partner, is also included in decision-making;
- Local initiatives have been put in place to engage the Ariane neighbourhood community of the where the facility is located:
 - educational courses for schools,
 - 100 m² space dedicated to local associations and residents,
 - "Repair Café" to encourage repair and reuse.

At the end of 2024, the HCES validated the creation of a new third place dedicated to entrepreneurship, which will serve as an open resource and guidance center for residents, offering programs, workshops, product testing, and connections to the local economic ecosystem. In 2025, efforts focused on developing this third place and finalizing the facility tour route, which will also require approval by the HCES.

This approach draws from Veolia's "+1, ecology in action" dialogue system, designed to include stakeholders in environmental projects. The objective is to optimize the project's environmental and social performance, while ensuring community acceptance and seamless integration in the local area. It is expected to be fully operational in 2026.

4.1.3.4 Consumers and end-users (S4)

4.1.3.4.1 Introduction

Consumers and end-users, within the meaning of ESRS-S4, are individuals who acquire, consume or use goods and services for personal use, either for themselves or for others, and not for resale or commercial purposes. Among Veolia's activities, those involving consumers and end-users⁽¹⁾ are mainly drinking water and wastewater services. District heating activities, mainly in Central Europe, and electricity distribution, mainly in Morocco, also include this interaction with consumers and end-users.

With regard to these consumers and end-users, Veolia has two priorities:

- Listening to customers, interaction with them being an integral part of the service provided. Section 4.1.3.4.2 "Services provided to consumers" details this point around the IRO "S4-ST-1 Consumer and end-user satisfaction through the quest for quality in the services delivered";
- Provide a high quality water, heating or electricity service. Section 4.1.3.4.2. also details this point around the IRO "S4-ST-2 Continuity and quality of essential services through the security of our operations".

Beyond consumers and end-users, a large majority of Veolia's activities are part of B2B (business to business) contracts often limited to a few years, with a strong challenge in terms of renewal or conquest of new contracts. These contracts may be signed:

- with public actors (subcontractors - public authorities) who need environmental services for the region they administer; these contracts are often the underlying framework for the relationships with the consumers and end-users referred to above;
- or with private actors (industrial, tertiary) who wish to integrate environmental services into their production process.

The tender documents produced by public agencies (local authorities) describe the objectives and means to meet the satisfaction of consumers concerned by the service. The call for tenders process is based on a regulatory procedure. The relationship with stakeholders upstream of the tender process is the responsibility of the delegating authority.

Challenges with regard to the quality of the relationship with these clients determine the sustainability and scope of the environmental services provided. This is why Veolia has chosen to add to the topics defined in the S4 standard a specific topic around the material IRO "S4-ES-3 Renewal and gain of new contracts as a trusted provider based on recognition of our operational know-how and respect of Ethics and Values", which is detailed in section 4.1.3.4.3 "Serving all customers" below.

⁽¹⁾ Includes end-users who subscribe, directly or not, to the service (e.g. water or district heating consumers paying their bill via an agent).

Commitment	Objective	SDG	Metric – definition	2023 baseline	2024 Results	2025 Results	2027 target
Guarantee results over the long-term through innovative services	Customer and consumer satisfaction		Customer satisfaction rate calculated using the "Extended Net Promoter Score" methodology (score and revenue coverage)	Not applicable	NPS score = 55 with 81% of revenue covered	NPS score = 57 with 84% of revenue covered	NPS Score ≥ 30 with 80% of revenue covered
Sponsor	Nadège Petit	Member of the Executive Committee, Senior Executive Vice President, North American region					

4.1.3.4.2 Services provided to consumers

The materiality of topics related to consumers and end-users stems from their large number:

- Veolia supplies drinking water to around 100 million residents and around 100 million people are connected to sanitation;
- For heating, Veolia supplies around 8 million people, mainly in Central Europe and China;
- For the electricity business, Veolia supplies around 4.4 million people, mainly in Morocco.

Listening to consumers

Veolia has implemented an omnichannel interaction strategy with consumers, including: call centers, physical & virtual branches and mobile branches for remote areas. Customer service is provided 24 hours a day, 7 days a week for the term of the agreement.

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S4-ST-1 Consumer and end-user satisfaction through the pursuit of quality in the services delivered			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	The actors in the value chain involved upstream are mainly: • administrative and delegating authorities, which define the target for quality of service; • possible subcontractors, for example for call centers; • consumer associations. At Veolia, the stakeholders involved are: • the operational services delivering the service provided; • services that interface with consumers. Downstream, the main beneficiaries are the regions and their users		
Business model	This IRO contributes to user satisfaction through service quality, for water and energy activities, as well as to financial performance through billing based on compliant service, limiting the risks of disputes.		

These impacts have been evident since 2024, as shown by the improvement in the NPS, which is part of the Group's strategy, through the GreenUp program for 2024-2027 and beyond, in the multifaceted performance.

Continuity and quality of services

Example of the drinking water distribution contract in Shanghai Pudong:

- Compliance with water quality objectives;
- 100 pipeline renewal projects completed in a five-year program;
- 120% increase in pipeline linear in 10 years;
- 24-hour monitoring of water quality throughout the contract term.

Positive impact	Negative impact	Financial opportunity	Financial risk
S4-ST-2 Continuity and quality of essential services through the security of our operations			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	The actors in the value chain involved upstream are mainly: • administrative and delegating authorities, which define the target for quality of service; • some subcontractors providing sensitive services. At Veolia, the stakeholders involved are: • the operational services delivering the service provided; • services providing risk analysis and prevention. Downstream, the main beneficiaries are the regions and their users		
Business model	This IRO contributes to customer satisfaction, for water and energy activities, through the proper functioning of the regions.		

These impacts have been evident since 2024, as shown by the improvement in the NPS, which is part of the Group's multifaceted performance strategy, through the GreenUp program for 2024-2027 and beyond.

A customer relationship management policy focused on listening to end-consumers

Veolia draws on a consumer management policy that has three main objectives:

- Continuity and quality of essential services through the security of our operations;

- Consumer and end-user satisfaction through the pursuit of quality in the services delivered;
- Renewal and gain of new contracts as a trusted provider based on recognition of our operational know-how and respect of Ethics and Values.

Access to the service (water, electricity, heating) meets some essential principles that are based on the recommendations issued by various international bodies on human rights. For access to water, the five fundamental components relating to human rights (detailed in section 4.1.3.5 below), which are part of the requirements set by the delegating authorities, are listed below:

- availability;
- accessibility;
- affordability;
- quality and safety;
- acceptability.

To ensure consumer protection and satisfaction, Veolia draws on a systematic approach and some key principles:

- **Understanding consumer needs:** Surveys are conducted regularly to better understand their needs. These surveys also identify the main areas of dissatisfaction in order to improve the quality of service. Surveys are carried out locally to take into account very heterogeneous geographical areas, socio-economic diversity (rates, services), etc.;
- **Segmentation:** Veolia adapts the consideration of consumer demands according to their consumption, the nature of their activity and their vulnerability;
- **Customer Management Tools:** to manage its end-users, Veolia uses tools specifically tailored to the services offered. These tools allow for management of the complete relationship cycle, from subscription to termination. They make it possible to issue bills according to consumption and to collect them. These tools are interfaced with technical tools (for example, with the geographic information system or the action planning tool). To better manage consumers, their personal data are collected while complying with the regulations in place, in particular the GDPR in Europe: control of information about millions of consumers/customization adapted to context/robustness;
- **Omnichannel interaction and communication with consumers:** interaction with consumers takes place in person through reception agencies or remotely via the internet (website), via a mobile app or by telephone (call centers). In case of emergency (e.g. water quality problem), the customer can be alerted by SMS. Bills are sent either by post or by email when the consumer's email address is known (email address or telephone number: bill sent electronically by email or SMS). Social networks are also used to inform the consumer about the service provided;
- **Control of customer processes:** all the processes are designed to facilitate all the steps that consumers would have to take with Veolia. A procedure is applied for each process (connection request, subscription, meter reading, complaint handling, etc.). It is also possible to carry out certain procedures through the online branch or the mobile app (for example "Acuacar" in Colombia) to ensure that consumer requests are processed within the defined time limits;
- **Prioritizing consumer satisfaction:** in the "customers" component of Veolia's multifaceted performance, the NPS is the metric chosen to measure customer satisfaction. As part of the strategic program, the 2027 objective is an NPS > 30 covering 80% of revenue. This point is developed at the end of this section "**Measuring consumer satisfaction**";
- **Application of the subsidiarity principle:** consumer service obligations must meet different requirements imposed locally and are therefore subject to the principle of subsidiarity. First, the contract signed with the local authority customer will define Veolia's obligations and the expected level of service. In addition, a service regulation will define the reciprocal rights and duties between Veolia and the consumers and stems from local regulations. Finally, the contract will apply Veolia Group recommendations stemming from the shared

experience and best practices promoted by the Group to improve customer satisfaction. Veolia is committed to producing an annual activity report which, in addition to charting the events of the year, includes proposals for improving the service. The areas to which this principle of subsidiarity applies are:

- adapting the customer relationship to the local context (rates, billing frequency, payment method, etc.),
- keeping local branches close to the consumer,
- facilitating assistance for consumers in financial difficulty,
- facilitating access to water and electricity (in Morocco) in recently urbanized places,
- meeting with the consumers (surveys, community meetings, etc.),
- ensuring the implementation of specific actions in the event of an interruption of service (Water Safety Plan for example);

- **Governance:** At the corporate level, Veolia sets recommendations, thresholds and targets, which are useful to the different local entities that are responsible for the commitments backed by each of the local contracts in line with local regulations. In addition, thanks to the efforts of expert communities from the various local organizations, Veolia identifies best practices, formalizes them and supports "Copy and Adapt" approaches.

All these principles are implemented in accordance with the [Veolia Ethics & Values Guide](#).

Compliance with these local commitments is ensured by delegation of authority according to hierarchical level.

A system that optimizes impacts with consumers

Maximizing the positive impact on consumers: they contribute to the good image of the undertaking, and thus to the renewal of contracts and winning new contracts. The system deployed by Veolia, thanks to the safety of the operations, provides the consumer with:

- **Quality of products delivered to consumers** in such a way as to ensure the best possible protection against health and safety risks, especially for the most vulnerable (children, hospitals). For example, for the production and distribution of drinking water, Veolia relies on the standards of the country concerned, and on internal best practices, to ensure that water quality complies with the defined criteria and that it is monitored. To do this, Veolia carries out sampling at different frequencies (continuous, daily, weekly) according to the chosen criteria. These monitoring actions may be part of a Water Safety Plan. In the event of contamination, Veolia implements a crisis management plan to trigger the necessary actions to protect end-consumers;
- **24/7 emergency operation:** Veolia responds 24 hours a day, 7 days a week, to all technical emergencies. A technician intervenes within the deadlines set out in the contract in the event of water supply, water quality or wastewater drainage problems;
- **Viewing their account 24/7:** the consumer account can be consulted on the website or on the App 24/7 via a username and password. In case of difficulties, the consumer can call the Customer Service Center accessible at extended hours;
- **Control of their consumption:** an analysis of their consumption and a comparison with the previous year is made at the time of billing. The consumer may also seek advice from a customer representative to assess their level of consumption in relation to the size of their household and the equipment installed. Finally, the pricing structure can be done in such a way as to encourage the rational use of distributed water;
- **Warning in case of over-consumption/leaks:** the consumer is warned in the event of overconsumption of drinking water by email or text message at the time of billing. If they have a smart meter, they can be alerted directly by the smart meter;
- **Payment facilities:** in case of payment difficulties, Veolia undertakes to find a solution for the consumer, either by offering a payment schedule or by helping them find financial assistance according to the local context;

- **Facilitating access to services:** in order to facilitate access to the service, municipalities can take over part of the work ("social connections"); this is the case in Morocco, for example.

Minimizing negative impacts on consumers: Such impacts are always possible and Veolia is keen to minimize and prevent them, in order to ensure good consumer satisfaction and thus reduce the risk of denigration, payment default and loss of contracts.

The main negative impacts that can affect a consumer individually or a group of consumers are:

- incorrect billing;
- error in taking into account the payment;
- insufficient temperature (for heating);
- water shortage/power outage;
- water quality (including aesthetic concerns as well as regulatory requirements);
- lack of pressure at the tap;
- grid stability (for electricity);
- incident with the meter;
- incident with the distribution network (leakage, breakage);
- problem with the sanitation network;
- the mishandling of a complaint (reason, time limits, etc.).

Negative impacts are usually the consequences of a malfunction or error in one of the operational management or customer relations processes. They may also be due to an unforeseen external factor, for example an exceptional climate event or an accidental intervention by a third party on the network.

Veolia's five promises

To fulfil its commitment to provide the best service to consumers, the undertaking relies on the "Five Veolia Promises" for all its contracts:

- To be fully committed to water quality and energy supply;
- To respond and help customers cope with incidents;
- To support customers in managing their bills;
- To be there to help, however and whenever the customer wants;
- To help customers manage their consumption.

In its activities related to the production and distribution of drinking water, Veolia disseminates its requirement standards and best practices through its operations and makes service commitments that reflect its expertise in production, network management and customer service. Communities of employees working in consumer services share their experiences and harmonize best practices among Veolia's global business units. For each of its contracts, together with its clients (local authorities), Veolia establishes service rules adapted to local issues and consumer expectations.

In order to respond to unforeseen water supply interruptions and/or to organize scheduled interruptions, Veolia deploys the following measures:

- **in case of unplanned supply interruption:** a Geographic Information System (GIS) is used to locate the incident and identify the consumers affected. This GIS system also locates the valves to be closed to isolate the incident and perform the repair. In addition, consumers are informed by telephone of the reason for the interruption (scheduled cuts, maintenance work, burst pipeline, network incident, water quality, etc.) and the expected time of restoration of the water supply or electricity service. If the water supply interruption has to exceed a certain time (usually six hours but this depends on local policy), an alternative water supply by trucks is implemented;

- **for scheduled interruptions:** a work order management tool is used to create and manage an intervention order; each work order is linked to property/equipment taken into account in the Geographic Information System. The consumer is informed by the online branches or by the customer relations center of the areas that are experiencing a water cut with the provisional date of re-launch.

Given the variety of situations, in application of the principle of subsidiarity, each contract has its own monitoring metrics and progress objectives. The metrics concerned at the contract level are generally:

- The progress and the rate of implementation of the actions identified with regard to negative impacts arising from the satisfaction surveys (time limit for completion of a connection, time limit for response to different types of complaints, time limit for intervention following a service interruption);
- Highlighting the positive impacts through a specific communication campaign covering the results of the last satisfaction survey or covering the improvement of metrics linked to an action plan.

Targets to improve a negative impact are set taking into account contractual obligations, but also the outcome of satisfaction surveys (CSAT) which give an appreciation of the end-user's expectations. These metrics are then shared with the various stakeholders (regulators, public authorities, consumer associations) to assess their relevance and ensure that the objectives are met.

A multi-channel approach to communicating with all consumers

In order to reach the maximum number of customers, Veolia uses several communication channels to inform or exchange with its customers, such as:

- website;
- mobile app;
- customer bill;
- SMS;
- emailing campaign;
- customer branches;
- mobile branches;
- social networks;
- community meetings.

In terms of the contract, the existence of these channels is brought to the attention of end consumers through communication in the form of flyers, digital or paper signs within the agencies but also on the website or on the mobile application.

Although Veolia favours modern means of communication with consumers because of their speed and simplicity, it is always possible to visit a branch and meet a customer advisor. Physical reception makes it possible to deal with complex consumer complaints and to welcome consumers who are not used to digital tools.

SMS communication is mainly used to inform consumers of an incident (interruption of service or water quality) or to inform them of a change to their account (new bill, recording of a payment, etc.).

The website and mobile app allow consumers to view their account in real time, to consult any incidents on the service, to obtain general information (rates, quality of the water distributed, etc.) and make requests online.

The bill can also be used as a form of communication, for short messages addressed to all consumers or to a specific category.

The form of communication is also chosen according to the category of consumer; the consumer database is managed by a CRM, which allows the communication to be adapted according to the consumer.

In addition, Veolia implements omnichannel management based on the latest technological innovations to allow 24/7 contact and facilitate self-service, including:

- customer relations centers to support subscribers in all procedures with IVR technologies;
- local reception areas: branches or mobile branches with self-service kiosks;
- web portals;
- mobile applications that customers can download onto a smartphone and use to carry out key transactions relating to their water service;
- chatbots;
- social media contacts.

Some or all of these channels are set up depending on the contract and sociocultural context.

For example, in Ecuador, privileged access in branches for vulnerable people and the introduction of buses travelling around the more remote regions have allowed the teams to get closer to customers whose access to branches was more difficult. In Colombia, Cartagena de India, thanks to numerous channels of attention and analysis at any steps of the process (planning, arrival, waiting time, interaction, after interaction, customer satisfaction survey) it allows to facilitate the interaction and ensure a positive customer experience for various categories of end customers including the vulnerable.

Careful handling of consumer complaints

A specific procedure is put in place to facilitate the handling of complaints for all Veolia contracts covering more than 100,000 people or managing more than 30,000 subscribers; this principle is set out in the "Essential principles" of the internal consumer service framework.

In this regard, Veolia has implemented a formalized and accessible complaint handling system, with a detailed description of the procedures in the operational document entitled "Claims Management". Depending on the country, independent companies can verify the undertaking's claims management system, such as companies that carry out system quality audits.

Regarding the quality of service, Veolia undertakes to deal with complaints and to regularly inform the consumer of the progress of their file.

To do this, Veolia has committed to time limits for processing, according to the type of complaints, and also gives the end-consumer the opportunity to monitor the progress of their complaint. The complaint time limits are then analyzed by type to understand any discrepancies and propose corrective action plans to remedy them. A reminder system allows the consumer to check whether the complaint has been processed correctly and on time.

Veolia ensures that consumers are satisfied with the quality of responses, for each contact channel, thanks to ad hoc Customer Effort Score (CES) surveys. Each year, survey campaigns are also used to calculate the Net Satisfaction Score (NSS) to assess end-user satisfaction and propose corrective measures.

In the event of unresolved conflict or disputes with a consumer, a mediator can be contacted (water ombudsman in France, Whisppli platform). This mediation is organized at the level of each Business Unit and can be done at the level of a trade union (in France, water mediation through the FP2E), by consumer associations or internally with a dedicated service.

A specific approach for vulnerable or disadvantaged consumers

Veolia makes sure to provide personalized answers according to the profiles of its consumers and in particular for the most vulnerable populations or those whose access to water or electricity is essential. For example, when a consumer visits a Veolia branch in Ecuador, a reception agent is responsible for directing them, according to their need for assistance, to an agent trained in this type of situation.

These specific support needs particularly apply to situations of vulnerability such as:

- physical and cognitive disabilities and impairments (visual or auditory);
- difficulties in using digital means.

Moreover, consumers such as people on dialysis, hospitals, or any activity where access to water is a priority are identified as such in the consumer base to guarantee continuity of service in the event of a serious crisis.

Economic vulnerability is taken into account locally, in accordance with what is stipulated in the contract. Veolia does not have leverage on its own initiative. The pricing policy, including in its social dimension, is the responsibility of the delegating authority.

Veolia implements initiatives to foster dialogue with local communities and residents: targeted information and awareness campaigns, including neighbourhood meetings, meetings with elected officials and local associations, installation visits and open days to inform the general public, as well as volunteering.

Veolia is involved with these communities in various ways, including through regional socio-economic analyses, community ties and the provision of methodological tools to organize stakeholder engagement at regional level.

Measuring consumer satisfaction

Each year, as part of its multifaceted performance, Veolia discloses a customer satisfaction metric, the Net Promoter Score (NPS) mentioned in section 4.1.3.4.3 "Serving all customers", adapted to the clients with which Veolia enters into contracts (local authorities or industrials). When Veolia provides a service to end-consumers, for example in the case of concessions for the distribution of drinking water or electricity, there is an additional metric called NSS (Net Satisfaction Score) on the satisfaction of its end-consumers, which contributes 30% of the NPS metric. As mentioned in the introduction to this section, the term "end consumer" is used in reference to natural persons who acquire, consume or use goods and services for their personal use, either for themselves or for others, and not for resale or commercial purposes.

The NSS metric is based directly on the CSAT satisfaction survey, the raw material of the surveys is the same. The calculation principle of the NSS is similar to that of the NPS, which imposes a rating on a scale of 0 to 10. This method identifies dissatisfied consumers who give a score between 0 and 6, called detractors, and very satisfied consumers who give a score of 9 or 10, called promoters.

The analysis of the surveys received makes it possible to identify individual or collective dissatisfaction points. Action plans are then implemented on the ground in order to correct these sources of dissatisfaction.

This annual work increases the chances of contracts being renewed when they come to an end, but also the chances of widening the scope of the markets.

For example, for Morocco, investment in customer management, particularly on the quality of meter reading and the digitalization of the relationship with consumers, has lightened the demand on branches and allowed our consumers to get answers more easily and by themselves, thanks to the online branch and the dedicated mobile app. The growth in the NSS has been significant, going from 11 to 26 over three years for Rabat (REDAL contract).

For end-consumers, the NSS Annual Satisfaction Survey is outsourced to survey institutes that apply their own methodologies (IPSOS, etc.). For water activity, the survey topics are the different dimensions of the service and include, among other things:

- the quality of the water distributed (sanitary quality, taste, pressure, etc.);
- continuity of service (leak repair, faults, service disruptions);
- availability, assessed by contact channels, branch opening hours, etc.;
- reception, assessed by quality of reception, listening capacity and competence of agents;
- simplicity, assessed by the clarity of the bill, the diversity of payment methods, etc.;

- support, assessed by the measures proposed to help consumers in difficulty;
- advice assessed by the information provided, in particular in terms of control and limitation of consumption.

Based on this annual survey and to promote the consumer-centric attitude, a dedicated community coordinated at Veolia level, called "Voice of the Customer", organizes and leads meetings to share best practice and compare results. It also relies on a digital platform to have access to all resources.

To support this end-consumer satisfaction program, seven key success factors were identified:

1. Leadership sponsorship and support;
2. Conduct one survey per segment related to operational organization;

4.1.3.4.3 Serving all customers

Veolia has acquired recognized know-how as an operator of complex environmental services and draws on this asset to renew expiring contracts and conquer new markets, for example:

- Veolia industrial services of the Czech Republic, has been awarded in 2025 the construction of three cogeneration gas units in the territorial city of Ostrava in the Korytko location. The implementation of these

3. Involve those in charge of the action plan in drawing up the questionnaire;
4. Define the target with a reliably representative sample thanks to a subcontractor expert;
5. Establish a customer-centric attitude among all employees;
6. Ensure that the system has both stability and flexibility to adapt to changes in the business;
7. Automate the survey process and integrate it into internal CRM systems.

In terms of targets, the NSS contributes 30% to the target set for the NPS and set out in section 4.1.3.4.3 below.

cogeneration units will contribute to the transition away from coal-fired power plant in Třebovice and ensure the supply of thermal energy for the city of Ostrava with the lowest possible impact on the environment;

- the 2025 renewal of its role as operator of the public drinking water service for Saint-Louis Agglomeration in the Eastern region of France.

The corresponding IRO is provided below:

Positive impact	Negative impact	Financial opportunity	Financial risk
S4-ES-3 Renewal and gain of new contracts as a trusted provider based on recognition of our operational know-how and respect of Ethics and Values			

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	The actors in the value chain involved upstream are mainly: • Veolia's B2B customers, in their assessment of which partners to retain for their outsourced environmental services. At Veolia, the stakeholders involved are: • operational entities through the provision of a high quality service; • commercial entities who interface with customers and prepare offers Downstream, the main beneficiaries are consumers and shareholders.
Business model	This IRO contributes mainly to commercial performance, through the contribution of customer satisfaction, for water and energy activities, to the maintenance and growth of the business portfolio.

Veolia sends an annual satisfaction survey to all public or private B2B clients, according to the Net Promoter Score methodology. In addition to collecting satisfaction scores on the standardized scale of 0 to 10, four or five questions are asked in relation to contractual commitments. The analysis of the responses makes it possible to identify individual or collective dissatisfaction points. The action plans triggered on the basis of the results make it possible to deal with individual dissatisfaction but also, over a longer time, to decide on modifications or adaptations to the way the service is delivered. Veolia makes every effort to ensure a good level of satisfaction throughout the contract in order to give itself the best chance of renewing its contracts when they come to an end. Moreover Veolia ensures the respect of Ethics and Values.

In addition, for all major contracts that are reopened to competition, the technical and marketing services at the headquarters are mobilized to maximize the chances of success.

Measuring customer satisfaction

Each year, as part of its multifaceted performance, Veolia discloses a customer satisfaction metric, the Net Promoter Score (NPS). Customers affected by the NPS are:

- 70% clients with which Veolia has contracts (local authorities or industrials), based on the results of the annual satisfaction survey referred to above;

- 30% consumers and end-users via the integration of the NSS as indicated in section 4.1.3.4.2 "Services provided to consumers".

Veolia has set itself the target of an NPS of more than 30 for 80% of its revenue in 2027:

- The choice of an NPS above 30 each year, and therefore sustainably, is explained by the diversity of the customers, public subcontractors, service consumers or private customers, from countries with very different cultures;
- It should also be remembered that the range of the NPS value scale is between -100 and +100;
- Finally, the customer can react in a given year to an increase in the price of the service as an example, even if it is contractual and justified, which can bring down the value of the NPS.

Customer satisfaction metrics

Veolia has decided to report two types of customer satisfaction data each year:

- the NPS value at Group level;
- the revenue coverage rate.

4.1.3.5 Human rights

4.1.3.5.1 Introduction

The issue of human rights is more general in scope than that of any other CSRD standard, and the systems implemented by Veolia cover all human rights topics. To allow for coherent presentation on this important subject, this section contributes across ESRS standards S1, S2, S3 and S4.

Veolia implements solutions for water, waste and energy management that help improve the daily lives of millions of people and organizations around the world. The Group ensures that its activities are carried out in accordance with a set of values, principles, standards and attitudes aimed at ensuring strict respect for human rights for and by its internal stakeholders (employees) and external stakeholders (suppliers, subcontractors, partners, local communities, consumers and end-customers, etc.).

To this end, Veolia implements a human rights program designed to maintain the trust of third parties, strengthen the Group's attractiveness and market differentiation and preserve its reputation. This system is fully in keeping with the Group's purpose.

4.1.3.5.2 Reference texts

The Veolia Group has implemented measures aiming to comply with the highest standards imposed by international legal frameworks and takes the necessary steps to ensure and promote the protection of human rights alongside governments, non-governmental organizations and its peers. To do so, Veolia refers to the obligations and principles established by the following texts:

- International Covenant on Civil and Political Rights;
- International Covenant on Economic, Social and Cultural Rights;
- Convention on the Rights of the Child;
- United Nations Global Compact;
- United Nations Sustainable Development Goals;
- International Labour Organization's Declaration on Fundamental Principles and Rights at Work and ILO fundamental conventions on, inter alia, child labour, forced labour, non-discrimination, freedom of association and the right to organize and collective bargaining;
- OECD Guidelines for Multinational Enterprises;
- UN Guiding Principles on Business and Human Rights.

4.1.3.5.3 Eight priority issues

The Veolia human rights policy covers eight priority issues.

- Three issues relating to the rights of the people impacted by its activities:
 - right to a healthy environment and protection of resources,
 - right to water and sanitation,
 - rights and lifestyles of local communities;

- Five issues relating to fundamental labour rights:

- elimination of forced labor: Veolia prohibits any form of forced or compulsory labour. These commitments are recalled in the Group's Ethics Guide, in particular, the requirement to comply with fundamental international labour standards and the prohibition on the use of forced labour in all its operations. This prohibition also applies to any form of modern slavery and human trafficking,
- abolition of child labour: Veolia strictly prohibits child labour. Minors can work in certain special cases, particularly work-study apprenticeships, but only in compliance with all regulatory provisions. These commitments are listed in the Ethics Guide, particularly in regard to compliance with the fundamental international labour standards and the prohibition of child labour,
- the elimination of discrimination: in particular respect for diversity and inclusion (covered in standard S1 in section 4.1.3.1.5 above),
- the promotion of freedom of association and collective bargaining: in particular social cohesion (covered in standard S1 in section 4.1.3.1.6.2 above),
- right to a safe and healthy working environment.

4.1.3.5.4 Define, steer and coordinate the Human Rights program

Program governance

The Human Rights and Duty of Care Committee is at the center of Veolia's approach to coordinating issues concerning human rights and fundamental freedoms. Chaired by the Group's General Counsel and led by the Compliance Department, it is responsible for the proper roll-out of Veolia's human rights policy and its appropriation by employees and monitors the implementation of action plans. In 2025, the committee met two times.

The Compliance Department performs its human rights role through a network of compliance officers covering the entire Group. This network is coordinated and facilitated by a human rights and duty of care manager reporting to the Compliance Department.

4.1.3.5.5 Identify and manage alerts and risks

Human rights risk mapping

As provided for in the law of March 27, 2017 on the duty of care of parent and subcontracting companies, the development of the mapping comprises three stages: risk identification, analysis and prioritization.

- Risk identification: a risk framework has been established covering human rights, health and safety and the environment. It is based on the main international treaties and conventions on the risks identified by the BUs and the Group's business experts.
- Risk analysis: the risks were analyzed according to their level of probability and severity. The level of control of each risk was also assessed.
- Risk prioritization: the risks were graded to highlight the most material risks.

The risk mapping is updated annually, in the light of any legislative, regulatory or organizational changes.

4.1.3.5.6 Identify and evaluate whistleblowing reports

Whistleblowing system

The Group's whistleblowing system, the "Veolia Ethics Alert Process", is also used to handle incidents linked to violations of human rights and fundamental freedoms, issues carefully monitored by Veolia.

In accordance with the requirements of the law, Veolia has implemented a whistleblowing system, called "Whispli", open to both Group employees and third parties to ensure the reporting of situations that fall under the duty of care. In this context, whistleblowers have the opportunity to remain anonymous if they wish, even if this method is not recommended because it does not guarantee the best possible processing of the alerts received. Responsibility for this mechanism has been entrusted to the Group's Ethics Committee.

The link to be used by third parties to refer a matter to the Ethics Committee is: <https://veolia.whispli.com/fr/tiers-ethique>.

Third-party assessment

Veolia relies on a third-party assessment system that includes various components.

Assessments carried out as part of the so-called "Major Projects" process also take human rights issues into account.

The Group assesses the performance of its Top 500 suppliers (spend basis), in the fields of fundamental, social and environmental rights. Assessments cover 21 topics such as water, local contamination, social dialogue, child labour and forced labour (see 4.1.3.2 above).

4.1.3.5.7 Train and raise awareness of our employees

Development of an online human rights training course

A "Human Rights" e-learning course has been offered since 2022. The purpose of the training is to better understand the organizational framework, develop the values of respect and responsibility and understand the role that everyone plays in ensuring human rights on a daily basis. Nearly 14,000 employees signed up for this training in 2025.

4.1.3.5.8 Control and improve processes

Control and assessment

As part of the annual assessment of the Group's compliance system, compliance with requirements related to the duty of care (human rights, health and safety, environment) is subject to in-depth review. The results of this work are presented and discussed by the Human Rights and Duty of Care Committee.

Additionally, in 2025, in order to improve its process related to human rights due diligence, Veolia participated in the Human Rights Accelerator Programme of the United Nations Global Compact. This initiative is designed to help companies integrate human rights into their operations and value chains. It provides structured support to participating companies through training, practical tools, assessments and mentoring to help them identify, prevent and mitigate negative impacts on human rights. The programme focuses on building companies' capacity to conduct human rights due diligence, develop appropriate policies and establish effective grievance mechanisms.

4.1.3.5.9 Metrics

■ ESRS S1 17-100 to 104: Human rights cases, complaints and incidents.

■ ESRS S2 4-36: Human rights incidents.

Whistleblowing reports relating to the duty of care, submitted via the internal whistleblowing system

	2024	2025
Total number of alerts	84	126
Human rights	33	1
Discrimination (included in human rights in 2024)	Not available	63
Health and safety	37	59
Environmental damage	2	3
Suppliers and subcontractors	12	9

In fiscal year 2025, Veolia was not convicted of breaching human rights laws.

4.1.4 GOVERNANCE INFORMATION

4.1.4.1 Business conduct (G1)

4.1.4.1.1 Introduction

Among the important cross-functional topics, ethics and compliance are core Veolia values and are key elements of its policy. They are sponsored by the Executive Management and apply to all Group employees and across all zones. This topic is reflected in IRO G1-ST-1 detailed in section 4.1.4.1.2 below.

Another important cross-functional topic is cybersecurity, which guarantees the security of the information system. IRO G1-ST-2 echoes this in section 4.1.4.1.3 below.

As stated in its purpose, Veolia is committed to contributing to the development and progress of society. Due to the weight and scope of its supply chain, the Group can leverage a significantly positive effect on society. To this end, Veolia intends to promote responsible and sustainable business relationships with its suppliers and subcontractors. This covers the ethics and compliance issues referred to above. Beyond this, and in accordance with the requirements of ESRS G1, this covers the suppliers payment terms, as developed in section 4.1.4.1.4 below.

Commitment	Objective	SDG	Metric – definition	2023 baseline	2024 Results	2025 Results	2027 target
 Support regional development through responsible means	Ethics and compliance		• Positive answers to the ethics and compliance question in the “Voice of Resources” survey	88 %	86 %	88 %	≥ 83%
Sponsor	Eric Haza		Member of the Executive Committee, Chief Legal Officer				

4.1.4.1.2 Ethics and Compliance

Business ethics is a subject that the management of the company sees as an essential matter for everyone. It translates into the following IRO:

Positive impact	Negative impact	Financial opportunity	Financial risk
G1-ST-1 Loss of contracts or defense costs due to unethical practices (non-compliance with human rights, corruption, etc.) with our clients, suppliers, partners, communities, and employees			

Preventing corruption and other unethical business practices is a major issue for the Group and all its employees. The Group must be particularly vigilant regarding these risks, particularly due to the nature of its contracts, the investments made and the difficulties unique to certain countries where it operates.

Actions by employees, corporate officers or external stakeholders which contravene the principles set out by the Group could expose it especially to loss of contracts as well as harm to its reputation.

The reputational and commercial (loss of contracts) consequences can be considerable and require a robust compliance program to prevent and manage these risks

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Veolia's actions meet expectations both upstream (regulatory authorities, regulations, local authorities, etc.) and downstream (customers, local communities, etc.).
Business model	The compliance program fosters a culture of transparency and integrity within the Group, thereby working to protect its reputation and the trust of internal and external stakeholders. It not only helps reduce risk in these areas, but also strengthens the Group's appeal and the uniqueness of its commercial offerings.

Line 1: Organization and governance

Veolia considers that ethics and compliance are inseparable; they both contribute to ethical security. On these two subjects, governance is ensured by the Ethics Committee and the Compliance Department.

The Ethics Committee has six members appointed by the Executive Committee, who may be employees, former employees or individuals from outside of the Company presenting the necessary guarantees of independence and expertise. Independent in the conduct of their duties, Committee members cannot receive instructions from Executive Management or be removed during their renewable four-year term of office.

The Committee is responsible for ensuring the proper application of the values as set out in Veolia's Ethics Guide, to which the Group and all its employees adhere.

As part of its responsibilities, the Ethics Committee interprets the Ethics Guide taking into account the diversity of the companies belonging to the Group, the specificities of their activities and the legal, regulatory and social framework of the countries in which they operate.

It is empowered with the authority necessary to fulfil its mandate with regard to Veolia Group companies, both in France and abroad. On that basis, it can access any useful documents and meet with any Group employee, the statutory auditors and third parties.

In carrying out its mission, it may rely on the Internal Audit Department and on Group departments, which it may request to intervene on any matter within its competence. It may also use the services of external experts, visit any site or any Group company.

Furthermore, Veolia has a Group Compliance Department, reporting to the Group General Secretary, whose scope of competence covers the identification and prevention of compliance risks as well as adherence to procedures in the following areas:

- fighting corruption and influence peddling;
- money laundering and terrorist financing;
- corporate duty of care;
- violations of human rights and fundamental freedoms;
- environmental damages;
- prevention of anti-competitive practices;
- personal data protection;
- conflicts of interest;
- lobbying;
- insider trading;
- fraud.

The group Compliance Department is responsible for strengthening the compliance culture within the Group and in its relations with third parties to protect it against the risks of non-compliance. To this end, it uses all the tools at its disposal: standards, procedures, compliance programs, training and awareness raising campaigns, etc.

Specifically, the Group Compliance Department supervises with the assistance of others group department the creation, updating and distribution of all standards: the required charters, guides, codes, policies and procedures linked to its compliance programs. It supports Business Units with a network of compliance officers in the zones and countries.

Along with other departments, the Compliance Department is also responsible for detecting cases of non-compliance, handling them appropriately and proposing potential corrective measures so that these events do not occur again.

Its scope covers the entire Group as well as its relations with customers, partners, intermediaries, suppliers and subcontractors.

The governing bodies (Executive and Management Committees) and the Board of Directors of Veolia Environnement are fully involved in the definition and application of the Group's compliance policy. The Chief Compliance Officer as a member of the Group Management Committee:

- regularly attends Management Committee meetings, and at least once a year attends a meeting of the Accounts and Audit Committee. When needed, he is also consulted by the Board of Directors;
- reports directly to the Chief Executive Officer.

Group Compliance Department policies must be deployed by each functional department in relation to their respective activities and by all Business Units and zones, with the necessary adaptations at local level, where needed. Zone Compliance Officers are responsible for deploying the Group's policy at zone level.

Line 2: Define, steer and coordinate ethics and compliance programs

The compliance department ensures the governance of compliance programs, notably covering the topics of anti-corruption, prevention of anti-competitive practices, fraud prevention, and interest representation.

The Group has numerous documents on the fight against corruption that reflect its commitments as well as its rights and obligations. These documents take different forms, they can be guides, codes of conduct and charters. The Group has also developed benchmarks and policies that set out its principles, general guidelines and operating methods (policies, benchmarks, etc.).

Internally, the Group has set up and implemented procedures to define and provide a framework for the rules that apply to all its employees. This set of rules constitutes the Group's internal procedures.

In addition, the document "The Essentials", drawn up in 2023 by the Group Internal Control Department, summarizes the main compliance rules (EC01 to EC10) and demonstrates, given the positioning of the "Compliance" rules, their importance in the hierarchy of the Group's rules.

An Ethics Guide sets out the Group's core values and the resulting rules of conduct that form the foundation of the Group's economic, social and environmental performance:

- **Responsibility:** the Group is committed to promoting harmonious regional development and improving the living conditions of populations affected by its activities from a public interest perspective, as well as internally, by developing employee skills and improving health and safety at work;
- **Solidarity:** as the Group serves collective and shared interests through its business activities, this value applies to relationships entered into with all stakeholders. Concretely, it involves developing solutions enabling the supply of essential services to everyone and adherence to a Code of conduct for managers to ensure the Group's core values are shared and complied with throughout the world;

- **Respect:** guides the individual conduct of all Group employees through compliance with the law and the Group's internal rules and the respect shown to others;
- **Innovation:** imagine, create and be audacious in order to develop the environmental services of the future. Veolia has placed research and innovation at the centre of its strategy in order to develop sustainable solutions of service to its customers, the environment and society;
- **Customer focus:** seek ever greater efficiency and quality in services, listen to customers and strive to fulfil their technical, economic, environmental and societal expectations through the capacity to provide appropriate and innovative solutions.

The Anti-corruption Code of conduct, which is an appendix to the Ethics Guide, adopted by the Executive Committee in 2018, describes the principles and actions intended to respect the Group's commitment to absolutely prohibit any form of corruption and similar or equivalent behaviour, and to comply with best practice and regulations in this field. It applies within all companies controlled directly or indirectly by Veolia, in France and all countries where they operate or are located, regardless of legal status. All zones and Business Units must deploy the Code in their respective areas. In France and certain countries, the implementation requires the integration of the Code in the internal regulations of the legal entities in question. Within Veolia Environnement, the modified internal regulations entered into force on July 15, 2018. For France, the Anticorruption Code of conduct was presented to the Works Council. Outside France, the Anticorruption Code of conduct disclosure and implementation processes depend on local legal requirements. This Anti-Corruption Code of Conduct was presented in short sketches illustrating the corruption scenarios presented in the document, in order to help the Group's employees better assimilate the issues at hand. Each situation is supplemented with insights, references to the wording of the Anti-Corruption Code of Conduct and practical advice. This illustrated guide is an easy-to-share awareness and training tool that complements other initiatives deployed by the Group, such as e-learning modules or resources made available to employees primarily through the Compliance Department's intranet site.

In addition, political contributions are prohibited within Veolia. Veolia therefore made no financial or in-kind political contributions during the 2025 financial year.

Furthermore, the Competition Law Compliance Guide adopted in 2014 describes the principles and actions aimed at strictly complying with competition law rules and preventing anti-competitive practices. This document is part of the Group's Essentials; all areas and Business Units must implement this Guide within their respective scopes.

To share ethics and compliance issues with all Functional Departments of the Veolia Group, a steering committee was created in 2018: the Veolia Ethics and Compliance Committee. Chaired by the Ethics Committee chairman, it brings together the functional departments the most interested in ethics and compliance matters and, especially, the Compliance, Finance, Legal, Human Resources, Internal Audit and Internal Control and Communication departments. The Committee fosters exchanges, the better understanding of ethics topics as well as the coordination of action plans rolled out to materialize the Group's ethics policy.

Line 3: Identify and evaluate non-compliance risks

Corruption risk mapping

Since 2017, the Group has been continuously strengthening its compliance systems, based on the results of its specific mapping of corruption risks using a common Veolia methodology, which combines internal and external data.

Corruption risks are mapped initially at Business Unit level. This then provides a consolidated view at Group level, which enables the Business Units to identify the risks at global level.

In 2023, the corruption risk mapping was updated, based on a new methodology, at both Business Unit and Group levels.

This methodology is consistent and integrated with the Group's overall risk mapping process. It is also in line with the best professional practice and recommendations issued by public authorities and professional associations.

Third party assessment (suppliers, partners, intermediaries, customers)

Based on its business risks, Veolia has chosen to prioritize the assessment of its suppliers, and certain other particularly sensitive third parties, such as commercial intermediaries, partners in Group development projects and beneficiaries of sponsoring and patronage initiatives. Veolia's system for assessing the integrity of its third parties is based on several components.

Firstly, suppliers are analyzed using a dedicated software solution, whose deployment began in 2021 and continued throughout 2022. This solution has been operational throughout the Group since 2023.

In addition, commercial intermediaries are subject to a specific process, governed by an internal procedure. The Compliance Department is in charge of the process with the support of the Security Department. The contracts regarding these intermediaries are subject to a systematic review. A dedicated team within the Security Department is responsible for the part of the third party assessment process designed to identify and assess the legal, commercial, financial and reputation risks associated with using commercial intermediaries.

A similar process has been set up for sponsoring and patronage initiatives, whereby the integrity of the beneficiaries of such initiatives must be confirmed before the Group legally commits.

Furthermore, when the Group considers contracting with third parties for project development purposes, an assessment of these third parties is performed based on the corresponding internal procedure. Significant projects are therefore systematically reviewed by the compliance chain.

Line 4: Identify and process alerts

Whistleblowing system

The Veolia Group provides its employees with **traditional whistleblowing channels**, allowing them to report failings and shortcomings, including through their line manager or internal auditors, internal financial control teams, the Legal Department, staff representatives and the Compliance Department.

In parallel with these conventional whistleblowing systems, the Veolia company has a global **ethical whistleblowing system** (Whispli), administered by an independent body, the Ethics Committee. This is available in many languages 24/7 and meets the highest standards for the protection of whistleblowers under the Sapin II law, with cross-border scope, and the French law of March 21, 2022:

- A general whistleblowing system, protecting the whistleblower, enshrined in the Ethics Guide. Any breach of the values described in that document, which is divided into rules of conduct, can be reported to the Ethics Committee via a secure digital platform (Whispli), by email (ethique.ve@veolia.com) or by any other means. In 2022, this system was extended to the scope of Suez companies that joined the Group. It is important to underline that this whistleblowing system represents an alternative to the existing hierarchical alert systems within the Business Units (BU), which continue to exist and the use of which is encouraged. This reporting system is managed by the Ethics Committee. This centralized tool for receiving whistleblowing reports – which are investigated locally – allows whistleblowers to remain anonymous, if they wish. It is available to both Group employees and third parties. However, all internal and external parties can still bring their concerns directly before the Ethics Committee, with a high level of confidentiality. Any reports received by the Ethics Committee via this system, which it administers, and which appear to relate to compliance issues, are, in principle, forwarded to the Compliance Department which will investigate on its behalf. Internal communications on the Veolia ethical whistleblowing system have been rolled out regularly;

- The way of using of the whistleblowing system is specified in the "User Charter for Veolia's Ethics Alert Process" on Whistleblowing Rights (in its update of May 23, 2023), that can be consulted by all Veolia employees.

The protection of the Veolia Ethics Alert Process is the subject of the French law of March 21, 2022 (Waserman law) supplemented by the implementing decree of October 3, 2022, which transposed the European directive on "the protection of persons who report violations of the rights of the Union". This law aims to improve the protection of whistleblowers, which is now considered a true "democratic marker"; to do this, it has established the following, with which the Veolia Ethics Alert Process complies:

- A wider definition of whistleblowers: the requirement for the whistleblower to act in a disinterested manner has been replaced by the note "absence of financial consideration," which authorizes the admissibility of the alert, particularly in cases where the whistleblower is in conflict with their employer;
- A new status for the entourage of whistleblowers: the law extends certain protections to whistleblowers, in particular that against retaliation, to natural persons and non-profit legal persons (unions and associations) who/that are connected to the whistleblower and to facilitators who help to make the report (colleagues, friends and relatives etc.);
- Reporting channels are simplified, as the law has removed any hierarchy between them. Henceforth, the whistleblower will be able to choose between internal and external reporting, to the competent authority, the ombudsman, the legal system or the European bodies;
- External reporting may be made in the event of:
 - an internal report not being processed,
 - risk of retaliation or if the processing has no chance of success,
 - serious or imminent danger;
- Enhanced protection measures. The law reinforces the confidentiality guarantees in relation to whistleblowing and supplements the list of prohibited retaliation acts (intimidation, damage to reputation, blacklisting etc.);
- Whistleblowers' immunity from liability as a result of their report is extended, with whistleblowers being unable to be held liable, either civilly for the damages caused by their good-faith report, or criminally for having intercepted confidential documents related to their alert, containing information to which they had freely accessed.

It should be remembered that employees or third parties can use the Veolia Ethics Alert Process as an alternative to traditional hierarchical whistleblowing systems. The Committee guarantees the strict confidentiality of the exchanges and ensures the protection of the whistleblower, any witnesses and the person against whom the report has been made if said person is exonerated at the end of the investigation. In 2023, a new communication campaign was conducted on the "Whispli Voice" add-on module, which can be used to call the Ethics Committee.

All investigations conducted under Veolia's Ethics Alert Process are the responsibility of the Ethics Committee.

- **Ethics Committee:**
 - the Veolia whistleblowing system is centralized at Group level but largely decentralized when it comes to carrying out investigations, which the Committee can entrust to its Country Ethics Delegates (more than 50), which it trains annually. They are usually in a better position to fully comprehend the situation presented to them, particularly with regard to local realities and the language spoken,
 - once cases are referred to them, delegates act independently and confidentially, in particular in relation to their line managers, and report only to the Committee,
 - they pass on the results of their investigations only to the Ethics Committee which decides on the next steps,

- the Ethics Committee can also rely on Veolia's Internal Audit Department and can also use the services of external experts,
- where the alerts received appear to have a "compliance" content (corruption and influence peddling, fraud, theft, abuse of company property, anti-competitive practices, serious breaches of environmental legislation, money laundering and terrorist financing, serious breaches of human rights legislation), they shall be, in principle, forwarded by the Committee for investigation, to the Compliance Department, via a dedicated workflow within Whispli. The Compliance Department acknowledges receipt and then investigates within the platform with the resources available to it. When the investigations are completed, it notifies the Ethics Committee which informs the whistleblower of the follow-up to be given to its alert,
- when it considers the alert justified, the Ethics Committee makes recommendations to the line managers and inquires about the follow-up actions taken by these managers,
- when several alerts appear to be systemic in nature, it groups them together to make a common Recommendation,
- the Ethics Committee reports annually on its activities to the Veolia Environnement Board of Directors,
- finally, the Ethics Committee acts entirely independently;

■ Compliance Department:

- the Group Compliance Department investigates reports that fall within its area of expertise. When reports are forwarded to it by the Ethics Committee, investigations are conducted in accordance with the procedures described in the whistleblowing policy. The investigations are carried out in accordance with the procedures described in the User Charter for Veolia's Ethics Alert Process. This charter specifies, among other things, the protective regime for the whistleblower, the confidentiality rules to be respected when handling the alert and the conduct of investigations. For example, the investigations carried out and the follow-up to the report are always the subject of an investigation report,
- at the end of the investigations, the conclusions are submitted for approval to the Ethics Committee, which will be responsible for notifying the whistleblower of the findings of the investigation or which will forward its Recommendations, to the line manager, based on the conclusions of the Compliance Department,
- depending on the incident, the reports may lead to disciplinary measures or action plans, the implementation of which will be monitored by the Compliance Department.

Fraud reporting

The facilitation and coordination of the fraud prevention system is founded on several components. The Whistleblowing system and fraud reporting mechanisms seek to facilitate the escalation and understanding of fraud patterns, thereby enabling the implementation of necessary protection measures. Cases of fraud identified within the group must be reported. They are broken down into three major categories: "misappropriation of assets", "communication of fraudulent information" and "corruption and unethical behavior". Fraud is assessed based on its severity determined according to the amount, as well as other risks such as reputation risk and commercial risk for the BU and the Group. Since 2020, a Fraud Prevention Committee has been set up within the Group. It brings together all stakeholder departments to continuously improve the fraud prevention process. In 2021, a new online training program on preventing wire transfer fraud was launched for all Group employees.

Since 2023, the corruption risk map has been produced using the lessons learned from fraud reporting. In 2024, the incident reporting methodology evolved to ensure more interactive and upstream sharing between head office and the BU concerned.

Convictions for corruption

In fiscal year 2025, the Veolia Group was not convicted of violating anticorruption and anti-bribery laws.

Line 5: Train and raise awareness of our employees and stakeholders

Anticorruption, fraud prevention and competition law compliance training program

- Veolia regularly organizes training sessions in ethics and compliance. These programs, which are regularly updated and improved, focus on the prevention of anticompetitive practices, the fight against corruption, criminal risk and fraud. They are delivered both through e-learning tools and face-to-face activities.
- The functions most exposed to the corruption risk are determined by each BU according to the risks identified by the corruption risk mapping.
- Specific training sessions on the Anti-Corruption Code of Conduct, the content of which was defined by the Compliance Department, are regularly organized. These training sessions are mandatory. Jointly deployed by the HR and compliance departments in the form of e-learning, they are intended for all Group managers. In 2025, 42520 Veolia employees attended mandatory e-learning courses. In a broader sense, the Zone Compliance Officers are responsible for defining a compliance training plan specific to each zone at Business Unit level, in close collaboration with the Human Resources Department and based on a risk approach. Under this plan, additional training can be provided to employees in exposed roles. Specific training sessions on the Competition Law Compliance Guide, the content of which is defined by the Group Legal Department in conjunction with the Group Compliance Department, are organized either in person or in the form of regularly deployed e-learning.

Compliance training 2025

Training coverage	Functions-at-risk	
	2024	2025
Total of employees trained (100% of all functions-at-risk)	38,259	42,520
Delivery method and duration		
Delivery method and duration	e-learning* 45 minutes	e-learning* 45 minutes
How often training is required		
Frequency	Annual	Annual
Topics covered		
Anticorruption	X	X
Conflicts of interest	X	X
Basic elements of anti-competitive practices	X	X
Human rights and duty of care	X	X

* Depending on the risks identified, face-to-face training is also organized within the BUs.

Ongoing "Ethics and compliance" communication initiatives

Veolia communicates regularly on corruption prevention issues. Accordingly, in 2021, the Group conducted a communication campaign entitled "Ethics and Compliance", to raise awareness on these issues among all the Group's employees over a period of several months. It was disseminated in a variety of ways (videos, messages from management bodies, posters, presentations at team meetings, etc.) in order to reach and involve as many people as possible. This campaign gives concrete expression to the "non-negotiable" ethics and compliance commitments made by the Group within the context of its Purpose and more broadly.

In 2024, on the occasion of International Anti-Corruption Day, a communication campaign was organized, including a message from the Director General and a video from the Compliance Director. A booklet of illustrated corruption scenarios entitled Taking Action Against Corruption! was also distributed to employees.

Line 6: Control and improve processes

Overall assessment of Veolia's compliance system

The Group conducts an annual assessment campaign focusing on the main components of its compliance system.

Almost all Veolia entities participate in this campaign in which the Business Units must firstly substantiate their replies (self-assessment phase). Subsequently, this information is reviewed by the Group Compliance Department which considers the system's accuracy and maturity (assessment phase). As such, the compliance function performs a level two control of the existing system. Following the campaign, the results are presented to the Group Audit and Accounts Committee.

ISO 37001 certification initiatives

ISO 37001 is the international reference standard for anti-corruption management systems. A number of Business Units are currently or will soon be certified. In 2025, nearly 130 entities were certified across the Group. These initiatives reflect the Group's efforts and commitment to prevent and fight against corruption.

Development of an anti-corruption accounting and non-financial control system

In 2023, an anti-corruption controls framework was developed as part of an internal project involving several central departments and risk and control functions. The purpose of this framework is to provide the Group with a mechanism enabling it to better assess corruption risks and to meet regulatory requirements.

The effectiveness of these controls is verified as part of the annual assessment campaigns.

Line 7: Other compliance programs

Personal data protection

The Group applies the EU regulation on the protection of natural persons with regard to the processing of personal data (GDPR) and the national provisions relating to personal data protection in all countries where the Group operates. For the proper application of these texts and the principles of privacy protection required by the Group, the Group's Compliance Department defines the personal data protection policy and the guidelines that apply to all Business Units, designed to protect the personal data processed by Veolia. These guidelines are accompanied by specific instructions to ensure compliance with the GDPR. The Business Units adapt them where necessary to comply with local legislation.

The Group's personal data protection function takes the form of a network, which handles the roll-out and implementation of these standards. This roll-out is being led by the Global Data Protection Officer (GDPO), who is also the DPO of Veolia Environnement S.A. and reports to the Group Compliance Director. The GDPO works with all departments concerned, including the Group's Information Systems (IS&T), Legal and Security Departments. The GDPO coordinates a network of Data Protection Officers (DPOs) and Data Protection Correspondents (DPC) covering all Group Business Units, which also have Data Protection Managers in each entity.

Awareness sessions and mandatory training for employees on the subject of personal data protection are organized regularly.

The Group's rules include the obligation to conduct regular Data Protection Impact Assessments (DPIAs) on processing operations which are likely to pose a high risk to individuals.

The Group is mindful of the principle of informing individuals about the processing of their personal data. It takes the necessary measures to respond efficiently and promptly to data subjects' requests, putting in place the appropriate organization through the DPOs and internal escalation processes.

To mitigate information system risks, the Group has introduced suitable technical and organizational measures, defined in its internal "Veolia GDPR Security Policy" and adapted by the Business Units. These measures ensure a level of security for personal data that is appropriate to the risks at all times. For example, the Group has introduced a "Design and Legal Assessment" process, common to the IS&T, Security, Compliance and Legal Departments, to guarantee proper consistency and the best possible personal data protection by providers of IT tools. This process has enabled the assessment of several hundred IT tools annually (evaluation of the technical architecture, security standards, user experience and legal documents, particularly with regard to the protection of personal data, limitations on corresponding liability and licensing policies, etc.). Through this process, the Group among other things ensures that the suppliers of these tools protect personal data according to the Group's requirements.

In accordance with the applicable regulations and in particular the GDPR, notification of a data breach is made if necessary.

The Group ensures that contracts with its suppliers comply with the GDPR and the laws of countries that are not part of the European Economic Area. Among other things, it has integrated the measures enacted by the European Commission relating to standard contractual clauses for the transfer of personal data to controllers and processors located in third countries.

As part of its compliance internal control, every two years Veolia assesses the application of the data protection rules by the Business Units. This assessment process seeks to measure progress with the level of maturity of each Business Unit and their ability to prevent risks of infringement to personal data protection. The results of this assessment are brought to the attention of the Board of Directors. In 2024, the relevant questionnaire was revised, reflecting the commitment to raise requirements in this area.

Under internal rules, breaches of personal data protection rules, if proven, can lead to disciplinary action against the employees at fault.

Lobbying

Veolia actively contributes to discussions, consultations and projects on changes in environmental services management initiated by international, European and French authorities, professional associations, think tanks and NGOs.

Pursuant to applicable regulations, these actions are implemented in the context of its adherence to the Global Compact and within the general framework of the Group's Ethics Guide and in accordance with its Anti-Corruption Code of conduct.

Veolia Environnement is listed on several transparency registers, including:

- the European Commission and European Parliament register of lobbyists (since 2009);
- the lobbying disclosure register in the United States;
- the public digital directory managed by the High Authority for public transparency (HATVP) in France. The Group is also registered in the Senate register in France, which records lobbyists on its own list.

Similarly, lobbying employees (or employees likely to lobby) have been made aware of the two objectives of respecting ethics rules and the duty to declare, in coordination with the Group Compliance Department.

In June 2019, Veolia issued an internal standard on the appropriate conduct of employees who are members of professional associations or participate therein. This procedure aims to ensure that lobbying is performed to the highest prevailing standards.

In accordance with strengthened reporting obligations in France and the extension of the system to include activities conducted with certain local public decision-makers that came into force in July 2022, Veolia adapted its internal system to satisfy its legal obligations in this area. In 2023, the Group expanded its reporting requirements to fully comply with the strengthened reporting framework.

Through these rules and initiatives, the Group is formally committed to adhering and ensuring adherence to the rules adopted by the various countries and institutions to guarantee transparency and compliance for lobbying actions.

Preventing insider trading

To help prevent insider trading, the Company has adopted a Code of conduct for Securities Trading. The Chief Executive Officer and Executive Committee members are deemed to be "permanent insiders" and trading by any of them in the Company's securities is prohibited, except during strictly defined periods and provided that they do not hold material inside information during such periods. These measures also cover so-called "occasional" insiders. The Company's Code of conduct for Securities Trading takes into account changes in regulatory requirements applicable to issuers and their executives and particularly those concerning the compilation and update of a list of named "insiders" and obligations to report transactions in the Company's securities by senior Company executives and closely-related persons.

Sensitive countries

Due to its global footprint, Veolia conducts business in certain countries in respect of which some national authorities and international bodies have issued restrictions. The Group may also have contact with individuals against whom restrictive measures have been issued.

To prevent risks arising from the potential breach of such restrictive measures, Veolia has set up a procedure to ensure the compliance of the Group's activities with prevailing regulations on sanction frameworks.

This procedure requires a prior risk assessment by the Compliance Department of any activity, new or existing, in countries or in connection with persons likely to be affected by sanction frameworks, and subsequent monitoring of validated projects.

Following the adoption of general sanctions against Russia and Belarus by several countries, the Group has put in place specific rules to ensure compliance with these sanctions and to prevent their circumvention. These rules require in particular enhanced due diligence on third parties in order to identify Russian stakeholders, as well as the verification of goods and technologies exported by the Group to ensure compliance with the new export restrictions.

4.1.4.1.3 Security of the information system

Regarding the security of the information system, which is a matter considered to be essential for everyone, Veolia has identified an IRO:

Positive impact	Negative impact	Financial opportunity	Financial risk
G1-ST-2 Cost of remediating a large-scale cyberattack (operational control systems and personal data), associated with reputational damage			
A large-scale cyber attack targeting operational control systems and personal data can lead to significant remediation costs. These costs include repairing damaged IT systems, recovering lost data, implementing enhanced security measures, and legal and regulatory costs associated with data breaches.			
The reputation of the company can be affected, resulting in a loss of confidence on the part of customers, investors and the public. This can result in lower sales, a fall in share price and difficulties in attracting new customers or retaining existing customers. Restoring the brand often requires costly communication campaigns and sustained public relations work.			
		The company continues to strengthen its IT security, train its staff, and work to restore its reputation. Continuous efforts are needed to ensure the secure collection, processing or storage of information, gain customer trust and stabilize business relationships. Veolia maintains a high level of cybersecurity vigilance to prevent further attacks. The complete restoration of the brand image can also take several years, requiring a continuous commitment to transparency and quality of service.	
		In summary, the costs and impacts of a large-scale cyber attack are material and require a coordinated and sustained response over multiple time-frames to effectively address damage and prevent future incidents.	

The main interactions of this IRO with Veolia's value chain and business model are as follows:

Value chain	Impacted communities like end customers are probably the most common data form. But suppliers and tenders can also be sensitive data.
Business model	Economic and financial performance as well as commercial performance would be affected.

Note: Among the topics covered in ESRS G1 Business Conduct is the issue of respect for animal welfare. This topic has been clearly identified as not material, as Veolia does not interact with advanced animals in the course of its activities. The only use of living creatures involves bacteria, for example, in wastewater treatment plants.

Finally, as part of stakeholder engagement in the ecological transformation, the third IRO focuses on the role that suppliers must play in helping to more effectively address sustainability issues, through the responsible purchasing function.

Line 8: Management of relationships with suppliers and supply chain

The supply chain is the subject of a detailed presentation in section 4.1.3.2 above.

The supplier charter, available on [veolia.com](https://www.veolia.com), is transmitted during tender processes and appended to concluded contracts. It enables suppliers to be engaged and held accountable with respect to Veolia's purchasing principles and standards, including their own supply chain. In order to prevent risks related to non-compliance with ethics and compliance rules, labour law and environmental regulations (human rights, child labour, etc.), specific clauses on sustainable development and anti-corruption, prevention of anti-competitive practices, sanctions and export control are incorporated into new contracts or renewed contracts/amendments with suppliers and subcontractors, as well as Veolia's purpose and the Group's health and safety commitments.

Veolia uses an assessment system to measure the CSR performance of its key 500 suppliers (spend based). This involves a documentary audit and the consideration of controversial aspects by an independent service provider. The analyses are performed by experts and cover 21 criteria across environmental, social, ethical and sustainable procurement issues. These assessments are performed through annual campaigns.

In accordance with the principles set out in the Veolia Ethics Guide, the Group's suppliers and subcontractors, as well as their employees, have the opportunity to use the Group's whistleblowing channels (see section 4.1.3.5.6 above).

Due to the nature of its businesses and the scope and diversity of its sites, the Group pays close attention to the security of its tangible and intangible property and information systems.

Recent cybersecurity attacks, which have become recurrent worldwide, are increasingly targeting companies providing services of vital importance, particularly in the water and energy sectors. These incidents illustrate the current state of the cyber threat. This trend is confirmed by ANSSI (National Agency for Information Systems Security), which, in its cybersecurity outlook document, highlights a constant increase in the level of threat.

A security organization has been implemented from 2013. Led by the Cybersecurity Director, a member of the Group Security Department and in conjunction with the Group's headquarters and local management, it also relies on a network of local correspondents. Cybersecurity managers in all the countries where the Group is present, responsible for implementing the cybersecurity directive issued by the Cybersecurity Director. These correspondents are the main contacts locally for cybersecurity issues, internally (with operational functions and support) and externally with local government agencies involved in cybersecurity activities (e.g. to share, retrieve best practices, alerts and feedback, etc.). The Group's cybersecurity strategy is based on a normative framework with risk reduction and Group business resilience objectives.

At Group level, the Cybersecurity Steering Committee validates and monitors the implementation of the cybersecurity directive. It meets once a month, chaired by the Group's General Counsel and brings together the central departments (finance, risk and insurance, internal control, technical, safety, information systems) and the Cybersecurity Director. The General Counsel, Security Director and the Cybersecurity Director report more than twice a year to the Group Executive Committee and the Audit and Accounts Committee of the Board of Directors to present the Group's roadmap with regard to risks and cybersecurity strategy and the follow-up of the actions implemented. During these committees, metrics are shared to track phishing campaigns and cyber crisis exercises, alerts from monitoring and supervision services, the program to secure industrial sites, vulnerabilities identified during intrusion tests and vulnerability scans, the evolution of the cyber maturity of the BUs and the cybersecurity budget.

In order to integrate the emergence of risks relating to increasingly connected industrial environments, the Cybersecurity Director facilitates, together with the Business Support and Performance Director and the Information Systems Director, the Top Critical Industrial Sites program. The objective of this program is to secure the 1000 most critical plants in order to protect them to the maximum extent, through support, tools and monitoring. These sites have been identified through a risk-based approach, and their evolution is tracked through a dashboard. This program also responds to geopolitical threats and regulatory developments, such as the NIS2 Directive and the equivalents in other regions.

Veolia has deployed a comprehensive information security framework and policies across all its entities, encompassing both corporate and industrial environments. Under the leadership of the Cybersecurity Director and supported by local security managers, this framework is built

on core commitments: the continuous improvement of information security systems, safeguarding data integrity and protection, proactive monitoring/response to security threats and cybersecurity-related business continuity plans, defining information security responsibilities for all employees, and implementing robust security requirements for external partners and suppliers. This holistic approach ensures consistent security standards while enabling ongoing improvement of data protection measures throughout the organization. To control the application of these policies, annual self-assessments, cross-checks, security reviews and internal audit missions are carried out on the basis of an internal cybersecurity repository called "Fix the basics" in all entities. In addition, audit and assistance missions are carried out by internal or external experts in accordance with international standards (e.g.: ISO, NIST) in the highest risk entities and on the most exposed systems. Action plans approved and validated by the Information Systems Department and the BU director are then defined and implemented. Monitoring and Assistance missions are organized every year to help low-maturity BUs and facilitate the deployment of best cybersecurity practice. The resulting action plans are presented to and monitored by the cybersecurity steering committee. In addition, several Group entities are certified ISO 27001, or equivalent. Regular campaigns for risk analysis and information system technical audits are organized locally by BU and supplemented by the Group cybersecurity department or external experts: vulnerability scans, cyber technical audits, intrusion tests and bug bounty campaigns. As part of the overall risk management strategy, Veolia is also implementing a rigorous process for assessing the cybersecurity of suppliers and analysing vulnerabilities. This is to ensure the integrity and security of the supply chain.

The cybersecurity roadmap is supplemented by cyber awareness-raising initiatives and training actions, to support users and IT and OT experts across the Group in the implementation of IT hygiene and cybersecurity rules. An awareness-raising program for all employees and a training program for certain specific functions have been defined. These actions are carried out through IT charters disseminating information on best practices in cybersecurity and specific actions, such as specific events during the European Cybersecurity month created by the European Union Agency for Cybersecurity (ENISA) (in October of each year). Awareness-raising and e-learning training sessions are regularly provided and updated. Phishing campaigns are carried out frequently to test employees' cybersecurity reflexes in a fun way, particularly identification and reporting. Finally, cybersecurity crisis exercises are carried out regularly to train management, IT and OT actors, and cybersecurity experts and to test the incident and activity recovery procedures.

In response to the resurgence of cyberattacks, including ransomware attacks, measures for detection and protection of information systems were supported by Endpoint Detection and Response (EDR) and other cyber defence tools and the deployment of a Global Security Operation Centre (SOC) system, 24/7, which includes support for industrial incident response, and the Computer Emergency Response Team (CERT), which allows for broader and faster identification and resolution of cyber threats and attempts. This was done within the framework of the cyber defence organization already in place, with several measures, such as: continuous monitoring of cybersecurity threats (for example, CTI), the cybersecurity alert, incident and crisis process, a security team trained and competent in information technology and operational technologies (for example, plants), ensuring Veolia has the ability to respond to cyberattack emergencies.

4.1.4.1.4 Supplier payment terms

Preventing the risk of late payment to suppliers

As a global group operating in around fifty countries, Veolia, with expenditure of 27.5 billion euros in 2025, collaborates with over 220,000 active suppliers worldwide. A significant portion of the Group's expenditure is allocated to subcontracting and energy purchases. Veolia pays particular attention to all its stakeholders, especially its suppliers.

For many years, an internal Group policy for continuous improvement of the "Purchasing" process has been in place, updated by the Group procurement department in 2025 and implemented locally in each country, which aims to:

- deploy a mandatory baseline for managing the P2P (Procure-to-Pay) process to control risks;
- streamline the process to ensure invoices are paid within the contractual deadlines agreed with suppliers;
- share best practices;
- harmonize definitions, production, and collection of performance indicators (KPIs), particularly the average payment time and the rate of compliance with payment deadlines.

To this end Veolia has, for example, implemented:

- means to facilitate the relationship and communication with suppliers, including access to information regarding their invoices;
- tools for the digitalization of supplier invoices;
- regular payment campaigns to reduce processing times; or even;
- monitoring and prioritization of the supplier aged balance.

Furthermore, a "good invoicing" charter is communicated and purchase order forms mention all the information allowing suppliers to establish an invoice.

Finally, a solid and mature internal control framework ensures compliance with Group policies. In a context where fraud attempts are increasingly frequent, the Group has strengthened this control framework, which may occasionally lengthen invoice processing times.

To the Group's knowledge and based on information available to date, no new legal proceedings for late payment were initiated against Veolia in 2025. Moreover, to facilitate the client-supplier relationship, the Group provides its suppliers with a dedicated and centralized email address across the Group. This mediation channel was used by 13 suppliers in 2025 and enabled the resolution of all reported issues.

Payment deadlines vary from one country to another; they are numerous and diversified, respecting local legislation and negotiated contractual agreements. Consequently, there are no standard payment deadlines applicable across the entire Group.

Similarly, information systems and supplier qualification nomenclatures vary from country to country. Consequently, Veolia implements all continuous improvement actions regarding compliance with payment deadlines, regardless of the supplier category.

This diversity in size, activity, and information systems represents a challenge for implementing common performance indicators (KPIs) regarding payment practices.

However, the Group fully measures the importance of these indicators, both for the purpose of continuous improvement of its relationship with its suppliers and for compliance with European regulatory requirements.

Consequently, resolutely committed, Veolia has progressively and appropriately supported its Business Units for the implementation of these indicators, taking into account the operational realities and local specificities of each entity. This approach will allow the Group to gradually improve the coverage rate of the indicators, while guaranteeing their relevance and reliability.

The Group also remains vigilant to all regulatory developments, Omnibus Package or other, that could have consequences for the understanding and publication of these indicators.

The publication of indicators for 2025 includes data from the most representative Business Units in various geographical areas. These cover Veolia's different activities, namely Water, Waste, and Energy management.

Metrics

Average Payment Time

The average payment time is 54 days.

The calculation method used is the average number of days between the invoice date and the payment date for the total volume of invoices paid in 2025 for the vast majority of the Business Units concerned. However, for two of our Business Units (United Kingdom and Czech Republic), this calculation is done in accordance with local legislation, taking into account the date of receipt of the invoice instead of the invoice date.

Percentage of Payments Aligned with Our Payment Terms

Given the significant diversity of payment terms within Veolia's Business Units, the Group reports a payment terms alignment rate of 80% within the scope measured in 2025.

The calculation method takes into account the due date calculated according to contractual payment terms and the invoice issuance date versus the actual payment date for settled invoices, with the exception of the Czech Republic, where the calculation of the due date is based on the date of receipt of the invoice.

The two indicators:

- were calculated at the level of the scope measured in 2025 by weighting the indicators of the Business Units by the total volume of invoices paid;
- take into account invoices paid late due to disputes or late sending of invoices, attributable to the supplier.

4.1.5 APPENDICES OF THE SUSTAINABILITY STATEMENT

Disclaimer

This document contains certain statements and other information that constitute forward-looking statements within the meaning of applicable securities laws. These forward-looking statements are not historical data and should not be construed as guarantees that the stated facts and figures will materialize. These forward-looking statements are subject to numerous risks and uncertainties, which are difficult to predict, generally outside the control of the Veolia Group or even unknown, and which may lead to results or events that differ materially from those expressed, implied or anticipated by these forward-looking statements.

Given the significant uncertainties inherent in these forward-looking statements, and even though they reflect the Veolia Group's intentions, they should not be considered an absolute statement or guarantee by the Veolia Group or anyone else, that the Veolia Group will achieve its goals, objectives, aspirations, metrics, plans or targets, and in particular with regard to sustainability issues. Furthermore, it cannot be ruled out that certain statements relating to sustainability issues, whether they relate to the past, present or future, are based on standards still being developed, on internal controls and processes that continue to evolve, or on assumptions that may change in the future.

As such, it is specified that Chapter 4.1 of this document has been prepared in accordance with the regime imposed by European Directive 2022/2464/EU as regards corporate sustainability reporting (the "CSRD"). This document uses certain specific terms that may result in the qualification of certain information or data points as "material" in order to reflect certain specific impacts, risks or opportunities or other issues identified as "material" or "significant" to the Veolia Group or its stakeholders in accordance with such initiatives or standards.

However, these terms as used in this report are distinct from, and should not be confused with, these terms as defined or interpreted under various securities laws and regulations or other laws and regulations, and in particular with regard to Regulation (EU) No. 596/2014 of the European Parliament and of the Council of 16 April 2014 on market abuse, or in the context of financial statements. In particular, for the purposes of the CSRD, these terms are used in the context of double materiality analysis, a concept which applies, for the purposes of the CSRD, a specific standard and regime that are completely distinct from the concepts of materiality referred to in other laws and regulations in force.

The forward-looking statements contained in this document are valid only as of the date of publication.

4.1.5.1 ESRs Disclosure Requirements

The table below gives the reader the location in the sustainability statement of the different disclosure requirements, identified by their code as published the CSRD directive:

ESRS	Disclosure Requirement	section concerned
ESRS 2 General disclosures	BP-1 — General basis for preparation of sustainability statements	4.1.1.2 General basis for preparation of sustainability statements
	BP-2 — Disclosures in relation to specific circumstances	4.1.1.3 Disclosures in relation to specific circumstances
	GOV-1 — The role of the administrative, management and supervisory bodies	4.1.1.4.1 The role of the administrative, management and supervisory bodies
	GOV-2 — Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies	4.1.1.4.2 Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies
	GOV-3 — Integration of sustainability-related performance in incentive schemes	4.1.1.4.3 Integration of sustainability-related performance in incentive schemes
	GOV-4 — Statement on due diligence	4.1.1.4.4 Statement on due diligence
	GOV-5 — Risk management and internal controls over sustainability reporting	4.1.1.4.5 Risk management and internal controls over sustainability reporting
	SBM-1 — Strategy, business model and value chain	4.1.1.5 Strategy, business model and value chain
	SBM-2 — Interests and views of stakeholders	4.1.1.6 Interests and views of stakeholders
	SBM-3 — Material impacts, risks and opportunities and their interaction with strategy and business model	4.1.1.7 Disclosures in relation to specific circumstances
	IRO-1 — Description of the process to identify and assess material impacts, risks and opportunities	4.1.1.7 Disclosures in relation to specific circumstances
	IRO-2 — Disclosure requirements in ESRs covered by the undertaking's sustainability statement	4.1.1.8 Other general information to disclose
ESRS E1 Climate change	ESRS 2 GOV-3 — Integration of sustainability-related performance in incentive schemes	4.1.2.1.6 Metrics
	E1-1 — Transition plan for climate change mitigation	4.1.2.1.3 Align Veolia's trajectory with the 1.5°C target
		4.1.2.1.3 Align Veolia's trajectory with the 1.5°C target
		4.... Focus on coal phase-out and methane recovery plans
		4.1.2.1.4 Helping customers decarbonize
		4.1.2.1.5 Climate change adaptation
		4.1.2.1.3 Align Veolia's trajectory with the 1.5°C target
		4.... Focus on coal phase-out and methane recovery plans
		4.1.2.1.4 Helping customers decarbonize
		4.1.2.1.5 Climate change adaptation
		4.1.2.1.3 Align Veolia's trajectory with the 1.5°C target
		4.1.2.1.4 Helping customers decarbonize
		4.1.2.1.5 Climate change adaptation
	E1-2 — Policies related to climate change mitigation and adaptation	The Group's action plan to reduce direct and indirect emissions in practice
	E1-3 — Actions and resources in relation to climate change policies	2050 target: the reduction drivers to be deployed between 2032 and 2050
	E1-4 — Targets related to climate change mitigation and adaptation	
	E1-5 — Energy consumption and mix	4.1.2.1.6 Metrics
	E1-6 — Gross Scopes 1, 2, 3 and Total GHG emissions	4.1.2.1.6 Metrics
	E1-7 — GHG removals and GHG mitigation projects financed through carbon credits	4.1.2.1.4 Helping customers decarbonize
		4.1.2.1.3 Align Veolia's trajectory with the 1.5°C target
		4.1.2.1.4 Helping customers decarbonize
	E1-8 — Internal carbon pricing	
	E1-9 — Anticipated financial effects from material physical and transition risks and potential climate-related opportunities	4.1.2.1.5 Climate change adaptation
ESRS E2 Pollution	ESRS 2 IRO-1 — Description of the processes to identify and assess material pollution-related impacts, risks and opportunities	4.1.2.2.1 Introduction
	E2-1 — Policies related to pollution	4.1.2.2.2 Pollution emitted by Veolia / A Group operational policy supporting the Business Units
		4.1.2.2.2 Pollution emitted by Veolia / This operational policy is translated locally into appropriate action plans
	E2-2 — Actions and resources related to pollution	
	E2-3 — Targets related to pollution	4.1.2.2.2 Pollution emitted by Veolia / Standard targets defined for the level of pollution emitted
	E2-4 — Pollution of air, water and soil	4.1.2.2.2 Pollution emitted by Veolia / Consolidated reporting

ESRS	Disclosure Requirement	section concerned
	E2-5 — Substances of concern and substances of very high concern	4.1.2.2.2 Pollution emitted by Veolia / Substances of concern and very high concern
	E2-6 — Anticipated financial effects from pollution-related risks and opportunities	4.1.2.2.2 Pollution emitted by Veolia / Financial assessment of pollution risk
ESRS E3 Water and marine resources	ESRS 2 IRO-1 — Description of the processes to identify and assess material water and marine resources-related impacts, risks and opportunities	4.1.2.3.1 Introduction
	E3-1 — Policies related to water and marine resources	4.1.2.3.2 Optimizing water resource management
	E3-2 — Actions and resources related to water and marine resources	4.1.2.3.2 Optimizing water resource management
	E3-3 — Targets related to water and marine resources	4.1.2.3.3 Measuring our impact on water resources
	E3-4 — Water consumption	4.1.2.3.3 Measuring our impact on water resources
	E3-5 — Anticipated financial effects from water and marine resources-related impacts, risks and opportunities	4.1.2.3.4 Supporting the efforts of municipal customers 4.1.2.3.5 Supporting the efforts of industrial customers 4.1.2.3.6 A Historical contractual model that needs to evolve
ESRS E4 Biodiversity and ecosystems	E4-1 — Transition plan and consideration of biodiversity and ecosystems in strategy and business model	4.1.2.4.2 Veolia's commitment to nature / Nature is integral to Veolia's strategy
	ESRS 2 SBM-3 — Material impacts, risks and opportunities and their interaction with strategy and business model	4.1.1.7 Disclosures in relation to specific circumstances 4.1.2.4.2 Veolia's commitment to nature / Incorporating biodiversity within the Group's risk management policy
	ESRS 2 IRO-1 - Description of processes to identify and assess material biodiversity and ecosystem-related impacts, risks, dependencies and opportunities	4.1.1.7 Disclosures in relation to specific circumstances 4.1.2.4.4 Protection and restoration of nature in Veolia's direct operations and the value chain
	E4-2 — Policies related to biodiversity and ecosystems	4.1.2.4.2 Veolia's commitment to nature / Incorporating biodiversity within the Group's risk management policy
	E4-3 — Actions and resources related to biodiversity and ecosystems	4.1.2.4.4 Protection and restoration of nature in Veolia's direct operations and the value chain
	E4-4 — Targets related to biodiversity and ecosystems	4.1.2.4.4 Protection and restoration of nature in Veolia's direct operations and the value chain
	E4-5 — Impact metrics related to biodiversity and ecosystems change	4.1.2.4.4 Protection and restoration of nature in Veolia's direct operations and the value chain
	E4-6 — Anticipated financial effects from biodiversity and ecosystem-related risks and opportunities	4.1.2.4.4 Protection and restoration of nature in Veolia's direct operations and the value chain
ESRS E5 Resource and circular economy	ESRS 2 IRO-1 — Description of the processes to identify and assess material resource use and circular economy-related impacts, risks and opportunities	4.1.2.5.1 Introduction
	E5-1 — Policies related to resource use and circular economy	4.1.2.5.2 Develop material and energy recovery
	E5-2 — Actions and resources related to resource use and circular economy	4.1.2.5.4 Manage circular solutions using resource-related metrics
	E5-3 — Targets related to resource use and circular economy	4.1.2.5.4 Manage circular solutions using resource-related metrics

4.1.5.3 Methodology for calculating Scope 3

Scope 3 emissions

The Group also assesses greenhouse gas emissions in its sphere of influence and publishes the significant sources of scope 3 emissions i.e. significant sources of emissions or minor sources of emissions where the Group's scope of action is significant.

As part of its 2050 Net Zero roadmap, Veolia is committed to reducing its scope 3 emissions by 30% by 2032. Thanks to the work carried out since 2021, Veolia now has a sufficiently reliable and comprehensive view of its emissions. Nearly 85% of emission calculations are now based on business data whose emission factors are based on physical data. The remaining 15% are based on expenditure data and monetary emission factors.

The sources of scope 3 emissions (in million metric tons eq. of CO₂) are:

1. Purchased goods and services
2. Capital goods
3. Fuel-and-energy-related activities not included in scope 1 and 2 – emissions relating to electricity consumption not included in scope 1 and 2
4. Upstream transportation and distribution
5. Waste generated in operations
6. Business travel
7. Employee commuting
8. Upstream leased assets
9. Downstream transportation and distribution
10. Processing of sold products
11. Use of sold products
12. End-of-life treatment of sold products
13. Downstream leased assets
14. Franchises
15. Investments

Methodological alignment with the GHG Protocol

The methodology used for the calculation of scope 3 is the GHG protocol.

The emission factors used by Veolia generally come from recognized databases (ADEME, DEFRA, CEDA, etc.) with the aim of using the latest data as part of a continuous improvement process. Exceptionally, in a few very specific cases, it was necessary to use factors calculated by Veolia.

The data sources used to calculate the scope 3 come from the Group's multiple information systems: environmental reporting, HR reporting, procurement, finance, etc.

Finally, it is worth stating that:

- All emissions related to transportation subcontracted by Veolia are accounted for under Scope 3.4, in accordance with the GHG Protocol;
- For scope 3.7, the calculation assumption is based on the full-time workforce.

4.1.5.4 Methodology for calculating erased emissions

Erased emissions, falling under Scope 4* emissions, promote the decarbonizing nature of the solutions proposed by Veolia. They consist of comparing the solution proposed by Veolia with a reference scenario corresponding to what would have happened in all likelihood in the absence of Veolia. This principle is the same as that used in avoided emissions. Work to standardize avoided emissions is underway, and to prevent any confusion between the Group's practices and those that will ultimately be required by the standard, in particular in defining the reference scenario, Veolia decided to use a different term. Veolia also actively participates in the standardization work (work done by the WBCSD in particular) necessary for a better recognition of the positive impact that undertakings have on climate, with the intention to align its practices with them.

At the Group level, Veolia accounts for erased emissions for several types of activities. A specific methodology has been designed for each activity.

Collection, sorting, recycling and trading of recyclable materials, solvents and wood-energy

Veolia manages: the collection of recyclable materials; their sorting in sorting centers; for plastics and solvents, their recycling into secondary materials; and, for wood, its preparation as fuel. For certain secondary raw materials, Veolia manages the trading and transportation to recyclers. All of these operations are part of the recycling/recovery value chain, which generates erased emissions. By convention, the avoided emissions calculated are those resulting from the entire value chain in which Veolia participates, as Veolia provides an essential contribution to this chain (such as sorting or trading).

- Solution scenario: waste recovery (recycling, regeneration or use in the wood-energy sector).
- Baseline scenario: production from virgin materials (in the case of recycling and regeneration)/use of fossil gas (in the case of wood-energy).

Erased emissions (Mt CO₂ eq.) = sum for each type of material of (Emissions in the baseline scenario (Mt CO₂ eq.) - Emissions from the recovery value chain (Mt CO₂ eq.) * Volume of materials recovered (t).

The avoidance factors currently in use originate from various sources:

- Recycling: a compilation of two studies, Prognos 2008⁽¹⁾ and AEA 2001⁽²⁾. Veolia participated in a study conducted by the Record association, which resulted in updated avoidance factors. The relevance of this study is still under discussion within interprofessional working groups;
- Solvent regeneration: ESRG 2018⁽³⁾.

⁽¹⁾ Dr. Birnstengel, Baerbel & Alwast, Holger & Häusler, Arno & Vogt, Regine & Giegrich, Jürgen & Baumann, Werner. (2015). Resource savings and CO₂ reduction potential. 10.13140/RG.2.1.1910.6721.

⁽²⁾ Alison Smith, Keith Brown, Steve Ogilvie, Kathryn Rushton, Judith Bates (2001). Waste Management Options and Climate Change, Final report to the European Commission, DG Environment.

⁽³⁾ Carbon footprint of recycled solvents at the sectoral level compared to virgin solvents, ESRG, 2018.

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

Waste-to-energy recovery

Burning or fermenting waste generates waste energy (similar to renewable energy) that can be recovered and sold, partly as a substitute for energy obtained from fossil fuels.

- Solution scenario: energy production from waste treatment (incineration, storage with biogas capture and recovery, anaerobic digestion).
- Baseline scenario: grid energy, with the average emission factor of the country's energy mix (whether for electricity or heat).

Erased emissions (Mt CO₂ eq) = Country average energy mix emission factor for electricity (Mt CO₂ eq/MWh) * Electricity volume (MWh) + Country average energy mix emission factor for heat (Mt CO₂ eq/MWh) * Volume of heat (MWh) + Emission factor of natural gas combustion (Mt CO₂ eq/MWh) * Volume of biogas injected into the network (MWh).

The national emission factors for electricity and heat are derived from data provided by the International Energy Agency (IEA), either directly for electricity or following recalculation for heat. These emission factors are updated annually.

Energy production

The production sites convert fuels into energy. When the site's energy mix has lower emissions than the country's average energy mix, the site generates erased emissions. Otherwise, there are no erased emissions.

- Solution scenario: energy produced by the site.
- Baseline scenario: energy produced by the country's energy mix.

Erased emissions (Mt CO₂ eq.) = sum for electricity and heat of (Emissions from the site to produce 1 MWh (Mt CO₂ eq.) - Emissions from the country's energy mix to produce 1 MWh (Mt CO₂ eq.) * Volume of energy (MWh).

The emission factors used are those provided by the IEA. These emission factors are updated annually.

Biogas capture at landfill sites

The fermentation of organic waste at landfill sites produces biogas, about half of which is methane (CH₄), a powerful greenhouse gas. In some countries where Veolia operates landfill sites, it is the only player to capture biogas. In other countries, our competitors also capture biogas, but with a lower capture rate. Thus, if Veolia did not operate these landfill sites, there would probably be no capture, or less capture, which would result in higher overall emissions.

- Solution scenario: biogas capture is implemented at the landfill site.
- Baseline scenario: no biogas capture (or less efficient capture, depending on the country concerned) is implemented at the landfill site.

Erased emissions (Mt CO₂ eq) = (Biogas capture rate at the landfill site currently operated by Veolia (%) - Most likely biogas capture rate at the landfill site if it was not operated by Veolia (%)) * Global warming potential of CH₄ (= 27 Mt CO₂ eq/Mt CH₄) * Volume of methane emitted by waste fermentation (Mt CH₄).

The reference scenario is updated during the definition of the new strategic program.

Energy efficiency of buildings and industrial sites

Veolia manages energy consumption in commercial buildings or industrial sites, seeking to meet the customer's specifications (in terms of temperature set point in particular) while consuming as little primary energy as possible.

- Solution scenario: energy performance after implementation of Veolia's energy saving measures.
- Baseline scenario: energy performance before Veolia took over the service.

Erased emissions = (Energy consumption of installations (corrected for external effects such as weather) before Veolia took over the service - Energy consumption of installations after Veolia has implemented energy saving measures) * Emission factor of the energy used.

The reference scenario is updated with each contract renewal.

Energy Efficiency of Urban District Heating Networks

When Veolia takes over the management of a district heating network, it may undertake actions aimed at improving the energy efficiency of the network. In some cases, without Veolia's intervention, it is likely that the network would have remained in its previous state. The resulting energy savings can be converted into avoided emissions.

Solution Scenario: Energy performance after the implementation of energy-saving measures carried out by Veolia.

Baseline Scenario: Energy performance before Veolia took over the service.

Erased emissions = (Energy sales / Baseline energy efficiency - Energy produced by the plants supplying the network) / Average plant efficiency * Emission factor for natural gas.

The baseline scenario will be updated when defining the new strategic program.

4.2 Auditors limited assurance report on the sustainability statement AFR

Report on the certification of sustainability information and verification of the disclosure requirements under Article 8 of Regulation (EU) 2020/852 for the year ended December 31, 2025

This is a translation into English of the statutory auditors' report on the certification of sustainability information and verification of the disclosure requirements under Article 8 of Regulation (EU) 2020/852 of the Company issued in French and it is provided solely for the convenience of English-speaking users.

This report should be read in conjunction with, and construed in accordance with, French law and the H2A guidelines on "Limited assurance engagement - Certification of sustainability reporting and verification of disclosure requirements set out in Article 8 of Regulation (EU) 2020/852".

To the Shareholders' Meeting of the Company

This report is issued in our capacity as statutory auditors of Veolia Environnement. It covers the sustainability information and the information required by Article 8 of Regulation (EU) 2020/852, relating to the year ended December 31, 2025, included in the Group management report and presented in Section 4.1, "Sustainability Statement" of the Universal Registration Document (hereinafter the "Sustainability Statement").

Our procedures covered this information and were performed in an evolving context marked by uncertainties regarding the interpretation of texts and the development of market practice.

Pursuant to Article L. 233-28-4 of the French Commercial Code (code de commerce), Veolia Environnement is required to include the above-mentioned information in a separate section of the Group management report.

This information enables an understanding of the impact of the Group's activities on sustainability matters, as well as the way in which these matters influence the development of the Group's business, its performance and position. Sustainability matters include environmental, social and corporate governance matters.

Pursuant to Article L. 821-54 paragraph II of the aforementioned Code our responsibility is to carry out the procedures necessary to issue a conclusion, expressing limited assurance, on:

- compliance with the requirements resulting from the sustainability reporting standards adopted by the European Commission pursuant to Article 29b of Directive 2013/34/EU of the European Parliament and of the Council of June 26, 2013 as amended by Directive (EU) 2022/2464 of the European Parliament and of the Council of December 14, 2022 (hereinafter the European Sustainability Reporting Standards or ESRS) of the process implemented by Veolia Environnement to determine the information reported, including the obligation to consult the Social and Economic Committee provided for in Article L. 2312-17, paragraph 6, of the French Labor Code, where the entity is subject to this obligation;
- compliance of the sustainability information included in the Sustainability Report with the requirements of Article L. 233-28-4 of the French Commercial Code, including ESRS; and
- compliance with the reporting requirements set out in Article 8 of Regulation (EU) 2020/852.

This engagement is carried out in compliance with the ethical rules, including independence, and quality control rules prescribed by the French Commercial Code.

It is also governed by the H2A (Haute Autorité de l'Audit) guidelines, "Limited assurance engagement - Certification of sustainability reporting and verification of disclosure requirements set out in Article 8 of Regulation (EU) 2020/852".

In the three separate sections of the report that follow, we present, for each of the sections of our engagement, the nature of the procedures that we carried out, the conclusions that we drew from these procedures and, in support of these conclusions, the elements to which we paid particular attention and the procedures that we carried out with regard to these elements. We draw your attention to the fact that we do not express a conclusion on any of these elements taken individually and that the procedures described should be considered in the overall context of the formation of the conclusions issued in respect of each of the three sections of our engagement.

Finally, where deemed necessary to draw your attention to one or more disclosures of sustainability information provided by Veolia Environnement in the Group management report, we have included an emphasis of matter paragraph hereafter.

Limits of our engagement

As the purpose of our engagement is to express limited assurance, the nature (choice of techniques), extent (scope) and timing of the procedures are less than those required to obtain reasonable assurance.

This engagement does not guarantee the viability or the quality of the management of Veolia Environnement, in particular it does not provide an assessment of the relevance of the choices made by Veolia Environnement in terms of action plans, targets, policies, scenario analyses and transition plans, beyond compliance with ESRS reporting requirements.

In addition, in the case of forward-looking information that is by nature uncertain, actual results may differ, sometimes materially, from the forecasts presented in the Group management report.

Our engagement does, however, allow us to express conclusions regarding the process for determining the sustainability information to be reported, the sustainability information itself, and the information reported pursuant to Article 8 of Regulation (EU) 2020/852, as to the absence of identification or, on the contrary, the identification of errors, omissions or inconsistencies of such importance that they would be likely to influence the decisions that readers of the information subject to this engagement might make.

The sustainability information and the information required by Article 8 of Regulation (EU) 2020/852 may be subject to the uncertainty inherent to the state of scientific knowledge and the quality of external data used. Some information is sensitive to the choice of methodology and the assumptions and/or estimates used for its preparation and presented in the Group management report.

Compliance with ESRS of the process implemented by Veolia Environnement to determine the information reported and compliance with the requirement to consult the Social and Economic Committee provided for in paragraph six of Article L. 2312-17 of the French Labor Code

Nature of procedures carried out

Our procedures consisted in verifying that:

- the process defined and implemented by Veolia Environnement, including the obligation to consult the Social and Economic Committee pursuant to paragraph six of Article L. 2312-17 of the French Labor

Code, has enabled it, in accordance with ESRS, to identify and assess its impacts, risks and opportunities related to sustainability matters, and to identify the material impacts, risks and opportunities that are disclosed in the Sustainability Statement; and

- the information provided on this process also complies with ESRS.

Conclusion of the procedures carried out

On the basis of the procedures we have carried out, we have not identified any material errors, omissions or inconsistencies regarding the compliance of the process implemented by Veolia Environnement with ESRS.

Elements that received particular attention

Information on the operating method adopted in 2025 by Veolia Environnement to update its impacts, risks and opportunities ("IROs") is disclosed in Section 4.1.1.7.1, "Method of identification and evaluation of IRO" of the Sustainability Statement.

Through interviews with those persons we considered appropriate and reviewing the available documentation, we familiarized ourselves with the analyses carried out by the entity, in particular the assessment of internal and external factors considered in support of the adjusted IROs adopted.

Based on our professional judgement, our procedures notably consisted of:

- exercising professional skepticism regarding the approach implemented by the entity to identify the internal and external factors to be considered;
- assessing the appropriateness of the internal and external factors considered by the entity in light of our knowledge of the entity and of the facts and circumstances specific to it;
- assessing the appropriateness of the description provided in this respect in Note 4.1.1.7.1, "Method of identification and evaluation of IRO" of the Sustainability Statement.

Compliance of the sustainability information included in the Sustainability Report with the requirements of Article L. 233-28-4 of the French Commercial Code, including ESRS

Nature of procedures carried out

Our procedures consisted in verifying that, in accordance with legal and regulatory requirements, including ESRS:

- the disclosures provided enable an understanding of the general basis for the preparation and governance of the sustainability information included in the Sustainability Statement, including the basis for determining the information concerning the value chain and the disclosure exemptions applied;
- the presentation of this information ensures its readability and understandability;
- the scope chosen by Veolia Environnement for providing this information is appropriate; and
- based on a selection, determined by our assessment of the risks of non-compliance of the information provided, and the expectations of users, that this information does not contain any material errors, omissions or inconsistencies, i.e. that are likely to influence the judgement or decisions of users of this information.

Conclusion of the procedures carried out

Based on the procedures we have carried out, we have not identified material errors, omissions or inconsistencies regarding the compliance of the sustainability information included in the Sustainability Statement with the requirements of Article L. 233-28-4 of the French Commercial Code, including ESRS.

Elements that received particular attention

Information reported in application of general standards (ESRS E1 and ESRS 2)

Information on the scope used to prepare the sustainability information is disclosed in Section 4.1.1.2 "General basis for preparation of sustainability statements" of the Sustainability Statement

Our procedures mainly consisted in assessing:

- the process for determining the consolidation scope used for publishing sustainability information, through discussions with management;
- the reconciliation between the financial consolidation scope and the scope used for publishing sustainability information;
- the information disclosed in Section 4.1.1.2 "General basis for preparation of sustainability statements" of the Sustainability Statement

Information provided in application of the environmental standard (ESRS E1)

Information reported in respect of climate change (ESRS E1) is disclosed in Section 4.1.2.1, "Climate change [E1]" of the Sustainability Statement.

We present below the elements that received our particular attention regarding the compliance of this information with ESRS.

Based on interviews conducted with the different departments concerned, we assessed whether the description of the policies, actions and targets implemented by Veolia covers the following areas: climate change mitigation and climate change adaptation.

We assessed the appropriateness of the information presented in Section 4.1.2.1, "Climate change (E1)" of the Sustainability Statement" and its overall consistency with our knowledge of the Group.

With regard to the verification of the transition plan for climate change mitigation, our procedures mainly consisted in assessing:

- whether the information reported on the transition plan meets the requirements of ESRS E1 and provides an appropriate description of the structuring assumptions underlying this plan, without expressing an opinion on the appropriateness or level of ambition of the objectives of this transition plan;
- based on interviews conducted with management and the relevant personnel, in particular within the teams responsible for the Group's carbon trajectory, the implementation of the methods, assumptions and data used, especially those relating to the main decarbonization levers;
- the internal consistency of the principal disclosures provided in respect of the transition plan.

With regard to the information reported as part of the greenhouse gas emissions assessment:

- we familiarized ourselves with the rules for preparing the greenhouse gas emissions inventory used by the entity to establish the greenhouse gas emissions assessment and reviewed their application, for a selection of emission categories and sites for scope 1 and scope 2.
- with regard to scope 3 emissions, we assessed:

- the justification for the inclusion in or exclusion from the GHG Protocol of the different categories and the transparency of the information provided in this respect,
- the information gathering process.
- we assessed the appropriateness of the emission factors used and the related conversion calculations, as well as the calculation and extrapolation assumptions applied to the estimates used by Veolia.

Compliance with the reporting requirements set out in Article 8 of Regulation (EU) 2020/852

Nature of procedures carried out

Our procedures consisted in verifying the process implemented by Veolia Environnement to determine the eligible and aligned nature of the activities of the entities included in the consolidation.

They also involved verifying the information reported pursuant to Article 8 of Regulation (EU) 2020/852, which involved checking:

- compliance with the rules applicable to the presentation of this information to ensure that it is readable and understandable;
- based on a selection, the absence of material errors, omissions or inconsistencies in the information provided, i.e. information likely to influence the judgement or decisions of users of this information.

Conclusion of the verifications carried out

On the basis of the procedures we have carried out, we have not identified any material errors, omissions or inconsistencies relating to compliance with the requirements of Article 8 of Regulation (EU) 2020/852.

Emphasis of matter

Without qualifying the above conclusion, we draw your attention to the paragraph "Methods applied to calculate the Key Performance Indicators" of Section 4.1.2.6.3, "Methodology" of the Sustainability Statement, describing the analysis conducted during the year of Taxonomy OpEx.

Elements that received particular attention

Regarding key performance indicators and related information

The key performance indicators and related information are presented in section 4.1.2.6, "European Union Green Taxonomy" of the Sustainability Statement.

As part of our procedures, we notably conducted interviews with the persons concerned and consulted, on a sample basis, the documentary sources used.

For the revenue and CapEx totals (the denominators) presented in the regulatory tables, we examined the reconciliations performed by the entity with group consolidated accounts.

For the other amounts making up the various indicators for eligible and/or aligned activities (the numerators), we performed analytical procedures and assessed these amounts based on a selection of activities and transactions determined by reference to the underlying activity, their contribution to the indicators, or a risk analysis.

Finally, we assessed the consistency of the information disclosed in Section 4.1.2.6, "European Union Green Taxonomy" of the Sustainability Statement with the other sustainability-related information in the Group management report.

4.3 Vigilance plan

This section summarizes measures implemented by Veolia Environnement to meet the requirements of the French duty of care law.

Law no. 2017-399 on the duty of care of parent and subcontracting companies requires the implementation by these companies of a vigilance plan (the Plan). This plan is notably founded on “reasonable due diligence to identify risks and prevent severe impacts on human rights and fundamental freedoms, on people’s health and safety, and on the environment”.

Veolia Environnement has developed a vigilance plan in accordance with prevailing legislation, covering the entire group.

A detailed version of the Plan was also prepared. It may be consulted on the group’s website via the following link:
<https://www.veolia.com/en/veolia-group/who-are-we/compliance-and-vigilance>.

4.3.1 COMPLIANCE OF THE PLAN WITH THE LAW

The Plan includes the five pillars required by the duty of care law:

- risk mapping;
- regular assessment procedures covering the situation of subsidiaries, subcontractors and suppliers;
- actions to prevent and mitigate risks and serious harm;
- a whistleblowing system that collects reporting of existing or proven risks;
- a monitoring scheme to follow up on the plan’s implementation and the efficiency of measures.

The law provides for an implementation report which is presented below.

4.3.2 2025 IMPLEMENTATION REPORT

Throughout 2025, Veolia ensured that the system implemented within the framework of the duty of care law matched its requirements. In this respect, the following initiatives were undertaken:

- human rights accelerator program: Participation in the United Nations Global Compact program to better master human rights due diligence processes;
- stakeholder association: Expansion of consultation with employee representative bodies for risk assessment and the definition of action plans during the risk mapping update.

- risk mapping methodology: The granularity of the analysis is evolving from a global approach to a differentiated analysis by business sector.

The improvements made to the group’s duty of care system, as described above, are all part of a process of continuous improvement in keeping with the spirit of the law.

Information from the Annual Financial Report is clearly identified in the table of contents by the pictogram 

5.1 Major events of the period

5.1.1 BUSINESS AND INCOME TRENDS

EXCELLENT 2025 RESULTS: ANNUAL OBJECTIVES EXCEEDED

Fiscal year 2025 marks a fundamental strategic pivot for Veolia, which posts strong results exceeding all of its annual objectives. This performance confirms the excellent momentum following the launch of the GreenUp plan, with an acceleration in the portfolio's shift toward technology activities ("boosters") and international activities, now the main drivers of the Group's growth.

This momentum has resulted in stellar growth with revenue of €44,396 million, up +2.8% excluding energy prices and at constant scope and exchange rates, as well as increased profitability, with EBITDA showing a strong organic growth of +6.3% to reach €7,050 million thanks to the resilience of our businesses and synergies.

At the same time, Veolia continued its capital allocation policy for value creation by investing €2.3 billion in strategic acquisitions, including an expansion in Water Technologies and Hazardous Waste. This rigorous management allows the Group to achieve its objective of a return on capital employed (ROCE) of 9.4% two years earlier than forecast under the GreenUp plan, while maintaining a robust balance sheet with controlled financial leverage of 2.79x, well below the 3.0x threshold.

(\$ million)	2024	2025	2025 / 2024	
			Δ at constant exchange rates	Δ at constant exchange rates & scope
Revenue	44,692	44,396	1.1 %	1.4 %
EBITDA ⁽¹⁾	6,788	7,050	5.7 %	6.3 %
Current EBIT ⁽¹⁾	3,547	3,740	7.7 %	8.9 %
Current Net income - Group share ⁽¹⁾	1,530	1,643	9.1 %	
Net Financial Debt ⁽¹⁾	-17,819	-19,657		

(1) The indicators are defined in Section 5.2 below.

Revenue as of December 31, 2025 is €44,396 million, a change of +1.4% at constant scope and exchange rates. Excluding energy prices, revenue rose +2.8% at constant scope and exchange rates.

- **France and Hazardous Waste Europe⁽¹⁾**: the Water France activity remained stable. The decline in France Waste (-3.7%) was impacted by commercial selectivity, the fall in volumes and energy prices, partially offset by the solid performance of Hazardous Waste Europe (+3.3%), boosted by tariff increases.
- **Europe⁽²⁾**: organic growth reached +3.3% excluding energy prices. The decline in Central Europe (-1.6%) masked the positive momentum in Iberia (+4.9%) and Northern Europe (+0.9%), supported by tariff indexation and commercial development.
- **Americas, Asia Pacific, Africa Middle-East⁽³⁾**: this segment was one of the main drivers of the Group's growth, with an increase of +4.1%. Latin America (+9.9%) and Africa Middle-East (+7.2%) recorded the largest increases thanks to volumes and tariffs. North America (+3.6%) benefited from a strong performance in Hazardous Waste and Regulated Water, while Asia maintained positive growth, buoyed by Japan and Taiwan in particular.
- **Water Technologies**: the business recorded growth of +3.6%, with strong acceleration in the fourth quarter (+8.0%). In this pivotal year for WTS with the acquisition of WTS's minority interests, performance was driven by high-margin activities (Products & Technologies, Services) and good volume of orders.

EBITDA as of December 31, 2025 stood at €7,050 million, an increase of +6.3% at constant scope and exchange rates. This improvement was driven by gains generated by growth and performance (+4.8%) as well as synergies (+1.5%), and favorable weather conditions (+0.5%), partly offset by the drop in commodity prices (-0.4%).

Gross operating efficiency gains as of the end of December (€399 million) were in line with our annual target.

At the end of 2025, the Group had generated €100 million in additional synergies related to the integration of Suez, bringing the cumulative amount of Suez synergies to €534 million for the 2022-2025 period. This performance exceeded the Group's initial guidance on targets of €500 million, raised to €530 million.

Current EBIT was €3,740 million, up 8.9% at constant scope and exchange rates compared to December 31, 2024.

Current net Income – Group share totaled €1,643 million as of December 31, 2025, compared with €1,530 million at the end of 2024, an increase of 9.1% at constant exchange rate.

Net financial debt totaled €19,657 million as of December 31, 2025, up €1,837 million from December 31, 2024, mainly due to net financial investments made over 2025.

⁽¹⁾ France and Hazardous Waste Europe, new IFRS8 segment designation previously "France and Special Waste".

⁽²⁾ Europe, new IFRS8 segment designation previously "Europe excluding France".

⁽³⁾ Americas, Asia Pacific, Africa Middle-East, new IFRS8 segment designation previously "Rest of the World".

5.1.2 CHANGES IN GROUP STRUCTURE - STRATEGIC PROGRAM

5.1.2.1 Innovations and commercial developments

In 2025, as part of the rollout of the Green Up strategic plan, the Group continues its innovation efforts and strengthens its commercial footprint both in its historical businesses, which ensure its solidity, and in its new activities identified as growth boosters, true catalysts for future expansion.

Strongholds

■ Australia: Veolia awarded a major contract of AUD \$850 million over 20 years for an innovative recycling facility

Veolia was awarded a strategic contract in Canberra for the construction and operation of an ultramodern recycling plant. This large-scale project will process 1.3 million metric tons of materials over 20 years, create 136 jobs and reduce carbon emissions by 26,000 metric tons per year, thanks to cutting-edge technologies and integrated solar production. This initiative, which is part of Veolia's GreenUp strategic program, strengthens the Group's presence in Australia where it recorded growth of 7.7% in 2024.

■ In July 2025, Veolia announced a £70 million investment to build the UK's first closed-loop plastic recycling plant in Battlefield, Shropshire

The plant, which will be operational in early 2026, will process 80,000 metric tons of plastic per year, including PET trays. It will specialize in closed-loop PET recycling, allowing trays to be recycled into food-grade materials. It will create more than 130 local jobs while reducing carbon emissions by up to 70% compared to using virgin materials. This investment is part of Veolia's overall plan to invest £1 billion by 2030 in the UK's circular economy.

■ Chile: Veolia wins the operation of the country's first municipal and industrial desalination plant in Valparaíso

Veolia has been awarded the operation and maintenance contract for Aguas Pacifico's desalination plant in Valparaíso, the first in Chile with a capacity of 1,000 Liters per second. With an initial duration of four years and renewal clauses extending until 2040, the contract also covers the management of the 105 km pumping system. This victory over five international competitors confirms Veolia's global leadership in desalination, with the Group having designed 18% of the world's installed capacity in this field.

Boosters

■ Desalination, a futuristic solution for water access

Desalination is becoming a key solution to water scarcity, with significant progress in energy efficiency and costs. Veolia aims to double its operated capacity by 2030 in a rapidly growing desalination market. This ambition is materializing in major contracts recently won in the United Arab Emirates (Mirfa 2, Hassyan), the United Kingdom (Cornwall) and Morocco (Rabat).

■ Start of a new electric flexibility asset in Hungary

Following the acquisition of Danubius Hungary (as detailed in Section 1.2.2), Veolia began operating the Gönyü gas power plant in January 2025. This facility includes an additional gas turbine and has the required permits to build a second 428 MW unit (Gönyü II), with the possibility of integrating the newly acquired turbine.

■ Tahwil: A strategic opportunity in hazardous waste treatment in Saudi Arabia

The Tahwil project concerns the construction and operation of a hazardous waste treatment plant in the city of Jubail in Saudi Arabia. In a favorable context, with demand of over 1 million metric tons per year, Veolia seized an opportunity to position itself as a major player in the region. The operation began successfully in February 2025.

■ Inauguration in June 2025 of one of the largest PFAS treatment plants in the United States, located in Stanton, Delaware

The plant, which represents an investment of \$35 million, will treat approximately 120 million liters of water per day and provide high quality drinking water to more than 100,000 residents, in accordance with EPA regulations. This project is part of Veolia's "BeyondPFAS" offering, which aims to roll out more than 100 treatment sites in the United States to serve nearly 2 million Americans.

■ In July 2025, Veolia announced that it had won Brazil's first public tender for water reuse

Vitória water reclamation station will be the world's first large-scale facility to convert a municipal wastewater treatment plant into a water reuse production station using membrane bioreactors and reverse osmosis. The project will save and preserve freshwater resources equivalent to the needs of nearly 200,000 people.

■ In September 2025, Veolia announced the signing of a historic agreement as part of the consortium composed of Veolia, Marafiq, Lamar, and SATORP (joint venture between Saudi Aramco and TotalEnergies Refining and Petrochemical Company) to launch a major industrial water initiative for the treatment and recycling of complex petrochemical effluents from "Jubail Industrial City" in Saudi Arabia

This US\$500 million project includes the construction, operation and maintenance (for 30 years from 2028) of the largest industrial wastewater reuse plant in the Middle East, with an annual capacity of approximately 8.8 million m³. The plant will boast Veolia's latest technologies, as part of the company's GreenUp strategic program.

■ On November 12, 2025, Veolia Australia announced that it had secured contracts worth AU\$700 million with major public water utilities to drive technological innovation in water management in Australia

These include two new agreements with Central Highlands Water and Hunter Water, as well as a contract extension with Seqwater for the Gold Coast desalination plant. The company will use cutting-edge technologies, such as its Hubgrade digital platform, to improve operational performance, strengthen water security and reduce energy consumption.

■ On November 21, 2025, Veolia signed an agreement to acquire Clean Earth, a major US player in Hazardous Waste

Clean Earth will be acquired in 2026 for an enterprise value of US\$3 billion (around €2.6 billion). This acquisition is considered the largest for Veolia since the merger with Suez, allowing the company to double its size to become number two in the key Hazardous Waste sector in the United States. The transaction provides a national operating platform with 82 sites, including 19 facilities approved by the Environmental Protection Agency (EPA), and strengthens Veolia's exposure to high-growth sectors such as healthcare, semiconductors and clean energy. The transaction is expected to be completed by mid-2026, subject to standard conditions precedent, such as the approval of the Enviri shareholders, and receipt of the necessary regulatory authorizations and approvals.

■ On November 25, 2025, Veolia unveiled a major project to phase out coal from Poznań's district heating network by 2030

The first phase of the project involves commissioning a new multi-energy cogeneration unit. This investment will result in a 25% reduction in CO₂ emissions and the removal of more than 300,000 metric tons of coal per year. The second phase will see the addition of innovative and renewable heat sources, including geothermal energy and data center and wastewater heat recovery.

- **On December 5, 2025, Veolia and Science City Guangzhou Investment Group signed a partnership agreement to jointly develop an innovative decarbonization project in the Guangzhou Development Zone, China**

The project harnesses Veolia's technologies to capture and recycle industrial flue gases by converting residual heat into steam and electricity. Once completed, it will result in an annual reduction of 200,000 metric tons of CO₂ while providing a new energy source for local businesses.

Strengthening of capital

- **A major strategic partnership: CriteriaCaixa's entry into Veolia's capital**

The Group announced on March 4, 2025, the strengthening of its shareholder structure with the entry of CriteriaCaixa, the investment company of La Caixa Foundation. This leading institutional investor acquired 5% of the capital of the global environmental services leader and obtained representation on the Board of Directors.

- **Bpifrance and the Lac1 fund invest in Veolia's future**

Veolia has taken a new step in its development strategy with the significant entry of Bpifrance and its Lac1 fund into the Group's capital, representing an investment of €800 million. This strategic alliance announced on March 17, 2025 demonstrates the confidence placed in the leader in ecological transformation, and resulted in the appointment of a Bpifrance representative to the Board of Directors. This major investment underlines the recognition of Veolia's growth potential and its crucial role in the ecological transition of regions and industries. It strengthens the Group's position as a key player in the fight against climate change, while consolidating its governance and innovation capacity.

Strategic partnerships

- **In July 2025, Veolia announced a three-year strategic partnership with AFD (Agence Française de Développement)**

This partnership aims to accelerate the ecological transformation in developing countries, combining Veolia's environmental services expertise with AFD's implementation capacity. Water and sanitation, waste management, and energy are the priority areas with targeted deployment in Latin America, Central Asia, the Balkans, Africa and the Middle East.

- **In October 2025, Veolia announced a partnership with TotalEnergies to accelerate the energy transition and the circular economy**

The two companies will collaborate in several key areas: reducing methane emissions, reducing the industrial sector's water footprint, making desalination more sustainable and recovering strategic resources from waste.

5.1.2.2 Changes in Group structure

The main changes in scope as of December 31, 2025 were as follows:

- **Acquisition of an electricity flexibility business in Hungary**

On February 14, 2024, Veolia Hungary signed a Share Purchase Agreement for the acquisition of Danubius from Uniper.

After obtaining the approvals from the European Union competition authority, the closing of the transaction was carried out on January 6, 2025 for an amount of €271 million*, equal to a securities price of €366 million.

- **Acquisition of the 30% minority interests in Water Technologies and Solutions**

Veolia announced, as of May 7, 2025, the signature of an agreement with Caisse de Dépôt et Placement du Québec (CDPQ) to acquire its 30% stake in Water Technologies and Solutions (WTS), giving Veolia 100% control, thereby increasing value creation, simplifying the structure, and making additional cost synergies of approximately €90 million by 2027, including €20 million by the end of December. The purchase price for the acquisition is US\$1.75 billion, equivalent to €1.5 billion.

This acquisition is a logical step in the deployment of the GreenUp strategic plan, which aims to strengthen the Group's foothold in Water Technologies activities and in the United States, both identified as priority growth boosters.

The acquisition of CDPQ's minority interests thus strengthens Veolia's unique positioning as a global leader in Water Technologies.

The acquisition of the additional 30% of WTS, being recognized as a transaction between shareholders, has no impact on the amount of goodwill recognized in 2022 at the time of the initial acquisition. The impact of the transaction on the Group's equity amounts to -€1,380 million.

As part of the GreenUp ambition, Veolia is increasing its leadership in Hazardous Waste Treatment with major investments in new capacity and targeted tuck-in acquisitions:

- **Acquisition of specialist hazardous waste treatment businesses in the United States**

Veolia has expanded with four acquisitions that enhance both regional coverage and treatment capacity.

In Massachusetts, the Group acquired a Hazardous Waste Treatment site and emergency response operations through New England Disposal Technologies, as well as the state's only permitted Medical Waste Treatment and Storage facility, Bio-Med Innovations, formerly operated by New England MedWaste.

These assets significantly strengthen Veolia's position in the Northeast of the US, a region with high regulatory standards.

On the West Coast of the United States, Veolia acquired a major platform in California through Ingenium, adding extensive packaging, logistics, and multi-stream treatment capabilities across Hazardous Waste – expanding service to a broad industrial and institutional client base in one of the largest U.S. waste markets.

In the semiconductor industry, Veolia acquired Chameleon Industries Group, a Texas-based producer of specialty chemical products. The company's circular economy technology uses byproducts from the semiconductor manufacturing process in its proprietary applications, reduces waste and creates beneficial products for industry. This acquisition expands Veolia's leadership in providing innovative environmental solutions to cutting-edge manufacturing and technology companies in North America.

The total amount of these acquisitions is €247 million*.

- **Acquisition of a hazardous waste treatment and storage business in Japan**

On May 16, 2025, Veolia signed the acquisition of Zeeklite Co. LTD, which operates one of the country's largest private hazardous waste storage facilities in Yonezawa City.

Specializing in the disposal of hazardous waste, general industrial waste, and contaminated soil, Zeeklite strengthens Veolia's ability to offer fully integrated waste management services in the country.

Financial closure took place on May 30, 2025 for an amount of €85 million*.

* Corresponds to net financial investments.

5.1.3 GROUP FINANCING

5.1.3.1 Group debt structure

Net financial debt is €19,657 million as of December 31, 2025.

The level of cash as of December 31, 2025 stood at €9,974 million, after the repayment of bonds convertible and/or exchangeable for new or existing shares maturing on January 1, 2025 for an amount of €336 million and two bonds maturing on April 3, 2025 and September 10, 2025, each for an amount of €500 million.

The Group also has at its disposal a multi-currency syndicated loan, with a total undrawn amount of €4,500 million as of December 31, 2025, as well as bilateral credit facilities with a total undrawn amount of €1,438 million as of December 31, 2025.

This enables it a solid net liquidity position of €6,885 million as of December 31, 2025, after taking into account current debts (including bank overdrafts and other cash position items) payable in the amount of €9,026 million.

5.1.3.2 Bond debt management

On May 13, 2025, Veolia issued its first green bond, in the form of a green hybrid bond, for €500 million with a coupon of 4.371% until its first reset date in August 2030.

On June 17, 2025, Veolia issued a two-tranche bond of €850 million at a rate of 3.324% maturing in June 2032 and €650 million at a rate of 3.795% maturing in June 2037.

On September 17, Veolia issued a hybrid bond in the amount of €850 million bearing a coupon of 4.322% until the first reset date in January 2033.

In addition:

- in the United States, on January 15, 2025, Veolia Utility Resources LLC drew down a US\$200 million (€184 million equivalent) private placement bond issue at a rate of 5.72% maturing in 2055;
- in Chile, on January 30, 2025, Aguas Andinas issued a bond of 4 million Chilean Units of Account (CLF) (equivalent to €161 million) at a rate of 3.19%, maturing in 2046.

5.1.3.3 Confirmation of the credit outlook

On November 25, 2025, Standard and Poor's confirmed Veolia Environnement's credit rating at A-2/BBB with a stable outlook. On December 2, 2025, Moody's confirmed the Group's rating at P-2/Baa1 with a stable outlook.

5.1.3.4 Dividend payment

The Combined General Meeting of April 24, 2025 approved payment of a dividend of €1.40 per share for 2024, payable in cash. The 2024 dividend was paid on May 14, 2025 for an amount of €1,023 million.

A dividend of €1.50 per share is proposed to shareholders for 2025, subject to the approval of the General Meeting on April 23, 2026.

5

5.1.4 APPOINTMENT OF STATUTORY AUDITORS

At the Combined General Meeting held on April 24, 2025, Deloitte & Associés was appointed as statutory auditors in charge of certifying the financial statements (parent company and consolidated) and

sustainability information, respectively for a six-year period that will end at the close of the Shareholders' General Meeting called to approve the financial statements for the fiscal year ending December 31, 2030.

5.1.5 FREE SHARE AND PERFORMANCE SHARE PLANS AND GROUP SAVINGS

In addition to the long-term incentive plans outlined in Chapter 2 of the amendment to the 2024 Universal Registration Document, the Company has reaffirmed its commitment to involving its employees in the company's development and value creation by launching a new employee share ownership program. On June 10, 2025, the Group announced the launch of an employee shareholding scheme open to around 190,000 Group employees.

The subscription rate was close to 45%, with more than 85,000 employees choosing to subscribe. As a result of the transaction, Group employees further increased their position as Veolia's largest shareholder by holding more than 9.5% of the Company's share capital.

To neutralize the dilutive effect of the transaction, Veolia proceeded with a concurrent capital reduction through cancellation of treasury shares acquired under the share buy-back program. The total share capital therefore remains unchanged after these transactions.

Through this new transaction, Group employees have strengthened their position as Veolia's largest shareholder. This success again reflects the commitment of Group employees to the objectives set out in the GreenUp 24-27 strategic plan.

5.1.6 CHANGES IN GOVERNANCE

As part of the annual re-election of the Board, the Board of Directors' meeting of March 11, 2025 noted the expiration of the terms of office of two directors at the end of the General Meeting of April 24, 2025 (Mr. Pierre-André de Chalendar and Mrs. Marion Guillou) and that Mrs. Marion Guillou did not seek the renewal of her term of office at the end of that General Meeting. In addition, the Board of Directors noted that the term of office of Mr. Francisco Reynés would expire, at his request, at the end of that General Meeting.

At the recommendation of the Nominations Committee, the same Board of Directors' meeting decided to ask the General Meeting to renew the term of office of Mr. Pierre-André de Chalendar as director, and appoint Mr. Philippe Brassac, Mr. Arnaud Caudoux and Mrs. Elena Salgado as directors.

The Veolia Environnement Combined General Meeting of April 24, 2025:

- renewed the term of office of Mr. Pierre-André de Chalendar as director; and
- appointed Mr. Philippe Brassac, Mr. Arnaud Caudoux and Mrs. Elena Salgado as directors;

for a four-year period expiring at the end of the General Meeting called to approve the financial statements for the year ending December 31, 2028.

At the date of this document, the Veolia Environnement Board of Directors had fifteen directors, 75% of whom were independent directors (excluding the two directors representing employees and the director representing employee shareholders), 54%⁽¹⁾ of whom were women, and one non-voting member (censeur):

- Mr. Antoine Frérot, Chairman of the Board of Directors;
- Mrs. Estelle Brachlianoff, Chief Executive Officer;
- Mr. Pierre-André de Chalendar*, Senior Independent Director;
- Mr. Olivier Andriès*;
- Mrs. Maryse Aulagnon;
- Mrs. Véronique Bédague*;
- Mr. Philippe Brassac*;
- Mr. Arnaud Caudoux*;
- Mrs. Isabelle Courville*;
- Mr. Franck Le Roux, Director representing employees;
- Mrs. Julia Marton-Lefèvre*;
- Mrs. Agata Mazurek-Bąk, Director representing employee shareholders;
- Mr. Pavel Páša, Director representing employees;
- Mrs. Elena Salgado*;
- Mr. Guillaume Texier*;
- Mr. Enric Xavier Amiguet i Rovira, non-voting member (censeur).

* Independent member.

The composition of the Board Committees is:

- **Accounts and Audit Committee:** Mr. Guillaume Texier (Chairman), Mr. Olivier Andriès, Mrs. Véronique Bédague, Mr. Arnaud Caudoux, Mr. Franck Le Roux (Director representing employees) and Mrs. Agata Mazurek-Bąk (Director representing employee shareholders);
- **Nominations Committee:** Mr. Pierre-André de Chalendar (Chairman), Mrs. Maryse Aulagnon, Mr. Philippe Brassac, Mrs. Isabelle Courville and Mr. Antoine Frérot;
- **Compensation Committee:** Mr. Olivier Andriès (Chairman), Mrs. Maryse Aulagnon, Mr. Pierre-André de Chalendar, Mr. Franck Le Roux (Director representing employees) and Mrs. Elena Salgado;
- **Research, Innovation and Sustainable Development Committee:** Mrs. Isabelle Courville (Chairwoman), Mr. Arnaud Caudoux, Mrs. Julia Marton-Lefèvre, Mr. Pavel Páša (Director representing employees), Mrs. Elena Salgado and Mr. Guillaume Texier. Mr. Enric Amiguet i Rovira is a permanent guest of this committee;
- **Purpose Committee:** Mr. Antoine Frérot (Chairman), Mr. Olivier Andriès, Mrs. Maryse Aulagnon, Mr. Philippe Brassac, Mr. Pierre-André de Chalendar, Mrs. Isabelle Courville, Mr. Franck Le Roux (Director representing employees) and Mr. Guillaume Texier.

The Chief Executive Officer is assisted in the performance of her duties by an Executive Committee, a discussion, consultation and general policy decision-making body which seeks to implement the Group's strategic direction. The Committee is also consulted on major issues concerning the Group's corporate life.

The Executive Committee meets monthly.

As of the date of this document, the Company's Executive Committee had 14 members:

- Estelle Brachlianoff, Chief Executive Officer;
- Sébastien Daziano, Senior Vice-President, Strategy, Innovation & Development;
- Gavin Graveson, Senior Executive Vice President, Northern Europe;
- Philippe Guitard, Senior Executive Vice President, Central and Eastern Europe;
- Éric Haza, Chief Legal Officer;
- Anne Le Guennec, Senior Executive Vice President, Worldwide Water Technologies;
- Christophe Maquet, Senior Executive Vice President, Veolia Asia Pacific;
- Emmanuelle Menning, Deputy Chief Executive Officer Finance and Purchasing;
- Gustavo Migués, Senior Executive Vice President, Iberia and Latin America;
- Jean-François Nogrette, Senior Executive Vice President, France and Special Waste Europe;
- Laurent Obadia, Deputy CEO in charge of Stakeholders and Communications;
- Helman le Pas de Sécheval, General Counsel;
- Nadège Petit, Senior Executive Vice President, North America;
- Isabelle Quainon, Senior Executive Vice President, Human Resources.

In addition, Management Committee meetings bring together, each quarter all the Group's functions and geographies to share and commit to the Group's challenges and outlook. At the date of this document, this Committee had 36 members, including the 14 Management Committee members; its composition can be viewed on Veolia's website (www.veolia.com).

⁽¹⁾ Excluding the two Directors representing employees in accordance with Articles L. 225-27-1 and L. 22-10-7 of the French Commercial Code.

5.2 Accounting and financial information

5.2.1 KEY FIGURES

Group key figures are presented in accordance with the definitions as described in the publication of the financial statements for the year ended December 31, 2025 (see Chapter 5.5.2 – Definitions).

(€ million)	2024	2025	2025 / 2024		
			Δ	Δ at constant exchange rates	Δ at constant scope & exchange rates
Revenue	44,692	44,396	-0.7%	1.1%	1.4%
EBITDA ⁽¹⁾	6,788	7,050	3.9%	5.7%	6.3%
Current EBIT ^{(2) (3)}	3,547	3,740	5.4%	7.7%	8.9%
Current Net income - Group share ⁽¹⁾	1,530	1,643	7.3%	9.1%	
Net Income - Group share	1,098	1,217	10.9%		
Current net income - Group share, per share (undiluted) ⁽¹⁾	2.13	2.25	5.6%		
Current net income - Group share, per share (diluted) ⁽¹⁾	2.06	2.24	8.9%		
Dividend per share paid during the fiscal year	1.40	1.50 ⁽⁴⁾			
Net industrial investments (including new operating financial assets)	-3,836	-3,855			
Net free cash-flow	1,156	1,178			
Post-tax ROCE	8.8 %	9.4 %			
Net financial debt - Closing ⁽⁵⁾	-17,819	-19,657			

(1) The indicators are defined in Section 5.1.

(2) Including the share of current net income of joint ventures and associates.

(3) Re-presented for depreciation of revalued assets, identified during the Suez purchase price allocation, of €191 million as of December 31, 2024 and €166 million as of December 31, 2025 as defined in Section 5.1.

(4) Amount of dividend proposed to the shareholders and subject to the approval of the General Meeting on April 23, 2026.

(5) Net financial debt excludes the remeasurement of financial liabilities during the Suez purchase price allocation as defined in Section 5.1 of the Universal Registration Document.

The main foreign exchange impacts between December 31, 2025 and December 31, 2024 are as follows:

FX impacts as of December 31, 2025 (vs December 31, 2024)	%	(€ million)
Revenue	-1.7%	-771
EBITDA	-1.8%	-124
Current EBIT	-2.3%	-82
Net financial debt ⁽¹⁾	-1.6%	293

(1) Including fair value adjustment.

5.2.2 GROUP GEOGRAPHIC PERFORMANCE

5.2.2.1 Revenues by operating segment

Group consolidated revenue amounted to €44,396 million at December 31, 2025, compared to €44,692 million at December 31, 2024. The increase was +1.4% at constant scope and exchange rates and +2.8% excluding the effect of energy prices, which mainly affects Europe.

(€ million)	2024	2025	2025/2024		
			Δ	Δ at constant exchange rates	Δ at constant scope and exchange rates
France and Hazardous Waste Europe	9,145	8,914	-2.5%	-2.5%	-0.7
Europe	18,619	19,206	3.2%	3.0%	0.1%
Americas, Asia Pacific, Africa Middle-East	11,945	11,316	-5.3%	-0.3%	4.1%
Water technologies	4,973	4,954	-0.4%	3.7%	3.6%
Other	9	6	-	-	-
GROUP	44,692	44,396	-0.7%	1.1%	1.4%

As of December 31, 2025, revenue by operating segment breaks down as follows:

Revenue as of 2025: €44,396 million

Compared with December 31, 2024, the revenue increase as of December 31, 2025 was +1.4% at constant scope and exchange rates.

Revenue for the **France and Hazardous Waste Europe** segment totaled €8,914 million, showing a slight decrease at constant scope and exchange rates compared to December 31, 2024:

- **Water** revenue of €3,163 million was stable at constant scope and exchange rates despite slightly lower contractual indexations (-0.8%). The activity is supported by strong commercial performance combined with an increase in water volumes (+2.6%);
- **Waste** revenue stood at €2,853 million. The decrease of -3.7% at constant scope and exchange rates is mainly due to lower landfill volumes, decrease in electricity revenue, commercial selectivity, partially offset by tariff indexations;
- **Hazardous Waste Europe** recorded revenue of €2,375 million, showing an increase of +3.3% at constant scope and exchange rates. This performance was mainly driven by price increases and positive momentum in the storage businesses.

Revenue for the **Europe** segment totaled €19,206 million as of December 31, 2025, with organic change of +0.1%, impacted by lower energy prices than in 2024. Excluding energy prices, revenue increased +3.3%, driven by Water (+5.4%) and Energy, combined with the resilience of Waste:

- In **Central and Eastern Europe**, revenue totaled €10,969 million, down by -1.6% at constant scope and exchange rates. Excluding energy prices, revenue showed organic growth of +3.5% thanks to Water progression (increased volumes and price indexations), good volumes in Energy (supported by favorable weather), and stabilized Waste activity. The year was marked by the successful integration of newly acquired electricity flexibility assets in Hungary and the commissioning of a new multi-energy cogeneration unit in Poznan, as part of the coal exit plan in Europe;
- In **Northern Europe**, revenue of €4,272 million rose by +0.9% at constant scope and exchange rates. In the United Kingdom, revenue increased by +0.4% to €2.8 billion at constant scope and forex, despite lower tariff indexation and maintenance outage of waste to energy facilities;
- In **Iberia**, revenue stood at €2,987 million, up 4.9% (excluding foreign exchange and scope effects). This positive momentum is mainly due to the strong performance of the Water sector, which benefited from favorable tariff revision and an increase in consumption: in Spain, where removal of draught restrictions contributed to volume rebound (+2.8%). Energy activities also contributed to this growth through the award of new contracts and the completion of project works;
- **Italy** generated revenue of €978 million, up +1.4% at constant scope and exchange rates, thanks to strong momentum in Energy.

In the **Americas, Asia Pacific, Africa Middle-East**, revenue reached 11,316 million euros, an organic growth of +4.1%, increasing across all geographies:

- In **North America**, revenue reached 3,145 million euros, up +3.6% at constant scope and exchange rate. This growth was mainly driven by the Hazardous Waste activity, supported by strong commercial momentum accompanied by favorable mix, as well as a solid performance in the Regulated Water business with favorable tariff revisions;
- In **Latin America**, revenue stood €1,889 million, an increase of +9.9% at constant scope and exchange rates. This growth was driven by tariff indexations and the increase in water volumes in Chile, and by a strong waste activity in Brazil and in Colombia;
- Revenue in **Asia** rose 0.4% at constant scope and exchange rates to €2,427 million. Revenue increased in Japan driven by Municipal water (price increases, as well as good order book), in South East Asia and in India (waste volumes increase and strong commercial momentum). Revenue in China is slightly down, but the waste activity is growing, particularly in plastic waste, with a recovery in hazardous waste volumes, offset by price pressure;

- In the **Pacific** region, revenue rose +0.9% at constant scope and exchange rates to €2,027 million, and up by +2.6% including tuck-ins which complement the good commercial momentum, in spite of intense competitive pressure in municipal, commercial and industrial waste collection;

- In **Africa Middle-East**, revenue rose +7.2% at constant scope and exchange rates to €1,828 million. This growth was driven by a sustained level of activity in Morocco, as well as the development of energy services in the Middle East, supported by favorable pricing and commercial momentum.

The **Water technologies** business recorded revenue of €4,954 million, up +3.6% at constant scope and exchange rates compared to 2024. This change is due to the growth of higher-margin activities, such as Products & Technologies and Services, offset by timing of project milestones.

5.2.2.2 EBITDA by operating segment

Group consolidated EBITDA as of December 31, 2025 was €7,050 million, compared with €6,788 million as of December 31, 2024, an increase of +6.3% at constant scope and exchange rates. EBITDA benefited from revenue organic growth of +2.8% excluding energy prices, operating efficiency programs, and synergies generated following the integration of Suez (€100 million).

(€ million)	2024	2025	2025 / 2024		
			Δ	Δ at constant exchange rates	Δ at constant scope and exchange rates
France and Hazardous Waste Europe	1,392	1,475	6.0%	6.0%	6.3%
Europe	2,642	2,758	4.4%	4.2%	1.8%
Americas, Asia Pacific, Africa Middle-East	2,025	2,009	-0.8%	4.2%	9.3%
Water technologies	612	669	9.3%	14.0%	14.1%
Other	117	139	-	-	-
GROUP	6,788	7,050	3.9%	5.7%	6.3%

- **France and Hazardous Waste Europe (+6.3% at constant scope and exchange rates)**: The EBITDA growth reflects excellent operational control. It was driven by the ramp-up of operational efficiency plans and the resilience of our activities. The business is also benefiting from positive volume momentum in Water and a strong performance in the Hazardous Waste division.

- **Europe (+1.8% organic growth)**: Solid performance driven by Southern Europe, with +12% organic growth in Iberia and +8.8% organic growth in Italy thanks to tariff renegotiations and operational efficiency. Northern Europe saw a slight decline due to the impact of incinerator maintenance shutdowns and lower electricity prices in the United Kingdom. In Central Europe, business remained stable and the impact of energy prices was offset by good volumes and a positive climate effect.

- **Americas, Asia Pacific, Africa Middle-East (+9.3% at constant scope and exchange rates)**: Strong momentum in organic growth across all regions, particularly in Asia (+13%)(1), thanks to good volumes in Waste, and in North America (+8.8%)(1). This performance was based on the full implementation of tariff reviews (US Regulated Water, Latin America) and the effectiveness of performance plans designed to protect margins.

- **Water Technologies (+14.1% at constant scope and forex)**: The segment recorded a significant increase in profitability (+120bps EBITDA margin). This result is the fruit of a refocusing on high value-added activities combined with synergies generated by One WaterTech.

(1) At constant scope and exchange rates.

5.2.3 GROUP PERFORMANCE BY BUSINESS LINE

5.2.3.1 Revenues by business line

Compared with December 31, 2024, revenue was up +1.4% at constant scope and exchange rates. Excluding energy prices, revenue increased by +2.8%. The change in revenue by business is due to the following:

(€ million)	2024	2025	2025/2024		
			Δ	Δ at constant exchange rates	Δ at constant scope and exchange rates
Municipal Water	13,060	12,739	-2.5%	-1.1%	3.5%
Water Technologies	4,973	4,954	-0.4%	3.7%	3.6%
Water	18,033	17,693	-1.9%	0.2%	3.5%
Solid Waste	11,387	11,226	-1.4%	0.9%	0.5%
Hazardous Waste	4,276	4,217	-1.4%	0.9%	3.8%
Waste	15,662	15,443	-1.4%	0.9%	1.4%
District Heating & Cooling Networks ⁽¹⁾	7,525	7,240	-3.8%	-4.2%	-5.4%
Bioenergy, Flexibility & Energy Efficiency ⁽¹⁾	3,471	4,021	15.8%	17.7%	5.1%
Energy	10,997	11,260	2.4%	2.7%	-2.1%
GROUP	44,692	44,396	-0.7%	1.1%	1.4%

⁽¹⁾ In 2024: €214 million were reclassified from district heating to energy efficiency following a simplification of the reporting process.

Revenue for the period ended December 31, 2025 breaks down by business as follows:

Revenue as of 2025: €44,396 million

The main changes in revenue by business at constant scope and exchange rates compared with figures of December 31, 2024 break down as follows:

Water revenue

Water activities recorded growth of +3.5% at constant scope and exchange rates, mainly driven by tariff increases of +1.5%, as well as improved volumes and good commercial momentum at +2.1%.

Revenue from the **stronghold Municipal Water** rose by +3.5% at constant scope and exchange rates, with tariff increases in most geographies (particularly in Spain, Central and Eastern Europe, North America and Chile) and a favorable commercial impact.

Revenue from **Water Technology booster activities** rose by +3.6% at constant scope and exchange rates. This change is due to the growth of higher-margin activities, such as Products & Technologies and Services, offset by timing of project milestones.

Waste revenue

Revenue from the **Waste** business rose by +1.4% at constant scope and exchange rates, due to tariff revisions (+2.2%), a slight decrease in commodities (-0.5%) and in commerce/volumes/projects (-0.3%).

Revenue from the **stronghold Solid Waste Management** rose by +0.5% at constant scope and exchange rates. This growth is mainly due to favorable tariff increases, particularly in the British and French markets, and strong volumes in Asia and Latin America, offsetting the negative impact of energy prices.

Revenue from the **Hazardous Waste treatment booster** rose by +3.8% at constant scope and exchange rates. This performance is particularly strong in North America and Europe, where Veolia benefits from its unique ability to treat the most difficult types of pollution, supported by tariff increases and improved the optimization of the waste mix.

Energy revenue

Energy revenue varied between -2.1% at constant scope and exchange rates but rose by +3.0% excluding the energy price impact. The unfavorable energy price impact of -5.0% is partially offset by the positive climate impact of +1.7% and the volume/commerce effect of +1.2%.

Revenue from the **stronghold District Heating and Cooling Networks**, mainly located in Central and Eastern Europe, rose by +1.7% at constant scope and exchange rates after neutralizing the impact of energy prices. This growth is driven by good volumes combined with a favorable climate impact.

Revenue from **Bioenergies, Flexibility and Energy Efficiency booster** rose by +5.8% at constant scope and exchange rates, excluding the impact of energy prices, thanks to an increase in volumes in the Middle-East, Italy, Spain and Belgium.

5.2.3.2 EBITDA by business line

(in € million)	2024	2025	2025/2024		
			Δ	Δ at constant exchange rates	Δ at constant scope and exchange rates
Municipal Water	2,727	2,729	-	1.6%	6.1%
Water Technologies	612	669	9.3%	14.1%	14.1%
Water	3,340	3,398	1.7%	3.9%	7.6%
Solid Waste	1,503	1,566	4.4%	6.8%	6.8%
Hazardous Waste	609	686	12.6%	14.8%	13.0%
Waste	2,110	2,252	6.8%	9.1%	8.6%
District Heating & Cooling Networks ⁽¹⁾	1,091	1,087	-0.4%	-0.5%	-1.5%
Bioenergy, Flexibility & Energy Efficiency ⁽¹⁾	246	312	26.9%	29.3%	5.0%
Energy	1,338	1,400	4.6%	5.0%	-0.3%
GROUP	6,788	7,050	3.9%	5.7%	6.3%

⁽¹⁾ In 2024: €5 million were reclassified from district heating to energy efficiency following a simplification of the reporting process.

Water EBITDA

EBITDA increased by +7.6%⁽¹⁾, driven by the strength of Municipal Water (+6.1%)⁽¹⁾ and the strong acceleration of Water Technologies (+14.1%)⁽¹⁾. This performance reflects the improvement in operational profitability, with the Water Technologies EBITDA margin now reaching 13.5%.

Waste EBITDA

The Waste business recorded a remarkable EBITDA growth of +8.6%⁽¹⁾, driven by solid waste efficiency plans (+6.8%)⁽¹⁾ and good momentum in Hazardous Waste (+13.0%)⁽¹⁾. Pricing effect and mix improvement enabled an EBITDA margin increase of +110 basis points to 14.6%, with a 13.9% EBITDA margin in Solid Waste and 16.3% in Hazardous Waste.

Energy EBITDA

EBITDA was virtually unchanged (-0.3%)⁽¹⁾. The sustained growth in Bioenergies, Flexibility and Energy Efficiency (+5.0%)⁽¹⁾ and a favorable climate effect offset the impact of the new contractual phase in District Heating Networks in Uzbekistan. EBITDA margin improved by +30 basis points to 12.4%.

⁽¹⁾ At constant scope and exchange rates.

5.2.4 GROUP PERFORMANCE EVOLUTION BY EFFECT

5.2.4.1 Analysis of changes in Group revenues

Revenue was up +1.4% at constant scope and exchange rates, and +2.8% excluding energy prices. It breaks down as follows:

The **Foreign exchange impact** of -€771 million (-1.7%) mainly reflecting the international dimension of the Group (c. 60% of non-euro revenue) and corresponding to the depreciation of the US, Argentine, Australian and Chilean currencies, partially offset by the appreciation of the Polish and Czech currencies⁽¹⁾. It should be noted that these are translation impacts and not transaction impacts, with no impact on margins.

The **Scope effect** of -€154 million (-0.3%) is primarily composed of a negative impact of -€839 million, which mainly includes the impact of the disposals of SADE (France and Special Waste Europe) on February 29, 2024, of Veolia North America Regeneration Services on August 1, 2024, and of Lydec (Morocco) on September 4, 2024. This effect was partially offset both by a positive scope effect of +€685 million due to both the acquisition of the electricity flexibility business in Hungary on January 6, 2025, and acquisitions of Hazardous Waste activities in Japan and the United States.

Commodities (corresponding to changes in energy and recyclate prices) amount to -€638 million (-1.4%), due to lower energy prices (-€630 million), mainly in Central and Eastern Europe, as well as the negative effect of recyclate prices (-€7 million).

The Climate impact is +€183 million (+0.4%), mainly in Central and Eastern Europe due to a harsher winter at the beginning of the year compared to 2024.

The Commerce/Volumes/Works amounts to +€466 million (+1.0%) driven by good commercial momentum, favorable water volumes, progressing works.

Favorable **Price effects** represent +€618 million (+1.4%), mainly related to tariff reviews for Water and Waste activities.

⁽¹⁾ Main foreign exchange impacts by currency: the US dollar (-€222 million), the Argentine peso (-€139 million), the Australian dollar (-€138 million), the Chilean peso (-€42 million), the zloty (+€46 million), and the Czech koruna (+€37 million).

5.2.4.2 Analysis of changes in Group EBITDA

The change in EBITDA between 2024 and 2025 breaks down as follows:

- **Foreign exchange** on EBITDA amounted to -€124 million (-1.8%). This reflects the international dimension of the Group and mainly corresponds to the depreciation of the US, Australian, Chilean and Argentine currencies, partially offset by the Czech and Polish currencies⁽¹⁾. It should be noted that these are translation impacts and not transaction impacts, with no impact on margins.
- **The scope effect** of -€44 million (-0.6%) mainly includes the impact of the disposals of SADE on February 29, 2024, RGS (North America) on August 1, 2024, and Lydec on September 4, 2024, partially offset by the acquisition of an Electricity Flexibility activity in Hungary on January 6, 2025, the acquisition of Zeeklite in May 2025 and the acquisitions carried out in the United States.
- The change in **commodity prices** (energy and recycle) had a net unfavorable impact on EBITDA of -€30 million (-0.4%), mainly tied to lower energy prices.

- **The weather impact** was favorable at +€35 million (+0.5%), mainly in Central and Eastern Europe, due to a colder winter in the first quarter of 2025.
- **Growth and performance** of +€326 million (4.8%) was driven by a favorable **Trade/Volumes/Works effect** of €137 million (+2.0%) and by a **price, productivity and efficiency effect**, net of shared gains, which generated €189 million in EBITDA (+2.8%). This represents a retention rate of 47% of the €399 million in gains generated, exceeding the annual objective of €350 million and the amount of One WaterTech synergies was 20 million euros by the end of 2025.

Efficiency plan: €399 M

Synergies generated at the end of December 2025 as part of the integration of Suez amounted to €100 million, mainly from optimizations in purchasing and the Water Technologies segment. These new synergies, combined with those already achieved between 2022 and 2024, amount to €534 million in cumulative synergies at the end of 2025 and exceed the Group's target of €500 million, raised to €530 million.

Cumulated synergies: €534 M

⁽¹⁾ Main currency exchange impacts by currency: the US dollar (-€41 million), the Australian dollar (-€19 million), the Chilean peso (-€18 million), the Argentine peso (-€17 million), the Czech koruna (+€9 million), and the Polish zloty (+€6 million).

5.2.5 OTHER INCOME STATEMENT ITEMS

5.2.5.1 Current EBIT

Group Current EBIT for the year ended December 31, 2025 is €3,740 million, up +8.9% at constant scope and exchange rates on the year ended December 31, 2024.

EBITDA reconciles with Current EBIT as follows:

(€ million)	2024	2025
EBITDA	6,788	7,050
Renewal expenses	-295	-305
Amortizations ⁽¹⁾ , including repayment of operational financial assets	-3,156	-3,178
Provisions, capital gain or loss on disposals of fixed assets, and others	78	82
Share of current net income of joint ventures and associates	132	90
Current EBIT	3,547	3,740

The +€316 million (+8.9%) increase in Current EBIT at constant scope and exchange rates compared with figures of December 31, 2024 is mainly due to:

- a strong growth in EBITDA (+€431 million at constant scope and exchange rates);
- an increase in amortization⁽¹⁾, including principal payments on operating financial assets (-€66 million at constant scope and exchange rates);
- the stability of the "provisions, capital gain or loss on disposals of fixed assets, and others" item (+€6 million at constant scope and exchange rates);

- a decrease in the item "share of current net income of joint ventures and associates" (-€36 million at constant scope and exchange rates) mainly due to a litigation provision in the Africa Middle East region and an impairment in Asia.

The impact of foreign exchange fluctuations on current EBIT was unfavorable by -€82 million, mainly due to the depreciation of the US dollar (-€27 million), the Chilean peso (-€13 million), the Argentine peso (-€13 million) and the Australian dollar (-€10 million).

5.2.5.2 Net financial expense

(€ million)	Year ended December 31, 2024	Year ended December 31, 2025
Current cost of net financial debt (1)	-652	-692
Dividends received	3	4
Foreign exchange gains and losses and fair value adjustments	-89	-45
Other	-288	-273
Other financial income and expense (2)	-374	-313
Gains (losses) on disposals of financial assets (3)	60	14
Current net financial expenses (1)+(2)+(3)	-966	-991
Other non-current financial income and expenses and impact of the remeasurement of financial liabilities	67	17
Net financial expense	-899	-974

Net financial expense as of December 31, 2025 are -€974 million compared with -€899 million as of December 31, 2024. This change of -€75 million is explained by the following:

- **Current net financial income** stood at -€991 million as of December 31, 2025, an increase of -€25 million compared to December 31, 2024. It includes the **current cost of net financial debt**, at -€692 million as of December 31, 2025.

The Group's financing rate (excluding IFRS 16 impacts) is therefore 3.83% at December 31, 2025, compared with 3.76% at December 31, 2024 (3.79% vs. 3.72% including IFRS 16 impacts).

In addition, **other current financial income and expenses excluding gains (losses) on disposal** amount to -€313 million as of December 31, 2025, an improvement of +€61 million compared to December 31, 2024, mainly due to a favorable change in foreign exchange gains and losses.

Gains (losses) on disposal of financial assets amount to +€14 million, compared with +€60 million as of December 31, 2024. In 2024, they included the gain on disposal of the SADE Group in February 2024.

The "Other current financial income and expenses" item also includes the unwinding of discounts on provisions, interest on concession liabilities and interest on IFRS 16 lease debt;

- **Non-current net financial income** of +€17 million as of December 31, 2025 mainly includes the impact of the amortized cost of the revaluation of the debt from Suez.

⁽¹⁾ Excluding the impact of the Suez purchase price allocation.

5.2.5.3 Current income tax expense

The current income tax expense for the year ended December 31, 2025 is -€675 million, compared with -€664 million for the year ended December 31, 2024.

The current income tax rate for the year end December 31, 2025 is 25.4%, versus 27.1% for the year ended December 31, 2024.

(€ million)	December 31, 2024	December 31, 2025
Current income before tax (a)	2,581	2,749
Of which share of net income of joint ventures & associates (b)	132	90
Re-presented current income before tax: (c)=(a)-(b)	2,449	2,659
Restated tax expense (d) ⁽¹⁾	-664	-675
RE-PRESENTED TAX RATE ON CURRENT INCOME (d)/(c)	27.1%	25.4 %

5.2.5.4 Current Net Result / Net Income attributable to the owners of the Company

Net income attributable to owners of the parent company is €1,217 million as of December 31, 2025, compared with €1,098 million as of December 31, 2024:

- Current net result attributable to owners of the Parent Company is €1,643 million for the year ended December 31, 2025, compared with €1,530 million for the year ended December 31, 2024;
- Current net result per share attributable to owners of the parent company is €2.25 (non-diluted) and €2.24 (diluted) as of December 31, 2025, compared with €2.13 (non-diluted) and €2.06 (diluted) as of December 31, 2024;

- Net result attributable to non-controlling interests is €402 million as of December 31, 2025, compared with €347 million as of December 31, 2024, and is consistent with the growth in the Group's net income, particularly in Central and Eastern Europe and in Spain;
- The net result from discontinued operations for the fiscal years 2025 and 2024 primarily relates to the EPC (Engineering, Procurement, Construction) activity discontinued across all geographies.

Net income attributable to owners of the Company breaks down as follows:

(€ million)	2024			2025		
	Current	Non-current & PPA *	Total	Current	Non-current & PPA *	Total
EBIT	3,547	-535	3,012	3,740	-441	3,298
Cost of net financial debt	-652	62	-590	-692	38	-654
Other financial income and expenses	-314	6	-309	-299	-22	-321
Pre-tax net income (loss)	2,581	-467	2,114	2,749	-425	2,324
Income tax expense	-664	98	-566	-675	88	-587
Net income (loss) from discontinued operations	0	-103	-103	-	-118	-118
Attributable to non-controlling interests	-387	40	-347	-431	30	-402
NET INCOME (LOSS) ATTRIBUTABLE TO OWNERS OF THE COMPANY	1,530	-433	1,098	1,643	-425	1,217

* Including non-current items, as well as depreciation of remeasured assets and the remeasurement of financial liabilities in the context of the Suez purchase price allocation as defined in Section 5.2 below.

Current EBIT reconciles with operating income, as presented in the income statement, as follows:

(€ million)	2024	2025
Current EBIT	3,547	3,740
Impairment losses on goodwill and negative goodwill	-3	-4
Net charges to non-current provisions	-2	-2
Restructuring costs	-137	-134
Non-current amortizations, provisions and impairment of property, plant and equipment, intangible assets, operating financial assets and other	-362	-295
Share acquisition costs, with or without acquisition of control	-32	-6
Total non-current items	-535	-441
OPERATING INCOME AFTER SHARE OF NET INCOME OF EQUITY-ACCOUNTED ENTITIES	3,012	3,299

- Restructuring costs mainly concerned France, Central Europe, Asia Pacific and Latin America.
- Non-current depreciation, amortization, provisions and impairment of property, plant and equipment, intangible assets and operating financial assets and other non-current expenses mainly include:

- depreciation of assets revalued as part of the Suez purchase price allocation of -€166 million in the year ended December 31, 2025, compared with -€191 million in the year ended December 31, 2024,
- the cost of integrating the Suez scope (migrating IT systems to common platforms, rebranding and assistance with organizational changes) for -€51 million, as well as the expenses resulting from the signing of the settlement agreement with Lithuania for -€35 million.

5.3 Financing

5.3.1 CHANGE IN FREE CASH FLOW AND NET FINANCIAL DEBT

Net free cash flow before financial investments and dividends was + €1,178 million as of December 31, 2025, versus +€1,156 million as of December 31, 2024.

The change in net free cash flow compared with December 31, 2024 reflects:

- the +€263 million increase in EBITDA, driven by organic activity growth and gains generated by operating and commercial efficiency plans as well as Suez synergies;
- net industrial investments of -3,855 million euros, an increase of -19 million euros compared to December 31, 2024. These include ongoing decarbonization projects in Central and Eastern Europe for an amount of 130 million euros, as well as investments in hazardous waste treatment projects for 206 million euros and in PFAS (forever chemicals) projects;
- the change in operating working capital requirement is -€120 million, compared with +€75 million in December 2024.

Net financial debt amounted to €19,657 million as of December 31, 2025, compared with €17,819 million as of December 31, 2024.

Compared with December 31, 2024, the change in net financial debt is mainly due to:

- net free cash flow of +€1,178 million;
- net financial investments of -€2,301 million from divestitures following significant acquisitions in the first half of the year, such as the acquisition of WTS's minority interests in June 2025, investments in Hazardous Waste projects in the United States, Brazil and Japan in May, June and August 2025 and the acquisition of the Electricity Flexibility business in Hungary in January 2025 (see 1.2.2 Changes in Group structure);
- the payment of the dividends voted by the Combined General Meeting of April 24, 2025 in the amount of -€1,023 million;
- the first green bond issue, which took the form of a green hybrid bond, for a net amount of €497 million;
- the share capital increase under the Sequoia 2025 employee share ownership program for a net amount of €318 million;
- the concurrent capital reduction through cancellation of €402 million in treasury shares acquired under the share buy-back program, to neutralize the dilutive effect of the Sequoia offer.

Net financial debt was also impacted by foreign exchange gains and losses and fair value adjustments of €293 million as of December 31, 2025, mainly as a result of variation in the dollar.

(€ million)	2024	2025
EBITDA	6,788	7,050
Net industrial investments	-3,836	-3,855
Change in operating WCR	75	-120
Dividends received	123	105
Renewal expenses	-295	-305
Other non-current costs and restructuring costs	-267	-231
Interest on concession liabilities (I12)	-86	-79
Interest on right of use (IFRS 16)	-66	-67
Financial items (current cash financial expense, and operating cash flow from financing activities)	-700	-724
Taxes paid	-579	-596
Net free cash flow before dividend payment, financial investments and financial divestitures	1,156	1,178
Dividends paid	-1,299	-1,401
Net financial investments	397	-2,301
Change in receivables and other financial assets	47	-12
Issue/repayment of deeply subordinated securities	-221	492
Proceeds on issue of shares	336	326
Share Buyback		-402
Free cash-flow	416	-2,121
Effect of foreign exchange rate	-157	293
Other movements	-113	37
Change	146	-1,790
Opening net financial debt	-17,903	-17,819
Impact of the remeasurement of financial liabilities	-62	-47
CLOSING NET FINANCIAL DEBT	-17,819	-19,657

* Net financial debt excluding the impact of the remeasurement of debt as part of the Suez purchase price allocation, see Section 5.2.

** Of which -€497 million through a green hybrid bond and -€318 million related to the Sequoia offer.

5.3.2 INDUSTRIAL AND FINANCIAL INVESTMENTS

5.3.2.1 Net Industrial investments

Group net industrial investments, including new operating financial assets, total €3,855 million as of December 31, 2025, compared with €3,836 million as of December 31, 2024.

Gross industrial investments total €4,056 million as of December 31, 2025 and include maintenance investments of €1,909 million (including IFRS 16), contractual growth investments of €1,544 million and discretionary investments of €604 million. They include new operating financial assets of €156 million.

Industrial disposals amounted to -201 million euros as of December 31, 2025, resulting from the existing asset base rotation program; they mainly include disposals carried out in France and related to the Special Waste Europe business (-63 million euros), North America (-34 million euros), Central and Eastern Europe (-33 million euros), and Northern Europe (-25 million euros).

Industrial investments for the year ended December 31, 2025, excluding discontinued operations, break down by **segment** as follows:

Period ended December 31, 2025 (€ million)	Total gross industrial investments	Industrial divestitures	Total net industrial investments
France and Hazardous Waste Europe	877	-63	814
Europe	1,655	-72	1,583
Americas, Asia Pacific, Africa Middle-East	1,278	-48	1,231
Water technologies	213	-17	196
Other	33	-2	31
GROUP	4,056	-201	3,855

Gross industrial investments total €4,040 million as of December 31, 2024 and include maintenance investments of €1,932 million (including IFRS 16), contractual growth investments of €1,446 million and discretionary investments of €663 million. They include new operating financial assets of €226 million.

Industrial divestitures total -€204 million as of December 31, 2024 and concern the existing asset rotation program; they mainly include France and Special Waste Europe (-€53 million), Central and Eastern Europe (-€50 million), Asia Pacific (-€22 million) and Water Technologies (-€19 million).

Industrial investments for the year ended December 31, 2024 excluding discontinued operations, broke down by **segment** as follows:

Period ended December 31, 2024 (€ million)	Total gross industrial investments	Industrial divestitures	Total net industrial investments
France and Hazardous Waste Europe	855	-53	801
Europe	1,655	-73	1,582
Americas, Asia Pacific, Africa Middle-East	1,266	-48	1,218
Water technologies	235	-19	216
Other	30	-11	19
GROUP	4,040	-204	3,836

5.3.2.2 Net financial investments

Net financial investments as of December 31, 2025 total -€2,301 million (including acquisition costs, net financial debt of acquired entities and disposal costs).

Financial acquisitions as of December 31, 2025 total -€2,415 million and primarily comprise the following items:

- the acquisition of Danubius (Hungary) on January 6, 2025 for a net amount of €271 million; this transaction allows the Group to operate the Gönyü gas power plant;
- the acquisition of New England Disposal Technologies LLC (United States), a hazardous waste treatment and emergency response subsidiary, for a net amount of €67 million on May 2, 2025;
- the acquisition of Bio-Med Innovations LLC (United States), a licensed medical waste storage and treatment facility in Massachusetts operated by Bio-Med Innovation, for a net amount of €33 million on May 13, 2025;
- the acquisition of Zeeklite (Japan), which operates one of the largest private hazardous waste landfill sites in the country, for a net amount of €85 million on May 30, 2025;
- the acquisition of Ingenium (United States), a company that manages hazardous, non-hazardous and medical products with an extensive range of services including packaging, transportation, recycling and disposal. The net amount of the transaction on June 24, 2025 was €90 million;
- purchase of the minority stake (30%) held by CDPQ in WTS in the United States for €1.5 billion on June 30, 2025;
- the acquisition of Chameleon Industries (United States), a company that uses byproducts from the semiconductor manufacturing process in its proprietary applications, reduces waste and creates beneficial products for industry. The net amount of the transaction on June 24, 2025 was €57 million.

The disposal of financial assets as of December 31, 2025 (including disposal costs) amounts to €114 million and mainly concerns:

- the receipt of the deferred payment of the final price for the February 2024 disposal of SADE for €11 million;
- the partial disposal of the Group's stake in water concessions in the Canary Islands, for €32 million.

Net financial investments for the year ended December 31, 2024 totaled +€397 million (including acquisition costs, net financial debt of acquired entities and disposal costs).

Financial acquisitions as of December 31, 2024 amounted to -€641 million and mainly concerned the acquisition of the recycling and waste management activities of Friedrich Hofmann GmbH for €315 million as of March 1, 2024.

The disposal of financial assets as of December 31, 2024 (including disposal costs) amounts to +€1,037 million and mainly includes the disposal of SADE for a net amount of €175 million, the disposal of Veolia North America Regeneration Services (United States) for €588 million and the disposal of the Group's interest in Lydec (Morocco) for €107 million.

5.3.3 OPERATING WORKING CAPITAL

The change in operating working capital requirements (excluding discontinued operations) is -€120 million for the year ended December 31, 2025, compared with +€75 million for the year ended December 31, 2024.

The decrease in the change in operational working capital requirement compared to December 31, 2024 is mainly due to the disbursement related to the Flint litigation following the settlement agreement concluded in 2025, scope entries with a negative change in working capital requirement during 2025, and the change in the frequency of royalty payments in water activities in France.

See Note 5.3 to the consolidated financial statements for the year ended December 31, 2025.

5.3.4 EXTERNAL FINANCING

Structure of the net financial debt

As of December 31, 2025, net financial debt after hedging is 85% at fixed rates, compared with 97% as of December 31, 2024. The average maturity of net financial debt is 6.5 years as of December 31, 2025 compared with 7.1 years as of December 31, 2024.

(€ million)	Note to the Consolidated Financial Statements	As of December 31, 2024	As of December 31, 2025
Non-current financial liabilities	8.1.1	19,805	20,492
Current financial liabilities	8.1.1	9,281	8,810
Bank overdraft and other cash position items	8.1.3	197	215
Sub-total borrowings		29,283	29,518
Cash and cash equivalents	8.1.3	-9,601	-8,021
Liquid assets and financing-related assets	8.1.2	-2,018	-1,952
Fair value gains (losses) on hedge derivatives		366	276
Remeasurement of financial liabilities ⁽¹⁾		-212	-164
NET FINANCIAL DEBT		17,819	19,657

⁽¹⁾ Net financial debt excludes the remeasurement of financial liabilities in the context of the Suez purchase price allocation as defined in Section 5.2. below.

Group liquidity position

Liquid assets of the Group as of December 31, 2025 break down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
Veolia Environnement :		
Undrawn syndicated loan facility	4,500	4,500
Undrawn MT bilateral credit lines	724	765
Undrawn ST bilateral credit lines	-	0
Cash and cash equivalents ⁽¹⁾	9,349	7,551
Subsidiaries :		
Undrawn bilateral credit lines	949	673
Cash and cash equivalents ⁽¹⁾	2,270	2,422

TOTAL LIQUID ASSETS NET OF CURRENT DEBT, BANK OVERDRAFTS AND OTHER CASH POSITION ITEMS	8,313	6,886

⁽¹⁾ Including liquid assets and financing financial assets included in Net financial debt.

Banks Covenants

See Note 8.3.2.3 to the consolidated financial statements as of December 31, 2025.

5.4 Other items

5.4.1 RETURN ON CAPITAL EMPLOYED (ROCE)

(€ million)	As of December 31, 2024	As of December 31, 2025
Current EBIT	3,547	3,740
- Current income tax expense	-664	-675
Current EBIT after tax	2,883	3,065

(€ million)	As of December 31, 2024	As of December 31, 2025
Intangible assets and property, plant and equipment, net	26,018	26,350
Right of use	1,819	1,806
Goodwill, net of impairment	11,783	11,456
Investments in joint ventures and associates	1,676	1,564
Operating financial assets	1,353	1,147
Net Working Capital Requirements	-4,004	-4,012
Net deferred taxes	-648	-588
Non-current and current concession liabilities	-1,762	-1,650
Net derivatives and other instruments	119	147
Provisions	-3,815	-3,921
Capital employed	32,539	32,299
Impact of discontinued operations and other restatements ⁽¹⁾	706	289
Represented capital employed	33,245	32,589

⁽¹⁾ 2024 average capital employed (including IFRS 16) includes the reintegration of the capital employed for the activities disposed of RGS, Lydec and the acquisition of Hofmann.

(€ million)	Current EBIT after tax	Average capital employed	Post-tax ROCE
2024 (incl. IFRS 16)	2,883	32,619	8.8 %
2025 (incl. IFRS 16)	3,065	32,564	9.4 %

Post-tax ROCE is 9.4% as of December 31, 2025; it rose +0.6 points compared to 2024 driven by the positive effects of (i) growth in post-tax current EBIT of +6.3% and (ii) the -0.2% decrease in average capital employed.

At the Combined General Meeting held on April 24, 2025, Deloitte & Associés was appointed as statutory auditors in charge of certifying the financial statements (see Section 1 of Operating and financial review).

Audit fees (Deloitte and Ernst & Young) certifying the Group's accounts amounted to €42 million for the 2025 fiscal year, including:

- €36 million in respect of the statutory audit of the accounts;
- €5 million in respect of services falling within the scope of diligences directly related to the audit engagement;
- €1 million for the certification of the sustainability statement set by the CSRD "Corporate Sustainability Reporting Directive".

5.4.3 RELATED-PARTY TRANSACTIONS

The Group identifies related parties in accordance with the provisions of paragraph 9 of IAS 24 revised, Related Party Disclosures (see Note 13 to the consolidated financial statements for the year ended December 31, 2025).

5.4.4 SUBSEQUENT EVENTS

No significant events occurred between the reporting date and the date on which the consolidated financial statements were approved by the Board of Directors.

5.4.5 RISK FACTORS

The main risk factors the Group could face are set out in Chapter 2 of the 2025 Universal Registration Document.

5.4.6 OUTLOOK

2026 OBJECTIVES

- Solid organic⁽¹⁾ revenue growth excl. energy prices;
- Organic⁽¹⁾ EBITDA growth of +5% to +6%;
- Current net income Group share⁽²⁾ growth of minimum +8% at constant forex and excl. Clean Earth;
- Current EPS Group share⁽²⁾ to grow in line with current net income Group share⁽²⁾ (thanks to share buyback plan to compensate the impact of the employee shareholding program);
- Dividend growth in line with current EPS Group share growth⁽²⁾;
- Leverage ratio equal or below 3x excluding Clean Earth (equal or slightly above 3x with Clean Earth).

In addition,

Assuming Clean Earth acquisition closing mid 2026, the transaction will be accretive to current net income from 2027 (before PPA) and synergies will start in 2027.

The €2bn+ disposal program will be delivered in the two-years post closing of Clean Earth acquisition.

GreenUp trajectory is fully confirmed.

⁽¹⁾ At constant scope and forex.

⁽²⁾ Before PPA.

5.5 Appendices

5.5.1 RECONCILIATION OF GAAP INDICATORS AND THE INDICATORS USED BY THE GROUP

The reconciliation of Current EBIT with Operating income, as shown in the income statement, is presented in Section 2.4.4.

Likewise, the reconciliation of Current net income with Net income attributable to owners of the Company, as shown in the income statement, is presented in Section 2.4.4.

The reconciliation of Net cash from operating activities of continuing operations (included in the Consolidated Cash Flow Statement) with net free cash flow is as follows:

(€ million)	2024	2025
Net cash from operating activities of continuing operations	5,044	5,150
including:		
Industrial investments, net of grants	-2,965	-3,056
Proceeds on disposals of industrial assets	204	201
New operating financial assets	-226	-156
Principal payments on operating financial assets	227	268
New finance lease debt	-587	-566
Dividends received	123	105
Interest paid	-737	-765
Excluding:		
Share acquisition and disposal costs, and other items	74	-3
Net free cash-flow	1,156	1,178

The reconciliation of Industrial investments, net of grants (included in the Consolidated Cash Flow Statement) with industrial investments is as follows:

(€ million)	2024	2025
Industrial investments, net of grants	-2,965	-3,056
New finance lease debt	-587	-566
Change in concession working capital requirements	-263	-278
New operating financial assets	-226	-156
Industrial Investments	-4,040	-4,056

5.5.2 DEFINITIONS

No changes have been made to non-GAAP financial indicators used by the Group in the preparation of the financial statements as of December 31, 2025.

5.5.2.1 Strictly accounting indicators (GAAP: IFRS)

Cost of net financial debt is equal to the cost of gross debt excluding IFRS 16 financial interest presented in other financial expenses and including related gains and losses on interest rate and currency hedges, less income on cash and cash equivalents.

Operating cash flow before changes in working capital, as presented in the Consolidated Cash Flow Statement, is comprised of three components: operating cash flow from operating activities (referred to as "adjusted operating cash flow" and known in French as "capacité d'autofinancement opérationnelle") consisting of operating income and expenses received and paid ("cash"), operating cash flow from financing activities including cash financial items relating to other financial income and expenses and operating cash flow from discontinued operations composed of cash operating and financial income and expense items classified in net income from discontinued operations pursuant to IFRS 5. Adjusted operating cash flow does not include the share of net income attributable to equity-accounted entities.

Net income (loss) from discontinued operations is the total of income and expenses, net of tax, related to businesses divested or in the course of divestiture, in accordance with IFRS 5.

5.5.2.2 Non-Strictly accounting indicators (non GAAP)

The expression "**change at constant exchange rates**" represents the change resulting from the application of exchange rates of the prior period to the current period, all other things being equal.

EBITDA comprises the sum of all operating income and expenses received and paid (excluding restructuring costs, non-current working capital impairments, renewal expenses and share acquisition and disposal costs) and principal payments on operating financial assets.

The EBITDA margin is defined as the ratio of EBITDA to revenue.

To calculate **current EBIT** (which includes the share of current net income of joint ventures and associates), the following items are deducted from operating income:

- impairment of goodwill of controlled subsidiaries and equity-accounted entities;
- restructuring charges;
- non-current provisions and impairment;
- non-current and/or significant impairment of non-current assets (property, plant and equipment, intangible assets and operating financial assets);

- depreciation of remeasured assets in the context of the Suez purchase price allocation;
- share acquisition costs.

The **cost of current net financial debt** represents the cost of net financial debt, excluding the amortization of debt remeasured as part of the Suez purchase price allocation.

To obtain the **Group's current net income**, the following items are excluded from the Group's net income:

- non-current items of net income;
- amortization of revalued assets as part of the Suez purchase price allocation exercise, net of tax and minority interests;
- amortization of revalued debt as part of the Suez purchase price allocation exercise, net of tax and minority interests.

Current net income Group share per share (or **current net earnings Group share per share**) is calculated by dividing the Group's current net income for the period (not adjusted for the amount of the coupon attributable to holders of deeply subordinated notes) by the weighted average number of shares outstanding during the period.

Net industrial investments, as presented in the statement of changes in net financial debt, include industrial investments (purchases of intangible assets and property, plant and equipment, and new operating financial assets), net of industrial asset divestitures.

The Group identifies three categories of investment:

- maintenance investments which reflect the replacement of equipment and installations used by the Group;
- growth investments which broadly correspond to investments included within our existing contracts or contractual requirements;
- discretionary growth investments which reflect investments in new equipment and installations linked to new projects, contract wins or significant new developments and extensions to existing projects or contracts.

The last two categories are defined as growth investments.

Net financial investments as presented in the statement of changes in net financial debt include financial investments, net of financial divestitures.

Financial investments include purchases of financial assets, including the net financial debt of companies entering the scope of consolidation, and partial purchases resulting from transactions with shareholders where there is no change in control.

Financial divestitures include disposals of financial assets including the net financial debt of companies leaving the scope of consolidation, and partial divestitures resulting from transactions with shareholders where there is no change in control, as well as issues of share capital by non-controlling interests.

Net free cash flow corresponds to free cash flow from continuing operations, and is equal to the sum of EBITDA, dividends received, changes in operating working capital and operating cash flow from financing activities, less net financial expenses, net industrial investments, taxes paid, renewal expenses, restructuring costs and other non-current expenses.

Net financial debt (NFD) represents gross financial debt (non-current borrowings, current borrowings, bank overdrafts and other cash position items) which includes IFRS 16 lease debt, net of cash and cash equivalents, liquid assets and financing-related assets, including fair value adjustments to derivatives hedging debt. Liquid assets are financial assets composed of funds or securities with an initial maturity of more than three months, easily convertible into cash, and managed with respect to a liquidity objective while maintaining a low capital risk. Net financial debt excludes the net impact of the remeasurement of debt in the context of the Suez purchase price allocation.

The **leverage ratio** (or **financial leverage**) is the ratio of closing net financial debt including IFRS 16 to EBITDA including IFRS 16.

The **financing rate** is defined as the ratio of the cost of net financial debt (excluding IFRS 16 lease debt and fair value adjustments to instruments not qualifying for hedge accounting) to average monthly net financial debt excluding IFRS 16 lease debt for the period, including the cost of net financial debt of discontinued operations.

The **post-tax return on capital employed (ROCE)** is defined as the ratio of:

- current EBIT as defined above, including the share of net result of equity-accounted entities, after tax. It is calculated by subtracting the current tax expense from current EBIT, including the share of net result of equity-accounted entities. The current tax expense is the tax expense in the income statement re-presented for tax effects on non-current items and tax effects of the depreciation of assets revalued in the context of the Suez purchase price allocation; to
- average capital employed in the year, including operating financial assets and investments in joint ventures and associates. Capital employed used in the post-tax ROCE calculation is therefore equal to the sum of net intangible assets and property, plant and equipment, goodwill net of impairment, investments in joint ventures and associates, operating financial assets, net operating and non-operating working capital requirements and net derivative instruments less provisions. It also includes the capital employed of activities classified within assets and liabilities held for sale, excluding discontinued operations. They are also adjusted for the effects of scope operations in order to be consistent with the contribution at the EBIT level.

Note 1 ACCOUNTING POLICIES AND METHODS**1.1 General principles underlying the preparation of the financial statements**

The accounting methods presented in these notes to the consolidated financial statements have been applied consistently for all periods presented in the consolidated financial statements.

The consolidated financial statements are presented on a historical cost basis, with the exception of assets and liabilities classified as held for sale measured in accordance with IFRS 5 and assets and liabilities recognized at fair value: derivatives, financial instruments held for trading, financial instruments at fair value (in accordance with IFRS 9).

The Veolia Environnement consolidated financial statements for the year ended December 31, 2025 were adopted by the Board of Directors on February 25, 2026 and will be presented for approval at the General Meeting on April 23, 2026.

1.2 Accounting standards framework

Pursuant to Regulation no. 1606/2002 of July 19, 2002, as amended by European Regulation no. 297/2008 of March 11, 2008, the consolidated financial statements are presented in accordance with IFRS (International Financial Reporting Standards) as adopted by the European Union.

In the absence of IFRS standards or interpretations and in accordance with IAS 8, Accounting Policies, Changes in Accounting Estimates and Errors, Veolia refers to other IFRS dealing with similar or related issues and the conceptual framework.

The consolidated financial statements and their notes are presented in millions of euro, unless stated otherwise, and rounded to the nearest million. Accordingly, the sum of rounded amounts may present non-material differences with total figures.

The consolidated financial statements comprise the financial statements of Veolia Environnement, the entities it controls (its subsidiaries) and the entities equity accounted. The financial statements of subsidiaries are drawn up for the same reference period as those of the parent company, from January 1, to December 31, 2025, in accordance with uniform accounting policies and methods.

The accounting principles and valuation rules applied by the Group in preparing the consolidated financial statements for the year ended December 31, 2025 comprise those applied by the Group as of December 31, 2024 and the standards, standard amendments and interpretations adopted or in the course of adoption by the European Union as of December 31, 2025:

- applicable from fiscal year 2025; or
- that the Group has elected to apply early as permitted by these texts.

Texts applicable as of January 1, 2025:

- Amendments to the following standards:
 - IAS 21: lack of exchangeability.

The first-time application of this text has no effect for the Group.

Texts applicable after 2025:

- IFRS 18 "Presentation and Disclosure in Financial Statements";
- IFRS 19 "Subsidiaries without Public Accountability: Disclosures";
- Amendments to the following standards:
 - IAS 21: translation to a hyperinflationary presentation currency;
 - IFRS 9 and IFRS 7: nature-dependent electricity contracts;
 - IFRS 9 and IFRS 7 on the classification and measurement of financial instruments.

The Group is currently assessing the potential impact of the first-time application of these texts.

1.3 Translation of foreign subsidiaries' financial statements

1.3.1 Exchange rates

Statements of financial position, income statements and cash flow statements of subsidiaries whose functional currency is different from the presentation currency of the Group are translated into the presentation currency at the applicable rate of exchange (i.e. the year-end rate for statement of financial position items and the average annual rate for income statement and cash flow items).

Foreign exchange translation gains and losses are recorded in other comprehensive income in equity. The exchange rates of the major currencies of non-euro countries used in the preparation of the consolidated financial statements were as follows:

Period-end exchange rate (one foreign currency unit = €xx)	December 31, 2024	December 31, 2025
US dollar	0.9626	0.8511
Pound sterling	1.2060	1.1460
Chinese yuan renminbi	0.1319	0.1216
Australian dollar	0.5962	0.5688
Polish zloty	0.2339	0.2369
Hungarian forint	0.0024	0.0026
Argentinian peso	0.0009	0.0006
Moroccan dirham	0.0464	0.0933
Chilian peso	0.0010	0.0009
Czech koruna	0.0397	0.0413

Average exchange rate (one foreign currency unit = €xx)	2024	2025
US dollar	0.9241	0.8853
Pound sterling	1.1811	1.1672
Chinese yuan renminbi	0.1284	0.1232
Australian dollar	0.6098	0.5708
Polish zloty	0.2323	0.2358
Hungarian forint	0.0025	0.0025
Argentinian peso	0.0009	0.0006
Moroccan dirham	0.0505	0.0947
Chilian peso	0.0010	0.0009
Czech koruna	0.0398	0.0405

1.3.2 Hyperinflation

Argentina is considered a hyperinflationary economy for all the periods presented. The Group has therefore applied the provisions of IAS 29 since January 1, 2018 for its businesses in Argentina.

1.4 Foreign currency transactions

Foreign currency transactions are translated into euro at the exchange rate prevailing at the transaction date. At year end, foreign currency-denominated monetary assets and liabilities are remeasured at year-end exchange rates. The resulting foreign exchange gains and losses are recognized in net income for the period.

Loans to a foreign subsidiary, the settlement of which is neither planned nor probable in the foreseeable future represent, in substance, a portion of the Group's net investment in this foreign operation. Foreign exchange gains and losses on monetary items forming part of a net investment are recognized directly in other comprehensive income in foreign exchange translation adjustments and are released to net income on the disposal of the net investment.

Exchange gains and losses on foreign currency-denominated borrowings or on currency derivatives that qualify as hedges of a net investment in a foreign operation, are recognized directly in other comprehensive income as foreign exchange translation adjustments. Amounts recognized in other comprehensive income are released to income on the date of disposal of the relevant investment.

Foreign currency-denominated non-monetary assets and liabilities recognized at historical cost are translated using the exchange rate prevailing as of the transaction date. Foreign currency-denominated non-monetary assets and liabilities recognized at fair value are translated using the exchange rate prevailing as of the date the fair value is determined.

Note 2

USE OF MANAGEMENT ESTIMATES IN THE APPLICATION OF GROUP ACCOUNTING STANDARDS

Veolia may be required to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue and expenses, and the disclosures of contingent assets and liabilities. Future results may be different from these estimates.

Underlying estimates and assumptions are determined based on past experience and other factors considered as reasonable given the circumstances. They act as a basis for making judgments necessary to the determination of the carrying amount of assets and liabilities, which cannot be obtained directly from other sources. Future values could differ from these estimates.

All these estimates are based on organized procedures for the collection of forecast information on future flows, validated by operating management, and on expected market data based on external indicators and used in accordance with consistent and documented methodologies.

The underlying estimates and assumptions are reviewed on a ongoing basis by the Group. The impact of changes in accounting estimates is recognized in the period the change is made if it affects this period only and in the period the change is made and prior periods if they are also affected by the change.

This is notably the case for impairment testing of assets with an indefinite useful life (goodwill). Note 7 presents the methodology and main assumptions used in preparing the financial statements for the year ended December 31, 2025 and particularly future flow and discount rate assumptions underlying the recoverable amount of these assets. The Group considered in particular the macroeconomic environment, especially for raw materials. Sensitivity analyses were also performed on the goodwill CGUs and certain of them are presented in the aforementioned note.

The items that generally require Management to make estimates or exercise judgment are as follows:

- classification and measurement of assets and liabilities covered by IFRS 5: assessments leading to the application of the standard are reviewed at each reporting date with regard to changes in facts and circumstances (See Note 3);
- measurement of intangible assets and property, plant and equipment (see Notes 7.2 and 7.3);
- measurement of provisions (including for employee commitments), as well as contingent assets and liabilities (Notes 6, 10 and 12);
- fair value measurement of financial instruments (Note 8.3);
- the amount of deferred tax assets and liabilities and the tax expense recognized (Note 11);
- methods used for determining the value of identifiable assets acquired and liabilities assumed in business combinations.

The Group uses several discount rate calculation methodologies for the purposes of these estimates. They are detailed in Notes 6, 7 and 10.

In addition, given its activities in installations covered by the EU Emissions Trading Scheme (EU ETS), the Group paid close attention to its exposure to greenhouse gas emission allowances, the management policy, accounting treatment and issues are presented in Note 8.3.1.3.

Finally, Veolia must make assumptions and judgments when assessing the level of control exercised over certain investments and particularly when defining relevant activities and identifying substantive rights. These judgments are reassessed when the facts and circumstances change.

Climate risk

In the context of its Purpose and the GreenUp strategic program, Veolia has committed to fighting pollution and accelerating ecological transition. This commitment can be broken down into several objectives, including combating climate change.

In addition, the Group's activities and those of its customers, due to their nature and geographic locations, may be exposed to risks related to climate change, which are likely to increase the frequency and magnitude of natural disasters.

The Group has integrated the identification of the main climate risks into its accounts closing process, to assess their potential impacts on the financial statements and, in particular, on:

- the useful life of certain assets;
- the value of certain non-current assets, particularly through cash flow estimates incorporating, where appropriate, decarbonizing plans validated by the governance bodies;
- risk estimates to determine the amount of contingency provisions.

These procedures are performed jointly with the Risk Department and the Sustainable Development Department to ensure the consistency of commitments given by the Group and their inclusion in the financial statements.

The main risks identified concern:

- risks related to the physical impacts of climate change (so-called "physical risks"):
 - increased frequency and severity of extreme events such as floods, droughts, etc. and
 - long-term shifts in mean (or "chronic") climate conditions, that may cause sea levels to rise, higher average temperatures, modified seasonal rain patterns, chronic water stress, etc.;
- risks related to the transition to a lower-carbon economy (so-called "transition risks") of various types: regulatory, technological, market, reputation. These risks may also generate significant commercial opportunities for the Group.

Through the Group's climate policy, actions taken and the geographic spread of its operations, Veolia limits the impacts of the risk of natural disaster and the physical impacts of climate change on its results, primarily through (i) the choice of a site's location in order to limit exposure, (ii) the implementation of tailored prevention plans and (iii) the development of business continuity plans.

In addition, the residual risk of extreme weather events is usually transferred to insurance companies via the damage program.

With regard to transition risks, the Group is particularly exposed to the Emissions Trading Scheme (EU ETS) introduced by the European Union in 2005, due to the quantity of free allowances granted and the cost of carbon on this market.

To manage this exposure, Veolia was very quick to adopt an active strategy in order to manage its greenhouse gas (GHG) emissions and allowances, by implementing an appropriate structure and creating a special-purpose legal entity to purchase, sell and price different types of greenhouse gas allowances. In addition, the Group also undertook to (i) reduce its GHG emissions, and (ii) increase GHG emissions avoided thanks to its activities, particularly by allocating a significant share of its investment to reducing greenhouse gas emissions.

Finally, the Group investment validation process includes a review of the consistency of investments with the objectives set out in its Purpose. At the COP 28 in Dubai, Veolia reaffirmed its commitment to invest €1.6 billion by 2030 to phase out coal in Europe, by converting coal-based power generation assets to less carbon-intensive energies and local energies in particular. At the end of 2025, Veolia had already invested €786 million to this end. This commitment is also taken into account when drafting the long-term plans used in the impairment testing of assets with an indefinite useful life (goodwill).

Veolia considers the assessment of climate risks to be consistent with the commitments given by the Group. The inclusion of climate risks did not have a material impact on the financial statements of the Group in 2025.

Note 3 CONSOLIDATION SCOPE

3.1 Accounting principles relating to the consolidation scope

3.1.1 Consolidation principles

Consolidated entities

Veolia Environnement fully consolidates all entities over which it exercises control.

Definition of control

Control exists when the Group (i) holds power over an entity, (ii) is exposed or has rights to variable returns from its involvement with the entity and (iii) has the ability to use its power over the entity to effect the amount of its returns.

The Group reassesses whether or not it controls an entity if facts and circumstances indicate that there are changes to one or more of the elements of control.

Full consolidation

The Group consolidates a subsidiary in its consolidated financial statements from the date it obtains control of the entity to the date it ceases to control the entity.

Interests that are not directly or indirectly attributable to the Group are recorded in non-controlling interests.

Total comprehensive income of subsidiaries is attributed to owners of the Company and to non-controlling interests, even if this results in non-controlling interests having a deficit balance.

Change in ownership interests in consolidated subsidiaries

Changes in the Group's ownership interests in subsidiaries that do not result in a change in control over the subsidiaries are accounted for as equity transactions, as they are transactions performed by shareholders acting in this capacity.

The effects of these transactions are recognized in equity at their net-of-tax amount and do not therefore impact the Consolidated Income Statement of the Group.

These transactions are presented in financing activities in the Consolidated Cash Flow Statement.

Investments in joint ventures and associates

Definition

An associate is an entity over which the Group has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of the entity but is not control or joint control of those policies.

A joint venture is a joint arrangement whereby the parties that have joint control of the entity have rights to its net assets.

Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.

Accounting for joint ventures and associates

The results and assets and liabilities of associates or joint ventures are incorporated in the Group consolidated financial statements using the equity method of accounting, except when the investment is classified as held for sale, in which case it is accounted for in accordance with the provisions of IFRS 5, Non-Current Assets Held for Sale and Discontinued Operations.

Under the equity method, the investment in the associate or joint venture is initially recognized at acquisition cost and subsequently adjusted, notably to recognize the Group's share of the net income and other comprehensive income of the associate or joint venture.

When a Group entity transacts with an associate or joint venture of the Group, profits and losses resulting from the transaction with the associate or joint venture are recognized in the Group consolidated financial statements only to the extent of interests in the associate or joint venture.

The share of net income (loss) of equity-accounted entities is included in the Group Consolidated Income Statement. Pursuant to recommendation no. 2013-01 issued by the French Accounting Standards Authority (Autorité des Normes Comptables, ANC) on April 4, 2013, the share of net income (loss) of equity-accounted entities must be included in "Operating income after share of net income (loss) of equity-accounted entities".

Impairment tests

When necessary, the carrying amount of the investment in associates or joint-ventures (including goodwill) is tested for impairment in accordance with IAS 36, Impairment of Assets.

Loss of significant influence or joint control

The equity method is discontinued from the date the investment ceases to be an associate or a joint venture. Where the Group retains a residual interest in the entity and that interest is a financial asset, the financial asset is measured at fair value at the date the investment ceases to be an associate or a joint venture.

Where an investment in an associate becomes an investment in a joint venture, or vice versa, the equity method continues to be applied and the change in ownership interest does not trigger remeasurement to fair value.

Investments in joint operations**Definition**

A joint operation is a joint arrangement whereby the parties that have joint control of the arrangement have direct rights to the assets, and obligations for the liabilities, relating to the arrangement.

Accounting for joint operations

As a joint operator in a joint operation, the Group recognizes in relation to its interest in the joint operation:

- its assets, including its share of any assets held jointly;
- its liabilities, including its share of any liabilities incurred jointly;
- its revenue from the sale of its share of the output arising from the joint operation;
- its expenses, including its share of any expenses incurred jointly.

3.1.2 Transactions impacting the consolidation scope**Business combinations and goodwill**

Business combinations are recorded in accordance with the acquisition method as defined in IFRS 3, revised.

Under this method, identifiable assets acquired and liabilities assumed of the acquiree are recorded at fair value at the acquisition date.

The goodwill arising from the business combination is measured as the excess of the aggregate of the consideration transferred, the amount of any non-controlling interest and, where applicable, the fair value of any previously held interest, over the acquisition-date net amounts of the identifiable assets acquired and liabilities and contingent liabilities assumed.

This goodwill is measured in the functional currency of the company acquired and recognized in assets in the Consolidated Statement of Financial Position.

The Group may elect, on an individual transaction basis, at the acquisition date, to measure non-controlling interests either at fair value (full goodwill) or at the share in the fair value of the identifiable net assets of the company acquired (partial goodwill).

Pursuant to IFRS, goodwill is not amortized but is subject to impairment tests performed at least annually or, where appropriate, more frequently where there is evidence calling into question the net carrying amount recorded in assets in the Statement of Financial Position.

Where the terms and conditions of a business combination are advantageous, negative goodwill arises. The corresponding profit is recognized in net income at the acquisition date.

Acquisition-related costs are expensed in the period in which the costs are incurred and the services received.

Pursuant to the provisions of IFRS 3 revised, the Group may finalize the recognition of the business combination during the measurement period. This period ends when all the necessary information has been obtained and no later than one year after the acquisition date.

Assets/liabilities classified as held for sale, discontinued operations

IFRS 5, Non-Current Assets Held for Sale and Discontinued Operations, sets out the accounting treatment applicable to assets held for sale and presentation and disclosure requirements for discontinued operations.

The standard notably requires the separate presentation of assets held for sale in the Consolidated Statement of Financial Position at the lower of net carrying amount and fair value less costs to sell, where the criteria set-out in the standard are satisfied.

When the Group is committed to a sales process leading to the loss of control of a subsidiary, all assets and liabilities of that subsidiary are reclassified as held for sale where the standard classification criteria are met, irrespective of whether the Group retains a residual interest in the entity after sale.

In addition, the standard requires the separate presentation in the Consolidated Income Statement of the results of discontinued operations for all comparative periods on a retrospective basis.

A discontinued operation is a component of an entity that either has been disposed of or is classified as held for sale and:

- represents a separate major line of business or geographic area of operations;
- is part of a single coordinated plan to dispose of a separate major line of business or major geographic area of operations; or
- is a subsidiary acquired exclusively with a view to resale.

3.2 Main changes in Group structure

Acquisitions

■ Acquisition of an electricity flexibility business in Hungary

On February 14, 2024, Veolia Hungary signed a Share Purchase Agreement for the acquisition of Danubius from Uniper.

After obtaining the approvals from the European Union competition authority, the closing of the transaction was carried out on January 6, 2025 for an amount of €271 million*, equal to a securities price of €366 million.

■ Acquisition of the 30% minority interests in Water Technologies and Solutions

Veolia announced, as of May 7, 2025, the signature of an agreement with Caisse de Dépôt et Placement du Québec (CDPQ) to acquire its 30% stake in Water Technologies and Solutions (WTS), giving Veolia 100% control, thereby increasing value creation, simplifying the structure, and making additional cost synergies of approximately €90 million by 2027, including €20 million by the end of December. The purchase price for the acquisition is US\$1.75 billion, equivalent to €1.5 billion.

This acquisition is a logical step in the deployment of the GreenUp strategic plan, which aims to strengthen the Group's foothold in Water Technologies activities and in the United States, both identified as priority growth boosters.

The acquisition of CDPQ's minority interests thus strengthens Veolia's unique positioning as a global leader in Water Technologies.

The acquisition of the additional 30% of WTS, being recognized as a transaction between shareholders, has no impact on the amount of goodwill recognized in 2022 at the time of the initial acquisition. The impact of the transaction on the Group's equity amounts to -€1,380 million.

As part of the GreenUp ambition, Veolia is increasing its leadership in Hazardous Waste Treatment with major investments in new capacity and targeted tuck-in acquisitions:

■ Acquisition of specialist hazardous waste treatment businesses in the United States

Veolia has expanded with four acquisitions that enhance both regional coverage and treatment capacity.

In Massachusetts, the Group acquired a Hazardous Waste Treatment site and emergency response operations through New England Disposal Technologies, as well as the state's only permitted Medical Waste Treatment and Storage facility, Bio-Med Innovations, formerly operated by New England MedWaste.

These assets significantly strengthen Veolia's position in the Northeast of the US, a region with high regulatory standards.

On the West Coast of the United States, Veolia acquired a major platform in California through Ingenium, adding extensive packaging, logistics, and multi-stream treatment capabilities across Hazardous Waste – expanding service to a broad industrial and institutional client base in one of the largest U.S. waste markets.

In the semiconductor industry, Veolia acquired Chameleon Industries Group, a Texas-based producer of specialty chemical products. The company's circular economy technology uses byproducts from the semiconductor manufacturing process in its proprietary applications, reduces waste and creates beneficial products for industry. This acquisition expands Veolia's leadership in providing innovative environmental solutions to cutting-edge manufacturing and technology companies in North America.

The total amount of these acquisitions is €247 million*.

■ Acquisition of a hazardous waste treatment and storage business in Japan

On May 16, 2025, Veolia signed the acquisition of Zeeklite Co. LTD, which operates one of the country's largest private hazardous waste storage facilities in Yonezawa City.

Specializing in the disposal of hazardous waste, general industrial waste, and contaminated soil, Zeeklite strengthens Veolia's ability to offer fully integrated waste management services in the country.

Financial closure took place on May 30, 2025 for an amount of €85 million.

(*) Corresponds to net financial investments.

3.3 Assets classified as held for sale, discontinued operations and divestitures

3.3.1 Discontinued operations

In the Consolidated Income Statement presented for comparative purposes, the net income (loss) from discontinued operations was reclassified to "Net income (loss) from discontinued operations".

For 2025 and 2024, they mainly concern the EPC (Engineering, Procurement, Construction) business, discontinued in all regions.

3.3.2 Assets and liabilities classified as held for sale

As of December 31, 2025, no assets or liabilities were classified as held for sale, unchanged from December 31, 2024.

3.4 Off-balance sheet commitments relating to the consolidation scope

3.4.1 Commitments given

Off-balance sheet commitments given break down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025	Maturing in		
			Less than 1 year	1 to 5 years	More than 5 years
Vendor warranties	122	120	1	71	48
Securities purchase commitments	366	2,644	2,644	-	-
Sale commitments	-	-	-	-	-
Other commitments relating to the consolidated scope	1	-	-	-	-
TOTAL COMMITMENTS GIVEN RELATING TO THE CONSOLIDATED SCOPE	489	2,765	2,646	71	48

Securities purchase commitments as of December 31, 2025, relate to the acquisition process for the U.S. entity Clean Earth for €2.6 billion, which is due to close in 2026. This acquisition will enable the Group to become a major player in Hazardous Waste Treatment in the United States. The transaction is expected to be completed by mid-2026, subject to standard conditions precedent, such as the approval of the Enviri shareholders, and receipt of the necessary regulatory authorizations and approvals.

Securities purchase commitments as of December 31, 2024, concern the acquisition process for Danubius in Hungary, for which the financial transaction was closed on January 6, 2025 (€366 million).

3.4.2 Commitments received

Commitments received relating to the consolidated scope total €45 million as of December 31, 2025, compared with €161 million as of December 31, 2024.

This decrease is mainly due to the discharge of warranties linked to acquisitions of companies in Central and Eastern Europe.

As of December 31, 2025, they mainly concern guarantees received in relation to corporate acquisitions.

Note 4 REPORTING BY OPERATING SEGMENT

The operating segments are components of the Group that engage in activities and whose operating results are reviewed by the Chief Executive Officer (Chief Operating Decision Maker) to make decisions about resources to be allocated to the segment and assess its performance. Information presented to the Chief Operating Decision Maker is taken from the Group internal reporting system.

Financial information by operating segment is prepared in accordance with the same rules used to prepare the Consolidated Financial Statements.

In accordance with the provisions of IFRS 8 on the identification of operating segments and after taking account of regrouping criteria, the operating segments presented are the following:

- France and Hazardous Waste Europe⁽¹⁾;
- Europe⁽²⁾;
- Americas, Asia Pacific, Africa Middle-East⁽³⁾;
- Water Technologies;
- Other, including holding companies.

The EBITDA indicator comprises the sum of all operating income and expenses received and paid (excluding restructuring costs, non-current impairment losses, renewal expenses and share acquisition and disposal costs) and principal payments on operating financial assets.

The main financial indicators by operating segment are as follows:

2025

(€ million)	France & Hazardous Waste Europe	Europe	Americas, Asia Pacific, Africa Middle-East	Water Technologies	Other	Total consolidated financial statements
Revenue	8,914	19,206	11,316	4,954	6	44,396
EBITDA	1,475	2,758	2,009	669	139	7,050
Operating income after share of net income (loss) of equity-accounted entities	418	1,399	1,064	385	32	3,299
Industrial investments net of subsidies	-645	-1,129	-1,126	-143	-13	-3,056

2024

(€ million)	France & Hazardous Waste Europe	Europe	Americas, Asia Pacific, Africa Middle-East	Water Technologies	Other	Total consolidated financial statements
Revenue	9,145	18,619	11,945	4,973	9	44,692
EBITDA	1,392	2,642	2,025	612	117	6,788
Operating income after share of net income (loss) of equity-accounted entities	388	1,304	945	343	32	3,012
Industrial investments net of subsidies	-571	-1,054	-1,113	-166	-61	-2,965

Assets and liabilities break down by operating segment as follows:

As of December 31, 2025

Assets by operating segment (€ million)	France & Hazardous Waste Europe	Europe	Americas, Asia Pacific, Africa Middle-East	Water Technologies	Other	Total consolidated financial statements
Goodwill, net	1,969	3,951	3,791	1,742	3	11,456

Other amounts < €500 million in 2025	7,120	15.9%	7,207	16.2%

The EBITDA indicator reconciles with operating cash flow for fiscal years 2025 and 2024, as follows:

(€ million)		December 31, 2024	December 31, 2025
Operating cash flow before changes in working capital	(A)	5,818	6,144
o/w Operating cash flow from financing activities	(B)	-116	-78
o/w Adjusted operating cash flow	(C) = (A) - (B)	5,933	6,223
Less :	(D)		
Renewal expenses		295	305
Restructuring costs		146	135
Share acquisition and disposal costs		66	24
Other items		121	96
Plus :	(E)		
Principal payments on operating financial assets		227	268
EBITDA	(C) + (D) + (E)	6,788	7,050

Note 5 OPERATING ACTIVITIES

The main environmental services carried out by Veolia in its business lines are:

- water: drinking water treatment and distribution, wastewater treatment and the sale of water treatment equipment, technologies and facilities;
- waste: waste collection, product recovery and waste-to-energy processing (including the sale of recycled products), dismantling and hazardous waste processing;
- energy: heating and cooling networks, thermal and multi-technical services, industrial utilities, installation and maintenance of production equipment, and integrated services for the comprehensive management of buildings.

Environmental services also include the design, construction and, where applicable, funding of necessary facilities to supply such services which are provided to industrial and service sector companies, public authorities and private individuals.

The range of business models used by the Group results in a variety of contractual forms specific to each business and adapted to local jurisdiction constraints and the nature and needs of customers (public or private).

The Group primarily conducts its activities under concession, construction (non-concession), lease and operation and maintenance contracts.

Concession arrangements (IFRIC 12)

In the conduct of its activities, Veolia provides collective general interest services (distribution of drinking water and heating, household waste collection and/or processing, etc.). These services are generally managed by Veolia under contracts entered into at the request of public sector bodies, which retain control over these collective services.

Concession arrangements involve the transfer of operating rights for a limited period, under the control of the local authority, using dedicated facilities built by Veolia, or made available to it for or without consideration:

- these contracts define “public service obligations” in return for remuneration. The remuneration is based on operating conditions, continuity of service, price rules and obligations with respect to the maintenance/replacement of installations. The contract determines the conditions for the transfer of installations to the local authority or a successor at its term;
- Veolia can, in certain cases, be responsible for a given service as it holds the service support network (water/heat distribution network, wastewater treatment network). Such situations are the result of full or partial privatizations. Provisions impose public service obligations and the means by which the local authority may recover control of the concession holder.

These contracts generally include price review clauses. These clauses are mainly based on cost trends, inflation, changes in tax and/or other legislation and occasionally on changes in volumes and/or the occurrence of specific events changing the profitability of the contract.

In addition, the Group generally assumes a contractual obligation to maintain and repair facilities managed under public service contracts.

The nature and extent of the Group's rights and obligations under these different contracts differ according to the public services rendered by the different Group businesses: Water, Waste, Energy.

Water

In France, these services are primarily rendered under public service delegation “affermage” contracts with a term of 8 to 20 years. They can use specific assets, such as distribution or wastewater treatment networks and drinking water or wastewater treatment plants, which are generally provided by the concession grantor and returned to it at the end of the contract.

Abroad, Veolia renders its services under contracts which reflect local legislation, the economic situation of the country and the investment needs of each partner. These contracts generally have a term of between 7 and 40 years. Contracts can also be entered into with public entities in which Veolia purchased an interest on their partial privatization. The profitability of these contracts is not fundamentally different from other contracts, but operations are based on a partnership agreement with the local authority.

Waste

Both in France and abroad, the main concession arrangements entered into by Veolia concern the processing and recovery of waste in sorting units, landfills and incineration plants. These contracts have an average term of 10 to 30 years.

Energy

The main contracts concern the management of heating and air-conditioning networks under urban concessions or on behalf of local authorities.

In Central and Eastern Europe, Veolia provides services under mixed partial privatizations or through public-private partnerships with public authorities responsible for the production and distribution of thermal energy.

The characteristics of these contracts vary significantly depending on the country and activities concerned.

Financial asset model

The Group applies the financial asset model for the accounting recognition of these concession arrangements, independently of service or infrastructure use by customers, when the concession grantor contractually guarantees the payment of amounts specified or determined in the contract or the shortfall, if any, between amounts received from users of the public service and amounts specified or determined in the contract.

Financial assets resulting from the application of IFRIC 12 are recorded in the Consolidated Statement of Financial Position under the heading “Operating financial assets” and recognized at amortized cost.

Unless otherwise indicated in the contract, the effective interest rate (EIR) is equal to the weighted average cost of capital of the entities carrying the assets concerned.

Cash flows relating to these operating financial assets are included in Net cash from (used in) investing activities in the Consolidated Cash Flow Statement.

Pursuant to IFRS 9, an impairment loss is recognized if the carrying amount of these assets exceeds the present value of future cash flows discounted at the initial EIR.

Revenue associated with this financial model includes:

- revenue recorded on a completion basis, in the case of construction operating financial assets (in accordance with IFRS 15);
- the remuneration of the operating financial asset recorded in revenue from operating financial assets (excluding principal payments);
- service remuneration.

Intangible asset model

The intangible asset model applies when the Group is paid by users or when the concession grantor has not provided a contractual guarantee in respect of the recoverable amount, regardless of service or infrastructure use by customers. The intangible asset corresponds to the right granted by the concession grantor to the operator to charge users of the public service in remuneration of concession services provided by the operator under the concession arrangement.

Intangible assets resulting from the application of IFRIC 12 are recorded in the Consolidated Statement of Financial Position under the heading "Concession intangible assets", as described in Note 7.2.1, and generally amortized on a straight-line basis over the term of the agreement.

Cash outflows, that is disbursements, relating to the construction of infrastructures under concession arrangements accounted using the "intangible asset model" are presented in Net cash from (used in) investing activities in the Consolidated Cash Flow Statement, while cash inflows are presented in Net cash from operating activities.

Under the intangible asset model, revenue includes:

- revenue recorded on a completion basis for assets and infrastructure under construction (in accordance with IFRS 15);
- service remuneration.

Mixed or bifurcation model

The choice of the financial asset or intangible asset model depends on the existence, or not, of payment guarantees granted by the concession grantor, independently of service or infrastructure use by customers.

However, certain contracts may include a payment commitment on the part of the concession grantor covering only part of the investment, with the remaining balance covered by the remuneration from services charged to users.

Where this is the case, the investment amount guaranteed by the concession grantor is recognized under the financial asset model and the residual balance is recognized under the intangible asset model.

Recognition of concession arrangements where existing infrastructures are made available to the Group by the concession authority in return for payment of fees

On the signature of certain concession arrangements, the infrastructures necessary to the operation of the concession already exist and are owned by the delegating authority. In such cases, the infrastructures are generally made available to the concession holder for the term of the concession arrangement in return for payments to the delegating authority for the right to use these infrastructures under the concession.

In July 2016, the IFRS Interpretations Committee clarified the appropriate accounting treatment when the concession holder is required to make fixed payments to the delegating authority for the provision of pre-existing infrastructure.

These fixed payments give rise to:

- the recognition of a liability equal to the present value of payments over the term of the concession arrangement;
- offset by the recognition of an intangible asset, where the concession arrangement is recognized using the intangible asset model, representing the right to charge users of the public service.

Payments satisfying this definition within the Group mainly concern concession arrangements recognized using the intangible asset model in Central and Eastern Europe.

Public sector activities performed using Veolia-owned infrastructure

Veolia provides drinking water and/or wastewater systems and heating network (production and/or distribution) public services in certain jurisdictions where it owns production and/or distribution assets.

The tariffs charged to users by the Group are governed by the competent authorities in accordance with methods specific to each geography.

This is particularly the case:

- in the United States and Chile, in the water and wastewater management sector where activities are highly capital intensive, a factor incorporated into the remuneration mechanism granted to the operator;
- in countries in Central and Eastern Europe, where Veolia is responsible for the production and/or distribution of thermal energy (heating networks) following full or partial privatizations, but remains subject to local authority control when determining heating tariffs.

Revenue from these activities is recognized progressively, as the services are performed.

Construction contracts

A construction contract concerns the production of complex assets that are closely interrelated or interdependent in terms of their design, technology, and function or their ultimate purpose. These contracts with local authorities or private partners are generally flat-rate.

This contractual model is commonly used in Water Technologies, including the design and supply of equipment and technological systems (such as Engineering & Procurement contracts) for water (drinking water or process water) and wastewater treatment.

The Group's construction revenues are mainly recognized on a completion basis.

The percentage of completion is determined by comparing costs incurred at the period end with total estimated costs under the contract. Costs incurred comprise costs directly attributable to the contract and borrowing costs incurred up to completion of the work. However, prospecting costs, costs incurred prior to contract signature, and administrative and selling costs are expensed in the period incurred and do not therefore contribute to contract completion.

Where total contract costs exceed total contract revenue, the Group recognizes a loss to completion as an expense of the period, irrespective of the stage of completion and based on a best estimate of forecast results including, where appropriate, rights to additional income or compensation, where they are highly probable and can be determined reliably. Provisions for losses to completion are recorded as liabilities in the Consolidated Statement of Financial Position.

The amount of revenue recognized on a completion basis less intermediary billings is determined on an individual contract basis. Where positive, this amount is recognized in assets in "Amounts due from customers for construction contract work" (in "Other operating receivables" as a contract asset). Where negative, it is recognized in liabilities in "Amounts due to customers for construction contract work" (in "Other operating payables" as a contract liability). Any loss to completion is recognized immediately through a provision.

Partial payments received under construction contracts before the corresponding work has been performed, are recognized as liabilities in the Consolidated Statement of Financial Position under "Other operating payables".

Service contracts including a lease

These contracts generally concern outsourcing services performed for industrial/private customers either under BOT (Build, Operate and Transfer) contracts, or incineration or cogeneration contracts under which, notably, demand or volume risk is, in substance, transferred to the prime contractor.

Services include the design, construction and financing of the construction of a specific asset/installation on behalf of the customer and the operation of the asset concerned.

These contracts are recognized in accordance with the principles set out in IFRS 16 (see Note 5.4).

Accordingly, construction revenue is recognized in accordance with the percentage of completion method and, more generally, the principles set out in IFRS 15.

The service invoiced to the customer includes a component representing the operation of the specific asset/installation concerned and a second component representing the financing of the construction.

- revenue relating to the operation of the asset is recognized on delivery of the goods or performance of the service, in accordance with IFRS 15;
- the financing of construction work involves finance costs that are invoiced to the customer and recognized in revenue. This interest is recognized in revenue from the start of construction work and represents remuneration received by the builder/lender.

Operation and maintenance contracts

The services rendered by Veolia do not systematically require the construction or acquisition of new infrastructure and can be provided through a variety of contractual forms tailored to the objectives and choices of customers. These services may particularly take the form of contracts for the operation and/or maintenance of installations already owned by the customer or service contracts aimed at improving the performance of these installations.

Accordingly, Veolia operates waste-to-energy plants, water production and/or distribution installations and heating networks under this type of contract recognized in accordance with IFRS 15.

5.1 Revenue

Group revenue is recognized for the amount the Group expects to receive in consideration for the transfer of control of goods and services.

The following table presents the revenue recognition method, rate and unit for the main environmental services provided by the Group:

Environmental service	Contract					Revenue		
	Concession	Public sector activities performed using Veolia-owned infrastructure	Construction	Services including an asset lease	Operation & maintenance	Revenue recognition method	Revenue recognition rate	Revenue measurement unit
Waste processing, water distribution, network operation, thermal services	•	•		•	•	Progressively	When the customer receives the benefit of the service	m ³ of water, metric ton of waste processed, Gwh, etc.
Sale of equipment, sale of recycled products	•	•		•	•	At a point in time	On physical delivery of the goods	Quantity sold
Design and build of infrastructures	•		•	•		Progressively	As the customer obtains control of the asset being built	Completion basis

Infrastructure maintenance and renewal services

Installation maintenance and renewal services rarely represent a separate performance obligation. Nonetheless, a separate performance obligation may be identified in respect of maintenance services in concession arrangements recognized using the financial asset model or operating contract, depending on the obligations contained in the contracts and the related remuneration terms.

Services on behalf of third parties

Few of the Group's activities are concerned by this provision and primarily combined energy purchase and distribution services.

For this type of contract, the Group identifies whether it is acting on its own behalf (principal: recognition of gross revenue) or on behalf of a third party (agent: recognition of the margin), by analysing in particular whether the Group has primary responsibility for performance of the service and whether it can freely set the price paid by the end customer.

Variable compensation

Variable consideration provided in contracts with customers can take several forms: rebates, discounts, penalties, incentives, performance bonuses. They are assessed on contract inception to determine the revenue amount to be recognized, applying either the expected value method or the most probable amount method, whichever is more appropriate.

Revenue by business

As for other Income Statement headings, revenue does not include amounts relating to discontinued operations in accordance with IFRS 5, Non-Current Assets Held for Sale and Discontinued Operations. The results of these activities are presented in a separate line, "Net result from discontinued operations", for fiscal year 2025 and fiscal year 2024 presented for comparison purposes (see Note 3.3).

Revenue breaks down by business as follows:

(€ million)	2024	2025
Water	18,033	17,693
Waste	15,662	15,443
Energy	10,997	11,260
Others	-	-
GROUP	44,692	44,396

A breakdown of revenue by operating segment and region is presented in Note 4.

Backlog

The backlog, as required by IFRS 15, is equal to firm revenue as contracted with customers, where the services have not yet been performed, or are only partially performed, at the reporting date.

After taking account of the exceptions provided in the standard (contracts with a term of less than one year, concession arrangements and service agreements), the backlog therefore primarily consists of revenue from Engineering & Procurement projects, with an average contractual period of two to three years and Water Technologies construction contracts, equipment sales and engineering work.

As of December 31, 2025, expected revenue is as follows:

(€ million)	Total	2026	2027 and beyond
Backlog	3,027	1,373	1,654

5.2 Operating income

Operating income breaks down as follows:

(€ million)	Year ended December 31, 2024	Year ended December 31, 2025
Revenue	44,692	44,396
Cost of sales	-36,924	-36,523
o/w :		
• Renewal expenses	-295	-305
Selling costs	-1,000	-993
General and administrative expenses	-3,459	-3,333
Other operating revenue and expenses	-429	-338
o/w :		
• Restructuring costs *	-137	-134
• (Impairment)/Reversal of impairment of goodwill	-3	-4
• Employee costs - share-based payments, excluding social security contributions	-57	-49
• Other non-current charges, impairment losses and net provisions	-201	-145
• Share acquisition costs	-32	-6
Operating income before share of net income (loss) of equity-accounted entities	2,881	3,208
Share of net income (loss) of equity-accounted entities	132	90
Operating income after share of net income (loss) of equity-accounted entities	3,012	3,299

* A breakdown of restructuring costs is presented in Note 5.2.2 below.

As of December 31, 2025, other expenses, impairment losses and charges to non-current provisions primarily include:

- impairment losses net of reversals on property, plant and equipment, intangible assets, and operating financial assets (see Note 5.2.1 below) for a total amount of -€45 million, recognized particularly in the Americas, Asia Pacific, Africa Middle-East segment for -€31 million and the Europe segment for -€18 million;
- other expenses and charges to non-current provisions for a total amount of -€100 million, corresponding in particular to integration costs incurred in connection with the 2022 Suez combination for -€51 million in addition to costs of -€35 million relating to the settlement agreement reached between the parties in the dispute in Lithuania (see Note 12).

5.2.1 Breakdown of provisions and impairment losses on non-current assets

The carrying amount of non-financial assets, other than inventory and deferred tax assets is reviewed at each period end in order to assess the existence of any indication of loss in value (non-performance of a significant long-term contract under the terms laid down in the contract, technical operating issues, and counterparty default for operating financial assets, etc.). Where such indication exists, the recoverable amount of the asset or group of assets is estimated.

The need to recognize impairment is assessed by comparing the net carrying amount of these assets with their recoverable amount. Unless there are future prospects for the sale of these assets, the recoverable amount corresponds to their value in use, generally equal to the present value of the future cash flows expected to be derived from the asset or group of assets, taking account of any residual value. The value in use of these assets is determined based on assumptions consistent with those adopted for impairment testing of goodwill and other intangible assets with an indefinite useful life (see Note 7.1.2).

Goodwill and other assets with an indefinite useful life are subject to systematic annual impairment tests following the update of the long-term plan and more frequent tests where there is an indication of loss in value.

Where the resulting recoverable amount is less than the net carrying amount of the asset or group of assets, an impairment is recorded.

Impairment losses on non-current assets can be reversed, with the exception of those relating to goodwill.

More generally, operating depreciation, amortization, provisions and impairment losses included in operating income in 2025 break down as follows:

(€ million)	2024	2025	
	Net	Charge	Reversal
OPERATING DEPRECIATION, AMORTIZATION AND PROVISIONS, NET			
Depreciation and amortization	-3,121	-3,077	-
Property, Plant and equipment ⁽¹⁾	-1,463	-1,467	-
Intangible assets	-1,094	-1,070	-
Rights of use	-564	-539	-
Impairment losses	-78	-96	51
Property, Plant and equipment	-45	-92	30
Intangible assets and Operating financial assets	-25	-2	21
Rights of use	-8	-2	-
Impairment losses and impact of disposals on goodwill and negative goodwill recognized in the Consolidated Income Statement	-3	-4	-
Operating provisions	130	-804	908
OPERATING DEPRECIATION, AMORTIZATION, PROVISIONS AND IMPAIRMENT LOSSES	-3,071	-3,980	958

(1) Including investment grants.

5.2.2 Restructuring costs

A restructuring is a program planned and controlled by Group management that significantly changes the scope of activity of the Group or the way in which this activity is managed. Accordingly, the following events can meet the definition of a restructuring: the sale or discontinuation of an activity branch, the closure of activity sites in a

country or a region or the relocation of activities from one country to another or from one region to another; changes to the management structure such as the suppression of a management level; and fundamental reorganizations with a significant impact on the nature and focus of an activity.

(€ million)	2024	2025
Restructuring costs	-146	-135
Net charges to restructuring provisions	9	1
NET RESTRUCTURING COSTS	-137	-134

Restructuring costs recognized in operating income in 2025, mainly concern France and Hazardous Waste Europe for -€66 million, Europe for -€27 million and the Americas, Asia Pacific, Africa Middle-East segment for -€39 million.

Restructuring costs recognized in operating income in 2024, mainly concern France and Hazardous Waste Europe for -€54 million, Europe for -€33 million and the Americas, Asia Pacific, Africa Middle-East segment for -€32 million.

5.2.3 Research and development costs

Research and development costs total €120 million as of December 31, 2025, compared with €136 million as of December 31, 2024.

5.2.4 Joint-ventures and associates

All equity-accounted companies, whether joint ventures or associates, represent an extension of the Group's businesses and are therefore allocated to one of the four operating segments.

(€ million)	2024	2025
Share of net income (loss) of joint ventures	71	32
Share of net income (loss) of associates	61	58
Share of net income (loss) of equity-accounted entities	132	90

5.2.4.1 Joint ventures

Movements in investments in joint ventures in 2025 break down as follows:

(€ million)	December 31, 2024	Net income	Dividend distribution	Changes in consolidation scope	Foreign exchange translation	Other movements	December 31, 2025
Investments in joint ventures	1,044	32	-39	-8	-79	-2	948

(€ million)	Share of equity		Share of net income (loss)	
	2024	2025	2024	2025
Chinese concessions	857	798	41	30
Other joint ventures	187	150	30	3
TOTAL	1,044	948	71	32
Impact in the Consolidated Income Statement on Net income from continuing operations (a)+(b)			71	32
Share of net income (loss) of joint ventures (a)			71	32
Reversals/(Impairment losses) recognized in other operating revenue and expenses (b)			-	-

Chinese Concessions

As of December 31, 2025, the Chinese concessions comprise a combination of approximately twelve separate legal entities in which the Group holds interests of between 21% and 51%; the most significant concessions in terms of revenue are Tianjin Jibin (49% interest) and Shanghai Pudong (50% interest).

Summarized financial information (at 100%) in respect of the Chinese concessions is set out below. This information reflects amounts presented in the joint ventures' financial statements prepared in accordance with IFRS, adjusted to reflect fair value adjustments performed on acquisition and adjustments recorded to comply with Group accounting principles when applying the equity method.

Summarized financial information (at 100%) - Chinese Concession joint ventures	Year ended December 31, 2024	Year ended December 31, 2025
Income statement		
Revenue	784	697
Operating income	98	69
Net income (loss) from continuing operations	87	66

Reconciliation of the above summarized financial information on the Chinese concessions to the carrying amount of the interest in these joint ventures recognized in the consolidated financial statements:

(€ million)	As of December 31, 2024	As of December 31, 2025
Net assets of the Chinese concession joint ventures	1,543	1,441
Group's ownership interest in the Chinese concession joint ventures - weighted average rate	46.28%	46.23%
Goodwill	147	135
Other adjustments	-4	-4
Carrying amount of the Group's interest in the Chinese concession joint ventures	857	798

As the Chinese concessions represent approximately twelve individual concessions, the percentage interest indicated in the above reconciliation is a weighted-average rate of the contribution of each concession within the combination.

The average rate used for the reconciliation of the different elements takes into account the Group's holdings in these different concessions, weighted by the relative importance of each of the entities to the whole. This rate is therefore adjusted each year and is sensitive to variations in the weight of the contributions to the results of each of the joint ventures within the presented set.

(€ million)	2024	2025
Net income (loss) for the year of the Chinese concession joint ventures	87	66
Group's ownership interest in the Chinese concession joint ventures - weighted average rate	46.28%	46.23%
Other	-	-
Group share of net income (loss) of the Chinese concession joint ventures	41	30

The recoverable amount of each Chinese concession joint venture is tested for impairment in accordance with the provisions set out in the standard. The Water activities business model in China is based on extremely long-term contracts (between thirty and fifty years) with high investment flows during the initial contract years.

Recoverable values are closely monitored. They are based on a certain number of structuring operating assumptions such as price increases, volume trends, construction activity levels and margins and efficiency and productivity measures integrated in future cash flows, as well as on the macro-economic assumptions (discount and inflation rates) underlying the business plans.

Other joint ventures

The Group also holds interests in other joint ventures that are not individually material, with a total net carrying amount of €150 million as of December 31, 2025, including primarily €71 million in the Middle East.

Unrecognized share of losses of joint ventures

As all the Group joint ventures are partnerships in which the Group exercises joint control, the share of any losses is recognized in full at the year end.

Transactions with joint ventures (related parties)

The Group grants loans to joint ventures. These loans are recorded in assets in the Group Consolidated Statement of Financial Position (see Note 8.1.2. "Other non-current and current financial assets").

As of December 31, 2025, non-current and current loans granted to all these entities totaled €32 million, including €24 million recorded in non-current loans (see Note 8.1.2.2) and €8 million recorded in current loans. As of December 31, 2024, these non-current and current loans totaled €38 million, including €21 million recorded in non-current loans and €17 million recorded in current loans.

In addition, given the Group's activities, operating flows between companies are generally limited to companies operating in the same country. As such, the level of operating transactions between the Group and equity-accounted companies is not material.

However, certain contractual agreements in the Group's businesses, impose the existence of a holding company (generally equity-accounted) and companies carrying the operating agreement (generally fully consolidated).

5.2.4.2 Investments in associates

Movements in investments in associates in 2025 break down as follows:

(€ million)	December 31, 2024	Net income	Dividend distribution	Changes in consolidation scope	Foreign exchange translation	Other movements	As of December 31, 2025
Investments in associates	632	58	-61	-6	-13	7	616

Investments in associates break down as follows:

(€ million)	Share of equity		Share of net income (loss)	
	As of December 31, 2024	As of December 31, 2025	2024	2025
Agbar's Subsidiaries ⁽¹⁾	216	219	12	16

TOTAL	632	616	61	58

Impacts on the Consolidated Income Statement

Share of net income (loss) of equity-accounted entities in continuing operations	61	58
Impairment losses and goodwill recognized in other operating revenue and expenses ⁽³⁾	-	-

(1) Including two associates with individual values of €34 million and €29 million.

(2) Associates with a unit value below €30 million as of December 31, 2025.

(3) Impairment and negative goodwill recognized in net income in respect of other associates.

5.3 Operating working capital

5.3.1 Operating working capital

Net working capital includes "operating" working capital (inventories, trade receivables, trade payables and other operating receivables and payables, tax receivables and payables other than current tax), "tax" working capital (current tax receivables and payables) and "investment" working capital (receivables and payables related to industrial investments/disposals).

In accordance with IAS 2 "Inventories", inventories are stated at the lower of cost and net realizable value. Net realizable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale.

Commercial receivables and payables are recognized at nominal value, unless discounting at the market rate has a material impact. The Group applies the simplified approach to the impairment of commercial receivables, in accordance with the option available in IFRS 9. The Group uses a provision matrix that takes account of the business, geographic region and customer category in question.

When preparing this matrix, the Group considered late payment and default rates observed in the past, as well as the macroeconomic environment. The matrix is also updated to reflect changes in economic factors.

Trade payables are recognized as liabilities at amortized cost in accordance with IFRS 9 for accounting purposes. Short-term commercial payables without a declared interest rate are recognized at nominal value, unless discounting at the market rate has a material impact.

The Group derecognizes a financial asset when the contractual rights to the cash flows from the asset expire or when it transfers the contractual rights to the cash flows from the financial asset in a transaction under which substantially all the risks and rewards inherent to ownership of the financial asset are transferred. Any interest created or retained by the Group in a financial asset is recognized separately as an asset or liability.

Movements in net working capital during **2025** are as follows:

(€ million)	As of December 31, 2024	Changes in business	Impairment losses	Changes in scope of consolidation	Foreign exchange translation	Transfers to Assets/ Liabilities classified as held for sale	Other movements	As of December 31, 2025

OPERATING PAYABLES	19,540	-237	413	-557	7	50	19,216

(1) Contract assets and liabilities are described in Note 5.6.

Changes in consolidation scope mainly concern the acquisition of Danubius in Hungary for €326 million.

5.3.2 Working capital management transactions

The Group's entities work continuously on improving the "Order-to-Cash" and "Procure-to-Pay" cycles, and more particularly on the management of Customer and Supplier positions. Therefore, action plans are regularly initiated, locally and at Group level, in order to improve invoicing time and quality, invoice processing, reconciliation of payments/disbursements, monitoring of aged balances, management of recovery and litigation.

These action plans include, where relevant, the implementation of a digital solution integrating Artificial Intelligence.

In addition to these actions, the Group may be required to implement programs for the assignment of receivables through factoring and reverse factoring, and discounting.

Factoring

Under these programs, certain subsidiaries have agreed to assign, on a renewable basis, trade receivables by contractual subrogation or assignment of receivables (such as Dailly programs in France) without recourse against the risk of default by the debtor. The analysis of the risks and rewards as defined by IFRS 9 led the Group to derecognize almost all the receivables assigned under these factoring programs. In addition, the transferor subsidiaries remain, in certain cases, responsible for invoicing and debt recovery, for which they receive remuneration but do not retain control.

Accordingly, receivables totaling €5,602 million were assigned under these programs in 2025, compared with €4,973 million in 2024. Receivables derecognized as of December 31, 2025 total €1,014 million, compared with €993 million as of December 31, 2024.

Reverse factoring

Some group entities implemented reverse factoring programs, allowing Group suppliers, by assigning their trade receivables, to benefit from advance payments.

After analyzing the key features of these programs, these liabilities were maintained as payables. The Group ensures that they are not substantially altered, and in particular:

- the Group's settlement periods are in accordance with local market and industry practices;
- the terms of the contract with the supplier are not linked to the existence of a reverse factoring program;
- the supplier remains free to choose whether or not to assign its receivable.

The amount of trade payables included under these reverse factoring programs and presented as payables totaled €275 million as of December 31, 2025 (or 3.6% of payables), compared with €255 million as of December 31, 2024.

Discounting

Under Public-Private partnerships, Veolia subsidiaries can assign the fraction of future payments guaranteed by public authorities/private customers (recognized in financial receivables pursuant to IFRIC 12 or IFRS 16) to the bodies funding the project, through discounting programs (such as Dailly programs in France). For the majority of partnerships concerned by these financial receivable assignments, the assignment agreements negotiated and the contractual clauses agreed between the stakeholders are sufficient to satisfy the derecognition criteria set out in IFRS 9. The residual risk retained by the companies (considered immaterial) is generally tied solely to late customer payment due to late/deferred invoicing of services by Group subsidiaries. Group subsidiaries are mandated by the financial institutions to manage the invoicing and recovery of the receivables covered by these programs. Veolia analyzed the management and recovery procedures falling to Group subsidiaries and concluded that these services did not constitute continuing involvement.

5.4 Non-current and current operating financial assets

Operating financial assets comprise financial assets resulting from the application of IFRIC 12 on accounting for concession arrangements and from the application of IFRS 16 on accounting for leases.

Concession arrangements

Pursuant to IFRIC 12, when the operator has an unconditional right to receive cash or another financial asset from the grantor in remuneration for concession services, the financial asset model applies. In this context, the infrastructures managed under these contracts cannot be recorded in assets of the operator as property, plant and equipment, but are recorded as financial assets.

Investment grants received in respect of concession arrangements are generally definitively earned and, therefore, are not repayable. In accordance with the option offered by IAS 20, these grants are presented as a deduction from intangible assets or financial assets depending on the applicable model following an analysis of each concession arrangement (IFRIC 12). Under the financial asset model, investment grants are equated to a means of repaying the operating financial asset.

During the construction phase, a financial receivable is recognized in the Consolidated Statement of Financial Position and revenue is recognized in the Consolidated Income Statement, in accordance with the percentage of completion method laid down in IFRS 15 on construction contracts.

Financial receivables are initially measured at the lower of fair value and the sum of discounted future cash flows and subsequently recognized at amortized cost using the effective interest method, as, in accordance with IFRS 9, they represent the right to receive contractual cash flows and have the characteristics of a loan.

After a review of the contract and its financing, the implied interest rate on the financial receivable is notably based on either the Group financing rate and/or the borrowing rate associated with the contract.

Leases

IFRS 16 requires the identification of contractual terms and conditions of agreements which, without taking the legal form of a lease, convey a right to use a group of assets in return for payments included in the overall contract (right of use analyzed as a transfer of control of a group of assets during the contract term). A lease component is thereby identified in these agreements, which is then analyzed and recognized in accordance with the criteria laid out in this standard.

The contract operator (Veolia) therefore becomes the lessor with respect to its customers. On contract signature, Veolia now determines whether the terms of the contract constitute a finance lease or an operating lease.

To this end, Veolia performs a comprehensive analysis to determine whether the lease transfers substantially all the risks and rewards inherent to ownership of the underlying asset to the customer (the lessee).

The following indicators in particular are considered when performing this analysis: (i) the lease transfers ownership of the asset to the customer by the end of the lease term, (ii) the lease term is for the major part of the economic life of the underlying asset, (iii) the present value of the lease payments amounts to at least substantially all of the fair value of the asset, or (iv) the asset is of such a specialized nature that only the customer can use it without major modifications.

If this analysis leads to the conclusion that the lease is a finance lease, Veolia does not recognize a tangible asset but an operating financial asset to reflect the corresponding financing.

Breakdown of operating financial assets by operating segment:

(€ million)	As of December 31					
	Non-current		Current		Total	
	2024	2025	2024	2025	2024	2025
France & Hazardous Waste Europe	186	109	12	10	198	119

Non-current and current IFRS 16 operating financial assets	497	53	-71	-	-	-18	-	12	473
NON-CURRENT AND CURRENT OPERATING FINANCIAL ASSETS	1,353	126	-268	-1	-	-43	-	-21	1,147

* New operating financial assets amounting to €156 million presented in the Consolidated Cash Flow Statement correspond to new operating financial assets in the above table (€126 million) net of the related debt (-€30 million) in 2025.

** Impairment losses are recorded in operating income.

The principal **new** operating financial assets in 2025 mainly concern the increase in financial receivables for pre-existing contracts, in particular in the following operating segments:

- Europe, in the amount of €67 million;
- France and Hazardous Waste Europe, in the amount of €48 million;
- the Americas, Asia Pacific, Africa Middle-East segment, in the amount of €11 million.

The principal **repayments and disposals** of operating financial assets in 2025 concern the following operating segments:

- France and Hazardous Waste Europe, in the amount of -€117 million;
- Europe, in the amount of -€112 million;
- the Americas, Asia Pacific, Africa Middle-East segment, in the amount of -€38 million.

Other movements are linked to contractual developments, mainly in Germany.

Water Technologies	-	-	-	-	-	-
Other	-	-	-	-	-	-
CONCESSION LIABILITIES	1,459	1,339	303	311	1,762	1,650

5.6 Contracts assets and liabilities

Non-current and current contract assets represent services rendered by the Group but not yet billed, where the right to remuneration is conditional.

Non-current and current contract liabilities mainly reflect amounts already settled by customers for which the Group has not yet performed the service (deferred income, down payments received from customers). These liabilities are recognized in revenue when the Group performs the service.

Contract assets and liabilities break down as follows:

(€ million)	Contract assets		Contract liabilities	
	As of December 31, 2024	As of December 31, 2025	As of December 31, 2024	As of December 31, 2025
France & Hazardous Waste Europe	62	25	191	199
Europe	158	165	720	740
Americas, Asia Pacific, Africa Middle-East	436	451	272	264
Water Technologies	470	456	482	420
Other	-	-	-	-
TOTAL	1,126	1,097	1,665	1,623

Contract assets and liabilities are mainly included in operating receivables and operating payables in the Consolidated Statement of Financial Position.

5.7 Management of supply risks

As part of supply management and cost optimization measures or to hedge future production, certain Group subsidiaries may be required, depending on their activities, to contract forward purchases or sales of commodities and set-up derivatives to fix the cost of commodities supply or the selling price of commodities produced (electricity).

Commodity risks are described in Note 8.3.1.3.

Depending on the contract, these guarantees cover the costs necessary for the supervision and rehabilitation of all or part of the site.

These guarantees are quantified in accordance with legal or contractually-defined procedures. These guarantees, which are given in their total amount from the start of operations, expire at the end of the commitment (termination of rehabilitation work and site supervision).

Therefore, the amount of our commitment for the rehabilitation and supervision of landfill sites is in general different from the amount of the provision recorded in the Group accounts (see Note 10). Provisions calculated by the Group are based on different valuations (based on internal policies regarding site security and designed for optimal environmental protection), which take into account the progressive nature of the obligation: operation of the landfill sites results in progressive damage to the site and, as such, a related liability is recognized as the facility is operated (see Note 10).

If the amount of the commitment is less than the provision at the balance sheet date, an off-balance sheet commitment is not disclosed. Conversely, if the amount of the commitment is greater than the provision, an off-balance sheet commitment is disclosed in the amount not provided.

■ Commitments related to engineering and construction activities.

In the context of its business activities the Group gives (and receives) commitments which can take several forms (deposits on construction work and performance guarantees, etc.). Issued in favor of customers or banking institutions, they are subject to individual follow-up by site and their maturity depends on their contractual characteristics.

■ Commitments relating to concession arrangements.

Pursuant to public service contracts with a public entity, the Group may be called on/obliged to invest in infrastructures that will then be operated and remunerated in accordance with contractual terms and conditions.

The contractual commitment may concern both the financing of installations and infrastructures to be used in operations and also the maintenance and replacement of infrastructures necessary to operations.

Expenditure relating to the replacement or rehabilitation of installations is monitored and recognized through any timing differences between the total contractual commitment over the contract term and its realization, in accordance with IAS 37 on Provisions.

5.8 Commitments relating to operating activities

5.8.1 Commitments given relating to operating activities

Commitments given relating to operating activities comprise operating guarantees and purchase commitments.

Operational or operating guarantees encompass all commitments not relating to financing operations, required in respect of contracts or markets and generally given in respect of the operations and activities of Group companies. Such guarantees include bid bonds accompanying tender offers, advance payment bonds and completion or performance bonds given on the signature of contracts or concession arrangements.

The main categories of commitments include:

■ Commitments related to site rehabilitation.

Pursuant to environmental texts and legislation concerning the operation of landfill sites, the Group is obliged to provide financial guarantees to local authorities/government agencies. These guarantees notably encompass the rehabilitation and supervision of the site during 30 years or more, depending on national legislation (currently 60 years in the United Kingdom), following its operation.

In this context, performance bonds and letters of credit are issued to local authorities and other public bodies.

Expenditure relating to the construction, maintenance and restoration of concession assets is reviewed with respect to IFRIC 12 and detailed in Note 5.4.

■ Firm commodity purchase and sale commitments.

As part of supply management and cost optimization, certain Group subsidiaries may be required, depending on their activities, to set-up derivatives to fix the cost of commodity supplies where the contracts do not offer appropriate protection or contract forward purchases or sales of commodities.

Commodity risks are described in Note 8.3.1.3.

Firm commodity purchase commitments, excluding derivative instruments, mainly concern:

- gas, biomass and coal in Energy activities (mainly in Central and Eastern Europe). Most commitments mature in less than 3 years;
- gas and electricity in Water activities.

In parallel, firm electricity sales contracts, excluding derivative instruments, are entered into to secure selling prices over a period of less than 3 years. These commitments concern production activities exposed to the electricity wholesale market and primarily Waste activities in the United Kingdom (electricity produced by waste incineration) and Energy activities in Central and Eastern Europe.

Firm heating sales contracts are also entered into by the Energy activity in Central and Eastern Europe over a period of one year.

Off-balance sheet commitments given break down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025	Maturing in		
			Less than 1 year	1 to 5 years	More than 5 years
Operational guarantees including performance bonds	12,089	11,812	3,446	4,057	4,309
Purchase commitments	208	178	72	78	29
TOTAL COMMITMENTS RELATING TO OPERATING ACTIVITIES	12,297	11,990	3,518	4,135	4,338

Commitments given break down by operating segment as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
France & Hazardous Waste Europe	663	650
Europe	3,162	3,318
Americas, Asia Pacific, Africa Middle-East	2,836	2,603
Water Technologies	2,346	2,449
Other	3,290	2,969
TOTAL COMMITMENTS RELATING TO OPERATING ACTIVITIES	12,297	11,990

The decrease in commitments given by -€307 million in 2025 is attributable to the impact of the fall in the exchange rate for -€644 million (mainly the US dollar) and the new guarantee issued as part of the project to recycle water from complex industrial effluents for SATORP in Saudi Arabia for €298 million.

In addition to the commitments given quantified above, Veolia has also granted commitments of an unlimited amount in respect of completion or performance bonds and a waste construction and processing contract in Hong Kong, in the Waste and Water businesses. This commitment, of an unlimited amount, is tied to the contract term (37 months of construction and 15 years of operation) and has a residual duration of 3 years as of December 31, 2025.

These commitments are limited to the duration of the related contracts and were approved in advance by the Board of Directors of Veolia Environnement.

Commitments given with regard to joint ventures remained at €150 million (100%) as of December 31, 2025, compared with €154 million in 2024. They mainly consist of performance bonds given to Kilpilahti Power Plant Ltd for the renovation of the combined heat and power plant in Porvoo, Finland, in the amount of €100 million.

5.8.2 Commitments received relating to operating activities

These commitments mainly consist of commitments received from our partners in respect of construction contracts.

They total €1,102 million as of December 31, 2025, compared with €1,093 million as of December 31, 2024.

Note 6 PERSONNEL COSTS AND EMPLOYEE BENEFITS**6.1 Personnel costs and employee numbers**

Personnel costs break down as follows:

(€ million)	2024	2025
Employee costs	-10,879	-11,018
Profit-sharing and incentive schemes	-292	-255
Share-based compensation, including social security contributions ⁽¹⁾	-63	-59
PERSONNEL COSTS	-11,234	-11,332

(1) As disclosed in Note 6.2.2, share-based compensation mainly concerns Share Grant Plans and the Employee Savings Plan.

Average consolidated employees break down as follows:

By operating segment	2024	2025
France & Hazardous Waste Europe	48,812	41,547
Europe	78,334	79,856
Americas, Asia Pacific, Africa Middle-East	75,039	72,946
Water Technologies	17,398	17,334
Other	1,619	1,493
CONSOLIDATED EMPLOYEES ⁽¹⁾	221,202	213,176

(1) Consolidated employees excluding employees of equity-accounted subsidiaries.

The employees employed in joint ventures are not significant. The change between 2025 and 2024 is mainly due to the effect of removals from the 2024 scope.

6.2 Share-based compensation**6.2.1 Accounting policies**

Pursuant to IFRS 2, Share-based Payment, an expense is recorded in respect of share purchase or subscription plans and other share-based compensation granted by the Group to its employees. When the plans are equity-settled, the fair value of instruments is determined at the grant date and the fair value of the plan is expensed in the Consolidated Income Statement and recognized directly in equity over the period in which the benefit vests and the service is rendered.

For share grant plans, the fair value of instruments is calculated based on the share price at the grant date and the expected dividend yield.

For Group Savings Plans (GSP), the compensation expense corresponds to the discount and the Company's contribution to subscribers.

6.2.2 Share-based compensation expense

The share-based compensation expense breaks down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
Employee savings plan	38	32
2022 Performance share grant plan	10	-
2023 Performance share grant plan	9	10
2024 Performance share grant plan	5	10
2025 Performance share grant plan	-	6
2022 Free share grant plan	1	1
TOTAL INCLUDING SOCIAL SECURITY COSTS	63	59

6.2.2.1 2025 Employee Savings Plans

Veolia Environnement regularly sets up, through Group Savings Plans (GSP), in France and internationally, standard and secured savings plans which enable a large number of employees of Veolia Environnement and its subsidiaries to subscribe for Veolia Environnement shares. Shares subscribed by employees under these plans are subject to certain restrictions regarding their sale or transfer.

In 2025, Veolia Environnement proposed a new Group employee share ownership transaction, rolled-out across 56 countries.

Under this transaction, shares were subscribed with a 15% discount on the average closing price of the share during the 20 trading days preceding the date the subscription price was set by the Chief Executive Officer. The subscription price was set at €25.97.

Under the so-called secure format, employees benefit from:

- a gross contribution from the Group equal to 100% of the employee's investment up to a maximum of €300;
- a leveraged system supplementing their personal investment in the event of an increase in the share price.

This personal investment and the net contribution from the Group are guaranteed in the event of a fall in the share price and receive a guaranteed minimum return. In certain countries, in order to adapt to local legislation, a Share Appreciation Rights plan is offered.

A financial institution is appointed by Veolia to hedge the transaction.

In the United Kingdom, a Share Incentive Plan (SIP) was offered as an alternative to the standard plan, enabling employees to subscribe at the lower of the share price on August 1, 2025, and the share price preceding the vesting of the shares in January 2026, while benefiting from a contribution from the Group capped at £250. The subscription period ended on December 31, 2025.

This transaction is valued at €339 million, representing 13,065,890 shares, including 11,289,176 new shares issued through a share capital increase on September 12, 2025. At the same time, the Company proceeded with a capital reduction through cancellation of 11,289,176 treasury shares acquired under the share repurchase program. The total share capital remains unchanged after these transactions.

In 2025, an expense of €32 million is recorded in operating income.

6.2.2.2 2025 Performance Share Grant Plans

In 2025, the Group granted 1,176,353 performance shares (PS) to Group employees and executives, subject to the beneficiary's presence in the Group on May 7, 2028 and performance conditions based on the following criteria:

- financial criteria (average increase in current net income attributable to owners of the Company and relative performance of the total shareholder return (TSR) of the Veolia Environnement share compared with the Stoxx 600 Utilities (Price) SX6P index);
- non-financial quantitative criteria relating to the Company's Purpose.

Taking account of these characteristics and market conditions at the plan implementation date, the fair value of the instruments was estimated at €23.36.

The performance and presence conditions are taken into account in estimating the compensation expense.

An expense of €6 million is recorded in operating income in 2025.

6.2.2.3 Plans implemented before 2025

Veolia implemented the following plans in previous years:

- 2024 employee savings plan: Veolia had proposed in 2024 a Group employee share ownership transaction, rolled-out across 54 countries. This plan expired on December 31, 2024;
- 2022, 2023 and 2024 performance share grant plans: the Group set-up performance share grant plans (PSP) in 2022, 2023 and 2024 subject to the beneficiary's presence in the Group at the vesting date on August 2, 2025, May 3, 2026 and May 14, 2027, respectively, and performance conditions. An expense of €20 million is recorded in operating income in 2025 in respect of these three plans;
- 2022 Free Share Grant Plan: the Group granted 145,200 free shares subject to the beneficiary's presence in the Group on June 15, 2025. An expense of €1 million is recorded in operating income in 2025 in respect of this plan.

6.3 Pension plans and other post-employment benefits

The following disclosures relate to the pension plans offered by fully consolidated entities.

6.3.1 Accounting policies

Veolia Environnement and its subsidiaries have several pension plans:

Defined contribution plans: plans under which the Group (or a Group entity) pays an agreed contribution to a separate entity, relieving it of any liability for future payments.

These obligations are expensed in the Consolidated Income Statement when due.

Defined benefit plans: all plans which do not meet the definition of a defined contribution plan. The net obligations of each Group entity are calculated for each plan based on an estimate of the amount employees will receive in exchange for services rendered during the current and past periods. The amount of the obligation is discounted to present value and the fair value of plan assets is deducted.

Where the calculation shows a plan surplus, the asset recognized is capped at the total of the discounted present value of profits, in the form of future repayments or reductions in plan contributions. The plan surplus is recognized in non-current financial assets.

Certain obligations of the Group or Group entities may enjoy a right to reimbursement, corresponding to a commitment by a third party to repay in full or in part the expenses relating to these obligations. This right to reimbursement is recognized in non-current financial assets.

The financing of defined benefit pension plans may lead the Group to make voluntary contributions to pension funds. Where applicable, these voluntary contributions are presented in Net cash from operating activities in the Consolidated Cash Flow Statement, in the same way as other employer contributions.

Employee obligations of the Group are calculated using the projected unit credit method. This method is based on the probability of personnel remaining with companies in the Group until retirement, the foreseeable changes in future compensation, and the appropriate discount rate. Specific discount rates are adopted for each monetary area. They are determined based on the yield offered by bonds issued by leading companies (rated AA) or treasury bonds where the market is not liquid, with maturities equivalent to the average term of the plans valued in the relevant region. This results in the recognition of pension-related assets or provisions in the Consolidated Statement of Financial Position and the recognition of the related net expenses.

Pursuant to IAS 19, Employee Benefits, actuarial gains and losses are recognized in other comprehensive income.

6.3.2 Description of plans

In accordance with the regulatory environment and collective agreements, the Group has established defined benefit and defined contribution pension plans (company or multi-employer) in favour of employees and other post-employment benefits.

Defined contribution plans

Supplemental defined contribution pension plans have been set up in certain subsidiaries. Expenses incurred by the Group under these plans totaled €200 million in 2025 and €200 million in 2024.

Defined benefit plans

The tables in Note 6.3.3 present the obligations in respect of defined benefit pension plans and other post-employment benefits.

The measurement of these obligations is reflected by the DBO (Defined Benefit Obligation). These future outflow commitments may be partially or fully funded ("plan assets").

The most significant obligations are located in the United Kingdom, the United States and France.

United Kingdom

The defined benefit obligation as of December 31, 2025 is €708 million (compared with €747 million as of December 31, 2024) and is funded by plan assets of €739 million as of December 31, 2025 (compared with €780 million in 2024). The change in the defined benefit obligation is presented in the table below in Note 6.3.3.

The average duration of these plans is approximately 11 years.

In the United Kingdom, defined benefit pension plans are mainly final salary plans. Most of these plans are closed to new employees and the majority are also closed to the accrual of new rights. These plans are financed by employer contributions, or even employee contributions, paid to an independent pension fund (managed by a Trustee). Local regulations ensure the independence of the pension funds, which have nine members (including five employer representatives, three representatives of active and retired employees and one independent member).

Plan rules authorize the employer to recover excess funds paid at the end of the plans.

These plans allow retirees to take part of the benefit as a lump-sum and the balance as a pension. In the case of a pension, the related risk is tied to the longevity of beneficiaries.

France

In France, the defined benefit obligation for all plans totaled €395 million as of December 31, 2025 (€369 million as of December 31, 2024). It is funded by plan assets of €60 million as of December 31, 2025 (€64 million as of December 31, 2024). The change in the defined benefit obligation is presented in the table below in Note 6.3.3.

Nearly 88% of the obligation relates to retirement indemnities (legally required payments) paid in a lump sum. These indemnities represent a number of months' salary based on seniority and are legally required by the applicable collective-bargaining agreement to be paid on an employee's retirement. A portion of these obligations is covered by insurance contracts, but this funding is at the discretion of the employer. The average duration of these plans is approximately 11 years.

The risk associated with this type of plan is linked to the renegotiation of collective bargaining agreements which could generate adjustments to the indemnities granted.

United States

The defined benefit obligation as of December 31, 2025 is €488 million (compared with €539 million as of December 31, 2024) and is funded by plan assets of €503 million as of December 31, 2025 (compared with €521 million in 2024). The change in the defined benefit obligation is presented in the table below in Note 6.3.3.

The average duration of these plans is approximately 10 years.

Approximately 83% of the obligation relates to average salary pension plans. Veolia also participates in plans that cover a portion of employee healthcare costs. Most of these plans are closed to new employees, and are even closed to the accrual of new rights. Financing is assured by the payment of employer contributions to these funds.

Multi-employer plans

Under collective agreements, some Group companies participate in multi-employer defined benefit pension plans. However, some of these plans are unable to provide a consistent and reliable basis for the allocation of the obligation, assets and costs between the different participating entities. They are therefore recorded as defined contribution plans in accordance with IAS 19. The multi-employer plans concern approximately 4,000 employees in 2025 and are mainly located in Germany, where such plans are generally funded by redistribution and in the United States.

The corresponding expense recorded in the Consolidated Income Statement is equal to annual contributions, which amount to approximately €8 million.

6.3.3 Obligations in respect of defined benefit pension plans and other post-employment benefits

6.3.3.1 Actuarial assumptions

Actuarial assumptions used for calculation purposes vary depending on the country in which the plan is implemented.

The benefit obligation in respect of pension plans and post-employment benefits is based on the following average assumptions:

	As of December 31, 2024	As of December 31, 2025
Discount rate	4.78%	4.73%
o/w United Kingdom	5.55%	5.55%
o/w United States	5.50%	5.40%
o/w Euro zone	3.60%	3.50%
Inflation rate	2.53%	2.44%
o/w United Kingdom (RPI / CPI)	3,15%/2,60%	2,90%/2,40%
o/w United States	2.50%	2.50%
o/w Euro zone	2.00%	2.00%

6.3.3.2 Change in the defined benefit obligation (DBO)

Change in the DBO (€ million)	As of December 31									
	United Kingdom		France		United States		Other countries		TOTAL	
	2024	2025	2024	2025	2024	2025	2024	2025	2024	2025
Defined benefit obligation at beginning of year	773	747	388	369	541	539	400	393	2,103	2,047
Current service cost	1	1	19	21	7	6	29	30	57	58
Plan amendments or new plans (contract wins)	-	3	-	-11	-	-	-	-	-	-8
Curtailments and settlements	-	-5	-7	-16	-	-	-4	-5	-11	-26
Interest cost	37	39	11	12	27	25	11	11	85	87
Actuarial (gains) losses	-54	5	-5	43	-36	13	9	6	-85	67
o/w actuarial (gains) losses arising from experience adjustments	2	7	2	10	-	5	1	3	4	25
o/w actuarial (gains) losses arising from changes in demographic assumptions ⁽¹⁾	-1	9	1	30	-	-	-	-	-1	39
o/w actuarial (gains) losses arising from changes in financial assumptions	-54	-11	-8	4	-36	8	9	3	-89	4
Plan participants' contributions	-	-	-	-	-	-	1	1	1	1
Benefits paid	-47	-45	-19	-21	-33	-33	-36	-27	-135	-126
Benefits obligation assumed on acquisition of subsidiaries	-	-	4	-	-	-	4	10	8	10
Benefits obligation transferred on divestiture of subsidiaries	-	-	-23	-	-	-	-22	-11	-46	-11
Foreign exchange translation	36	-37	-	-	33	-63	-	-14	69	-114
Other	-	1	1	-1	-	-	1	-2	2	-2
(a) Defined Benefit Obligation at end of year	747	708	369	395	539	488	393	392	2,047	1,983

(1) Actuarial losses resulting from changes in demographic assumptions in France in 2025 for €30 million are mainly due to updates to the workforce turnover rates.

6.3.3.3 Sensitivity of the defined benefit obligation and the current service cost

The Group defined benefit obligation is especially sensitive to discount and inflation rates.

A 1% increase in the discount rate would decrease the defined benefit obligation by approximately €189 million and the current service cost of the next year by €5 million. A 1% decrease in the discount rate would increase the defined benefit obligation by €212 million and the current service cost of the next year by €5 million.

Conversely, a 1% increase in the inflation rate would increase the defined benefit obligation by approximately €123 million and the current service cost by €5 million. A 1% decrease in the inflation rate would decrease the defined benefit obligation by €112 million and the current service cost by €5 million.

6.3.4 Change in the funding status of post-employment benefit obligations and the provision

(€ million)	United Kingdom		France		United States		Other countries		Total	
	2024	2025	2024	2025	2024	2025	2024	2025	2024	2025

Investment policy

In the **United Kingdom**, the investment policy is defined by the pension fund. Funding levels and the contribution payment schedule are negotiated by the employer and the Trustee, based on triennial actuarial valuations. Contributions include both the funding of the shortfall in relation to past rights and service costs for future years.

United Kingdom pension funds aim to attain 100% technical coverage of liabilities within 10 years, while maintaining a risk level considered as acceptable by all parties (Trustees and employers). In order to achieve that goal, plan assets are allocated within two portfolios:

- a liability-driven investment portfolio comprising financial instruments (where flows best match liabilities and the value fluctuates in line with the liability value). This portfolio mainly includes inflation-linked bonds issued or guaranteed by the United Kingdom government and derivatives with leading banking counterparties, with which collateralization contracts have been signed in order to minimize counterparty risk;
- a portfolio of growth assets invested in a diverse range of asset classes (equities, bonds, diversified funds, etc.) and seeking to outperform the liabilities. Portfolio management was delegated to an external manager in January 2017.

A hedging policy covering some financial risks (particularly foreign exchange, inflation and interest rate) was implemented, in order to reduce the fund's exposure to these risks and therefore reduce the risk of increased contributions. These hedges were implemented using derivatives (currency forwards, total return swaps on gilts, interest rate swaps, etc.).

In France, the Group's assets are placed primarily with insurance companies and invested in the general insurance fund. The French General Insurance Code (Code général des assurances) requires insurance companies to provide a minimum rate of return on these funds, calculated primarily based on the rate offered by government bonds.

In the United States, the investment policy is defined by the pension fund. The level of funding for the plan is set by the employer.

For the entire Group, the actual rate of return on plan assets reflects market performance based on the asset investment profiles.

The Group plans to make contributions of €23 million to defined benefit plans in 2026, compared with €22 million in 2025. The amount of employer contributions is presented net of reimbursements of benefits by insurance companies. In 2025, a reimbursement of €4 million was made in respect of benefits paid in France, compared with €13 million in 2024.

Investment and return on assets

On average, Group pension plan assets were invested as follows:

	2024	2025
Unquoted assets	14.7%	10.7%
Liquid unquoted assets - Investment funds (general insurance fund)	8.9%	9.1%
Non-liquid unquoted assets - Investment funds ⁽¹⁾	3.2%	0.5%
Unquoted assets - Other	2.7%	1.1%
Quoted assets (liquid)	82.4%	82.7%
Government bonds ⁽²⁾	22.4%	16.6%
Corporate bonds	20.7%	24.4%
Shares	29.1%	28.1%
Diversified Investment funds	9.3%	7.2%
Liquid quoted assets - Other	0.9%	6.4%
Liquid assets	2.9%	6.6%
TOTAL	100.0%	100.0%

(1) The line "Non-liquid unquoted assets – Investment funds" consists of funds without guaranteed monthly liquidity (e.g. real estate funds, infrastructure funds).

(2) The portion of government bonds from high-risk countries is not material.

6.3.6 Impact on comprehensive income

The net benefit cost breaks down as follows:

(€ million)	As of December 31									
	United Kingdom		France		United States		Other countries		TOTAL	
	2024	2025	2024	2025	2024	2025	2024	2025	2024	2025
Service cost	1	-1	13	-6	7	6	25	25	46	24
o/w Current service cost	1	1	19	21	7	6	29	30	57	58
o/w Past service cost	-	-2	-7	-27	-	-	-4	-5	-11	-34
Net interest expense	-2	-2	8	10	3	1	8	8	16	17
o/w Interest cost	37	39	11	12	27	25	11	11	85	87
o/w Interest income on plan assets	-39	-40	-3	-2	-24	-24	-4	-4	-69	-70
Interest income on right to reimbursement	-	-	-	-	-	-	-	-	-	-
Administrative expenses paid by the fund	1	1	-	-	1	-	-	-	1	1
Other	-	5	2	-	-	-	-	1	2	6
Net benefit cost recognized in the Consolidated Income Statement	-	3	22	4	10	8	33	34	65	48
Return on plan assets excluding amounts included in interest income	67	1	-	-1	-5	-42	-1	-2	61	-45
Actuarial (gains) losses arising from experience adjustments	2	7	2	10	-	5	1	3	4	25
Actuarial (gains) losses arising from changes in demographic assumptions	-1	9	1	30	-	-	-	-	-1	39
Actuarial (gains) losses arising from changes in financial assumptions	-54	-11	-8	4	-36	8	9	3	-89	4
Net benefit cost recognized in other comprehensive income	14	6	-5	42	-41	-29	8	4	-24	23
NET BENEFIT COST RECOGNIZED IN TOTAL COMPREHENSIVE INCOME	14	9	18	45	-30	-21	41	38	42	71

The costs in the Consolidated Income Statement are recorded in operating income, except for the net interest expense, recorded in net financial income and expenses.

6.4 Compensation and related benefits of key management (related parties)

Group Executive Committee members and directors represent the key management personnel of Veolia Environnement.

The following table summarizes amounts paid by the Group in respect of compensation and other benefits granted to members of the Company Executive Committee in exercise at the closing date of each fiscal year presented.

Short-term benefits include fixed and variable compensation, employee benefits and directors' fees. Variable compensation comprises amounts paid in a given fiscal year in respect of previous fiscal years.

(€ million)	Year ended December 31, 2024	Year ended December 31, 2025
Short-term benefits, excluding employer contributions	16	14
Employer contributions	5	7
Post-employment benefits ⁽¹⁾	-	-
Other long-term benefits ⁽²⁾	-	-
Share-based payments	3	4
Other items	-	-
TOTAL	25	26

(1) Current service cost.

(2) Other compensation vested but payable in the long-term.

As of December 31, 2025, total pension and post-employment benefit obligations in respect of members of the Management Committee amount to €1 million, compared with €2 million as of December 31, 2024.

The members of the Board of Directors receive compensation for their duties as directors. It is noted that Mr. Antoine Frérot (Chairman of the Board of Directors) and Mrs. Estelle Brachlianoff (Chief Executive Officer) waived the receipt of compensation for their duties as a director of the Company and as corporate officers of companies controlled by the Group. The same applies to Mr. Arnaud Caudoux for his duties as a director. The total gross amount of compensation (before withholding tax) paid by the Company to directors and the non-voting member (*censeur*) was €1,126,125 in 2025.

Note 7 GOODWILL, INTANGIBLE ASSETS AND PROPERTY, PLANT AND EQUIPMENT**7.1 Goodwill****7.1.1 Movements in goodwill**

Goodwill breaks down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
Gross	12,783	12,468
Accumulated impairment losses	-1,000	-1,012
NET	11,783	11,456

7.1.1.1 Main goodwill balances by Cash-Generating Unit

A Cash-Generating Unit (CGU) is the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets.

For the purpose of impairment tests, goodwill is allocated, from the acquisition date, to each of the cash-generating units or each of the groups of cash-generating units that are expected to benefit from the business combination, referred to hereafter as "goodwill CGUs".

Given the Group's activities, the goodwill CGUs are below operating segments in the organizational structure and generally represent a group of countries.

The Group has 11 goodwill CGUs as of December 31, 2025.

(€ million)	As of December 31, 2024	As of December 31, 2025
North America	2,767	2,519
Central & Eastern Europe	2,159	2,334
France & Hazardous Waste Europe	1,973	1,969
Water Technologies	1,943	1,742
Northern Europe	1,268	1,227
Pacific	565	540
Goodwill balances > €500 million as of December 31, 2025	10,676	10,331
Other goodwill balances < €500 million	1,107	1,125
TOTAL GOODWILL	11,783	11,456

Goodwill of less than €500 million at the end of December 2025 mainly concerns the following geographical areas: Iberia for €382 million, Latin America for €328 million and Asia for €287 million.

As of December 31, 2025, accumulated impairment losses total -€1,012 million and mainly concern goodwill of the Central and Eastern Europe cash-generating unit (-€827 million).

7.1.1.2 Movements in the net carrying amount of goodwill

Movements in the net carrying amount of goodwill during 2025 are as follows:

(€ million)	As of December 31, 2024	Changes in consolidation scope	Foreign exchange translation	Impairment losses	Transfers to Assets classified as held for sale	Other movements	As of December 31, 2025
France & Hazardous Waste Europe	1,973	-5	-	-	-	-	1,969
Europe	3,790	145	17	-	-	-	3,951
Americas, Asia Pacific, Africa Middle-East	4,075	102	-382	-4	-	-	3,791
Water Technologies	1,943	3	-203	-	-	-	1,742
Other	3	-	-	-	-	-	3
TOTAL GOODWILL	11,783	244	-568	-4	-	-	11,456

The main movements in Group goodwill during 2025 were primarily due to:

- **changes in consolidation scope**, mainly including the entry of Danubius in Hungary, acquired in January 2025, with final goodwill amounting to €73 million, as well as the acquisitions of activities specializing in hazardous waste treatment in the United States for preliminary goodwill of €70 million;
- **foreign exchange translation losses**, mainly due to the fall in the value of the US dollar for -€517 million.

7.1.2 Impairment tests

Veolia performs systematic annual impairment tests in respect of goodwill and other intangible assets with an indefinite useful life. More frequent tests are performed where there is indication that the cash-generating unit may have suffered a loss in value.

Changes in the general economic and financial context, worsening of local economic environments, or changes in the Group's economic performance or stock market capitalization represent, in particular, external indicators of impairment that are analyzed by the Group to determine whether it is appropriate to perform more frequent impairment tests.

Impairment testing was performed on all cash-generating units as of December 31, 2025.

Goodwill impairment is recognized in operating income and is definitive.

Key assumptions underlying the determination of recoverable amounts

The need to recognize an impairment is assessed by comparing the net carrying amount of the assets and liabilities of the CGU or group of CGUs with their recoverable amount.

The recoverable amount of a cash-generating unit is the higher of its fair value less costs to sell and its value in use.

Fair value less costs to sell is determined based on available information enabling the best estimate of the amount obtainable from the sale of the cash-generating unit in an arm's length transaction between knowledgeable, willing parties, less the costs of disposal.

The value in use determined by the Group is generally equal to the present value of the future cash flows expected to be derived from the CGU or group of CGUs, taking account of their residual value and based on the following:

- cash flow projections are taken from the Long-Term Plan prepared each year and reflect changes in volumes, prices, direct costs and investment in the period, determined based on contracts and activities and in line with past data and expected changes over the period covered by the Long-Term Plan;

- this plan covers the year in progress and the next six years. This period is representative of the average duration of the Group's long-term contract portfolio and its short-term activities;
- terminal values are calculated based on discounted forecast flows for the last year of the long-term plan (2031). These flows are determined for each CGU or group of CGUs based on a perpetual growth rate mainly founded on long-term inflation;
- these terminal values are calculated based on discount rates and perpetual growth rates reflecting the country or the geographic area of the cash-generating unit;
- a discount rate (weighted average cost of capital) is determined for each asset, cash-generating unit or group of cash-generating units: it is equal to the risk-free rate plus a risk premium weighted for country-specific risks (see Note 2). A risk premium is included in the calculation of the weighted average cost of capital of entities located in countries outside the euro zone and the following euro zone countries: Spain, Italy, Slovakia and Greece. The discount rates estimated by management for each cash-generating unit therefore reflect current market assessments of the time value of money and the country specific risks to which the CGU or group of CGUs is exposed, with the other risks reflected in the expected future cash flows from the assets. These rates were updated by an independent expert in the second half of 2025, and take into account the increase in inflation rates and in financing conditions;
- investments included in forecast future cash flows are those investments that enable the level of economic benefits expected to arise from the assets to be maintained in their current condition. It should be noted that these investment forecasts used as a basis for computing projections of future cash flow include Veolia commitments to phase-out coal in Europe reflected through an assets decarbonization plan. Restructuring plans to which the Group is not committed are not included in forecast cash flows used to determine values in use.

Changes in the economic and financial context, as well as changes in the competitive or regulatory environment may impact estimates of recoverable amounts, as may unforeseen changes in the political, economic or legal systems of certain countries.

The assumptions underlying the impairment tests on Group cash-generating units with material goodwill balances are as follows:

Cash Generating Unit	Recoverable amount determination method	Discount rate	Perpetual growth rate
France & Hazardous Waste Europe	Value in use	5.7%	2.0%
Central & Eastern Europe	Value in use	7.1%	2.5%
Northern Europe	Value in use	6.5%	2.0%
Pacific	Value in use	6.8%	2.7%
North America	Value in use	6.8%	2.0%
Water Technologies	Value in use	6.7%	2.0%

7.1.2.1 Impairment test results

Impairment tests were performed on all cash-generating units. No impairment losses were recognized in 2025.

7.1.2.2 Sensitivity of recoverable amounts

Recoverable amounts determined for impairment testing purposes were tested for their sensitivity to a 1% increase in discount rates, a 1% decrease in perpetual growth rates and a 5% decrease in operating cash flows.

The changes in operating cash flows taken into account for the purpose of these sensitivity tests include EBITDA, less investments net of divestitures, plus changes in working capital. They also include the impact of Efficiency and Convergence plans launched by each cash-generating unit at the date of preparation of the Long-Term Plan.

These assumptions are considered reasonable given the Group's activities and the geographic areas of its operations.

Some goodwill CGUs generate cash flows in more than one country. For these CGUs, discount rates, perpetual growth rates and tax rates taken into account at CGU level were calculated by weighting the flows of each constituent country.

The cash-generating units are not sensitive to changes in macroeconomic and operating assumptions as of December 31, 2024 or December 31, 2025.

7.2 Intangible assets

Intangible assets are identifiable non-monetary assets without physical substance. They mainly consist of certain assets recognized in respect of concession arrangements (IFRIC 12).

Intangible assets purchased separately are initially measured at cost in accordance with IAS 38. Intangible assets acquired through business combinations are recognized at fair value separately from goodwill. Subsequently, intangible assets are measured at cost less accumulated amortization and impairment losses. They are tested for impairment where there is indication of loss in value (non-performance of a significant long-term contract under the terms laid down in the contract, technical operating issues, etc.).

7.2.1 Concession intangible assets

Concession intangible assets include entry fees paid to local authorities for public service contracts. They correspond to the right of the concession holder to bill users of a public service in return for construction services provided by it to the concession grantor under public service contracts in accordance with IFRIC 12, Service Concession arrangements.

This concession holder right is equal to the fair value of the construction of the concession infrastructure plus borrowings costs recognized during the construction period. It is amortized over the contract term in accordance with an appropriate method reflecting the rate of consumption of the concession asset's economic benefits as from the date the infrastructure is brought into service.

Investment grants received in respect of concession arrangements are generally definitively earned and, therefore, are not repayable. In accordance with the option offered by IAS 20, these grants are presented as a deduction from intangible assets and reduce the amortization charge in respect of the concession intangible asset over the residual term of the concession arrangement.

Movements in the net carrying amount of concession intangible assets during 2025 are as follows:

(€ million)	As of December 31, 2024	Additions	Disposals	Impairment losses	Amortization/ Reversals	Change in consolidation scope	Foreign exchange translation	Other movements	As of December 31, 2025
Concession intangible assets, gross	11,167	762	-287	-	-	-98	-108	135	11,572
Amortization and impairment losses	-5,912	-	228	16	-701	63	41	-6	-6,271
CONCESSION INTANGIBLE ASSETS, NET	5,255	762	-58	16	-701	-35	-67	129	5,301

Additions concern Europe (€378 million), France and Hazardous Waste Europe (€305 million), and the Americas, Asia Pacific, Africa Middle-East segment (€80 million).

Charges to amortization and impairment losses mainly concern Europe (-€439 million), the Americas, Asia Pacific, Africa Middle-East segment (-€123 million), and France and Hazardous Waste Europe (-€122 million).

Changes in consolidation scope of -€35 million are mainly attributable to the change in consolidation method of a Spanish subsidiary.

Other movements are linked to contractual developments in Ecuador and Germany.

Concession intangible assets break down by operating segment as follows:

(€ million)	Net carrying amount as of December 31, 2024	As of December 31, 2025		
		Gross carrying amount	Amortization and impairment losses	Net carrying amount
France & Hazardous Waste Europe	728	1,620	-743	877
Europe	3,738	7,917	-4,256	3,660
Americas, Asia Pacific, Africa Middle-East	786	2,016	-1,256	760
Water Technologies	4	18	-15	3
Other	-	-	-	-
CONCESSION INTANGIBLE ASSETS	5,255	11,572	-6,271	5,301

7.2.2 Other intangible assets

Other intangible assets mainly consist of the value of contracts acquired through business combinations ("contractual rights"), patents, licenses, software and operating rights.

Other intangible assets are amortized on a straight-line basis over their useful life, unless another systematic amortization basis better reflects the rate of consumption of the asset.

Useful lives are as follows:

	Range of useful lives in number of years*
Purchased contractual rights	6 to 30
Purchased software	3 to 10
Other intangible assets	1 to 30

* The range of useful lives is due to the diversity of intangible assets concerned.

Other intangible assets break down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
INTANGIBLE ASSETS WITH AN INDEFINITE USEFUL LIFE, NET	66	62
Intangible assets with a definite useful life, gross	6,077	6,058
Amortization and impairment losses	-3,313	-3,475
INTANGIBLE ASSETS WITH A DEFINITE USEFUL LIFE, NET	2,764	2,583
OTHER INTANGIBLE ASSETS, NET	2,830	2,645

Movements in the net carrying amount of other intangible assets during 2025 are as follows:

(€ million)	As of December 31, 2024	Additions	Disposals	Impairment losses	Amortization	Changes in consolidation scope	Foreign exchange translation	Other movements	December 31, 2025
INTANGIBLE ASSETS WITH AN INDEFINITE USEFUL LIFE, NET	66	-	-	-	-	-1	-4	1	62
Purchased contractual rights	340	1	-	-	-39	-4	-18	9	289
Purchased software	280	75	-	1	-96	2	-4	41	298
Purchased customer portfolios	946	1	-	-	-103	71	-86	16	844
Patents, licenses	723	-	-	-	-63	173	-61	82	853
Other purchased intangible assets	385	19	-11	4	-44	8	-23	-140	199
Other internally-developed intangible assets	90	41	-1	-	-23	14	-1	-18	101
INTANGIBLE ASSETS WITH A DEFINITE USEFUL LIFE, NET	2,764	137	-12	4	-370	263	-193	-10	2,583
OTHER INTANGIBLE ASSETS	2,830	138	-12	4	-370	262	-196	-10	2,645

Purchased customer portfolios total €844 million, including mainly €525 million in Water Technologies, €160 million in the Americas, Asia Pacific, Africa Middle-East segment, and €155 million in Europe.

Patents and licenses, including technologies, total €853 million, including €371 million in the Americas, Asia Pacific, Africa Middle-East segment, €277 million in Water Technologies, and €181 million for France and Hazardous Waste Europe.

Other purchased intangible assets total €199 million and mainly concern the Americas, Asia Pacific, Africa Middle-East segment for €118 million, Europe for €47 million and Water Technologies for €30 million.

Other internally developed non-current assets total €101 million and mainly concern France and Hazardous Waste Europe for €31 million and Europe for €37 million.

Changes in consolidation scope amounting to €262 million mainly concern acquisitions in the United States for €143 million and of Zeeklite in Japan for €74 million.

The foreign exchange translation amounts to -€196 million and mainly concerns the depreciation of the US dollar.

7.3 Property, plant and equipment

Property, plant and equipment are recorded at historical acquisition cost, less accumulated depreciation and any accumulated impairment losses.

Borrowing costs attributable to the acquisition or construction of identified installations, incurred during the construction period, are included in the cost of those assets in accordance with IAS 23, Borrowing Costs.

Property, plant and equipment are recorded by component, with each component depreciated over its useful life.

Useful lives are as follows:

	Range of useful lives in number of years *
Buildings	20 to 50
Technical installations	7 to 35
Vehicles	3 to 25
Other plant and equipment	3 to 12

* The range of useful lives is due to the diversity of property, plant and equipment concerned, excluding regulated activities.

Property, plant and equipment are primarily depreciated on a straight-line basis, unless another systematic depreciation basis better reflects the rate of consumption of the asset.

In the regulated activities of Chile and the United States, the depreciation periods of buildings can specifically be extended up to 100 years and those of technical installations up to 70 years.

Non-current assets are subject to impairment tests where there is indication of impairment loss.

In accordance with the option offered by IAS 20, Accounting for Government Grants and Disclosure of Government Assistance, investment grants are deducted from the gross carrying amount of property, plant and equipment to which they relate. When the construction of an asset covers more than one period, the portion of the grant not yet used is recorded in "Other liabilities" in the Consolidated Statement of Financial Position.

7.3.1 Movements in the net carrying amount of property, plant and equipment

Movements in the net carrying amount of property, plant and equipment during 2025 are as follows:

(€ million)	As of December 31, 2024	Additions	Disposals	Impairment losses	Depreciation	Changes in consolidation scope	Foreign exchange translation	Other movements	As of December 31, 2025
Property, plant and equipment, gross	33,425	2,437	-729	-	-	537	-1,076	107	34,701
Depreciation and impairment losses	-15,492	-	624	-63	-1,467	-78	278	-98	-16,297
PROPERTY, PLANT AND EQUIPMENT, NET	17,933	2,437	-106	-63	-1,467	459	-798	9	18,404

Additions for 2025 total €2,437 million and break down by segment as follows:

- France and Hazardous Waste Europe (€329 million): additions concern Hazardous Waste Europe for €129 million, mainly for a new treatment facility in Germany, and non-hazardous waste treatment and recovery for €91 million;
- Europe (€932 million): additions concern Poland and the Czech Republic for €245 million and €158 million, respectively, with the majority of investments aimed at the conversion of coal-based power generation assets to less carbon-intensive energies, maintenance and connection of heating networks; the United Kingdom for €171 million, mainly related to investments in waste treatment and recovery; and Germany for €119 million, related to acquisitions for the decarbonization and maintenance of networks;
- The Americas, Asia Pacific, Africa Middle-East (€1,038 million): additions concern the United States for €591 million, mainly involving water supply and treatment installations, particularly of PFAS (forever chemicals), for €395 million, and work and equipment for a hazardous waste treatment facility for €150 million. They also concern Chile for €171 million with the renewal of drinking water and wastewater networks, and Australia for €132 million for energy infrastructure and rolling stock.

Disposals of -€106 million mainly concern:

- France and Hazardous Waste Europe for -€23 million;
- Europe for -€28 million;
- The Americas, Asia Pacific, Africa Middle-East segment for -€45 million.

Impairment losses of -€63 million concern Europe for -€26 million and the Americas, Asia Pacific, Africa Middle-East segment for -€37 million.

Depreciation of -€1,467 million mainly concerns France and Hazardous Waste Europe (-€270 million), Europe (-€567 million) and the Americas, Asia Pacific, Africa Middle-East segment (-€513 million).

Changes in consolidation scope amount to €459 million and mainly concern the acquisition of Danubius in Hungary for €282 million.

Foreign exchange translation gains and losses amount to -€798 million and are primarily due to the depreciation of the US dollar for -€646 million and of the Chinese yuan renminbi for -€62 million.

Property, plant and equipment break down by operating segment as follows:

(€ million)	Net carrying amount of December 31, 2024	As of December 31, 2025		
		Gross carrying amount	Depreciation and impairment losses	Net carrying amount
France & Hazardous Waste Europe	1,820	6,739	-4,850	1,889
Europe	5,793	13,804	-7,303	6,502
Americas, Asia Pacific, Africa Middle-East	9,372	12,601	-3,454	9,146
Water Technologies	926	1,438	-591	847
Other	23	119	-98	21
PROPERTY, PLANT AND EQUIPMENT	17,933	34,701	-16,297	18,404

The breakdown of property, plant and equipment by class of assets is as follows:

(€ million)	Net carrying amount as of December 31, 2024	As of December 31, 2025		
		Gross carrying amount	Depreciation and impairment losses	Net carrying amount
Land	1,410	2,619	-1,202	1,417
Buildings	3,132	5,899	-2,643	3,257
Technical installations, plant and equipment	9,317	18,469	-8,760	9,709
Rolling stock and other vehicles	903	2,759	-1,829	930
Other property, plant and equipment	497	2,269	-1,725	545
Property, plant and equipment in progress	2,673	2,686	-139	2,547
PROPERTY, PLANT AND EQUIPMENT	17,933	34,701	-16,297	18,404

7.4 Right of use

In application of the Lease standard (IFRS 16), the Group analyses the contractual provisions of an agreement at the time of signature, to determine whether it presents the characteristics of a lease. In substance, it is necessary to determine whether the agreement conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

Where these characteristics exist, the Group recognizes, at the time the asset is made available:

- a new asset, the "Right of use", which represents the right to use the leased asset during the term of the lease;
- a liability, the "IFRS 16 lease debt", which represents the lease payment commitment.

(€ million)	As of December 31, 2024	As of December 31, 2025
Short term leases	52	47
Low value lease contracts	5	5
Variable leases	9	5
TOTAL	66	58

Initial and subsequent measurement of Right of use assets

The right of use asset recognized includes:

- the amount of the related lease debt;
- plus, where applicable:
 - lease payments made before the asset is made available,
 - initial direct costs incurred to obtain the lease, and
 - any dismantling or rehabilitation costs for which Veolia is liable;
- less any incentives received.

The lease debt is equal to the present value of:

- future lease payments (fixed payments and in-substance fixed payments, as well as variable lease payments that depend on an index or a rate);
- incentives receivable;
- amounts that Veolia expects to pay under residual value guarantees;

The Group applies a single recognition method for all leases, excluding short-term leases (duration of 12 months or less) and leases of assets with a low value. The Group adopted a threshold of US \$5,000 for low value assets.

Lease payments on contracts excluded from the scope of IFRS 16, as well as variable payments, continue to be recognized as operating expenses.

- the exercise price of a purchase option if Veolia is reasonably certain to exercise it; as well as
- any penalties for terminating the lease.

The right of use asset is depreciated or amortized on a straight-line over the shorter of the expected useful life of the asset and the lease term.

Impairment tests are performed in accordance with the method described in Note 7.1.2.

Lease term

The lease term is determined based on the provisions of the contract and reflects:

- the non-cancellable period, that is the period of time during which the Group does not have the opportunity to cancel the contract;
- plus any optional cancellation periods, if the Group is reasonably assured not to exercise the cancellation option;
- plus any optional extension periods, if the Group is reasonably assured to exercise the extension option.

Discount rate

When calculating the present value of future lease payments, the Group has elected not to use the rate implicit in the lease as the discount rate, and has developed a calculation method to determine the incremental borrowing rate that would apply to the financing of these leased assets. This methodology is based on a rate schedule calculated by currency and maturity based on the following parameters: reference rate of the relevant currency and the Veolia credit spread, the Group satisfying, through access to the bond market, the majority of the financing requirements of its subsidiaries.

Lease amendments

The net carrying amount of the right of use asset is adjusted in the event of amendments to the lease provisions that require the remeasurement of the lease debt (modification of an index, increase or reduction in the lease term, increase or decrease in future lease payments, etc.) or in the event of changes in assumptions as to whether the exercise of renewal or termination options is reasonably certain.

Right of use assets break down as follows:

(€ million)	Net carrying amount as of December 31, 2024	As of December 31, 2025		
		Gross carrying amount	Depreciation and impairment losses	Net carrying amount
Rights of use Intangible assets	7.6	11	-5	6
Right of use, Land	365	598	-284	313

Other	79	276	-207	69
RIGHT OF USE	1,819	3,938	-2,132	1,806

Movements in the net carrying amount of the right of use during 2025 are as follows:

(€ million)	As of December 31, 2024	Additions	Contract termination or expiry	Impairment losses	Depreciation	Changes in consolidation scope	Foreign exchange translation	Other movements	As of December 31, 2025
Right of use	4,003	577	-591	-	-	40	-100	10	3,938
Depreciation and impairment losses	-2,184	-	543	-2	-539	-4	50	3	-2,132
RIGHT OF USE, NET	1,819	577	-48	-2	-539	36	-50	13	1,806

Additions amount to €577 million and mainly concern France and Hazardous Waste Europe (€199 million), Europe (€157 million), and the Americas, Asia Pacific, Africa Middle-East segment (€133 million).

Depreciation and impairment losses total -€541 million in 2025 and mainly break down as follows:

- land: -€46 million;
- buildings: -€230 million;
- technical installations, plant and equipment: -€41 million;
- rolling stock: -€178 million.

They mainly concern Europe (-€173 million), France and Hazardous Waste Europe (-€152 million), the Americas, Asia Pacific, Africa Middle-East segment (-€131 million) and Water Technologies (-€55 million).

Sub-lease revenue associated with right-of-use assets is not material.

Note 8 FINANCING AND FINANCIAL INSTRUMENTS**8.1 Financial assets and liabilities**

Financial assets and liabilities mainly consist of:

- "financial liabilities", presented in Note 8.1.1;
- "non-current and current financial assets", presented in Note 8.1.2;
- cash and cash equivalents and bank overdrafts and other cash position items, presented in Note 8.1.3;
- derivative instruments, presented in Note 8.3.

8.1.1 Financial liabilities

Borrowings and other financial liabilities are recognized initially at fair value less transaction costs and subsequently measured at amortized cost using the effective interest rate (EIR) method.

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts over the estimated term of the financial instrument or, where applicable, over a shorter period, to the net carrying amount of the financial asset or liability.

		Non-current		Current		Total	
		As of December 31, 2024	As of December 31, 2025	As of December 31, 2024	As of December 31, 2025	As of December 31, 2024	As of December 31, 2025
(€ million)	Notes						
Bond issues	8.1.1.1	16,366	16,541	1,417	1,451	17,783	17,992
Other financial liabilities	8.1.1.2	1,915	2,437	7,402	6,890	9,317	9,328
IFRS 16 lease debt	8.1.1.3	1,523	1,514	462	469	1,985	1,983
TOTAL NON-CURRENT AND CURRENT FINANCIAL LIABILITIES		19,804	20,492	9,281	8,810	29,085	29,303

The heading "Net increase/decrease in current borrowings" in the Consolidated Cash Flow Statement mainly includes redemptions of current bonds in the amount of -€1,439 million in 2025 and increases and repayments of other current borrowings of -€725 million.

The heading "New non-current borrowings and other debts" in the Consolidated Cash Flow Statement mainly includes non-current bond issues in the amount of €1,879 million in 2025 and new other non-current borrowings of €863 million.

8.1.1.1 Changes in non-current and current bond issues

Bond issues break down as follows:

(€ million)	As of December 31, 2024	Subscriptions	Redemptions	Changes in consolidation scope	Fair value adjustments (1)	Foreign exchange translation	Non-current/ current reclassification	Other movements	As of December 31, 2025
Non-current bond issues	16,366	1,879	-43	-	63	-258	-1,465	-1	16,541
Current bond issues	1,417	-	-1,439	-	15	-7	1,465	-	1,451
TOTAL BOND ISSUES	17,783	1,879	-1,482	-	78	-265	-	-1	17,992

(1) value adjustments are recorded in financial income and expenses. This value adjustment corresponds, on the one hand, to the fair value hedge adjustment for €40 million on the VESA bond line and, on the other hand, to the revaluation of bond issues in Chile, which are indexed to inflation for €37 million.

Issues mainly correspond to:

- two tranches of a bond issue by Veolia on June 17, 2025, of €850 million at a rate of 3.324% maturing in June 2032 and €650 million at a rate of 3.795% maturing in June 2037, respectively.
- a bond issue by Aguas Andinas in Chile on January 30, 2025, of 4 million Chilean Units of Account (CLF) (equivalent to €148 million) at a rate of 3.19%, maturing in 2046.
- the private placement bond issue by Veolia Utility Resources LLC in the United States of US\$200 million (equivalent to €177 million) at a rate of 5.72%, maturing in 2055.

- the redemption at maturity, on April 3, 2025, of a bond issue for €500 million,

- the redemption at maturity, on September 10, 2025, of a bond issue for €500 million.

Non-current/current reclassifications total €1,465 million and mainly concern two euro bond lines maturing on June 9, 2026, and November 30, 2026, for a nominal of €750 million and €650 million respectively.

Foreign exchange translation gains and losses of -€265 million mainly correspond to the translation at the year-end exchange rate of bond issues in US dollars for -€190 million.

Redemptions correspond to:

- the redemption at maturity, on January 1, 2025, of bonds with an option to be converted into and/or exchanged for new or existing shares for a remaining nominal outstanding of approximately €336 million,

(€ million)	Non-current		Current		Total

OTHER FINANCIAL LIABILITIES	9,317	40	17	-8	-43	-	-	5	9,328

Other non-current financial liabilities mainly comprise debt carried by:

- the Americas, Asia Pacific, Africa Middle-East segment in the amount of €1,070 million, including €699 million in China as of December 31, 2025, compared with €534 million as of December 31, 2024;
- Europe in the amount of €1,288 million, including:
 - in Germany in the amount of €420 million as of December 31, 2025, compared with €448 million as of December 31, 2024,
 - in Spain in the amount of €273 million as of December 31, 2025, compared with €228 million as of December 31, 2024,
 - in Hungary in the amount of €509 million as of December 31, 2025, compared with €195 million as of December 31, 2024.

Other current financial liabilities total €6,890 million as of December 31, 2025, compared with €7,402 million as of December 31, 2024. They mainly concern Veolia Environnement for €5,983 million (including €4,933 million in commercial paper, €863 million in deeply subordinated securities, for which notice of redemption had been given as of December 31, 2025, for payment on February 9, 2026, and €186 million in accrued interest on debt) and the Regulated Water activity in the United States for €218 million in credit line drawdowns payable.

Net movements in other current borrowings in 2025 mainly reflect the repayment of a portion of the commercial paper by Veolia Environnement for €1,108 million.

8.1.1.3 IFRS 16 lease debt

Lease debt recognition and measurement principles are disclosed in note 7.4.

(€ million)	As of December 31, 2024	Net movement	Changes in consolidation scope	Fair value adjustments	Foreign exchange translation	Non-current / current reclassification	Transfers to Liabilities classified as held for sale	Other movements	As of December 31, 2025

8.1.1.4 Breakdown of non-current and current financial liabilities by currency

Financial liabilities break down by original currency (before currency swaps) as follows:

- Euro-denominated debt of €23,041 million as of December 31, 2025 and €22,737 million as of December 31, 2024;
- Pound sterling-denominated debt of €609 million as of December 31, 2025 and €699 million as of December 31, 2024;
- US dollar-denominated debt of €2,455 million as of December 31, 2025 and €2,723 million as of December 31, 2024;
- Chinese yuan renminbi-denominated debt of €731 million as of December 31, 2025, and €645 million as of December 31, 2024;
- Chilean peso-denominated debt of €1,197 million (including inflation-indexed bond issues of €1,100 million) as of December 31, 2025 and €1,158 million as of December 31, 2024.

8.1.2 Non-current and current financial assets

Financial assets include assets classified as loans and receivables, liquid assets, financing assets, other financial assets, derivative assets and cash and cash equivalents.

Financial assets are initially recognized at fair value plus transaction costs, where the assets concerned are not subsequently measured at fair value through profit or loss. Where the assets are measured at fair value through profit or loss, transaction costs are expensed directly to net income.

The Group classifies financial assets in one of the categories identified by IFRS 9 on the acquisition date, based on the instrument's characteristics and the business model.

Assets at amortized cost

Financial assets are valued at amortized cost where they are recovered by collecting contractual cash flows (payments of principal and interest on the principal amount outstanding).

These assets comprise loans to non-consolidated investments, operating financial assets, other loans and receivables and trade receivables. After initial recognition at fair value, they are recognized and measured at amortized cost using the effective interest method.

In accordance with IFRS 9, these assets are impaired in the amount of expected credit losses. Impairment losses are recorded in other financial income and expenses.

Assets at fair value through other comprehensive income subsequently released to net income

This category includes financial assets recovered by collecting contractual cash flows (payments of principal and interest on the principal amount outstanding) or selling the assets.

Changes in the fair value of these assets are recognized directly in other comprehensive income, with the exception of interest income and dividends recognized in other financial income and expenses. Fair value gains and losses are released to net income on the sale of the assets.

Assets at fair value through other comprehensive income not subsequently released to net income

This category includes equity instruments not held for trading. It relates primarily to non-consolidated investments.

Changes in the fair value of these assets are recognized directly in other comprehensive income, with the exception of interest income and dividends recognized in other financial income and expenses. Fair value gains and losses are not released to net income on the sale of the assets.

Fair value is equal to market value in the case of quoted securities and to an estimate of the fair value in the case of unquoted securities, determined based on financial criteria most appropriate to the specific situation of each security. Financial investments which are not quoted in an active market and for which the fair value cannot be measured reliably, are recorded by the Group at historical cost less any accumulated impairment losses.

Assets at fair value through profit or loss

Instruments that do not meet the amortized cost or fair value assessment criteria through other comprehensive income are, by default, assessed at fair value through profit or loss. This is the case, for example, of the cash UCITS portfolio, whose performance and management are based on fair value.

Fair value gains and losses are recognized in other financial income and expenses.

Net gains and losses on derivatives entered into for trading purposes consist of swapped flows and the change in the value of the instrument.

8.1.2.1 Other non-current and current financial assets

Other non-current and current financial assets break down as follows:

(€ million)	Non-current		Current		Total	
	As of December 31, 2024	As of December 31, 2025	As of December 31, 2024	As of December 31, 2025	As of December 31, 2024	As of December 31, 2025
Gross	380	366	337	404	716	770
Impairment losses	-67	-72	-41	-33	-108	-105
FINANCIAL ASSETS RELATING TO LOANS AND RECEIVABLES, NET	312	294	296	371	608	665
OTHER FINANCIAL ASSETS	212	218	67	46	279	264

TOTAL OTHER FINANCIAL ASSETS, NET	534	520	2,371	2,360	2,905	2,881

(1) Liquid assets are financial assets composed of funds or securities with an initial maturity of more than three months, easily convertible into cash, and managed with respect to a liquidity objective while maintaining a low capital risk.

8.1.2.2 Changes in other non-current financial assets

Changes in the value of other non-current financial assets during 2025 are as follows:

(€ million)	As of December 31, 2024	Changes in business	Changes in consolidation scope	Fair value adjustments	Impairment losses*	Foreign exchange translation	Non-current / current reclassification	Transfers to Assets classified as held for sale	Other movements	As of December 31, 2025
Gross	380	1	-	-	-5	-15	-1	-	6	366

TOTAL OTHER NON-CURRENT FINANCIAL ASSETS, NET	534	23	-2	-	-12	-31	-1	-	10	520

* Impairment losses are recorded in financial income and expenses.

Non-current financial assets relating to loans and receivables

As of December 31, 2025, the main non-current financial assets relating to loans and receivables primarily consist of loans granted to equity-accounted joint ventures totaling €68 million gross, compared with €64 million as of December 31, 2024 (see also Note 5.2.4.1).

Other non-current financial assets

Other non-current financial assets are classified as "Assets at fair value through profit or loss" in accordance with the principles set out in Note 8.1.2.

Other financial assets held by the Group in countries considered high-risk by the IMF are not material in amount.

8.1.2.3 Movements in current financial assets

Movements in other current financial assets during 2025 are as follows:

(€ million)	As of December 31 2024	Changes in business	Changes in consolidation scope	Fair value adjust ments	Impairment losses *	Foreign exchange translation	Non-current / current reclassification	Transfers to Assets classified as held for sale	Other movements	As of December 31 2025
Gross	337	5	-1	-	69	-8	1	-	1	404
Impairment losses	-41	-	1	-	4	2	-	-	-	-33
CURRENT FINANCIAL ASSETS RELATING TO LOANS AND RECEIVABLES, NET	296	5	-	-	73	-6	1	-	1	371
OTHER CURRENT FINANCIAL ASSETS	67	-27	11	-	-	-5	-	-	-	46
LIQUID ASSETS AND FINANCING FINANCIAL ASSETS	2,008	-64	-	-	-	-	-	-	-	1,944
TOTAL OTHER CURRENT FINANCIAL ASSETS, NET	2,371	-86	11	-	73	-11	1	-	1	2,360

* Impairment losses are recorded in financial income and expenses.

As of December 31, 2025, liquid assets and financing financial assets primarily consist of investments with an initial maturity of more than three months, easily convertible into cash, and managed with respect to a liquidity objective while maintaining a low capital risk (see Section 8.3.3.2 "Counterparty risk relating to investment and hedging activities").

The accounting treatment of other current financial assets relating to loans and receivables complies with the required treatment of assets at amortized cost. Other financial assets are classified as "Assets at fair value through profit or loss" in accordance with the principles set out in Note 8.1.2.

8.1.3 Cash and cash equivalents, bank overdrafts and other cash position items

Cash and cash equivalents include all cash balances, certain term deposit accounts, negotiable debt instruments and monetary UCITS.

Cash equivalents are held to meet short-term cash commitments. In order to be considered a cash equivalent, an investment must be readily convertible to a known amount of cash and subject to a negligible risk of change in value, thereby satisfying the requirements of IAS 7.

Term deposit accounts and negotiable debt instruments present characteristics satisfying the requirements of IAS 7 when their yield is based on short-term money-market rates (such as €STR) and their maturity is less than 3 months (contractually or due to an early exit option exercisable at least every 3 months and held at a low or nil cost, without loss of capital or remuneration received net of the early exit penalty of less than the yield on short-term investments).

UCITS classified in "cash equivalents" comply with Regulation (EU) 2017/1131 of the European Parliament and of the Council of June 14, 2017 on money market funds and satisfy the cash equivalent criteria defined by IAS 7.

These UCITS can be sold daily on demand, conferring on them the characteristics of short-term, highly liquid investments that are readily convertible to known amounts of cash. These instruments are not intended to be held more than three months and offer a yield similar to the €STR interbank rate, thereby limiting sensitivity to interest rates. The regularity of performance trends does not expose them to a material risk of change in value.

Bank overdrafts repayable on demand which form an integral part of the Group's cash management policy represent a component of cash and cash equivalents for the purposes of the Consolidated Cash Flow Statement.

Cash and cash equivalents are valued at fair value through profit or loss. Note 8.2.1 sets out the method of determining fair value. Cash and cash equivalents belong to fair value levels 1 and 2:

- instruments with a quoted price in an active market in level 1;
- other instruments that are not quoted but the fair value of which is determined using valuation techniques involving standard mathematical calculation methods integrating observable market data, in level 2.

8.1.3.1 Movements in cash and cash equivalents

Movements in cash and cash equivalents and bank overdrafts and other cash position items during 2025 are as follows:

(€ million)	As of December 31, 2024	Changes in business	Changes in consolidation scope	Fair value adjustments ⁽¹⁾	Foreign exchange translation	Transfers to Assets/ Liabilities classified as held for sale	Other movements	As of December 30, 2025
Cash	2,120	-115	187	-	-84	-	1	2,109
Cash equivalents	7,481	-1,562	-	-	-8	-	-	5,912
CASH AND CASH EQUIVALENTS	9,601	-1,677	187	-	-92	-	1	8,021
BANK OVERDRAFTS AND OTHER CASH POSITION ITEMS	197	20	-6	-	-3	-	7	215
Net cash	9,404	-1,697	193	-	-89	-	-5	7,806

(1) Fair value adjustments are recorded in financial income and expenses.

Cash and cash equivalents total €8,021 million, including €581 million "subject to restrictions" as of December 31, 2025.

Restricted cash breaks down as follows: €224 million subject to contractual legal restrictions (particularly for the Group's reinsurance activities), €91 million backing the servicing of local borrowings and €266 million in respect of subsidiaries located in countries with currency restrictions.

Cash and cash equivalents decreased by €1,580 million in 2025, mainly due to the repayment of commercial paper for €1,108 million, and financial investments made during the year.

As of December 31, 2025, the Europe segment held cash of €648 million, the Americas, Asia Pacific, Africa Middle-East segment held cash of €682 million, the Water Technologies segment held cash of €388 million, France and Hazardous Waste Europe segment held cash of €64 million and the Other segment held cash of €327 million (mainly Veolia Environnement).

Surplus cash balances of other Group subsidiaries, not pooled at Veolia Environnement level, are invested in accordance with procedures defined by the Group. Note 8.3.2, "Management of liquidity risk", presents a breakdown of investments by nature.

As of December 31, 2025, cash equivalents were primarily held by Veolia Environnement in the amount of €5,332 million, including monetary UCITS of €2,573 million and term deposit accounts of €2,759 million.

Bank overdrafts and other cash position items consist of credit balances on bank accounts and related accrued interest payable, corresponding to brief overdrafts.

8.1.3.2 Management of equity risk

As part of its cash management strategy, Veolia Environnement holds UCITS. These UCITS have the characteristics of monetary UCITS and are not subject to equity risk.

8.2 Fair value of financial assets and liabilities

8.2.1 Fair value of financial assets and liabilities

The recognition and measurement of financial assets and liabilities is governed by IFRS 9. Fair value measurement incorporates, in particular, the risk of non-performance by the Group or its counterparties, determined based on default probabilities taken from rating agency tables.

The fair value of all financial assets and liabilities is determined at the reporting date, either for recognition in the accounts or disclosure in the Notes to the financial statements.

Fair value is determined:

- i. based on quoted prices in an active market (level 1); or
- ii. using internal valuation techniques involving standard mathematical calculation methods integrating observable market data (forward rates, interest rate curves, etc.). Valuations produced by these models are adjusted to take account of a reasonable change in the credit risk of the Group or the counterparty (level 2); or
- iii. using internal valuation techniques integrating factors estimated by the Group in the absence of observable market data (level 3).

Quoted prices in an active market (level 1)

When quoted prices in an active market are available, they are used in priority to determine the market value. Marketable securities and certain quoted bond issues are valued in this way.

8.2.2 Financial assets

The following table presents the net carrying amount and fair value of Group financial assets as of December 31, 2025, grouped together in accordance with IFRS 9 categories.

As of December 31, 2025									
(€ million)	Note	Net carrying amount	Financial assets at fair value			Fair value	Method for determining fair value		
		Total	Assets at fair value through other comprehensive income	Assets at amortized cost	Assets at fair value through profit or loss	Total	Level 1	Level 2	Level 3
Non-consolidated investments		84	84		-	84	-	84	-
Non-current and current operating financial assets	Note 5.4	1,147	-	1,147	-	1,159	-	1,159	-
Other non-current financial assets	Note 8.1.2	520	-	520	-	520	-	520	-
Trade receivables and contracts assets	Note 5.3	10,449	-	10,449	-	10,449	-	10,449	-
Other current operating receivables	Note 5.3	996	-	996	-	996	-	996	-
Other current financial assets	Note 8.1.2	2,360	-	2,360	-	2,360	-	2,360	-
Non-current and current derivative instruments	Note 8.3	189			189	189	-	189	-
Cash and cash equivalents	Note 8.1.3	8,021			8,021	8,021	4,682	3,339	-
TOTAL		23,767	84	15,473	8,210	23,778	4,682	19,096	-

Level 2 cash and cash equivalents mainly consist of term deposits and accounts.

Fair values determined using models integrating observable market data (level 2)

The majority of derivative instruments (swaps, caps, floors, etc.) are traded over the counter and, as such, there are no quoted prices. Valuations are therefore determined using models commonly used by market participants to value such financial instruments.

Valuations calculated internally for derivative instruments are tested every six months for consistency with valuations issued by our counterparties.

The fair value of unquoted borrowings is calculated by discounting contractual flows at the market rate of interest.

The net carrying amount of receivables and payables falling due within less than one year and certain floating-rate receivables and payables is considered a reasonable estimate of their fair value, due to the short payment and settlement periods applied by the Group.

The fair value of fixed-rate loans and receivables depends on movements in interest rates and the credit risk of the counterparty.

Valuations produced by these models are adjusted to take account of changes in Group credit risk.

Fair values determined using models integrating certain non-observable data (level 3)

Derivative instruments valued using internal models integrating certain non-observable data include certain electricity derivative instruments for which there are no quoted prices in an active market (notably for electricity purchase options with extremely long maturity) or observable market data (forward prices for component materials, interest-rate curves, etc.), in particular for distant maturities.

8.2.3 Financial liabilities

The following table presents the net carrying amount and fair value of Group financial liabilities as of December 31, 2025, grouped together in accordance with IFRS 9 categories.

		As of December 31, 2025							
(€ million)	Note	Net carrying amount	Financial liabilities at fair value			Fair value	Method for determining fair value		
		Total	Liabilities at amortized cost	Liabilities at fair value through profit or loss	Liabilities at fair value through profit or loss and held for trading	Total	Level 1	Level 2	Level 3
Borrowings and other financial liabilities									
Non-current bond issues	Note 8.1.1	16,541	16,541	-	-	14,284	13,470	814	-
Current bond issues	Note 8.1.1	1,451	1,451	-	-	1,451	1,451	-	-

Bank overdrafts and other cash position items	Note 8.1.3	215	-	215	-	215	-	215	-
Trade payables	Note 5.3	7,692	7,692	-	-	7,692	-	7,692	-
Non-current and current concession liabilities	Note 5.5	1,650	1,650	-	-	1,650	-	1,650	-
Non-current and current derivative instruments	Note 8.3	545	-	545	-	545	-	545	-
Other operating payables	Note 5.3	8,580	8,580	-	-	8,580	-	8,580	-
TOTAL		47,986	47,225	761	-	45,214	14,920	30,294	

8.2.4 Offsetting of financial assets and financial liabilities

The Group's derivative instruments are systematically processed under ISDA or EFET contracts.

Under these contracts, the derivative instruments may only be offset in the event of default by one of the parties. They are not therefore offset in the accounts.

Such derivatives are recognized in assets in the amount of €189 million and in liabilities in the amount of €545 million in the Consolidated Statement of Financial Position as of December 31, 2025.

Net gains and losses on instruments at fair value through profit or loss consist of swapped flows and changes in the value of the instrument.

Hedge accounting is applicable if:

- the hedging relationship is precisely defined and documented at the inception date;
- the effectiveness of the hedge is demonstrated at inception and by regular verification of the offsetting nature of movements in the market value of the hedging instrument and the hedged item. The ineffective portion of the hedge is systematically recognized in the Consolidated Income Statement.

Hedge accounting relationships currently used by the Group meet the requirements of IFRS 9 and are aligned with the Group's risk management strategy and objectives.

The effectiveness of derivatives in these hedging relationships is assessed using the hypothetical derivative method: the designated derivative in each hedging relationship must enable changes in cash flows of the hedged item to be offset.

The main sources of ineffectiveness are:

- the impact of Group and counterparty credit risk on the fair value of hedging instruments, not reflected by fluctuations in the fair value of the hedged item (foreign exchange, interest rate and commodities). Pursuant to IFRS 13, the impact of credit risk on derivatives is regularly assessed. In the absence of materiality, an adjustment has never been recognized;
- changes to the timing and amount of expected cash flows from hedged transactions, in the case of transaction foreign exchange risk.

The recognition of period-on-period fair value gains and losses depends on the type of hedge accounting applied.

8.3 Market risks and financial instruments

As a result of its operational and financial activities, the Group is exposed to various financial risks, for which it has implemented management rules:

- market risks: interest rate risk, foreign exchange risk and commodity risk;
- liquidity risk;
- credit risk.

Equity risk is presented in Notes 8.1.3.2 and 9.2.2.2.

Derivative instruments

To manage its exposure to market risks, Veolia uses derivatives, the majority of which are classified as hedging instruments.

Derivative instruments are recognized at fair value in the Consolidated Statement of Financial Position. Other than the exceptions detailed below, changes in the fair value of derivative instruments are recorded through profit or loss. The fair value of derivatives is estimated using standard valuation models which take into account active market data.

A **fair value hedge** is a hedge of exposure to changes in the fair value of all or a portion of a recognized asset or liability impacting net income for the period. Fair value gains and losses on hedging instruments are recognized in net income for the period. Changes in the value of the hedged item attributable to the hedged risk are also recorded in the Consolidated Income Statement for the period, to match these gains and losses (and adjust the value of the hedged item). These two remeasurements offset each other in the income statement headings, with the exception of any "ineffective portion" of the hedge.

A **cash flow hedge** is a hedge of exposure to variability in cash flows of an asset or liability or a highly probable forecast transaction impacting net income for the period. In the case of cash flow hedges, the portion of the gain or loss on the fair value remeasurement of the hedging instrument that is determined to be an effective hedge is recognized directly in other comprehensive income, while the gain or loss on the fair value remeasurement of the underlying item is not recognized in the Consolidated Statement of Financial Position. The ineffective portion of the gain or loss on the hedging instrument is recognized in profit or loss. Gains or losses recognized in other comprehensive income are reclassified to profit or loss in the same period or periods in which the asset acquired or liability issued affects profit or loss.

A **hedge of a net investment in a foreign operation** hedges the exposure to foreign exchange risk of the net assets of a foreign operation including loans considered part of the investment (IAS 21, The Effects of Changes in Foreign Exchange Rates). For this type of hedge, the effective portion of the gain or loss on the hedging instrument is recognized in translation reserves in other comprehensive income, while the ineffective portion is recognized in the Consolidated Income Statement. Gains and losses recognized in foreign exchange translation reserves are reclassified to profit or loss when the foreign investment is sold.

Certain transactions performed in accordance with the Group interest rate and foreign exchange risk management policy, but that do not satisfy hedge accounting criteria, are recorded as trading/non-qualifying instruments.

In the case of **currency hedges**, the Group only designates the "spot" component of derivative instruments as hedging its foreign exchange risk. As the "hedging cost" option is not applied, the premium/discount on hedging contracts is excluded from the hedging relationship and recognized separately in net financial expense.

In the case of **commodities**, purchase/sales contracts are generally recognized outside the scope of IFRS 9 ("own use" exemption), except for certain specific transactions in electricity, gas or metals. For these specific transactions, cash flow hedge accounting is systematically preferred.

The "own use" classification is applicable when the following conditions are satisfied:

- the volumes purchased or sold under the contracts reflect the operating requirements of the subsidiary;
- the contracts are not subject to net settlement as defined by IFRS 9 and, in particular, physical delivery is systematic;
- the contracts are not equivalent to sales of options, as defined by IFRS 9.

Commodity hedging instruments falling within the application scope of IFRS 9 are derivative instruments and are measured at fair value, calculated using models mostly based on observable data. Fair value gains and losses and the net impact of unwinding these transactions are recognized in operating income.

8.3.1 Management of market risk

The Group uses derivative financial instruments to manage and reduce its risk exposure: within the Veolia Environnement Financing and Treasury Department, the dealing room is directly responsible for implementing and monitoring these hedges, while the Middle and Back Office teams verify transactions and monitor limits, ensuring the security of the transactions processed.

The fair value of derivatives in the Consolidated Statement of financial Position breaks down as follows:

(€ million)	Notes	As of December 31, 2024		As of December 31, 2025	
		Assets	Liabilities	Assets	Liabilities
Interest rate derivatives	8.3.1.1	30	321	28	276
Fair value hedges		2	309	1	271
Cash flow hedges		28	12	27	5
Derivatives not qualifying for hedge accounting		-	-	-	-
Foreign currency derivatives	8.3.1.2	166	308	148	206
Net investment hedges		22	98	27	55
Fair value hedges		79	186	92	106
Cash flow hedges		8	16	7	30
Derivatives not qualifying for hedge accounting		57	8	22	15
Commodity derivatives	8.3.1.3	37	18	13	63
Fair value hedges		-	-	-	-
Cash flow hedges		34	16	10	61
Derivatives not qualifying for hedge accounting		3	2	3	2
TOTAL DERIVATIVES		233	647	189	545
o/w non-current derivatives		67	365	45	319
o/w current derivatives		166	282	144	226

The fair value of derivatives recognized in the Consolidated Statement of Financial Position and the determination method (as described in Note 8.2.1) breaks down as follows:

(€ million)	As of December 31, 2025		Level 2 (in %)		Level 3 (in %)	
	Assets	Liabilities	Assets	Liabilities	Assets	Liabilities
Interest rate derivatives	28	276	100%	100%	0%	0%
Foreign currency derivatives	148	206	100%	100%	0%	0%
Commodity derivatives	13	63	100%	100%	0%	0%
TOTAL DERIVATIVES	189	545	100%	100%	0%	0%

There are no level 3 derivative instruments as of December 31, 2025.

(€ million)	As of December 31, 2024		Level 2 (in %)		Level 3 (in %)	
	Assets	Liabilities	Assets	Liabilities	Assets	Liabilities
Interest rate derivatives	30	321	100%	100%	0%	0%
Foreign currency derivatives	166	308	100%	100%	0%	0%
Commodity derivatives	37	18	100%	100%	0%	0%
TOTAL DERIVATIVES	233	647	100%	100%	0%	0%

8.3.1.1 Management of interest rate risk

The structure of the Group exposes it naturally to the risk of interest rate fluctuations. As such, the cash and cash equivalents position covers floating-rate debt which impacts future financial results according to fluctuations in interest rates.

Short-term debt is primarily indexed to short-term indexes (€STER for the commercial paper program and Euribor/Libor for the main other short-term credit lines). Medium and long-term debt comprises both fixed and floating-rate debt.

Veolia manages a fixed/floating rate position in each currency in order to limit the impact of interest rate fluctuations on its net income and to

optimize the cost of debt. For this purpose, it uses interest rate swap and swaption instruments. The Group determines the existence of an economic relationship between the hedging instrument and the hedged item taking account of reference interest rates, the frequency of coupons, the currency and the nominal amount.

These swaps may be classified as fair value hedges or cash flow hedges.

The following table shows the interest-rate exposure of gross debt (defined as the sum of non-current financial liabilities, current financial liabilities and bank overdrafts and other cash position items) before and after hedging.

(€ million)	As of December 31, 2024		As of December 31, 2025	
	Outstandings	% total debt	Outstandings	% total debt
Fixed rate	20,891	70.6%	21,183	71.1%
Floating rate	8,700	29.4%	8,611	28.9%
Gross debt before hedging	29,591	100.0%	29,794	100.0%
Fixed rate	17,083	58.3%	16,553	56.1%
Floating rate	12,200	41.7%	12,965	43.9%
Gross debt after hedging and fair value remeasurement of fixed-rate debt	29,283	100.0%	29,518	100.0%
Fair value adjustments to (assets)/liabilities hedging derivatives	367		276	
GROSS DEBT AT AMORTIZED COST	29,650		29,794	

Total gross debt as of December 31, 2025, after hedging, is 56.1% fixed-rate and 43.9% floating-rate.

As of December 31, 2025, the Group has cash and cash equivalents of €8,021 million, the majority of which bears interest at floating rates.

The Group manages its exposure to interest rate fluctuations based on floating-rate gross financial debt net of cash.

The Group's net floating-rate position after hedging (liability position) is -€2,992 million, maturing €3,021 million in less than one year, -€2,482 million in 1 to 5 years and -€3,531 million after 5 years.

Fixed-rate receiver / floating-rate payer swaps (€ million)	Notional contract amount by maturity				Fair value of derivatives	
	Total	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
As of December 31, 2025	5,100	1,250	1,450	2,400	1	271
As of December 31, 2024	4,500	200	2,900	1,400	2	309

As of December 31, 2025, accumulated fair value hedging adjustments to bond issues included in their net carrying amount totaled +€4 million.

Interest rate fair value hedges

The risk of volatility in the value of debt is hedged by fixed-rate receiver/ floating-rate payer swaps which change bond issues to floating-rate debt (see Note 8.1.1.1) recorded in non-current and current financial liabilities.

Fair value hedge swaps represent a notional outstanding amount of €5,100 million as of December 31, 2025, compared with €4,500 million as of December 31, 2024, with a net fair value in the Consolidated Statement of Financial Position of -€270 million as of December 31, 2025, compared with -€307 million as of December 31, 2024, as follows:

The +€38 million increase in fair value is due to the improvement in euro forward rates as of December 31, 2025, compared to the end of 2024. It is offset by the fair value remeasurement of the debt relating to the hedged risk in the amount of -€38 million. A review of the inefficiency of these hedging instruments did not give rise to any material impacts.

Interest rate cash flow hedges

The Group has entered into interest rate swaps to fix the cost of existing floating-rate debt or the cost of future debt issues.

Cash flow hedging swaps represent a notional outstanding amount of €261 million as of December 31, 2025, compared with €1,315 million as of December 31, 2024, with a net fair value of +€22 million as of December 31, 2025, compared with +€16 million as of December 31, 2024.

Floating-rate receiver / fixed-rate payer swaps / purchases of caps (€ million)	Notional contract amount by maturity				Fair value of derivatives	
	Total	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
As of December 31, 2025	261	250	0	11	27	5
As of December 31, 2024	1,315	-	1,000	315	28	12

An amount of -€1 million, net of tax, was recorded directly in equity attributable to owners of the Company in respect of cash flow hedge interest-rate derivatives as of December 31, 2025. -€3 million was released from equity to the income statement as of December 31, 2025.

The decrease in notional outstanding amounts is mainly due to the maturing of €750 million in swaps and the exercise of €300 million in pre-hedging swaps.

The efficiency of these hedging instruments was measured but did not give rise to any material impacts.

Contractual flows on interest rate swaps are paid at the same time as contractual flows on floating-rate borrowings and the amount recorded in other comprehensive income is released to net income in the period in which interest flows on the debt impact the Consolidated Income Statement.

Interest-rate derivatives not qualifying for hedge accounting

As of December 31, 2025, there are no interest-rate derivatives not qualifying for hedge accounting.

As a reminder, the breakdown as of December 31, 2024 was as follows:

(€ million)	Notional contract amount as of December 31, 2024				Fair value of derivatives	
	Total	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Total firm financial instruments	215	215	-	-	-	-
TOTAL INTEREST-RATE DERIVATIVES NOT QUALIFYING FOR HEDGE ACCOUNTING	215	215	-	-	-	-

8.3.1.2 Management of foreign exchange risk

The Group's international activities generate significant foreign currency flows.

The Group's central treasury department manages foreign exchange risk centrally within limits set by the Chief Financial Officer.

Foreign exchange risk, as defined by IFRS 7, mainly results from:

- foreign currency-denominated purchases and sales of goods and services relating to operating activities and the related hedges (e.g. currency forwards). The Group has no significant exposure to foreign exchange transaction risk. Indeed, the activities of the Group are performed by subsidiaries operating in their own country and their own currency. Exposure to foreign exchange risk is therefore naturally limited;
- foreign currency-denominated financial assets and liabilities including foreign currency-denominated loans/borrowings and related hedges (e.g. forex swaps). With many operations worldwide, Veolia organizes financing in local currencies. In the case of inter-company financing,

these credit lines can generate foreign exchange risk. In order to limit the impact of this risk, Veolia has developed a policy which seeks to back foreign-currency financing and foreign currency derivatives with inter-company receivables denominated in the same currency. The asset exposure hedging strategy primarily involves hedging certain net foreign investments and ensuring that Group companies do not have a material balance sheet foreign exchange position that could generate significant volatility in foreign exchange gains and losses;

- investments in foreign subsidiaries reflected by the translation of accounts impacting the translation reserves. The Group determines the economic relationship between the hedging instrument and the hedged item by comparing changes in the value of the hedging instrument attributable to a change in the spot foreign exchange rate with the impact of changes in this same rate on the hedged instrument. It is Group policy to align the key characteristics of hedging instruments (currency, nominal amount, maturity, etc.) with the hedged item.

Foreign exchange risk with regard to the cost of net financial debt

With many operations worldwide, Veolia organizes financing in local currencies.

The foreign currency debt borne by the parent company, Veolia Environnement S.A., is generally hedged using either derivative instruments or assets in the same currency.

The cost of the Group's net financial debt, i.e. a euro-equivalent of -€654 million as of December 31, 2025, is primarily denominated in EUR (57%), USD (16%), GBP (2%), CZK (1%), CNY (3%), PLN (5%), HUF (5%) and CLP (6%).

A 10% appreciation in the main currencies to which the Group is exposed (GBP, USD, PLN, CLP, HUF, CZK and CNY) against the euro would generate a €27 million increase in the net finance cost, while a 10% depreciation in these currencies would generate a €22 million decrease in the net finance cost.

Translation risk

Due to its international presence, the translation of the income statements of the Group's foreign subsidiaries is sensitive to exchange rate fluctuations.

The following table summarizes the sensitivity of certain Group Consolidated Income Statement aggregates to a 10% increase or decrease in foreign exchange rates against the euro, with regard to the translation of financial statements of foreign subsidiaries.

(€ million)	Contribution to the consolidated financial statements								Sensitivity to a change of :		
	Euro	Pound sterling	US dollar	Polish zloty	Czech koruna	Australian dollar	Chinese renminbi	Other currencies	Total	10%	-10%
Revenue	18,894	3,070	5,101	3,004	2,161	2,021	907	9,238	44,396	2,824	-2,311
Operating income	831	289	509	280	232	126	96	935	3,299	273	-223

Foreign exchange and translation risk in the Consolidated Statement of Financial Position

Due to its international presence, the Group's Consolidated Statement of Financial Position is exposed to exchange rate fluctuations. A fluctuation in the euro impacts the translation of subsidiary foreign currency denominated assets in the Consolidated Statement of Financial Position.

For its most significant assets, the Group has issued debt in the relevant currencies. The main net assets of the Group are located in the United States, the United Kingdom, China, Poland, Australia, Chile and the Czech Republic. A 10% appreciation in the currencies of the above countries would increase net assets by €1,643 million, while a 10% depreciation in these currencies would reduce net assets by -€1,345 million.

Hedge of a net investment in a foreign operation

Financial instruments designated as net investment hedges break down as follows:

Financial instrument (€ million)	Notional amount as of December 31, 2025 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Currency payer swaps	10	10	-	-	1	-
Currency receiver swaps	-	-	-	-	-	-
Options	3,338	3,334	4	-	26	38
Cross currency swaps	60	-	60	-	-	17
TOTAL	3,408	3,344	64	-	27	55

The above currency swaps are short-term but are generally renewed at maturity, until financing of an appropriate term is secured in the currency of the related country.

Options are mainly hedging strategies using net buyer long collars.

It is Group policy to hedge the net investment only in the nominal amount of the foreign currency debt financing the securities.

Inter-company loans and receivables forming part of a foreign investment (IAS 21) are nearly systematically hedged by foreign currency external financing or foreign currency derivatives (cross currency swaps, currency forwards, collars) meeting IFRS 9 criteria for hedge accounting. Foreign exchange gains and losses recorded in foreign exchange translation reserves in respect of hedging instruments are systematically offset by

foreign exchange gains and losses recognized in foreign exchange translation reserves on loans forming part of the net investment, unless:

- the inter-company loan forming part of the net investment in a foreign operation is not hedged;
- the hedge is partially ineffective due to a difference between the nominal amount of the hedge and the amount of the hedged net asset;
- only the net assets of the foreign subsidiary (excluding the loan forming part of the net investment) are hedged.

A breakdown of foreign exchange gains and losses recorded in Group foreign exchange translation reserves as of December 31, 2025 is presented in Note 9.2.4.

As a reminder, the breakdown as of December 31, 2024 was as follows:

Financial instrument (€ million)	Notional amount as of December 31, 2024 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Currency payer swaps	85	85	-	-	-	4
Currency receiver swaps	75	75	-	-	3	-
Options	3,786	3,722	64	-	18	69
Cross currency swaps	60	-	60	-	1	25
TOTAL	4,006	3,882	124	-	22	98

Foreign currency fair value hedges

Financial instruments designated as fair value hedges break down as follows:

Financial instrument (€ million)	Notional amount as of December 31, 2025 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Forward purchases	1,189	1,122	67	-	7	19
Forward sales	6,209	5,648	561	-	85	87
FOREIGN CURRENCY DERIVATIVES : FAIR VALUE HEDGES	7,398	6,770	628	-	92	106

The fair value hedges presented above mainly consist of foreign currency swaps hedging balance sheet items. They mainly concern hedges of internal financing and, to a lesser extent, hedges of construction contracts or sales of water treatment equipment and solutions. The impact of these hedges is offset by the remeasurement of the underlying items.

Financial instrument (€ million)	Notional amount as of December 31, 2024 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Forward purchases	1,884	1,826	58	-	32	12
Forward sales	7,711	7,301	410	-	47	174
FOREIGN CURRENCY DERIVATIVES : FAIR VALUE HEDGES	9,595	9,127	467	-	79	186

Foreign currency cash flow hedges

Financial instruments designated as cash flow hedges break down as follows:

Financial instrument (€ million)	Notional amount as of December 31, 2025 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Forward purchases	214	199	15	-	6	1
Forward sales	882	662	220	-	1	29
FOREIGN CURRENCY DERIVATIVES : CASH FLOW HEDGES	1,096	861	235	-	7	30

The cash flow hedges presented above mainly consist of forward purchases/sales of foreign currencies different from the functional currencies of the entities concerned, in connection with their own activities.

They mainly include currency hedges in respect of commodity purchases and sales in Central Europe.

Financial instrument (€ million)	Notional amount as of December 31, 2024 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Forward purchases	152	143	8	-	1	2
Forward sales	542	534	8	-	7	14
FOREIGN CURRENCY DERIVATIVES : CASH FLOW HEDGES	693	677	16	-	8	16

Hedges of currency exposure in the Consolidated Statement of Financial Position by derivatives not qualifying for hedge accounting

Financial instrument (€ million)	Notional amount as of December 31, 2025 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Currency receiver swaps and forward purchases	4,727	4,698	29	-	13	14
Currency payer swaps and forward sales	3,284	2,956	328	-	9	1
FOREIGN CURRENCY DERIVATIVES NOT QUALIFYING FOR HEDGE ACCOUNTING	8,011	7,654	357	-	22	15

The above portfolio of foreign currency derivatives was mainly contracted by Veolia Environnement to hedge its foreign currency-denominated net financial debt (comprising foreign currency-denominated borrowings and foreign currency-denominated inter-company loans and borrowings).

Financial instrument (€ million)	Notional amount as of December 31, 2024 by maturity				Fair value of derivatives	
	Amount	< 1 year	1 to 5 years	> 5 years	Total assets	Total liabilities
Currency receiver swaps and forward purchases	5,071	5,071	-	-	54	6
Currency payer swaps and forward sales	3,104	3,104	-	-	3	2
FOREIGN CURRENCY DERIVATIVES NOT QUALIFYING FOR HEDGE ACCOUNTING	8,175	8,175	-	-	57	8

8.3.1.3 Management of commodity risk

Energy, commodity and consumable purchases represent a major operating expense for the Group's activities, in particular gas and biomass for the supply of energy services, electricity for water treatment and distribution activities, and metals for recycling activities. The Group is therefore exposed to fluctuations in their price.

The long-term contracts entered into by Veolia generally include price review and/or indexation clauses which enable it to pass on the majority of any increases in commodity or fuel prices to the price of services sold to customers, even if this may be performed with a time delay.

Nonetheless, as part of supply management and cost optimization measures or to hedge future production, certain Group subsidiaries may be required, depending on their activities, to contract forward purchases or sales of commodities and set-up derivatives to fix the cost of commodities supply or the selling price of commodities produced (electricity).

These transactions form part of the Group's commodity risk management policy, which seeks to establish a progressive hedge over three years (where possible) in order to limit results volatility.

As of December 31, 2025, the fair value of commodity derivatives is recorded as €13 million in assets and €63 million in liabilities.

(€ million)	As of December 31, 2024		As of December 31, 2025	
	Assets	Liabilities	Assets	Liabilities
Commodity derivatives	37	18	13	63
Electricity	5	17	11	10
Petroleum products	-	-	-	-
CO ₂	1	-	-	-
Coal	-	-	-	6
Gas	31	1	2	47
Other	-	-	-	-

These derivatives break down by hedge type as follows:

(€ million)	As of December 31, 2024		As of December 31, 2025	
	Assets	Liabilities	Assets	Liabilities
Commodity derivatives	37	18	13	63
Fair value hedges	-	-	-	-
Cash flow hedges	34	16	10	61
Derivatives not qualifying for hedge accounting	3	2	3	2

The reversal in the value of the commodity derivatives portfolio is mainly explained by two factors: on the one hand, the decrease in the price of gas, as the hedge agreements from the beginning of the year were signed at purchase prices higher than those at the end of the year; and on the other hand, the increase in metal prices due to geopolitical uncertainty, as this time the sale prices of the hedges were lower than the prices recorded at the end of the year.

Greenhouse gases

Regulatory constraints and management policy

As a combustion plant operator, the Group is exposed to the risks inherent to the Emissions Trading Scheme (EU ETS) introduced by the European Union in 2005.

To accelerate the rate of emission reductions, Phase 4 (2021-2030) provides for a 2.2% annual decrease in the total number of emission allowances (free grant of allowances). In April 2023, the European Council adopted a new trajectory, raising the reduction rate of the emission cap to 4.3% per year from 2024 to 2027 and 4.4% from 2028 to 2030.

Under European regulations, the actual emissions position is determined each year and the corresponding rights surrendered. Veolia is therefore required to purchase or sell emission rights, depending on whether actual emissions are greater or lesser than emission rights allocated under the hedging policy described above. Although Veolia is currently a purchaser of emission allowances and is expected to continue to be a purchaser in the future, implementation of its decarbonization plans is expected to gradually reduce its purchasing obligations under current applicable regulations.

The position in 2025 is as follows:

Volumes (in thousands of metric tons)	As of January 1st, 2025	Changes in consolidation scope	Granted	Purchased/ Sold/ Cancelled	Used	As of December 31, 2025
TOTAL	1,899	-16	2,278	4,104	-7,725	540

In 2025, Veolia's actual emissions (7.7 million metric tons) exceeded the allocated allowances (2.3 million metric tons), requiring the purchase of an additional 4.1 million metric tons of allowances. This volume includes forward purchases made to hedge the 2025 emissions, with delivery scheduled for 2026, in compliance with the deadline of September 30, 2026, for the surrender of the 2025 allowances.

In addition, China also officially launched a country-wide Emissions Trading Scheme in 2021, focusing initially on electricity producers. The impacts are not material at this stage for the Group.

Accounting treatment adopted by the Group

In the absence of specific IFRS provisions, the Group has adopted the "net liability approach," which involves the recognition of a liability at the period end if actual emissions exceed allowances held, in accordance with IAS 37.

Allowances are managed as a production cost and, in this respect, are recognized in inventories at:

- nil value, when they are received free of charge;
- acquisition cost, if purchased for valuable consideration on the market.

Transactions in these allowances performed on the forward market are generally recognized outside the application scope of IFRS 9 ("own use" exemption).

For consistency, the volumes presented as of January 1, 2025, have been adjusted to take into account the forward purchases made to cover the 2024 emissions and delivered during 2025.

The inventory of 540 thousand metric tons is equivalent to approximately €46 million as of December 31, 2025, based on a spot price of €85.12 per metric ton.

8.3.2 Management of liquidity risk

The operational management of liquidity and financing is managed by the Treasury and Financing Department. This management involves the centralization of major financing in order to optimize liquidity and cash.

The Group secures financing on international bond markets, international private placement markets, the treasury note market and the bank lending market (see Note 8.1.1 financial liabilities).

8.3.2.1 Maturity of financial liabilities

As of December 31, 2025, undiscounted contractual flows on net financial debt break down by maturity date as follows:

(€ million)	As of December 31, 2025		Maturity of undiscounted contractual flows					
	Carrying amount	Total undiscounted contractual flows	2026	2027	2028	2029	2030	Beyond 5 years
Bond issues ⁽¹⁾	17,992	22,265	1,924	3,043	2,447	1,781	2,006	11,065
Other liabilities and bank overdrafts	9,543	9,977	7,219	465	728	302	254	1,009
Gross financial liabilities excluding IFRS 16 and the impact of amortized cost and hedging derivatives	27,535	32,242	9,143	3,508	3,175	2,083	2,260	12,074
IFRS 16 lease debt	1,983	2,162	499	384	317	198	147	618
Gross financial liabilities excluding the impact of amortized cost and hedging derivatives	29,518	34,404	9,642	3,891	3,492	2,281	2,407	12,692
Impact of derivatives hedging debt	276							
Gross financial liabilities	29,794	34,404	9,642	3,891	3,492	2,281	2,407	12,692
Cash and cash equivalents	-8,021							
Liquid assets and financing financial assets	-1,952							
Net financial debt	19,821	34,404	9,642	3,891	3,492	2,281	2,407	12,692

(1) Excluding the impact of amortized cost and derivatives hedging debt.

8.3.2.2 Net liquid asset positions

Liquid assets of the Group as of December 31, 2025 break down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
Veolia Environnement:		
Undrawn MT syndicated loan facility	4,500	4,500
Undrawn MT bilateral credit lines	724	765
Undrawn ST bilateral credit lines	-	-
Letters of credit facility	-	-
Cash, cash equivalents, liquid assets and financing assets	9,349	7,551
Subsidiaries:		
Bilateral Credit lines	949	673
Cash, cash equivalents, liquid assets and financing assets	2,270	2,422
TOTAL LIQUID ASSETS	17,792	15,911
Current debt and bank overdrafts and other cash position items		
Current debts	9,281	8,810
Bank overdrafts and other cash position items	197	215
TOTAL CURRENT DEBTS AND BANK OVERDRAFTS AND OTHER CASH POSITION ITEMS	9,478	9,026
TOTAL LIQUID ASSETS NET OF CURRENT DEBTS AND BANK OVERDRAFTS AND OTHER CASH POSITION ITEMS, LIQUID ASSETS AND FINANCING ASSETS	8,313	6,886

As of December 31, 2025, Veolia has total liquid assets of €16 billion, including cash and cash equivalents of 10 billion.

As of December 31, 2025, cash equivalents are mainly held by Veolia Environnement in the amount of €5,332 million. They comprise monetary UCITS of €2,573 million and term deposit accounts of €2,759 million.

Confirmation of the credit outlook

On November 25, 2025, Standard and Poor's confirmed Veolia Environnement's credit rating at A-2/BBB with a stable outlook.

On December 2, 2025, Moody's confirmed the Group's rating at P-2/Baa1 with a stable outlook.

Refinancing of the multi-currency liquidity lines

The Group decided to refinance its two syndicated loan facilities (€3 billion historic syndicated facility and €2.5 billion former-Suez syndicated facility) at the beginning of March 2023, securing a new €4.5 billion single syndicated loan facility. On February 17, 2025, this syndicated loan was extended until 2030.

This syndicated loan facility is undrawn as of December 31, 2025.

Renewal of bilateral credit lines

Veolia Environnement has bilateral credit lines of a total undrawn amount of €765 million as of December 31, 2025.

Veolia Environnement may draw on the multi-currency syndicated loan facility and all credit lines at any time.

Undrawn confirmed credit lines mature as follows:

(€ million)	As of December 31, 2025			Maturing in			
	Total	2026	2027	2028	2029	2030	2031
Undrawn syndicated loan facility	4,500	-	-	-	-	4,500	-
Credit lines	1,438	227	321	590	150	150	-
Letters of credit facility	-	-	-	-	-	-	-
TOTAL	5,938	227	321	590	150	4,650	-

8.3.2.3 Information on early debt repayment clauses

Veolia Environnement debt

The legal documentation for bank financing and bond issues contracted by the Company does not contain any financial covenants, i.e. obligations to comply with a debt coverage ratio or a minimum credit rating which, in the event of non-compliance, could lead to the early repayment of the relevant financing.

Subsidiary debt

Certain project financing or financing granted by multilateral development banks to the Group's subsidiaries contain financial covenants of which the principal are the debt coverage ratio, the ratio between net debt and the EBITDA, and the ratio between the debt and shareholders' equity.

Based on due diligence performed within the subsidiaries, the Group considers that the covenants included in the Group's material financing agreements were satisfied (or had been waived by lenders) as of December 31, 2025.

8.3.3 Management of credit risk

The Group is exposed to counterparty risk in various areas: its operating activities, cash investment activities and derivatives.

8.3.3.1 Counterparty risk relating to operating activities

Credit risk must be considered separately with respect to operating financial assets and operating receivables. Credit risk on operating financial assets is appraised via the rating of primarily public customers. Credit risk on other operating receivables is appraised through an analysis of late payment and/or default by customers taking account of their nature (public/private) as detailed below.

Group customer credit risk analysis may be broken down into the following four categories (Public customers – Delegating authority, Private customers – Individuals, Public customers – Other and Private customers – Companies):

(€ million)	Note	At December 31, 2025			Breakdown by customer type			
		Gross carrying amount	Impairment losses	Net carrying amount	Public customers - Delegating authority	Private customers - Individuals	Public customers - Other	Private customers - Companies
Non-current and current operating financial assets	5.4	1,162	-15	1,147	841	-	6	299
Trade receivables and contracts assets	5.3	11,546	-1,097	10,449	2,380	2,291	1,494	4,284
Other current operating receivables	5.3	1,039	-43	996	285	119	166	425
Non-current financial assets in loans and receivables	8.1.2	366	-72	294	43	78	12	161
Current financial assets in loans and receivables	8.1.2	404	-33	371	64	17	9	281
LOANS AND RECEIVABLES		14,517	-1,260	13,257	3,613	2,506	1,688	5,451
Other financial assets	8.1.2	2,242	-26	2,216	128	83	19	1,985
TOTAL AS OF DECEMBER 31, 2025		16,759	-1,286	15,473	3,741	2,590	1,706	7,436
TOTAL AS OF DECEMBER 31, 2024		17,192	-1,326	15,865	3,880	2,380	1,446	8,159

Assets past due and not impaired break down as follows:

(€ million)	Note	Assets past due but not impaired				
		Net carrying amount	Amount not yet due	0-6 months	6 months – 1 year	More than 1 year
Non-current and current operating financial assets	5.4	1,147	1,142	3	2	-
Trade receivables and contracts assets	5.3	10,449	8,153	1,694	326	276
Other current operating receivables	5.3	996	851	40	21	83
Non-current financial assets in loans and receivables	8.1.2	294	294	-	-	-
Current financial assets in loans and receivables	8.1.2	371	362	8	1	-
LOANS AND RECEIVABLES AS OF DECEMBER 31, 2025		13,257	10,802	1,745	350	360
Other non-current and current financial assets	8.1.2	2,216	2,183	1	31	-
TOTAL AS OF DECEMBER 31, 2025		15,473	12,985	1,746	381	360
TOTAL AS OF DECEMBER 31, 2024		15,865	13,573	1,513	438	341

As of December 31, 2025, trade receivables and net contract assets totaling €10,449 million include unbilled revenue for €3,968 million, compared with €10,724 million and €4,090 million as of December 31, 2024.

As of December 31, 2025, trade receivables and contract assets with a maturity in excess of six months have a gross carrying amount of €1,545 million, impaired for -€943 million, representing a total net value of €602 million. They represent 5.8% of total net receivables and contract assets, compared with €629 million (5.9%) as of December 31, 2024.

Trade receivables over six months are mainly concentrated in France and Italy and primarily concern local authorities (municipalities or equivalent).

In Italy, net trade receivables total €373 million, including €116 million over six months past due as of December 31, 2025, against €385 million and €113 million, respectively, as of December 31, 2024.

8.3.3.2 Counterparty risk relating to investment and hedging activities

The Group is exposed to credit risk relating to the investment of its surplus cash and its use of derivative instruments in order to manage interest rate and foreign exchange risk. Credit risk corresponds to the loss that the Group may incur should a counterparty default on its contractual obligations. In the case of derivative financial instruments, this risk corresponds to the fair value of all the instruments contracted with a counterparty insofar as this value is positive.

The Group minimizes counterparty risk through internal control procedures limiting the choice of banking counterparties to leading banks and financial institutions (banks and financial institutions with a minimum Moody's, Standard & Poor's or Fitch's rating of A3/P3/F3 respectively for transactions with a term of less than one year and of A2/A/A respectively for transactions with a term of more than one year, unless justified). Limits are determined for each counterparty based primarily on the rating awarded by the rating agencies, the size of their equity and commitments given to the Group and are reviewed regularly. In addition, the Group has set-up Credit Support Annexes with its main counterparties limiting counterparty risk using margin call mechanisms.

Counterparty risk on financial operations is monitored on an ongoing basis by the middle-office within the Group Finance Department. The Group is not exposed to any risk as a result of material concentration.

(€ million)	2024	2025
Expenses on gross debt	-703	-679
Assets at fair value through profit or loss (fair value option) ⁽¹⁾	318	215
Net gains and losses on derivative instruments, hedging relationships and other	-205	-190
COST OF NET FINANCIAL DEBT	-590	-654

(1) Cash equivalents are valued at fair value through profit or loss.

The cost of net financial debt (including the impact of remeasurement of financial liabilities of €47 million) totaled -€654 million for the year ended December 31, 2025, compared with -€590 million for the year ended December 31, 2024. This increase in financing costs is mainly due to the increase in the group's net financial debt, in particular due to the acquisition of the minority interests in WTS, the financing of which represented -€28 million in 2025.

Veolia Environnement cash surpluses are managed with a profitability objective close to that of the money market, avoiding exposure to capital risk and maintaining a low level of volatility.

8.4 Financial income and expenses

8.4.1 Cost of net financial debt

Costs of financial debt consist of interest payable on borrowings calculated using the amortized cost method and losses on interest rate derivatives, both qualifying and not qualifying as hedges.

Interest costs included in payments under lease finance contracts are recorded using the effective interest method.

Finance income consists of gains on interest rate derivatives, both qualifying and not qualifying as hedges and income from cash investments and equivalents.

Interest income is recognized in profit or loss when earned, using the effective interest method.

Finance costs and finance income represent the cost of financial liabilities net of income from cash and cash equivalents. In addition, the cost of net financial debt includes net gains and losses on derivatives allocated to debt, irrespective of whether they qualify for hedge accounting.

Finance income totals €406 million. Expenses, including expenses on derivative instruments and hedging relationships amounted to -€1,060 million as of December 31, 2025.

The cost of net financial debt presented in the Consolidated Cash Flow Statement reflects the cost of net financial debt of continuing operations presented above and the cost of net financial debt of discontinued operations of nil for the year ended December 31, 2025.

The heading "Interest paid" in the Consolidated Cash Flow Statement reflects the cost of net financial debt of continuing and discontinued operations adjusted for accrued interest of -€26 million and fair value adjustments to hedging derivatives of -€8 million in 2025.

Net gains and losses on derivative instruments, hedging relationships and other mainly include the following amounts in the year ended December 31, 2025:

- a net interest expense on hedging relationships (fair value hedges and cash flow hedges) of -€217 million;
- net gains and losses on derivative instruments not qualifying for hedge accounting of €23 million, mainly on foreign currency derivatives.

In addition, the income relating to the ineffective portion of net investment hedges in the amount of €4 million was not material in 2025.

8.4.2 Other financial income and expenses

Other financial income and expenses primarily include capital gains and losses on disposals of financial assets, net of disposal costs, the unwinding of discounts on provisions, interest on concession liabilities and interest on IFRS 16 lease debt.

(€ million)	2024	2025
Net gains and losses on loans and receivables	2	13
Capital gains and losses on disposals of financial assets, net of disposal costs	65	-2
Dividends received	3	4
Assets and liabilities at fair value through profit and loss	-	-
Unwinding of the discount on provisions	-55	-51
Foreign exchange gains and losses and fair value adjustments	-89	-45
Interest on concession liabilities	-86	-79
Interest on IFRS 16 lease debt	-66	-67
Other	-81	-95
OTHER FINANCIAL INCOME AND EXPENSES	-309	-321

As of December 31, 2025, net gains on loans and receivables primarily correspond to income on loans to unconsolidated entities.

In 2024, capital gains on disposals of financial assets totaled +€65 million and mainly included the capital gains on the disposals of the SADE Group and of Veolia North America Regeneration Services in the United States.

8.5 Financing commitments

8.5.1 Financing commitments given

Debt guarantees: these relate to guarantees given to financial institutions in connection with the financial liabilities of non-consolidated companies and equity-accounted entities, when the commitment covers the entire amount.

Letters of credit: letters of credit delivered by financial institutions to Group companies' creditors, customers, and suppliers guaranteeing operating activities are reported in Note 5.8.

Off-balance sheet commitments given break down as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025	Maturing in		
			Less than 1 year	1 to 5 years	More than 5 years
Letters of credit	12	10	7	2	1
Debt guarantees	49	40	2	33	5
Other financing commitments given	87	103	8	27	68
TOTAL FINANCING COMMITMENTS GIVEN	148	153	17	62	74

Commitments on lease contracts entered into by the Group are analysed in Note 7.4.

8.5.2 Financing commitments received

They total €25 million as of December 31, 2025, compared with €133 million as of December 31, 2024.

Commitments received under confirmed and unused lines of credit are listed and described in Note 8.3.2.2 "Net liquid asset positions".

8.5.3 Collateral guaranteeing financial liabilities

As of December 31, 2025, the Group has given €400 million of collateral guarantees in support of borrowings, compared with €469 million as of December 31, 2024. They are mainly due to long-term refinancing secured by the Chinese entities with Minsheng and CMB banks, backed by assets of €401 million.

The breakdown by type of asset is as follows (€ million):

Type of pledge /mortgage (€ million)	Amount pledged (a)	Total Consolidated Statement of Financial Position (b)	Corresponding % (a)/(b)
Intangible assets	13	7,946	0.2%
Property, plant and equipment	362	18,404	2.0%
Financial assets ⁽¹⁾	17		
Total non-current assets	393	44,807	
Current assets	7	25,864	0.0%
TOTAL ASSETS	400	70,671	

(1) As financial assets pledged as collateral are shares of consolidated subsidiaries and other financial assets, the ratio of pledged assets to total assets in the Consolidated Statement of Financial Position is not significant.

The breakdown by maturity is as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025	Maturing in		
			Less than 1 year	1 to 5 years	More than 5 years
Intangible assets	16	13	2	5	7
Property, plant and equipment	428	362	5	38	320
Mortgage pledge	48	40	5	14	21
Other PP&E pledge ⁽¹⁾	380	323	0	24	298
Financial assets	18	17	-	-	17
Current assets	8	7	0	6	1
Pledges on receivables	-	-	0	0	0
TOTAL	469	400	6	49	345

(1) Mainly equipment and rolling stock.

Note 9 EQUITY AND EARNINGS PER SHARE**9.1 Share capital management procedures**

Veolia Environnement manages its share capital within the framework of a prudent and rigorous financial policy that seeks to ensure easy access to French and international capital markets, to enable investments in projects that create value and provide shareholders with a satisfactory remuneration, while maintaining an "Investment Grade" credit rating.

On May 28, 2019, Veolia Environnement entered into a liquidity contract with Kepler Cheuvreux, effective June 1, 2019, for an initial period expiring on December 31, 2019, tacitly renewable thereafter for periods of one year.

9.2 Equity attributable to owners of the Company**9.2.1 Share capital**

The share capital is fully paid-up.

9.2.1.1 Share capital increase dedicated to employees

In 2025, Veolia Environnement carried out an initial share capital increase on June 16, 2025, of €0.7 million deducted from additional paid-in capital, following the vesting to beneficiaries of rights to free shares not subject to a performance condition and granted, on an exceptional basis, to take into account the success of the acquisition of the Suez group by decision of the Board of Directors on June 15, 2022, increasing the share capital to €3,703,974,040.

On August 4, 2025, Veolia Environnement carried out second share capital increase of approximately €4.6 million deducted from additional paid-in capital, following the vesting to beneficiaries of rights to performance shares granted by decision of the Board of Directors on August 2, 2022, increasing the share capital to €3,708,617,185.

On September 12, 2025, Veolia Environnement carried out a third share capital increase of approximately €293 million, including issue premiums, by issuing 11,289,176 new shares, accompanied by the paying up of the treasury shares for €46 million, as part of the Sequoia 2025 employee share ownership plan, using the delegation of authority granted by the Combined General Meeting of April 24, 2025. At the same time, Veolia Environnement proceeded with a capital reduction through cancellation of 11,289,176 treasury shares acquired under the share repurchase program. The total share capital therefore remains unchanged after these transactions, amounting to €3,708,617,185.

In 2024, Veolia Environnement carried out an initial share capital increase on May 6, 2024 of approximately €3.7 million deducted from additional paid-in capital, following the vesting to beneficiaries of rights to performance shares granted by decision of the Board of Directors on May 4, 2021, increasing the share capital to €3,630,742,570.

On September 13, 2024, Veolia Environnement performed a second share capital increase of approximately €356 million, including issue premiums, as part of the 2024 Sequoia employee share ownership plan, using the delegation of authority granted by the Combined General Meeting of April 25, 2024, increasing the share capital to €3,703,263,040. The expenses relating to this transaction have been deducted from additional paid-in capital for approximately €1 million.

9.2.1.2 Number of shares outstanding and par value

The share capital represented 740,652,608 shares as of December 31, 2024 and 741,723,437 as of December 31, 2025. The par value of each share is €5.

9.2.1.3 Authorized but unissued shares

For the financial management of Veolia Environnement, resolutions authorizing share capital increases approved every two years by Veolia Environnement's General Shareholders' Meeting are intended to authorize the Board of Directors to increase the share capital subject to certain conditions and limits. They allow the nature of financial instruments issued to be adapted in line with financing requirements and the situation of the French and international capital markets.

In addition to the annual resolutions on share capital increases reserved for Group employees and managers, these resolutions, approved by the General Meeting of April 25, 2024, are broadly divided into two categories and subject to the following share capital increase ceilings:

- resolutions authorizing share capital increases with preferential subscription rights (PSR) subject to a maximum par value amount capped at app €1.1 billion (i.e. approximately 30% of the Company's share capital on the date of the General Meeting that approved these resolutions); and
- resolutions authorizing share capital increases without PSR subject to an overall maximum par value amount capped at €363 million (i.e. approximately 10% of the Company's share capital on the date of the General Meeting that approved these resolutions).

The use of these resolutions may not lead to share capital increase transactions with or without PSR exceeding a second overall cap of a par value amount of €1.1 billion (approximately 30% of the Company's share capital on the date of the General Meeting that approved these resolutions).

All these authorizations are suspended during a takeover bid made by a third party and aimed at taking control of the Company.

Fiscal years 2024 and 2025

217,623,500 shares could be issued pursuant to the share capital increase authorizations granted by the General Meeting of April 25, 2024, based on 725,411,667 shares comprising the Company's share capital as of April 25, 2024.

15,240,941 shares were issued in 2024 from among the 217,623,500 above-mentioned authorized shares.

12,928,805 shares were issued in 2025 from among the 217,623,500 above-mentioned authorized shares.

9.2.2 Offset of treasury shares against equity

Treasury shares are deducted from equity.

Gains or losses arising from the sale of treasury shares and related dividends are recognized directly in equity and do not impact the Consolidated Income Statement.

9.2.2.1 Purchases and sales of treasury shares

Purchase and sale transactions in Veolia Environnement shares under the liquidity contract in 2025 and 2024 were as follows:

	2024	2025
Number of shares purchased during the year	11,380,601	15,051,388
Number of shares sold during the year	11,025,775	15,261,652

As of December 31, 2024, and 2025, Veolia Environnement holds 517,796 and 307,532 shares under the liquidity agreement. A €20 million drawdown authorization was granted for the operation of this liquidity agreement.

Treasury shares as of December 31, 2024, and 2025, amount to 10,651,380 and 10,438,730 shares, respectively.

9.2.2.2 Treasury shares

As of December 31, 2025, Veolia Environnement holds 10,438,730 of its own shares, of which 6,370,621 are allocated to external growth transactions and 4,068,109 were acquired for allocation to employees under employee savings plans. These shares have a market value of €310 million, based on a share price of €29.7 and a net carrying amount of €438 million deducted from equity.

9.2.3 Appropriation of net income and dividend

The Combined General Meeting of April 24, 2025 approved payment of a dividend of €1.40 per share for 2024, payable in cash. The 2024 dividend was paid on May 14, 2025 for a total amount of €1,023 million.

In 2024, a dividend of €895 million was distributed by Veolia Environnement and deducted from net income for fiscal year 2023. This dividend was paid as of May 10, 2024.

9.2.4 Foreign exchange gains and losses

As of December 31, 2025, accumulated foreign exchange gains and losses total -€1,402 million (attributable to owners of the Company).

In 2025, the change in foreign exchange gains and losses primarily reflects fluctuations in the US dollar (-€899 million), the Chinese yuan renminbi (-€101 million), the pound sterling (-€68 million), and the Argentinian peso (-€34 million).

As of December 31, 2024, accumulated foreign exchange gains and losses total -€260 million (attributable to owners of the Company).

In 2024, the change in foreign exchange gains and losses primarily reflects fluctuations in the US dollar (€428 million), the pound sterling (€56 million), the Hong Kong dollar (-€35 million) and the Chinese yuan renminbi (€33 million).

Movements in foreign exchange translation reserves (attributable to owners of the Company and to non-controlling interests)

(€ million)	Total	o/w Attributable to owners of the Company

TOTAL	-260	-1,142	-1,402

9.2.5 Fair value reserves

Fair value reserves attributable to owners of the Company total +€305 million as of December 31, 2025, and +€337 million as of December 31, 2024. It breaks down as follows:

(€ million)	Financial instruments at fair value through equity not subsequently released to net income	Commodity derivatives hedging cash flows	Foreign currency derivatives hedging cash flows	Hedging costs	Interest rate derivatives hedging cash flows	Total	o/w attributable to owners of the Company
As of December 31, 2024	309	41	-6	-	2	346	337
Fair value adjustments	3	-45	-4	-11	5	-52	-37
Other movements	3	-	-	-	2	5	4
AMOUNT AS OF DECEMBER 31, 2025	315	-4	-10	-11	9	299	305

Amounts are presented net of tax.

The change in financial instruments at fair value through equity mainly concerns gas hedges for -€47 million in Europe (see Note 8.3.1.3).

No material amounts were released to the Consolidated Income Statement in respect of interest-rate derivatives hedging cash flows and recorded in financial debt.

9.3 Non-controlling interests

Pursuant to IFRS 10, non-controlling interests in fully consolidated subsidiaries are considered a component of equity.

Furthermore, in accordance with IAS 32 "Financial Instruments: Presentation", non-controlling interest put options are recognized as liabilities.

9.3.1 Non-controlling interests

A breakdown of the movement in non-controlling interests is presented in the Statement of Changes in Equity.

As of December 31, 2025, non-controlling interests mainly concern:

- in Europe: Poland (€278 million), Germany (€229 million) and Spain (€223 million);
- in the Americas, Asia Pacific, Africa Middle-East: Chile (€633 million), the United States (€298 million) and China (€223 million).

9.3.2 Net income attributable to non-controlling interests

Net income attributable to non-controlling interests is -€402 million for the year ended December 31, 2025, compared with -€347 million for the year ended December 31, 2024.

Net income attributable to non-controlling interests breaks down by operating segment as follows:

(€ million)	Year ended December 31, 2024	Year ended December 31, 2025
France & Hazardous Waste Europe	-13	-11
Europe ⁽¹⁾	-143	-180
Americas, Asia Pacific, Africa Middle-East ⁽²⁾	-172	-201
Water Technologies	-19	-10
Other	-	-
NET INCOME ATTRIBUTABLE TO NON-CONTROLLING INTERESTS	-347	-402

(1) Including net income attributable to non-controlling interests in Central and Eastern Europe (-€157 million in 2025 compared to -€131 million in 2024).

(2) Including net income attributable to non-controlling interests in Chile (-€82 million), United-States (-€23 million) and Australia (-€17 million) in 2025.

9.4 Deeply-subordinated securities and OCEANE convertible bonds

9.4.1 OCEANE convertible bonds

On September 12, 2019, Veolia Environnement completed an offering of bonds convertible and/or exchangeable for new and/or existing shares (OCEANE) maturing January 1, 2025, of a nominal amount of €700 million (see also Note 8.1.1.1).

On August 2, 2024, Veolia Environnement launched a partial redemption transaction of 52% of these bonds with a delivery settlement date of August 9. The share of repurchase costs charged to equity was approximately -€18 million.

On January 1, 2025, Veolia Environnement redeemed in full, at maturity, its bonds with an option to be converted into and/or exchanged for new or existing shares for a remaining nominal outstanding of approximately €336 million, (see Note 8.1.1.1).

9.4.2 Deeply subordinated securities

At the end of December 2025, hybrid debt excluding coupons represented €4.1 billion at Veolia Environnement, broken down as follows:

- an issue carried out on October 14, 2020, the proceeds of which were used to finance the acquisition of 29.9% of the share capital of Suez from Engie, with a residual tranche of €1,150 million bearing a coupon of 2.50% until its first reset date in April 2029, the redemption of the first tranche of €850 million having been notified at the end of December 2025 for payment in February 2026 (see Note 8.1.1.2);
- a €500 million issue carried out on September 2, 2019, resulting from the acquisition of Suez S.A. with an initial fixed coupon of 1.625%, reset for the first time seven years after issue, then every five years;
- a €500 million issue carried out on November 8, 2021, bearing a coupon of 2% until the first reset date in February 2028;

- a €600 million issue carried out on November 22, 2023, under Veolia Environnement's EMTN program and bearing a coupon of 6% until the first reset date in February 2029;
- on May 13, 2025, Veolia issued its first green bond, in the form of a green hybrid bond, for €500 million with a coupon of 4.371% until its first reset date in August 2030;
- an €850 million issue carried out on September 18, 2025, bearing a coupon of 4.322% until the first reset date in January 2033.

Pursuant to IAS 32.11 and given its intrinsic characteristics (no mandatory repayment, no obligation to pay a coupon except in the event of a dividend distribution to shareholders or the buyback of its own instruments), this instrument is recognized in equity.

9.5 Earnings per share

Basic earnings per share is calculated by dividing adjusted net income attributable to owners of the Company by the weighted average number of ordinary shares outstanding during the year.

Pursuant to IAS 33, the weighted average number of shares outstanding taken into account for the calculation of basic net income per share is adjusted to take into account the increases in capital during the year. Pursuant to IAS 33.9 and IAS 12, the net income attributable to owners of the Company has been adjusted to take into account the cost of the coupon payable to holders of deeply subordinated securities issued by Veolia Environnement.

Diluted earnings per share is calculated by dividing adjusted net income attributable to owners of the Company by the weighted average number of ordinary shares outstanding during the year plus the weighted average number of ordinary shares that would be issued following which would have been issued on the conversion of all existing potentially dilutive instruments (OCEANE, performance share plan and Free Share Grant Plan).

Net income and the number of shares used to calculate basic and diluted earnings per share are presented below for all activities.

	Year ended December 31, 2024	Year ended December 31, 2025
(in millions of shares)		
Weighted average number of ordinary shares for the calculation of basic earnings per share	720	729
Theoretical number of additional shares resulting from potentially dilutive instruments	22	3
Weighted average number of ordinary shares for the calculation of diluted earnings per share (in millions of shares)	741	732
Net income (loss) attributable to owners of the Company per share (in millions of euros)		
Net income (loss) attributable to owners of the Company (in millions of euros)	1,098	1,217
Coupons on deeply subordinated securities net of taxes (in millions of euros)	-58	-89
Net income (loss) attributable to owners of the Company restated for coupons (in millions of euros):	1,040	1,128
Net income (loss) attributable to owners of the Company per share restated for coupons (in euros):		
Basic	1.45	1.55
Diluted	1.40	1.54
Net income (loss) from discontinued operations attributable to owners of the Company per share (in millions of euros)		
Net income (loss) from discontinued operations attributable to owners of the Company (in millions of euros)	-103	-118
Net income (loss) from discontinued operations attributable to owners of the Company per share (in euros):		
Basic	-0.14	-0.16
Diluted	-0.14	-0.16
NET INCOME (LOSS) FROM CONTINUING OPERATIONS ATTRIBUTABLE TO OWNERS OF THE COMPANY PER SHARE		
Net income (loss) from continuing operations attributable to owners of the Company (in millions of euros)	1,201	1,336
Coupons on deeply subordinated securities net of taxes (in millions of euros)	-58	-89
Net income (loss) from continuing operations attributable to owners of the Company restated for coupons (in millions of euros) :	1,143	1,247
Net income (loss) from continuing operations attributable to owners of the Company restated for coupons per share (in euros) :		
Basic	1.59	1.71
Diluted	1.54	1.70

The only potentially dilutive instruments recognized by Veolia Environnement are the OCEANE, presented in Note 9.4.1, as well as the performance shares and free shares presented in Note 6.2.2.

Note 10 PROVISIONS

Pursuant to IAS 37, Provisions, Contingent Liabilities and Contingent Assets, a provision is recorded when, at the year end, the Group has a current legal or implicit obligation to a third party as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and the amount of the obligation can be reliably estimated.

Provisions cover all losses that are considered probable, and that relate to litigation (taxation other than income tax, employee or other) arising in the normal course of Veolia's business operations, including adjustments on uncertain tax positions identified but not yet adjusted.

As part of its obligations under public services contracts, Veolia generally has contractual obligations for the maintenance and repair of the installations it manages. The resulting maintenance and repair costs are analyzed in accordance with IAS 37 on provisions and, where necessary, a provision for contractual commitments is recorded where there are delays in work to be performed.

In the event of a restructuring, an obligation exists if, prior to the period end, the restructuring has been announced and a detailed plan produced or implementation has commenced. Future operating costs are not provided.

Provisions for closure and post-closure costs encompass the legal and contractual obligations of the Group on the completion of operating activities at a site (primarily site rehabilitation provisions) and, more generally, expenditure associated with environmental protection (provision for environmental risks).

In the case of provisions for rehabilitation of landfill facilities, Veolia accounts for the obligation to restore a site as waste is deposited, recording a non-current asset component. This asset is amortized during the fiscal year based on its depletion. The costs included take account of the technical and operating characteristics of the sites, as well as applicable regulatory requirements. The monitoring period following the closure of a landfill site depends on the country where the Group operates (France: 30 years; United Kingdom: 60 years). Inflation is taken into account in the total cost calculation and, depending on the projected expenditure schedule, a discount rate is applied (based on the country and flow maturities). Provisions are calculated, by site, at the reporting date, taking account of the landfill site fill rate, total estimated costs per year, the scheduled closure date and the discount rate and are recorded progressively over the operating period.

Provisions giving rise to an outflow after more than one year are discounted if the impact is material. Discount rates reflect current assessments of the time value of money and the risks specific to the liability. The unwinding of the discount is recorded in the Consolidated Income Statement in "Other financial income and expenses".

Movements in non-current and current provisions during 2025 are as follows:

(€ million)	As of December 31, 2024	Addition/ Charge	Repayment/ Utilization	Reversal	Actuarial gains (losses)	Unwinding of the discount	Change in consolidation scope	Foreign exchange translation	Non-current/ current/ reclassification	Other movements	As of December 31, 2025

Provisions excluding pensions and other employee benefits	3,069	964	-580	-246	-	75	22	-103	-	-19	3,181
Provisions for pensions and employee benefits	746	86	-88	-27	20	19	-	-24	-	6	740
TOTAL PROVISIONS	3,815	1,050	-668	-273	20	94	22	-127	-	-12	3,921
NON-CURRENT PROVISIONS	2,749	510	-88	-165	20	94	15	-83	-402	10	2,661
CURRENT PROVISIONS	1,066	540	-580	-108	-	-	7	-44	402	-22	1,260

Provisions for litigation €550 million overall as of December 31, 2025, compared with €438 million overall as of December 31, 2024.

The Water Technologies, Americas, Asia Pacific, Africa Middle-East, France and Hazardous Waste Europe and Europe operating segments contribute €356 million, €92 million, €55 million and €44 million respectively as of December 31, 2025.

Additional information on the main litigation is presented in Note 12.

As of December 31, 2025, **provisions for contractual commitments** amount to €99 million and primarily concern the France and Hazardous Waste Europe operating segment in the amount of €53 million and Europe in the amount of €35 million.

Provisions for work-in-progress and losses to completion on long-term contracts for a total amount of €190 million as of December 31, 2025 mainly concern the Americas, Asia Pacific, Africa Middle-East operating segment for €100 million, the Water Technologies operating segment for €54 million, and the Europe operating segment for €27 million.

Provisions for closure and post-closure costs total €1,214 million as of December 31, 2025 compared with €1,220 million as of December 31, 2024 and mainly concern the following operating segments:

- France and Hazardous Waste Europe for €454 million as of December 31, 2025, compared with €448 million as of December 31, 2024;
- Americas, Asia Pacific, Africa Middle-East for €418 million as of December 31, 2025, unchanged from December 31, 2024;
- Europe for €315 million as of December 31, 2025, compared with €323 million as of December 31, 2024.

The change in these provisions in 2025 is mainly due to the unwinding of the discount in the amount of €72 million.

By nature of obligation, these provisions concern:

- provisions for site rehabilitation in the amount of €1,106 million at the end of 2025, compared with €1,104 million at the end of 2024;
- provisions for environmental risks in the amount of €53 million at the end of 2025, compared with €55 million at the end of 2024;
- provisions for plant dismantling in the amount of €55 million at the end of 2025, compared with €61 million at the end of 2024.

Self-insurance provisions were mainly recorded by Group insurance and reinsurance subsidiaries.

Other provisions include various obligations recorded as part of the normal operation of the subsidiaries. They primarily concern the following operating segments:

- the Other segment in the amount of €192 million as of December 31, 2025, compared with €197 million as of December 31, 2024;
- Europe in the amount of €174 million as of December 31, 2025, compared with €161 million as of December 31, 2024;
- France and Hazardous Waste Europe in the amount of €154 million as of December 31, 2025, compared with €119 million as of December 31, 2024;
- the Americas, Asia Pacific, Africa Middle-East segment in the amount of €125 million as of December 31, 2025, compared with €139 million as of December 31, 2024.

Provisions for pensions and other employee benefits as of December 31, 2025 total €740 million, and include provisions for pensions and other post-employment benefits of €647 million (governed by IAS 19 and detailed in Note 6.3), and provisions for other long-term benefits of €93 million.

Note 11 INCOME TAX EXPENSE**11.1 Income taxes**

The income tax expense (income) includes the current tax expense (income) and the deferred tax expense (income).

11.1.1 Analysis of the income tax expense

Income tax expense breaks down as follows:

(€ million)	2024	2025
Current income tax (expense) income	-553	-577
France	-56	-79
Other countries	-497	-498
Deferred tax (expense) income	-13	-10
France	31	-18
Other countries	-44	8
TOTAL INCOME TAX EXPENSE	-566	-587

A number of French subsidiaries elected to form a consolidated tax group with Veolia Environnement as the head company. Veolia Environnement is liable to the French Treasury Department for the full income tax charge, calculated based on the group tax return. Any tax savings are recognized at the Veolia Environnement level.

11.1.2 Effective tax rate

	2024	2025
Net income (loss) from continuing operations (a)	1,547	1,738
Share of net income (loss) of associates (b)	61	58
Share of net income (loss) of joint ventures (c)	71	32
Share of net income (loss) of other equity-accounted entities (d)	-	-
Impairment losses on goodwill of joint ventures and other equity-accounted entities (e)	-	-
Income tax expense (f)	-566	-587
Net income from continuing operations before tax (g) = (a)-(b)-(c)-(d)-(e)-(f)	1,982	2,234
Effective tax rate -(f)/(g)	28.6%	26.3%
Theoretical tax rate⁽¹⁾	25.8%	25.8%
Net impairment losses on goodwill not deductible for tax purposes	-	0.0%
Differences in tax rate	-3.6%	-3.9%
Capital gains and losses on disposals	1.9%	-0.4%
Dividends	0.4%	0.5%
Taxation without tax base	4.4%	3.9%
Effect of tax projections ⁽²⁾	3.4%	4.0%
Other permanent differences	-3.8%	-3.7%
EFFECTIVE TAX RATE	28.6%	26.3%

(1) The tax rate indicated is the statutory tax rate in France applicable in fiscal years 2024 and 2025.

(2) Effect of tax projections primarily includes impairment losses on deferred tax assets and capitalized deferred taxes.

The main elements explaining the effective tax rate in 2025 are as follows:

- transactions in countries with a higher or lower tax rate than the French standard rate;
- taxation without tax basis, including, in particular, taxes other than income tax meeting IAS 12 criteria;
- other permanent differences;
- the effect of tax projections, primarily relating to impairment losses on deferred tax assets and capitalized deferred taxes.

It is recalled that the main elements explaining the effective tax rate in 2024 were as follows:

- transactions in countries with a higher or lower tax rate than the French standard rate;
- taxation without tax basis, including, in particular, taxes other than income tax meeting IAS 12 criteria;
- taxation on capital gains or losses from disposals;
- the effect of tax projections, primarily relating to impairment losses on deferred tax assets and capitalized deferred taxes.

11.2 Deferred tax assets and liabilities

Deferred tax assets and liabilities are generally recognized on timing differences and/or tax loss carry forwards.

Deferred tax assets arising from timing differences are only recognized when it is probable that:

- there are sufficient taxable timing differences within the same tax group or tax entity that are expected to reverse in the same periods as the expected reversal of such deductible timing differences or in the periods when the deferred tax assets arising from tax losses can be carried back or forward; or
- the Group is likely to generate sufficient future taxable profits against which the asset can be offset.

At each reporting date, the Group reviews the recoverable amount of deferred tax assets arising from material tax losses carried-forward.

Deferred tax assets arising from these tax losses are no longer recognized or are reduced when required by the specific facts and circumstances of each company or tax group concerned, and particularly when:

- the forecast period and uncertainties regarding the economic environment no longer enable the probability of utilization to be assessed;
- the companies have not started utilizing the losses;
- the forecast utilization period exceeds the carry forward period authorized by tax legislation; or
- offset against future taxable profits is uncertain due to the risk of different interpretations of the application of tax legislation.

Deferred tax assets and liabilities are adjusted for the effects of changes in prevailing tax laws and rates at the year end. Deferred tax balances are not discounted.

Movements in deferred tax assets and liabilities **during 2025** are as follows:

(€ million)	As of December 31, 2024	Changes in business through net income	Changes in business through equity	Changes in consolidation scope	Foreign exchange translation	Transfers to Assets / Liabilities classified as held for sale	Other movements	As of December 31, 2025
Deferred tax assets, gross	4,177	91	20	43	-195	-	7	4,143
Deferred tax assets not recognized	-2,219	-66	-17	18	117	-	-5	-2,173
DEFERRED TAX ASSETS, NET	1,958	25	3	61	-78	-	2	1,970
DEFERRED TAX LIABILITIES	2,606	-4	-11	91	-124	-	-	2,557

As of December 31, 2025, deferred tax assets not recognized total -€2,173 million, including -€1,464 million on tax losses and -€709 million on timing differences. As of December 31, 2024, they totaled -€2,219 million, including -€1,553 million on tax losses and -€666 million on timing differences.

Deferred tax assets and liabilities break down by nature as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
DEFERRED TAX ASSETS		
Tax losses	1,826	1,742
Provisions and impairment losses	560	649
Employee benefits	279	278
Financial instruments	165	182
Operating financial assets	27	25
Fair value of assets purchased	125	125
Finance leases	130	130
Intangible assets, PP&E and operating financial assets	234	223
Other	831	789
DEFERRED TAX ASSETS, GROSS	4,177	4,143
DEFERRED TAX ASSETS NOT RECOGNIZED	-2,219	-2,173
RECOGNIZED DEFERRED TAX ASSETS	1,958	1,970

(€ million)	As of December 31, 2024	As of December 31, 2025
DEFERRED TAX LIABILITIES		
Intangible assets and Property plant and equipment	1,266	1,222
Fair value of assets purchased	635	584
Operating financial assets	48	43
Financial instruments	157	175
Finance leases	112	104
Provisions	27	25
Employee benefits	70	72
Other	291	332
DEFERRED TAX LIABILITIES	2,606	2,557

The breakdown by **main tax group** as of December 31, 2025 is as follows:

(€ million)	Recognized deferred tax assets on tax losses	Recognized deferred tax assets on timing differences	Deferred tax liabilities on timing differences	Net recognized deferred tax position
France tax group	48	249	-249	48
United States tax group	52	242	-454	-160
TOTAL FOR THE MAIN TAX GROUPS	100	491	-703	-112

The **timing schedule for the reversal** of the net deferred tax position on timing differences and the deferred tax asset position on tax losses of the France tax group and the United States tax group is as follows:

(€ million)	Deferred tax assets on tax losses			Net deferred tax on timing differences			Total		
	5 years or less	More than 5 years	Total	5 years or less	More than 5 years	Total	5 years or less	More than 5 years	Total
France tax group	48	-	48	-	-	-	48	-	48
United States tax group	52	-	52	161	-373	-212	213	-373	-160

The **expiry schedule** for deferred tax assets on tax losses recognized and not recognized as of December 31, 2025 is as follows:

(€ million)	Maturing in			Total as of December 31, 2025	Total as of December 31, 2024
	5 years or less	More than 5 years	Unlimited		
Recognized tax losses	96	33	149	278	273
Tax losses not recognized	421	556	487	1,464	1,553

Deferred tax assets and liabilities **break down by destination** as follows:

(€ million)	As of December 31, 2024	As of December 31, 2025
DEFERRED TAX ASSETS, NET		
Deferred tax assets through net income	1,840	1,842
Deferred tax assets through equity	118	128
DEFERRED TAX ASSETS, NET	1,958	1,970
DEFERRED TAX LIABILITIES		
Deferred tax liabilities through net income	2,547	2,507
Deferred tax liabilities through equity	59	50
DEFERRED TAX LIABILITIES	2,606	2,557

11.3 Tax audits

In the normal course of their business, the Group entities in France and abroad are subject to regular tax audits.

The Group assesses income tax risks in accordance with IFRIC 23, notably by considering that the tax authorities will conduct an audit and will have full knowledge of all relevant information.

The tax authorities have carried out various tax audits in respect of both consolidated tax groups and individual entities. To date, none of these reviews have led to liabilities to the tax authorities materially in excess of amounts estimated during the review of tax risks.

In estimating the risk as of December 31, 2025, the Group took account of the expenses that could arise as a consequence of these audits, based on a technical analysis of the positions defended by the Group before the tax authorities. The Group periodically reviews the risk estimate in view of developments in the audits and legal proceedings.

11.4 Pillar 2 Directive

The 2024 Finance Act (Article 33 of Law no. 2023-1322 of December 29, 2023) enacted the Pillar 2 Directive (Council Directive (EU) 2022/2523 of December 14, 2022) which aims to introduce a global minimum tax. Due to the amount of its revenue, the Group falls within the scope of this new legislation.

For 2025, the Group determined that the financial impact of this new tax, recognized as a tax expense, was not material.

In accordance with the temporary exemption introduced by the amendment to IAS 12 in May 2023, no deferred tax was recorded on that basis.

Note 12 CONTINGENT ASSETS AND LIABILITIES

Management has exercised its judgment with regard to the assessment of risks related to judicial, administrative, or arbitration proceedings concerning the Group. In light of the uncertain nature of the outcome of these proceedings, and in accordance with the criteria of IAS 37, these risks may have resulted in the recognition of a provision or, as applicable, a receivable as of December 31, 2025.

North America

United States – Water – Flint

In February 2015, the city of Flint (Michigan, USA, hereafter “Flint”) hired a U.S. subsidiary of the Company, Veolia Water North America Operating Services (“VWNAOS”), to conduct a study on the residual effects of the chlorination process on the color, its taste and its odor. This one-time review, invoiced at USD 40,000, was completed in approximately four weeks.

On February 18, 2015, VWNAOS issued an interim report based, among other things, on tests performed exclusively by Flint, which showed compliance with the Lead & Copper Rule. The same day, during a meeting organized by the Flint City Council Public Works Committee, VWNAOS employees communicated to the public the results of their interim report.

On March 12, 2015, VWNAOS’ final report was delivered to Flint, which was subsequently made available to the public. In its report, VWNAOS issued a certain number of recommendations including, notably, the development of a corrosion control plan. Flint ignored most of these recommendations until late 2015, when the State ordered the implementation of certain measures, in response to the revelation of the existence of lead in distributed water.

Legal proceedings

Since February 2016, numerous individual actions and putative class actions were filed in state and federal courts in Michigan by Flint residents against a number of defendants, including the State of Michigan, the Michigan Department of Environmental Quality, Flint, LAN (another engineering firm acting as the city’s principal consultant at the time) and three American subsidiaries of the Company: Veolia North America Inc., VWNAOS and Veolia North America LLC (hereafter “VNA”).

Although the Company has been named in several individual or class actions, it has not been served and is not a defendant in any of these actions; only the three U.S. subsidiaries are.

In February 2022, the first trial for four plaintiffs began in federal court. On August 11, 2022, the judge declared a mistrial, on account of the jury’s failure to reach a unanimous verdict.

Over the course of 2024 and 2025, VNA and the Company signed several settlement agreements with different plaintiff groups and the Michigan Attorney General, resulting in payments totalling approximately USD 79 million. As a result, virtually all actions brought before the state and federal courts in Michigan have been dismissed with prejudice and the plaintiffs have fully waived all rights to bring actions against VNA and the Company in relation to the case. Only a remainder of about 350 individual plaintiffs is not covered by these settlements. To date, none of these plaintiffs have come forward to request the scheduling of a new trial and no timetable has been set to move forward with any of these cases.

Insurance

These lawsuits were declared to the insurers. Some of the insurers, relying on an exclusion clause contained in their policies, made it known that they did not intend on covering any damages caused by lead.

The Group strongly contests this position, contending that this exclusion is inapplicable to the current situation and, in any event, the clause is void as, it is contrary to both the mandatory rule of Article L. 113-1 of the French Insurance Code—which requires that an exclusion clause shall be “formal and limited”—and to relevant case law.

In June 2023, the Company and VNA filed a request for arbitration in order to resolve their dispute with one of their insurers. In October 2025, an agreement bringing the arbitration to a full and final settlement was reached.

In November 2025, the Company and VNA initiated proceedings against another of their insurers before the Paris Commercial Court (Tribunal des activités économiques de Paris). These proceedings are currently pending.

Central and Eastern Europe

Lithuania - Energy

Between 2000 and 2003, the Lithuanian subsidiaries of the Group, UAB Vilniaus Energija (“UVE”) and UAB Litesko (“Litesko”), signed a number of contracts with Lithuanian cities, of which the most significant was with the city of Vilnius (“Vilnius”) in 2002 to rent, operate and modernize the heating and electricity production and distribution infrastructure. The Group made significant investments over the years for which it expects the cost incurred to be taken into account and a return on its investment.

Since 2009, the government publicly, and on numerous occasions, accused the Group of being responsible for high heating prices by waging a sustained campaign against it. Several steps were thus taken by the public authorities against the Lithuanian subsidiaries of the Group, among others:

- a EUR 19 million fine imposed on UVE by the Competition Council;
- the transfer of ownership without compensation of the individual heat exchange sub-stations invested by UVE;
- the unilateral reduction of the heating prices to capture the savings realized with the help of a smoke condenser invested by UVE;
- the retroactive annulment of the heating prices applied by UVE for the period 2011-2015;
- the annulment of the amendments extending the duration of the contract concluded between Litesko and the city of Alytus and the transfer to Alytus of the assets invested by Litesko.

All the harmful decisions taken against the Lithuanian subsidiaries of the Group are subject to pending challenges or appeals before the local courts.

In this context, the Company and its subsidiaries also had to initiate the arbitral proceedings described below.

The first arbitration, initiated under the auspices of the Stockholm Chamber of Commerce (“SCC”), resulted in a ruling issued on November 30, 2023, which is now final.

In the second arbitration, the Company, Veolia Energie International (successor in law to Veolia Baltics and Eastern Europe), UVE and Litesko (collectively “the Companies”) filed a request for arbitration against Lithuania before the International Center for Settlement of Investment Disputes (“ICSID”) in January 2016. The Companies’ claim amounts to circa EUR 76 million (not including interest). For its part, Lithuania withdrew its EUR 150 million counterclaim, following the judgment rendered by the Court of Justice of the European Union on 6 March 2018 in the Achmea case, which held that arbitration clauses contained in intra-EU bilateral investment treaties are incompatible with European Union law.

In July 2020, Lithuania initiated a legal action against the Companies and other respondents before the Vilnius regional court, by which it seeks compensation for damages worth over EUR 240 million. Lithuania has indicated that this action is a transfer of the counterclaims it previously withdrew from the ICSID arbitration. The Companies vigorously contest Lithuania's claims. Following several divergent rulings by the Lithuanian courts, Lithuania's claim was finally declared admissible in October 2023. After several months of suspension, the proceedings on the merits resumed early 2025 before the Vilnius Regional Court.

In mid-July 2025, the Companies and Lithuania signed a settlement agreement aiming at amicably resolving both the ICSID arbitration and the pending proceedings before the Vilnius Regional Court. Under the terms of the agreement, the Companies undertake to pay Lithuania a lump sum of EUR 35 million, subject to certain conditions. This settlement does not constitute any admission of liability on the part of the Companies.

In September 2025, Lithuania received the EUR 35 million; pursuant to the above-mentioned settlement, the Vilnius Court of Appeal acknowledged the withdrawal of the Companies as defendants in the proceedings, as well as the reduction of Lithuania's claims to EUR 51.7 million. This decision is final. However, the Vilnius court granted the co-defendants' request to include the Companies as third parties in the proceedings.

Furthermore, in October 2025, the ICSID tribunal took note of the parties' withdrawal.

Italy / Africa Middle East

Veolia Propreté vs. Republic of Italy

In October 2007, Veolia Propreté made very significant investments in Italy through long-term concession contracts for the construction and management of waste recovery and power generation facilities in the regions of Calabria and Tuscany. The Italian subsidiaries of Veolia Propreté were unable to execute the concession contracts due to the serious failures of the Italian authorities. In 2014, these actions caused the subsidiaries' bankruptcy and the loss of Veolia Propreté's investment.

In June 2018, Veolia Propreté commenced an arbitration against the Republic of Italy before the International Centre for Settlement of Investment Disputes ("ICSID") alleging breaches of the Energy Charter Treaty. The arbitral tribunal was constituted in January 2019. Veolia Propreté claimed an amount of approximately EUR 400 million plus interests. On 26 September 2025, the tribunal issued an award ordering Italy to pay Veolia Propreté approximately EUR 86 million, plus pre-award and post-award interests, together with half the costs of proceeding.

In November 2025, Veolia Propreté filed a request with ICSID for a supplementary decision, arguing that the tribunal failed to address interest on historical losses for the period 2007-2011, amounting to approximately EUR 12 million. These proceedings remain ongoing.

In September 2021, the Court of Justice of the European Union in the Komstroy case ruled that the investor-state dispute settlement mechanism provided for in the Energy Charter Treaty is incompatible with EU Law and does not apply to intra-EU disputes. This development may affect the enforcement of the award.

Water Tech

VWT v. K+S Potash

On December 1, 2012, Veolia Water Technologies, Inc. ("VWT") signed a CAD 324.5 million contract with K + S Potash Canada GP ("KSPC") for the design, supply and commissioning of an evaporation and crystallization system, which includes 14 large evaporators and crystallizers (the "Tanks"), for a potash mine then under construction by KSPC in the province of Saskatchewan, Canada. In this framework, a letter of guarantee at first request was issued by VWT to the benefit of KSPC in the amount of USD 14.6 million.

On July 17, 2016, during the process of commissioning the Tanks, one tank collapsed (the "Incident"). A new replacement tank had to be manufactured and installed. The Incident also damaged other Tanks and plant equipment, which had to be removed and replaced. VWT cooperated with KSPC to determine the cause of the incident. The first investigations, conducted by KSPC, identified a defect in the design of the metal structure supporting the Tanks, for which VWT and one of its subcontractors were responsible. Subsequently, additional expert assessments conducted by VWT, however, found a defect in the production of the concrete bases to which the metal structure supporting the Tanks was affixed. These concrete bases were in turn built by a subcontractor of KSPC. VWT has repaired the damaged Tanks. These repairs resulted in significant contractual changes and additional costs. Mid-June, 2017, a second letter of guarantee at first request was issued by VWT to KSPC in the amount of USD 15 million.

Several procedures are currently in progress.

ADRIC Arbitration Procedure (ADR Institute of Canada)

On August 18, 2017, VWT filed a complaint with the ADRI seeking KSPC's reimbursement of the costs incurred by the contractual modifications made to carry out repairs linked to the Incident, i.e. USD 19 million. On January 18, 2019, the arbitral tribunal accepted jurisdiction over only some claims (approximately USD 13.6 million). This procedure is stayed due to proceedings initiated by KSPC before the Court of King's Bench for Saskatchewan (see below).

Legal Proceedings (the Court of King's Bench for Saskatchewan)

On April 6, 2018, KSPC brought claims against VWT before the Court of King's Bench for Saskatchewan in the amount of CAD 200 million - currently quantified at CAD 168,5 million (approximately EUR 103,6 million) - for consequential damages and additional costs of repair in relation to the Incident. In mid-January 2019, VWT made a settlement offer to KSPC who refused the offer.

On May 28, 2018, one of KSPC's subcontractors, AECON, sued KSPC before the Court of King's Bench for various claims for damages. On June 28, 2018, KSPC joined VWT as a third party to the proceedings in an attempt to require VWT to indemnify KSPC for a minimum of CAD 467 million - amount currently quantified at CAD 103,1 million (approximately EUR 63,5 million) - as well as reimbursement of sums already paid by KSPC to other subcontractors (the "Delay Claim").

On March 25, 2020, KSPC brought claims against VWT before the Court of King's Bench for Saskatchewan for an amount quantified to date at CAD 80 million (approximately EUR 50 million). These new claims include an equipment failure that occurred in November 2018 and alleged corrosion in specific materials of the plant. In June 2020, VWT filed a statement of defense before this court and contested these new claims.

In November 2019 and 2020, respectively, KSPC received payment under the letters of guarantee.

The Group strongly contests the merits of all these legal proceedings.

These lawsuits have been notified to professional liability insurance companies.

VWT v. Antero

In August 2015, Veolia Water Technologies Inc. ("VWT") and Antero Resources Corporation ("Antero") entered into a Design Build Agreement ("DBA") for a revised contract sum of USD 255.8 million for the treatment of water associated with the drilling, production and general development of shale gas at the Clearwater facility located in Pennsboro West Virginia ("Facility").

VWT achieved the substantial completion of the Facility on March 15, 2019. The Facility was fine-tuned over the following months. The final performance test was scheduled to begin on September 16, 2019 but, by a letter dated September 12, 2019, Antero terminated the DBA. VWT considers this termination to have been made without proper contractual notice or a valid reason.

On March 13, 2020 VWT filed suit against Antero in the State District Court, City and County of Denver, Colorado, in the United States, alleging breach of contract and seeking damages of USD 118 million. On the same day and in front of the same tribunal, Antero filed suit against VWT and claimed that VWT breached its contractual obligations under the DBA. In this lawsuit, Antero asserts claims under theories of fraud and breach of contract. It claims alternatively USD 451 million or USD 367 million in damages based on different valuation methods.

VWT's claims have been consolidated with Antero's claims. By a final judgment dated January 27, 2023, the State District Court, City and

County of Denver, Colorado ordered VWT to pay to Antero on the grounds of fraud and breach of contract, a principal amount of USD 242 million, plus interests (such interests including USD 67 million of pre-judgment interests) and Antero's fees and costs. By a revised judgment dated May 3, 2023, reflecting the outcome of a post-trial motion successfully filed by VWT, the principal amount of the judgment was reduced to USD 215 million and the pre-judgment interests were reduced to USD 65 million. The effects of the judgment are stayed.

At the end of May 2023, VWT appealed the decision before the Colorado Court of Appeals. In June 2023, Antero filed a cross appeal. On December 19, 2024, the Court of Appeals upheld the judgment. VWT strongly disputes the Court of Appeals' decision affirming the judgment. In March 2025, VWT filed a petition before the Supreme Court of Colorado. In September 2025, the Colorado Supreme Court granted VWT's petition in part. The proceedings are continuing in the Colorado Supreme Court. The effects of the judgment remain suspended until the Colorado Supreme Court issues its decision.

This dispute was reported to the insurers, who issued coverage reservations. One of them, after initially accepting to cover the legal expenses in connection with those proceedings, initiated arbitral proceedings in October 2021 to be released from its coverage obligation. On July 10, 2023, the arbitral tribunal dismissed the insurer's claim and ruled that the insurer's dispute of its coverage obligation was ill-grounded.

Note 13 RELATED PARTY TRANSACTIONS

The Group identifies related parties in accordance with the provisions of paragraph 9 of IAS 24 revised, Related Party Disclosures.

To the Company's knowledge, as of December 31, 2025 except for relations with joint ventures (see Note 5.2.4.1) and pay and related benefits of key management (see Note 6.4), there were no other related party transactions.

Note 14 SUBSEQUENT EVENTS

No significant events occurred between the reporting date and the date on which the consolidated financial statements were approved by the Board of Directors.

Note 15 MAIN COMPANIES INCLUDED IN THE CONSOLIDATED FINANCIAL STATEMENTS

In 2025, Veolia group consolidated or accounted for a total of 1 870 companies, of which the main companies are:

Note 16 AUDIT FEES

At the Combined General Meeting held on April 24, 2025, Deloitte & Associés was appointed as statutory auditors in charge of certifying the financial statements (see Section 1 of Operating and financial review).

Audit fees (Deloitte and Ernst & Young) certifying the Group's accounts amounted to €42 million for the 2025 fiscal year, including:

- €36 million in respect of the statutory audit of the accounts;
- €5 million in respect of services falling within the scope of diligences directly related to the audit engagement;
- €1 million for the certification of the sustainability statement set by the CSRD "Corporate Sustainability Reporting Directive".

6.1.7 STATUTORY AUDITORS' REPORT ON THE CONSOLIDATED FINANCIAL STATEMENTS

This is a translation into English of the statutory auditors' report on the consolidated financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users. This statutory auditors' report includes information required by European regulations and French law, such as information about the appointment of the statutory auditors or verification of the information concerning the Group presented in the management report and other documents provided to shareholders. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

Year ended December 31st, 2025

To the General Meeting of Veolia Environnement,

Opinion

In compliance with the engagement entrusted to us by your General Meeting, we have audited the accompanying consolidated financial statements of Veolia Environnement for the year ended December 31st, 2025.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group for the year and of the results of its operations for the year in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit Committee.

Basis for Opinion

Audit Framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report.

Independence

We conducted our audit engagement in compliance with the independence requirements of the French Commercial Code (*Code de commerce*) and the French Code of Ethics for Statutory Auditors (*Code de déontologie de la profession de commissaire aux comptes*) for the period from January 1st, 2025 to the date of our report and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No. 537/2014.

Justification of Assessments - Key Audit Matters

In accordance with the requirements of Articles L. 821-53 and R. 821-180 of the French Commercial Code (*Code de commerce*) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

Assessment of the recoverable amount of intangible assets, property, plant and equipment and operating financial assets

	As of December 31, 2025, the net carrying amount of your Group's intangible assets, property, plant and equipment and operating financial assets is €7,946 million, €18,404 million and €1,147 million, respectively. These assets primarily consist of intangible assets and operating financial assets under concession arrangements (IFRIC 12) and the production and distribution property, plant and equipment necessary for the performance of contracts in your Group's three businesses.
Risk Identified	These assets are tested for impairment by your Group where there is indication that they may have suffered an impairment loss (non-performance of a major long-term contract under the conditions provided, operating technical difficulties, default by a counterparty for operating financial assets, etc.) as disclosed in Notes 5.2.1, 7.2 and 7.3 to the consolidated financial statements. The recoverable amount generally corresponds to the value in use, which is equal to the present value of future cash flows expected to be derived from these assets or groups of assets as disclosed in Notes 5.2.1 to the consolidated financial statements.
	Determining value in use requires management to make significant judgments; we have therefore considered the recoverable amount of intangible assets, property, plant and equipment and operating financial assets to be a key audit matter.
	We assessed the compliance of the methodology adopted by management with prevailing accounting standards. We also performed a critical review of the implementation of this methodology and notably assessed the contracts identified with regard to: • changes in economic performance; • the justification of differences between forecast and actual results for prior periods;
Our response	• the forecast cash flows given the economic and financial context in which the contracts are performed, in particular by analysing the main data and assumptions underlying the estimates (assumptions regarding changes in volumes, prices, direct costs and investment) and the discount rates adopted with respect to long-term growth rates and market data for each geographic zone, where deemed necessary.
	We also considered the disclosures relating to these assets presented in Notes 5.2.1, 5.4, 7.2 and 7.3 to the consolidated financial statements to be appropriate.

Liabilities relating to litigation in the United States (Flint, K+S Potash and Antero) and in Lithuania

Risk Identified	Your Group is regularly involved in major litigation with its customers and third parties during the course of its activities. The disputes relating to legal, administration or arbitration proceedings disclosed in Note 12, represent significant exposure for your Group due to their amount or the parties involved. As disclosed in Note 10, a provision is recognized at the year end reporting date if the Group has a current legal or implicit obligation to a third party as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and the amount of the obligation can be reliably estimated. In the context of these disputes, estimates made by management when determining any provisions were made in a context of uncertainty surrounding the outcome. In connection with the litigations in the United States (Flint, K+S Potash and Antero) and in Lithuania, for which the judicial, administrative or arbitration proceedings are subject to uncertainty, the Group's management makes estimates in order to determine any potential provisions, in accordance with the criteria set out in IAS 37. Accordingly, these litigations may be subject to a provision, which is reassessed at each reporting date, and are described in the notes to the consolidated financial statements, as indicated in Note 12. We considered the contingent liabilities relating to this litigation to be a key audit matter due to the amounts concerned and the management judgment involved in assessing the uncertain outcome of these litigations.
Our response	As part of our audit of the consolidated financial statements, our work consisted in: • assessing the procedures implemented by the Group to identify and inventory all risks; • analysing the information on the ongoing proceedings and the probable financial consequences communicated to us by your Group's external advisors in response to our circularization letters; • assessing the main risks identified and the assumptions adopted by the Group and their accounting treatment; • assessing the information regarding these risks disclosed in Note 12 to the consolidated financial statements.

Specific Verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the information relating to the Group given in the management report of the Board of Directors.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements.

Report on Other Legal and Regulatory Requirements**Format of preparation of the consolidated financial statements intended to be included in the annual financial report**

We have also verified, in accordance with the professional standard applicable in France relating to the procedures performed by statutory auditors regarding the annual and consolidated financial statements prepared in the European single electronic format, that the preparation of the consolidated financial statements intended to be included in the annual financial report mentioned in Article L. 451-1-2, I of the French Monetary and Financial Code (*Code monétaire et financier*), prepared under the Chief Executive Officer's responsibility, complies with the single electronic format defined in Commission Delegated Regulation (EU) No. 2019/815 of 17 December 2018. Regarding consolidated financial statements, our work includes verifying that the tagging thereof complies with the format defined in the above-mentioned regulation.

On the basis of our work, we conclude that the preparation of the consolidated financial statements intended to be included in the annual financial report complies, in all material respects, with the European single electronic format.

We have no responsibility to verify that the consolidated financial statements that will ultimately be included by your Company in the annual financial report filed with the AMF (*Autorité des marchés financiers*) agree with those on which we have performed our work.

Appointment of the Statutory Auditors

We were appointed as statutory auditors of Veolia Environnement by your General Meetings held on April 24th, 2025 for the firm DELOITTE & ASSOCIES and December 23rd, 1999 for the firm ERNST & YOUNG et Autres .

As at December 31st, 2025, the firm DELOITTE & ASSOCIES was in the first year of the engagement and the firm ERNST & YOUNG et Autres in the twenty-seventh year of total uninterrupted engagement, including twenty-six years since the securities of the Company were admitted to trading on a regulated market.

Responsibilities of Management and Those Charged with Governance for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union and for such internal control as Management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, Management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risk management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Objectives and audit approach

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users made on the basis of these consolidated financial statements.

As specified in Article L. 821-55 of the French Commercial Code (Code de commerce), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management in the consolidated financial statements;

- Assesses the appropriateness of Management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein;
- Evaluates the overall presentation of the consolidated financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation;
- Obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The statutory auditor is responsible for the direction, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed on these consolidated financial statements.

Report to the Audit Committee

We submit to the Audit Committee a report which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report significant deficiencies, if any, in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) No. 537/2014, confirming our independence within the meaning of the rules applicable in France as set out in particular in Articles L. 821-27 to L. 821-34 of the French Commercial Code (Code de commerce) and in the French Code of Ethics for Statutory Auditors (*Code de déontologie de la profession de commissaire aux comptes*). Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

6.2.3 PROPOSED APPROPRIATION OF 2025 NET INCOME

(in euros)

2025

2025 Net income	133,723,935
Distributable reserves	9,654,122,258
Prior year retained earnings	1,219,619,914
i.e a total of	11,007,466,107
To be appropriated as follows ⁽¹⁾ :	
■ to the reserve required by law	-
■ to dividends (€1.50 x 731,284,707 shares) ⁽²⁾	1,096,927,061
■ to retained earnings	256,416,788
Shareholders' equity accounts after appropriation and distribution of the dividend	
Share capital	3,708,617,185
Additional paid-in capital	9,654,122,258
Reserve required by law	370,861,719
2025 retained earnings	256,416,788
TOTAL ⁽³⁾	13,990,017,950

(1) Subject to the approval of the General Shareholders' Meeting.

(2) The total dividend distribution presented in the above table is calculated based on 741,723,437 shares outstanding as of December 31, 2025, less 10,438,730 treasury shares held as of this date and may change depending on movements in the number of shares conferring entitlement to dividends up to the ex-dividend date. Accordingly, amounts deducted from "2025 retained earnings" and/or "distributable reserves" may change depending on the definitive dividend amount paid.

(3) After appropriation of net income and distribution of the proposed dividend for 2025 shareholders' equity of the Company will be €13,990,017,950.

6.2.4 STATEMENT OF SOURCE AND APPLICATION OF FUNDS

(1) Operating cash flow comprises: operating items of €61 million; financial items of €360 million; exceptional items of -€32 million and income tax income of €81 million.

(2) This item mainly corresponds to the increase in net loans to equity investments of €605 million.

(3) In 2024, this item corresponds to a share capital increase in cash; in 2025, the Group savings plan operation resulted in a share capital increase; in order to neutralize the dilutive effect, Veolia concurrently reduced the share capital by canceling treasury shares acquired under the share repurchase program.

(4) This item corresponds to changes in hybrid debt.

(5) This item corresponds to changes in external debt.

6.2.5 NOTES TO THE COMPANY FINANCIAL STATEMENTS

Table of contents

Note 1	MAJOR EVENTS OF THE YEAR	455	Note 5	RECEIVABLES AND DEBT MATURITY ANALYSIS	469
Note 2	ACCOUNTING POLICIES AND METHODS	458	Note 6	INCOME STATEMENT	470
Note 3	BALANCE SHEET ASSETS	461	Note 7	OTHER DISCLOSURES	472
Note 4	BALANCE SHEET EQUITY AND LIABILITIES	467			

Note 1 MAJOR EVENTS OF THE YEAR**1.1 First issue of green hybrid bonds**

Veolia successfully completed its first €500 million green bond issue on May 13, 2025. The aim of this issue, in the form of deeply subordinated perpetual securities with a coupon of 4.371% until the first reset date in August 2030, is to finance or refinance the eligible Green Projects described in the Green Financing Framework published in March 2025. In addition, this bond replaces part of the existing hybrid debt on Veolia's balance sheet.

1.2 Employee share ownership plan and treasury share repurchase program

Veolia has launched an employee share ownership plan, aimed at giving over 190,000 Group employees a stake in the Company's development and performance under Group savings plans.

To finance this plan, Veolia repurchased 13,141,366 treasury shares at a unit price of €30.59 in July 2025 for a total amount of €402 million.

The shares thus repurchased were (i) partly canceled, in the amount of the share capital increase on September 12, 2025, i.e. 11,289,176 new shares aimed at neutralizing the dilutive effect of the share capital increase reserved for employees as decided by the Board of Directors on May 6, 2025 and (ii) partly sold, in the amount of 1,776,714 shares, to cover the secured plan proposed in certain countries.

The total share capital remains unchanged after these transactions.

1.3 Internal restructuring**Merger by absorption of Veolia Research and Innovation**

In a bid to streamline the Group's organization, Veolia Environnement decided to merge with its subsidiary Veolia Recherche et Innovation SAS (Veolia Research and Innovation, or "VERI") through a simple merger;

For the purposes of accounting and tax, the effect of the merger is retroactive, to January 1, 2025.

The merger constitutes a universal transfer of the assets and liabilities, including the off-balance sheet commitments and collateral attached thereto, which constitute the assets and liabilities of VERI.

Universal transfer of the assets and liabilities of Vigie 50 AS and Vigie 3 AS

In a bid to streamline the Group's organization, Veolia Environnement decided to dissolve Vigie 50 AS and Vigie 3 AS.

The early dissolution of these two Vigie companies resulted in the universal transfer of their assets and liabilities to Veolia Environnement.

The following table shows the impact of the VERI merger and the universal transfers of assets and liabilities of VIGIE 50 AS and VIGIE 3 AS in the Veolia Environnement company financial statements

1.4. ANC Regulation 2022-06 on the modernization of financial statements

As of fiscal year 2025, the application of the provisions of ANC Regulation 2022-06 on the modernization of financial statements means:

- A new definition for exceptional items;
- New accounting systems related to the elimination of the expense transfer method;
- Changes in accounting classifications:
 - from operating results to net financial income and expenses: the main reclassifications relate to the amortization of loan issuing costs,
 - from exceptional items to net financial income and expenses: the main reclassifications relate to disposals of securities and gains and losses on treasury shares,
 - from exceptional items to operating results: the main reclassifications relate to disposals of property, plant and equipment and intangible assets, provisions for contingencies and losses of a recurring nature, and penalties.

The following table shows the impacts of the reclassifications resulting from the modernization of the 2025 financial statements:

(€ million)	Operational towards Financial	Exceptional towards Financial	Exceptional towards Operational	Amount
Operating profit /loss				
Deferred charges: syndicated loans	-3	-	-	-3

	-	-7	-22	-29

positive and negative figures: debits are written as positive numbers and credits are accompanied by a minus sign

Note 2 ACCOUNTING POLICIES AND METHODS

2.1 Basis of preparation

The financial statements for the 2025 fiscal year are prepared and presented in accordance with general accounting principles applicable in France, as set out in Regulation no. 2014-03 issued by the French Accounting Standards Authority (Autorité des Normes Comptables, ANC), as amended by ANC Regulation no. 2022-06, on the modernization of financial statements.

The changes in accounting methods resulting from the application of the new provisions of this Regulation (new definition of exceptional items, new accounting systems related to the elimination of the expense transfer method, classification of provisions for the amortization of loan issuing costs, classification of disposals of securities in net financial income and expenses, gains and losses on treasury shares classified in net financial income and expenses etc.) apply from the first year of application (fiscal year 2025) without any restatement of previous financial statements.

Amounts recorded in the accounts are valued on a historical cost basis in accordance with the true and fair principle.

The accounting period ends on December 31, 2025, and has a duration of 12 months.

Veolia Environnement, whose registered office is located at 21, rue La Boétie, 75008 Paris, prepared the Group's consolidated financial statements under the number: 403210032 RCS Paris.

A copy of the financial statements may be obtained at the Company's administrative headquarters at 30, rue Madeleine Vionnet, 93300 Aubervilliers.

2.2 Main accounting policies

2.2.1 Non-current assets

Non-current assets: on initial recognition in the accounts, non-current assets are recorded at acquisition cost if acquired for valuable consideration, at market value if acquired for nil consideration or at production cost if produced by the Company.

Intangible assets: in the course of major IT projects, the Company incurs project costs which it capitalizes in accordance with Articles 611 et. seq. of the new ANC Regulation 2023-05. These costs are not amortized prior to asset commissioning.

Technical merger losses are recognized according to the nature of the underlying asset to facilitate monitoring over time, in accordance with the new rules defined by ANC Regulation no. 2015-06. Technical merger losses are amortized on the same basis as the underlying asset to which the unrealized capital loss relates. The share of the loss allocated to non-depreciable assets is not amortized but is impaired, where appropriate, in accordance with Article 745-8 of the French General Chart of Accounts.

Property, plant and equipment: depreciation is calculated over the expected period of use. More specifically, fixtures and fittings and installations are depreciated on a straight-line basis over periods of 6 to 10 years. Furniture and office equipment are depreciated on a straight-line basis over periods of between 5 and 10 years. Finally, vehicles are depreciated on a straight-line basis over 5 years.

Equity investments: this heading records the acquisition cost of securities held by Veolia Environnement in companies over which it exercises control or significant leverage, directly or indirectly.

At the date of entry into Company assets, the gross carrying amount of "Equity investments" is their acquisition cost. The Company has elected to capitalize costs relating to the acquisition of equity investments. At the reporting date, the value in use of equity investments is determined by the Company based on criteria encompassing profitability, growth perspectives, the net assets of the Company held and the stock market value of the securities acquired, where applicable. Where the net carrying amount of an equity investment exceeds its value in use, an impairment is recorded in the amount of the difference.

Pursuant to the change in tax regime applicable to equity investment acquisition costs introduced by Article 21 of the 2007 Finance Act and completed by Article 209 of the French General Tax Code and based on Opinion no. 2007-C of June 15, 2007 issued by the Urgent Issues Taskforce of the French National Accounting Institute (Conseil National de la Comptabilité), Veolia Environnement has recognized the tax deferral of security acquisition costs over a period of 5 years in the accelerated depreciation account since January 1, 2007.

Other long-term loans and investments: treasury shares are recorded in long-term investment securities when earmarked for external growth operations and when they are purchased with a view to their cancellation. They are recognized at acquisition cost and an impairment is recorded if their market value is less than their net carrying amount.

Term accounts not classified as cash equivalents are recorded in "Other long-term loans and investments".

Merger losses relating to financial assets are recognized in "Other long-term loans and investments" and are considered to have an unlimited duration.

Pursuant to Articles 214-15, 214-17 and 745-8 of ANC Regulation no. 2015-06, Veolia Environnement performs an impairment test at each period end to assess the net carrying amount of the asset compared with its current value. Where the current value of the asset is less than its net carrying amount, an impairment is recognized in the amount of the difference and offset in priority against the share of the merger loss.

Where the current value of the asset cannot be determined separately, the current value of the group of assets is determined.

2.2.2 Marketable securities and Cash at bank and In hand

Marketable securities: marketable securities comprise treasury shares held in respect of Group savings plans, share option plans and other highly liquid investment securities. Treasury shares are classified as marketable securities when purchased for presentation to employees under share option plans and employee savings plans benefiting certain employees. Shares acquired and sold under the liquidity agreement generate movements in the "marketable securities" account. Marketable securities are recognized at acquisition cost and an impairment provision is recorded if their market value is less than their net carrying amount.

Cash at bank and in hand: term accounts classified as cash equivalents are recorded in Cash at bank and in hand.

2.2.3 Foreign currency-denominated transactions

During the year, foreign currency-denominated transactions are translated into euro at the spot exchange rate.

Liabilities, receivables and cash balances denominated in currencies other than the euro are recorded in the balance sheet at their euro equivalent determined using year-end exchange rates. Gains and losses resulting from the translation of foreign currency liabilities and receivables at year-end exchange rates are recorded in "Unrealized foreign exchange gains and losses". In accordance with Article 420-7 of the French General Chart of Accounts, unrealized foreign exchange gains and losses on foreign currency cash accounts are recognized directly in foreign exchange gains and losses. Similarly, foreign exchange gains and losses on subsidiary current accounts equivalent in nature to cash accounts are recognized directly in foreign exchange gains and losses, except where hedge accounting principles are applied.

Pursuant to ANC Regulation no. 2015-05, Veolia Environnement applies hedge accounting to clearly identified and documented matching foreign exchange positions, which seek to reduce the risk associated with currency fluctuations. Accordingly, all foreign exchange gains and losses calculated on liabilities and receivables and related hedging transactions included in these mirroring positions are recorded in dedicated unrealized foreign exchange gains and losses – mirroring position accounts.

The corresponding increase or decrease in the value of treasury instruments is recorded in the Treasury instruments – Assets or Treasury instruments – Liabilities accounts.

Furthermore, in order to comply with the matching settlement principle, foreign exchange gains and losses realized on instruments hedging underlying items not yet matured are recorded in new balance sheet accounts in the French General Chart of Accounts: Change in the value of treasury instruments – Assets and Change in the value of treasury instruments – Liabilities. On maturity of the underlying items, the foreign exchange gains and losses realized on the corresponding hedging instruments are released to the income statement.

Pursuant to Article 628-11 of ANC Regulation no. 2014-03, when the underlying is unwound, the gains/loss on the hedging instrument is presented in the same section of the income statement (operating, financial) as the hedged item.

Hedge accounting is also applied to equity investments acquired in foreign currency and hedged by borrowings or foreign currency derivatives in accordance with Article 628-8 of ANC Regulation no. 2014-03.

Other liabilities, receivables and foreign currency derivatives not forming part of matching hedge relationships are included in the overall foreign exchange position per currency, as provided in Article 420-6 of the French General Chart of Accounts. For those transactions with sufficiently close terms and conditions, the provision amount is determined by limiting the excess of unrealized losses over unrealized gains. This provision is calculated individually for each currency on realizable items maturing in the same fiscal year.

In the case of isolated open positions, a provision for foreign exchange losses is only recorded in respect of unrealized losses at the accounts closing.

Finally, pursuant to Articles 946-65 and 947-75 of ANC Regulation no. 2015-05, foreign exchange gains and losses on commercial receivables and payables and related hedging gains and losses are recorded in the accounts: Foreign exchange gains or Foreign exchange losses on commercial receivables and payables.

Foreign exchange gains and losses on financial operations and related hedging gains and losses continue to be recorded in the accounts, Foreign exchange gains or Foreign exchange losses on financial items.

2.2.4 Recognition of financial transactions

Financial operations (loans, borrowings, derivatives, etc.) are recognized at the value date, with the exception of cash pooling transactions with subsidiaries which are recognized at the trade date.

Deeply-subordinated perpetual securities (TSSDI): these securities represent perpetual bonds and are classified in equity equivalents. Additional paid-in capital is recognized in balance sheet assets. Accrued interest is expensed in the accounting period to which it relates through an accrued interest on bond issues account. Accrued interest is recognized as a financial expense in the Income Statement. TSSDI issue costs are amortized on a straight-line basis over the estimated debt repayment period by Veolia Environnement, that is the period from the debt issue date to the first reset date.

Derivatives: Veolia Environnement hedges asset risks (acquisition of securities in foreign currencies), balance sheet risks (financing of subsidiaries in their local currency) and transaction risks (hedging of commercial flows on its own account and for all its operating subsidiaries). The Company has therefore adopted a strategy that consists in backing foreign currency-denominated borrowings with either assets denominated in the same currency or using foreign currency derivatives (forex swaps, currency forward contracts, hedging options, cross currency swaps).

All transaction flows are hedged, primarily by currency forward contracts and forex swaps. Finally, market risks relating to interest rate fluctuations are hedged by interest rate swaps or interest rate caps and floors.

Interest-rate derivatives: pursuant to ANC Regulation no. 2015-05, income and expenses relating to the use of these instruments are recognized in the income statement to match income and expenses on the hedged transactions.

These transactions are recognized as follows:

- transactions qualifying as hedges:
 - a provision for unrealized losses is not recognized as changes in the value of the underlying item reduce the related risk,
- open-isolated positions:
 - unrealized losses, calculated individually for each instrument, are provided in full,
 - unrealized gains on instruments are recognized in income on the unwinding of the transaction only.

Foreign currency derivatives: for hedging transactions, currency financial instruments are valued by comparison with the closing exchange rate defined by the European Central Bank. The difference between the spot rate of the instrument and the closing rate is recorded in the dedicated unrealized foreign exchange gains and losses – matching position accounts. The difference between the forward rate and the spot rate of the instrument is recorded in a specific financial instruments account entitled "premium/discount". This distinguishes the interest rate impact from the currency impact. The premium/discount is spread on a straight-line over the hedge period and is classified in net financial income and expenses.

Realized gains and losses on currency transactions are recorded to match the gains and losses on the hedged transactions. If the underlying item has not matured, realized gains and losses on hedging instruments are recorded in accounts created in the French Chart of Accounts – Change in the value of treasury instruments – Assets and Change in the value of treasury instruments – Liabilities.

Where transactions do not qualify as hedges, the foreign currency derivatives are included in the overall foreign exchange position.

2.2.5 Valuation of provisions

Provisions for contingencies and losses

These provisions are valued at the best estimate of the outflow of resources necessary to settle the obligation. When valuing a single obligation in the presence of several valuation assumptions concerning the outflow of resources necessary, the best estimate is the most probable assumption.

2.2.6 Accrued expenses method for personnel costs

Accrued expense for incentives schemes

The unit amount of incentive payments is defined:

- based on the results of Veolia Group subsidiaries for the following criteria:
 - current net income (Group share) compared to the 2025 budget,
 - 2025 purchase expenditure, excluding taxes, recorded for the sheltered employment sector (France scope);
- based on the results and performance of Veolia Environnement (economic and social unit - "UES" Veolia Siège) for the following criteria:
 - Veolia Head Office economic and social unit average number of training hours per employee for 2025,
 - Veolia Head Office economic and social unit participation rate in the employee engagement survey in 2025,
 - Veolia Head Office economic and social unit employee subscription rate to the employee share ownership transaction in 2025,
 - Veolia Head Office economic and social unit annual review completion rate.

Based on the observed growth rate and other criteria, the level of incentive payments is determined using a contractually defined chart. The total amount of incentive payments provided is equal to the individual amount determined above multiplied by the number of beneficiaries communicated by the Human Resources Department.

The maximum amount of the incentive scheme accrued expense cannot exceed €5,000 gross per beneficiary and per fiscal year.

Accrued expense for bonuses

The accrued expense is determined based on the amount of bonuses awarded in the previous year multiplied by an estimated percentage change and changes in employee numbers.

Accrued expense for paid leave

Entitlement to paid leave is earned and consumed in Veolia Environnement in the calendar year.

2.2.7 Income from ordinary activities and exceptional income

Items concerning the ordinary activities of the Company, even if exceptional in amount or frequency, are included in income from ordinary activities.

In accordance with ANC Regulation no. 2022-06 on the modernization of financial statements, exceptional items include incomes and expenses directly related to a major and non-recurring event.

- An event is major when its consequences are likely to influence the judgment that summary document users may make regarding the entity's assets, financial position and results, as well as any decisions they may be led to make.
- A non-recurring event is an event that is not related to the normal and current operations of the entity. An event is considered to be non-recurring when the same event has not occurred in the recent fiscal years and is unlikely to occur in the upcoming fiscal years.

2.2.8 Valuation of employee-related commitments

Pursuant to Article L. 123-13 of the French Commercial Code, Veolia Environnement has elected not to recognize a provision for retirement benefits and other employee commitments. This information is presented in off-balance sheet commitments in the notes to the financial statements.

3.1.1 Intangible assets and Property, plant and equipment

Intangible assets have a gross value of €250 million and a net value of €16 million.

Property, plant and equipment have a gross value of €84 million and a net value of €20 million.

3.1.2 Long-term loans and investments: equity Investments

Equity investments have a gross value of €23.4 billion as of December 31, 2024. Impairments total €1.5 billion, reducing the net value to €21.9 billion.

3.1.3 Long-term loans and investments: loans to equity investments

This item has a gross value of €15.7 billion as of December 31, 2025.

Movements recorded in 2025 break down as follows:

(€ million)	Opening balance	Increase	Decrease	Unrealized foreign exchange gains (losses)	Closing balance
VEOLIA EAU - COMPAGNIE GENERALE DES EAUX	3,518	56	13	-79	3,535

TOTAL	16,638	789	1,409	-296	15,721

Loans to equity investments also include impairment charges in the amount of €150 million.

3.1.4 Long-term loans and investments: loans

This item amounts to €2.8 billion as of December 31, 2025.

It mainly includes term deposit accounts of €2.8 billion (including accrued interest), each receivable being for an amount less than €250 million.

3.1.5 Other long-term loans and investments

Other long-term loans and investments have a gross value of €4.9 billion and a net value of €4.9 billion as of December 31, 2025, and mainly comprise:

- the technical merger loss of €448 million recognized on the merger by absorption of Veolia Services Énergétiques in 2014. Impairment testing of Veolia Energie Internationale in 2025 did not give rise to the recognition of an impairment loss;
- the technical merger loss of €4.2 billion recognized on the merger by absorption of Vigie S.A. in 2022. Impairment testing of Vigie Group in 2025 did not give rise to the recognition of an impairment loss;

- the net carrying amount of the 6,370,621 treasury shares (to be used for financing external growth operations) held by Veolia Environnement, with a gross value of €203 million and a net value of €187 million. A €12 million write-back of financial impairment was recorded for the year. Impairment of treasury shares totals €16 million as of December 31, 2025.

3.2 Trade receivables

Trade receivables mainly correspond to services invoiced to Group subsidiaries. Trade receivables have a gross value of €144 million and a net value of €115 million as of December 31, 2025.

3.3 Other receivables

Other receivables have a gross value of €3.2 billion and mainly comprise the following balances:

(€ million)	As of December 31, 2025	As of December 31, 2024
Current accounts with Group subsidiaries	3,155	3,152
Other receivables :	53	245
Income tax receivables	-	30
Other tax receivables	24	25
Financial receivables on derivatives	0	1
Receivables on non-current asset disposals ⁽¹⁾	0	154
Accrued interest on current accounts	28	36

(1) Receivables on non-current asset disposals comprise receivables with Veolia Environnement subsidiaries impacted by sales price adjustments as part of the Suez carve-out.

3.4 Prepayments

Prepayments total €54 million and mainly concern:

- balancing cash adjustments paid on interest rate swaps of €16 million;
- interest on commercial paper of €21 million;
- operating expenditure of €17 million.

3.5 Marketable securities

3.5.1 Treasury shares

The remaining 4,068,109 shares recorded in marketable securities have a gross carrying amount of €105 million as of the 2025 year-end. These shares are mainly allocated to cover stock option programs or other share award programs to Group employees, with 307,532 shares allocated to the liquidity agreement.

No impairment charges were recognized in 2025. Impairment reflects the difference between the average purchase cost of the Veolia Environnement shares and the average stock market price in December 2025.

Liquidity contract

This liquidity agreement forms part of the share repurchase program authorized by the Veolia Environnement Combined General Meetings of April 25, 2024 and April 24, 2025.

In 2025, 15,051,388 shares were purchased for a total amount of €446 million and a weighted average share price of €29.62. 15,261,652 shares were sold for a total amount of €451 million and a weighted average share price of €29.54. A net capital gain of €2 million was generated under this contract.

3.5.2 Other securities

Other securities total €2.6 billion as of December 31, 2025, and comprise SICAV mutual funds.

3.5.3 Forward financial instruments: assets

Forward financial instruments total €280 million as of the 2025 year-end and break down as follows:

- interest-rate derivative spreads: €12 million;
- foreign currency derivatives: €232 million;
- premium/discount: €36 million.

3.6 Cash at bank and in hand

Liquid assets total €309 million as of December 31, 2025.

3.7 Accrued income and deferred charges

3.7.1 Deferred charges: bond issue costs

Bond issue costs are spread on a straight-line basis over the bond term. Net deferred charges as of December 31, 2025, total €47 million. The charge for the year was €15 million.

Other deferred charges total €6 million and mainly comprise credit line issue costs, amortized on a straight-line basis over the repayment term. The charge for the year was €3 million.

3.7.2 Bond redemption premiums

Unamortized bond redemption premiums total €41 million. These mainly include the redemption premium recognized on the bond exchange performed in 2015 of €22 million as of December 31, 2025. The charge for the year was €18 million.

Bonds redemption premiums are amortized on a straight-line basis over the bond term.

3.8 Accrued income

Accrued income totals €231 million and primarily comprises the following items:

(€ million)	As of December 31, 2025	As of December 31, 2024
Accrued interest on loans to equity investments	72	91
Sales invoice accruals	71	69
Supplier credit notes receivable	30	31
Accrued interest on current accounts	28	36

3.9 Foreign exchange gains and losses and changes in value of treasury instruments

Foreign exchange gains and losses include unrealized foreign exchange gains and losses on matching positions and on the overall position per currency. In addition, matching positions include realized gains and losses on instruments where the underlying item has not yet matured.

(€ million)	Unrealized foreign exchange losses	Change in value of treasury instruments - Assets	Unrealized foreign exchange losses	Change in value of treasury instruments - Liabilities	Notes
Matching foreign exchange positions	915	1,983	270	2,246	3.9.1
Overall foreign exchange position	3	-	4	-	3.9.2
TOTAL	918	1,983	275	2,246	

The following tables present the foreign exchange positions for the main currencies determined at the reporting date.

3.9.1 Unrealized foreign exchange gains and losses and changes in value of treasury assets and liabilities on matching foreign exchange positions

Unrealized foreign exchange gains and losses presented below include not only unrealized gains and losses, but also realized gains and losses on financial instruments recognized in accordance with ANC Regulation no. 2015-05.

The following information concerns the most material currencies:

Prior year net income/(loss)	376	-	376	-
Tax-driven provisions	7	0	-	7
TOTAL BEFORE NET INCOME FOR THE YEAR	16,038	299	1,377	14,960
Net income for the year	0	134	-	134
TOTAL AFTER NET INCOME FOR THE YEAR	16,038	433	1,377	15,094

N.B.: amounts are in millions of euros rounded to the nearest whole number, unless stated otherwise in the notes. Accordingly, the sum of rounded amounts may present non-material differences with total figures

The share capital comprises 741,723,437 shares with a par value of €5 each, compared with 740,652,608 shares with a par value of €5 each as of December 31, 2024.

The €62 million increase in share capital is the result of subscriptions under the Group Employee Savings Plan for €56 million and Share Plans for €5 million. The €56 million decrease in share capital is the result of the cancellation of treasury shares acquired under the share repurchase program.

The €237 million increase in "Additional paid-in capital" is due to the share capital increase under the Group Employee Savings Plan.

The €244 million total decrease in "Additional paid-in capital" corresponds to the cancellation of the share premium on the treasury shares acquired

under the share repurchase program for €237 million, the Share Plans for €5 million, the €1 million provision to the reserve required by law and net issue costs for €1 million.

The €54 million decrease in Share Premiums (reduction of share capital) corresponds to the cancellation of the par value of the treasury shares acquired under the share repurchase program for €52 million and net issue costs for €1 million.

Dividends distributed to shareholders totaled €1,022 million and were deducted from net income for fiscal year 2024 and retained earnings for €647 million.

4.1 A Equity equivalents

(€ million)	Opening balance	Increase	Decrease	Closing balance
Proceeds from issues of equity equivalent securities	-	-	-	0
Subordinated loans	-	-	-	0
Other	3,600	1,350	850	4,100
TOTAL EQUITY EQUIVALENTS	3,600	1,350	850	4,100

The increase corresponds to the issue of deeply subordinated perpetual securities, in May 2025, for €500 million with a coupon of 4.371%, the first reset date for which is in August 2030. This is Veolia's first issue of green hybrid bonds.

The increase corresponds to the issue of deeply subordinated perpetual securities, in September 2025, for €850 million with a coupon of 4.322%, the first reset date for which is in January 2033.

The decrease corresponds to a reclassification as Loans and debts with credit institutions, performed on December 31, 2025, of the value of the deeply subordinated perpetual securities, as of December 30, 2025, the date on which Veolia expressed its intention to exercise its right to repurchase all the securities for €850 million, with an annual coupon of 2.25%, the first reset date for which is in April 2026.

4.2 Provisions for contingencies and losses

Movements in provisions for contingencies and losses

(€ million)	Opening balance after adjustments	Contributions	Charge	Write-backs used	Write-backs not used	Closing balance
Provision for foreign exchange losses	6	-	0	1	3	2
Provision for other contingencies	12	0	2	0	12	3
Provision for losses	15	0	36	5	8	37
TOTAL	33	1	38	5	23	43
Nature of charges and write-backs:						
Operating			36	5	9	
Financial			2	-	14	
Exceptional			-	-	-	
TOTAL			38	5	23	

4.3 Bond issues

(€ million)	Opening balance	Increase	Decrease	Foreign exchange translation	Closing balance
Other bond issues	15,270	1,500	1,336	-43	15,391
Accrued interest on other bond issues	203	256	203	-	256
TOTAL	15,473	1,756	1,539	-43	15,647

The €1.8 billion increase is due to:

- a new €850 million fixed-rate bond issue launched on June 17, 2025, maturity September 2032, with an annual coupon of 3.324%;
- a new €650 million fixed-rate bond issue launched on June 17, 2025, maturity June 2037, with an annual coupon of 3.795%.

The €1.5 billion decrease is due to:

- the maturity of the bonds convertible and/or exchangeable for new or existing shares (OCEANE) for €336 million, with a delivery settlement date of January 1, 2025;
- the maturity on April 3, 2025 of a euro-denominated bond line paying interest at 1% for an outstanding amount of €500 million;
- the maturity on September 10, 2025 of a euro-denominated bond line paying interest at 1.75% for an outstanding amount of €500 million.

4.4 Bank and other borrowings

Bank and other borrowings total €17 billion and break down as follows:

(€ million)	As of December 31, 2025	As of December 31, 2024
Current accounts with Group subsidiaries ⁽¹⁾	10,854	13,281
Treasury note outstandings	4,977	6,103
Tax group current accounts	30	19
Bank borrowings	850	0
Bank accounts in overdraft and short-term bank facilities	81	119
TOTAL	16,792	19,522

(1) The €2.4 billion decrease in current accounts is mainly due to Vigie Groupe's current account, down €1.3 billion, and Veolia Energie International's current account, down €0.7 billion.

4.5 Forward financial instruments – Liabilities

This item totals €270 million and includes:

- interest-rate derivative spreads: €6 million;
- foreign currency derivatives: €172 million;
- premium/discount: €92 million.

4.6 Tax and employee-related liabilities

Tax and employee-related liabilities total €127 million and mainly include:

- personnel costs – accrued expenses: €65 million;
- social welfare organizations: €43 million;
- value added tax: €12 million;
- French State - tax liabilities: €5 million;
- French State – accrued expenses: €2 million.

4.7 Deferred income

Deferred income totals €34 million and mainly concerns financial instruments:

- balancing payments on derivatives of €32 million;
- bond issue premiums of €1 million.

4.8 Accrued expenses

Accrued expenses total €613 million and primarily comprise the following items:

(€ million)	As of December 31, 2025	As of December 31, 2024
Accrued interest on bond issues	256	203
Purchase invoice accruals	145	187
Provisions for personnel costs	91	80
Accrued interest on current accounts	72	121
Accrued customer credit notes	15	26

Write-back of provisions for financial items, impairment	171	88	
Other financial income and expenses	949	1,279	
NET FINANCIAL INCOME	54	302	

Note 1: the change is mainly due to current account interest.

Note 2: charges to provisions and impairment in 2025 primarily break down as follows:

- a €320 million impairment charge on the equity investments of Veolia North America;
- an €83 million impairment charge on the equity investments of Campus Veolia Environnement.

6.2 Exceptional items

Exceptional items, representing a net expense of €32 million. The impacts of the reclassifications of the modernization of the financial statements are set out in Note 1.4 above.

(€ million)	Year ended December 31, 2025	Year ended December 31, 2024	Notes
Exceptional income	3	19	
Exceptional expense	-35	-46	Note 1
TOTAL	-32	-27	

Note 1: this item includes fixed compensation of €35 million paid to Lithuania.

6.3 Income tax and the consolidated tax group

Within the framework of a tax group agreement, Veolia Environnement forms a tax group with those subsidiaries at least 95% owned that have elected to adopt this regime. Veolia Environnement is liable for the full income tax charge due by the resulting tax group.

The income tax expense is allocated to the different entities comprising the tax group according to the "neutrality" method. Each subsidiary bears the tax charge to which it would have been liable if it were not a member of the tax group. The parent company records its own tax charge and the tax saving or additional charge resulting from application of the tax group regime.

The tax group election came into force on January 1, 2001 for a period of five years and benefits from tacit renewal failing explicit termination by Veolia Environnement at the end of the five-year period.

The application of the tax group regime in 2025 is reflected in the Veolia Environnement company financial statements by a tax saving in respect of the subsidiaries of €191 million.

A tax expense of €93 million corresponding to income tax and tax credits not offset against current income tax was also recognized.

The exceptional income tax levy on large companies resulted in an expense of €15 million being recognized in 2025.

The global minimum rate of 15% under the 2024 Finance Act and the transposition of the European Pillar 2 Directive resulted in a tax expense of €10 million being recognized in respect of fiscal year 2025.

6.4 Net income

Veolia Environnement reported net income of €134 million for fiscal year 2025.

Note 7 OTHER DISCLOSURES**7.1 Off-balance sheet commitments**

Commitments given by Veolia Environnement total €2.0 billion as of December 31, 2025, (including counter-guarantees) and primarily consist of financing guarantees and operational guarantees given on behalf of subsidiaries:

(€ million)	As of December 31, 2025	As of December 31, 2024	Notes
Commitments given			
Discounted notes not yet matured			
Endorsements and guarantees ⁽¹⁾	1,989	2,956	Note 1
Equipment finance lease commitments			
Real estate finance lease commitments			
Pension obligations and related benefits	37	46	Note 2
TOTAL	2,026	3,002	Note 3
Commitments received			
Endorsements and guarantees	2	-	

(1) Of which commitments given in respect of related companies: € 4.8 million;

Note 1 : Main endorsements and guarantees

The €1 billion decrease in commitments given breaks down as follows:

- a net decrease in commitments given of €746 million;
- a €204 million decrease related to foreign exchange impacts;
- a €17 million decrease in future rental payments;
- a €9 million decrease in pension obligations and related benefits. The commitment given takes into account the extension of the legal retirement age following the pension reform.

Veolia Environnement is required to grant the following types of endorsement and guarantee:

- Operational or operating guarantees of €1.6 billion.

These are commitments not relating to financing operations, required in respect of contracts and markets and generally in respect of the operations and activities of Group companies (bid bonds accompanying tender offers, completion or performance bonds given on the signature of contracts or concession arrangements and counter-guarantees granted by Veolia Environnement to insurance companies that issue bonds on

behalf of its subsidiaries). This type of guarantee also includes letters of credit delivered by financial institutions to Group creditors, customers and suppliers for their business requirements or to guarantee various commitments such as the payment of leases or reinsurance obligations.

- Financial guarantees of €0.4 billion.

These primarily relate to guarantees given to financial institutions in connection with the financial liabilities of subsidiaries, including project financing, and Veolia Environnement's joint and several commitments regarding divestments by subsidiaries or direct Veolia Environnement warranties on asset divestitures.

Warranties mainly included:

- warranties relating to guarantees (joint and several) covering obligations of US and Canadian subsidiaries under letters of credit granted by several banking institutions in the amount of €85.1 million;
- the warranty given under the trade receivables factoring program in France, the United Kingdom and the United States in the amount of €92.1 million.

Note 2 : Pension obligations and related benefits

Obligations net of plan assets break down as follows:

(€ million)	
Pension obligations pursuant to Title V of the Collective Agreement	24
Collective insurance contract in favour of Group executives (active and retired)	9
Insurance company contract in favour of Executive Committee members (retired)	4
TOTAL ⁽¹⁾	37

(1) Of which obligations for Executive Committee members as of December 31, 2025: €1 million.

The economic assumptions underlying the actuarial valuation of employee-related commitments as of December 31, 2025 are a discount rate of 3.50% and an inflation rate of 2.00%.

Note 3 : Other commitments given

In addition to commitments given of €2 billion, Veolia Environnement also granted commitments of an unlimited amount in respect of:

- completion or performance bonds;
- a sludge incineration plant construction contract and waste processing contracts in Hong Kong in the Water and Waste businesses;
- a Hong Kong landfill contract.

These commitments are limited to the duration of the related contracts and were approved in advance by the Board of Directors of Veolia Environnement.

7.2 Specific contractual commitments

The financial management of renewal expenses for installations provided by delegating authorities, for certain French subsidiaries, was mutualized and centralized until December 31, 2003 within Veolia Environnement and, partially, since January 1, 2004 within Veolia Eau – Compagnie Générale des Eaux.

Therefore, Veolia Environnement, as an active partner of certain subsidiaries of Veolia Eau – Compagnie Générale des Eaux, has undertaken to repay all renewal expenses resulting from contractual obligations to local authorities under public service delegation contracts. In return, the subsidiaries pay an indemnity in full and final settlement to Veolia Environnement, the amount of which is approved annually by the Supervisory Board of each subsidiary benefiting from this guarantee.

7.3 Derivative financial instruments and counterparty risk

Veolia Environnement is exposed to the following financial risks in the course of its business:

Market risk

■ Interest rate risk (interest rate hedges, cash flow hedges).

The financing structure of Veolia Environnement exposes it naturally to the risk of interest rate fluctuations. As such, floating-rate debt impacts future financial results in line with changes in interest rates. Veolia Environnement manages a fixed/floating rate position in each currency in order to limit the impact of interest rate fluctuations on its net income and to optimize the cost of debt. For this purpose, it uses interest rate swap and swaption instruments.

■ Foreign exchange risk (hedges of balance sheet foreign exchange exposure and overall foreign exchange risk exposure).

Foreign exchange risk is primarily managed using foreign-currency denominated financial assets and liabilities including foreign-currency denominated loans/borrowings and related hedges (e.g. currency swaps). With many offices worldwide, Veolia Environnement organizes financing in local currencies. In the case of inter-company financing, these credit lines can generate foreign exchange risk. To limit the

impact of this risk, Veolia Environnement has developed a policy which seeks to back foreign-currency financing and foreign currency derivatives with inter-company receivables denominated in the same currency.

Equity risk

As of December 31, 2025, Veolia Environnement held 10,438,730 treasury shares, of which 6,370,621 were allocated to external growth operations and 4,068,109 were acquired for allocation to employees under employee savings plans. As part of its cash management strategy, Veolia Environnement holds UCITS. These UCITS have the characteristics of monetary UCITS and are not subject to equity risk.

Liquidity risk

Liquidity management involves the pooling of financing in order to optimize liquidity and cash. Veolia Environnement secures financing on international bond markets, international private placement markets, the commercial paper market and the bank lending market.

Credit risk

Veolia Environnement is exposed to credit risk on the investment of its surplus cash and on its use of derivative instruments to manage interest rate and foreign exchange risk. Credit risk reflects the loss that Veolia Environnement may incur should a counterparty default on its contractual obligations. Veolia Environnement minimizes counterparty risk through internal control procedures limiting the choice of counterparties to leading banks and financial institutions. Veolia Environnement does not expect the default of any counterparties which could have a material impact on transaction positions or results.

As of December 31, 2025, the main derivative products held primarily comprised:

- interest rate swaps;
- trading swaps;
- cross-currency swaps;
- forward purchases of currency;
- forward sales of currency;
- hedging options.

The net carrying amount of derivatives at the reporting date is presented below:

(€ million)	Assets	Liabilities
Accrued interest on swaps	12	6
Foreign currency derivatives	232	172
Premium/discount ⁽¹⁾	36	91
Prepayments	16	-
Deferred income	-	32
TOTAL	296	302

(1) The premium/discount represents the difference between the spot rate and the forward rate of the instruments. It is amortized over the term of the financial instrument.

The fair value of derivatives at the reporting date is presented below:

(€ million)	Assets	Liabilities
Interest rate derivatives		
Hedging derivatives	-	271
Derivatives not qualifying for hedge accounting (trading)	-	-
Foreign currency derivatives		
Derivatives used in matching foreign exchange positions	124	138
Derivatives used in the overall foreign exchange position	80	70
Commodity derivatives		
Derivatives hedging fuel and energy	70	70
TOTAL	273	549

The notional amounts of interest rate swaps globally designated as interest rate hedges at the reporting date are presented below:

(€ million)		Foreign currency amount	€ equivalent
Swaps hedging debt			
Fixed-rate payer/floating-rate receiver swaps	EUR	250	250
Floating-rate payer/fixed-rate receiver swaps	EUR	5,100	5,100

TOTAL	10,899	10,895

7.4 Average workforce

	2025 Salaried employees	2024 Salaried employees
Executives	1,334	1,175
Supervisors and technicians	124	59
Administrative employees	95	86
Workers	-	-
TOTAL	1,553	1,320

The average workforce as defined by Article D.123-200 of the French Commercial Code (French Chart of Accounts Articles 832-19, 833-19, 834-14 and 835-14) is now disclosed. The average number of salaried employees is equal to the arithmetical average of the number of employees at the end of each quarter of the calendar year, holding an employment contract with the Company.

7.5 Management compensation

(in euros)	Amount
Compensation granted to members of management bodies	4,345,636

The above amount only includes compensation borne by Veolia Environnement.

7.6 Deferred tax

Deferred tax liabilities (€ million)	Amount
Tax-driven provisions	
Accelerated depreciation	7
Other	
Expenses deducted for tax purposes but deferred for accounting purposes	37
Unrealized foreign exchange losses	888
Change in value of treasury instruments - Assets	1,983
TOTAL	2,916
Deferred tax assets (€ million)	Amount
Provisions not deductible in the year recorded	
Other non-deductible provisions	121
Other	
Taxed income not recognized	35
Difference between the net carrying amount/tax value of treasury shares	19
Unrealized foreign exchange gains	275
Change in value of treasury instruments - Liabilities	2,246
TOTAL	2,696
Tax losses carried forward	3,384
Theoretical Deferred Tax Effect (€ million)	Amount
TOTAL	817

If the Company were taxed separately, the impact of these timing differences on the financial statements would generate a theoretical net tax receivable of €817 million (income tax rate hypothesis for the calculation of the deferred tax position: 25.83%).

7.7 Audit fees

Audit fees billed in respect of the statutory audit of the accounts and services falling within the scope of related diligence procedures are presented in the Veolia Environnement annual financial report (see Chapter 6, Section 6.1.6, Note 16 above).

7.8 Share-based compensation

2025 Employee savings plan

Veolia Environnement regularly sets up, through Group Savings Plans (GSP), in France and internationally, standard and leveraged savings plans which enable a large number of employees of Veolia Environnement and its subsidiaries to subscribe for Veolia Environnement shares. Shares subscribed by employees under these plans are subject to certain restrictions regarding their sale or transfer.

In 2025, Veolia Environnement proposed a new Group employee share ownership transaction, rolled-out across 56 countries.

Under this transaction, shares were subscribed with a 15% discount on the average closing price of the share during the twenty trading days preceding the date the subscription price was set by the Chairman and Chief Executive Officer. The subscription price was set at €25.97.

Under the so-called secure format, employees benefit from:

- a gross contribution from the Group equal to 100% of the employee's investment up to a maximum of €300;
- a leveraged system supplementing their personal investment in the event of an increase in the share price.

This personal investment and the net contribution from the Group are guaranteed in the event of a fall in the share price and receive a guaranteed minimum return.

A financial institution is appointed by Veolia Environnement to hedge the transaction.

This transaction is valued at €339 million, representing 13,065,890 shares, including 11,289,176 new shares issued through a share capital increase on September 12, 2025.

At the same time, Veolia proceeded with a capital reduction through the cancellation of 11,289,176 treasury shares acquired under the share repurchase program.

The total share capital remains unchanged after these transactions.

In 2025, a contribution expense of €20 million was recognized in respect of the savings plan and rebilled to relevant Group subsidiaries.

2025 Performance share grant plan

In 2025, the Group granted 1,176,353 performance shares (PS) to Group employees and executives, subject to the beneficiary's presence in the Group on May 7, 2028 and performance conditions based on the following criteria:

- financial criteria (average increase in net income (loss) before non-recurring items attributable to owners of the Company and relative performance of the total shareholder return (TSR) of the Veolia Environnement share compared with the Stoxx 600 Utilities (Price) SX6P index);
- non-financial quantitative criteria relating to the Company's Purpose.

A net charge to the provision for social security contributions in respect of the performance share grant plan was recorded in operating income in the amount of €1.4 million.

Plans implemented before 2025

Veolia Environnement implemented the following plans in previous years:

- 2024 Employee Savings Plan: in 2024, the Group proposed a Veolia Environnement employee share ownership transaction, rolled-out across 54 countries. This plan expired on December 31, 2024;
- 2023 and 2024 Performance Share Grant Plans: the Group set-up performance share grant plans (PSP) in 2023 and 2024 subject to the beneficiary's presence in the Group at the vesting dates on May 3, 2026 and May 14, 2027, respectively, and performance conditions. A net charge to the provision for social security contributions in respect of the performance share grant plans was recorded in operating income for the year, in the amount of €3 million and €2.4 million, respectively;
- end of the 2022 free share grant plan: the Group had set up a free share grant plan, subject to the beneficiary's presence in the Group on June 15, 2025. The plan expired and Veolia performed a share capital increase in the first half of 2025. The net social security contribution expense for the year is €0.5 million;
- settlement of the 2022 Performance Share Grant Plan: the Group set-up a performance share grant plan (PSP) in 2022 subject to the beneficiary's presence in the Group at the vesting date on August 2, 2025 and a performance condition. The plan expired and the Company performed a share capital increase in the second half of 2025. The net social security contribution expense for the year is -€3.1 million.

7.9 Related-party transactions

Veolia Environnement had no transactions with related-parties in 2025.

7.10 Subsequent events

Issue of a bond line

On January 6, 2026, Veolia made a bond investment with three new issues for a total of €2.5 billion:

- for €950 million at five years with a coupon of 3.209%,
- for €900 million at eight years with a coupon of 3.639%,
- and for €650 million at twelve years with a coupon of 4.052%.

7.11 Subsidiaries and equity investments

Investments acquired in 2025, within the meaning of Article L. 233-6 of the French Commercial Code (crossing of investment thresholds laid down by law) concern:

- Vigie 58 AS at 100% (registered office located in France);
- Vigie 59 AS at 100% (registered office located in France).

6.2.6 STATUTORY AUDITORS' REPORT ON THE ANNUAL FINANCIAL STATEMENTS

This is a translation into English of the statutory auditors' report on the financial statements of the Company issued in French and it is provided solely for the convenience of English speaking users.

This statutory auditors' report includes information required by European regulation and French law, such as information about the appointment of the Statutory Auditors or verification of the management report and other documents provided to the shareholders. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

Fiscal year ended December 31, 2025

To the General Meeting of Veolia Environnement,

Opinion

In compliance with the engagement entrusted to us by your General Meeting, we have audited the accompanying financial statements of VEOLIA ENVIRONNEMENT for the year ended December 31, 2025.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the Company as of the end of the year in question and of the results of its operations for said year in accordance with French accounting principles.

The audit opinion expressed above is consistent with our report to the Audit Committee.

Basis for opinion

Audit framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the "Statutory Auditors' Responsibilities for the Audit of the Financial Statements" section of our report.

Independence

We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (code de commerce) and the French Code of Ethics (code de déontologie) for statutory auditors, for the period from January 1, 2025 to the date of our report, and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014.

Emphasis of Matter

We draw your attention to the impacts of the first-time application of ANC Regulation No. 2022-06 set out in the notes to the financial statements. Our opinion is not modified in respect of this matter.

Justification of Assessments- Key Audit Matters

In accordance with the requirements of Articles L.821-53 and R. 821-180 of the French Commercial Code relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the financial statements as a whole, approved in the conditions mentioned above, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the financial statements.

Valuation of equity investments and loans to equity investments

Risk identified

As of December 31, 2025, equity investments and loans to equity investments are recorded in the balance sheet at a net carrying amount of €37,425 million and represent 68% of total assets. At their date of entry into Company assets, equity investments are recorded at acquisition cost.

As disclosed in Note 2.2.1 to the financial statements, the value in use of equity investments at year-end is determined by your Company based on criteria encompassing profitability, growth perspectives, the net assets of the Company held and the stock market value of the securities acquired, where applicable. If the value in use of investments is lower than their net carrying amount, an impairment is recognized in the amount of the difference.

Given the amount of equity investments and loans to equity investments in the balance sheet and the sensitivity to changes in assumptions used to determine their value in use, we considered the measurement of the of equity investments and loans to equity investments to be a key audit matter.

Our response

Regarding the methodology for determining the use values applied by your company according to the equity securities concerned, our work consisted mainly of assessing its compliance with the accounting standards in force and its consistency with the previous year.

Regarding the implementation of this methodology, our work has consisted in particular of:

- carry out a critical examination of the modalities of implementation of this methodology;
- Assess the consistency of cash flow projections with your company's latest estimates in the context of the budget process with respect to the economic and financial context in which the entities concerned operate. We also compared the forecasts of the past periods with the corresponding realizations;
- assess the criteria based on profitability and the development prospects chosen.

In addition to assessing the use values of equity securities, our work also consisted of:

- assess the recoverability of the loans to equity investments in the light of the analyses carried out on the equity investments;
- control the recognition of a provision for risks in cases where your company is committed to bearing the losses of a subsidiary with negative equity;
- assess the information relating to these equity investments and the loans to equity investments, presented in notes 2.2.1, 3.1 and 7.11 to the notes to the annual accounts.

Specific verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations.

Information given in the management report and in the other documents with respect to the financial position and the financial statements provided to shareholders

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the management report of the Board of Directors and in the other documents with respect to the financial position and the financial statements provided to shareholders.

We attest the fair presentation and the consistency with the financial statements of the information relating to payment deadlines mentioned in Article D.441-6 of the French Commercial Code (code de commerce).

Report on corporate governance

We attest that the Board of Directors report on corporate governance sets out the information required by Article L. 225-37-4, L.22-10-9 and L. 22-10-10 the French Commercial Code.

Concerning the information given in accordance with the requirements of Article L. 22-10-9 of the French Commercial Code (code de commerce) relating to remunerations and benefits received by or awarded to the directors and any other commitments made in their favour, we have verified its consistency with the financial statements, or with the underlying information used to prepare these financial statements and, where applicable, with the information obtained by your Company from controlled enterprises included in the scope of consolidation. Based on these procedures, we attest the accuracy and fair presentation of this information.

Other Information

In accordance with French law, we have verified that the required information concerning the purchase of investments and controlling interests and the identity of the shareholders and holders of the voting rights has been properly disclosed in the management report.

Other Legal and Regulatory Verifications or Information

Format of presentation of the financial statements intended to be included in the annual financial report

We have also verified, in accordance with the professional standard applicable in France relating to the procedures performed by the statutory auditor relating to the annual and consolidated financial statements presented in the European single electronic format, that the presentation of the financial statements intended to be included in the annual financial report mentioned in Article L. 451-1-2, I of the French Monetary and Financial Code (code monétaire et financier), prepared under the responsibility of the Chief Executive Officer complies with the single electronic format defined in the European Delegated Regulation No 2019/815 of 17 December 2018.

Based on the work we have performed, we conclude that the presentation of the financial statements intended to be included in the annual financial report complies, in all material respects, with the European single electronic format.

We have no responsibility to verify that the financial statements that will ultimately be included by your company in the annual financial report filed with the AMF are in agreement with those on which we have performed our work.

Appointment of the Statutory Auditors

We were appointed as statutory auditors of VEOLIA ENVIRONNEMENT by the General Meetings of April 25, 2025 for Deloitte & Associés and December 23, 1999 ERNST & YOUNG et Autres.

As of December 31, 2025, Deloitte & Associés was in the first year of engagement and ERNST & YOUNG et Autres in the twenty-seventh year of total uninterrupted engagement, including twenty-six years since securities of the Company were admitted to trading on a regulated market.

Responsibilities of management and those charged with governance for the financial statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with French accounting principles, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The financial statements were approved by the Board of Directors.

Statutory Auditors' Responsibilities for the Audit of the Financial Statements

Objectives and audit approach

Our role is to issue a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As specified in Article L.821-55 of the French Commercial Code, our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the financial statements;
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein;
- Evaluates the overall presentation of the financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

Report to the Audit Committee

We submit a report to the Audit Committee which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the financial statements of the current period and which are therefore the key audit matters that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) N° 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L.821-27 to L.821-34 of the French Commercial Code and in the French Code of Ethics (code de déontologie) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

Following the delisting by Veolia Environnement of its American Depositary Receipts (ADRs) from the New York Stock Exchange (NYSE), the final listing of the ADRs on the NYSE occurred on December 22, 2014. Since this date, the ADRs are traded on the US over-the-counter market under the code VEOEY.

As of the date of filing of this Universal Registration Document, the ADR program is managed by Bank of New York Mellon as a sponsored level 1 facility since March 27, 2023.

7.1.3 PURCHASE OF TREASURY SHARES BY THE COMPANY

7.1.3.1 Repurchase plan in effect as of the date of filing of this Universal Registration Document (plan authorized by the Combined General Meeting of April 24, 2025)

During the Combined General Meeting of April 24, 2025, the Company's shareholders authorized a share repurchase program that allows the Company to purchase, sell or transfer its shares at any time, except during a takeover bid, within the limits authorized by provisions set forth by the law and regulations in force, and by any means, on regulated markets, on multilateral trading systems, with systematic internalizers or over the counter, including through block sales or purchases (with no limit on the proportion of the share repurchase program that may be implemented by this method), by public offers to purchase or exchange shares, or through the use of options or other forward financial instruments traded on regulated markets, multilateral trading systems, with systematic internalizers or over-the-counter or through delivery of shares following the issue of securities granting access to the Company's share capital by conversion, exchange, redemption, exercise of a warrant or otherwise. Transactions may be conducted either directly or indirectly through an investment services provider.

Shares may be purchased such that the number of shares purchased by the Company throughout the term of the repurchase program does not exceed at any time whatsoever 10% of the shares comprising the Company's share capital, and such that the number of shares that the Company holds at any given time does not exceed 10% of the shares comprising the Company's share capital.

This authorization allows the Company to trade in its own shares with the following objectives: (i) implementing all Company stock option plans or any similar plan; (ii) granting or selling shares to employees in respect of their profit-sharing plan or the implementation of any company or Group savings plan (or equivalent plan); (iii) granting free shares; (iv) delivering shares on the exercise of rights attached to securities granting access to the share capital by redemption, conversion, exchange, presentation of a warrant or in any other way; (v) stimulating the secondary market for, or the liquidity of, Veolia Environnement shares through an investment services provider, as part of a liquidity agreement that complies with the Ethics Charter recognized by the French Financial Markets Authority; or (vi) cancelling all or some of the shares thus repurchased.

The General Meeting of April 24, 2025 set the maximum share purchase price at €40 per share and set the maximum amount that the Company

may allocate to the share repurchase program at €1 billion. It granted full powers to the Board of Directors, with the option of sub-delegation under the conditions laid down by law, to decide on and implement this authorization.

The authorization described above, which is in force as of the date of filing of this Universal Registration Document, will expire no later than 18 months from the date of the Combined General Meeting of April 24, 2025, i.e., on October 24, 2026, unless a new plan is authorized at the next General Shareholders' Meeting.

7.1.3.2 Summary of transactions completed by Veolia Environnement in its own securities in 2025

Percentage of the Company's share capital held as treasury shares as of December 31, 2025	1.41
Number of treasury shares held as of December 31, 2025	10,438,730
Carrying value of the portfolio as of December 31, 2025* (in euros)	308,235,943
Market value of the portfolio as of December 31, 2025** (in euros)	306,646,468
Number of shares cancelled over the past 24 months	11,289,176

* Carrying value excluding provisions.

** Based on the closing price as of December 31, 2025 (€29.38).

During the financial year, the authorization granted to the Board of Directors was notably used to carry out a share repurchase by means of a forward contract entered into with an investment service provider of up to 13,141,366 shares, with a view to (i) cancelling them for an amount equal to the share capital increase completed under the Sequoia 2025 employee share ownership plan; and (ii) divesting them to cover the secured plan proposed in certain countries.

On May 28, 2019, Veolia Environnement entrusted the implementation of a new liquidity agreement to Kepler Cheuvreux, commencing June 1, 2019 for an initial period ending December 31, 2019 and automatically renewable for successive 12-month periods (unless terminated). An amount of €20 million was allocated to the operation of the new liquidity account, excluding all securities.

The table below details transactions by the Company in treasury shares during fiscal year 2025 under the program authorized by the Combined General Meetings of April 25, 2024 and April 24, 2025:

	Cumulated gross flows as of December 31, 2025		Open positions as of December 31, 2025			
	Purchases ⁽¹⁾	Sales/Transfers ⁽²⁾	Open buy positions		Open sell positions	
			Call options purchased	Forward purchases	Call options sold	Forward sales
Number of shares	28,192,754	17,116,228	N/A	N/A	N/A	N/A
Average transaction price (in euros)	30.07	29.28	N/A	N/A	N/A	N/A
Average strike price (in euros)	N/A	N/A	N/A	N/A	N/A	N/A
AMOUNT (IN EUROS)	847,822,348	501,161,776	N/A	N/A	N/A	N/A

N/A: not applicable.

(1) Purchases performed under the liquidity agreement.

(2) Sales made under the liquidity agreement of the Share Incentive Plan UK.

7.1.3.3 Objectives of transactions carried out in 2025 and allocation of treasury shares held

Pursuant to the shareholders' authorizations in the 26th resolution of the Combined General Meeting of April 25, 2024, the 18th resolution of the Combined General Meeting of April 24, 2025 and the decision of the Board of Directors of May 6, 2025, the Chief Executive Officer decided, on September 12, 2025, to reduce the share capital by cancelling 11,289,176 treasury shares in order to neutralize the dilutive effect of the Sequoia 2025 employee share ownership plan.

As of December 31, 2025, Veolia Environnement held a total of 10,438,730 treasury shares, representing 1.41% of the Company's share capital and acquired at an average price of €29.53. No shares were held directly or indirectly by Veolia Environnement subsidiaries.

On this date, the portfolio of treasury shares was allocated as follows:

- 3,760,577 shares (representing 0.51% of the share capital) were allocated to cover stock option programs or other share grant programs for Group employees;
- 6,370,621 shares (representing 0.86% of the share capital) were allocated to external growth transactions.

As of December 31, 2025, Veolia Environnement held 307,532 shares under the current liquidity agreement.

7.1.3.4 Description of the program submitted to the Combined General Meeting of April 23, 2026 for authorization

The share repurchase authorization described in Section 7.1.3.1 above will expire on October 24, 2026 at the latest, unless the Combined General Meeting of April 23, 2026 adopts the resolution presented in accordance with the provisions of Articles L. 22-10-62 et seq. of the French Commercial Code and Article L. 225-210 et seq. of the same code, set out below.

This resolution, in consideration of the report by the Board of Directors, authorizes the Company to implement a new program to repurchase shares under the following conditions:

- This authorization would be intended to allow the Company to trade in its own shares with the following objectives: (i) implementing all Company stock option plans within the scope of the provisions of Articles L. 225-177 et seq. and L. 22-10-56 et seq. of the French Commercial Code or any similar plan; (ii) granting or selling shares to employees in respect of their profit-sharing plan or the implementation of any company or group savings plan (or equivalent plan) under the conditions provided for by law and in particular Articles L. 3332-1 et seq. of the French Labor Code; (iii) granting free shares under the provisions of Articles L. 225-197-1 et seq., L. 22-10-59 and L. 22-10-60 of the French Commercial Code; (iv) in general, honoring commitments relating to stock option plans or other plans involving shares awarded to employees of the issuer or associates or to allow the coverage of an stock ownership plan structured by a banking establishment, or by an entity controlled by such an establishment within the meaning of Article L. 233-3 of the French Commercial Code, occurring at the request of the Company; (v) delivering shares on the exercise of rights attached to securities granting access to the share capital by redemption, conversion, exchange, presentation of a warrant, or in any other way; (vi) cancelling all or some of the securities thus repurchased, pursuant to the 26th resolution adopted by the Combined General Meeting of April 25, 2024 or any resolution of the same nature that may follow this resolution during the period of validity of the present authorization; (vii) delivering shares (by way of exchange, payment or other) within the scope of external growth transactions, mergers, spin-offs or contributions; (viii) stimulating the secondary market for Veolia Environnement shares through an investment services provider, as part of a liquidity agreement that complies with market practices accepted by the French Financial Markets Authority (AMF);

- This program is also intended to allow the use of any market practice that might be accepted by the French Financial Markets Authority (AMF), and more generally, the completion of any other transaction in accordance with the regulations in force. In such a case, the Company will inform its shareholders by way of a press release;

- Purchases of the Company's shares may relate to a number of shares such that:

- at the date of each repurchase, the total number of shares purchased by the Company since the beginning of the share repurchase program (including the current repurchase) does not exceed 10% of the shares comprising the Company's share capital at that date (this percentage will apply to the share capital, as adjusted in light of transactions affecting it after this General Shareholders' Meeting), i.e. 74,172,343 shares as of the date of filing of this Universal Registration Document, it being specified that (i) the number of shares purchased for retention and subsequent delivery as part of a merger, spin-off or contribution may not exceed 5% of the share capital; and (ii) when shares are bought to increase liquidity under the conditions defined by the French Financial Markets Authority's General Regulations, the total number of shares taken into account for the calculation of the aforementioned limit of 10% is the number of shares purchased, after deduction of the number of shares sold during the period of the authorization,

- the number of shares that the Company holds at any given time whatsoever does not exceed 10% of the shares comprising the Company's share capital on the date in question;

- Shares may be purchased, sold or transferred at any time, within the limits authorized by prevailing legal and regulatory provisions, except during a takeover bid for the Company's shares, and by any means, particularly on regulated markets, multilateral trading systems, with systematic internalizers or over-the-counter, including by block purchases or sales, by public offers to purchase or exchange shares, or through the use of options or other forward financial instruments traded on regulated markets, multilateral trading systems, with systematic internalizers or over the counter or through delivery of shares following the issue of securities granting access to the Company's share capital by conversion, exchange, redemption, exercise of a warrant or otherwise. Transactions may be conducted either directly or indirectly through an investment services provider or by any other means (with no limit on the proportion of the share repurchase program that may be implemented by any of these methods);

- The maximum purchase price of the shares under this resolution will be €44 per share (or the equivalent of this amount on the same date in any other currency); this maximum price is only applicable to acquisitions decided as from the date of the Combined General Meeting of April 23, 2026 and not to forward transactions concluded pursuant to an authorization granted by a previous General Shareholders' Meeting that provides for acquisitions of shares subsequent to the date of this meeting.

In the event of a change in the par value of shares, share capital increase via capitalization of reserves, grant of free shares, division or regrouping of securities, distribution of reserves or of any other asset, redemption of capital or any other transaction concerning the share capital or shareholders' equity, the General Shareholders' Meeting delegates to the Board of Directors the power to adjust the maximum aforementioned purchase price in order to take account of the impact on the share value of these transactions.

The total amount allocated to the share repurchase program authorized above may not exceed €1 billion.

This authorization would, as from the date of the Combined General Meeting of April 23, 2026, cancel any as yet unused portion of any prior authorization granted to the Board of Directors to trade in the Company's shares. This authorization is granted for a period of 18 months from the date of this Combined General Meeting.

The General Shareholders' Meeting would grant full powers to the Board of Directors, including the option of sub-delegation under the conditions provided for by law, to implement this authorization, to specify, if necessary, the terms and conditions thereof, to carry out the repurchase program, and, in particular, to place all stock market orders, enter into all agreements, allocate or reallocate the shares acquired to the desired objectives under the applicable statutory and regulatory provisions, to

determine the terms and conditions under which, if applicable, the rights of holders of securities or other rights granting access to the share capital will be protected, in compliance with legal and regulatory provisions and, where applicable, contractual provisions stipulating other types of adjustment, make all declarations to the French Financial Markets Authority and to all competent authorities, carry out all other formalities and, in general, do whatever is necessary.

7.1.4 AUTHORIZED BUT UNISSUED SHARES

7.1.4.1 Authorizations adopted by the Combined General Meeting of April 25, 2024 ⁽¹⁾

Type of authorization	Securities/transactions concerned	Term of authorization and expiry date	Upper limit on the use of the authorization (in € and/or as a percentage)	Use in 2025
Share issues				
	Issuances with preferential subscription rights (PSR)* Issuance of all types of securities Except during a public offering period (Resolution 17)	26 months June 25, 2026	30% of the share capital as of the date of the General Meeting, i.e. €1,088,117,500 (par value)(counting towards the overall maximum par value amount of €1,088,117,500, hereinafter the overall cap)	None
	Issuances with no preferential subscription rights (PSR)* Issuance of all types of securities by public offer – mandatory priority subscription period Except during a public offering period (Resolution 18)	26 months June 25, 2026	10% of the share capital as of the date of the General Meeting, i.e. €362,705,833 (par value)(counting towards the overall cap)	None
	Issuances with no preferential subscription rights (PSR)* Issuance of all types of securities, by way of private placement Except during a public offering period (Resolution 19)	26 months June 25, 2026	10% of the share capital as of the date of the General Meeting, i.e. €362,705,833 (par value) (counting towards the par value upper limit of €362,705,833 for share capital increases without PSR and towards the overall cap)	None
	Issuances of securities as payment for contributions in kind* Except during a public offering period (Resolution 20)	26 months June 25, 2026	10% of the share capital as of the date of the General Meeting, i.e. €362,705,833 (par value) (counting towards the par value upper limit of €362,705,833 for share capital increases without PSR and towards the overall cap)	None
	Increase in the number of securities in the event of share capital increases with or without preferential subscription rights (green shoe option)* Except during a public offering period (Resolution 21)	26 months June 25, 2026	Extension by no more than 15% of the share capital increase performed with or without PSR (additional issuance counting towards the upper limit of the relevant resolution with or without PSR and towards the overall cap, and where applicable, towards the par value upper limit of €362,705,833 for share capital increases without PSR)	None
	Increase of share capital through the incorporation of premiums, reserves, earnings or other* Except during a public offering period (Resolution 22)	26 months June 25, 2026	€400 million (par value) representing approximately 11% of the share capital as of the date of the General Meeting (counting towards the overall cap)	None
Share capital reduction by cancellation of shares				
	Cancellation of treasury shares (Resolution 26)	26 months June 25, 2026	10% of the share capital within any 24 month period	None

(1) Only authorizations still in effect at the date of this Document are listed.

* The total par value amount of share capital increases that may be carried out pursuant to this resolution will count towards the overall cap of 30% of the share capital on the day of the Shareholders' Meeting, i.e. €1,088,117,500 (nominal), set forth in the 17th resolution of the Combined General Meeting of April 25, 2024.

7.1.4.2 Authorizations adopted by the Combined General Meeting of April 24, 2025 ⁽¹⁾

Type of authorization	Securities/transactions concerned	Term of authorization and expiry date	Upper limit on the use of the authorization (in € and/or as a percentage)	Use in 2025
Share repurchases				
	Share repurchase program <i>Except during a public offer period</i> (Resolution 18)	18 months October 24, 2026	40 euros per share, up to a limit of 74,065,260 shares and €1 billion; the Company may not hold more than 10% of its share capital	Treasury shares As of December 31, 2025, the Company held 10,438,730 shares, valued on the basis of the closing price as of December 31, 2025 (€29.38), representing a market value of €306,646,468. Movements 28,192,754 shares purchased and 17,116,228 shares sold. During the financial year, the authorization granted to the Board of Directors was notably used to carry out a share repurchase by means of a forward contract entered into with an investment service provider of up to 13,141,366 shares, with a view to (i) canceling them for an amount equal to the share capital increase completed under the Sequoia 2025 employee share ownership plan; and (ii) divesting them to cover the secured plan proposed in certain countries. As of December 31, 2025, the Company held 307,532 shares under the current liquidity agreement (see Section 7.1.3 above)
Share issues				
	Issuances reserved for members of employee saving plans with cancellation of preferential subscription rights* Share capital increase by issuing shares or securities granting access to the Company's share capital (Resolution 19)	26 months June 24, 2027	2% of the share capital as of the date of the General Meeting (counting towards the overall cap)	Capital increase reserved for employees (employee saving plan): issue on September 12, 2025 of 11,289,176 new shares, i.e. approximately 1.52% of the share capital at that date
	Issuances reserved for employees with cancellation of preferential subscription rights** Share capital increase reserved for a category of beneficiaries (Resolution 20)	18 months October 24, 2026	0.6% of the share capital as of the date of the General Meeting (counting towards the overall cap)	None
	Authorization to the Board of Directors to grant free shares, existing or to be issued, to employees of the Group and corporate officers of the Company, subject to performance conditions, with waiver by shareholders of their preferential subscription rights (Resolution 21)	26 months June 24, 2027	0.35% of the share capital as of the date of the General Meeting	At its meeting of May 6, 2025, the Board of Directors decided to grant 1,147,326 performance shares to approximately 580 beneficiaries, i.e. approximately 0.2% of the share capital at that date.

(1) Only authorizations still in effect at the date of this Document are listed.

* The total par value amount of share capital increases that may be carried out pursuant to this resolution will count towards the overall cap of €1,088,117,500 set forth in the 17th resolution presented to the Combined General Meeting of April 25, 2024.

** Share capital increase reserved for (i) employees and corporate officers of affiliated companies as provided under Article L. 225-180 of the French Commercial Code and Articles L. 3341-1 and L. 3344-2 of the French Labor Code and/or (ii) share ownership funds (UCITS or similar) invested in the Company's shares and whose share capital is held by the employees and corporate officers referred to in (i), and/or (iii) any financial institution (or subsidiary of such an institution) acting at the request of Veolia Environnement to set up a structured offering of shares to employees and corporate officers of affiliated companies having their registered office in countries where, for regulatory reasons or otherwise, employees may not participate in the usual employee shareholding mechanisms (issues reserved for employees who are members of savings plans).

	Increase of share capital through the incorporation of premiums, reserves, earnings or other* <i>Except during a public offering period</i> (Resolution 21)	26 months June 23, 2028	€400 million (par value) representing approximately 11% of the share capital as of the date of the General Meeting (counting toward the overall cap)
Share issues reserved for Group employees and executives			
	Issuances reserved for members of employee saving plans with cancellation of preferential subscription rights* Share capital increase by issuing shares or securities granting access to the Company's share capital (Resolution 22)	26 months June 23, 2028	2% of the share capital as of the date of the General Meeting (counting toward the overall cap)
	Issuances reserved for employees with cancellation of preferential subscription rights** Share capital increase reserved for a category of beneficiaries (Resolution 23)	18 months October 23, 2027	0.6% of the share capital as of the date of the General Meeting (counting toward the overall cap)
	Authorization to the Board of Directors to grant free shares, existing or to be issued, to employees of the Group and corporate officers of the Company, subject to performance conditions, with waiver by shareholders of their preferential subscription rights (Resolution 24)	26 months June 23, 2028	0.35% of the share capital as of the date of the General Meeting
Share capital reduction by cancellation of shares			
	Cancellation of treasury shares (Resolution 25)	26 months June 23, 2028	10% of the share capital within any 24-month period

* The total par value amount of share capital increases that may be carried out pursuant to this resolution will count toward the overall cap of €1,112,585,155 set forth in the 15th resolution presented to the Combined General Meeting of April 23, 2026.

** Share capital increase reserved for (i) employees and corporate officers of affiliated companies as provided under Article L. 225-180 of the French Commercial Code and Articles L. 3341-1 and L. 3344-2 of the French Labor Code and/or (ii) share ownership funds (UCITS or similar) invested in the Company's shares and whose share capital is held by the employees and corporate officers referred to in (i), and/or (iii) any financial institution (or subsidiary of such an institution) acting at the request of Veolia Environnement to set up a structured offering of shares to employees and corporate officers of affiliated companies having their registered office in countries where, for regulatory reasons or otherwise, employees may not participate in the usual employee shareholding mechanisms (issues reserved for employees who are members of savings plans).

7.1.5 OTHER SECURITIES GRANTING ACCESS TO THE SHARE CAPITAL

Potential dilutive effect of bonds convertible into and/or exchangeable for new and/or existing shares

See Section 7.1.7 below.

Potential dilutive effect of performance shares

Within the framework of the Group compensation policy and pursuant to the authorization granted by the Company's Extraordinary General Meeting of April 27, 2023, the Board of Directors decided on May 3, 2023, at the recommendation of the Compensation Committee, to grant 1,006,109 performance shares, representing approximately 0.14% of the share capital at this date, to around 510 beneficiaries.

Furthermore, pursuant to the authorization granted by the Company's Extraordinary General Meeting of April 25, 2024, the Board of Directors decided on May 13, 2024, at the recommendation of the Compensation

Committee, to grant 1,082,914 performance shares, representing approximately 0.15% of the share capital at this date, to around 550 beneficiaries.

Finally, pursuant to the authorization granted by the Company's Extraordinary General Meeting of April 24, 2025, the Board of Directors decided on May 6, 2025, at the recommendation of the Compensation Committee, to grant 1,176,353 performance shares, representing approximately 0.16% of the share capital at this date, to around 540 beneficiaries.

The scheduled issue date is May 2026 for the 2023 performance shares, May 2027 for the 2024 performance shares and May 2028 for the 2025 performance shares. If all these shares were issued, this would represent a dilution of 0.44%, based on 741,723,437 shares outstanding as of December 31, 2025.

See Chapter 3, Section 3.4.3.1 above.

7.1.6 CHANGES IN SHARE CAPITAL OVER THE PAST FIVE FISCAL YEARS

The table below shows the changes in the Veolia Environnement share capital since the start of fiscal year 2021:

Meeting date	Transaction	Transaction date	Number of shares issued	Par value of the shares (in euros)	Par value amount of the share capital increase (in euros)	Additional paid-in capital (in euros)	Total share capital (in euros)	Total number of shares
04/19/2018	Share capital increase following the vesting of 700 free shares to executives and high potential employees of the Group	05/03/2021 (recorded by the Chairman and Chief Executive Officer)	971,827	5	4,859,135	-	2,897,915,945	579,583,189
04/22/2021	Share capital increase with preferential subscription rights in the context of the financing of the Public Tender Offer by the Company for Suez shares	10/08/2021 (recorded by the Chairman and Chief Executive Officer)	110,396,796	5	551,983,980	1,954,023,289	3,449,829,925	689,979,985
04/22/2021	Share capital increase reserved for employees (Group savings plan)	12/08/2021 (recorded by the Chairman and Chief Executive Officer)	9,745,281	5	48,726,405	167,618,833	3,498,626,330	699,725,266
04/18/2019	Share capital increase following the vesting of free shares to 450 employees	05/02/2022 (recorded by the Chairman and Chief Executive Officer)	846,450	5	4,232,250	-	3,502,858,580	700,571,716
06/15/2022	Share capital increase reserved for employees (Group savings plan)	12/14/2022 (recorded by the Chief Executive Officer)	14,002,651	5	70,013,255	173,632,872.40	3,572,871,835	714,574,367
04/22/2020	Share capital increase following the vesting of free shares to 450 employees	05/09/2023 (recorded by the Chief Executive Officer)	809,508	5	4,047,540	-	3,576,919,375	715,383,875
04/27/2023	Share capital increase reserved for employees (Group savings plan)	12/13/2023 (recorded by the Chief Executive Officer)	10,027,792	5	50,138,960	171,776,076.96	3,627,058,335	725,411,667
04/22/2021	Share capital increase following the vesting of free shares to 450 employees	05/06/2024 (recorded by the Chief Executive Officer)	736,847	5	3,684,235	-	3,630,742,570	726,148,514
04/25/2024	Share capital increase reserved for employees (Group savings plan)	09/13/2024 (recorded by the Chief Executive Officer)	14,504,094	5	72,520,470	283,409,996.76	3,703,263,040	740,652,608
06/15/2022	Share capital increase following the vesting of free shares to 20 employees	06/16/2025 (recorded by the Chief Executive Officer)	142,200	5	711,000	-	3,703,974,040	740,794,808
06/15/2022	Share capital increase following the vesting of free shares to 550 employees	08/04/2025 (recorded by the Chief Executive Officer)	928,629	5	4,643,145	-	3,708,617,185	741,723,437
04/24/2025	Share capital increase reserved for employees (Group savings plan)	09/12/2025 (recorded by the Chief Executive Officer)	11,289,176	5	56,445,880	236,734,020.72	3,765,063,065	753,012,613
04/24/2025	Share capital decrease by cancellation of treasury shares	09/12/2025 (recorded by the Chief Executive Officer)	-11289176	5	-56,445,880	-	3,708,617,185	741,723,437

7.1.7 NON-EQUITY SECURITIES

EMTN program

In June 2001, a Euro Medium Term Note (EMTN) program was set up for a maximum amount of €4 billion. This maximum amount has been repeatedly raised since and was raised to €22 billion on December 11, 2025.

The outstanding senior bond issues performed under the EMTN program as of December 31, 2025 are as follows:

Issue date	Currency	Nominal issue amount (in millions of currency units)	Additional drawdowns/ partial repurchases	Nominal amount outstanding as of December 31, 2025 (in millions of currency units)	Interest rate	Maturity
November 25, 2003	EUR	700		700	6.125 %	November 25, 2033
October 29, 2007	GBP	150

April 3, 2017	EUR	700		700	1.500 %	April 3, 2029
May 21, 2014	EUR	75		75	2.000 %	May 21, 2029
June 30, 2015	EUR	50		50	2.250 %	July 1, 2030
September 17, 2018	EUR	500		500	1.625 %	September 17, 2030
December 2, 2011	GBP	250		250	5.375 %	December 2, 2030
December 4, 2024	EUR	500		500	2.974 %	January 10, 2031
October 14, 2019	EUR	700		700	0.500 %	October 14, 2031
June 17, 2025	EUR	850		850	3.324 %	June 17, 2032
June 17, 2025	EUR	650		650	3.795 %	June 17, 2037
September 21, 2017	EUR	540		540	1.625 %	September 21, 2032
March 25, 2013	EUR	100		100	3.385 %	March 25, 2033
September 9, 2024	EUR	500		500	3.571 %	September 9, 2034
May 14, 2020	EUR	750		750	1.250 %	May 14, 2035

As of December 31, 2025, the total nominal outstanding amount of the EMTN program was €15,780 million, maturing in more than one year.

Offering of bonds convertible into and/or exchangeable for new and/or existing shares (OCEANE)

On September 12, 2019, Veolia Environnement completed an offering of bonds convertible and/or exchangeable for new and/or existing shares ("OCEANE") maturing January 1, 2025 by way of a private placement without shareholders' preferential subscription rights, of a nominal amount of approximately €700 million. These bonds will not bear interest and were issued at 103.25% of their principal amount. The bonds have a nominal unit value of €30.41 representing a premium of 35% above the Company's reference share price on the issue date.

On August 2, 2024, Veolia Environnement successfully repurchased some of its bonds with an option to be converted into and/or exchanged for new or existing shares for €364 million.

The outstanding bonds convertible and/or exchangeable for new or existing shares totaling €336 million matured on January 1, 2025.

Public issue on the US market

On November 23, 2022, Veolia performed a second partial redemption in the amount of US\$111.2 million of the US\$400 million bond line paying interest at 6.75% and maturing in June 2038, issued in 2008 on the American market.

As of December 31, 2025, the total nominal outstanding amount was US\$188.8 million (€161 million euro-equivalent), maturing in more than one year.

Issue of deeply subordinated bonds

On May 13, 2025, Veolia carried out its first green bond issue, in the form of a green hybrid bond series, for €500 million with a coupon of 4.371% until its first reset date in August 2030. This issue was carried out as part of the March 2025 Green Financing Framework.

On September 17, 2025, Veolia successfully issued a new perpetual (hybrid) deeply subordinated bond series of €850 million, with a first reset date in January 2033 and bearing a coupon of 4.322%.

As of December 31, 2025, the total amount of subordinated securities was €4,100 million, due to the fact that €850 million had been the subject of a notice of redemption, due to take place on February 9, 2026.

Commercial paper

Veolia Environnement has a short-term financing program comprising Negotiable European Commercial Paper (NEU CP) capped at €6.5 billion. The financial documentation for this program was updated with the Bank of France on June 10, 2025.

As of December 31, 2025, the total outstanding amount of negotiable commercial paper issued by the Company was €4,933 million.

7.2 Veolia Environnement shareholders AFR

7.2.1 BREAKDOWN OF SHAREHOLDERS AS OF DECEMBER 31, 2025

(1) Direct and indirect shareholdings, including through financial investment vehicles. In accordance with the provisions of Article L. 225-102 of the French Commercial Code, employee share ownership stood at 9.35% of the share capital and 9.49% of the voting rights as of December 31, 2025.

(2) According to the company share ownership review as of December 31, 2025.

(3) Treasury shares without voting rights.

7.2.2 CHANGES IN THE COMPANY'S PRINCIPAL SHAREHOLDERS DURING THE PAST THREE FISCAL YEARS

The table below presents the number of shares and the corresponding percentage of share capital and voting rights held as of December 31, 2025 by Veolia Environnement's principal known shareholders, and changes in the Company's principal shareholders (holding more than 4% of the Company's share capital, directly or indirectly), during the past three years.

In its 27th resolution, the Combined General Meeting of April 25, 2024 approved the amendment to the Articles of Association to introduce a dual provision (i) canceling double voting rights; and (ii) placing an automatic

limit of 10% on the voting rights of any shareholder who ends up holding, alone or in concert, more than 10% of the share capital. Pursuant to this resolution, double voting rights, which had applied since April 3, 2016 for shareholders holding their shares in registered form for at least two years, were canceled as of April 25, 2024.

To the best of the Company's knowledge, as of the date of filing of this document, no shareholder other than those listed in the table below, directly or indirectly held 4% or more of the Company's share capital or voting right.

Shareholder	Position as of December 31, 2025					Position as of December 31, 2024					Position as of December 31, 2023		
	Number of shares	% of share capital	Theoretical number of voting rights	Number of voting rights that may be exercised [*]	% of voting rights that may be exercised ^{**}	Number of shares	% of share capital	Theoretical number of voting rights	Number of voting rights that may be exercised [*]	% of voting rights that may be exercised ^{**}	Number of shares	% of share capital	% of voting rights that may be exercised ^{**}

* As of December 31, 2025, Veolia Environnement held 10,438,730 treasury shares (Veolia Environnement treasury shares do not exercise voting rights).

** Percentage of voting rights as a proportion of effective voting rights (Veolia Environnement treasury shares do not exercise voting rights).

(1) Direct and indirect shareholdings, including through financial investment vehicles.

(2) According to the share ownership review as of December 31, 2025.

(3) According to the share ownership review as of December 31, 2025. The shareholding of Crédit Agricole is below the 4% threshold at that date.

(4) According to the company share ownership review as of December 31, 2025. On March 21, 2025, Caisse des dépôts et consignations declared that, on March 17, 2025, the Caisse des Dépôts group had exceeded the legal and statutory thresholds of 5% of the Company's voting rights and share capital and held, directly and indirectly, through the companies CNP Assurances and LBP Prévoyance, 37,358,551 shares representing the same number of voting rights, that is 5.04% of the share capital and voting rights of the Company at this date (see AMF Decision and Information no. 225C0542).

(5) According to the company share ownership review as of December 31, 2025. On March 17, 2025, Criteria Caixa declared that it had exceeded the legal and statutory thresholds of 5% of the share capital and voting rights of the Company and that it held 37,115,957 shares of the Company representing the same number of voting rights, i.e. 5.01% of the share capital and voting rights (see AMF Decision and Information no. 225C0513).

(6) Treasury shares without voting rights. This information is included in the monthly report of transactions carried out by Veolia Environnement in its own shares that was filed with the French Financial Markets Authority (AMF) on January 6, 2026.

On March 4, 2025, the Company announced that CriteriaCaixa, the Caixa Foundation's investment company, will enter into the capital of the Company by 5.5% (see [press release](#)) and on March 17, 2025, the entry of Bpifrance, the public investment bank, and of its fund Lac1, with an investment of 800 million euros (see [press release](#)).

No third party controls Veolia Environnement and, to the Company's knowledge, there are no agreements that, if implemented, could result in a change of control or takeover of the Company.

7.3 Dividend policy

7.3.1 DIVIDEND PER SHARE AND TOTAL AMOUNTS PAID DURING THE PAST FIVE FISCAL YEARS

A dividend payment of €1.40 per share for each of the Company's outstanding shares carrying dividend rights as of January 1, 2025 was approved by the Combined General Meeting of April 24, 2025. The ex-dividend date was set at May 12, 2025 and the dividend was paid from May 14, 2025. As of December 31, 2024, the share capital comprised 740,652,608 shares, including 10,651,380 treasury shares. The total dividend distribution was adjusted to take account of the number of treasury shares held by Veolia Environnement at the payment date, as treasury shares are stripped of dividend rights.

A dividend of €1.50 per share for 2025, 100% payable in cash, will be proposed to the General Shareholders' Meeting of April 23, 2026. The ex-dividend date has been set at May 11, 2026. The 2025 dividend will be paid from May 13, 2026.

For individual shareholders who are French tax residents, a mandatory flat-rate levy of 12.8% will be deducted, in the year of receipt of the dividend, as payment on account for income tax due in 2027 on 2026 income. This levy will however not be applied to taxpayers whose reference taxable income for the year before last is less than €50,000 for a single person or €75,000 for taxpayers who are subject to joint taxation, if they request exemption in advance.

Social security contributions on dividends paid to private individual shareholders tax resident in France are subject to withholding tax deducted by the paying agent at a rate of 18.6%.

The definitive tax liability for dividends paid by Veolia Environnement will be determined based on information reported in the income tax return filed by the taxpayer in the year following receipt of the dividends.

Whether paid in cash or shares, dividends⁽¹⁾ are liable to a flat-rate tax of 12.8% (giving a total tax rate of 31.4% including social security contributions). Social security contributions are not deductible from income tax.

A taxpayer may make a global election to include dividends in income taxable at the progressive income tax scale. They will therefore be taxed after a 40% deduction. Under this option, social security contributions are deductible from taxable income in the amount of 6.8%.

For beneficiaries who are not tax residents in France, dividends are subject to withholding tax at a rate dependent on the country of tax residence.

7.3.2 DIVIDEND POLICY

The Company's dividend policy is determined by the Board of Directors which may consider a number of factors, such as net income and financial position, as well as the dividends paid by the Company's other French and international companies in the same sector.

7.3.3 PERIOD DURING WHICH DIVIDEND PAYMENTS MUST BE CLAIMED

Dividends that are not claimed within five years from the date on which they are made available for payment revert to the French government.

⁽¹⁾ The dividend is eligible for a 40% tax rebate.

* Submitted to approval of the General Shareholders' Meeting of April 23, 2026. The total dividend is calculated based on 741,723,437 shares outstanding as of December 31, 2025, less 10,438,730 treasury shares held as of this date, i.e. 731,284,707 shares, and may change depending on movements in the number of shares conferring entitlement to dividends up to the ex-dividend date.

APE Code	7010Z
LEI – Legal Entity Identifier	969500LENY69X51 OOT31

(1) The information on the website is not part of this Universal Registration Document.

8.1.2 APPROPRIATION OF NET INCOME UNDER THE ARTICLES OF ASSOCIATION

Each share grants entitlement to an amount of the profit in proportion to the percentage of the capital that such share represents.

The distributable earnings are made up of the net income for the fiscal year, minus any accumulated losses and the various deductions provided for by law, plus any retained earnings.

The General Meeting may decide to distribute amounts drawn from the reserves of which it may freely dispose, by expressly stating the reserve items from which the amounts are drawn.

After approving the financial statements and recording the existence of amounts that are eligible for distribution (including the distributable earnings and, if any, the amounts drawn from reserves referred to above), the General Meeting may decide to distribute all or part of such amounts

to the shareholders as dividends, to allocate them to reserve items, or to carry them forward.

The General Meeting has the option of granting shareholders, for all or part of the dividends paid out or interim dividends, an option of payment in cash or payment in shares under the conditions laid down by the law. Furthermore, the General Meeting may decide, for all or part of the dividend, interim dividends, distributed reserves or premiums, or for any capital reduction, that such distribution or such capital reduction will be carried out in kind by delivery of Company assets.

The Board of Directors has the option of distributing interim dividends prior to the approval of the annual financial statements pursuant to the terms and conditions provided for by law.

8.1.3 GENERAL SHAREHOLDERS' MEETINGS

8.1.3.1 Notice of meetings

General Shareholders' Meetings are convened and deliberate under the terms and conditions provided for by law. Meetings are held at the Company's registered office or at any other location stated in the notice.

Shareholders' decisions are made at ordinary, extraordinary, special or combined meetings, depending on the nature of the decisions that shareholders are called upon to make.

8.1.3.2 Participation in and attendance at Meetings

Conditions

All shareholders, regardless of the number of shares they hold, are entitled to attend meetings in accordance with the laws and regulations in force, either by attending them in person, by being represented at them, by voting pursuant to the ballot-by-mail process, (also known as "by mail"), or by giving a proxy to the Chairman of the meeting.

In accordance with Article R.22-10-28 of the French Commercial Code, the only shareholders permitted to attend meetings are those who can provide proof of their legal status through the recording of the securities in their name, or in the name of the intermediary registered as acting on their behalf, no later than the fifth business day prior to the meeting at midnight, Paris time (hereafter, D-5), either in registered securities accounts, or in bearer securities accounts held by their authorized intermediary.

For registered shareholders, this accounting recognition in the registered securities accounts on D-5 is sufficient for them to be able to attend.

For holders of bearer shares, it is the responsibility of the authorized intermediaries that hold the bearer securities accounts to provide proof of the legal status as shareholder of their clients to the clearing institution for the meeting appointed by Veolia Environnement, by providing a certificate of shareholding which they append to the ballot-by-mail voting form or proxy form or to the admission card request drawn up in the name of the shareholder or on behalf of shareholders represented by the registered intermediary.

Procedures

Shareholders wishing to attend the General Meeting in person must apply for an admission card:

- registered shareholders should apply directly to the clearing institution for the meeting appointed by Veolia Environnement (hereinafter "the clearing institution");
- holders of bearer shares should apply to their financial intermediary.

If a holder of bearer shares wishing to attend the meeting in person has not received their admission card by D-5, they must submit a request to their financial intermediary to issue them with a certificate of shareholding enabling them to provide evidence of their position as a shareholder as of D-5 in order to be admitted.

A notice of the meeting, including a ballot-by-mail voting, proxy or admission card request form, is automatically sent to all registered shareholders. Holders of bearer shares must contact the financial intermediary with whom their shares are recorded in order to obtain the ballot-by-mail voting, proxy or admission card request form.

Remote voting

Shareholders who are unable to attend the General Meeting in person may choose from one of the following options:

- give a written proxy to another shareholder, to their spouse or partner or any other natural or legal person of their choice;
- give a proxy to the Chairman of the meeting;
- vote by mail;
- vote electronically prior to the General Meeting.

Shareholders can access a dedicated voting website provided by the Company prior to meetings (Votaccess). This site allows each shareholder to access meeting documents, submit voting instructions electronically or request an admission card.

Remote and proxy votes can only be taken into account if the forms, duly completed and signed (and accompanied by the certificate of shareholding for bearer shares) are received by the clearing institution no later than the third business day prior to the meeting.

In accordance with the provisions of Article R.225-79 and R.22-10-24 of the French Commercial Code, notification of the appointment and dismissal of a proxy holder may also be made by electronic means.

Only notifications of appointment to or dismissal from positions duly signed, completed and received no later than two days before the date of the meeting may be taken into account.

In accordance with the provisions of Article R.22-10-28 of the French Commercial Code, any shareholder who has already voted by mail, or sent a proxy or an admission card request is no longer able to choose another method of participation in the meeting, but may, nonetheless, sell all or some of their shares. However, if the sale takes place before D-5, the Company will cancel or amend accordingly, as appropriate, the remote vote cast, the proxy, the admission card or the certificate of shareholding. To this end, the authorized intermediary holding the account notifies the Company or its proxy holder of the sale and provides it with the necessary information. No sale or any other transaction made after D-5, regardless of the method used, is notified by the authorized intermediary holding the account or taken into consideration by the Company, notwithstanding any agreement to the contrary. It is noted that if a shareholder does not name a proxy holder in a proxy form, the Chairman of the General Meeting shall register a vote in favor of adopting draft resolutions submitted or approved by the Board of Directors, and shall register a vote against the adoption of all other draft resolutions. In order to issue any other vote, the shareholder must choose a proxy holder who agrees to vote as directed by the shareholder.

Under the terms of Article 22, paragraph 4 of the Company's Articles of Association, the Board of Directors may decide that shareholders may attend the General Meeting via videoconference or by telecommunication or electronic means, including via the Internet, under the conditions provided for by the applicable regulations at the time of use. In this case, the shareholders concerned will be deemed to be present for the purposes of calculating quorum and majority at the meeting in question. This option has not yet been used by the Company as of the date of filing of this document.

8.1.3.3 Main powers and quorum required for General Shareholders' Meetings

Ordinary General Meetings

The Ordinary General Meeting is called to make all decisions that do not amend the Articles of Association. It is held at least once a year, within six months of the end of each fiscal year, in order to approve the accounts for that fiscal year. It may only proceed, when it is convened for the first time, if the shareholders present, represented or having voted remotely hold at least one-fifth of the shares with voting rights. When it is convened for the second time, no quorum is required. The decisions of the Ordinary General Meeting are made by a simple majority of the votes of the shareholders present, represented or having voted remotely.

Extraordinary General Meetings

The Extraordinary General Meeting is the only meeting authorized to amend the provisions of the Articles of Association. It may not, however, increase the commitments of shareholders, with the exception of reverse stock splits, duly and properly carried out. It may only proceed, when it is convened for the first time, if the shareholders present, represented or having voted remotely hold at least one-quarter, and, when it is convened for the second time, one-fifth of the shares with voting rights. The decisions of the Extraordinary General Meeting are made by a majority of two-thirds of the votes of the shareholders present, represented or having voted remotely.

8.1.3.4 Shareholders' rights

Inclusion of points or draft resolutions on the agenda

Requests for the inclusion of points or draft resolutions on the agenda must reach 30, rue Madeleine Vionnet – 93300 Aubervilliers – France

(Veolia Environnement, Office of the General Counsel) by registered letter with acknowledgement of receipt or by e-mail to: AGveoliaenvironnement.ve@veolia.com, no later than 25 days prior to the date of the meeting, and may not be sent more than 20 days after publication of the notice of the meeting in the "Bulletin des Annonces Légales et Obligatoires" (French Legal Gazette of Mandatory Legal Announcements).

The request for the inclusion of a point on the agenda must be justified. The request for the inclusion of draft resolutions must be accompanied by the text of the draft resolutions, which may include a brief explanatory statement. Such requests from shareholders must include a certificate providing proof of their legal status as shareholders, either in the registered securities accounts or in the bearer securities accounts held by a financial intermediary, as well as the percentage of share capital required by the regulations. Review of the point or draft resolution filed in line with the regulations is subject to the submission, by the authors of the request, of a new certificate evidencing the recording of the securities in the same accounts on D-5.

Written questions

In accordance with the provisions of Article R. 225-84 of the French Commercial Code, any shareholder wishing to submit written questions must address them to the Chairman of the Board of Directors, 30, rue Madeleine Vionnet, 93300 Aubervilliers, France (Veolia Environnement, Office of the General Counsel) by registered letter with acknowledgment of receipt, no later than four business days prior to the meeting. To be considered, questions must be accompanied by an account registration certificate. Answers to written questions may be published directly on the Company's website (<https://www.veolia.com/en/veolia-group/finance>) in the "General Meetings" section.

Consultation of the documents made available

Documents and information relating to General Meetings are made available to shareholders in accordance with prevailing laws and regulations and, in particular, the information referred to in Article R.22-10-23 of the French Commercial Code is published on the Company's website: <https://www.veolia.com/en/veolia-group/finance>, in the "General Meetings" section, no later than 21 days prior to the meeting.

8.1.4 VOTING RIGHTS

The voting rights attached to shares are proportional to the percentage of share capital that such shares represent, and each share carries the right to cast one vote.

In its 27th resolution, the Combined General Meeting of April 25, 2024 approved the amendment to the Articles of Association to introduce a dual provision (i) cancelling double voting rights, and (ii) placing an automatic limit of 10% on the voting rights of any shareholder who ends up holding, alone or in concert, more than 10% of the share capital.

Pursuant to this resolution, double voting rights, which had applied since April 3, 2016 for shareholders holding their shares in registered form for at least two years, were cancelled as of April 25, 2024.

The voting right attached to shares subject to beneficial ownership is exercised by the income beneficiary at Ordinary General Meetings and by the bare title owner at Extraordinary General Meetings.

8.1.5 IDENTIFICATION OF SHAREHOLDERS

When shares are fully paid up, they may be held in registered or bearer form, at the discretion of the shareholder, subject to the regulatory and legal provisions in force and the Company's Articles of Association. Until the shares are fully paid up, they must be held in registered form.

Company shares are registered in an account under the conditions and in accordance with the terms provided for by the laws and regulations in force. However, where the owner of the shares does not reside in France or French Overseas Territories, within the meaning of Article 102 of the French Civil Code, any intermediary may be registered on behalf of such owner, in accordance with the provisions of Article L.228-1 of the French Commercial Code.

Furthermore, the Company's Articles of Association provide that the Company may seek to identify all holders of securities that grant an immediate or deferred right to vote at its meetings, in accordance with the procedures set forth in Articles L. 228-2 *et seq.* of the French Commercial Code. Pursuant to these provisions, the Company reviews its share ownership four times per year on average.

Failure by the holders of securities or their intermediaries to comply with their data disclosure obligations set forth in Articles L.228-2 *et seq.* of the French Commercial Code results, pursuant to the conditions provided for by law, in the temporary loss of voting rights and, under certain circumstances, the suspension of the right to dividend payments attached to the shares.

8.1.6 CROSSING OF THRESHOLDS

In addition to the thresholds provided by the laws and regulations in force, the Company's Articles of Association provide that all individuals or legal entities, acting alone or in concert with others, that enter into possession of or that no longer hold, either directly or indirectly, a fraction of the share capital, voting rights or securities granting future access to the share capital equal to 1% or more of the Company's share capital, or any multiple thereof, must inform the Company, by registered letter with acknowledgment of receipt within a period of fifteen days from crossing this threshold, of his/her/its identity and any parties acting in concert with him/her/it, together with the total number of shares, voting rights, or securities granting future access to the share capital owned alone, either directly or indirectly, or in concert.

Failure to comply with the above provisions will be penalized by the loss of voting rights for the shares that exceed the threshold that should have been declared, for all General Shareholders' Meetings that are held until the expiry of a two-year period following the date on which the aforementioned notification is brought into compliance, if the application of this penalty is requested by one or more shareholders who together hold at least 1% of the Company's shares.

8.1.7 BOARD OF DIRECTORS AND EXECUTIVE MANAGEMENT

Composition of the Board - Chairman and Vice-Chairman (Chairmen) of the Board: pursuant to Article 11 of the Articles of Association, the Board of Directors has a minimum of three and a maximum of 18 members, elected by General Meetings of Shareholders subject to exceptions provided by law. The Board of Directors elects a Chairman (see Section 3.2.1.5 above on the Chairman) and, where appropriate, one or two Vice-Chairmen (see Section 3.2.1.7 above on the Vice-Chairman), who must be individuals. The term of their duties cannot exceed their term of office as directors.

Employee representation: pursuant to the employment protection law of June 14, 2013, the Veolia Environnement Board of Directors includes two members representing employees, appointed in accordance with Article 11.2 of the Company's Articles of Association. In addition, the Board of Directors includes a member representing employee shareholders in accordance with Article 11.3 of the Company's Articles of Association.

Share ownership: Article 11.1 of the Articles of Association requires each member of the Board of Directors to own at least 750 registered shares in the Company throughout their term of office. This provision does not apply to employee shareholders and directors representing employees, appointed or designated in accordance with legislation (see Section 3.1.1.1 above).

Term of office - age limit applicable to directors and the Chairman: except for directors representing employees, members of the Board of Directors are appointed individually by Ordinary General Meetings for a period of four years, expiring at the end of the Ordinary General Meeting called to approve the financial statements for the year then ended and held in the year in which their term of office expires (see Section 3.2.1.2 above). Directors may be reappointed; it being noted that:

- at the end of each Annual General Meeting, the number of directors aged over 70 years of age may not exceed one-third of the total number of directors in office;
- Article 12 of the Articles of Association states that the Chairman's duties expire, at the latest, at the end of the Ordinary General Meeting called to approve the financial statements for the year then ended, held during the year in which the Chairman reaches 70 years of age.

Powers: the powers of the Board of Directors (see Article 15 of the Articles of Association) are detailed in Sections 3.2.1.4 and 3.3.2 above.

Executive Management: pursuant to Article 19 of the Articles of Association, the Company's Executive Management is assumed, under its responsibility, either by the Chairman of the Board of Directors or by another individual, who may or may not be a director, appointed by the Board of Directors and with the title of Chief Executive Officer. The decisions of the Board of Directors regarding the choice between these two methods of exercising Executive Management are made in accordance with the Articles of Association. Shareholders and third parties are informed of this choice in accordance with legal provisions (see Section 3.3.1 above).

The Chief Executive Officer has the widest powers to act in all circumstances in the Company's name, within the limits of the corporate purpose and subject to:

- powers expressly conferred on shareholders' meetings and the Board of Directors by prevailing legal and regulatory provisions; and
- powers reserved for and prior authorizations required from the Board of Directors in accordance with the internal regulations of the Board of Directors (see Section 3.3.2 above).

The duration of the Chief Executive Officer's duties and her compensation are set by the Board of Directors. Pursuant to Article 19 of the Articles of Association, the duties of Chief Executive Officer expire, at the latest, at the end of the Ordinary General Meeting called to approve the financial statements for the year then ended, held during the year in which the Chief Executive Officer reaches 70 years of age.

Deputy Chief Executive Officer: pursuant to Article 20 of the Articles of Association and at the recommendation of the Chief Executive Officer, the Board of Directors may appoint one or more individuals to assist the Chief Executive Officer, with the title of Deputy Chief Executive Officer. The maximum number of Deputy Chief Executive Officers is set at five.

In agreement with the Chief Executive Officer, the Board of Directors sets the scope and duration of the powers conferred on each Deputy Chief Executive Officer, who have the same powers as the Chief Executive Officer with regard to third parties. The age limit on the exercise of the duties of Deputy Chief Executive Officer is 70 years of age.

8.1.8 AMENDMENTS TO THE ARTICLES OF ASSOCIATION AND CHANGES TO THE SHARE CAPITAL AND RIGHTS ATTACHED TO SHARES

All amendments to the Articles of Association and changes to the share capital or the voting rights attached to the securities that make up the share capital must comply with applicable law, since the Articles of Association do not contain any specific provisions relating thereto.

The text of the Company's Articles of Association is available and can be consulted on the Company's website (see Section 8.5 below).

8.2 Legal and arbitration proceedings

The most significant legal proceedings involving the Company or its subsidiaries are described hereinafter. In addition, tax audits and disputes are described in chapter 6, section 6.1, note 11 of the consolidated financial statements.

The description of the most significant judicial, administrative or arbitral proceedings is set forth in chapter 6, section 6.1, note 12 annexed to the consolidated financial statements, to which this chapter refers. The main updates concerning these disputes, which are set forth in note 12 and reflect significant changes that have occurred up to the registration date of this document, are also described in this chapter 8, section 8.2. The Company is not aware of any other current or threatened judicial, administrative or arbitral proceedings which, during the past 12 months, may have had or have had a material adverse effect on the financial condition or profitability of the Company and/or the Group.

Consolidated reserves booked for all of the Group's disputes (see chapter 6, section 6.1, note 12 to the consolidated financial statements), including reserves for tax and labor law disputes, represent together a large number of disputes for amounts that are individually immaterial. These reserves include all probable losses relating to the various disputes that the Group encounters in conducting its business.

NORTH AMERICA

United States - Flint

See chapter 6, section 6.1, note 12 of the consolidated financial statements above.

United States – WASCO and Aqua Alliance

Several current and former indirect subsidiaries of Veolia Eau in the United States⁽¹⁾ are defendants in lawsuits in the United States, in which the plaintiffs seek recovery for personal injuries and other damages allegedly due to exposure to asbestos, silica and other potentially hazardous substances. With respect to the lawsuits against Veolia Eau's former subsidiaries, certain of Veolia Eau's current subsidiaries retain liability and in certain cases manage the defense of the lawsuits. In addition, in certain instances, the acquirers of the former subsidiaries benefit from indemnification obligations provided by Veolia Eau or the Company in respect of these lawsuits. These lawsuits typically allege that the plaintiffs' injuries resulted from the use of products manufactured or sold by Veolia Eau's current or former subsidiaries or their predecessors. There are generally numerous other defendants, in addition to Veolia Eau's current or former subsidiaries, which are accused of having contributed to the injuries alleged. Reserves have been booked for the possible liability of current subsidiaries in these cases, based on the nexus between the injuries claimed and the products manufactured or sold by these subsidiaries or their predecessors, the extent of the injuries allegedly sustained by the plaintiffs, the involvement of other defendants and the settlement history in similar cases. These reserves are booked at the time such liability becomes probable and can be reasonably assessed, and do not include reserves for possible liability in lawsuits that have not been initiated.

As of the date of this Universal Registration Document, a number of such claims have been resolved either through settlement or dismissal. To date, none of the claims has resulted in a finding of liability.

During the 10-year period ended December 31, 2025, the average annual costs that the Group has incurred with respect to these claims, including amounts paid to plaintiffs, legal fees and expenses, have been \$1,114,597 after reimbursements by insurance companies.

United States – San Diego/International Boundary Water Commission

A U.S. subsidiary of the Company ("VNA") operates, since 1997, the South Bay International Wastewater Treatment Plant ("SBIWTP") in San Diego, California. The plant is located on the U.S.-Mexican border. VNA's client is the International Boundary Wastewater Commission (U.S. Section) ("IBWC"), an agency of the U.S. federal government. The plant solely treats a portion of wastewater coming from the Mexican city of Tijuana, located directly on the border. Water treated by the plant is discharged directly into the ocean through an outfall (the "South Bay Ocean Outfall"), over 5 kilometers from the coastline. Treatment of the remainder of Tijuana's wastewater is the responsibility of Mexican authorities.

Since the plant was built, Tijuana's population has nearly doubled, and the San Diego region has experienced pollution related to wastewater discharges by Mexico directly into the Pacific Ocean or into the Tijuana River, contaminating the estuary and coastline.

Beginning in April 2024, five civil actions have been served against VNA and certain employees before courts in California for alleged failures in managing the wastewater treatment plant and wastewater flows coming from Mexico, which have allegedly contributed to pollution in the region. One of this action has also been brought against the Company. These actions are in preliminary procedural stages. VNA and the Company strongly contest the merits of the allegations made against it.

CENTRAL AND EASTERN EUROPE

Lithuania

See chapter 6, section 6.1, note 12 of the consolidated financial statements above.

ITALY AFRICA MIDDLE EAST

Veolia Propreté v. Italian Republic

See chapter 6, section 6.1, note 12 of the consolidated financial statements above.

WATER TECH

WWT v. K+S Potash

⁽¹⁾ Subsidiaries of the Aqua Alliance group or of WASCO (formerly Water Applications & Systems Corporation and United States Filter Corporation), the parent company of the former U.S. Filter group, most of whose businesses were sold to various buyers in 2003 and 2004.

8.3 Change in control and major contracts AFR

In many countries, including France, local authorities can terminate contracts entered into with Group companies. A takeover of Veolia Environnement could also affect the validity of contracts entered into by Group companies that include a change in control clause.

8.4 Main financial flows between Veolia Environnement and the main subsidiaries of the geographic structure (Business Units)

The main financial flows between Veolia Environnement and the main subsidiaries of the geographic structure (Business Units) are disclosed in the notes to the Veolia Environnement company financial statements set forth in Chapter 6, Section 6.2 above.

Veolia Environnement primarily finances its Business Units through loans and current accounts (net position of €8 billion as of December 31, 2025) and through equity. As a result, it received €940 million in interest and €70 million in dividends in 2025. The Company has set up a cash pooling system in the main countries in which it operates and uses hedging, mainly at Group level, in accordance with defined management rules (see Chapter 6, Section 6.1, Note 10 to the consolidated financial statements above).

The main operating flows between Veolia Environnement and the Business Units comprise amounts rebilled by Veolia Environnement to the Business Units totaling €754 million, primarily in respect of the

provision of services and brand royalties and temporary out-placement of personnel. In addition, in connection with contractual commitments relating to the financial management of repair and maintenance work at facilities made available by delegating authorities, the Company received indemnities of €76 million in full and final settlement from Water France Business Unit subsidiaries and paid €91 million to Water France Business Unit subsidiaries in 2025.

As part of its operating activities, Veolia Environnement has granted financing and operational guarantees totaling €1,803 million as of December 31, 2025.

The table below details certain balance sheet line items (non-current assets, financial debt, net cash), cash flows from operating activities and dividends paid in 2025 and attributable to the Company as of December 31, 2025, broken down between Veolia Environnement and its Business Units.

Impact on the consolidated financial statements (€ million)	France & Hazardous Waste Europe	Europe	Americas, Asia Pacific, Africa Middle-East	Water technologies	Other	Veolia Environnement	Consolidated total
Non-current assets	6,190.8	16,922.3	17,480.4	4,026.5	(83.8)	269.4	44,805.6
Non-Group debt ⁽¹⁾	355.1	2,648.5	4,905.5	170.2	(82.3)	21,581.9	29,578.9
Net cash per the balance sheet ⁽²⁾	482.5	(3,693.2)	182.5	(801.1)	(1,976.0)	13,611.1	7,805.8
Net cash flows from operating activities	748.3	2,180.7	1,592.1	500.4	(60.8)	189.2	5,149.9
Impact on the financial statements of VE SA (€ million)							
Dividends paid during the period and attributable to Veolia Environnement	12.6	0,0	0,0	0.0	55.8		

(1) Non-current borrowings + current borrowings +/- fair value remeasurement of cash instruments.

(2) Cash and cash equivalents less bank overdrafts and other cash position items.

Act4Nature International website ⁽¹⁾
		GBF Target 21				
	2024 to 2027	- Integrate into our Multifaceted Performance, objectives relating to 3 erosion factors on biodiversity: - Climate change: reducing GHG emissions (Scope 1 and 2); - Pollutions: Action plans on sensitive sites⁽²⁾; - Resources: Volume of water saved.	Corporate	Action accomplished	Four objectives for multifaceted performance under GreenUp 2024-2027 relate to these three factors: - Scope 1 and 2 GHG emissions reduction – 2027 target -18% (vs. 2021); - Scope 4* GHG erased emissions – 2027 target 18 Mt CO₂ eq.; - Action plan deployment rate on sensitive sites – 2027 target 85%; - Volume of freshwater saved (reuse, desalination, leakage reduction) – 2027 target 1.5 billion m³.	URD 2024
Strategy	2024	As a TNFD Early adopter, align information published in the URD with TNFD requirements as of 2024 (URD 2023).	Corporate	Action accomplished	Since 2024 (URD 2023), the URD has included sidebars focusing on each of the four TNFD pillars, as well as a cross-reference table linking the TNFD's recommended disclosures with the relevant chapters of the URD. See Appendices 8.10.2 of this URD.	List of TNFD Adopters ⁽³⁾ URD 2023 and 2024 TNFD Report 2025
	2025	Design an on-site biodiversity management solution to be included in our commercial offers (assessment of the biodiversity footprint of our customers sites and action plans to reduce impacts and restore biodiversity).	Global	Action accomplished	With the support of the Marketing Department, provision to sales teams of a Biodiversity offer to be included in proposals. This offer is modular to allow consideration according to contract objectives. This offer is accompanied by a list of best practices already in place at Veolia sites, a list that will be updated annually.	
	2024	Design and test an invasive alien species treatment solution for our customers (treatment chain).	France	Action accomplished	Pilots launched to validate the protocol: Implementation of bio-coverage to facilitate the rise in temperature. Validation at two sites.	
Managing our impacts and risks	2024	Produce a handbook of references and best practices. The objective of this handbook is to propose solutions for our customers to avoid or reduce their impacts and restore biodiversity.	Global	Action accomplished	In 2024, this action pivoted toward the Group's first biodiversity report, including various references.	Biodiversity report ⁽⁴⁾
	From 2024	Integrate nature-based solutions (NBS) into our commercial offering building on existing pilots.	Global	Action accomplished	The NBS offer is available and can be included in tender specifications.	
	2025	Improve the integration of biodiversity in our procurement criteria, in line with the identification of risks in our value chain as part of the TNFD and ideally include at least one biodiversity criteria for our strategic suppliers with the greatest potential impact.	Global	Ongoing	A new Sustainable Procurement supplier charter is to be published in 2026 and will integrate biodiversity criteria.	

* Scope 4, also called erased emissions, is a concept specific to Veolia, to assess the GHG emission reductions of third parties thanks to Veolia's decarbonizing solutions. It is defined in point 4.1.2.1.4. Veolia ensures that scope 4 is recognized differently than its scopes 1, 2 and 3 emissions and may under no circumstances be subtracted from them.

TNFD pillar	Target year of attainment	Objectives and indicators	Scope	2025 outcomes	Comments	Communication/source
Metrics and targets	2024 then 2027	Define a target for renatured surface area by 2027 and 2030 on all of our landfill sites identified as sensitive sites. <i>GBF Target 2</i>	Global	745 ha	This figure, defined at the beginning of 2024, corresponds to the objective of revegetated surface area by 2027.	URD 2025
	2027	Continue to create biodiversity footprints and deploy action plans on 100% of our sensitive sites with an updated scope and aim for an average action plan deployment rate of 85% for 2027. <i>GBF Targets 3, 6, 7, 12 and 16 Act4Nature 20-23: Measure the environmental footprint and biodiversity of our sensitive sites</i>	Global	80%	This commitment was extended to a broader scope in 2023, including former Suez sites. The significant increase in the deployment rate in 2024 (+14 points) bodes well for achieving the 2027 target.	URD 2025
	2027	Deploy ecological management on 95% of our sites with more than 1 ha of green space (updated scope). <i>GBF Targets 3, 6, 7, 12 and 16 Act4Nature 20-23: Deploy ecological management at 75% of our sites with more than 1ha of green space</i>	Global	64%	This commitment was renewed with a new 2027 target of 95% set in 2023 for the new Veolia scope (following the acquisition of Suez). 64% achieved by the end of 2023 on the old pro forma 2020 scope.	URD 2025
	2027	Stop the use of phytosanitary products on 95% of our sites (2023 pro forma updated scope). <i>GBF Target 7 Act4nature 20-23: stop the use of phytosanitary products at 75% of our sites</i>	Global	73%	This commitment was renewed with a 2027 target of 95% set in 2023 for the new Veolia scope (following the acquisition of Suez). 65% achieved at the end of 2023 on the old pro forma 2020 scope.	URD 2025
	2027	Make a zero deforestation commitment, maintain 100% traceability of wood products in our energy sector and aim for 100% certified supplies in the operational control scope of our supply chain. <i>GBF Target 13 Act4nature 20-23: supply the sites of our energy sector with biomass, with 98% of wood traced and 80% certified</i>	Global	100% traceability 87% certification	100% certification in Europe.	URD 2025
		Save water resources with a target of 1.5 billion cubic meters of freshwater saved in 2027 through the reuse of treated water, desalination and leakage reduction.	Global	1.57 billion m³		URD 2025

GBF: Global Biodiversity Framework, international framework for action resulting from COP 15 on biodiversity, consisting of 23 targets, mapped to each commitment.
TNFD: Taskforce on Nature-related Financial Disclosures.

(1) From 2024, disclosed data are the ones of CSRD perimeter defined in the Sustainability information (see chapter 4.1 supra).

(2) The 2021 pro forma emissions presented here are the sum of Veolia scope emissions published in 2021 and 2021 emissions from the Suez scope acquired and retained as of the date of publication of this document. In addition, the 2021, 2022, 2023 and 2024 emissions have been updated with the new method of accounting for emissions introduced in 2024 and refined in 2025 to better reflect Veolia's operational control over GHG emissions from operated assets (see chapter 4.1.2.1.2 supra).

(3) New accounting methodology for recovered solid waste from 2024.

(4) Covering the scope of operational control on the supply of biomass.

(5) New methodology from 2024.

(6) For networks serving over 50,000 inhabitants.

(7) WWTP with a population equivalent capacity of over 150,000.
