APPENDIX 11: Return On Capital Employed (ROCE)

After tax ROCE definition

- **Current EBIT after tax** = Current EBIT (including Share of net income from JVs and associates) – Current income tax expense
- **Capital employed** = average capital employed in the year, including operating financial assets and investments in joint ventures and associates. Capital employed used in the post-tax ROCE calculation is therefore equal to the sum of net intangible assets and property, plant and equipment, goodwill net of impairment, investments in joint ventures and associates, operating financial assets, net operating and non-operating working capital requirements and net derivative instruments less provisions. It also includes the capital employed of activities classified within assets and liabilities held for sale, excluding discontinued operations. They are also adjusted for the effects of scope operations in order to be consistent with the contribution at the EBIT level
- **Average capital employed during the year** = Average of opening and closing capital employed
- **ROCE after tax** = Current EBIT after tax / Average capital employed during the year

In €M	2023	2024	2025
Current EBIT after tax ⁽¹⁾	2,747	2,883	3,065
